OAKLAND C. C.—On May 23 the Oakland C. C., of Oakland, Cal., entertained at its hours the Corinthian Y. C., of San Francisco. The Corinthian fleet sailed up in the afternoon, being met at the mouth of Oakland Creek by Com. Blow and the canoe fleet. The ten yachts of the C. Y. C. fleet were escorted into the basin, and, after a sail, anchored off the canoe club house, where the crews were entertained at dinner. Late in the afternoon they departed with the ebb tide for home.

RUSHTON'S BOATS AND CANOES.—To all who want a boat without knowing definitely the particular style of craft which will best suit their uses, we recommend the very full and complete catalogue of boats and canoes issued by J. H. Rushton, of Canton, N. Y. The old canoeist and boatman will find much that is new to interest him, but it will be specially valuable to the novice from the number and variety of boats illustrated, covering all classes from the plainly finished rowboat for hard use and the light-weight canoe for paddling, up to steam launches and the most elaborately fitted racing canoes. The method of construction still employed is that described in previous catalogues, and so well known to the many who have tested the Rushton boats; but in addition two new methods have been added, described as follows: "In the semi-smooth boats all streaks will be beveled to an edge on the inside of the boat, and the next streak to be nailed on will be beveled just as much as may be needed to make smooth work inside. This will leave an outer edge like the simple lap-streak on the fourth and fifth streaks from the keelson, and the rest of the boat smooth. For a perfectly smooth skin the fourth and fifth streaks will be gotten out of a thicker material, and hollowed and rounded to give proper shape." We have seen some very nice-looking canoes made by this latter method, and there seems no reason why it should not be as strong in use as the plain lapstreak. The old list of stock models has been cut down somewhat, but there still are enough good models in stock of all sizes to suit any purpose. A new board is described, lately perfected and yet to be thoroughly tested—a plain plate board in a low trunk, the later being removable by means of cam bolts and rubber packing, so that the boat is left clear for an extra man, or for sleeping. A new addition to the list of boats is the Rushton Cruiser, an outgrowth of the sneakbox but with an overhanging stern and a plumb stem. It is built in two sizes, 13ft.×4ft. 4in., and 16ft.×5ft. The list of canoe and boat fittings is larger than ever before, and Mr. Rushton deserves much credit for his efforts to provide the many small appliances which were never before within reach of the canoeist. One of the latest novelties is a fitting for the foot of mast, a brass tube long enough to run down the mast tube for several inches and also to extend as far above deck, where it is fitted with a very convenient gear for blocks and also for swiveling the boom. Besides this there are many other fittings which are simply indispensable to a properly rigged canoe. Since he first began the construction of light boats thirteen years ago, Mr. Rushton has revolutionized the boat building business, and all who have dealt with him will agree that his success is due no less to the energy and originality which he brought into the work, than to his fair and honest dealing and the character of his boats.

OSWEGO C. C.—Officers: Capt., V. W. Poole; Mate, G. M. Kenyon; Purser, W. G. Thrall; Meas., J. B. McMurrich.

25. Oswego, Ladies' Day.
28. Great Head, Pennant.

DECORATION DAY.

YACHTSMEN generally were blessed with good weather this year for the opening of the season and the day was observed throughout the country by races, cruises and informal sails. As far as racing goes May 30 is too early for good sport, as the larger boats are never entirely ready, but it serves a good purpose in furthering preparations that might otherwise be left until regatta week. Much was expected this year about New York, but although the results were disappointing to the racing men, all enjoyed a pleasant day's sail even though they must defer for a week or more before seeing some real racing. It was expected that the second class yachts about New York would turn out in force and that some real work would be seen between the old and new ones, but this hope was not realized. Bedouin was at her moorings all day, her owner being absent. Titania did not arrive from the Sound in time to start, and Pocahontas, on her trial trip a few days before, carried away the step of her mast and was disabled. Shamrock was out and did some fine sailing, while in the first class Galatea, Priscilla and Atlantic were with the fleets. In Boston the chief event was the South Boston Y. C. open regatta, but there as in New York, there were many smaller races and sails.

ATLANTIC Y. C.

A very large fleet started from Bay Ridge in the morning for a sail down the bay, the larger classes rounding Buoy 8½ and the small class Buoy 11. The cloudy sky of the early morning had cleared away by 10 A. M. and a nice breeze was blowing straight in the Narrows, as the fleet got under way in two divisions, Shamrock in the lead. Outside the Narrows there was much more wind and the fleet beat down to Buoy 8½ in fine style, nearly all carrying jibheaders, but the little fellows having all they wanted under lower sail. Shamrock led the fleet all day, beating Gracie and Fanny, of her class. Atlantic came in first in her class, having nothing against her. She showed no improvement over last year, either in appearance or performance. Though there were no prizes the yachts were timed as follows:

SCHOONERS.

Grayling	1 53 30	Leona	2 42 00
Gevalia	2 07 00		

CLASS C.

Atlantic	1 41 55		

CLASS D.

Shamrock	1 33 30	Fanny	1 55 00
Gracie	1 38 15		

CLASS E.

Hildegarde	2 12 00	Huron	1 54 00

CLASS F.

Roamer	2 05 55	Bertie	2 10 10
Athlon	2 06 00	Onward	2 18 00

CLASS G.

Adelaide	2 16 30	Stella	2 37 00
Vixen	2 31 00	Rover	2 40 00
Nirvana	2 33 30	Ariadne	2 47 06
Enterprise	2 35 00		

CLASS I.

Ilderan	1 00 43	Mistral	1 08 00

CLASS J.

Crocodile	12 45 30	Kangaroo	12 57 58
Arab	12 56 55	Louise	1 11 16

One or two of the small fry lost their topmasts. Titania towed down the Bay after the fleet and cast loose near the lower island, falling in with Shamrock as the latter came up, but she was unable to hold the white yacht. After reaching Bay Ridge she continued on up through the Gate.

SEAWANHAKA C. Y. C.

The opening sail of the S. C. Y. C. is always in the shape of a scrub race, prizes of $25 being offered in each class. On Monday morning the fleet was at anchor off Stapleton, with two exceptions—Bedouin, whose owner was absent, and Titania, not yet arrived. The chief point of attraction was the new steel schooner Julia, now seen for the first time under a racing rig. If looks go for anything, with her handsome white hull and stylish rig, single round spar over her nose and tall mainmast, she should rate as high for speed as she already does as a seagoing cruiser. The preparations have been greatly hurried since her return from the South, and she is not yet in racing trim, sails and gear being brand new and rigging not in shape. It is expected to have her ready for the regattas next week, but of course the time is too short to show her at her best. Priscilla was on hand, with her new mainsail sitting badly and a foul bottom, as she has not been docked since she was set afloat. Galatea was hardly recognizable in her black coat, but looked very handsome. Cinderella came out in a white dress, instead of last year's black, and sailed so well that it made one wish that Clara was alongside so that it might be seen just how fast she was going. The fleet was ready at 10:30, but a wait was made for Titania, towing down in the distance. She was delayed so much, however, that the fleet was started at 11:06, Priscilla waiting to time the rest, and then starting even with Galatea at 11:10.

The entries in the various classes were: Schooners, Julia and Ray; first class sloops, Priscilla and Galatea; third class, Medusa and Cinderella; fourth class, Espirito and Mona; fifth class, Iseult and Beatrice. The course was from Stapleton around Buoy 10 and return, 20 miles, the wind fresh from south and flood tide. Cinderella had nothing to fear from Medusa under small cruising rig, but she nevertheless put on steam and ran ahead of the fleet. Galatea stood over to the Staten Island shore, but tacked and came across, soon planting herself on Priscilla's weather bow. Here she stayed, gaining with each tack until she had a good lead of the iron sloop. She held the latter to windward and at the same time ran away from her, both carrying working topsails. Priscilla carried her jibtopsail from the start, but Galatea, after setting hers in the Narrows, soon stowed it again. When the cutter turned Buoy 10, ahead of the fleet, Priscilla gave up all hopes of catching her and started for home to time the fleet. The times at the finish were: Galatea 2:02:00, Cinderella 2:06:15, Medusa 2:22:00 Julia 2:35:40, Espirito 2:38:02, Mona 2:40:20, Iseult 2:46:00, Beatrice 3:04:44. Ray did not go the course and Julia did not cross the line at the finish. Galatea, Cinderella, Mona and Iseult win in their classes. In the evening the members of the club dined at the club house, Lieut. Henn also being present.

SOUTH BOSTON Y. C.

A large fleet turned out on Monday in the open regatta of the South Boston Y. C., and a very good race was sailed, the southeast wind being strong enough to make fair time over the course. The new cutter Prince Karl, built and sailed by E. L. Williams, performed very creditably and won in her class. The summary is as follows. The courses and prizes will be found in the last issue of the FOREST AND STREAM:

FIRST CLASS CENTERBOARDS—OVER 28FT. WATERLINE.

	Length.	Elapsed.	Corrected.
Violet, H. J. McKee	33.08	3 01 20	2 27 17

Bessie, R. Tufts	12.00	1 31 05	1 09 09
Brunette, J. W. Bragdon	12.00	capsized.	

Winners: First class centerboards, Violet $25, Magic $15. First class keels, Prince Karl $25, Breeze $15. Second class centerboards, Black Cloud $20, Sea Bird $12, Lizzie Warner $8. Second class keels, Echo $20, Lizzie Daly $12, Æolus $8. Third class centerboards, Tom Cat $20, Mabel $12, Em-Ell-Eye $8, Good Luck $5. Third class keels, Fearless $20, Thelga $12, Cooper $8, Zelta $5. Fourth class, Zoe $15, Victor $10, Wildfire $5. Fifth class, Minnie $10, Mist $5.

CAPE ANN Y. C.

The first sweepstakes race was sailed on Monday, over a triangular course from a line between the judges' boat and buoy off Pavilion beach to buoy near Round rock, thence to buoy off Eastern Point and to starting line. The course for the first and second class was sailed twice, a distance of eight miles. The third and fourth classes went over the course once. The times were:

FIRST CLASS—OVER 21FT. TO 27FT.

	Length.	Elapsed.	Corrected.
Sachem, Roberts	21.01	3 54 19	3 04 49
Petrel, Paul	21.01	3 36 15	3 08 45
Osceola, Gifford	21.02	4 51 20	3 21 56

SECOND CLASS—18FT. TO 21FT.

Lark, Bishop	18.08	3 45 47	3 13 25
Silver Cloug, McLoughlin	20.03	4 06 53	3 36 44

THIRD CLASS—15FT. TO 18FT.

Madcap, Wheeler	16.00	1 22 24	1 04 18
Alpine, Tarr	15.06	1 24 07	1 05 37
Alice, Brooks	15.07	1 26 59	1 08 33
Spark, Gaffney	16.11	1 33 02	1 15 38

FOURTH CLASS—15FT. AND UNDER.

Pilgrim, Lloyd	13.02	1 56 08	1 35 28
Thistle, Stetson	14.02	1 56 36	1 36 56
Wurwina, McFarland	14.00	1 58 00	1 38 10
Rocket, Hodgkins	13.11	2 03 32	1 43 38
Mollie, McPhee	13.05	2 15 09	1 54 45

A protest was entered against Pilgrim by Thistle for fouling the buoy, and she was ruled out. Osceola entered a protest against the Petrel for fouling.

KNICKERBOCKER Y. C.

The first of the annual regattas was that of the Knickerbocker Y. C., sailed on May 30 over the course from Port Morris around the Gangway buoy and home, 20 miles. The wind was southerly and the tide near the flood, the boats catching the first of the ebb at Whitestone. The first signal was given at 10:45 A. M., and at 10:55 Classes 6 and 7 were started. The steamer Sirius carried the regatta committee and guests of the club, keeping along with the fleet. The wind was moderate, but when off Whitestone a zephyr tangled itself up in some of the topmasts. First the Culprit Fay lost her topmast at the cap, then the John Demarest followed, losing her topmast and mastheaad, and then the Florence. Near the mark there was less wind; the turn was made as follows: Lorna, 12:49; Dora 12:51:30; Adele, 12:51:38. The full times were:

CLASS 1—CABIN SLOOPS AND CUTTERS 31FT. AND OVER.

Climax, E. C. Stetson	Disabled.	

CLASS 5.

Bertha, P. F. Davis	2 50 35	2 50 35
Florrie, L. P. Davis	2 55 50	2 54 11
Fedora, F. Antovs	3 00 17	2 59 29
M Louise, C. W. Simmons	3 03 54	3 03 06

First prize, $30, Mignon; second, $15, Peri; third, $8, M. F. Swift. Second class—First prize, $20, Atlanta; second, $10, Bessie and Essie; third, $5, Louise. Third class—First prize, $20, Alice; second, $10, Crawl; third, $5, Zest. Fifth class—First prize, $12, Bertha; second, $7, Florrie; third, $3, Fedora.

NEWARK Y. C.

The Newark Y. C. sailed its fifth annual regatta on Newark Bay the course being 15 miles triangular. Besides the class prizes was one for best elapsed time. The start was made on the first of the ebb with a good S.W. breeze, at 2:50 P. M. The times were:

CLASS 1—CABIN SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Alexander F.	2 59 05	4 40 26	1 41 21	1 41 21
Emmy C	2 59 53	4 44 30	1 44 37	1 41 55
Winnifred	2 59 00	Withdrew.		
Hattie	3 02 00	Withdrew.		
Loretta B	3 00 18	Withdrew.		

CLASS 2—JIB AND MAINSAIL.

Falcon	2 54 20	4 34 42	1 40 22	1 40 22
Sirene	2 55 41	4 40 36	1 44 55	1 44 50
Rambler	2 54 40	4 54 31	1 49 51	1 49 06
Our Own	2 56 57	4 59 47	1 42 50	1 41 50
Cloud	2 53 40	4 39 36	1 45 56	1 42 56
Just Woke Up	2 56 45	4 46 55	1 50 10	1 46 15

CLASS 4—CATBOATS OVER 20FT.

Unexcelled	2 48 37	4 44 50	1 56 19	- - -
Arrow	2 48 38	4 49 40	2 02 00	2 00 57
Annie R	2 49 35	Withdrew.		
Sprite	2 52 00	Withdrew.		
Frank S	2 48 39	4 39 23	1 50 46	1 50 21

CLASS 5—CATBOATS UNDER 20FT.

Triton	2 49 03	4 47 00	1 57 58	- - -
Eddie	2 49 11	Withdrew.		

Falcon won on elapsed time, beating the best previous record of 1.44.22. Annie R. was stove in by a stake. The judges were W. Clark, A. Mayhew and Geo. E. Gar'land. The winners of class prizes were Alexander F., Falcon, Frank S., Arrow, Cloud and Triton.

CAPE COD Y. C.

The first championship race of this club was sailed on Monday, the course being from the judges' boat, anchored off Brewster breakwater, east to buoy in Orleans Harbor; thence north, leaving New Found Rock buoy on port hand and return, 7¾ miles.

The wind was very light and the race slow. The times were:

CLASS 1.

	Start.	Finish.
Percie Allen	1 06 45	3 19 00
Madge	1 03 00	3 19 15
Ariel	1 06 15	4 11 00
Guenivere	1 07 00	4 56 00
Fawn	1 09 01	withdrew.

CLASS 2.

Gracie	1 15 00	4 55 00
Magie	1 15 00	4 59 00
Iris	1 16 00	5 00 00

The judges were Edgar Lincoln, D. W. Sears, and E. Small.

At Canarsie a race was sailed over a 10-mile course, the times being:

FIRST CLASS.

	Elapsed.	Corrected.
Secret, E. F. Linton	2 10 30	2 01 33
Alert, F. A. Reid		Withdrew.
Josephine, O. Treadwell	Split mast.	Withdrew.

SECOND CLASS.

So So, D. J. Brinsley	2 05 38	2 05 38
Edda D., J. H. Ives	2 12 07	2 11 44
Excise, Wm. Bush	2 16 53	2 15 13
Maddie, F. Gallagher	2 17 58	2 16 18
Ethel, F. J. Viallenbach	2 19 18	2 18 03

A match was set for Monday between the open boats Nahli, Shrew and La Perichole, of the Larchmont Y. C., but in the early morning there was no wind, and it was not until noon that the race was started. The course was from off Pagoda Point to the buoy off Throgg's Neck and return, 20 miles. The boats were timed at the start: Nahli, 12:01:22; Shrew, 12:01:56, La Perichole, 12:00:38. The wind was mostly light, breezing up a little at times, and Nahli led easily.

A race was sailed between the Alice L., P. Lynch, Twilight, Messrs. Rideout and Burdan, of the West Lynn Y. C., for $25, over a 5-mile course. Alice L. won, but Twilight protested, and the judges have not yet decided.

The New Jersey Y. C. and the Jersey City Y. C. fleets were out during the day....The Yonkers Y. C. sailed down to Fort Lee and returned....The Brooklyn Y. C. sailed from the club house in Gravesend Bay out around buoy 7 and return, with a dinner at the club house afterward....The Pavonia Y. C., of Jersey City, sailed a race from a stakeboat off Bedloe's Island, around Fort Lafayette and return. In the first class Avalon won, as Maraquita fouled a buoy and stove her bottom, so returned. Maggie M. Conway won in second class. In the open boats the winners were: Class 1, Clara S., Alta; Class 2, Three Brothers, H. H. Holmes; Class 3, Hoodoo, Woolsey.

NEW BURGESS BOATS IN BOSTON.

IT is through the success of her large yachts that Boston has taken of late the leading place in American yachting; but very few have given any thought to a most important fact underlying the great advance she has made. The Eastern fleet has never been noted for the number of its fast yachts in the larger classes, the majority being, with very few exceptions, inferior to the New York fleet. Of a sudden, however, Boston has jumped to the first place in the very classes where she has before been weakest, and to-day her larger boats ask no odds of any New York craft. That such progress should be made spontaneously and without some cause that, though unseen, has been quietly working for a long time, is contrary to the natural order of things, and in looking for this cause we are inclined to ascribe it to the strength and vitality of the small yacht division of the fleet. This division has always been noted for the number of its boats and also of its races, while it has enlisted in yachting a vast number of men. The interest in its doings has been very great along the coast about Boston, and the growth has been healthy and regular. On this foundation, with its roots extending from Cape Ann to Cape Cod, with hundreds of small craft of excellent types and with thousands of men actively engaged in sailing them, the East has easily and naturally laid the first part of a superstructure of yachting on a more pretentious scale. New York, on the contrary, with all its famous fleet of large yachts, has not been as strong in its smaller classes, yachting has not been so universally popular, and to-day it is feeling the need of just such a foundation as Eastern yachting enjoys.

This season the larger division promises to be able to take care of itself, what with Sachem and Gitana at home, and Fortuna in foreign waters, while of single-stickers there are Mayflower and Puritan besides the new flyer. At the same time the small yachts have not been neglected, and the fleet will be stronger than ever in numbers and in quality, while an exceptionally brilliant season of racing is promised. Mr. Burgess, of course, is foremost in this branch, and while his work is not so generally known as that in the large classes it is no less important. Within the past two or three years he has turned out a number of very fine small boats, cats and sloops as well as cutters, both centerboard and keel; and the influence of this fleet is plainly perceptible throughout the East. A leading feature of the Burgess boats is the unity of the design, each individual boat is carefully worked out with the greatest care in all details, and there is harmony and absence of the crudities and individual fads and notions that are coupled with many good features in the work of the local builders along the coast. These boats have gone to different points, and in some cases designs have been furnished for boats to be built by local builders, and already the results are visible in the changes of model and build which are taking place generally. The presence of one good boat in a fleet establishes a new standard of excellence, it serves in many ways as a model for local builders and yachtsmen, and its good influence is very soon evident. It would be too much to expect that every yacht, large and small, turned out by Mr. Burgess, should retain the same success as Puritan, but thus far in all classes his boats have been remarkably successful. This has been the case in particular with the keel cats of about 20ft. and also with the centerboard boats of the same size. This spring the Lawleys are busy with half a dozen of these boats, most of them with a heavy lead keel in addition to the centerboard, and with the boats built elsewhere to beat them they will make a most valuable addition to the small fleet.

Of course Titania and the new steel yacht for Gen. Paine will monopolize the attention of racing men very largely this season, but Mr. Burgess is looking for more laurels in another class. We have before described the cutter building by Lawleys', from his designs, for Mr. C. F. Adams, of Quincy, but we give her dimensions more fully than they have yet appeared. They are:

Length over all	44ft.
Length l.w.l.	36ft.
Beam, extreme	12ft. 5½in.
Beam, l.w.l.	11ft. 4½in.
Draft, extreme	7ft. 6½in.
Freeboard, bow	4ft. 2in.
Freeboard, least	2ft. 9in.
Displacement, long tons	17.66
Ballast all on keel, lead	9.00
Mast, from stem	14ft.
Mast, deck to hounds	32ft.
Mast head	6ft.
Topmast, fid to hounds	25ft.
Boom	39ft.
Gaff	25ft.
Bowsprit, outboard	26ft.
Spinaker boom	34ft.
Topsail yards	31 and 21ft.

The boat is intended for racing and under the rules of the Eastern Y. C. will come in the class with Shadow and Shona, which boats she will probably meet in the coming regatta. How much time she will allow the little cutter we do not yet know, but to look at the two side by side the new boat looks able to carry the other at her davits. The main object has been speed, and in striving for it Mr. Burgess has followed the same methods as in the Titania, in both boats departing from his practice in the earlier yachts. The beam is great compared with the length, but at the same time the boats are relatively deep, the one in question drawing 7ft. 6in. on 36ft. The bilge is kept light and the topsides flare, while the shapes of hull and lead keel merge fairly into each other, unlike the class of keel sloops once so common about Boston in which the body was wide but shoal, the draft being made up by a deep fin. There is nothing of this kind about the new boats, the midship section shows a fair sweep from keel to plankSheer, but the same idea of a wide body with high bilge, coupled with very low ballast, is common to both. In the matter of deck room the new boat has plenty to spare, and below she is equally roomy, but her great beam gives a lot of waste space above the lockers that only goes into extra width in the berths. She has good headroom, 5ft. 9in., and good room between the lockers, but both of these she might have with less beam. The forecastle is high and roomy and there is a ladies' cabin aft. The width gives a very wide companion, more so than is really necessary, and there is a passage to the after cabin beside it. While the cramped companions and the narrow passages of the extreme cutters are absent, owing to the increased beam, it certainly seems as though the economic limit had been exceeded in the other direction, and that more beam had been taken than was really necessary for the best average of interior accommodation and driving power. The spars are those of a modern 10-tonner, but while the accommodation is much better in some respects, it is by no means in proportion to the added beam of 12½ft. compared to the 7ft. of the narrow boat. Of course, with the canvas the boat should be fast, but it is a question whether Mr. Burgess could not put another hull under the same rig that would give better results, both in racing and for room below. A yacht of different proportions is the other cutter on which Lawleys are at work, a cruising boat of 42ft. l.w.l. from Mr. Burgess's design, for Mr. Agassiz, owner of the cutter Kelpie. With 4½ beams and a draft of over 8ft., she promises to be a typical cruiser. The same firm have also begun work on a schooner of 53ft. from Mr. Burgess's designs.

A number of small yachts have been built during the winter and spring about Boston and vicinity which we have noticed at various times. The most interesting fact about them as a class is that moderate beam and lead keels prevail to a very large extent. Keel boats form a large proportion of the total; and while some small centerboard catboats have been built for the classes in the smaller clubs, there have been none of the old type sloops. The centerboard boats, outside the cats, are all of moderate proportions for their class, with a good share of ballast in keel, and a modified sloop rig. The old boats have many of them received additional ballast outside, and in Boston at least the idea of outside ballast has been universally adopted.

LAUNCHES AT POILLON'S YARD.—Last week both the sloops building at Poillon's yard, from Mr. Elsworth's models, were launched, the smaller one, Gertrude, for Com. H. G. Pearson, of the Jersey City Y. C., on May 26. This yacht is 35ft. l.w.l., 40ft. over all, 13ft. beam, with sloop rig. As she entered the water she was christened Gertrude by Miss Addie Elsworth, daughter of the modeler. The other and larger yacht, for Mr. J. G. Prague, was launched on May 28, receiving the alarming name of Anaconda from the daughter of the owner. She is intended to make it very warm for the class that Clara has headed for the past two seasons, her dimensions being: Length over all, 60ft.; on l.w.l. 52ft., beam, 18ft. 4in.; draft, 5ft. 3in.; ballast 8 tons. Both of these yachts will carry all ballast inside.

THE TRIALS OF THE THISTLE.

THE first of the Thistle's races has proved very unsatisfactory, there being no opportunity given for a test of her qualities beside Irex and Genesta. This much is evident, that she is a very fast boat in light weather and drifting, and that is what is most likely to tell in the Cup races; but what she can do in good sailing weather remains yet to be seen. Her first race was sailed on May 28, from South End to Harwich, a distance of about 50 miles. The starters were:

CLASS A.

	Sail Tons.
Thistle, J. Bell, cutter	139
Irex, J. Jameson, cutter	106
Genesta, Sir Richard Sutton, cutter	104
Sleuthhound, Lord Francis Cecil, cutter	54
Queen Mab, T. B. C. West, cutter	10

CLASS C.

Wendur, H. R. Laing, yawl	113
Neptune, C. D. Gough, cutter	42
Foxhound, Capt. Nottage, yawl	33
Sybil, C. T. G. Still, cutter	26
Mary, Cosmo Romilly, cutter	26

The start was made at 9:35 A. M. with a light S. W. wind. Sleuthhound was first away, followed by Thistle, the latter getting to windward of Irex. Sleuthhound soon lost her place and fell to fourth, the order being Thistle, Irex and Genesta. Later on the breeze fell, and all but Thistle were obliged to anchor to hold their own against a strong tide. From this out the race was a drift, the yachts finishing late at night. Thistle brought in a good breeze with her after midnight, Genesta being next, then Irex. The times at the finish were:

Thistle	0 50 20	Wendur	2 25 00
Genesta	1 34 00	Sybil	2 37 10
Irex	1 47 00	Mary	2 50 00
Sleuthhound	1 49 29		

The rest of the fleet anchored over night and came in next morning. The race off Harwich on Monday was even more unsatisfactory, as a fog prevailed through the latter part of the race. The course was from Harwich Harbor, around the northeast buoy, off Badasey Bank and the sunk lightship, leaving both on starboard hand; thence to northward of buoy at West Rocks; thence between Cork lightship and Cork sand buoy, and back to starting point, 35 miles. The starters were as before, excepting Sleuthhound, Mary and Queen Mab. At the start the wind was fresh from east, Irex leading over the line, with Genesta second and Thistle third. Genesta sailed away alone, while Irex and Thistle were busy with each other. A thick fog finally shut in and hid the course, but the yachts sailed on, Irex coming in first, with Genesta second and Thistle third. The times of finish were:

Irex	4 17 20	Wendur	4 35 13
Genesta	4 35 19	Thistle	4 52 06
Neptune	5 02 46	Sybil	5 01 45

The sailing amounted to nothing, as all were lost for a time in the fog. In the evening the annual dinner of the Royal Harwich Y. C. was held.

A third race was sailed on Tuesday under more favorable conditions for a test, the weather being clear and the wind of good strength. The course was from Harwich to Southend, about fifty miles. Irex was first away, with Thistle second, Wendur third, and Genesta fourth. The prizes were £40 and £30, with a cup presented by Mr. James Ashbury. All four carried full lower sail and club topsails. Thistle crossed to windward and led at the first mark. At 9:30 all set spankers, Thistle being slower than the others in getting hers out. Irex began to gain on her but never succeeded in catching her. At the Swin Middle Lights Irex was 3½6m. astern of Thistle, and Genesta 6m. astern. The times at the finish were, Thistle 1.01, Irex 1.04, Genesta 1.11, and Wendur 1.27. Thistle allows Irex 6m. 50s., and is consequently beaten by 3m. 50s. From the cabled reports Thistle seems to have been slow in working her canvas and to have suffered from a green crew, while Irex has had the same crew, almots to a man, for three seasons. Yesterday another race was set, around the Mouse and back to Gravesend, the Royal Thames Y. C., and on Saturday the race of the same club from the Nore to Dover comes off. After the latter Thistle will return to the Clyde to prepare for her voyage across.

STEAM YACHT BUILDING AT BRISTOL.

AT Herreshoffs's shops there is now building a high speed yacht for service between New York and the Shrewsbury to take the place of the famous Henrietta, lately sold. This new craft will be 81ft. l.w.l., 10ft. beam and 3ft. draft aft. She will have triple compound engines, 7½, 12 and 19×10½, with a grate surface of 25ft. and a 36in. screw. The Henrietta has lately been to the shop for a spring overhauling before going into commission under her new owner, Mr. Howard Jaffray, and the firm have also a duplicate of her now finished in stock. These boats are 48ft. over all, 47ft. l.w.l., 7ft. 6in. beam, and 2ft. 2in. draft of hull and 2ft. 8in. draft of shoe. They are built after the usual method of the firm, a double skin, the strakes running fore and aft, and steamed frames, all being fastened with brass screws. The workmanship is of the very highest grade, the joints of each skin being almost invisible and no caulking being needed. The decks, like the bottoms, are of double thickness, being laid in whitelead with brass screws and also require no caulking. For the skin and decks mahogany has been proved to be better than any other wood, and it is used for all the smaller craft. The large yacht is planked with a very fine quality of yellow pine, clear and free from pitch —for the outer skin ½in. thick, the inner skin being of ⅜in. white pine, the fastenings of galvanized steel nails, clinched. In the bending house, besides the sister to Henrietta, is a steam whale boat 28ft.×8ft., with engines 6 and 3½×6in., such as was carried by the Greeley expedition. There is also a duplicate of Electra's launch, a new boat in stock, of mahogany, 27×6ft. 4in., weighing complete 3,800lbs. The wood in these launches is so carefully selected that a uniform grain and color is preserved over the entire boat. In one the mahogany is all straight-grained, while in another it is figured, but matching in all parts in color and grain. A valuable feature of all the Herreshoff launches is the hood or buggy top of oiled drill, stretched over bent wood frames hinged so as to be swung into any position. The cover can be raised sufficiently on either side to break the wind while leaving the boat open; it can be raised to cover half or more of the cockpit for protection from rain while running, or it can be swung entirely over the cockpit, making a complete roof by night. The same idea is adaptable to sailing craft, but so far as we know it has only been fitted to one, the cat-yawl Consuelo, owned and sailed by Mr. N. G. Herreshoff. In this yacht the steering is done by a horizontal bar on an upright standard in place of a tiller or wheel, and over the after part of cockpit a hood is fitted so as to protect the steersman from the weather. The Stiletto is now hauled out near the works, but will be fitted out soon for delivery to the U. S. Government.

GALATEA IN A BREEZE.

Editor Forest and Stream:

On Decoration Day there was a nice topsail breeze, and the way in which the narrow-beam cutter Galatea beat Priscilla and Atlantic to windward and running home was a caution. She can certainly also dispose of Puritan, as the latter has not sufficient length to cope with Lieut. Henn's smart cutter. That much may be regarded as settled. The only question remaining is whether Galatea can get away with Mayflower as well. Last year's races for the America's Cup offered no opportunity for sound judgment. Now why does Mayflower sulk in Boston? Is she afraid to meet Galatea in the spring breezes that she is held back till midsummer drifting sets in? She backed down from her proposed voyage to Europe, because she did not care to face Irex in a Channel sea, and now she refuses to give Galatea a chance. This is, no doubt, very shrewd from the standpoint of "yachting politicians," but it leads up to the question frequently asked of late: "Are our yachtsmen really *yachtsmen* or only yacht owners? SQUARE DEAL.

BAR HARBOR REGATTA.—A regatta will be held at Bar Harbor on Aug. 25 under the rules of the N. Y. Y. C., the course being 30 miles, triangular, with a time limit of 7 hours. The sum of $1,200 has been subscribed by the residents for prizes. The classes will be: Schooners, class 1, over 80ft. waterline length, $250; class 2, 80ft. waterline length and under, $200. Sloops and cutters, class 1, 80ft. and over waterline length, $250; class 2, 55ft. and under 80ft. waterline length, $200; class 3, 45ft. and under 55ft. waterline length, $150; class 4, under 45ft. waterline length (cabin yachts), $150. No prize will be awarded in any class unless there are two or more starters.

DORCHESTER Y. C., 97TH REGATTA.—The 97th regatta of the Dorchester Y. C. was sailed on May 27, for champion pennants in the fourth and fifth classes. The course was twice around the triangle formed by Farm Bar Buoy, Half Tide Rock and Old Harbor Buoy, 7½ miles. The times were:

Scamp, Frank Gray	0 58 49	Nora, G. E. Dennie	1 05 25
Rocket, H. M. Faxon	1 02 16	Nonpareil, E. Lanning	1 07 30
W. E., J. E. Robinson	1 04 43	Yolande, C. H. Nute	1 11 21

Mirage and Sheerwater withdrew. Scamp wins one leg for the pennant.

COOPER'S POINT CORINTHIAN Y. C.—*Editor Forest and Stream:* The second semi-monthly race of the Cooper's Point Corinthian Y. C. took place on May 24, over the club course. The following boats started at 2:20 P. M.: First class—C. T. Humes and R. M. Fitch. The H. C. Funk parted luff bolt rope and did not get off. Second class—Item, Russell, Wilkins and Allman. Third class—Cook and Anderson. A spanking breeze from S. S. E. sent the boats off with reefed sails, except the Wilkins; she carried whole sail throughout the race. The first round of the flagboat was made in the following order: Fitch, 3:15:30; Humes, 3:16:00; Wilkins, 3:17:00; Item, 3:19:00; Russell, 3:19:01; Cook, 3:31:30; Anderson and Allman, time not taken. Best time, 55m. 30s. The home stakeboat was reached on the second course as follows: Fitch, 4:02:30; Humes, 4:03:00; Wilkins, 4:08:30; Item, 4:12:00; Russell, 4:13:00; Cook, 4:40:00; Allman and Anderson, time not taken. The Fitch, Captain Will Kinsey, made the fastest time on record over the course by any sailboat, on the second round covering the 8 miles in 47m. 30s. The Corinthian fixtures are: Bay cruise to Cape May, June 20; up river to head of navigation (Trenton), Sept. 25. Three new boats, Funk, Item and Russell, have been added to the club this year, and new members are rapidly joining the club, which is in a prosperous condition. Their club rooms have been fitted up in good style.—R. G. W.

MONATIQUOT Y. C.—The Monatiquot Y. C., of Weymouth, Mass., organized April 27, 1887, now numbers 125 members, and 30 yachts now enrolled in its squadron. The club house (now building) will be ready for occupancy July 1, when a grand celebration is proposed. The officers are: Com., J. F. Sheppard; Vice-Com., G. H. Bicknell; Sec., F. T. Hunt; Treas., E. F. Worster; Fleet Captain, Andrews Lane; Meas., W. F. Maybury. Directors, Com., Vice-Com., Sec. and Treas; ex-officio, J. M. Knight, Henry Gardner. The following fixtures have been decided on. Fort Point course: June 22, first championship; July 23, union regatta; Aug. 6, second championship; Aug. 17, third championship; Sept. 3, club championship; Sept. 17, pennant. Inside course, club races: May 30, June 11, July 6, Aug. 27, Sept. 10 and 24.

ANOTHER CRUISING SCHOONER.—Mr. A. Cary Smith has a model ready of the 110ft. cruising schooner, and the vessel will be in commission by November. Mr. Smith will at once commence a design for a steel schooner 100ft. long for Mr. C. W. Chapin, who has sold his new schooner Julia to Thos. J. Coolidge, of Boston. Thought built for cruising last year and only in commission during the winter, Julia has made a reputation already for speed. Her owner, however, wishes a larger yacht, and having sold her, will have a new boat ready by fall.

QUAKER CITY Y. C.—This club has announced the following fixtures: June 13, annual regatta; June 15, ladies' day; June 26, river and harbor cruise; July 2-4, Corinthian cruise and regatta; July 24, river and harbor cruise to Lazaretto; Aug. 14-20, annual cruise Chesapeake and Delaware bays; Sept. 11, review; Sept. 25, cruise. The new rules of the club are printed, being the same as the S. C. Y. C.

YORKVILLE Y. C.—The annual regatta of the Yorkville Y. C. was set for May 29 over a 17 mile course, off Oak Point, but there was not wind enough to finish within the limit of six hours. At 12:30 there was a flat calm, and it was not until 2:30 that a start was made. About half of the course was sailed before the yachts withdrew. The date for the re-sail is not yet announced.

SEAWANHAKA C. Y. C. OPEN RACE.—The entries for this race, which is open to yachts of the New York, Atlantic, Larchmont, Eastern, New Bedford, Knickerbocker and New Haven clubs, all close at noon on June 9. Blanks may be had of the secretary, L. F. D'Oremieulx, 67 Exchange place, and entries must be made to L. P. Bayard, 167 Broadway.

AN ENGLISH YAWL FOR AMERICA.—The schooner Hildegarde, now on her way across, will soon be followed by the yawl Nonparielle, just purchased by S. B. Pomeroy, S. C. Y. C., who will sail her across. Nonparielle was built by Camper & Nicholson, of Gosport, in 1882, and is 69.3ft. stem to sternpost on deck, 15.9ft. beam and 10.25ft. hold.

A RACE BETWEEN FISHING SMACKS.—A match has been made between the fishing smack Julian T. Creeton, of Greenport, and the John Feeney, of Noank. The course is to be 20 miles to windward from Scotland Lightship to the Whistling Buoy off Fire Island.

LAUNCH OF THE FORBES STEAMER.—The steel steam yacht designed by Burgess and built at the Atlantic Works, East Boston, for John Murray Forbes, was launched on May 27. She was named Barracouta, and is 108ft. l.w.l., 18ft. beam and 10ft. hold.

QUINCY Y. C. OPENING REGATTA.—The only starter for the Quincy Y. C. regatta on May 28 was Echo, Messrs. Burwell and Isham. She sailed the course alone in 1h. 31m., taking first prize, $10. The judges were H. H. Sheen and G. G. Saville.

PACIFIC Y. C.—The opening cruise of the Pacific Y. C., on May 15, found Aggie, Nellie and Lolita under way at 11 A. M. The destination was Martinez, but so few yachts turned out that it was changed before the start to Mount Diablo.

CORONET.—At noon on May 25, the Coronet arrived at New York after a very unpleasant passage of 24 days. She went at once to her owner's dock in South Brooklyn, where she is now stripped and laid up.

THE "GLOBE'S" OPEN REGATTA.—The Boston fishing fleet expects to enter the regatta of June 25. The *Globe* has offered a cup for the Shadow-Shona class in the Dorchester regatta of June 17.

FELICIA.—This Boston boat has been converted from a centerboard into a keel. The catboat Cooper has also been changed into a cutter, and the cat Nora has had 1600lbs. of lead bolted to her keel.

FORTUNA was to sail yesterday from Marblehead for Greenock, touching at Queenstown. Her racing spars have been shipped to Greenock in advance.

DORCHESTER Y. C.—At the monthly meeting of this club on June 3, Mr. Adrian Wilson, the sail maker, will lecture on "Scientific Sail Making."

A SAILBOAT ADRIFT.—A 25ft. catboat, keel upward, was picked up by a tug on Sunday night outside Sandy Hook and towed to Atlantic Basin.

CYPRUS.—This cutter was at Oswego last week, having come from New York by canal. She fitted out at the former port and sailed for Toronto.

SILK KITES.—Mayflower and the new steel boat will both have spinakers of the new "union" silk, from Lapthorne.

ANETO.—This little yawl has been sold by H. W. Eaton to W. H. Browne of Boston.

NANTILUS.—Keel sloop, has been sold by Arthur Ryerson to S. P. Freeman.

ECLIPSE.—Sloop, has been sold by E. H. Wales to a Boston yachtsman.

ANSWERS TO CORRESPONDENTS.

AMATEUR, New York city.—A gun club publicly announces a clay-pigeon tournament in which all professionals or semi-professionals are barred. A party enters and shoots under protest, who is employed by a certain gun manufacturing company to show their particular make of gun to visitors at the factory and at shooting tournaments. Now, as the value of this gun in question depends on his skill at the traps, would he not be considered at least a semi-professional and barred from a strictly amateur shoot? Ans. The term semi-professional is a new one, and the club introducing it must define and determine who come within its meaning. There has never been any recognized ruling as to what constitutes a professional in trap-shooting. Following the rule which obtains in rowing and other sports, the individual named would be a professional, but the point has not been decided either way in trap-shooting.

GEESE KILLED BY LIGHTNING.—R. Burch, who resides on Rock Creek, north of town, paid us a call last Tuesday evening. He informs us that during the storm of last Friday afternoon, as he and his family were watching the clouds, a flock of wild geese passed near the house. As he was looking at them there came a vivid flash of lightning, which seemed to pass right through the flock of geese, and the next moment the flock seemed to be thrown into confusion, uttering the shrillest cries of alarm, and six of their number were seen falling to the ground. They had been killed by the lightning flash Mr. Burch had noticed. He went and picked up the dead geese, which he found to be plump and fat, without a mark to show where the lightning had struck them. He had a feast of roast goose the next day. This is the first instance on record, we believe, of geese being struck by lightning while flying in the air, and it is generally supposed that they are safe from the destroying bolt of Jove.—*Chico (Cal.) Chronicle.*

—BY—

GEO. W. SEARS.

("NESSMUK.")

Large octavo, 208 pages, printed on heavy paper, bound in cloth, gold lettering, with a portrait of the author. Price, $1.50.

FOR SALE BY ALL BOOK DEALERS.

Forest and Stream Publishing Co., 40 Park Row, N. Y.

"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

FOREST AND STREAM PUBLISHING COMPANY,
39 Park Row, New York.
LONDON: DAVIES & Co., 1 Finch Lane.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages Price $1.00.

ANSWERS TO CORRESPONDENTS.

TWENTY CENTS' WORTH OF GOLD.

THE "gold medal" offered by the Western Pennsylvania Poultry Society contains about 20 cents' worth of that metal. It must not be supposed, however, that it is worth no more than this. To draw such a conclusion would be to do a grave injustice to the persons who offered these medals as prizes. They would cost perhaps $4 or $5 each if ordered in lots of 50. To make the die would perhaps cost $50; there may be $1 profit on each medal, $50 more; gold and labor of electroplating, 50 cents each, $25; copper, which composes them, say $2; labor, say $73; total, $200.

It must be understood, however, that these copper medals did not cost the Western Pennsylvania Poultry Society anything like so much as this, for they already had the die—the one from which the pewter medals of last year were struck—so that really there was to them little expense beyond the copper and the gilding. The number of "gold medals" offered was about forty. We should really like to see the bill for those particular prizes. Would Mr. Gregg have any objection to sending us for the information of exhibitors a certified copy of this item, as also of the charge for the silver medals.

In manufacturing these medals a circular disc of copper of the proper size is cut out and sent to the electroplater, who gilds it and then puts it in the bath. When it is coated with gold to the amount of 15 or 20 cents' worth, it is taken out, and then put under the die and stamped with the words

WESTERN PENNA. POULTRY SOCIETY
BENCH SHOW.

This gives it a bright finish and obviates the necessity of polishing, which would be added labor and greatly increase the cost of these already valuable medals.

We shall be glad to quote rates to any association desiring to offer zinc, pewter, brass, copper or lead medals, or other prizes. A liberal discount on large orders.

We said last week that the directors of the W. P. P. Society were not to blame for the fraud which was practiced on exhibitors, but they cannot escape some measure of responsibility for it, if any of them saw the medals before they were awarded.

Any man who has an idea of the value of the precious metals and of business methods, and who saw these medals before they were awarded, would naturally say to himself that if these medals were of gold they would cost $50 or $60, a sum greater than any show could afford to give, while, if they were not gold, they were a fraud on the exhibiting public. He would then make inquiries, and on learning the price which was paid for the medals, should have protected himself by disavowing the action of the managers of the show. We are not informed as to whether such a course was pursued by any of the directors of the Pittsburgh society.

To talk merely about Pittsburgh in connection with these base metal trophies is manifestly unjust, if other clubs have been guilty of similar practices. It is reported that at the last meeting of the A. K. C. the Pittsburgh delegate attempted to justify the fraud perpetrated on exhibitors by alleging that the same thing had been done by other clubs. The *tu quoque* argument never carries any weight, and was particularly silly in this case. It has a certain interest, however, as being the first public announcement that fraudulent medals have been given by other clubs than Pittsburgh. Whispers to this effect have been heard before, but it has been impossible to trace them to a definite and responsible source. The question is one that ought to be settled, and, if exhibitors will assist us, the FOREST AND STREAM will be glad to determine the character of all medals awarded at recent shows, and will have them assayed or tested, free of cost, and then publish the results. Medals sent in for this purpose must be accompanied by an affidavit from the sender, stating at what show the medal was awarded, the date of the show, class, and the name of the dog and dog's owner, but the name of the person sending and the information contained in this statement will be regarded as confidential and will not be made public without the consent of the deponent.

Medals and statements should be forwarded by registered mail or express.

It is impossible to foreshadow the action of the A. K. C. on the subject of the Pittsburgh copper medals. The pewter medal fraud was in effect condoned, the subject being laid on the table, and there seems no reason to suppose that the A. K. C. will take any notice of this latest imposition on the dog public.

Since there is in this country a body of men which is supposed to take charge of bench show and field trial matters, and to see that such competitions are conducted in a clean and creditable manner, it ought not to be left to a newspaper to detect and announce a fraud like the one twice practiced by the Pittsburgh show. It was the plain duty of the A. K. C. to have discovered the deception, investigated it and promptly punished the offense. Instead of doing this it dawdles, temporizes, says that the Pittsburgh club are "good fellows" and lays the matter on the table.

The American Kennel Club can gain no friends by such a contemptible shilly shally policy. It has never yet done anything to command public respect, and until it is radically changed it never will. Founded on wrong principles, and originally controlled by schemers, it has been from the beginning incompetent and unworthy of its name. No doubt the intentions of most of its members are excellent, but prejudice has too strong a hold on many of them to permit them to exercise judgment. There must be a change and a speedy one.

THE WELLINGTON TOURNAMENT.

FROM the story of the week's shooting at Wellington, Massachusetts, told in our issue of this week, some notion may be formed of the tremendous proportions to which the pastime of trap-shooting has grown. Fifty thousand clay birds of various sorts thrown in the air invited a very lively bombardment from the small army of marksmen present, and so well was everything managed that there was no utterance of any complaint, no claim that there was any unfair play, nor that everybody did not get a good chance and win according to his merits as shown at the score. This shows that there is no need for anything like the number of complaints which are continually pouring in upon us, asking for decisions upon this or that point, and explaining all manner of difficulties which would never have been met had a clear study of the rules been made in advance.

The shoot shows, too, that the makers of clay birds and artificial targets in any form have so nearly simulated the flight of the real bird, or in fact, so far surpassed it, that shooting from a trap is a complete and thorough test of the comparative skill of the men entered for the match. There has been a wonderful improvement in trap and target since Bogardus came out with his glass ball substitute for the live feathered target. Shooting at the balls soon became monotonous, and long runs of breaks wearied the onlookers. There is nothing of this with the targets of to-day, as seen in the Wellington tournament. These tax the best shot to his best effort, and no pigeon, however wild, however full of flight or doctored by the trapper, could show the "get up and get" agility of some of the skimming clay saucers as they leave a trap well notched down.

The story of this big shoot, where the Eastern sportsmen so hospitably entertained and so cleverly outshot their Western associates, is particularly interesting when it is put side by side with the columns printed when law and nature combined to put down the shooting of live birds. It will be recalled how it was proven beyond a doubt to the satisfaction of the old-time trappists, that the flinging aside of the old time H and T trap was sure to be followed by a general flinging aside of guns. Armories, powder-mills and shot towers were all to fall into decay, according to those who wanted the real bird and no make-believe substitute. Well, the big roosts of wild pigeons dwindled away into flitting dozens, the legislators drew up statutes more or less stringent, and the artificial target came naturally to the front and has given to trap-shooting a position in the list of sports which it never had before. Hundreds shoot now where dozens shot a decade ago, and thousands of clay dishes are broken with ease and comfort where before the handling of a few hundred pigeons was a labor for several assistants for weeks before the actual match. The few live birds remaining will find a fitting grave under a heap of flying bits from the shower of clays sent up every day in every part of the country.

SNAP SHOTS.

THE articles on "The Diamond Hitch," which we are now publishing, will have an interest for a large class of people. Every man who has traveled with a pack train in the Rocky Mountains, or who ever expects to do so, will read them with pleasure; and to the large class who live among the Mountains and themselves throw the ropes, the papers will prove attractive. Experience has taught many of "Yo's" readers how difficult it is to learn to throw this hitch, but it is far more difficult to explain in words how it ought to be thrown. The author of the series now appearing is the first who has attempted this task, and he is to be congratulated on having set forth the operation so clearly. Criticisms and comments on these papers from old packers will be welcomed by all those interested in the subject. There is a great deal to be said about packing, and few pens have been found to do justice to this and a kindred topic, the Rocky Mountain mule.

Death loves a shining mark, and in league with him is the young fool who tries to make a man of himself by stuffing a revolver into his hip pocket. One evening of last week E. F. Stoddard, a prominent citizen of Dayton, O., was standing on the second story landing of a stairway in a hall leading to the street; a young man was passing; from the young man's pocket a revolver fell to the pavement, exploded, and the bullet killed Stoddard. Here were a wife and children left desolate and a community plunged into mourning, all by a pure accident, yet an accident made possible only by this foolish and detestable hip-pocket pistol carrying.

The comments on "Farmer Brown's Trout," and the incidental discussion of the relations which anglers, shooters and campers sustain toward land-owners, might be made profitable for all concerned if governed by reason and genuine feeling. In past years many columns of this journal have been devoted to the endeavor to show that the interests of sportsmen and farmers are identical. There should be no clashing between them; and where differences and difficulties do arise they are due to the unreasonableness of one or both of the parties concerned.

One of the magazines is publishing a series of articles by different writers on "Books That Have Helped Me." What a series might be written on the helpful influence of the "books in the running brooks."

THE DIAMOND HITCH.

II.

GETTING THINGS READY.

THE essential parts of the packer's outfit besides the pack saddles are as follows:

Sling Rope.—A 25 to 30ft. length of ¼ to ½in. rope, the ends whipped so that they will not ravel.

Lash Rope.—A ⅝in. rope 35 to 40ft. long. One end is passed through the ring of the lash cinch and spliced into the standing part, making an eye splice. The free end is either knotted, or better, is whipped, so that it will not ravel.

Lare Ropes.—Lengths of ¼ or ½in. rope, 15 to 20ft. long, used for lashing together in compact bundles the "packs," which may consist of a number of small articles.

Lash Cinch.—A cinch made either of horse hair or canvas from 6 to 8in. wide. At one end is a 3in. iron ring, either running through the hair or made fast to the canvas by a stout leathern string passed back and forth through the ring and the canvas, attaching the ring to the cinch so firmly that nothing can free it. To this ring the lash rope is attached by the eye splice. A better arrangement than the ring is shown in Fig. 4. In this a broad strip of leather is fastened to the canvas, passes over an ½in. iron rod as long as the leather is wide, and then returning to the canvas, is laced to it. Half way from either side of the cinch and close to the iron rod, is a hole large enough to admit the passage through it of the lash rope. This is passed through from the belly side

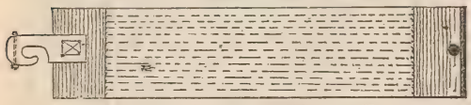

FIG. 4.—LASH CINCH WITH WOODEN HOOK.

of the cinch, and then either knotted so that it cannot pull out, or better spliced, as in the case of the ring above mentioned. The advantage of this arrangement is that the whole cinch pulls smooth from this end, whereas with a ring it is apt to gather on the lower side like a rag. To the other end of the cinch is fastened in the same way a hook, preferably of ½ to ⅝in iron, but often made of wood. The wooden hook is made of oak, hickory or other hard wood, and is laced on the cinch. It should be about 8in. long, 3½ or 4in. wide, and the hook end is often strengthened by a bolt or rod of iron riveted over a washer as shown in the figure. A bolt is best, as it can be tightened in case the wood shrinks. When the lash cinch is in position, the open side of the hook should look forward, and the end point downward and under the animal's belly. The inner surface of the hook is smooth, so that there may be as little friction as possible.

Blind.—A calfskin, or heavy cloth blinder, cut in a long oval and brought together at the ends. This is slipped over the ears of the animal to be packed, and falling down over the face covers the eyes while saddling and packing. To the front of the blind a strap is

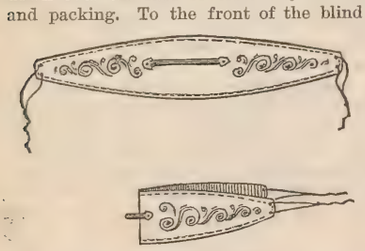

FIG. 5.—BLIND.

sewed for a hand hold, and it is often used as a quirt by the packer who carries it, or it may be hung over the horn of the saddle and carried in that way. The strings go back on the mule's neck.

Jaquima, or as it is more commonly termed, hackamore.—A loose halter, put on the animal when it is caught up in the morning and worn during the day, or until the load is removed and the animal turned out. The stem of the hackamore is the rope depending from it; the equivalent of halter shank. A convenient and inexpensive hackamore is shown in Fig. 6. It is made of ⅜in. rope. C is an eye made by passing one end of the rope, A, under a strand of the other end, B, and then passing the end of B under a strand of A, as in the diagram. Draw this up. Splice in the short end, which goes over the animal's head, about 12in. back from the eye, and then pass the long end through the eye. This completes the halter.

We will take it for granted that two young men quite unacquainted with Western ways are starting out to go through the Yellowstone Park by themselves. They wish to go as inexpensively as possible, and do not care to be confined to the beaten routes of travel. They want to see the nooks and corners that are hidden away among the mountains, to get away from the dust and rattle of the stage coach, and the exclamations of the "coupon" tourists. They decide—and very wisely—to pack through the Park, but do not feel that they can afford to hire an experienced packer. I shall try in these papers to so describe the *modus operandi* of packing an animal, that any two persons of ordinary intelligence can, with a little practice, perform the operation. Out of consideration for these two young men I allow them only one animal.

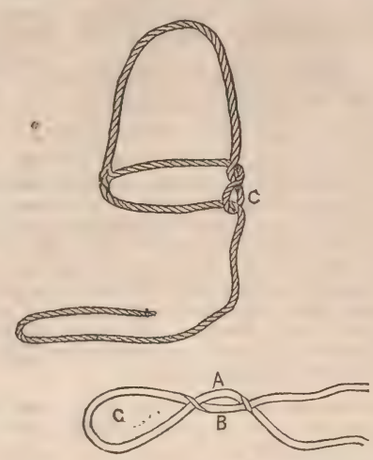

FIG. 6.—HACKAMORE.

I do this because I want them, if possible, to get started the first day, even if they only make half a mile. If they had two or three animals to pack it is very likely they would not get away from camp for a week.

In traveling in the mountains the animals are usually turned loose at night, the bell mare and in fact all the horses being hobbled so that they are not likely to stray, and the mules or burros left perfectly free. The latter will almost always stay with the horses. Of course, some time would be saved if the animals could be picketed out, but in the mountains this is impossible. There are so many trees, bushes and rocks to catch and tangle up a rope, that an animal which is dragging one will be sure to get itself tied up early in the evening, and have to go all night with nothing to eat. This is a serious matter, for if your stock gets poor on a trip, you will be in a bad way. In old times it was often the case that a man's life depended on the ability of his animals to travel, and to travel fast, with good loads, and although nowadays the condition of the stock is not often of such vital importance, still it is always worth while to look after it with the utmost care, and even if his trip is to be a very short one, the experienced traveler is always considerate of the well-being of his animals.

The single pack animal of our two heroes, or pupils, is probably feeding somewhere in the neighborhood of the camp. As soon as they have turned out in the morning—and they should always do that at dawn—one of the party should make the fire and begin to get breakfast, while the other goes off to look up the animals. If they are not in sight he will have to listen for the bell, which one of them should always wear at night, or, if he cannot hear that, he must look for their tracks made in the wet grass or on the snow, and follow these up until he finds the animals. They should then be driven close to camp, and allowed to feed there until needed.

FIG. 7.—BLINDED.

After breakfast one of the party should wash the dishes and get the "kitchen" in shape to pack up, while the other may take down the tent and fold up the blankets. After all this has been done the animals must be caught. If they are at all wild, take a couple of lash or picket ropes and stretch them about some trees standing near together, at a height of about 4ft. from the ground, so as to form an inclosure, with only one opening about 6ft. wide, and here leave a loose end of rope long enough to close this entrance after the animals have been driven into it. Drive the animals slowly toward, and at length into, this rope corral, and then catch them and put on their jaquimas and tie them to the trees. Of course, if the animals are so gentle that they will let you catch them without difficulty, you will not take the trouble to corral them.

We will suppose the animal to have been driven in, caught, its jaquima put on and the stem tied to the limb of a convenient tree. When you are ready to saddle, lead him out to the saddle, put the blind on and drop the halter. The operation of saddling need not be described, but several points must be kept especially in mind. You must see to it first that the blankets lie smoothly, *i. e.*, without wrinkles under the saddle; second, that there is plenty of blanket wherever the saddle bears on the animal's withers or back; third, that the blanket is well forward, for its tendency is always to work back; and fourth, that the saddle is put on so firmly that there is no possibility of its slipping, turning or working. Do not be afraid of cinching the beast too tight. Ordinarily two men take the latigo in their hands, and bracing one foot each against the animal's side, pull until the mule takes the shape of an hour glass. The animal grunts and groans and swells itself up as much as possible, but it is useless for it to resist. It is business, not sport, this packing. If you are using a double cinch saddle—a sawbuck—do not take the flank cinch up too tight at first, though it must be made tight enough, so as to hold well, especially where there is no crupper.

It is better to make up your packs before you catch your animal, because, until you have had some practice, this will be slow business, and you must not keep the animal tied up and starving while you are learning how to do your work. Let him feed until the packs are prepared. Of these there are usually three or more, two side packs and a center, or top, pack. It is important that the side packs be about equal in bulk and weight, for they are to balance each other on each side of the saddle, while the top pack may either be one bundle or two or three, as may be convenient. Rolls of bedding make convenient side packs, but boxes, sacks of flour or oats, or any single bundles, may be carried on the side. If you can do so, make up your two side packs of your heavy stuff. Keep the bedding out, if there is enough for side packs without using it. If there is not, then roll the hand bags up in some of the blankets, and then in canvas and tie for side packs, making the bundles as nearly as possible equal in bulk and weight.

Besides these bulky packages there will inevitably be a lot of small articles, which of course cannot go on the load separately, but must be put together in the top or center pack. This pack, therefore, may contain a varied assortment of articles; a lot of "grub," including flour, coffee, bacon, sugar, pepper and salt; the "kitchen" with its knives, forks, spoons, camp kettle, coffee pot, frying pan, tin plates and cups; a hatchet, the tent, matches, some extra ropes and extra ammunition. How is it all to go?

You have one or two extra squares of canvas, say 6ft. square, and half a dozen empty flour sacks. Your flour, coffee and sugar are already in sacks. If your flour sack is full, it can go on the saddle, between the side packs; but if it is less than half full, put it into an empty sack and tie it close down. Then put the sacks containing sugar and coffee and the tins of salt and pepper into the other end, and tie that. The knives, forks, spoons and cups, packed with grass or twigs about them so that they will not rattle, will perhaps all go into the coffee pot, which may be put in the end of another sack and tied, while the bacon, wrapped up in a sack, can go into the kettle, which if small enough can be tied up in the other end of the sack that has the coffee pot. If too large for that, the coffee pot with its contents can perhaps go in the kettle, and a sack should be tied over its mouth. If the kettle is small enough so that it will go between the side packs and yet not be smashed by the crosstrees of the saddle, it may be placed there, but it is safer to tie it on outside. The hatchet must have its cover put on so that it will not cut anything. Spread a square of canvas on the ground, and on it arrange all the packages in an oblong form, filling in between the larger ones with the smaller articles. After arranging the packages as compactly as possible, fold the canvas over as tightly as convenient. Make a loop in a lare rope and pass around one end, drawing it tight, then pass over the end of the bundle, and taking a half hitch around the other side of the loop, tighten. Make a loop about other end of the package and tighten; pass the rope over the end of the bundle, and take a half hitch and tighten, continuing until you have a compact package, which should be about 3ft. long, 18in. wide and 9in. or a foot deep; of course its size will vary indefinitely. If quite light two such packages may go on top of the pack. Have all your bundles compact and well tied up.

If you have an axe instead of a hatchet this must go on after the packing has been done, being shoved under the ropes, blade out, where it can do no harm, and securely tied. Your plates may go into a frying-pan and this into a sack. Never put a bucket or anything that can be crushed into a side pack. If you have any blankets left over from the side packs fold them twice. They will go on top of the load and under the pack cover. Leave your camp kettle and frying-pan one side for the present.

YO.

The Sportsman Tourist.

WORMS VERSUS FLY.

IF, as is said, "an honest confession is good for the soul," I propose to gain a little on the record book by making of your columns a confessional and entering them as an impenitent penitent. If I do not lay myself open to the serious charge of being a complete renegade, it will be only because of my starting from a standpoint at the least mugwumpian.

I have abandoned one of the strongest planks upon which nearly all trout fishermen who write up their adventures, from those who simply record

Date.	*Number.*	*Weight.*	*Largest.*
May 30.	400.	7lbs.	3oz.

to those who sprinkle profusely the ornamental phrases, "speckled beauties," "sulked," "rushed," "music of the reel" and "gave him the butt," stand as immovable as the Colossus, and some of them beyond doubt stand as firmly by the brookside as in print, and martyrs to a principle, catch their trout with flies or not at all. The plank is a slippery one when tested by actual work. Many when in seclusion slip off, and I have often been a tumbler, but I never before got such a fall as I have during the last week. My footing never was very secure, but I'm a goner now, and the next time I go trout fishing, if it be in early spring, and my destination be the Adirondacks, I shall leave at home my split bamboo fly-rod, and all that that implies, fit out with a stiffer bass rod, No. 1 to 1-0 sprout hooks, No. 8 and 9 ringed sinkers, and fish with worms and "chunk bait." Now don't understand me as starting in on the Don Quixotic windmill charging task of trying to persuade or convince any "true" fishing sportsman that worms, etc., are to be preferred to flies under any circumstances. There are men, very good fellows, sane on every other subject, who would write me down crazy on this were I so foolish.

My platform, or rather the plank in question, is this: When you go afishing the prime object, aside from the pleasure derived from the outing, etc., equal in either case, is to catch fish in any fair, sportsmanlike method.

The spring of the rod, the hum of the reel, the thrill of the strike and the pleasure of final capture are not lost to me because it is a minnow, a dobson or a crab that the bass has taken: while my fly neighbor, casting in the boat, experiences neither if the bass won't rise (and we all know that there are more times that they won't than they will) to the gang of flies with which he industriously whips the warm surface.

So it is with the trout. We travel many miles by rail, stage, buckboard and on foot through very rough country, and it costs us a lot of time and money to get into a good trout stream. When I get there I want to catch something. (Change that I to we, for I know there are lots of us.) I prefer a light rod and tackle and flies, but my preference for the latter lure does not continue if I find by the best of evidence that the trout prefer worms. for that spring and hum and thrill, etc., depend entirely upon the fish. If they won't take your fly, why there's the end of it; you might as well get into a more comfortable place than up to your hips in a brook, fighting flies and mosquitoes with one hand and with the other threshing a stream, empty to all intents and purposes.

Now all of us like the fun of catching them; most of us like them on the table; most of us like to have a good story to tell without padding it with lies; most of us like to carry out a few big ones. If sticking to the flies gives pleasure enough to any person to enable him to dispense with all of these other things, well and good; let him stick, and if he pleases whip the stream in vain; but to him I would say—and I speak as a representative of a large class—"Because thou art virtuous, shall there be no more cakes and ale?" If adherence to the fly under all circumstances be praiseworthy, then the man who, for virtue's sake, will content himself with occasional little ones, while his companion—one of the wicked, with the same gear, except as to bait—is having great success, and is constantly engaged in tussles with big trout, is a martyr and deserves a reward of some kind.

A friend once tried to convince me that it was as cruel to deceive the poor trout by imbedding death in their hoped-for food, as to poison a spring; and he drew a pathetic picture of the feelings of the fish when he discovered the fraud. All of this I admitted; but I must say that the substitution of a 9ft. leader and set of flies for the worms, with which, when he began his lecture, I was fishing, was due, not to his sermon, but to the simple fact that then and there, on a lake where the trout were bred on flies alone, he was catching three or four to my one. I wonder, if the case had been reversed, if he would not at least have longed for the forbidden fruit. I admitted the deceit and the cruelty, but claimed that in both the worm fisherman was less guilty than he of the fly, for, while of a dozen trout that spring for the flies, certainly half is a fair proportion to bring to the basket, the other half dozen get but pricked mouths; while of the dozen that come for the worms, the greater part get them and we don't get the fish; a trout for every worm would be astonishing good luck. So with even 50 per cent. in each case basketed; his others get nothing, mine their breakfast. On the time-honored principle "the greatest good to the greatest number," worms are ahead.

I have been airing my old ideas, and as I have confessed my last trip has increased even their laxity. As between the rural method by which, with pole and string and sinker, the rustic snails 'em with worms and the æsthetic method of the experienced and well equipped angler with split bamboo rod, tapered line and flies, I have unhesitatingly championed the latter. But my views have become seriously modified; theoretically, I am still prepared to defend the fly system; practically, I have within the last week thrown it aside and adopted the rustic method, worms and chunk bait, sinker and all included. I did, however, adhere as a matter of comfort and as one connecting link between the present and the past to my rod, a shorter and stiffer implement than those in general use, and by so doing lost more than I saved of splendid fish. I propose to submit my story and I wonder if among your readers there will be those who will feel sure enough of their virtue to come out and affirm that, under the circumstances, they would not have done as I did.

Last autumn I was one of the many who spent a few delightful days at one of the swell hotels of the Adirondacks, strolled on its spacious piazzas, rolled ten pins, watched lawn tennis and dancing, and made sundry efforts to add the amusement of fishing to my resources; my only reward being a few medium-sized black bass. To obtain these I had, first, to work hard to secure a few worms (as yet a very scarce commodity, although this year they are growing more plentiful). After a four-mile row to a certain spot in Marion River, where the voracious bass had left a few minnows, I spent an hour or so in taking a few of them. Then I went back into Eagle or Utowana Lake and devoted the little remainder of my time to the bass. The first time I employed a so-called guide, a man faultlessly attired in a guide's costume, and who undertook to have everything all ready, providing all needed outfit, at usual wages, $3 per day and board. Arriving at the minnow rocks we proceeded to bait hooks, and found ourselves the possessors of three small worms. This was bad enough, for the pumpkin seeds were more plentiful than shiners, and great bait eaters; but when in succession our guide lost one of the worms, then attempted to convince us that bits of the salt ham of which our lunch sandwiches were built were "jess as good as worms to catch shiners," and that "punkin seeds were jess as good as shiners to catch bass," our wrath arose, and my companion, a gentleman of over eighty years, and for at least seventy years an ardent and successful angler, "spoke out in meeting;" and I don't think that "guide" will ever want us any more than we will him in future.

I longed for a day with the trout, but everybody, especially the "guide," combined to convince me that I was sighing for the unattainable, trying to turn the past into the present. But fortune favored me, for through accident I became acquainted with a lady whose son had the preceding day, under the guidance of one Henry Taylor, made a most successful trouting trip. It is needless to say that the next day I too was under the same guidance, bent on the same mission. A five-mile drive on a buckboard and a mile across country brought us to a large brook, in whose spring holes Henry guessed "we could tease a few of them out of the wet," and we did. We fished four springholes; two drew blank; two others paid. As it was the season for fly-fishing and the location was suitable we used flies. A large brown hackle and a grizzly king were eagerly taken. We had seven or eight fish, ranging from ¼lbs. up, when I hooked a large one. The ensuing fight, together with the necessary use of the landing net, spoiled the hole, and this one, weighing nearly 2lbs., was my last; even "chunk bait," to which we finally resorted, failed to draw. That evening Henry and I exchanged promises, his that if I would return in early spring he would insure me some splendid fishing, mine that, D.V., I would be on hand.

Two weeks ago I found that other business made it necessary that I should give up my proposed trip, and I wrote to that effect. By return mail came a letter which you have already published. It was full of glorious promises, but as you remarked editorially, there were "lions in the path." Obstacles so great stood in the way that I was most reluctantly forced to decline. I had business which demanded my time; pleasant as the trip might prove, I ought not to go, and I wrote Taylor to that effect. This was on Saturday morning, and for an hour or two I felt that glow of comfort which comes to a man who resists temptation and sacrifices pleasure to duty. But then came a reaction. All of the obstacles which seemed so high at first became gradually less formidable, and I began to feel despondent and downhearted. A member of my family, competent to judge, characterized my mental condition as "cross and sulky." My courage followed the example of Bob Acres, and the next morning, Sunday, I found it all gone. I showed my appreciation of my virtuous resolution by breaking it. My letter to Henry was not posted, and on Monday morning I started with a week at my disposal, of which three days must be devoted to the journey to and fro.

To reach Blue Mountain Lake one must be in Saratoga in time to start by the 10 A. M. train on the Adirondack Railroad; this brings you to North Creek (58') a little after noon, thence on Tuesdays, Thursdays and Saturdays now (every day later in the season), a thirty miles drive over a good road in or on a Concord stage, brings you to Blue Mountain Lake by 8 or 9 P. M., stopping half an hour for an excellent dinner at Eldridge's, as North River is generally called. A buckboard can be hired on any day, but this, while very comfortable, is an expensive luxury. One with seats for 3 costs $12; for 5, $20; while the stage fare is $3, and on a pleasant day well worth the money. From the westward, on the New York Central, it is necessary to go to Saratoga the day previous. I did, and spent the night there sleeping part of the time and the rest fighting mosquitoes, with which the town was well populated; and curiously enough, in the courtyard of my hotel there still lay a great pile of snow. Snow to make snow water, and the insects thus encountered at the very outset of my trip argued poorly; but there was one comfort in the woods, I could wear garments and tar oil, neither of which were adapted to the city. The events which thus apparently cast their shadows before, did not come. Once clear of Saratoga, I bade adieu to mosquitoes, seeing not over half a dozen in the woods, and no snow except in forest-sheltered swamps where, in holes, there still remained snow and ice. Arriving at 9 P. M., early the next morning Henry and I started, and arrived at the large pool under the dam. I could hardly wait to get at the big trout that beyond question were lying in wait.

Well, I exhausted my patience and my variety of suitable flies, with not a rise. Then came Henry, and dropping his big hook armed with a chunk of chub, and out came a beauty, then another, then chubs. We started down, and my results were repeated, his were not. Thinking, perhaps, that I fishing ahead, and being out of practice, spoiled the stream for him, we exchanged precedence, and he tried the flies, but, although a very skillful caster, the result was the same, and Rock River proved a failure. We afterward learned that but a few days before the dam had been opened to drive logs, and thus the fishing was spoiled. After an hour of failure, we struck across the woods to another stream. Taylor, born and brought up in the woods, and always a fisherman, knew them all. At this we did better; we took a few small trout, 4 to 6oz., with the flies, one brown hackle and scarlet ibis, in a long stretch of still water; then we came to a deep and large pool with a heavy rift in it. Both of us cast the flies with no success. Then, determined to test the matter, I put on a large hook, a sinker and worms. Hardly had my hook sunk before I had hold of, I thought, a snag. Lifting gingerly to avoid damage, the head and shoulders of a very large trout made their appearance, just long enough to let me know the nature of my "snag" to excite hopes; then he unbit, dived and vanished. After that, at every symptom of a touch, I struck hard, determined to sacrifice my stock of hooks rather than lose another trout.

My second strike was a success and I saved a pound trout, and during the day I saved quite a lot of good ones; but I lost more than I saved, for the amount of strength required to jerk the half-ounce sinker and heavily-baited hook up the swift waters left very little to be expended in setting the hook home. My rod is an 8oz., 9½ft., and unusually stiff for a split bamboo. I could strike and save anything up to half a pound; fish larger than that generally got away. When, however, I did manage to get good hold of a big one, the little rod did its work well.

Our day's work brought us a good basketful of fine fish. We improved on the 6-inch law and saved nothing under ¼lb.

That night I spent at Merwin's Blue Mountain House and had the honor of being the first guest of the season. This hotel, situated 200ft. above the lake, is a most comfortable resort when you get there; the 200ft. rise in a fifteen minutes' walk from the lake is a pretty stiff pull after a day's work. I made this my headquarters for three days, finding the fare good, attentions and accommodations all that a fisherman could wish. Being in advance of the season has, though, one disadvantage. While your guide is admitted to the family table, you sit in solitary grandeur the only feeder in a big dining room, and at such epochs listening to chat and laughter, music and children's play, from which your grandeur debars you. The position of "Lone Fisherman" is very lonesome, It is not the woods custom to give to outsiders a share of domestic pleasures.

As I had but four days to fish I worked hard and much of my time was wasted. For instance: A drive of four very long miles on the Long Lake stage road took me to Salmon River, two hours of hard fishing brought me two small trout. The snow water was still in the river and trout were not. At the south inlet of Raquette Lake there are a falls and resultant large pool. I rowed fifteen miles to fish that pool and caught two suckers, yet while I sat there chatting with Mr. Durkee, superintendent of the Adirondack Railroad, quite a number of large trout rushed from the pool and through a 3in. water apron which covered a sloping rock, 6ft. to the first resting pool, then after a time went on and surmounted the falls, yet in the still water above they showed no sign.

While all of the native fishermen agreed that too much snow water was the trouble with the forest-sheltered streams I fished, some held, and I think with truth, that one great cause of failure was that the trout were bottom feeding on sucker spawn. Never in my life, except in the salmon rivers of Alaska, have I seen streams so densely crowded with fish as were all of these with suckers, ranging from 8in. to twice the length. And at the mouths of the creeks a black converging mass was visible way out to the deep water of the lakes.

To obtain bait for our buoys or trolling we had but to place a trap, consisting of a big bag with hooped mouth, bent downward, from 10ft. to 15ft. above, and fill our bag with from three to four bushels. This unending supply of these otherwise useless fish is a godsend to these waters, for living as they do in the deep waters and coming on to the shoals to spawn before the bass begin to feed, the food supply for the lake trout is assured.

Not so, however, with the bass, with which some years ago the Raquette was stocked, and which have spread into all of the lakes (Raquette, Forked, Blue Mountain, Eagle and Utowana). They have cleaned the lakes of shiners, chubs and all other minnows, and now it is thought must live upon their own young, and such little supply of troutlets as is left. Every spring young bass an inch long are seen in countless schools, but the stock in the lakes does not seem to increase, and very few fish of any size are taken. Now and then a two or three pounder is the best record I could get for them.

At one stream only did we get first-rate fishing, and on that for several hours it was simply perfect. This stream ran through open country, there was no snow water, and every hole of the rapids yielded a trout. On this stream I again made a faithful effort with flies, and to insure against failure through any want of skill upon my part, had Taylor do the same. After a bit he got tired of it; then following close behind me, kept lifting and saving so rapidly that it was exasperating to me. Fish after fish, none less than ½lb., several up to 1lb., and a few of twice the weight were buried in a cold-water swamp that night—we had no ice. But Henry did not catch them all, for again I yielded, and this time for good; and fishing to get trout out of holes that held trout that would not take flies, I did it the correct way and got my share. Next spring, if I live and can, I'll do it again, and as I said in the beginning, take with me my bass gear and outfit.

Every one in the woods was praying for rain; not only was the fishing injured by the long drouth, but in all directions the burning woods gave evidence of careless fallow burning. From the Blue Mountain House (in the view from which are included Eagle and Utowana lakes) a dozen separate fires could be seen at once, and besides the loss of timber many had suffered loss of buildings, etc. On Thursday a very large fire seemed located on the road in and where I went out on Monday; we drove for miles through a burned, and in some places still burning, district. In one place the bridge over a stream was gone, burned down, and we had to make a difficult detour. Pleasant as it may be when all is right, the front top seat on a high stage drawn by four horses is not pleasant upon such detours; and on Thursday the driver informed me he had to run his horses to get through.

The lakers were taking the troll very well during my stay, but I did not care to fish for them. I did spend a few spare hours at the buoys, and caught several from 2 to 6lbs.

The flies made their appearance on Thursday (19th) but did not seem to be hungry, or had not been educated sufficiently, for it was not until Saturday afternoon that I received my first bite. Tar and sweet oil probably had its usual saving effect, but as we all know, there are times when even that will not save us. I think that the extreme dryness of the air kept them languid. There were very few mosquitoes. I was more troubled by them in my one night at Saratoga than during my stay in the woods. The "punkies" were not at all troublesome, and except that the dry weather interfered with the fishing, I could ask nothing better, and altogether I had a most delightful trip.

On the Raquette I passed a few pleasant hours. At one of my favorite Adirondack resorts, "Under the Hemlocks," as at Merwin's, I was first guest of the season, and Landlord Bennett, as did Merwin, exerted every effort to make it pleasant for me, and succeeded. I am prepared to testify that the people of the woods live very comfortably, even when the season has not yet opened.

A fine large hotel is building on the site where last season stood the Blue Mountain Lake House, more commonly known as Holland's, and I believe will be ready to receive guests by Aug. 1.

I am told that the rush for the woods is increasing, and that the various hotels have more rooms spoken for now than were taken a month later last season.

Speaking of the food supply of the people, they don't seem to care much for the bass. This may be partly due to prejudice, for one and all of the natives with whom I talked seemed to agree that the bass planting was a mistake, and a serious one, unless a suitable amount of food fish is provided for them. They claim that the Commissioner was mistaken in considering the trout supply of the Raquette practically exhausted when, some fifteen years ago, it was stocked with bass; that there were then a great many trout left for those who knew when and where to get them. And I know this. During my stay a guide trolling in South Inlet caught a number of large speckled trout, seven or eight, I believe, aggregating 13lbs. I myself, trolling along the bays of Raquette Lake, had several fair strikes which, through defective gear, I lost; and Taylor assures me that it is very unusual for him to troll near the shore in the various lakes at this season without fair success, always large ones. At Bennett's I was shown four two-pounders, which, with six others that had been consumed, were caught from his wharf the day before on live bait.

Thus, one thing would seem evident, either the work of the bass during fifteen years has not been as destructive as is commonly claimed, or the lake was not so depleted as it was supposed when the bass were put in, for I thus know actually of some thirty odd pounds having been taken by two men in two days, and that's mighty good trout fishing anywhere. PISECO.

CONCERNING HERBERT.

THERE can be no dispute as to much of "Veteran's" article upon Herbert in the FOREST AND STREAM of May 26, but still, it seems to me, the article in its entirety scarcely does him justice. On the contrary, it strikes me as being too severe. I think I am not one of those given to overpraise him, and certainly not one of those who almost deify him—if there are such—but yet I have always felt that the sportsmen of this country owe him a large debt of gratitude.

It is difficult at this time and with our present surroundings to understand fully the conditions under which Herbert undertook to perform his self-assigned mission, which was none the less a mission because it subsequently became a means of sustenance. There were not then in existence in this country any of the papers or periodicals which now in every quarter enrich the domain of sport. There were not then the hundreds of thousand readers of them, nor the hundreds of writers and critics constantly contributing to them. Porter's *Spirit of the Times* was the first, and for a long time was the only exponent of sportmen's views; and that was governed and colored by general sentiment of the day, of which, regarding such views, it may be safely and mildly said that the sentiment was not always moral or healthful.

It is somewhat difficult, too, to appreciate now with accuracy and candor all the personal relations and circumstances which blighted Herbert's career, and which finally destroyed his life. That these unhappy relations and circumstances were brought upon him by himself is not to be denied, and as "Veteran" properly says, "The example of his private life is one not profitably to be followed." But yet, they are to be considered when making an estimate of him as an author and a teacher. We are to read his works as we read the works of the early poets and novelists, and take "the form and body of the times" as part of themselves.

Herbert was a writer of strict purity. It is not only that his diction was pure and his style charming in its ease and grace, but that there is not a line of immorality or an unworthy precept emanating from him. If it shall be said that he brought potations into prominence, it must be remembered that that feature was an inevitable adjunct of the social system then prevailing among all classes, and that indulgence in it was his misfortune and his ruin.

He opposed all shams, all dishonesty, and all double dealing. He upheld honorable sportsmanship and inculcated manliness. If, perchance, he showed an Englishman's deference to rank and position, he did not carry it to servility; and if, sometimes, he expressed contempt for things American, it must be admitted that there were many things American which purposely were presented to him in an unattractive aspect. The truth was, he was here a stranger in a strange country, and in some sense, an outcast in it. It is not surprising, therefore, that ideas acquired at home should cling to him here, even to the extent of becoming bitter prejudices; nor that a superior education and a dominant nature should have made him appear imperious and offensive. But without that he was kind, generous and companionable.

That he did not foresee that the breechloader would supplant the muzzleloader is charged against him. But he is not alone in that want of forecast. English authors ridiculed the gun as much as he did, the elder Greener and "Marksman" being among them. It is also charged against him that he occasionally fell into error regarding both fish and game, but who does not fall into error occasionally when dealing with any specialty?

All such defects may fairly be set down as minor defects when casting up the grand total of his merits.

I have heretofore endeavored to make up an impartial judgment of him, in his public capacity, and I confess to an admiration for him in that light. It is an admiration which is elicited by the fact that he stood as the pioneer for the elevation and dignity of sportsmanship, for the enforcement of law, and for the protection of fish and of game; that he proclaimed his opinions honestly, sturdily and in classical English; and that, thanklessly then, but fearlessly and persistently, he sowed the seed which now is bearing such good fruit throughout the land. DUSKY GROUSE GOSSIP.

THE FOREST AND STREAM columns, I notice, often contain letters from Pacific slope contributors, describing that peculiar and weird sound made in the spring of the year by the cock dusky grouse (*Tetrao obscuro*), and commonly known as "hooting."

Nothing, however, that I have seen, has been written concerning the hoot of the hen bird. Perhaps it has been forgotten by those who have written, or, perhaps, not identified by them as a sound made by a grouse; for it is a strange, mysterious cry, and one hard to locate in the woods. Moreover, I have found that it is not often made save by birds that frequent more sequestered parts—places where they are likely to be undisturbed during the breeding season.

Often when in the woods had I heard this sound and been unable to account for it. One day, however, when out on a mountain side specimen shooting, fern hunting, etc., I heard, when well on toward the evening, the same cry proceeding apparently from a thick forest of Douglas firs at the foot of the slope which I was on; and the place seeming suitable, I made up my mind to trace the puzzle to its source.

What a beautiful evening that was! Through the scented woodland, on the drowsy, languid air, the dreamy hooting of the grouse floated to my ears. The wild bees, butterflies and a thousand other insects were droning and fluttering among the grass and sweet wild flowers at my feet. How lovely was that mountain side! Ah, me! when one looks back and catches glimpses in memory of bits of forest and grassy hillsides, does it not seem like a glance at paradise?

Quietly I walked toward the spot whence seemed to issue the mysterious sound. Hark! There it is again, one short note, loud, yet mellow, and yet withal seemingly subdued "coo," repeated at intervals of two minutes. After going a short distance I heard a rustling in the leaves just in front of me and paused to ascertain the cause. The next moment from behind some short brush a large cock grouse stepped out in full view and strutted about with swelling neck and tail proudly spread, his wings slightly expanded and his red eye ceres glowing like vermilion. Unconscious of my presence, he went through his maneuvers, but whether these were hostile or amatory I could not then tell. I kept my eyes fixed on him, watching every movement and holding my breath for fear of alarming him. Soon I became aware of the fact that the cooing noise was drawing nearer, and nearer it got by degrees until it seemed to come from a small clump of bushes just beyond his lordship's circus ring, while that gallant seemed every moment to be nearer the bursting point. Presently the grass began to quiver, the cry, meanwhile having stopped, and then across the track of the cock, lythe and crouching, with coy upturned eye, softly stole the hen bird.

Here, then, was the solution of the mystery. I own I was astonished, for I had always, from the tone and character of the sound, imagined it to be made by some species of owl, certainly not by a grouse. Now, however, I recalled to mind several instances of my having heard the sound and the cackle of the hen grouse in the same part of the woods. I watched the pair for a while, and then crept gently away as I came. It would be a pity to disturb such a pair of God's most lovely creatures.

What a shame that so many call it sport and pleasure to shoot the cock in the spring when he is engaged in hooting to his innocent mate. Look at him now and see if he is not beautiful. Mark the poise of his noble head, the harmony of the slate and ashy tints in his plumage, with here and there a touch of Vandyke brown. What a pretty gorget of grey white feathers on his throat! See what an eye he has! Soft as a dove's, bright as a hawk's and overarched by its glowing cere. Note the breadth of his bonnie breast, the strength of his shapely feet, with the soft gray plumes coming to the toes. Alack, poor fellow! The pot-hunter will soon have thee when thou dost hoot, and mayhap he will boil thee with a small piece of fat bacon and a few brown beans, and will call thee "pot pie," and smack his poaching lips over thee. Poor hooter!

There is no doubt in my mind that the wholesale slaughter of the male birds in the spring seriously lessens the number of fertile eggs produced by the hens. I have myself seen in parts where many males had been shot in the hooting, a band of fifteen or twenty hen birds in July with eight or ten chicks for the whole lot. Other people who have had better opportunities than I for observing these birds during the breeding season have told me the same story, and this they have seen on ground where, when the cocks had been unmolested, from eight to ten chicks was a common number for each hen. I am not prepared to state whether the dusky grouse is monogamous or not, but from what I have said, and which I know to be correct, I should imagine they were. I am glad to say that the provincial game law has this year been amended, and hope with many others that soon the "way of the poacher will be hard."

May I now be permitted to relate a little incident which happened when I was out grouse shooting some years ago? It was on a pleasant day in September that I took a ramble over a woody mountainside in search of dusky grouse. A young half-breed accompanied me, and off we went to where the trailing arbutus was thick with berries, and other small autumn fruits, at the like of which the grouse's heart rejoices, were abundant. Having no dog, we were unable to get many birds, although they were plentiful enough. So, after enjoying the view and a good rest at the top of the mountain, we began to work toward home, keeping along the face of the hill and near the feet of some crags, where we expected we would flush some birds. We were walking over a piece of sloping ground covered with broken rock, with here and there a clump of withered fern, when my companion, who was a little in advance of me, stopped short, quickly raised his gun and fired. O, heavens! What was that? A scream like that of a human being in mortal agony piercing our horror-stricken ears, while the unfortunate shooter, with ashen face and trembling hands, sprang clear around in his tracks and confronted me with quivering lips and starting eyes. Not a sound could he get out of his parched mouth. I was horribly startled, but kept my eyes fixed in the direction he had fired in. In another instant out of the shaking fern tumbled a half-grown pig and rolled down the steep slope in his death agony, while his comrades, wakened into new life by the shout of laughter I gave, broke cover at a dozen different points and scattered grunting over the mountain side. Friend, hast seen the dawn break and flush a cold, gray sky with rosy tint? So it was with that poor hunter's face when at last, between my fits of laughing, I got him to understand what it was he had shot, for look he would not. He then explained that he had shot at what he thought was a blue grouse in a bunch of fern. What he had seen was the curly end of poor piggy well crusted with a fine coat of blue mud from his bath. We made uncommonly good time for home after that, thinking that the owner of the pigs might be handy with a double-barreled shotgun loaded for wolves; and there is no accounting for the keen desire some people have for testing a shotgun.

The circumstance taught me a lesson which I have never forgotten, and it is one which all young sportsmen would do well to learn by heart before venturing out with a gun: "Never shoot at anything in the woods until you are certain what it is." W. B. A.

FORT SIMPSON, British Columbia.

BREEDING OF THE WILD GOOSE.—Pittsburgh, Pa,, June 3.—I see by your correspondent M. M. Benschoter, of Berlin Heights, O., that a pair of wild geese hatched but three young ones, and that the opinion prevails that the brood never exceeds five. On a recent Western hunting trip it was my good fortune to find a pair of domesticated geese (*Bernicla canadensis*) which had hatched out seven healthy young ones. In the Allegheny City park there were hatched, about three weeks since, a brood of six of the same variety. One, however, has since died. Which proves the limit cannot safely be placed at five.—C. A. R. The eggs range in number from five to nine. They are usually five or six. "D. D. M." writes from Rockaway, N. Y., of a pair of wild geese in confinement: "Seven eggs were laid, beginning April 30, 1886, and seven young were hatched. This year the first egg was laid March 30, and in due time seven young were brought off the nest. Though in each case there was a good supply of grass with a pond, they died within a week."

THE BIG BEAR OF TOBY GUZZLE.

FOR a dozen or more years a monstrous bear had his stamping ground in the vicinity of McAdam, York county, New Brunswick. In the berry season his favorite haunt was on a cold spring brook, known as Toby Guzzle, which empties into the Digityquash, near the track of the New Brunswick Railway. His selected feeding ground was a large blueberry patch in the burnt land on the opposite side of the brook and road, where in passing to and fro he was often met with by section hands and track walkers with whom he always successfully disputed the right of way. Every spring on emerging from his winter quarters he visited the farms of the settlers and levied on sheep and other stock. So great were his depredations that the flocks and herds had to be folded; even that was no security as he would sometimes tear off the boarding of barns to get at his fresh meat. There were hunters in those days, for bears were plenty, but this old bear knew all about "ways that are dark and tricks that are vain." Once only had he got into a steel trap, but this he had soon reduced to scrap iron. It seemed his delight to follow the hunters' trails and tear down deadfalls and cuff, out from their places steel traps; thus he prevented the capture of other bears. He was indeed "a holy terror." My grounds were on the same line adjoining and north of it, where he seldom came, except on the approach of winter when he was seeking his den. Once in the spring of the year he was hunted out of his bailiwick by the disgusted local hunters, when he crossed the track about 300yds. from my camp, and I had a view of him for a moment, and he loomed up as large as an ox. Once I saw his track in black growth where snow was thin and damp and took the measure with a pocket rule Step, from heel to heel, 26in.; width of pad, 7in.

Three years ago I was on the way to my camp, and came across a lumber scaler, who said that during the past winter while on his way across country from one camp to another, he one day routed out a monstrous bear from his den; that the bear stood upright and fanned the air with his arms and rattled his ivories in so terrifying a manner that, as the lumber scaler was armed only with an axe and .22-caliber pistol, he wisely concluded he hadn't lost any bears. At a safe distance in cover, he saw bruin return to his den. He described the location, which was near a long beech ridge, a noted feeding ground for bears when nuts were plenty and at which place I had taken many in the past. I felt sure it was the big bear before mentioned; that he had lived on the ridge in the fall and would be there during the spring. I felt pleased to have a chance at him; even if I failed, the "other fellers" couldn't crow. I had to wait many days for the waters in the swamps to subside before I could get to the ridge. Finally one pleasant morning at break of day I started with rifle, axe and trap, the latter a brand new one. At about 8 o'clock I had gained the ridge where the beech growth was heavy, and the works and sign of bears were as plentiful as one could desire to see.

After a good rest and admiration of the prospect, I started with the intention of going the length of the ridge, but had gone less than a quarter of a mile when I halted as a big bear up-ended on my left a few rods ahead, giving a snort as he did so. With the first move I made to unload, he came down on all fours and started down the hill on a gallop. There was an open space ahead that he would have to cross, and dropping on one knee I got good and ready, and pulled on him as he came in sight where I wanted; but the shot struck just over his shoulders and plowed the ground on a rising knoll beyond. To say that I was disappointed, mad at myself clear through, and wanted to kick myself, doesn't begin to express my sensations. Why, if I had talked to another half as mean as I did to myself, I would have deserved a good thrashing.

After a little I calmed down and concluded it would be just as well to trap him. Still I couldn't account for the miss, as I felt sure I was dead on him; but upon reloading it was made plain. I used a cartridge that was no longer manufactured and difficult to obtain, andI reloaded shells with a round ball for use when necessary to shoot a trapped bear, saving those with long bullets for long shots, and I usually cruised with one of the latter in the rifle. There was a difference of 10in. in curve, the round ball shooting highest. That morning I had loaded with round ball by mistake. Thus my miss was excusable, and my equanimity was, in a measure, restored.

I shouldered my load again and started down the hill toward a brook to find where he got his drink, as bears always seek water after eating. A stream ran along at the base of the ridge, and beside it was a hard-beaten bear path. This I struck and followed till I found where the big bear stepped over it to reach the brook. Such old, cunning bears seldom travel the beaten roads, knowing that therein often lie the hidden traps. The problem now was to find the right place to set my trap. I had taken several cunning old chaps by a plan I studied out, and, though it is a "dead give away," it goes. I followed up his trail to where it passed through a clump of low hemlocks; cutting out only enough sprays to bed the trap, and those few were stuck beside the trap in finishing up, so as to fill the gap at the top. The explanation of this is that in passing through the brush a bear will close his eyes for their protection, and so not discover any disturbance of the surface to excite suspicion. The impress of the foot indicates where the trap should be placed. (Where there is no bush growing I improvise a hedge). Lastly, I made a cup of bark, fetched water, and with a whisp of fir cleansed everything I had touched, besides drenching the ground I had trodden. I put up no bait in such cases, as its presence is a danger signal.

Six days later on my second look the trap was gone and the sport began; for the most interesting part in trapping is trailing the game. From the word go, the old fellow meant business, stopping for no obstructions, tearing the heavy birch sapling clog through logs, fallen treetops and small growth like a plow hitched to a pair of runaway steers. Up the hill and over boulders and every obstruction he went with apparent ease. And how my heart beat, as I saw such evidence of his power, lest the new and untried trap should fail. Gaining the top of the ridge, he turned and started for the further end, keeping well up on the backbone. Over and down into a thick cedar swamp, and here I expected to find him, if at all, played out; as by the looks of the trail he had been in for thirty hours or more. On reaching the swamp I was well played out myself, but the probable nearness of the game nerved me up. After half a mile in the swamp I sighted him going like a colt, but often brought to by fouling snags. I closed up and kept within shooting distance waiting for a fall, so as to get a fair shot. Presently the clog caught, throwing him broadside, but so that only the head and neck were in sight. I fired quickly, and he dropped, but was right up again bleeding at the mouth. I aimed to break his neck, but shot a little under. He was away before I got in another shell, but fell again shortly full in view, quartering, head toward me. I sent another, this time at the shoulder, and he fell in a heap. I confess I had a wholesome respect for his power and kept my distance a while lest he should revive, and seeing me at close quarters reverse the order of the chase. But the old Remington .58-85-530 had done for him this time, and as I sat and enjoyed my pipe on his huge proportions, I congratulated myself on my success. The fatal ball of pure lead had struck the joint of the right shoulder, passed down and backward and lodged against the skin on the belly. It was flattened to nearly the size of a half dollar and pulverized the bone and flesh to a pulp for a diameter of 2in., tearing the heart to shreds in its course. Such ammunition is good medicine for big game. One front foot had been mutilated years before, evidently by a steel trap. The fat on his rump was 3½in. deep, that on the belly 1½ deep. I should have liked to see him weighed; but having weighed others I judged by comparison he weighed all of 600. His pelt weighed 37lbs., and when stretched was plump 8ft. long.

It was the largest bear I ever killed or have ever seen. His capture was hailed with pleasure by every one, and never since has any one seen the big bear of Toby Guzzle.

WARFIELD.

The pranks of what must be the Toby Guzzle bear's twin brother in ursine depravity are related by our New Brunswick correspondent, Mr. Edward Jack, who writes from Fredericton:

"Bears are numerous in many places in the country here. Last autumn one got so bold that he broke open several barn doors at Durham, on the Nashuaak, and carried off some sheep. In one instance when a party of young men were watching for his return to the carcass of a sheep which he had killed, he left that spot and helped himself to an animal belonging to a neighboring farmer. At another time he tore the shingles and boards from the side of a barn, looked in, and not deeming it prudent to enter, walked leisurely off. He also broke open a barn door where some cows were stabled, but left without doing any further damage. He is very bold, attacking animals in open day, and seems to have but little fear of man. He is also very cunning, refusing to be caught in any deadfall, though many have been set for him."

A WOODCOCK IN PAWTUCKET.—Pawtucket, R. I., June 2.—Tuesday evening watchman Crandall picked up on the platform at the passenger station a woodcock partially insensible. The bird had evidently flown against some of the wires and was "knocked out of time." It soon recovered, and this morning was apparently as well as ever in its captivity. The bird was kept in captivity until it fully recovered, when it was liberated and went on its way rejoicing.—R.

NEW BRUNSWICK MOOSE.—Fredericton, N. B., June 2.—Fewer moose than ordinary were killed by New Brunswick lumbermen on the branches of the Miramichi last winter. Henry Turnbull a few days since saw the tracks of a cow moose and calf some miles above the mouth of the Taxis River, thirty-eight miles distant from the city of Fredericton.—EDWARD JACK.

THE PARKER GUN took the leading prizes in the expert class at the great Wellington shoot last week. A full report of the meeting is given in our trap columns.

ZINC FOR RUST IN BARRELS.

Editor Forest and Stream:

Sixty years ago, before the galvanizing of iron came into use, a citizen of this town strapped the blades of his oars with strips of sheet zinc secured by iron tacks. In three years' use in salt water the iron tacks had not rusted, and were as bright as when new.

Seven years ago I fitted a steel bar to the keel of a row boat, and laid under it before nailing a strip of sheet zinc. The boat was used in salt water two years, and has been used in fresh water to this time, and the steel shoe has always been and now is entirely free from rust.

I tacked a small piece of zinc with a bright tack to a piece of wood, and applied nitric acid to them. The tack remained bright.

Place a strip of zinc the length and width of the bore in the gun barrel when not in use, and there will be no beginning to rust, nor increase if already rusted. If preferred, roll up thin zinc to fill the barrel.

The Soule Brothers, of Freeport, heavy ship builders in the past, have improved this principle for several years by laying zinc under iron when the iron was not already galvanized.

The iron is galvanized as effectively when it lies in contact with zinc as when its pores are permeated.

The reverse action takes place with copper and iron. In this case the iron wastes rapidly. AUSTIN.

PORTLAND, Me.

THE NEW YORK GAME LAW.

THE general object of game legislation during the past winter, according to Mr. Hadley, has been to keep the game laws about where they are without making many changes. Mr. Hadley claims that therefore it was foolish to go on and amend them any more. The general codifications that were offered by Senator Daly and Assemblyman Langbein shared the same fate with Assemblyman Hadley's bill covering the same ground. Not one of the three codes were reported; or, if it had been, it would have stood no chance of getting through.

In regard to sea game it may be stated that the 10-inch lobster act of 1880 has been repealed. The Governor has signed Senator Wemple's bill appropriating $5,000 to the Commissioners of Fisheries to erect, as soon as practicable, a fish hatchery at Mill Creek, Round Lake, Hamilton county, so as to restock the Adirondack streams with brook and other fish natural to that locality. The Governor is likely to sign Assemblyman Fitch's bill appropriating $5,000 for new hatchery buildings and improvement of grounds at the Cold Spring Harbor station of the Commissioners of Fisheries, to be expended under the direction of the Commissioners of Fisheries, on vouchers to be approved by the Comptroller; but no money shall be paid out of this appropriation till a lease of the lanes and water rights now occupied for such hatchery shall be executed to the State, rent free, from the owner, for such period as the same may be occupied as a public hatchery, which lease, when accepted by the Commissioners, shall be filed in the office of the Secretary of State. The Governor signed, under protest, Bulkley's bill forbidding the taking of fish in Lake Ontario in the town of Cape Vincent, within a mile of the shore, except by hook and line held in the hand. The Governor also signed Brundage's bill, making it unlawful to catch trout in the county of Steuben except from May 1 to Aug. 1, and Hogeboom's bill forbidding shad fishing in the Hudson on Sundays, amended so as to add, in Sec. 1, after the word river, the words, "past the northern boundary of Westchester county," thus limiting the space in the river devoted to the operation of the law.

The Governor has in his possession, and is likely to sign, the following fish bills: Senator Murphy, authorizing the possession and sale in the city of New York of salmon trout and other fish taken from waters outside of this State; McMillan's bill (Sheehan's in the Assembly), amending Chap. 437 of the laws of 1886 so that the act shall not apply to salmon trout or landlocked salmon caught in lakes Michigan, Superior, Huron, St. Clair, or in the waters adjacent thereto or connecting the same; Senator Comstock, providing for the construction of a fishway in the State dam at Troy amended so as to recognize the rights of the mill owners; Senator Coggeshall, restoring the 6in. provision stricken out last year relative to the possession of brook trout, speckled trout, salmon trout and landlocked salmon, the $10 fine being omitted; Assemblyman Cornwell, allowing the spearing of any fish but bass and pike in Seneca, Keuka and Canandaigua lakes, and the drawing of seines for the catching of bait; Assemblyman Hamilton, allowing any individual or association having exclusive right to shoot game on certain tracts of land to post notices and arrest trespassers; Assemblyman Sime, providing that the bills of State fish protectors shall be audited by boards of supervisors as other bills are audited; Assemblyman Giese (from the Audubon Club of Buffalo), amending Chap. 534 of the laws of 1879, Sec. 21, so that no black bass shall be caught in the waters of Lake Erie and Niagara River above Niagara Falls on the American side between the 1st day of January and the 1st day of July, bullheads in Lake George being exempted; Assemblyman Collins, providing that no person shall at any time catch salmon in the waters of this State with any device save that of angling with line or rod held in the hand, and then only from March 1 to August 15 in each year. Any person in fishing for other fish allowed to be taken by nets shall upon catching any salmon immediately return the same to the water without injury. The foregoing provisions not to apply to the artificial propagation of fish by State or public authority. Violations are termed misdemeanors and there is a penalty of $100, or one day's imprisonment for each dollar of fine, the informer to receive one-half of said fine; Assemblyman Sweet, allowing the taking of suckers and other fish with nets at the foot of Cayuga Lake; Assemblyman Emery, forbidding pound nets, etc., in Lake Erie adjacent to Erie county.

Among the fish bills that never reached the Governor were the following: Assemblyman Leete, prohibiting fishing in Oneida Lake between April 1 and June 1 for pike, perch or wall-eyed pike; Senator Dunn (similar to Assemblyman Hamilton's) relating to special privileges for fishing, etc.; Senator Vedder and Assemblyman Frost, prohibiting the killing of quail between Jan. 1 and Nov. 1, and hares between Feb. 1 and Nov. 1; Senator Kellogg, allowing the catching of all kinds of fish in Lake Champlain during October and the first 15 days of November; Senator Comstock, amending the game law of 1879 so as to include "set lines" among prohibited devices unless by permission of the Commissioners of Fisheries; Assemblyman Reeves, providing that notices forbidding trespassing must be placed on every half mile along highways, instead of every 50 acres, as now; Assemblyman Reeves, forbidding the taking up of any net, weir, etc., at the peril of heavy fines; Assemblyman Fort, forbidding the possession of snares, etc., on waters inhabited by salmon, lake trout, etc., in close season; Assemblyman Thompson, amending the Jefferson county act so as to except that part of Lake Ontario bordering on one of the towns.

The oyster interest has been helped by the new law, introduced by Senator Fagan and Assemblyman Hines, amending the Jamaica and Hempstead law of 1871 so as to place the planting of oysters in the hands of the respective boards of auditors of those towns. The Governor has also very important bill, introduced originally by Assemblyman Reeves, and afterward somewhat modified by the Committee on Game Laws in the Assembly and by the Finance Committee in the Senate, for the protection of shellfish cultivation within the waters of this State and to raise revenues. As finally passed, it provides for the mapping out of the oyster lands and makes very strict regulations. Assemblyman Moore's bill regulating the use of steam dredges weighing over 30lbs. in taking oysters never came out of the Judiciary Committee. Assemblyman Reeves's appropriation for a steamer to patrol the harbor of New York to prevent dumping did not pass the Senate.

In regard to the song bird act of 1886, several amendments were offered. The one by Assemblyman Moore, allowing the taking of birds and eggs for scientific purposes became a law. The Governor has before him Erwin's amendment to the same act which, in the first place, merely exempted St. Lawrence county so as to allow the shooting of blackbirds, hawks, etc. It was finally passed, making it a misdemeanor to feed or shelter sparrows, also making it lawful to kill crows, hen hawks, owls and blackbirds. Assemblyman Smith's amendment to the same law did not pass the Assembly. It made certain exemptions, so as to allow importers of plumage to deal in feathers, etc., of birds killed in other States.

The chief bill relating to forestry was the one introduced by Assemblyman Hadley appropriating $15,000 to continue the work of the Adirondack survey. This is now in the hands of the Governor, but there are slim prospects of his signing it. The Governor has signed the Hadley bill permitting the sale or exchange of consolidated tracts of forest lands to secure contiguity. The Governor has before him Assemblyman Winnie's bill appropriating $5,000 to allow the Forest Commission to develop the State Park in the Catskills; also Assemblyman Lyman Hall's bill amending the law for the taxation of forest preserves; also Assemblyman Hall's bill adding Oneida county to the forest preserve.

The Ways and Means Committee of the Assembly reported Assemblyman Eldridge's bill exempting from taxation forest lands exceeding ten acres from which no income is derived. The Committee on Game Laws never reported Davies's bill creating a commission to act in connection with the State Fishery Commissioners to prepare a codification of the fish and game laws. The Ways and Means Committee did not report Assemblyman Winnie's bill amending the law of 1880 so that the game and fish protectors appointed under that act shall be under the control and authority of the Forestry Commission, as created by Chap. 283 of the laws of 1885. The Senate did not pass Assemblyman Hogeboom's bill amending the Forest Commission act of 1885 so as to give certain exemptions to summer occupants and to leased premises.

In regard to the shooting of game, the Governor has Reeves's bill amending the general laws of 1886 and 1879, extending the exemption clause to Gardiner's and Peconic bays, so that wildfowl may be shot from boats. The Assembly refused to pass Senator Coggeshall's bill restoring the law so that woodcock may be killed in August, and prohibiting the killing of ducks, geese and brant in April excepting in the waters of Long Island Sound, where they may be killed during that month. The Assembly also refused to pass Senator Pierce's bill allowing the shooting of quail and rabbits on Long Island from Nov. 15 to Dec. 31. The Assembly did not pass Assemblyman Reeves's bill making the quail, grouse, hare and squirrel season on Long Island, Nov. 1 to Jan. 1; woodcock, July 1 to 31 and Nov. 1 to Jan. 1; shore birds and wildfowl, July 15 to May 1. The three following bills were never reported from the Assembly Committee on Game Laws: White, providing that it shall not be lawful to shoot or kill any wild duck between the first day of January and the first day of September in each year; Reeves, amending the general law of 1879 so as to forbid the killing, possession or sale of wildfowl between May 1 and Sept. 1; Ainsworth, amending the laws of 1879 and 1880 so that the time for hunting deer is extended from Nov. 1 to Dec. 18, and the time for having in possession from Nov. 15 to Dec. 1, and the time for transportation from Nov. 15 to Dec. 1. ALBANY.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

ADDRESSES WANTED.—"Hutch," D., C. C., P. C.

J. C. E.—Give the smaller bores a handicap of 2yds. each.

J. G. S.—Snipe shooting season on Long Island will begin July 10.

BOSTON.—We have published description of sleeping bag; see issue of Dec. 31, 1885. You will have to have one made.

A. M.—You can train your spaniels by the "Training vs. Breaking" system. We know of a bull-terrier which has been taught successfully by the book. Your time ought to suffice.

C. H. M.—1. Farrar's Maine guides will give you the information. 2. The rifle will do, but a .40 or .45 would be better. 3. The make is reliable. 4. The issue with "P.'s" grizzly story can be supplied.

E. G. B., Hartford.—The rifle and charge named would kill a deer, if hit in a vital spot, at short range. Choose a .40 or .45 instead, and a single-shooter. The short bullet will not be fitted to the long chamber.

C. B. W., California.—1. Is a 12ft. sneakbox large enough for two to cruise in? 2. What are the cheapest boxes built for, both 12ft. and 14ft.? 3. Are they safe to sail in? 4. Would you advise B. L. shotgun and rifle combined for Florida, or doublebarreled B. L. shotgun alone? 1. Yes. 2. The price varies from $30 to $200; see the builders' catalogues. 3. Yes, if not over-rigged. 4. Take the doublebarreled breechloader in preference to the other.

PUG, Waterbury.—1. Does a bitch in whelp need more exercise than she will naturally take if given her liberty? 2. What kind of dogs do you consider most likely to have distemper and at what age will it appear? 3. Which of the following breeds do you consider the best to breed for profit, the St. Bernard, Great Dane or cocker spaniel? Ans. 1. No. 2. Puppies from 3 to 7 or 8 months of age. 3. St. Bernards, if any one of the three, but it is not always safe to look for profits from the breeding of any breed.

TO KEEP FISH FRESH.

THINKING it may be of use to some of our brother anglers, and the season being on hand, I would relate my way of preserving trout which I intend to take home. It may be an old thing, but I never have seen it in print and to many an old woodsman it was quite new. I found it by experimenting, and here it is: Kill your fish when caught. Pick out the trout you wish to preserve, clean them well, taking out the gills and all the clotted blood on the backbone; wash them thoroughly in cold spring water (be particular about that), sprinkle a little salt along the backbone and let them dry off by air in a shaded place. They need not be so dry that the skin draws, but only in such a measure that no water drops off from them. While they are drying, select a shady place under some low bushes where the loam underneath is cool to the hand. Dig a hole 1ft. deep by 2 or 3ft. long, according to the quantity of your fish. Now put down one layer in such a manner that none touches the other. Then put on one inch of loam and put it down tightly with your hand. Be also very particular about that. You may then put in another layer and continue until the hole is filled up to within 2in. from the top, when it is to be closed with loam. If you take good care to close up every layer tightly, you will find your fish at the end of six days as fresh as when you put them in. I have kept them perfectly hard for ten days and then took them fifteen miles out of the woods and expressed them to New York, where they arrived in very good condition. In taking them out for final transportation do not clean them of particles of earth which may cling to them, but pack them closely in moss, and if you have it bundle all up in packing paper, so as to exclude as much air as possible. Now try it and you will have well conditioned fish to take home.

PISCATOR.

THE UNDINE FISHING CLUB of Rockaway, L. I., celebrated their annual opening on Decoration Day, May 30. The members were out in full force, and the spacious club house, with its wide verandas, presented an animated scene. The reception committee, headed by Com. Taylor and Dr. J. C. Ubert, welcomed a large number of visitors in royal style. An elegant dinner was served at all hours. Every one enjoyed themselves thoroughly. The club has a fine house pleasantly situated and well appointed, and its members are all good fellows who pass their spare time in fishing and yachting. We hope to be on hand to help them "open" another season.—BIZ.

WRITE UPTHEGROVE & MCLELLAN, Valparaiso, Ind., for new catalogue of sportsmen's and civil engineers' wear.—*Adv.*

THE OLD BAMBOO.

WITH APOLOGIES TO THE AUTHOR OF "THE OLD CANOE."

OLD Bear Mountain's sides are gray and steep,
And Hudson's waters flow dark and deep.
The smoke from my pipe with its rich perfume
Scents every part of my quaint old room,
Where rods and rifles of many a make
Stand almost as thick as canes in a brake.
Where the sunshine shimmers the whole day through
There stands in one corner the old bamboo.

The tip is unbroken, the guide rings still there,
Though the old linen cover lacks sadly repair;
The joints and the ferrules are dented and worn
With the brunt of the battles the old rod has borne.
But still the old warrior, trusty as steel,
Is ready for duty from tip point to reel,
As fit for the fight as when first it was new,
My cherished tried comrade, the old bamboo.

Oh! many a time with my rod in my hand
Have I strolled along the pebbly strand,
Down many a stream where the alders grew thick,
And the gnats and the punkies bit like Old Nick;
And laughed as I tossed the gaudy fly,
To see how the trout were deluded thereby,
As I waded out where it deeper grew,
While I deftly handled the old bamboo.

The waters I fished, they flow there still;
The gnats and the punkies they bite with a will;
But of alders and fish every stream is bereft,
And who goes for trout will get sadly left.
The woodcock are gone and the merry quail
No longer whistles "Bob White" on the rail;
You may hunt, you may fish the whole day through,
You'll need not your gun nor the old bamboo.

So now as I muse in my old arm chair,
And glance at my phiz in the mirror up there,
The face that I see has much graver grown,
Though my laugh will preserve its ancient tone,
And the hand that lent the gay fly wings,
No longer can pick on the banjo strings,
Nor "whoop her up" as I used to do,
When first I handled the old bamboo.

So the dear old rod does my youth renew,
Those happy days and that merry crew,
And I think with a sigh, can it really be
That I was that youngster so joyous and free?
Is it only a dream, a fanciful tale,
Of rod and rifle, of trout and of quail?
And wonder, dear reader, between me and you,
Shall I fish once again with the old bamboo.

CAPT. CLAYTON.

THE BIG PIKE.

LOOKING back through the vista of recent years, and calling up to memory long tramps over hill and forest, camp-fires and snowy canvas along the Blue Juniata, adventures with canoe and paddle on the winding branches of the broad Susquehanna, and weeks with rod and gun along the forest-bordered Yellow Breeches and Conodoguinet; mentally reviewing all these memories of the past, fraught with pictures of lake and river, mountain and woodland, and the familiar faces of old friends, my thoughts linger with special interest on the recollections which cluster round the month we spent at Long Pond. Sometimes I sit with closed eyes and bring up the whole scene before me again with such accuracy that I am deceived myself, and sit there dreaming, until suddenly I wake with a bitter feeling of disappointment.

There is the pond before me, somber and gray in the early dawn, with feathery clouds of mist rolling lightly over the surface; and the opposite hills, lofty and fir-crowned, mirrored to perfection in the deep and silent depths. Then the sun peeps over the mountain top, and in an instant the golden light scatters the mist, penetrating all the dim and shadowy nooks, bringing into bold relief each rock and tree, and glitters and sparkles like ten thousand diamonds on the ever-changing water. A flock of ducks rise with a startled cry and skim over the surface; red-headed woodpeckers are thundering on the rotten limbs; over in the swamp among the gum trees the flickers sound their shrill whistles; a carrion crow pursued by hosts of smaller birds, utters cries of distress as he flies higher and higher over the pond; far up in the trees, screened by densest foliage, the squirrels are chattering. All the world of nature is wide awake. Over on that grassy knoll under the pine trees rises a column of smoke; the tent flaps are thrown wide open, and a procession of blanketed forms stagger out and deposit their many-colored burdens on the line stretched behind the tent.

All is activity. Some are cleaning fish, some watching the fire, and one eager angler is already out on the pond pulling toward the opposite shore with the scarlet and silver spoon dancing in the wake of the boat. Now they are grouped around the rude table. The coffee is steaming and fragrant, the potatoes are brown and crisp, and there come the fish, shedding rich odors and adding the last touch to our already voracious appetites. And then—But hold on! I am dreaming again and living over only in memory those shadowy days that are past.

On the morning that we reached Long Pond and stood gazing across the broad bosom we seemed to breathe in with the pure mountain air a sort of premonition that we were to have some stirring times before we broke up camp. That premonition was to a great extent fulfilled. The fishing in Long Pond was very good. Our boating facilities, however, were limited. Forster had brought his canvas canoe and down in front of camp lay the half sunken hulk of an old tub that had probably helped to land its own weight in fish many, many times over. It had been repaired so often that I firmly believe not a plank of the original boat still remained. Weeds grew out of the cracks and the bottom was so thickly impregnated with soil that a youg tree had taken root in one end and bade fair some day to shelter with its shade the fisher who sat on the seat beneath. But stern necessity knows no law, so we mustered it into use and contrived by the constant use of a bailer to navigate the pond. For want of oars we used the primitive paddle and it was a graceful sight to see the ancient boat under our muscular efforts, clearing the waves like a sand barge.

Our camp was beautifully located on a little eminence, and shaded by pine trees that perfumed the air with aromatic odors and carpeted the ground with their crisp brown needles. Our tent looked straight across the pond, and through the flaps the first rays of the sun glared in and never failed to wake those of us who neglected to turn out at the first call. And then we had a spring, of course—a sparkling, ice-cold stream, that flowed out of a circular basin, girt around by huge granite rocks and a massive pine tree that had twisted its gnarled roots in and out among the stones till it resembled a veritable Laocoon. We did a great deal of fishing. We hunted a little and made a few sketches.

In the mornings we used to paddle up and down on the pond, ricochetting our spoons over the surface, getting numerous strikes and frequently landing a nice pike. Forster trolled with great success in his canoe. He always went out in his bare feet until one morning, catching a good-sized pike, he threw it carelessly into the cockpit, where it floundered and thumped against the canvas sides of its prison. And then absent-mindedly straightening his cramped legs, Forster thrust his toes into the spacious mouth, and the triangular teeth and square jaws closed on them with a vicious snap. He yelled lustily, and thrown off his guard, another fish seized the hook and jerked the rod off the canoe. We paddled to his assistance, and then joined in the chase after the rod which was shooting rapidly toward the upper end of the pond, and was finally recovered minus spoon and fish. After that Forster wore shoes.

When we got tired of trolling we anchored our boat in a deep hole under the shady side of the mountain, and using a float and worms, landed yellow-bellied catfish, and sometimes a goggle-eyed sunfish, with bristling spine and rainbow-hued scales. We caught no very large pike, and concluded that the pond didn't hold any big ones. That was a rash and hasty conclusion.

One morning we went up half a mile through the woods to visit our one neighbor, and procure some fruit from his well-stocked orchard. He was an old settler whose father had lived there before him, and had built the abandoned log cabin which still stood in ruins near the present house. He narrated wonderful stories of the times when the savage painted in yellow and red ochre, whooped and yelled along the shores of the pond, and described in a thrilling manner numerous adventures with the crafty panthers and ravenous bears that used to roam in all their pristine savageness through the pine woods and over the mountains. That morning we found him standing down by the shore of the pond, and watching impatiently a flock of young ducks that were disporting themselves some distance out from shore. "What's the matter, Goliah?" we asked. His huge stature and muscular limbs had gained for him that nickname. He turned round. "Hullo! Glad to see you." Why, dern my luck, I can't do nothin' with them ducks. They're half gone now, and I'll hev to build a pen for 'em, or I'll soon have none. Why, only a week ago there was fifteen, and now dern it, there goes another. Look out there. See that."

We glanced out on the pond just in time to see something dark disappear under water. A heavy wave was spreading shoreward. A moment before I had counted nine ducks. I now saw but eight half swimming, half flying with frightened quacks toward shore.

Goliah was furious. "Dern that critter. I used to think it was a mink or a muskrat, but blamed if I don't b'lieve it's a fish; one of them big pike, I'll bet."

"Are there any big pike in here?" I asked eagerly.

"Waal, yes, there's a good many slappin' big fish in here, but it's tarnation hard to ketch 'em. But that fish out here, he's bold and he'd jump at a spoon. See that old stump stickin' out of water? Well, that fish is always around there some place; there when he ain't eatin' duck; he ketches young fish in among the lily pads. Try to ketch him and I'll give you the free use of my orchard long as you're here. Want some apples, do you? Well, go up and help yourselves while I pen these young ducks up."

We got our apples and started back to camp resolved to capture that big pike. We decided that our largest and brightest spoon with a young minnow fastened on the barb would be the most tempting bait. Minnows were scarce around camp, so that afternoon we paddled up the pond some distance to the mouth of a small brook, where we thought we might get some. Forster accompanied us in his canoe and landed a couple of small pike on the way up. We caught a good many bait fish, just the size we wanted. The first one we caught Forster claimed and put it on his spoon. He trolled round in front of us for a while without success, and having filled our box, we were about starting for camp when Forster cried excitedly, "I've got him! I've got him."

He was a few yards out from shore, right among the lily pads, and, although he was using the paddle vigorously, the canoe seemed to be stationary. Then we saw a splash in the water, and Forster headed the canoe around as the fish started for the open pond. He got free of the lily pads and into clear water, and then dropping the paddle he seized the rod. The fish was straight out from the stern now and the rod was bending dangerously. Then came a flank movement, and the strain was pulling the canoe sideways. Suddenly the line slackened. "Look out," we shouted, "he's coming toward you." The fish must have darted under the canoe, for the line suddenly tightened, the tip of the rod seemed to be trying to curve around the bottom, and Forster, taken unawares, leaned to one side, and in an instant the canoe upset and Forster and the rod plunged in headforemost and disappeared. He came up in a moment, gasping and spitting. We were soon on the spot and dragged him, dripping wet, into the boat. We righted the canoe and recovered the rod in among the water lilies. The line was tangled and twisted among the tough stems, and was broken off near the hook.

"I tell you what, fellows, that was a big fish," said Forster. "Why I believe he could have pulled that canoe all over the pond. I'll have another try for him." We advised him to stop fishing out of his canoe but he was obstinate, and continued to troll around the pond. But that very evening while paddling backward a hidden snag brought him to a stop, and made a six inch rip in the canvas. We rescued him for about the fifth time and after that the canoe for want of cement remained on shore, and was finally mustered into service as a camp table. The double paddle was bisected, and made to do duty on our ancient boat.

We had intended to have a trial at Goliah's big pike the next day, but when we got to camp with our bait Lester greeted us with a marvelous tale of a trout stream back among the hills, and produced as evidence a young mountaineer who had strayed across our camp. He offered to guide us to the place the next day. "Only two miles away" he said it was, "and just swarming with fish."

He accepted our invitation to spend the night, and as our accommodations were limited we quartered him in Forster's canoe.

I think his conscience must have troubled him, for he kicked out the end in his sleep, and roused Forster's wrath to such an extent that he refused to accompany us.

We started at daybreak and traveled for two hours through forest and swamp, over rocks and heaps of loose stones and thickets of tangled undergrowth. It was six miles if it was a yard, but our guide remarked pleasantly, "That he guessed they measured it differently down where we came from." We reached the place at last. The stream was a beauty, and ran through a deep gorge so narrow that the mountains almost touched above us. It was one continual succession of sparkling little waterfalls and deep brown pools, so densely shaded that not the faintest glimmer of the sky touched their surface. We fished for hours, landing a good many beautiful trout, till the sun warned us that it was time to start. Our guide accompanied us part way, and then pointing out a path that he said would take us to camp by a short cut, disappeared in the thicket. We took the path, and after walking for miles it seemed to us we came out on the shore of the pond.

But it was the wrong shore. We were just opposite camp. We yelled and howled and lit a signal fire, and waved our coats and hats, but to no purpose. No welcome boat shot out toward us, though we could see the fellows moving around camp. It was imperative, so we tramped a weary mile round the pond through brambles and cranberry bog, and finally came into camp muddy and footsore. Forster greeted us eagerly, "Hullo, glad you got back. There are a lot of tramps right across the pond. They've been yelling at us for half an hour, and I'll bet they'll attack us to-night. They are hid some place in the bushes now." We smiled sadly. Should we give ourselves away? We were silent, but we had our revenge all the same, for Forster spent the night at the tent door waiting with a loaded gun for the tramps who never came.

But to return to the pike. He appeared before us that night in every conceivable form. He danced over the bed clothes, took wings and hovered above our heads; he struggled with a huge hook hanging from his jaw, and finally appeared in the act of swallowing a plump young duck, whose vociferous quackings woke us up. It was 6 o'clock. And here let it be recorded for the benefit of supernatural-minded people that, according to Goliah's account, that identical pike was actually masticating the ninth duck at the same time that he took that *rôle* in our dreams.

Our bait fish were all dead, so we had to get a fresh supply. Then a flock of ducks tempted us, and we maneuvered round after them until noon; but about 2 o'clock Lester, Forster and I, with tackle and bait, started up the pond. Half an hour's steady paddling brought us to the upper end, where we exchanged our half-sunken craft for a somewhat tighter and less weighty boat, belonging to Goliah. The remainder of the brood of ducks were now safe behind a wooden paling, and could only look mournfully out on the pond and express their disapproval with vigorous and frequent quacks.

"You see I've got 'em shut up now," said Goliah, "an' as that critter ain't had no duck since mornin' he'll be just ready for supper now. And mind," he called after us as we shoved off from shore, "don't ye come back without him."

We reached deep water and first threw in our lines baited with minnows. But we got no bites, and pulled in nothing but water-soaked twigs and weeds that twined round our bait till they looked like water snakes with long green tails. The sun became unendurable, so we put on our spoons and trolled for a while. Back and forward we went past the old sunken tree, skimming over beds of fragrant lilies, the barbed hooks ruthlessly tearing apart the pretty white petals, and our reels singing a merry tune as the hooks clung for an instant to some tough stem or hard-fibred leaf. We traversed every foot of space in that corner of the pond, but in vain.

The pike was probably taking a siesta somewhere down among the lily roots or was in some lonely secluded corner basking languidly as is the wont of his tribe in the warm rays of the sun on the surface of the water. So we pulled inshore and refreshed ourselves, body and soul, with quart cups of iced milk, sitting in the chilly atmosphere of Goliah's spring house and listening to some of his rafting adventures, for he had handled the rudder on many a voyage down the Susquehanna and had twice narrowly escaped with his life, once at Naticoke, and once at old Mehoopany dam, now only a few shapeless piles of dingy gray stones and rotted timbers. But the sun was sheering off toward the west and its vertical rays had lost their intensity, so we girted ourselves anew for the fray, and with fresh hopes pushed off from shore. Once more we baited with minnows and dropped our lines in the water. Then we trolled again, lazily resting our rods on the stern and watching the spoons rippling in the shadowy wake of the boat.

Lester got a strike, and we were all excitement until he landed a wretched little 12in. fish. "Cut him open," suggested Forster, "and see if he has any young ducks inside of him." This was met with chilling contempt. We fished for a while in silence, while the sun crept lower and lower, and our shadows lengthened visibly on the fast darkening water.

Far, far away over the hills came faintly the sound of a distant farmhouse bell and the long-drawn, mournful howl of a dog in harsh contrast to the melodious tinkle. The mournful cry of a whippoorwill echoed from the thickets across the pond, and a moor hen, startled by something unseen, rose with a shrill cry and flew over our heads. It was supper time and we were getting hungry. Again we made the circuit, and crossed and recrossed the pond. Not a strike rewarded us.

"This is getting tiresome," said Lester. "It's no use to try for that fish. He has been brought up on duck, and he's not going to lower his dignity to take a painted piece of brass or a young minnow. I propose a halt."

"Yes, let's go to supper," chimed in Forster.

"Well, now see here," said I. "I'm hungry, too, but row up to that clump of bushes there at the end of the pond, and rest a moment. Then row on down rather

slowly past the old stump, and if we don't get a strike we'll give up and go back to camp."

This was satisfactory, so we rowed up to the end and ran the keel gently into the soft bank, greatly startling a monster frog, which leaped with a frightened "ker chunk" into the water, and buried himself in the soft mud. We remained there awhile, and Forster and Lester took apart their tackle. They had had a surfeit of fishing for that day. We pushed off. Forster seized the oars, Lester threw himself in the bow, and I stood watchful and expectant in the stern, rod in hand, and our largest minnow impaled on the triple barb. Silently and noiselessly we moved along. Right in front was the old stump. Now we were gliding past it. We were leaving it behind, and the glittering spoon, dancing in our wake, was rapidly nearing it.

Twice I dropped a foot or two of line, and the spoon sank for a second under water. Now it was at the stump. One short pull which made the swivel turn rapidly, then a gentle drop that left it motionless for a second, and then there came a fearful dash, a lunge forward, a shower of drops, the line tightened with startling rapidity, the rod described an involuntary arc, and we sprang to our feet wild with excitement. The fish was off for the open pond, and preferring to humor him, off we went in pursuit. Once, twice, he sprang full length out of water, shaking the drops off his massive head and silvery sides. Then down to the bottom settling with bulldog tenacity into a steady pull. We hung on closely, giving him plenty of line, and letting him dash at his own free will down the pond in the clear open water. On he went, then a sudden halt and off again at right angles, reeling out a few more yards of oiled silk. We were nearing the shore now. He was lost to us if he reached the weeds and beds of lilies. Carefully and steadily I gave him the butt and headed him off into open water again. Then down the pond and across from shore, and finally he settled down in the deepest part and sulked. He was obstinate and refused to budge, so we waited on him, resting on our oars while he gained fresh strength and energy.

The sun was out of sight, leaving behind only a pink and orange glow that was rapidly fading. It darkened visibly and a silence fell on the forest. A chill air from the mountain blew across the pond, and the outline of the distant hills was blending more and more into the horizon. Suddenly the reel sang merrily as the huge fish made a fresh start and dashed up the pond, now deep under water, swerving from side to side, now so near the surface that his back protruded, and then leaping savagely into the air in the vain endeavor to rid himself of the agonizing hook. Would we never tire him out? Apparently he was as fresh as ever. The chase continued until finally, out-flanked and out-maneuvered on all sides, he showed signs of weakness. We cautiously drew him closer, keeping the line well stretched; he made wild darts, dragging out foot after foot that had just been reeled in; and once, with a prodigious effort, he rushed up the pond carrying out yard after yard until the reel was nearly empty. That was his last effort. His struggles were now fainter and fainter, and we gradually drew him nearer to the boat. "Now, Forster," I cried, "we have no net, so we must gaff him. Take your knife and drive it into his head when he comes near."

The reel was nearly full now, and raising the rod the monster fish rose alongside still struggling convulsively and beating the water with his tail. All three of us were standing up in the boat. Just as Forster raised the knife the pike made a last dash, the knife descending pierced only the water, and Forster overbalanced plunged in headforemost, dragging us and the boat over with him. We sank and rose, and struck out for shore, pushing the boat ahead of us. Land was near, and emptying out the water we rowed anxiously back on the pond again. Alas! the rod was there but the line, broken or bitten off near the hook, floated idly in the water. Our fish had escaped.

At such a moment as that life loses all charm and existence is almost unendurable. That fish would haunt us for months—nay, more, as long as memory lasted.

To our excited imagination he had seemed as long as the boat. In very truth he was two or three feet in length, and joyed in a spacious mouth moulded especially to masticate plump young ducks. But he was gone now and bitter experience would in the future warn it away from all hooks, no matter how skillfully concealed. We rowed back to shore sad and weary in the gathering darkness, fiercely tugging at the oars, and crushing down in savage glee whole patches of fragrant lilies that, phœnix-like, rose up behind us brighter than ever and purified by their plunge under water. We grounded sullenly on the shore, and refusing all Goliah's well meant sympathies and urgent invitation to partake of fried chicken, went on to camp, where, strange to say, we forgot half our grief in describing to the rest our struggle with the huge fish.

We trolled for the big pike again and again, but always unsuccessfully; and, stranger still, the rest of Goliah's brood now sported in security on the pond, and each night's roll call found the list complete.

The next week we reluctantly broke up camp, and as our heavy-laden team piled up with paraphernalia came in sight of Goliah's tumble-down gate, that worthy individual hastened down the walk.

"Hello! Off, are you? Well, your pike's back an' he's just got away with another duck. Mebbe you'll get him another year. Well, good-bye." With a clasp of his muscular hand off we went, and in a moment a turn in the road hid from view the lofty pines and waving birches that clustered round Long Pond.

Some day we will get that pike. I feel convinced of that. But to-day the first born rays of the morning sun shine down on Long Pond, and play hide and seek around the gnarled old stump; and the evening sun in mockery floods it with golden light, and the moon throws a silvery glance upon it, and day and night the old pike keeps his ceaseless vigil watching and waiting in vain for the ducks that never came, for the last of Goliah's brood long since disappeared down that hungry throat.

W. MURRAY GRAYDON.

NEW BRUNSWICK SALMON.—Fredericton, N. B., June 2.—Some grilse have already been caught in the southwest Miramichi. The best fishing in that river usually begins about July 1. This river, whose waters reached a very high pitch this spring, is falling rapidly and has now nearly attained its normal level at this time of year. A number of salmon have been caught during the spring with bait at various points on the St. John River.—EDWARD JACK.

WHEELER AS AN ANGLER.

IN the chapter on "Some of the Distinguished Anglers of our Time," in his "Angling Talks," George Dawson wrote as follows:

"Vice-President Wheeler is one of the distinguished anglers of our own time. His visits to the Saranacs and adjacent waters were and still are as regular as the seasons. His home is in close proximity to the best fishing grounds in the State, and he has grown up as familiar with all of them as he is with the various rooms in his own domicile. He has been a member of our State Legislature, has repeatedly served his district in the House of Representatives, been Vice-President of the United States and a busy man always, but he has never intermitted his annual visits to the beautiful lakes which make a terrestrial paradise of the far-famed Adirondacks. When years ago he was talked of for the high position which he subsequently filled, I ventured the prediction that he would take no office that would preclude him from these annual visits to angling waters. In 1876 'Hayes and Wheeler' were the candidates of their party, and I was proclaimed a false prophet. But I not only knew my man, but the fascinating pastime of which he was a votary, and the result vindicated my prediction. He more than once mysteriously disappeared from his place as presiding officer of the Senate, and while others were guessing his whereabouts, his most intimate friends knew he had gone a-fishing. His robes of place were laid aside for the garb of the angler, and the restraints and formalities of his office for the quiet and freedom which can be found nowhere so perfectly as in the primitive forests and on the crystal lakes and flowing rivers where the veteran angler finds his most refreshing rest and highest delectation."

A WEEK IN THE ADIRONDACKS.

WILL you take a week's vacation with us in the Adirondacks? What a question to ask a man who has been housed up all winter in a musty office, with his nose down to the grindstone; what a seductive bait to cast in front of a brain-weary man who is a lover of that beautiful collection of mountains and lakes.

The invitation came from the officers of the Adirondack Preserve Association, who were about making a spring visit to their club house and preserves in Essex county for the purpose of getting things in ship-shape for the coming summer. Thirty-six hours after the invitation was given found the party on board one of the Hudson River steamboats, and the day after the Adirondack Railroad carried us to North Creek, where we changed our mode of locomotion to the comfortable mountain buckboard, and were soon in the vast and wild wood solitude beyond civilization. The ride of 18 miles over the mountains was the same old appetizing, liver-shaking journey, and late in the evening we were dumped out at our destination, a tired, hungry lot of mortals, ready for both food and bed. The next morning found us early astir, all anxious to take advange of the beautiful weather and to inflate ourselves with as much pure mountain air as we could conveniently hold.

The association has certainly displayed excellent judgment in selecting the site for its commodious and comfortable club house. It is located in the midst of a 100-acre clearing, its distance from the surrounding forest and its high elevation giving ample opportunity for the enjoyment of the breezes, no matter from which direction they may come. The 100 acres of clearing are in excellent cultivation, thus permitting the keeping of cows and poultry, and consequently a ready supply of fresh milk, butter and eggs that are usually difficult to procure in these mountain fastnesses.

The view from the front piazza of the club house is extensive and beautiful, but if the front view is attractive, how shall I designate the outlook from Prospect Rock, situated about 300yds. back from the house? From this lofty eminence a view taking in 25 to 30 miles of country can be enjoyed. Lofty and lesser peaks can be seen on every hand, rising and falling in rotation until lost to sight in the dim distance, while almost at the foot of the mountain, in the valley below, can be seen the waters of the Hudson, just sufficiently near to hear its silvery sweetness as it tumbles over its rocky bed, gathering strength for its important work nearer the sea. Upon this lofty height a comfortable summer house is being erected, so that those members who care little for fishing or hunting will find sufficient reward for their journey in the simple pleasure of breathing the pure mountain air and enjoying the "subdued Swiss view" spread out like a panorama for their gratification. And how the cool breezes of this spot do remove the cobwebs from the brain, and what vigor it imparts to wearied bodies. Only those who frequent the Adirondacks can appreciate the renewed life which its pure cool air so generously bestows upon its visitors. The members of the association who are lovers of the rod and reel have every opportunity of indulging their mania, as Mink, Thumb, Beaver, Loon, Frank and Moose lakes are within easy distance of the club house, so that fishing and boating are almost at their doors, and if there is any virtue in "signs" the deer around these various bodies of water must be as plentiful as the most ardent sportsman can wish.

Of course there was an amateur photographer in the party; life is very dull now if there is not one of these enthusiasts at every wayside inn and summer hotel through the country. Our "amateur" was alive to the wants of the occasion, and although we were obliged to stop occasionally on our journey in to allow him to admire in a proper artistic way the many beautiful views that would burst upon us from time to time, still he was not too previous with his "negatives" and "positives," and as he was wisely reticent in thrusting professional terms at us, such as "hypo," "developers," "gelatine," etc., etc., we managed to submit to his society without premeditating manslaughter. The views which he brought back with him will be souvenirs that the members of the association will ever prize. As photographs, like figures, never lie, the pictures of the trout we caught in those few pleasant days will be convincing to the skeptical of the size and beauty of the fish in that particular region, and I imagine it would be difficult to exhibit a handsomer view than that of eleven beauties, aggregating 22lbs, that were captured in about two hours by a member of the party. The photographs of these trout obviated the necessity of our telling our friends the usual fishermen's yarns as to our success, but did not prevent our expatiating fully upon the big fellows we had upon our lines that, of course, got away.

The few days marked out for our stay at the club house rapidly passed away, and what with trouting, tramping over mountain trails and social intercourse, were too soon over. We reluctantly turned our faces cityward, and were shortly enjoying the tyranny of linen collars, struggling to get our minds diverted from trout and deer tracks, and concentrated on market reports, bargains and other surroundings of civilization.

The association have much cause to be satisfied with the property they own, as with the facilities for hunting and fishing over their domain, together with the beautiful surroundings, the members have everything to make life pleasant and enjoyable during their summer vacations. A view from Prospect Rock is alone sufficient to warrant a trip to the club house, and if you add the pleasure of boating and fishing on a lake as beautiful as Mink, situated but a half mile from the house, it leaves nothing further to be desired.

I cannot but envy those whose privileges admit of their enjoying, now and then, a vacation in the woods, and if the rest of the members of the Adirondack Preserve Association are as genial as the officers whose society I enjoyed for those few pleasant days, then indeed one of the objects of the incorporation, that of encouraging social recreation, will be carried out to a fault.

NOTES ON THE TOURNAMENT.

IN our report of the fly-casting contests we had neither time nor space for much comment on the different classes or the incidents of the day, and gave merely the results in the regular order. There is much that strikes the observer on such occasions, which, if published in full as seen through his glasses, would read strangely, and we propose to touch on this subject, although some of the details are unpleasant.

We have already said that there was less grumbling at the decisions of the judges by "mug hunters," and that a more gentlemanly spirit was apparent, but there is still an element which must be eliminated if the Association would attract the class of gentlemen which it caters for and which we are glad to see by the list of names that appear among the contestants is entering into the contests. At the first tournament it was said by some that few, if any, gentlemen anglers would cast in public, but five years' experience has disproved this, and each year has seen a gradual improvement in all the classes, in this respect. The class of men who growl if the judges do not give them a higher award than they deserve, and who "protest" on the slightest occasion has gradually dropped out, much to the benefit of the Association. The judges at these tournaments are gentlemen of experience some of whom come from a distance and act as judges for hours, at some personal discomfort, in order to foster and sustain a sport in which they delight, and the rule has been that their decisions should not be questioned and that any exception made to this rule would deprive the contests of their services. The judges are appointed before the contestants make their entries and the latter are in honor bound to abide by them or the fly-casting tournaments will fall to the level of the prize ring. We are glad to say that at the last tournament there was but one instance in which anything occurred to mar the harmony of the meeting, and this instance was of so pronounced a character that it cannot pass unnoticed, and disagreeable as the subject is we feel compelled to report it for the benefit of future tournaments.

In the first contest for amateurs with single-handed fly-rods the judges awarded C. G. Levison the third prize, whereupon he loudly protested that he was not fairly dealt with, and declared his intention to resign from the Association, an intention which it is to be hoped he will carry out, for several gentlemen have declared that they will never again enter a contest with him. He has been a chronic "protestor," and has made more trouble than any other member now in the Association. As an instance of the way in which he views these contests the following will suffice. On the second day there was a class in salmon casting, open to all, in which the rods were not to exceed 16ft., and several gentlemen urged Harry Prichard to cast. The old man, not feeling at all sore that Hawes had beaten his great record of 91ft. with his favorite switch cast the day before, consented, but had no rod of that length and asked Mr. Levison for the loan of his. Levison agreed, but stipulated that Prichard should give him any prize that he might win, and as Prichard won first prize, a handsome grilse rod, Mr. Levison claimed and took it.

To turn to more agreeable subjects we noted that in the amateur single-handed classes, on the two days Dr. Trowbridge did some elegant work in distance casting, delivering his flies with grace and precision, and making 81 and 85ft. respectively, the longest casts made, and only fell to the third place on the first day and to second on the second day by reason of deficiency in delicacy and accuracy, although in one contest he was awarded the full score for the first point. Mr. Graydon Johnston wielded an antique specimen of a home-made ash and lancewood rod, but astonished all by what he did with it. Perhaps he might do better with another rod, or it may be that he had the best tool on the ground.

The light rod contest for experts was one of the most interesting events of the tournament, the rods being 10ft. long and weighing 4¾oz. The shortest record among four contestants was 70ft., while Reuben Leonard led the field with 88ft., a most wonderful performance. A private trial of an extreme light rod took place in a quiet nook, which it is of interest to record. The rod, owned by Mr. William C. Harris, was of split bamboo, 8ft. long, and weighed only 3¼oz., and with this Mr. Thomas B. Mills sent out a line over 62ft.

The other contests are already recorded in our pages of last week, and there is little more to say of them except that there was a surprise in nearly all, for it was thought that the limit in casting had about been reached. The attendance was good and many distinguished gentlemen from a distance gathered at Harlem Mere to see the tournament.

MICHAEL MORRISON, a man known to hundreds of anglers and employed by Abbey & Imbrie, died last week of heart disease. Mr. Morrison was nearly 70 years old, and for the last 25 years had been engaged in tying salmon flies, his skill in the art being regarded as very great. "Mike" Morrison, as everybody called him, knew all about the habits and tastes of a salmon, his knowledge having been gained in Ireland, where he was born, and in Scotland.

MAINE WATERS.

MAY 29.—The salmon fishing on the beautiful Penobscot River of Maine is now excellent. The water has fallen to a medium depth and everything looks most promising for a very successful fishing season on the river. The fishing season here commences about the last of April and continues to the middle of July. The best of the fishing is from now till the last of June. The average run of fish is larger than that of any river in the Eastern States or Canada, excepting the Cascapedia. Most of the salmon taken here are over 15lbs. in weight. Ten fish taken here Thursday ran from 13½lbs. to 23lbs., but larger ones have been taken this season.

As the fish are "fresh run," in fact are caught while in the "tide water," they are very gamy. A long line and strong leaders are needed, as the fish run large and fight fast and hard. The most taking flies are the well-known favorites, silver-gray, Jock-Scott and silver-doctor, tied on rather large hooks. As the water is dark the bright flies seem to take best.

The early morning and evening are thought to be the best; others think the flood tide the best. However, some fish are taken at all hours of the day and at all times of tide.

This excellent fishing ground can be reached by leaving Boston at 7 A. M., when one will arrive at Bangor 6 o'clock next morning. A good breakfast for 50 cents can be had in the restaurant at the station, kept by Woodbury & Son. A hack can be had at the station to take one or two passengers to the ground for about one dollar, and 20 cents for toll bridge. If you want an express wagon, you will find Mr. Carpenter ready and willing to take all your tents and baggage and selves, as he did for us, for the very moderate sum of one dollar. But a less costly and very comfortable and expeditious way of getting there is to take the little steamer at Ferry Slip, a short distance from the depot, at 8 A. M., fare 15 cents. The captain, Chas. M. Robinson, like all the residents we have met, is very ready to accommodate, and at very moderate prices, *i. e.*, he will run his boat between regular advertised trips for parties of three, or the equivalent of three fares, thus enabling any one to get either to or from the fishing ground at any time of day.

The fishing ground is mostly on the Brewster side of the river, and is leased by Capt. Allen for a term of ten years. He has built a club house near the head of the ground for the use of members, who are admitted to all the pools and use of the house for the small sum of two dollars per year. It will be readily seen that Capt. Allen has not gone into any speculation, as with the present or even larger membership it would require all he will receive in four years to pay for the lease and building. This is the first instance of the kind that has come to my notice where a person has secured a very valuable salmon river solely for the benefit of anglers desiring to fish for salmon. None but a true disciple of Walton would have shown such a spirit. Thus to the untiring efforts of Messrs. Stilwell and Stanley in restocking the river, and to Capt. Allen for preserving this unequaled chance to catch salmon, all true anglers will ever accord the full honor due to them.

The ground reached, there is room for all, as the river is half a mile wide and full of pools and eddies. Here, as elsewhere, one will meet persons that do not know the etiquette of angling. So patience, brother of the angle, and when some untaught would-be angler casts across your pool, or worse, some ignorant boatman pulls across where you have seen a big rise, don't swear, but in mildest terms, on fit occasion, teach and practice better things. Little by little this new angler's paradise will get in shape, so that the true angler will find peace and pleasure in casting without being intruded upon by any.

On arriving at Bangor, anglers will find Capt. Allen at the Court street police station. Or those ever genial anglers, Messrs. Benson and Mosely, ticket agents at the depot, will furnish all information necessary to guide a brother angler to reach the desired pool. DR. R.

We had only one day at Sebago Lake for the landlocked salmon and the record was not very brilliant. Out of four strikes we only saved one salmon of 7lbs. As far as I have been able to learn the fishing has been hardly up to the average of the last five years. A large proportion of the fish taken have been spent fish, *i. e.*, fish which spawned last fall. This has not been done heretofore, and shows that they were not speared on their spawning grounds last fall as usual, owing to their being caught instead by the Commissioners at the mouth of the river, stripped and turned loose in the lake. They have 750,000 young fry now hatched at Eeles Falls (on Crooked River) which will be turned loose in Sebago waters the coming week. The best fishing at Sebago last year was in June.

At Weld Pond the fishing for trout and landlocked salmon has been good and many have been taken. The trout run from 1 to 5lbs., averaging about 2lbs. Salmon 2 to 6lbs., with occasionally one larger. Most have been caught trolling with smelts or angle worms. Within a week they have taken the fly readily and for the next week or ten days I have no doubt more could be caught with the fly than with bait.

At Rangeley and Moosehead the parties I have seen report good success.

The cream of the fishing is now at Bangor, for the Penobscot salmon, and many anglers from abroad are coming and departing every day. Nearly all are successful in either capturing or hooking a fish, and some five or six in as many days fishing. They run from 10 to 25lbs., averaging thus far about 18lbs., being fresh run and in tide water are the smartest fish in the world. Many old salmon anglers have been there and all say they are the smartest salmon they have ever seen. I fished there one day this week and was fortunate enough to capture one.

Eleven fish were caught that day, and as many hooked and lost. Bangor is delighted, and well she may be to have one of the best salmon pools on the Atlantic coast within the limits of the city, and she is reaping her harvest from the anglers who are coming to Maine. Being so early in the season, before there is any fishing in the Provinces, it is like early strawberries and should be valued accordingly. The water is yet high in the Penobscot, and as it gets lower am inclined to think the fishing will improve. Many salmon fishers I have seen here, who have fished the Provincial rivers, say this averages better than any they have ever fished before.

The rush of sportsmen to Maine thus far has been double what it was last year. The hotels at Rangeley and Moosehead are reported full. There is also a big rush to all our inland ponds and streams. HENRY O. STANLEY.

DIXFIELD, Me., May 29.

Mr. W. H. Wingate yesterday, while fishing off the mouth of Rogers Brook, boated a 3lb. landlocked salmon, in the stomach of which were found twenty-three smelts. Evidently the landlocks are "on their feed." This is the pioneer salmon to respond to light tackle in Long Lake. BLACKSPOT.

NORTH BRIDGTON, Me., June 3.

SENATOR QUAY'S MIDNIGHT TARPON.—Senator Matt S. Quay, of Pennsylvania, has entered the race for fame as a tarpon angler. His claim is based on a 155lbs. fish taken at Punta Blanco, Fla., at midnight, April 7, 1887. During his stay in Florida Senator Quay took twenty tarpon; and among his adventures or the adventures of his boatman, Ben Sooy, was the onslaught of a tarpon, which, in its second leap, struck the boat and knocked Sooy overboard. Unfortunately for Senator Quay's claims to a tarpon record, he did not use a rod but stuck to "Al Fresco's" method of tarpon fishing with a handline. Perhaps "J. M. S." is to blame for this, as Senator Quay is reputed to refer to him as an oracle, and "J. M. S." says that when you are going for tarpon, anything from a fly-rod to a hawser and derrick is allowable.

BLACK BASS IN GERMANY.—Mr. Max von dem Borne, of Berneuchen, Germany, wishes some information about the black bass and wishes answers to the following questions: "Is the black bass, where met with in American fisheries, regarded as a harmful fish? Has the introduction of this fish injuriously affected any American fisheries? In the affirmative case name the waters or fisheries in question and the fish which have been so affected. Into what waters may black bass be introduced with advantage and without fear of their doing damage? Are waters containing nothing but pike and coarse fish the only ones in which there would be no danger?" Something on this may be found in "Piseco's" communication elsewhere.

FLY-CASTING AT BLOOMING GROVE PARK.—On May 30 a fly-casting tournament was held by the Blooming Grove Park Association at their grounds in Pike county, Pa., the first prize being a silver badge, which was won by our correspondent, Mr. Robert B. Lawrence. The following is the score: R. B. Lawrence, 75ft.; H. W. Nason, 73ft.; S. M. Nash, 68ft.; A. J. Post, 66ft.; N. S. Smith, 65ft. The time allowed each contestant was fifteen minutes, with no allowance for accidents. Many ladies and gentlemen witnessed the contest.

THE SOUTHERN TIER ANGLERS ASSOCIATION, of Elmira, N. Y., went on its third annual excursion to Germania, Pa., June 1. The great event of the occasion was a stuffed trout banquet, given in honor of the long and short haul of the "Interstate Commerce Law."

JOTTINGS.

Editor Forest and Stream:

My friend "Wells" gives a short contribution in your issue of May 26. I call him my friend, though my acquaintance with him is limited to the intercourse afforded by your columns. "Wells" promises to give some other sketches of "gala days and ambrosial nights," and I hope he will, because what he writes is always interesting to read, even though the incidents be trivial. I must, however, give him a gentle chiding for calling my old friend Prof. Wilson, of the "Noctes Ambrosianæ," "Prof. Wilcox;" but that was, no doubt, mere thoughtlessness.

I am also minded to say that "Wells" was whilom my ally in asserting the true name of our only Southern game bird, the partridge, and that he seems now to be afraid to use that term, but contends himself with the makeshifts of "birds" and "Bob White," which I am bound to look upon as a rather ignominious compounding of a felony, since it winks at the purloining of the true and traditional cognomen of our little favorite by our Northern brother sportsmen. But I note with gratitude, and give him due credit therefor, that he does not yield completely and adopt the horrid "quail," a designation which deprives the dear little bird of a great part of his peculiar charm. Let us stoutly maintain our right to our partridge, "Wells," the only game bird we have, and which is a heritage from our fathers, who shot him in the peafields of Virginia and the Carolinas in Revolutionary days, with flint-lock guns and very poor powder. He was "partridge" then and has been partridge ever since, and no other name will we accept for him.

But what has become of the racy "Nessmuk," charming "Wawayanda," piquant "Kelpie," delightful "Pisco," and other contributors who were wont to serve your readers with dainty and appetizing dishes? They have hibernated too long and should come forth, shake off their lethargy and give us something for our delectatin.

"Kingfisher," whose interesting narratives have afforded much pleasant reading to the fraternity, makes a touching and pathetic announcement of the death of "Rare Old Ben," and I am sure that all your readers will join heartily with me in tendering our sympathetic regrets, for all must have enjoyed "Old Ben's" humorous yarns and quaint expressions and will doubtless recall the story of his adventure in the Texas cabin with five pones of corn bread in the skillet, one of which was made after the woman had spanked the baby with meal-bedaubed hand, and failing to identify which, Ben had to eat them all to avoid not eating the right ones. Peace to his ashes.

Speaking of contributions, my own peculiar line is "snakes," but since Miss Catherine Hopley has gone to Europe, I am unable to get up any more discussion on that interesting subject.

"Will," of Aberdeen, noticed a snake similar to the last marvel I discovered. I regret that he did not make a closer examination of it to determine if it was venomous or otherwise. I am with snakes a good deal like the crazy tailor who, whenever any one stretched out his arm would rush up and measure it. So whenever I see a strange snake I must interview him and inquire if he has fangs or not. COAHOMA.

["Wells" did not inadvertently speak of Wilson as Wilcox. The mistake arose from an erroneous deciphering, by the well-intentioned compositor, of "Wells's" manuscript, which is, as Prof. Wilson himself would have put it, "hieroglyphical of wisest secrets," but sometimes hard to find out.]

A fox hunt recently occurred in Kent, Conn., which was in many respects the most remarkable this country has ever known. There was no anise-seed-bag nonsense about it. The game was a real fox, and Mrs. Monroe, the only hunter, was in at the death. She was feeding chickens in the yard when a fox entered and seized a hen, but before it could escape Mrs. Monroe seized the invader by the tail. Holding the hen firmly in its mouth the fox attempted to drag Mrs. Monroe away to its lair. The heroic woman retained her grip, however, and called loudly for help. It came in the shape of two sturdy dogs, who immediately despatched the fox. It must be apparent to the most careless mind that this method of fox hunting possesses many claims to consideration. No fields of grain were injured, no rider broke a limb, no expense was incurred. But, for all that, the excitement produced by the encounter was intense, the dogs had the pleasure of killing the fox, and the gallant heroine of the chase possesses the brush. Surely Connecticut economy and pluck often produce great results.—*World.*

Fishculture.

AMERICAN FISHERIES SOCIETY.

SYNOPSIS OF PROCEEDINGS.

THE sixteenth annual meeting of the Society was held in the lecture room of the National Museum at Washington, D. C. on Tuesday, May 31, and Wednesday, June 1. In the absence of Dr. W. M. Hudson, President of the Society, Vice-President W. L. May called the meeting to order at 11 A. M. on Tuesday, and after a short address the meeting adjourned until 3 in the afternoon.

On assembling again the following new members were elected: M. B. Hill, Clayton, N. Y.; Calvert Spensley, Mineral Point, Wis.; Walter D. Marks, Paris, Mich. The following were elected corresponding members: K. Ito, Hokkaido Ccho, Sapporo, Japan, member of the fisheries department of Hokkaido and president of the Fisheries Society; W. Oldham Chambers, Esq., secretary National Fishculture Association, South Kensington, London.

Dr. H. H. Cary said he had recently been examining oysters on the coast of Georgia with a view to planting in Lake Worth, Fla. The lake is situated on the east coast in one of the southern counties near Jupiter Inlet, and is twenty-three miles long. It was once a fresh water lake separated from the ocean by a barrier of coquina formation, but the inlet has been cut for the transportation of boats of ten tons or more, and now the lake is partially salt. The temperature of the Gulf Stream is not far from 79 degrees Fahrenheit, and the lake is about the same. The question now arises, is this temperature too high for the breeding of oysters? The average depth of the lake is eight feet, and the bottom of the south end is muddy; other parts have hard bottom.

MR. WHITTAKER—What is the temperature of the Indian River?

DR. CARY—I think it is lower. The Gulf Stream diverges almost northeast and the inlet to the lake is ten miles south of Jupiter Inlet. I believe that Mr. Mather has had some experience in raising oysters and perhaps he can give us some information on this point.

MR. MATHER—My experience has not been extensive enough to say at what temperature the eggs of the oyster will decline to hatch or the young will die. In 1885 Prof. Henry J. Rice came to Cold Spring Harbor to make some experiments in the propagation of oysters, and I loaned him a large wooden tank, in which he placed some young oysters immediately after hatching. The tank was put on the south side of the hatchery and was fed by a stream of salt water not larger than a lead pencil; it was exposed to the sun and the water attained a temperature of 90deg. and no result was obtained. The next year I continued the experiments in the same tank placed on the north side of the building with a temperature never exceeding 80deg., fair results being attained. How much higher a temperature they would have stood, I have no means of knowing.

DR. CARY—I can place layers of shells on the bottom for catching the spawn, but there is a great deal of moving sand, and I would like to know if this would be injurious to the young oysters?

MR. EARLL—No doubt moving sands would be injurious to the young oysters, because the shells to which they were attached would be buried and the young would be smothered.

DR. CARY—There are oysters in Indian River, but it has been a question whether there would be food in Lake Worth, the kind that oysters feed upon.

MR. MATHER—The oyster feeds mainly upon diatoms, and attains a size in proportion to the food it gets. Some of the best feeding grounds on Long Island are in the brackish waters of the bays.

MR. EARLL—While I don't know the limit of temperature at which oysters will spawn, I will say that I have found adults in water 84 degrees, and at 80 they spawn readily, Chesapeake Bay being 80 degrees every summer. Chrisfield, near Pokomoke Sound, and Tangiers Sound, famous oyster places, are often 80 to 85 degrees, and oysters spawn there in June and July.

The Secretary then read a paper by Prof. W. O. Atwater, entitled "Chemical Changes Produced in Oysters in Floating and their Effect upon the Nutritive Value." The meeting then adjourned until the following day.

SECOND DAY.

The meeting was called to order at 11:30 A. M. A telegram from Treasurer Blackford, stating his inability to attend, was read. The committee, consisting of Messrs. Whittaker, Spensley, Cary, Nevin and Earll, appointed on the previous day to nominate officers, made the following report:

For President—W. L. May, Nebraska.

For Vice-President—H. H. Cary, Georgia.

For Recording Secretary—Fred Mather, New York.

For Corresponding Secretary—W. A. Butler, Jr., Michigan.

For Treasurer—E. G. Blackford, New York.

Executive Committee—Calvert Spensley, Chairman, Wisconsin; J. H. Bissell, Michigan; Dr. R. O. Sweeney, Minnesota; Dr. W. M. Hudson, Connecticut; Livingston Stone, New Hampshire; Col. McDonald, Virginia; Frank M. Clark, Michigan; and upon vote these officers were declared duly elected.

MR. MATHER then read a paper upon the season's work at Cold Spring Harbor, N. Y., and a discussion upon the handling of glutinous eggs followed, in which several members took part. The Society then adjourned until 2 P. M.

In the afternoon session James Nevin read a paper upon hatching pike, perch and their adhesive eggs; Mr. K. Ito, president of the Fisheries Society of northern Japan, gave some very interesting statistics concerning the fish and fisheries of his country, for which the Society accorded him a vote of thanks. Mr. Earll made some remarks upon the changes and conditions of fishculture and the duties of Fish Commissioners under the new conditions. Mr. A. Howard Clark read a paper on "Fish Preservation by the Use of Acetic, Boracic, Salicylic and other Acids and Compounds." Mr. S. G. Worth explained a new method for outlets of fish ponds, which he illustrated by a diagram upon the blackboard; he also read a paper on "Inducements to Growing Shell Fish in North Carolina," and the secretary read an essay upon "Spasmodic Migrations of Lake Superior Whitefish," by W. D. Tomlin. The subject of the time and place of the next annual meeting then came up for discussion. Mr. Spensley moved that the meeting be held in Detroit on the third Tuesday in May, 1888. Dr. Cary amended it by substituting Washington for Detroit. A vote for the amendment was lost and the original motion was carried. Messrs. Whittaker, Mather and Bissell were appointed a committee to invite persons and papers, the treasurer's report was accepted and the meeting adjourned.

PENNSYLVANIA COMMISSION.—Pittsburgh, Pa., June 23.—The new fish commissioners for Pennsylvania as appointed by Governor Beaver are as follows: James V. Long, Pittsburgh; W. L. Powell, Harrisburg; H. C. Ford, Philadelphia; S. B. Stillwell, Scranton; A. S. Dickson, Meadville; H. Dermuth, Lancaster.

BOUNTIFUL NATURE AFFORDS NO FINER SPECIFIC for skin diseases than Sulphur, a fact that is proven by the action upon the cuticle afflicted with eruptions or ulcerous sores, of that supreme purifier and beautifier of the skin, Glenn's Sulphur Soap. HILL'S HAIR AND WHISKER DYE—Black and brown, 50c.—*Adv.*

FIXTURES.

DOG SHOWS.

Sept. 1 to 3.—Inaugural Dog Show of the Pacific Kennel Club, at San Francisco, Cal. J. E. Watson, Secretary, 516 Sacramento street, San Francisco, Cal.

Sept. 12 to 17.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary.

Oct. 12 and 13.—Stafford Kennel Club Show, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Sept. 6.—Manitoba Field Trials Club Field Trials. Derby entries will close July 1; all-aged entries Aug. 1. Secretary, Hubert Galt, Winnipeg, Manitoba.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5036.**

AMERICAN KENNEL CLUB METHODS.

Editor Forest and Stream:

No person seems very anxious to undertake the duty of defending the actions of the American Kennel Club, to which attention has been drawn by Messrs. Wade and Peshall and in my previous letter under the above caption. Surely, if there were any defense to make it would be given publicity, hence we must assume that there is no argument to be advanced.

The next subject to which I will direct attention is the case of the disqualification of Brahmin at Providence show. The judge at that show threw out Brahmin for being overweight, and the owner, Mr. Rendle, appealed from that decision. Every man is at liberty to present or conduct his case as he sees fit, of course, within parliamentary limits; but I think Mr. Rendle weakened his case very much by surrounding it with totally irrelevant matter. There was but one point for him to make, and that was the way in which the dog had been weighed. Mr. Mason, it appeared, used a spring scale which was his own property, while the club had provided a pair of scales for that purpose. What was done at Boston, or whether other dogs at Providence were overweight was altogether outside of the question at issue. Neither was it competent testimony for Mr. Rendle to produce a scale he had that day purchased for 25 cents, and proceed to illustrate the defects of this machine and how it could be altered. All that was not evidence, yet when I rose to a point of order, I was incontinently sat upon by the president. A base ball writer would say, "he jumped on my neck with both feet," so fiercely did he order me to resume my seat. When Mr. Rendle's case was all in, the fire of resolutions leveled at the president was brisk. Finally I got the floor, and briefly drew attention to the central fact that official scales had been provided and it was not competent for the judge to decide by any other. The reception awarded my remark was decidedly flattering, and I was asked to submit a resolution, which I did to that effect, adding thereto that it was not competent for the American Kennel Club to alter the award. "No, no," resounded all over the room and that settled my motion. Again were we treated to all sorts of extraneous talk, until finally Mr. Munhall proposed a resolution to the effect that it was the duty of the judge to use the official scales. This was carried and a motion to adjourn at once followed. Your report has it that "the R. I. Club was ordered to pay prize." This was not so, as a matter of fact, neither could it be so in point of law.

If Brahmin, the dog in question, had been awarded a prize and subsequently disqualified for being over weight, then he would unquestionably have been eligible for the prize taken from him by an illegal transaction. Such, however, was not the case, and the American Kennel Club has no right whatever to assume the position of a judge and award a prize in the manner suggested by the wording of your report.

The Patti M. case has been pretty well thrashed out by Messrs. Wade and Peshall. It was brought forward on the second day, when I was not present; but it is not a question of what was said, but of well-known facts, with a monumental annex in the way of one of the strangest of decisions ever yet given by President Smith. Mr. Peshall's statement has not been contradicted, and it is, therefore, unquestioned that he permitted a person who was not a delegate nor the holder of a proxy to assume the rights of the floor and make a motion. That of itself would seem to me the place to attack the whole subsequent miscarriage of justice. As to the facts, they are that a dog was entered at the Waverly show "not for competition." That subsequent to the closing of entries a sweepstake under special conditions as to entry was opened under the jurisdiction of the club, and that dog was entered and won. The sole question at issue is, can you make an owner's declaration on July 1 apply to an event which was not announced at that time and for which the entries do not close for two weeks later. The answer is, most decidedly not. Under the conditions of the sweepstake, had Beaufort not been entered at the show at all he would have been eligible; the appellant could not deny that, and yet we are asked to agree with him that he was not eligible simply because he was not a competitor in the regular classes. I quite agree with Mr. Peshall that Messrs. Craig and Newberry, the two new delegates, could not have understood the vital point of the case; but I must, at the same time, disagree with him as to the manner in which they can rectify their mistake. He suggests that they have the secretary send out a circular resolution for the delegates to vote upon. This cannot be done under the new constitution, which, happily, put an end to the transaction of business in this manner. We had enough of that in the Perry case.

Your report contains the following enigmatical sentence: "Communication from J. O. Fellows, referred to Hornell Kennel Club, with information that Buffalo is not a member of A. K. C." Mr. Fellows is the secretary of the Hornell Kennel Club, and was also superintendent of the Buffalo show, and he asked me as his club's delegate to submit the following letter to the A. K. C.:

"I charge C. J. Farley, of Albany, N. Y., with stealing from the Hornell Kennel Club one four-gallon tin sprinkler and two dozen two-quart feeding tins, also with telling barefaced falsehoods, Sept. 11, 1886.

"At Buffalo, March 9, I charge him with concealing five seven-pound cans of food. March 10, with concealing, with the intention to steal, one sprinkler, one dozen feed tins and one claw hammer, all of which I took from his crate, where he had them in meal bags and under the straw.—J. OTIS FELLOWS."

That was returned to me with the following letter, dated May 14:

"Dear Sir—At the meeting of the A. K. C., held 5th inst., I was directed to return to your club the inclosed letter, with the information that the Buffalo Club is not a member of this association. Respectfully, etc., A. P. VREDENBURGH, Secretary."

The question which will naturally arise in any man's mind is, what has the Buffalo club to do with a charge of theft at the Hornell Club's show? Further than that, does not the A. K. C. rule, with regard to dishonorable conduct in connection with dogs, dog shows or field trials, apply to anything beyond A. K. C. shows? Is Mitchell, disqualified by Eastern Field Trials Club, to be allowed to show at A. K. C. shows because the Eastern Club is not a member of the A. K. C? The clause with regard to dishonorable conduct in connection with dogs must of necessity apply to transactions outside of an A. K. C. member's show. What is the A. K. C. for if it is not to carry out its own rules? I should like to hear from Mr. Peshall on this case, as he perhaps can throw a side light on the manner by which the unaccountable decision was arrived at.

With your permission, I will in another letter show the manner in which the rules of the A. K. C. have been violated by the members of the association and how the mandate of the association has been completely ignored by those instructed to see that the rules are carried out.

JAS. WATSON.

A CHASE WITH THE DOG STAR.

I AWOKE one spring morning to find that it was the opening of a beautiful day; a light snow had fallen during the early part of the night and I saw it was going to be a nice day for a fox hunt. So I had a early breakfast, fed my two young thoroughbred foxhounds Star and Sport, brothers about 18 months old, and shouldering my 12-bore muzzle-loader loaded with very small buckshot, and with my dogs put out, prepared for a good day's sport all alone. Foxes inhabit the fields and woods around my farmer's home, as well as do speckled trout the famous Caledonia Creek and springs only three miles to the south of me.

I went east, but only for a half mile looking for signs, when I heard my young dog Star give tongue a little to the south in a small piece of woods with underbrush. I, of nimble 18 years, was not long in getting there, and found the dogs had struck the tracks of two foxes, evidently made about the middle of the night, and running side by side about five feet apart. The dogs ran on the tracks south for about three-quarters of a mile, when all at once Star stopped perfectly still, put his nose up in the air, snuffed, and then started at full speed at a right angle due east, with Sport at his heels. I knew they had scented a fox somewhere, but far out of sight, so I ran to a road at about the place I thought the fox might come out, and had no sooner got there than I heard the dogs at full cry, taking a rapid circuit of the woods, and the very next moment, his brush flying, out came reynard headed a little to the south of me, running at full speed with no discount at that. I now ran down the stone wall fence, keeping well under its cover, to within five rods of the place where I thought he would cross it and the road. I had stopped only a moment and hastily cocked my gun, when up he jumped upon the wall at the very place I thought he would. Could I desist? Not well. I fired my left barrel in an instant, when down tumbled poor reynard stone dead, with eleven buck or turkey shot sent through his body. Said I to myself, "No more robbing of hen roosts by you, nor midnight rovings."

Only one dog, Star, came up on his track, and after he had had the exquisite fun of shaking the fox, much to my astonishment I heard Sport running on a trail at full cry some distance west of me. I now looked on the top of the hills way west of him, and there I saw the other fox going over its brow, as if sent for and in great haste to be sure. He headed westward, as if bound for California. Star must have known there was another fox in this case, for when I looked around near by for him, behold he had slipped away and was already far out of sight, and bound for the track that Sport was on. It did not take him long to catch up with Sport, as he is a very swift runner indeed. (Query. Is it not possible the hound sense of these two young dogs dictated to each other to take a separate trail at the time the two foxes had parted? It certainly looks so to me, and as if reason, not instinct, controlled them. They are very sagacious animals.)

Both dogs being now on the trail and in full tongue, I saw more sport ahead. I slung the dead fox across my shoulder, and hastened for home not more than a mile away. Arriving there I hitched my hunter Mabel to a light craft, and started out at long strides to follow the dogs. They had gone far to the north, where I soon learned that another party of hunters living in Churchville or near there, and about seven miles from where I started the fox, on hearing the cry of my dogs, had hastened to the spot where they had crossed the country and put their hounds on the trail a little behind mine. The northern half of Monroe county was now fairly alive with the sweet music of the hounds. Old men and old women, and young maidens, too, as they faintly heard it, rushed out of doors to catch the joyful sounds and to witness the exciting scene of the flying cavalcade of bold riders. They ran that fox from nine in the morning sharp, till 1 o'clock in the afternoon, my hounds making not less than 30 to 40 miles I judge, when at 1 o'clock it was shot on the long lope by one of the Churchville party just east of Beulah Corner, and within less than a mile of my home, and very near where it was first started. Star, just behind the fox when killed, was leading the other dogs by a good mile, so he had the pleasure of seeing the other four fine dogs come up but not till after he had shaken his second fox in this day's run. This is his first year's hunting. This ended the chase for that day, as the snow had now melted away and destroyed all the other tracks, but we all thought we had had very good luck and had enjoyed much sport.

I have more than once seen Star with nose up as if scenting something, go a mile and then suddenly start a fox, and on one occasion I saw him evidently scent a fox at a distance (as I was told by one professing to know) of 2¼ miles. He never utters a cry, but goes with his nose up in the air until he strikes a track or winds the game, then he makes up for lost time both in cry and speed. There is no dog around here that can keep in sight of him on a long chase. He indeed runs almost too fast, and sometimes drives the fox way out of the country, and may not succeed in bringing it back again till late in the afternoon and perhaps not at all.

How do the two snowy owls that I got last winter and sent on to the Central Park museum for exhibition get along without an ice-house to keep them cool? When I had them it was cold weather, with snow on the ground, and they would then loll like hens on a hot summer's day. I think they miss the polar regions greatly. JAY L. MERRILL.

MUMFORD, N. Y.

[When recently seen the owls appeared to be doing very well, but were lolling with tongues out as described.]

HIGH POINT.—Mr. Geo. T. Leach, of this city, has received the following note, dated High Point, N. C., May 28: "Dear Sir—I am reminded of the field trials by seeing to-day a partridge's nest filled with eggs. The season has been very late, and the birds have been late in pairing off. But I have never seen more than there are around this season. There is a large area of small grain planted, so that the young ones will fare well. There will be more birds on the field trial grounds than ever before.—DAVID P. WHITE."

BUCK.

Editor Forest and Stream:

As rather an old timer, I have for many years looked in vain for some dog like the old mastiff of my boyhood near fifty years ago. I remember one, a perfect watch dog, belonging to the storekeeper of the country village where I lived. Off duty Buck was kindly and genial, at least to those who attended to their own business; but a meddler would see his teeth and hear his warning growl if he tried to go behind the counter. A tramp—for there were tramps as long ago as 1837—could only get entrance into the store doors upon the assurance of some one in whom the dog had confidence that it was all right. But no matter who tried the doors after they were closed for the night or at noon, except the owner or some member of the family, the dog was alert and fierce. Buck was my friend and frequent companion in the woods and fields and when I had pole and line (rods were then unknown) along the waters. But after the doors of the store were fastened and he was left on watch, he was as fierce on my approach as on a stranger's. I never feared he would injure me, but I took care not to invade his prerogatives. I waited outside the door many a morning for Buck, and we had many a tramp before breakfast together. But with his love of sport he never forgot his duty. My clothes were safe on the bank of the river where I went swimming with my mates when I put them in Buck's care; and yet, with all our friendliness for each other, he was as savage at my shaking the door, even when he could see me through the glass, as if he had never known me.

Buck was a large brindle-colored dog, the head somewhat of the bulldog character, but not nearly so pronounced, and as I recollect him very much of the appearance of the mastiff whose portrait is in your last issue, copied from "Bingley's Memoirs." In one respect there was a difference, the head was shorter in proportion to the size of the dog.

Of course I know nothing of the dog's breeding. He was called a mastiff, but there was little in common with the present type of dog known by that name.

I shall never forget a school incident in which Buck figured. We had for a teacher a man hated by the boys as sincerely as ever a teacher was hated by any boys. It was not an ordinary dislike, for, so far as I have ever learned, the lapse of fifty years has not availed to soften our feelings. Well, Sim C. was brother of the owner of Buck, and had been promised a thorough drubbing after the close of school for the day. Sim slipped out when school was dismissed, and soon returned with Buck. I was detained after school, probably for the same purpose that Sim had been told to stay. Sim, perhaps because he was the worse offender, was called out first, and he went to the front with Buck at his heels. The "master's" hand was raised, and with it went up Buck's upper lip and the note of warning was sounded. Suffice it to say there were no whippings that night. We all escaped, and I dare say not one of those present on that occasion has ever forgotten Buck. H.

JUNE 4.

TOY DOG CLUB.

Editor Forest and Stream:

The owners and breeders of various classes of toy dogs have been for some time under the impression, and perhaps justly so, that their favorites have been regarded as only of secondary consideration at the New York and other great bench shows, the sporting and great watch dogs having the monopoly. In order that the proverb, "Every dog has his day," may be verified, a large number of ladies and gentlemen are now enthusiastically interested in the subject, and are about to organize a club to be known as The American Toy Dog Club. Under the auspices of this club the dwarf pug, with his dwarf compeers of other breeds, will have the right to bark as loud—if he can—as his giant prototype the mastiff. To this end it is proposed to hold a meeting of owners and breeders in New York at an early day. Of the time and place due notice will appear in the FOREST AND STREAM and other papers so that all who so desire may be present. Those who by reason of distance or other causes cannot be present are requested to communicate their views and wishes in the meantime to Mr. W. Robinson, 221 West Thirty-eighth street, New York, who has consented to act as secretary pro tem. The breeds to be included are all those properly coming under the title of toy dog. As all the toy breeds will be equally represented in this club, none will have cause to be pugnaciously disposed toward, or jealous of the other; neither will the owners have any cause for jealousy as to the rank of their respectative favorites. And although the most aristocratic canine families are to be here represented, it will be seen that whenever and wherever they meet it will be on democratic principles, perfect equality. The title "Toy Dog Club" will at once remove the opposition and objection so generally and strongly urged against the name of one particular breed, such as pug dog or King Charles club. That this club will exceed in number and excel in interest any dog club now in existence there can be little if any doubt, owing to the rapid increasing numbers of the little household pets and their increasing popularity. It may be even now suggested that one of the objects proposed by those already interested in the formation of the club is the holding of an annual fall bench show of toy dogs in New York or Brooklyn and others of the large cities. This, however, to be determined by the general executive committee. TOY.

MANITOBA FIELD TRIALS.

WINNIPEG, Man., May 29.—*Editor Forest and Stream:* The Manitoba Field Trials Club will hold their trials this year commencing on Sept. 6, to be run on prairie chickens under the Eastern Field Trials rules, except that in the Derby retrieving will not be counted. Entries for Derby close July 1, and for All-Aged Stake Aug. 1. Open to all. Three prizes will be given in each stake. There is a splendid opening for a handler here. If any person who would charge reasonable rates, and not want the stakes, dog and a fee besides, came up, he could get quite a number of dogs to handle. These trials are not run to make a reputation for any particular strain, but will combine a shooting excursion with the trials. The club have secured this year about 20,000 acres of land to run on. Full particulars and forms of entry can be had by making application to the secretary, HUBERT GALT, Winnipeg, Manitoba.

OUR PRIZE DOGS.—Mr. C. H. Maason is hard at work preparing the material for his book, which will contain a full description of all the prize-winning dogs of this season at Buffalo, Newark, Providence, Boston, Pittsburgh, Philadelphia, Hartford and New York. The list comprises nearly one thousand dogs and the compilation of the book entails a vast amount of labor. In addition to the description of the animals, there will be added a full list of the winnings of many of them, and lifelike pictures of twenty-five or more typical specimens of the the different breeds. The pictures will be photographs taken from life by competent artists and reproduced by the artotype process. These alone will be worth more than the price of the book. Mr. Mason informs us that he has already received orders enough to insure the success of the venture.

AN OLD DOG HINT.—The quickest, surest and best way to break an old dog of bad tricks is to trade him off right away for a young puppy, and begin right by teaching him according to the system of Hammond as set forth in "Training vs. Breaking."

DONUIL DHU, Mr. A. C. Wilmerding's lost black spaniel, has been returned to his owner.

DEATH OF SENSATION.—Just as we go to press, a letter from Mr. R. C. Cornell informs us that the well-known pointer Sensation is dead. The grand old dog needs no eulogy; his public performances prove his worth. As a companion at home or in the field he had few equals, and the memory of his many good qualities will long remain green with those who were so fortunate as to know him, as he was a good dog. Sensation was whelped in May, 1874. Following is a portion of Mr. Cornell's letter: "I regret to say old Don is dead. He passed away quietly on Sunday last simply from old age. I have been expecting his collapse for some time, as he had outlived the usual span of dog life. Never shall I forget the good old dog, and I never shall have quite the same feeling for another. The most satisfactory days I have ever had in the field have been with Don."

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Bow Bondhu. By G. A. Colman, Charlestown, Mass., for blue be ton English setter dog, whelped April 7, 1877, by Gus Bondhu (Dashing Bondhu—Novel) out of Bo-Peep (Rake—Claradale).

Bradford's Bonnie, East Lake Clara and East Lake Lassie. By East Lake Kennels, West Jefferson, O., for one apricot fawn, black marks, pug dog and two bitches, whelped May 1, 1887, by Bradford Ruby out of Zadie (A.K.R. 2753).

Dixey and Lakme East Lake. By East Lake Kennels, West Jefferson, O., for apricot fawn pug dog and bitch, whelped April 4, 1887, by Bradford Ruby out of Peggie (A.K.R. 1804).

Taddie East Lake and East Lake Laddie. By East Lake Kennels, West Jefferson, O., for fawn, black markings, and silver fawn pug dogs, whelped April 4, 1887, by Bradford Ruby out of Peggie (A.K.R. 1804).

Bonnie Duntroon and Bonnie Brae. By McEwen & Gibson, Byron, Ont., for golden sable collie dog and red sable bitch, whelped March 17, 1886, by imported Red Gauntlet (Charlemagne—Hasty) out of imported Brenda (Highlander—Hasty).

Carrick and Jess. By McEwen & Gibson, Byron, Ont., for black, white and tan collie dog and bitch, whelped June 4, 1886, by Heather (Eclipse—Nesta) out of Madge (Highlander—Hasty).

Idstone Dream. By B. F. Seitner, Dayton, O., for lemon and white pointer bitch, whelped Jan. 2, 1887, by Planet out of Lady Croxteth.

Miss Idstone. By Henry Hardie, Nashville, Tenn., for lemon and white pointer bitch, whelped Jan. 2, 1887, by Planet out of Lady Croxteth.

Idstone Prince, Idstone Bow and Idstone Trick. By B. F. Seitner, Dayton, O., for liver and white ticked and liver and white pointer dogs and liver and white bitch, whelped Jan. 5, 1887, by Planet (Meteor—Accident) out of Spinaway II. (Bang—Spinaway).

Lulu East Lake. By East Lake Kennels, West Jefferson, O., for fawn, black marks, mastiff bitch, whelped April 5, 1887, by Leo (Lord Nelson—Maud) out of Ashmont Bertha (Hero II.—Empress).

Bessie B. By Edwin Still, Philadelphia, Pa., for English setter bitch, whelped Sept. 14, 1886, by Bingo out of Nellie.

Major B. By T. C. Brown, Piqua, O., for dark fawn, black marks, mastiff dog, whelped April 5, 1886, by Leo (Lord Nelson—Maud) out of Ashmont Bertha (Hero II.—Empress).

Deacon. By E. A. Pitts, Columbus, O., for apricot fawn pug dog, whelped April 4, 1887, by Bradford Ruby out of Peggie (A.K.R. 1804).

Dee, Turriff and Ness. By Geo. Sanderson, Moncton, N. B., for two Scotch terrier dogs and one bitch, whelped May 15, by Charlie out of Perth.

Perth. By Geo. Sanderson, Moncton, N. B., for Scotch terrier bitch, imported.

Flirt II. By W. G. Young, Ottawa, Can., for lemon and white Clumber spaniel bitch, whelped Aug. 28, 1886, by Johnny (Ben—Joan) out of Jess (Jack—Jill).

Quart Cup and Lilly K. By Henry May, Augusta, Ga., for black, white and tan English setter dog and bitch, whelped March 14, 1886, by Harry S. (A.K.R. 223) out of Jessie (A.K.R. 590).

Bessie W. By Henry May, Augusta, Ga., for black, white and tan English setter bitch, whelped Nov. 20, 1886, by Harry G. (A.K.R. 223) out of Mary Belle (A.K.R. 1393).

Idalia. By A. Gerald Hull, Saratoga Springs, N. Y., for fawn mastiff bitch, whelped Jan. 27, 1887, by Debonair (Crown Prince—Idalia) out of Lorna Doone (Crown Prince—Ilford Baroness).

Chicago Fawn. By J. B. Wickery, Chicago, Ill., for lemon and white pointer bitch, whelped May 13, 1886, by Fritz (A.K.R. 1351) out of Virginia (A.K.R. 1357).

Gladstone's Rake. By Dr. R. I. Hampton, Athens, Ga., for black and white English setter dog, whelped Jan. 2, 1887, by Gladstone out of Flounce.

Hur Kennels. By Robert D. Locke, Chicago, for his kennel of mastiffs.

Caumsett Kennels. By Richard H. Derby, Lloyd's Neck, N. Y.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Mary Belle—Harry G. Henry May's (Augusta, Ga.) English setter bitch Mary Belle (A.K.R. 1373) to his Harry G. (A.K.R. 223) April 28.

Devonshire Queen—Mort of Naso. Floyd Vail's (Jersey City, N. J.) pointer bitch Devonshire Queen (A.K.R. 3127) to F. F. Benson's Mort of Naso (Nick of Naso, A.K.R. 4591—Temptation, A.K.R. 1590), June 1.

Lady Croxteth—Planet. B. F. Seitner's (Dayton, O.) pointer bitch Lady Croxteth (Croxteth—Lass) to Idstone Kennels' Planet (Meteor—Accident), May 5.

Fannie—Tom II. G. F. Bond's (Worcester, Mass.) Gordon setter bitch Fannie to F. M. Harris's Tom II. (Doane's Tom—Flora), May 17.

Vic—Tom II. J. L. Wells's (Attleboro, Mass.) Gordon setter bitch Vic (Dinks—Mabel) to F. M. Harris's Tom II. (Doane's Tom—Flora), April 29.

Trinket's Belle—Doncaster. B. F. Seitner's (Dayton, O.) pointer bitch Trinket's Belle (Bang Bang—Trinket) to Idstone Kennels' Doncaster (Croxteth—Lass), May 3.

Nellie II.—Ashmont Sam. Maple Grove Kennels' (St. Louis, Mo.) mastiff bitch Nellie II. (Hero II., A.K.R. 545—Countess, A.K.R. 2220) to their Ashmont Sam (Hero, A.K.R. 545—Ashmont Lady, A.K.R. 2314), May 23.

Lady Winnie—Little Swell. J. H. Shepherd's (Philadelphia, Pa.) fox-terrier bitch Lady Winnie (Sam—Wasp) to E. Lever's Little Swell (Spice—Relish), April 26.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

DELAWARE.—There was a good attendance at the weekly shooting of the Wilmington Rifle Club at Schuetzen Park on Decoration Day. The scores made were generally good and a notch or two ahead in the steady improvement which has marked the club's shooting this spring. But the event of the day was the breaking of Heinel's highest record of the club of 81 points at 200yds. (which was considered almost impregnable), by S. J. Newman, who over-reached it by three points. Although Newman last week tied Heinel's highest club record of 91 points at 100yds. no one was expecting him to surpass the high record at 200yds. Standard American target, off-hand, possible 100 points:

First Match, 200yds.

S J Newman	9	10	0	6	10	8	9	6	7	10	—84
R Miller	9	7	10	9	9	9	5	4	4	8	—74
C Heinel, Sr	5	6	7	7	7	10	5	8	10	6	—72
J Scott	7	6	3	6	7	7	10	4	10	6	—69
M A Jones	6	7	6	5	9	4	5	7	6	7	—62
H B Seeds	7	4	6	5	6	10	3	6	9	8	—61
J Francis	7	6	6	4	7	9	6	6	4	5	—60
J E Newman	6	6	4	6	9	4	4	9	3	4	7—58
W F Seeds	4	5	4	9	3	7	4	7	6	6	—54
W A Bacon	4	6	5	6	3	5	5	7	8	3	—51

Second Match, 200yds.

S J Newman	7	7	6	6	6	8	9	10	5	6	—70
J Francis	9	6	4	7	8	5	8	6	7	7	—67

Griffin	6	4	8	6	6	5	7	10	8	7—67

Worthen gold badge, J. F. Brown silver badge. A fine day but troublesome wind on our range.

BOSTON, June 4.—The Saturday matches were quite well attended at Walnut Hill Range. N. Washburn broke the record on the new rest target, and now holds the highest with a total of 116 points. Matches C and F will come to a close on the 11th inst. The spring meeting of the Massachusetts Rifle Association will be held at Walnut Hill on June 16, 17 and 18. Next Saturday the picked team from the Massachusetts Rifle Association will shoot the Bullard Arms Company's team match at the range. Wednesday, the 8th, will be rifle day and the range will be open. Following are the best scores made to-day:

Decimal Off-Hand Match.

W O Burnite	8	9	10	7	8	8	10	10	6	9	— 85
	6	7	8	10	7	10	6	9	8	8	— 79

SPRINGFIELD, Mass., May 30.—The Schuetzen Verein observed Memorial Day in their own peculiar fashion at Beldin's West Springfield range, where 20 of the best marksmen held a practice shoot to sharpen up for the bund shoot at New Haven, July 11-12:

A Hallenstein	13	17	15	24	25	20	22	21	13	20	—191
Capt Buchholz	7	11	17	15	18	21	13	19	20	22	—163
E Wunsch	12	14	13	18	17	22	14	11	13	15	—149
W Schraeder	10	14	6	9	15	16	14	14	14	16	—115
H Lehman	8	8	5	10	11	15	9	11	13	15	—109
P Rosstauscher	9	7	6	9	12	14	10	15	19	8	—105

THE MUZZLE VS. BREECH MATCH, which was to have been shot at Jamestown, N. Y., last month, is thus reported to us by a Syracuse correspondent: "I am sorry to reply that there was no attendance of breechloaders, hence no match. My own breechloader was the only exception. There were five in attendance with muzzleloaders, and part of two days were devoted to pool shooting, of which no official record was kept. I have no account of this myself, neither do I know of any one that has.—C. H. R."

WORCESTER, Mass., June 2.—The Worcester Rifle Association had a meet this week at Broad Meadow Range. The results of the work in detail were as follows:

Sporting Rifle, 500yds.

M G Fuller	5555555555—50	5555555555—50—100

NEWARK, June 1.—The match between the Coppersmith and Snellen teams was shot this evening at the Essex range, and resulted in a victory for the Snellen team by 5 points. Some of the old riflemen showed that they have not forgotten how to roll up large scores, while others were a little rusty. The greatest surprise of the evening was Old Reliable John Doon, who made a score of 115 ring or 50 Creedmoor points. The following is the score:

Snellen Team.		Coppersmith Team.	
A C Neuman	116	John Coppersmith	118
John Doon	115	Geo Wiegman	115
G Snellen	109	C H Miesel	113
Wm Watts	108	Charles Weeks	111
Frank Helms	107	J H Huegel	106
Roger Marshall	105	Chas Cooper	102
S H Shackleford	103	Albert Steiner	99
J A McCallum	98	N Diethrick	98
A Lake	95—956	Wm Dutcher	89—951

A return match will be shot on June 16, commencing at 7 o'clock.

The election in the Our Own Rifle Club, last week, resulted in the following choice of officers: President, O. A. Kiefer; Vice-President, Fred Knothe; Recording Secretary, F. A. Freinsehner; Treasurer, William Drexler; Sergeant-at-Arms, W. Kroeplin; Captain, M. Condit; Lieutenant, Ferdinand Freinsehner; Official Scorer, John Bander; Judges, O. A. Kiefer and A. Snellin; Referee, Frank Smith; Finance Committee, Miller, J. M. Kiefer and Bertram; Assistant Rifle Inspector, Emil Wilms. The club has thirty active and eighteen honorary members. The weekly shoot resulted as follows: F. A. Freinsehner 105, Bertram 104, Weider 94, Condit 100, Limberger 101, Kroeplin 96, J. M. Kiefer 99, Wilms 102, O. A. Kiefer 103, Drexler 101, Ferd Freinsehner 93, Friedenheit 92, Bauder 100, Steutler 87, Weeks 107, Knothe 97, Dietzel 104, Garthner 96, Smith 104, Klem 99, Miller 74, Petry 102.

BLOOMING GROVE.—Upward of fifty ladies and gentlemen, members of the Blooming Grove Park Association, were present at the spring tournament at the club house in Pike county, Pennsylvania, on Decoration Day. Through the courtesy of the officers of the Erie a special car was provided for the use of the members of the Association and attached to the Scranton express. On Monday the various contests were held. The prizes were handsome silver badges. Clay-pigeons, 18yds.:

THE CANADIAN TEAM.—The following men have been chosen by the Dominion Rifle Association and have consented to go to Wimbledon as the Canadian team of 1887:

1. Pvt. A. S. Kimmerley, 49th Hastings Rifles, Napanee, Ont.
2. Qr.-Mr. Sergt. John Ogg, 1st Brig. Field Artillery, Guelph, Ont.
3. Lieut. W. Mitchell, 32d Bruce Infantry, Port Elgin, Ont.
4. Sergt. D. M. Loggie, 73d Northumberland Inf, Chatham, N. B.
5. Corpl. W. Langstroth, 8th Cavalry, Hampton, N. B.
6. Lieut. Geo. Crockett, 82th Batt., Little York, P. E. I.
7. Pvt. H. Marris, 13th Batt., Hamilton, Ont.
8. Sergt. J. Goudie, 8th Royal Rifles, Quebec, P. Q.
9. Pvt. James Riddle, 6th Fusiliers, Montreal, Que.
10. Lieut. D. Hooper, 82d Batt., Charlottetown, P. E. I.
11. Col.-Sergt. C. N. Mitchell, 90th Rifles, Winnipeg, Man.
12. Pvt. H. Graham, 13th Batt., Hamilton, Ont.
13. Lieut. A. D. Cartwright, 47th Batt., Kingston, Ont.
14. Sergt. W. C. King, 45th Batt., Bowmanville, Ont.
15. Sergt. A. Thomas, 3d Victoria Rifles, Montreal, P. Q.
16. Pvt. W. Gamble, 46th Batt., Port Hope, Ont.
17. Pvt. J. Kambery, 5th Royal Scots, Montreal, P. Q.
18. Lieut. W. Hora, 14th Princess of Wales' Own Rifles, Kingston, Ont.
19. Corp. W. Taylor, 63d Rifles, Halifax, N. S.
20. Pvt. A. Gillies, 90th Rifles, Stony Mountain, Man.

Staff-Sergt. McAdam, Victorias; Lieut. Smith, 71st.; Sergt. Fairbairn, 43d, reserves.

WIMBLEDON.—The annual rifle meeting at Wimbledon promises unusual success. New prizes aggregating a thousand pounds will be offered to commemorate the Jubilee year. The Canadian team will occupy its old quarters. Other colonies are going to send teams.

COMING RIFLE SHOOTS.—Massachusetts Rifle Association spring meet, June 16-18; Newark Shooting Society, June 20-22; Creedmoor fall meet, Sept. 12-17.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE CARVER-BREWER MATCH, at Germantown, Pa., was stopped by the agent of the Society for the Prevention of Cruelty to Animals. There is in Pennsylvania no specific statute forbidding pigeon shooting, but the District Attorney gave his opinion last spring, in Philadelphia, that the sport came under the head of cruelty to animals; and since then the Society has been looking for an opportunity to test the matter. The Wingohocking Club, of Germantown, might settle the matter by arranging a friendly test suit.

NEW YORK ASSOCIATION.—Utica, N. Y., June 6.—The New York State Association for the Protection of Fish and Game met here to-night. The following officers were elected for the ensuing year: President, C. W. Tuttle, of Auburn; first Vice-President, Dr. W. H. Booth, of Utica; second Vice-President, James H. Brown, of Rochester; Recording Secretary, John B. Sage, of Buffalo; Corresponding Secretary, George B. Wright, of Albany, and Treasurer, D. M. Lefever, of Syracuse. Auburn was named as the place of meeting for the convention of 1888.

PHILADELPHIA, Pa., June 4.—Wayne Gun Club, Ligowsky clay-pigeons, screened trap, 18yds.:

SPORTSMEN'S ASSOCIATION OF THE NORTHWEST.—The third annual tournament at Seattle, Wash. Ter., will be held tomorrow and Saturday.

DECORATION DAY TROPHY.

THE FOREST AND STREAM DECORATION DAY TROPHY match may be scored among the pleasant shooting events of the year. The entries numbered fifty-three teams all told. The Lockport Gun Club was last week by an error announced as one of the competitors. The total sum of entrance fees is $159. The second prize, 50 per cent. of this, is $79.50; the third prize, 30 per cent., is $47.70; the fourth prize, 20 per cent., is $31.80.

Some of the teams, for various reasons, did not shoot or did not send in the results of their shooting. The Bay Ridge Gun Club report that their two teams were broken up by unforeseen circumstances. The Spring Hill Club, of Blauveltville, N. Y., report that they did not strictly comply with the conditions; another team made such low scoring that they did not care to submit the result. The Algonquin Gun Club of this city were unfortunate. None of the three teams entered were able to shoot for the TROPHY, as the club grounds, which are also used as a baseball ground, were occupied both morning and evening for the latter purpose. Forty-four scores have come to hand, and are as follows:

KNOXVILLE GUN CLUB, Knoxville, Tenn.—Cleveland Co. target and trap:

	Straight-Bore.	away.	Right.	Left.	Total.
T C Eldridge	10	11111	11111	11111—15	
J M Ross	10	11111	21111	11111—15	
C M Woodbury	10	12221	22111	12121—15—45	

Scorer, J. H. Cruze; referee, F. S. Davant; J. Ed. Ross.

DELHI GUN CLUB, Cleves, O.—American target and trap:

L J Schlesinger	..	11001	11101	10102—10—28	

Scorer, Wm. Rowland; referee, Edwin L. Thomas; P. H. Wing.

There are four perfect scores of 45. Of these the Fountain Gun Club score has been rejected. The Fountain Club entered three teams: First, Messrs. Capron, Smith and Saunders; second, Messrs. Benedict, Green and Richards; third, Messrs. Hendrie, Williams and Ferris. In the scores as sent Messrs. Saunders and Richards have been transposed. This is not a substitution, and according to the conditions of the match, the scores cannot be accepted. There are then three teams to shoot off for the TROPHY.

Five teams have tied on 44 for second place, or first money prize.

Four teams have tied on 43 for third place, or second money prize.

There are three scores of 42 for fourth place, but of these the Fountain score has not been allowed for reasons already stated. This leaves two teams to compete for the third money.

The tie for the TROPHY must be shot off, and the teams have been communicated with respecting a date. The other ties may be shot off or divided by unanimous consent.

NEW ORLEANS.—On the 20th of June the Louisiana Gun Club will give a grand open tornament at the New Orleans Base Ball Park.

THE WELLINGTON SHOOT.

THE big shoot, under the auspices of the Massachusetts marksmen, has been successfully carried out, and the story of their doings before the trap is told in the figures and records below. Reasonably fair weather came in to assist the very admirable arrangements of the Committee of Arrangements. During the entire week the best of feeling has prevailed among the shooters, and not a cross word has been spoken so far as known, a fact which speaks volumes for the character of the 200 gentlemen who have faced the traps. Some of the best shooters in the country have participated in the tournament, and on every side only words of praise could be heard of the management of the tournament. Surprises and disappointments were the order of the day; the Eastern men surprised that their scores compared so favorably with those of their Western brethren, and the later disappointed in not taking to the land of the setting sun more prizes.

Mr. C. W. Dimick, of the United States Cartridge Company, is to be credited with the instigation of this grand tournament, and to the executive committee consisting of Messrs. Edward Read, W. R. Schaefer, A. F. Adams, Hermann Strater, C. B. Sanborn, H. W. Eager, J. S. Sawyer, C. W. Dimick, C. H. Gerrish, W. H. Allen, W. L. Davis, O. R. Dickey, I. B. Wellington and T. G. Strater, is due the credit of successfully carrying out the six days' programme.

The main prize list, apart from the sweepstakes winnings, will show that there are some good shots in all parts of the country. The distribution showing:

T. G. Strater, Boston, L. C. Smith gun, $450.
J. R. Stice, New Haven, Parker gun, $150.
G. C. Luther, Syracuse, N. Y., Pieper gun, $100.
H. W. Eager, Marlboro, Mass., Winchester gun, $50.
C. W. Budd, Des Moines, Ia., Massachusetts Arms rifle, $75.
O. R. Dickey, Boston, Forehand Wadsworth gun, $75.
H. McMurchy, Syracuse, N. Y., J. H. Lovell revolver, $20.
Ben Teipel, Covington, Ky., Smith & Wesson revolver, $60.
H. G. Wheeler, Marlboro, Mass., Winship shell case, $12.
C. M. Stark, Winchester, Mass., leather gun cover, $10.
A. L. Traeger, New Haven, Conn., oil painting, $1,000.
C. H. De Rochemont, Newburyport, Mass., Scott gun, $200.
E. Taylor, Cincinnati, O., Lefevre gun, $100.
E. M. Moody, Lockport, N. Y., Spencer gun, $100.
F. S. Mead, Davis gun, $140.
J. Buffum, Melrose, Mass., Manhattan gun, $75.
F. W. Partiss, Ilion, N. Y., Springfield roadster bicycle, $75.
A. E. Mead, Knoxville, Tenn., J. Stevens rifle, $50.
J. S. Snow, Cambridgeport, Mass., shooting suit, $30.
A. B. Bowditch, Oxford, Mass., Har.-Rich. revolver, $20.
R. H. Aldoes, Brockton, Mass., Belcher loader, $10.
W. R. Dean, canvas gun cover, $5.

Such a capital showing of shooters and sportsmanlike spirit was a surprise even to the hopeful and enthusiastic managers, but the success was earned and well won through intelligent well-directed work before the first shot was fired.

May 30.—The opening day was a perfect one for trap-shooting sport, and about the circle of shooters was gathered a large crowd of spectators. The ladies were out in large numbers, and took as much interest in the shooting as their gallant escorts. During the day many military men called, and expressed themselves as pleased with the proceeding. The matches were all shot according to list, but the largest interest was felt in Matches 7 and 8 of the day's list. These were the merchandise prizes, which were to run through the meeting, the aggregate score to count in fixing rank for the selection of prizes. The scores ran as follows:

First event, open to all, 10 birds for sweepstake purse, $2 entrance: Dickey 5, Eager 9, Stanton 6, Cooper 9, Spofford 7, Stark 6, Tiple 8, Steel 9, Livingstone 7, Pike 4, Miller 7, Mills 7, Osgood 6, Law 6, Early 8, Wagenar 8, Allen 7, Aldaes 5, Francis 8, Sherman 6, Budd 9, McMurchy 6, Charles 4, Atwell 7, Luther 7, Haskell 9, Cunningham 4, Faulkner 8, Linneman 6, Bartlett 5, Moody 6, Smith 10. Ties at 8 shot off and Francis won. Ties on 7 were shot off and Allen won.

Second event, open to amateurs only, entrance $1, 10 birds, 3 traps: Bancroft 8, F. S. Meede 6, H. B. Nichols 6, S. Cunningham 7, J. M. Greene 5, Leems 7, Rochemont 7, Pratt 5, Tucker 5, Folsom 4, A. S. Alexander 8, H. Crown 5, J. S. Barnes 6, M. C. Smith 9, H. M. Levington 2, W. L. Pike 3, F. W. Farliss 6, A. L. Goud 3, M. C. Poor 1, F. W. Gore 5, G. Gribbin 7, Fibert 7, Moody 5, Goodwin 4, Hoffman 5, Lowley 3, Allen 8, Wheeler 7, Haskell 9, Ackerman 7, R. H. Aldoes 3, H. Levett 5, J. Keith 4, G. Bates 5, M. Knowles 4, J. Spofford 6, P. Kenaird 7, F. Tirrell 4, L. W. Farren 7, C. Wilbur 7, J. A. Faulkner 8, B. C. Sherman 4, W. M. Hughes 6, R. F. Scherfer 6, Stickney 6, Brown 8, Amos 8, Rowdish 4, Hall 8, F. H. Smith 5, Beaudry 5, Nullrisy 8, Hopkins 6, C. J. Landers 6, F. H. Landers 6, Beekman 7, Nichols 7, Gerry 7, Austin 3, Butler 3, Francis 6, Gray 3, Snow 5. Hatch 4, Widman 3, Brazer 5, Doane 7, Downs 5, Temple 3, Russell 8, H. S. Taylor 7, S. H. Wurms 9, Baxter 6. Ties on 9 divided, ties on 8 won by Allen, ties on 7 shot off and divided between Renard and Wilbur, ties on 6 divided between Barnes and Hughes.

Third event—Open to amateurs only; sweepstakes, entrance $1, 10 birds, 2 traps: Faulkner 8, Saville 4. Bartlett 6, Frazer 8, Wilbur 5, Renard 7, Aldoe 4, Bates 5, Knowles 8, Elliott 5, A. E. Mead 2, Baker 8, Francis 6, Wheeler 7, Hargrave 4, W. F. Cook 6, Widman 6, Swift 6, Dr. Downs 4, Heele 7, Andrews 6. Farrar 2, Quimby 4, Richardmond 4, Osgood 6, Haskell 5, Spofford 5, N. S. Taylor 7, W. Ames 6, Law 8, Folsome 6, Allen 8, Pratt 7, Crown 2, J. M. Green 3, J. S. Smith 9, Nichols 7, Loring 6, Greener 4, Doane 5, Jason Smith 4, Gerry 6, C. M. Gray 4, W. J. Plimpton 3, Carey 9, C. M. Smalley 6, J. J. Walker 4, Davis 3, G. Roe 6, W. H. Sheldon 7, J. Nichols 7, G. S. Luther 8, T. Curtis 7, Atwell 2, E. W. Webster 3, W. R. Dean 5, E. M. Moody 9, W. H. Slocum 9, F. P. Austin 4, E. K. Butler 3, G. Wurms 5, Bowdish 5, Stickney 3, Baudrey 10, Buffington 7, Baxter 5, Taylor 8, Sherman 5, Wardwell 5, F. Beckman 5, T. Hall 5, Keith 5, Morandus 2, J. W. Russell 4, H. B. Bancroft 8, J. S. Snow 7, J. B. Churchill 4, C. M. Carpenter 7, A. Newton 4, F. H. Smith 7, A. W. Gorr 6, W. M. Hughes 5, G. A. Griffin 6. F. C. Hatch 6, W. G. Crandell 8, Capt. Hart 6, L. B. Nutting 7, Lefever 2, W. H. Cole 4, Mahare 7, C. Newcomb 4, D. S. Short 6, Friedel 7, Ackerman 3, A. W. Lawrence 4, Lee 7, Morehouse 2, E. S. Williams 7, Schaefer 8, Temple 4, Spanglee 0, C. Wilber 7, S. Morse 2, J. F. Swift 8, C. B. Scranton 5, Langelier 0. Ties on 7 shot off and Wheeler, Pratt, McDonald and Buffington divided. Ties on 8 shot off and Law won. Ties on 9 shot off and W. G. Cary, W. H. Slocum and G. Wurms 9 divided.

Fourth event, open to all, 10 birds, 3 traps: Eager 9, Charles 6, Stark 7, Dickey 6, Haskell 5, W. T. Quinlan 3, Stanton 7, Taylor 7, Lunneman 6, Mullen 7, Wagner 7, G. C. Luther 8. Trager 5, Stice 8, Folsome 8, Tiepel 8, Allen 8, Mills 3, Mead 2, W. T. Smith 5, Cooper 8, Earley 8, Ackerman 6, Francis 8, McMurchy 6, Budd 6, Bartell 6, Faulkner 10, Barnes 0, Widman 6, E. T. Smith 6, E. W. Tinker 6, M. D. Gilman 5, Bowditch 1, Vebert 6, G. W. Russel 5, W. R. Dean 4, Osgood 6, E. W. Buffington 6, T. G. Parson 7, W. S. Perry 6, S. W. Carey 4, C. B. Holden 2, Crowell 3, W. L. Davis 3, W. H. Sheldon 7, H. G. Wheeler 8, Amos 8, E. W. Law 5, Shaefer 1, G. C. Bates 7, M. Knowles 4, M. C. Smith 9. Ties on 7 shot off and Stark won. Ties on 8, Folsom and Amos divided. Ties on 9 divided.

Fifth event, for amateurs, 1 trap, sweepstakes, $10 each, 10 birds: Aldoes 5, Swift 5, Wheeler 10, Law 8, Temple 4, Triche 4, Williams 6, Elliott 7, Jones 2, Wilbur 4, Reneau 7. Tirrell 7, Renchaud 7, F. Tirell 4, Fuson 5, Taylor 7, Baker 6, Faulkner 9, Traeger 8, Saville 7, Sanborn 4, Francis 7, Nichols 3, Gilman 2, Doane 4, Amos 8, Parties 8, Beaudry 6, Cunningham 6, Crowell 6, Barnes 8, Russell 6, Davis 8, Cole 5, Newcomb 5, Tranaplin 6, Mankard 6, Folsom 7, DeRochemont 8, Atwell 4, W. Ames 4, McDonald 6, Widman 6, G. C. Rowe 5, Jayson 8, Steel 3, Haskell 7, Wardwell 9, Nichols 6, Barney 8, Hall 8, Bowditch 8, Yearrington 7, Smalley 6, Walker 4, Livingston 5, Swift 6. Ties on 7 shot off and Renaud and Taylor divided. Ties on 8, Traeger, Sayson, DeRochemont and Hall divided.

Sixth event, 10 birds, open to all, sweepstake purse: Tucker 6, Charles, 7 Steele 6, Allen 9, Stanton 9, Law 7, Budd 8, Wurms 5, Aldoes 9, Luther 7, Wagener 5, Miller 4, Tiepie 7, Beaudry 8, Carey 7, Eager 8, Perry 6, Haskell 8, Holden 7, Parson 9, McMurchy 7, Steele 8, Barnes 8, Cooper 9, Earley 9, Stark 7, Dickey 6, Mills 8, Francis 7, Spofford 5, Atwell 1, Faulkner 9, Wheeler 10, E. T. Smith 4, Gilman 9, Baker 9, Davis 8, Ackerman 4, Crowell 9, Bales 5, M. C. Smith 6, Nichols 7, Renead 7, Wurms 8, Folsom 5, W. H. Sheldon 9. Ties on 7 shot off and Francis won. Ties on 8 shot off and Eager and Haskell divided. Ties on 9 shot off and Stanton and Earley divided.

Seventh Event.—For experts only; sweepstakes optional, $5; 3 traps, 20 birds; score to count on merchandise prizes:

J. Miller	11111100100001111011—13	Stanton	11111100111111111011—17

Newton	01110011100001101101—11	Ellsworth	00000101111111100010—10
C Collins	00100110111111101100—12		

Ties on 14 won by Haskell; ties on 15 divided; ties on 16 divided.

Ninth event, sweepstakes for amateurs, 10 clay-birds, 5 traps—Doane 5, Cole 5, Luther 5, Barney 6, Wardwell 7, Wurms 8, Wheeler 9, Aldoes 7, Bartlett 7. Traeger 5, Haskell 8, Widman 6, Frances 8, Reneaud 8, Nichols 8, Sherman 6, Smith 3, Dean 5, Rowe 6, Buffington 6, Bowdish 5, Stickney 5, Bates 5, Swift 10, Downs 3, Gray 2, Hughes 3, Lawrence 6, Morehouse withdrawn, Stone 5, Nichols 6, Bates 4, Wilbur 6, Grimhier 1, Greene 4, Barnes 9, Steele 7, Gore 7, Newcomb 5, Law 8, Russell 7, Beaudry 4, Lander 4, Ackerman withdrawn, Jason 3, Smalley 4, Mahard 5, Short 4, Churchill 6, Tirrell 4, Nye 3, Mott 4, Walker withdrawn, Longley 6, Saville 5, Elliott 3, Swift 7, Warren 9, Mead 6, Webber 5, Hall 6, Taylor 7, Bancroft 7, Hatch 4, Knowles 7, Snow 8. Ties on 7 divided between F. Swan and Hall; ties on 8 divided between G. H. Wurms, Reneaud and Snow. Ties on 9 divided.

Tenth event, open to all, sweepstakes, 10 pigeons, 4 traps.—Eager 10, Budd 9, Charles 5, Wurms 7, Tinker 7, Allen 7, Farrar 6, Murchy 7, Parsons 6, Early 9, Jason 5, Ames 4, Tiepie 7, Bartlett 7, Swift 6, Stanton 8, Perry 7, Luther 5, Crandall 5, Wardwell 6, Smith 5, Crewell 9, Dickey 8, Stark 7, Barnes 8, Smith 8, Mills 3, Lineman 6, Folsome 9, Morse 6, Law 8, Aldoes 7, Luther 5, Davis 7, Stice 6, Reneaud 8, Wheeler 9, Bates 9, Knowles 8, Beaudry 8, Warren 7, Webber 3, Wagner 5, Miller 9, Saville 6, Baker 9, Elliott 6, Emerson 5, Frances 6, Haskell 4. Ties on 9 divided between Budd, Early, Crewell, Simone and Miller. Ties on 8 divided between Stanton, Dickey and Barnes. Ties on 7 divided between MacMurchey, Tiple, Stark and Warren.

Eleventh event—For amateurs only, 10 birds, sweepstakes, 2 traps: Renaud 5, Beaudry 8, Mead 6, Greene 1, Stone 3, Taylor 9, Cole 3, Sherman 8, Morehouse 4, Laurence 7, Hughes 8, Wade 3, Knowles 8, Swift 7, Baker 9, Lefever 7, Law 7, Stickney 6, Semple 3, Donald 6, Bates 8, Jason 7, Russell 5, Widman 6, Bowdish 10, Doan 8, Haskell 9, Wurms 8, Francis 8, Friedel 3, Ferson 5, Wilbur 7, Barnes 4, Aldoes 5, Dean 7, Hall 7, Nichols 4, Webber 4, Gove 4, Newcomb 6, Luther 8, Barnes 7, Alexander 9, Buffington 8, Schaefer 8, Morandus 3, Moody 6, Andrews 7, Partiss 7, Traeger 9, Nichols 7, Churchill 5, Snow 7, Spangler 5. Ties on 9 divided; ties on 8 shot off, and Beaudry, Hughes, Doane and Buffington divided; ties on 7 shot off and Swift won.

Twelfth event—For experts only, 10 birds, 4 traps, sweepstakes: Wagener 7, Tiepie 8, Cooper 7, Earley 8, Stanton 7, Miller 5, Luther 8, Dickey 8, Law 9, Davis 6, Crowell 7, Barnes 7, Francis 8, Parson 6, McMurchy 8, Stark 10, Budd 9, Beaudry 6, Stice 9, Linneman 5, Waskeld 7, Perry 6, Aldoes 9, Charles 9, Eager 9, Wheeler 7, M. C. Smith 7, Renaud 7, Warren 3, E. T. Smith 6, Wilbur 4, Wurms 10. Ties on 10 divided; ties on 9 shot off and Eager won; ties on 8 shot off and Tiepie, Earley, McMurchy and Wheeler divided; ties on 7 shot off and Cooper, M. C. Smith and Haskell divided.

Thirteenth event—Sweepstakes, 10 clay-pigeons, 4 traps: Eager 9, Charles 4, Perry 3, Budd 9, Luther 8, McMurchy 7, Stice 9, Dickey 8, Parsons 6, Stanton 8, Cooper 8, Tiepel 9, Linneman 8, Stark 9, Earley 8, Crowley 8, Wheeler 10, Sheldon 8, Carey 8, Smith 9, Beaudry 9, Haskell 7, Wagener 7, Wurms 7, Law 6. Ties on 9 shot off and divided between Eagar, Stice, Renaud and Beaudry; ties on 8 shot off and divided between Luther and Earley; ties on 7 shot and McMurchy won.

May 31.—The second day's contest in the World's Trap Shooting Carnival, under the auspices of the New England Shooting Tournament Association, was witnessed to-day by about 800 people, fully one-fourth of which number were participants in the shoot. The day was ideal as good as Monday for the shooting, the wind was from the east, was raw and cold, and the lowery condition of the weather hardly permitted the rise of the birds being seen quite as quickly as would have been the case had the sun been shining, and thus valuable seconds were lost by the gunners in gaining an accurate sight of the flying missiles previous to pulling the trigger. The scores, however, average better than at the preceding day's shoot, and taken altogether, the second day's contest compares favorably with its predecessor. The day was known as the American clay-bird day, and upward of 9,000 birds were thrown and shot at. In the programme of the events of the day only four matches were announced, but between 9 o'clock in the morning, the hour at which the shooting commenced, and 7 o'clock at night, 19 matches were shot.

The ties in the 10th event (merchandise match) were: De Rochemont and Taylor 18; Webber, Davis and Knowles, 17; Wardwell, Renaud and Griffin, 16; Andrews, Francis, Lee, Aldoes and Mead, 15. Darkness prevented shooting these ties off, and they will be shot to-day. Appended is the result of the day's shooting:

First event. 10 birds, open to all comers—McMurchy first, Wheeler, Tucker and Early second, Wagner third, Eager and Stanton fourth.

Second event, 10 birds, open to all comers—Eager first, Beaudry and Stice second, Aldoes, Wheeler, McMurchy and Barnes third, Teipel fourth.

Third event, 10 bird match for amateurs—Sherman first, Lawrence and Beaudry second, Lee third, Barnes fourth.

Fourth event, 10 bird amateur match—Aldoes, Snow, Swift, Cook, E. Taylor and Alexander first, Hughes, Knowles, Treager, J. F. Barnes and Folsom second, Griffin third, Spangle fourth.

Fifth event, 10 bird amateur match—Sherman and Schaeffer first, Bedich second, E. Taylor, Green and Partiss third, De Rochemont fourth.

Sixth event, 10 birds, open to all—Stanton, Beaudry, Dickey, Sheldon and Francis first, Stark second, Aldoes and Budd third, Early and Wheeler fourth.

Seventh event, 10 birds, open to all—Teipel first, Dickey, Mills and Stice second, Allen third, Early fourth.

Eighth event, 10 bird match, open to all comers—Luther, McMurchy, J. Barnes and Parsons first, E. T. Smith, Budd and Eager second, Treager, Charles and Early third, Dickey and Stark fourth.

Ninth event, 5 pairs of birds, open to all—Early and Budd first, McMurchy, M. C. Smith, Wardwell and Barnes second, Eager and Miller third, Teipel, Cooper and Perry third.

Tenth event, 20 birds, amateur merchandise match:

Fourteenth event, open to all comers—Stice and Eager first, Carey and Wheeler second, Charles third, E. T. Smith and Dickey fourth.

Fifteenth event, 10 birds, free to all comers—Stice and Budd first, Wheeler and McMurchy second, Parsons third, Wardwell fourth.

Sixteenth event, 5 pairs birds, open to all comers—Early first, Law, Eager and Budd second, M. C. Smith and Renaud third, Teipel fourth.

Seventeenth event, 10 birds, professionals—Stark and McMurchy first, Eager second, Stice and Budd third, Parsons fourth.

Eighteenth event, 10 birds, open to all—Sheldon and Eager first, Stice second, Budd and Cooper third, McMurchy fourth.

Nineteenth event, 3 pairs of doubles, open to all comers—Sawyer and Taylor first, Moody, Hatch, Wardwell and Andrews second, Gore, Knowles and Renaud third, Aldoes fourth.

June 1.—The rain to-day interfered with the attendance of spectators at the third day's contest in the world's trap shooting carnival on the Wellington Gun Club grounds, but failed, however, to dampen the ardor of the participants in the numerous matches, for about 150 men, armed with shotguns and enveloped in rubber coats, put in an appearance before the traps, and defied the elements. The scores compare favorable with those of the preceding days, and in one instance a full score of 20 is to be credited to one of the Eastern men. Blue rocks seem to be the favorites of all the Western men. The day was cold and the fire in the shooting house was the center of attraction between matches. The special prize match, which was not finished Tuesday owing to darkness, was the first event, and as a result A. F. Cooper, of Exeter, N. H., will take to his home the beautiful silver pitcher. During the day a match for Saturday was arranged between C. W. Budd, the champion bird shot of the world, who has a record of 36 matches won to none lost, and H. W. Eager, of Marlboro, Mass., the champion inanimate pigeon shot of New England. The contest to begin at 3 o'clock and each man to shoot at 50 blue rocks and a like number of Ligowsky clay birds for a special prize of $300, donated by the executive committee. During the day's shoot over 7,000 pigeons were thrown from the traps. Appended is the result of the third day's shoot:

First event, 10 blue rocks, open to all—Teipel first, Stark and Wheeler second, McMurchy and Budd third, Eager, Stone and Cooper fourth.

Second event, 20 blue rocks, amateur class, merchandise prize match—Haskell first, Renaud and Spangler second, Moody and Taylor third, Partiss and Francis fourth.

Third event, 10 blue rocks, open to all—Luther first, Stanton, Budd, Early and Barnes second, Cooper third, Gilman fourth.

Fourth event, 10 blue rocks, amateurs—Aldoes first, H. Taylor, Knowles and A. Green second, Gerry third, E. Taylor and Buffington fourth.

Fifth event, 10 blue rocks, all comers—H. Taylor first, Treager and Amos second, De Rochmont third, E. Taylor and Barnes fourth.

Sixth event, 10 blue rocks, open to all—Teipel, Cooper and McMurchy first, Budd, Early and Wardwell second, Luther and Wheeler third, Stark and Perry fourth.

Seventh event, 10 blue rocks, amateurs—Knowles, Gerry and Barnes first, Bowditch and H. Taylor second, Wardwell third, Snow, Allen and Green fourth.

Eighth event, 5 pairs blue rocks, experts—Budd and Wheeler first, McMurchy, Perry and Eager second, Dickey, Early and E. T. Smith third, Stice and Teipel fourth.

Ninth event, 10 blue rocks, open to all—Luther, Mills, Stanton and Early first, W. S. Perry, Teipel and Stice second, Stark third, Wagener, Parsons, Treager and Mills fourth.

Tenth event, 10 blue rocks, open to all—Luther, Early and Wheeler first, Teipel second, Cooper, Mills and Stanton third, Perry and Wagener fourth.

Eleventh event, 10 blue rocks, amateurs—H. Taylor and Bowditch first, Warren second, Knowles third, F. Smith and Lefevre fourth.

Twelfth event, 20 blue rocks, experts—Stanton first, Budd second, Parsons, Teipel and Luther third, M. C. Smith, Crowell and Stice fourth.

Thirteenth event, 10 blue rocks, open to all—McMurchy, Cooper and Wagener first, Dickey, Barnes, Gilman and Wheeler second, Teipel, Stark and Stice third, Jordan, Luther, Davis and Carsey fourth.

Fourteenth event, 10 blue rocks, open to all—Luther, Stice and Teipel first, Perry second, McMurchy and Barnes third, Budd fourth.

Fifteenth event, 10 blue rocks, amateur—Jordan and E. Taylor first, Green, Swift and Renaud second, Taylor, Bowditch and Gore third, Swift, Snow and Edwards fourth.

Sixteenth event, 10 blue rocks, all comers—Dickey first, Perry, Budd and Stice second, Stark, McMurchy and Linneman third, Wagener and Beaudry fourth.

Seventeenth event, 10 blue rocks, open to all—McMurchy, Wheeler, Cooper and Miller first, Budd, Dickey and Stice second, Barnes third, Beaudry and Eager fourth.

Eighteenth event, 5 pairs blue rocks, double, open to all—Stice first, McMurchy second, Linneman and Wardwell third, Budd, Barnes and Teipel fourth.

Nineteenth event, 10 blue rocks, open to all—McMurchy, Wheeler, Teipel and Dickey first, Luther, Linneman and Wardwell second, Budd and Cooper third, Eager and Wagener fourth.

Twentieth event, 10 blue rocks, straightaway, all comers—Dickey and Luther first, Barnes and Dean second, Charles, Budd and McMurchy third, Wheeler fourth.

Twenty-first event, five pairs, all comers—Moody and Snow first, Bowditch second, F. Swift third, Hughes fourth.

Twenty-second event, 10 blue rocks, open to all—Early and Parsons first, Budd second, Wardwell, Dickens and Charles third, Luther fourth.

Twenty-third event, 5 pairs, open to all—Stice first, Budd second.

Following are the scores of the expert and amateurs in the merchandise prize match:

June 2.—As the shooting tournament on the grounds of the

Wellington Gun Club nears the end, the interest in it increases proportionately, as manifested by the arrival daily of prominent shooters from the West and South. Prominent among the new arrivals was W. L. Canon, of Newark, N. J., a one-armed man, who faced the traps and shot 8 pigeons out of 10 at 24yds. Also, Mr. D. Ledyard, of Montgomery, Ala., who made several excellent scores, also arrived during the afternoon. This carnival is the largest ever held in this country. In the merchandise matches alone there have been 149 entries, embracing representatives from all the principal shooting clubs in the South and West, while in the sweepstakes and special matches fully 300 men have entered, inclusive of the 149 mentioned above. The heavy rain in the forenoon somewhat dampened the ardor of many of the sportsmen who are not entered in the merchandise matches, and it was not until the early afternoon trains that the shooters in the sweepstakes matches put in an appearance in as large numbers as on the preceding days. Entries in the merchandise match, however, are on the ground early, as they are obliged to shoot a score of 20 each day of the tournament in order to have any claim upon the articles of merchandise offered as prizes. The special prize of the day, one of the peerless L. C. Smith shotguns, valued at $75, was won by J. E. Miller, of Cincinnati, with a clean score of 20.

There were 600 in attendance, and the 19 traps were kept constantly on the move as the 23 events were being shot. There were 8,300 birds sent skyward.

First event, 20 birds, amateur merchandise match, sweepstakes—Dean first, Aldoes second, Moody third, H. Taylor and Renaud fourth.

Second event, 10 birds, open to all, sweepstakes—Dickey first, Eager second, Bradley third.

Third event, 10 birds, open to all, sweepstakes—Dickey, Eager, Stark and McMurchy first, Allen, Perry and Wheeler second, Stanton third.

Fourth event, 10 birds, amateur sweepstakes—E. Taylor, Knowles and Jordan first, Bowditch, J. Clarke, Partiss and Renaud second, Bradley and Gerry third, A. Green fourth.

Fifth event, 10 birds, open to all, sweepstakes—Eager and Stanton first, Perry and Dickey second.

Sixth event, 10 birds, amateurs, sweepstakes—E. Taylor, Knowles and H. Swift first, Jourdan, Carey, Bradley and Moody second, Bowditch and F. Hatch third, Sherman and Schaefer fourth.

Seventh event, 10 birds, open to all, sweepstakes—Teipel and McMurchy first, Allen second, Miller, Budd and Francis third, Wheeler, Knowles and Bowditch fourth.

Eighth event, 10 birds, open to all, sweepstakes—Eager, Teipel, Luther and McMurchy first, Stice and Parsons second, Miller third, Budd and Smith fourth.

Ninth event, 20 birds, experts' merchandise match, sweepstakes—J. E. Miller first, Stanton and Eager second, McMurchy third, Dickey, Sheldon and Luther fourth.

Tenth event, 10 birds, open to amateurs only, sweepstakes—Barnes, Bowditch and Francis first, Renaud, Wardwell, Warren and Hughes second, Snow, Sherman, Buffington and Green third, Hall and H. Taylor fourth.

Eleventh event, 10 birds, amateur match, sweepstakes—Warren, Knowles, Treager, Wardwell and Dan first, Francis second, H. Smith third, Aldoes and Gerry fourth.

Twelfth event, 10 birds, open to all, sweepstakes—Stark and Stanton first, Aldoes and Eager second, Luther, Stice, Bradley and Francis third, Cooper and Wardwell fourth.

Thirteenth event, open to amateurs only, sweepstakes—Wardwell and H. Swift first, E. Taylor, Wales and Walker second, Andrews, Letever, Baxter, and Hatch third, Hall and Francis fourth.

Fourteenth event, 5 pairs doubles, amateur sweepstakes—Warren, Moody, Knowles, Barnes and Snow first, Aldoes, E. Taylor and Law second, Lineman third, F. Swift fourth.

Fifteenth event, 10 birds, open to all comers—Stark, Budd and Earley first, McMurchy and Stice second, Eager third, Dickey fourth.

Sixteenth event, 10 birds, open to all, sweepstakes—Eager, Cooper, Parsons and Miller first, Stark and Luther second, Stice, McMurchy and Cannon third, Teipel and Aldoes fourth.

Seventeenth event, 10 birds, amateurs, sweepstakes—Dean first, Warren second, Tirrel and Knowles third, Taylor and Dan fourth.

Eighteenth event, 10 birds, amateurs, sweepstakes—H. Swift first, Barnes, Treager, Walker and Partiss second, Francis and Snow third, Aldoes fourth.

Nineteenth event, 10 birds, all comers, sweepstakes—Eager and Budd first, McMurchy and Davis second, Wheeler third, Stark, Aldoes and Teipel fourth.

Twentieth event, 10 birds, open to all, sweepstakes—Budd and Eager first, Wheeler and Stice second, Teipel third, Wagener fourth.

Twenty-first event, 5 pairs doubles, open to amateurs, sweepstakes—Knowles first, Dan second, A. A. Greene and Aldoes third, Law fourth.

Twenty-second event, 10 birds, open to all comers, sweepstakes—Earley and Dickey first, Wardwell, Budd and Teipel second, Walker third.

Twenty-third event, 5 pairs doubles, open to all comers, sweepstakes—Stark, McMurchy and Budd first, Stice and Eager second, Wardwell third.

June 3.—The fourth day in the great shooting tournament on the grounds of the Wellington Gun Club was a red-letter day, as it decided the winners of the first prizes in the two merchandise matches, and contrary to the expectations of hundreds of prominent sporting men, the three principal prizes will remain in the East. Mr. T. G. Strater, of Boston (F. Stanton), is the successful aspirant for the chief prize in the expert merchandise match, an elegant L. C. Smith sporting gun, valued at $450. Out of a possible 100, Mr. Strater, who has been shooting during the week under the name of Stanton, scored 88 dead birds. A. L. Traeger, a 17-year-old boy, has done some phenomenal shooting, and for a score of 81 out of a possible 100, wins the elegant oil painting valued at $1,000. In the afternoon he was offered and refused $700 for the result of his week's shooting. The special prize, an English field gun, donated by the Lockport Target Co., was won by W. S. Perry, of Worcester, Mass. The second prize in the expert merchandise match, a W. & C. Scott gun, valued at $200, was won by C. H. De Rochemont with a score of 80. Thus, three of the principal prizes go to members of the Wellington Gun Club, and, naturally, members of the association are very much elated at the unexpected result.

About 8,500 bats were thrown from the traps during the day, and the attendance was 1,000. The scores made did not come up to the average of the four preceding days, through some unexplained reason, but it is claimed by many of the shooters that they did not take as much pains as on the preceding four days, as they are saving themselves for the final events, when all the ties will be shot off, and missing one bird may mean the loss of a prize worth $100 or more. In the appended scores are the results of the merchandise prize matches and the totals of each day's score for shooters in these events, from which it will be seen that about forty men will have to shoot off ties.

The tournament has proved, by comparison with previous shooting carnivals, to have been by far the largest ever held. In 1884 the Illinois State Sportsmen's Association, in a grand carnival of shooters, had a total of 96 entries; in 1886, at Burlington, Ia., the Iowa State Sportsmen's Association had 86 entries; while in the present tournament there are 149 entries in the two merchandise matches, beside nearly 100 more in the sweepstakes.

First event, 20 bats, amateur merchandise and sweepstakes match, sweepstakes—Russel first, Knowles and C. B. Paine second, H. Taylor and H. Swift third, Barnes and Francis fourth.

Second event, 10 bats, open to all comers, sweepstakes—C. W. Bird, Dickey, McMurchy first, Stanton and Early second, Wagener and Crowell third, Treager fourth.

Third event, 10 bats, amateur sweepstakes—E. Taylor, Traeger and Swan first, Aldoes and Clark second, Bowditch, Schaefer and Buffington third, Dan and Partiss fourth.

Fourth event, 10 bats, open to all, sweepstakes—Allen, Eager, Budd first, Clark second, McMurchy third, Perry fourth.

Fifth event, 10 bats, open to all comers, sweepstakes—Budd and Eager first, Early, Crowell, Stice and Lodge second, Perry third, Stanton and Wagener fourth.

Sixth event, 10 bats, amateur sweepstake match—Swift and Clark first, Russell and Moody second, Wardwell, Schaefer and Renaud third, C. T. Snow, Traeger and Swan fourth.

Seventh event, 20 bats, experts, merchandise and sweepstakes match, sweepstakes—Stice and Perry first, Eager and Faulkaer second, Teipel third, Dickey, Cooper and Wagener fourth.

Eighth event, 10 bats, open to amateurs only, sweepstakes—Moody, Russell and Schaefer first, Knowles second, H. Taylor third, Wardwell fourth.

Ninth event, 10 bats, amateurs only, sweepstakes—Wardwell and H. Swift first, E. Taylor and Traiger second, Renaud third, Moody, Gerry, Nichols fourth.

Tenth event, 10 bats, open to all, sweepstakes—Stark, Stice, Gilman and Wagener first, Eager and Dickey second, Clark and Wheeler third, Cooper and Perry fourth.

Eleventh event, 5 pairs doubles, open to all comers, sweepstakes—Tinker and Perry first, McMurchy, Davis, Barnes and Teipel second, Stice third, Gray and Warren fourth.

Twelfth event, 10 birds, amateur, sweepstakes—Russel, Warren, Aldoes, Clark and Dean first, Bancroft and Bowditch second, Renaud, Gerry and Green third, E. Taylor, Moody, Rich and Baxter fourth.

Thirteenth event, 10 bats, open to all, sweepstakes—Dickey, Tinker and Miller first, Parsons, Teipel and Budd second, Stanton, Gilman and Perry third, Dodge fourth.

Fourteenth event, 10 bats, amateurs, sweepstakes match—Clark and Renaud first, Bancroft and Francis second, Dan and Russell third, A. Green fourth.

Fifteenth event, 10 bats, open to amateurs, sweepstakes—Dan first, Law, Russell and Barnes second, H. Taylor third, Snow, Baxter and Clark fourth.

Sixteenth event, 10 bats, open to all, sweepstakes—Wheeler and Dickey first, McMurchy, Luther and Stanton second, Parsons third, Miller fourth.

Seventeenth event, 10 bats, open to amateurs only, sweepstakes—Bancroft first, T. Snow second, H. Swift third, Law fourth.

Eighteenth event, 10 birds, open to all, sweepstakes—McMurchy and Teipel first, Stanton, Dickey, Luther and Budd second, Eager, Bradley and Wheeler third, Wagener fourth.

Nineteenth event, 5 pairs, double, open to amateurs only, sweepstakes—Knowles first, Nichols, Schaefer and Gerry second, Renaud, Wardwell and Law third, Barnes fourth.

Twentieth event, 10 bats, straightaway, open to all, sweepstakes—Stanton first, Dickey and Luther second, Budd, Eager and Teipel third, Wagener and Nichols fourth.

Twenty-first event, 5 bats, straightaway, amateur sweepstakes—Francis and Bowditch first, Bancroft and Schaefer second, Barnes third.

June 4.—A few minutes before 6 o'clock this evening the echo of the last gun fired died away at Wellington, the judges called "dead bird" for the last time, and the largest and most successful trap shooting tournament ever held was at an end. The weather during the week has been anything but favorable to good scores, yet those made will compare very favorably with the scores in any previous tournament ever held in this country.

It was a gala day, the attendance being 2,130, and of this number more than 100 were ladies. Ten thousand birds were trapped, making a total of over 40,300 birds during the week, a number unprecedented in the history of trap shooting. As a matter of interest to the reader, some idea of the cost of the six days' shooting, to the contestants, may be gleaned from the fact that each shot fired at a clay-pigeon costs the shooter on an average 8 cents, 8 cents for the bird and from 2½ to 3½ cents for powder, shot and shells, aside from all other expenses incidental to the shoot, such as car fares to and from the range, implements used in keeping the guns in good condition, etc. Hence simply shooting in the merchandise match cost the shooter from $8 to $10 for pigeons, powder and shot alone, outside of his entrance fees and an occasional sweepstakes match. The championship match between H. W. Eager and C. W. Budd was the chief attraction of the day, and all other contests were declared off during their shoot. The match was for a purse donated by the committee, and the conditions were that each man should shoot at 50 blue rocks and 50 Ligowskys thrown from three traps. Budd scored a total of 85 and Eager 79, as will be seen by reference to the detailed score appended

One of the events of the afternoon was the contest of the reporters for a $25 engraving of Tait's sporting picture, offered by G. H. Litchfield, president of the Ivanhoe Gun Club, of New York. The judges selected informed the scribes that they were to have 10 shots each, and that if, at the end of an hour they failed to knock the bark off a bird, they would have to toss up to see who was to get the prize. Although the birds shot at were of the ordinary size, the reporters were able to "find them" as they sailed through the air. John Low, of the Boston *Globe*, broke 4 out of his first 5, and, as the others were unable to tie it with 10 shots, he concluded not to spoil his score by shooting any more. Following is a summary of the sweepstake matches to-day:

First event, 10 birds, amateurs only, sweepstakes—Dan first, DeRochmont and Knowles second, H. Taylor and Bowditch third.

Second event, 10 birds, 5 traps, open to all, sweepstakes—Shaefer, Barnes, Clark and Shumway first, E. Taylor, Renaud and Moody second, Knowles third, Bowditch and Lee fourth.

Third event, 10 birds, experts only, sweepstakes—H. McMurchy first, J. R. Stice second, Wheeler and Teipel third.

Fourth event, 10 birds, open to amateurs only, sweepstakes—Bowditch, Francis and Sampson first, Knowles, Wardwell, Clark and H. Swift second, Shumway, Gore and H. Taylor third, Bradley fourth.

Fifth event, 10 birds, open to all comers, sweepstakes—Wheeler and McMurchy first, Wagener, Budd, Knowles and Teipel second, Luther, Miller and Wardwell third, Early, Dickey, Gillman and Cooper fourth.

Sixth event, 10 birds, amateur sweepstakes—Barnes and Francis first, Linneman, Clark and Wardwell second, H. Smith and Dann third, Aldoes fourth.

Seventh event, 10 birds, open to all, sweepstakes—Stice and Luther first, Stanton, Teipel and Stark second, Budd and Charles third, Wheeler fourth.

Eighth event, 10 birds, open to all comers, sweepstakes—Teipel, Wardwell and Barnes first, Earley and McMurchy second, Stanton, Eager, Knowles and Dick third, Budd, Wagener and Faulkner fourth.

Ninth event, 10 birds, open to amateurs only, sweepstakes—Dan first, Barnes and H. Swift second, Lineman and Moody third, Dodge, Wardwell and Curtis fourth.

Tenth event, 10 bats, amateurs, sweepstakes—Barnes and J. S. Snow first, Moody, Shumway and Shaeffer second, Francis, Frank lin and E. Taylor third, Wilbur and Bowditch fourth.

Eleventh event, 20 birds, fancy hip match between H. P. Arkerson, of Texas, and Ben. Teipel, of Covington, Ky. Won by Teipel.

Twelfth event, 20 birds, 10 Ligowskys and 10 blue rocks, sweepstakes—Teipel first, Miller and Crowell second, Early, Barnes and Cooper third, McMurchy, Dickey and Stanton fourth.

Thirteenth event, 20 birds, open to experts for special prize of $150—Barnes, De Rochemont, Warren and Partiss divide 40 per cent.; Aldoes, Clark, H. Swift, Moody, J. S. Snow and Short divide 30 per cent.; Gerry, Dean and Sanborn divide 20 per cent., and Traeger, Francis, Meacham and Law divided 10 per cent.

Fourteenth event, 10 birds, experts, sweepstakes — Stice, McMurchy and Budd first, Tinker, Wheeler and Dickey second, Teipel, Luther and Stanton third, Eager fourth.

Fifteenth event, 10 birds, open to all comers, sweepstakes—Gerry, Swift, Tirrell and Francis first, Knowles second, Aldoes, Dan, Weymouth and Blake third, Dean and Renaud fourth.

Sixteenth event, 10 birds, members of press—Low, *Globe*, first, Stetson, Associated Press, second, Stearns, *Herald*, third.

Seventeenth event, 5 pairs doubles, open to all comers—Tinker, McMurchy and Teipel first, Budd and Early second, Knowles third.

Eighteenth event, 5 pairs, amateurs, sweepstakes—Law, Wardwell and Barnes first, Franklin, Knowles and E. Taylor second, Dan, Warren and Norris third, Moody and Dodge fourth.

Nineteenth event, 100 birds, 50 Ligowskys and 50 blue rocks, championship match between C. W. Budd, of Des Moines, Ia., champion live bird shot, and H. W. Eager, of Marlboro, Mass., champion inanimate target shot for a purse subscribed by members of the Association:

Budd, Lig.s	0101111111101111111101111111111101111111111110100—42

	79

Twentieth event, 10 birds, amateur sweepstakes—Partiss and E. Taylor first, Barnes, Bardwell and Andrews second, Warren third, Gore fourth.

Twenty-first event, 10 birds, amateurs only, sweepstakes—Dan first, Weymouth, Swift and Gerry second, Wilbur, Wardwell and Knowles third, Sanborn and Dean fourth.

Twenty-second event, 10 blue rocks, open to all, sweepstakes—McMurchy and Luther first, Wardwell second, Stark third, Stanton and Teipel third.

Twenty-third, 5 pairs doubles, open to all, sweepstakes—McMurchy and Dickey first, Wheeler and Stark second, Teipel and Dan third.

TAUNTON, Mass., May 30.—T. F. and G. P. A. Match at 7 clays, Ligowsky clay-pigeon trap, 16yds., 5 angles, N. G. A. rules:

Hardy	0010011—3	E Leonard	1011001—4
Snow	1111010—6	Barstow	1111101—6
Hayward	1110001—4	J J Davis	1110100—4
E Bowen	0101001—3	Smith	1001100—3
Hall	1101101—5	G H Davis	0111101—5
A Davis	1111111—7	F Scudder	0110110—4

Ties divided.

Match at 5 bats, 18yds. rise:

A Hardy	10101—3	J J Davis	10101—3
Snow	11111—5	Smith	01101—3
Hayward	11001—3	H Danforth	11000—3
E Bowen	11111—5	L Dow	10101—3
Hall	11111—5	Walker	11011—4
A Davis	11110—4	E Waterman	10100—2
E Leonard	11101—4	G H Davis	11100—3
W Barstow	11111—5	Scudder	01111—4

Ties—Snow and Hall divided first, Scudder and Davis second, J. Davis and G. H. Davis third.

Match at 15 clay-pigeons, 16yds. rise: Class A—G. A. Deane first on 13, C. T. Snow and E. Bowen divided second on 12, G. H. Davis and J. J. Davis divided third on 11, Scudder and J. T. Hall divided fourth on 10. Class B—W. H. Rogers first on 10, A. T. Keith second on 5, Hayward and King divided third on 4.

Match at 7 blue rocks, blue rock trap, 18yds. rise:

J T Hall	1111100—5	G L Smith	1101111—6
B F King	0100100—2	B E Lincoln	1010011—4
A Hardy	1010110—4	C T Snow	0111111—6
A Davis	1110101—5	J J Davis	1100111—5
G L Walker	0100101—3	F M Scudder	1101101—5
W Barstow	1110111—6	A Presbrey	1011101—5
G A Deane	1100100—3	F S Keith	1010011—4
E Bowen	1110011—5	W H Rogers	1011010—4
G H Davis	1101111—6	A T Keith	0100101—3

On shoot off Snow took first; Hall, A. Davis and J. J. Davis second; Keith third.

Match at 5 blue rocks, blue rock trap, 18yds. rise:

J T Hall	01111—4	W Barstow	11000—2
C T Snow	11101—4	G H Davis	00111—3
F S Keith	11001—3	G L Walker	11110—4
B F King	11100—3	F M Scudder	01011—3
A Hasty	00011—2	A Davis	01011—3
A T Keith	11001—3	G A Deane	11110—4
E Bowers	00111—3		

On shoot off Hall first, Brown second, third divided.

ALGONQUIN GUN CLUB.—A few members of the Algonquin Gun Club assembled at their grounds, Manitor Park, Decoration Day, for a practice shoot at blackbirds, 20yds.:

J Hanna	11111 11111 11111 10111—19
H Otten	11010 11111 11111 11111—18
P Radsinsky	11111 11111 11101 10100—16
F Turnly	10101 11011 11110 10111—15

POUGHKEEPSIE TOURNAMENT.—The shoot of the Poughkeepsie Gun Club came off on Thursday, May 26, and was attended by quite a number of prominent shots, and on the whole proved to be quite an enjoyable affair. Dr. Gardener, of Albany, took the $100 Colt's hammerless. The shooters were favored, to a remarkable extent, by the weather, for, although it could be seen to be pouring on all sides, not enough rain fell on the grounds to interfere in the slightest degree with the shooting. Colts Manufacturing Company's match No. 2, 25 clay-pigeons, 18yds.:

M Jones.....0110111000101101111111000—15
W R Smith.....1100111111101101111111110—20

S Goggins	0111111101—8	E Folsom	1111011111—9
Pane	0001110111—7	W Hyland	1010011100—5
Dommer	1011011011—7	Beckwith	0011110010—5
J M Godinez	1101100010—5	W R Smith	0101101111—7
A Parker	1010010101—5	E J Peck	0011011011—6
E Eames	1111111110—9	M Condit	1100011010—5
Dr Gardener	1011111110—8		

Eames, Pierce and Folsom shoot off for first, Folsom wins the tie but is protested as a professional; referred to FOREST AND STREAM. Thorne second Smith third.

MILFORD, Mass., June 2.—At a meet this week of the Sportsman's Club guests were present from Worcester, Upton, Ashland and Franklin, in this State, and Woonsocket, R. I. First event, 5 pigeons: Swan 5, Howe 6, C. Whitney, Warren, Saddler, each 4, Keniston, Wilkinson, each 3, G. Whitney 2. Second event, same: Swan, Keniston, Fletcher 5, Warren, Bass 3. Third event, 5 blackbirds: Bailey, C. Whitney 5, Kingman, Bass 4, G. Whitney, Coleman, Fletcher 2, Smith 1. Fourth event, 5 pigeons: Howe 5, Snow 4, Wilkinson 3, Warren, Bass 2, Keniston, Saddler 1. Fifth event, 5 blackbirds: Fletcher, G. Whitney, Kingman, Bailey, Bass 4, C. Whitney, Coleman, Redfield 3, Smith, S. Eames 2, Moore 1. Sixth event, 7 pigeons: F. Eames 6, Darling, Blake, Harris, Keniston 5, Swan, Howe, Ballou 4, Wilkinson, Gile, Aldrich, Brooks 3, Joslin, Saddler 2. Seventh event, 5 blackbirds: F. Eames, Blake, Keniston 5, Wales, H. Eames, G. Whitney 4, Warren, Darling, Aldrich 3, Manchester, Saddler 2. Eighth event, same: Bailey, C. Whitney, Eames 5, Fletcher, G. Whitney, Coleman, Warren 4, Gile, Bass, Kingman 3, Redfield 2, Smith 1. Ninth event, same: Bailey, Gile, Snow, Keniston, Aldrich, Howe, H. Eames, Fletcher 5, Wilkinson, Wales, Warren, F. Eames, S. Eames 4, Joslin, Ballou, C. Whitney, Saddler, Blake 3, G. Whitney, Manchester 2.

NEW YORK CITY, June 4.—Washington Heights Gun Club, on club grounds, One Hundred and Sixty-ninth street and Twelfth avenue. Mr. Keppler's shooting is remarkable, it being his second appearance with the club; he is 19 years of age, a son of Mr. Keppler, the editor of *Puck*. Match at 15 blue rocks and clays, 2 traps, 18yds. rise, club rules, for club badge:

G Snooks.....1111011101111111—13
E H Fox.....0111010011001111— 9
C Davidson.....1001011101101101— 9
C Parsons.....0100100010000000— 3
E Roe.....0111010111010000— 8
W Keppler.....1111111111001111—13
Wagner.....1000000010010111— 5
H Harrison.....1101011110110110—11
C Terwilliger.....0111110011010000— 8
Sauer.....0101100111111101—10

Snooks and Keppler tied again on 4 out of 5, and on miss and out Keppler missed first, Snooks broke, winning badge for second time; he must win it three times in order to hold it.

BRADFORD, Ont., June 2.—The first shoot for the W. M. Cooper cup, which has to be won three times before it becomes the property of the winner, was shot for to-day by the members of the Bradford Gun Club. Following is the score made at 10 blackbirds. N. A. St. Clair 9, P. Knoblock 8, D. Sutherland 8, T. Edmanson 6, James S. Boddy 6, James A. Neilly 5, Wm. Lowery 5, J. F. Lillicrop 5, James St. Clair 4, John Armstrong 4, Robert Weilly 4, B. Kilborn 4, Wm. Holmes 5, Samuel Neilly 4.

BRIGHTON, Mass., June 4.—The fourth shoot for the Rivett diamond medal, presented to the Brighton Gun Club by Edward Rivett, of Faneuil, was held at the Faneuil grounds this afternoon. O'Connell made the highest score yet made for this medal. 15 clays and 15 bats:

O'Connell	454	445—26	J Coyle	325	324—19
McDonald	344	444—23	Temple	012	355—16
M Coyle	343	534—22	Grace	132	324—15

WINCHENDON, Mass., June 2.—At the last regular meet of the Winchendon Gun Club out of a possible 10 birds the following were broken: H. J. Lawrence 8, H. M. Eaton 7, A. H. Felsh 7, L. T. Earle 7, A. D. Lawrence 4.

NEWARK.—The Woodside Gun Club held a clay-pigeon shoot on Monday, May 30, and entertained a delegation from the Southside Club. The Woodside Club shoots every Saturday afternoon, and invites members of other clubs and unattached marksmen to attend the shoots and take part in the sport.

At the shoot held by the West Newark Gun Club, May 30, the following scores were made with 40 blackbirds, 21yds. rise: J. Adleman 37, C. Doty 35, G. Deisler 30, C. Burgess 27, A. Wade 25, O. Hornich 23, J. Lamb 19, L. Bishop 17, L. Reiber 17, and J. Weber broke 17 out of 25.

UTICA, June 3.—The Oneida County Sportsmen's Club had a shoot at Riverside to-day for the Kirkland-Divine prize. The scores were as follows:

Scott	0011110101001110— 8	Christian	1111111100000000—8
Beckwith	1001011111100111—10	Candee	1101011001010001—8
Booth	1101111101101111—10	Howe	0111110001100001—8

In shooting off the tie for first Dr. Booth won. This is the third time that he has won this prize, and the contest is therefore closed. The prize is a handsome fishing rod. In shooting off the ties for second Scott won.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

JUNE.

18. Brooklyn, Annual, Bay Ridge.
25. New York, Annual, Staten Island.

THE DELAWARE RIVER MEET.

THE first meet of canoeists on the Delaware River was held this year on May 28-30, at Burlington Island, opposite Burlington, N. J. The rain of Saturday delayed the canoeists from Philadelphia, but four members of the Trenton C. C. arrived at the island on Saturday morning and went into camp. Later five canoes and six men from the Keystone C. C. arrived, but the Quaker City C. C., with five canoes, did not reach the camp until noon on Sunday. Decoration Day was cloudy and threatening, but the race programme was carried out as far as practicable. At 9 A. M. Class IV. paddling was started, the course being about ½ mile, with turn. There were ten starters, the winner being Kit, T. C. C., with Volusia, of Bridesburg, second, and Malta, Quaker City, third. Kit is a light canvas canoe, Volusia a light open cedar, and Malta a Sunbeam with plate board. The first and second prizes were silk flags. At 11:30 the Class B sailing race was called, with 8 starters, course 1½ miles, triangular. Bubble was first across, then Picnic, Pilgrim, Malta, the latter soon leading. On the first leg Malta's deck tiller was disabled, but she led at the first mark, Bubble passing her before second was reached, and finally winning, after a close race, by half a length, with Lenore third. Bubble carried 92ft., and Malta 85ft., a Mohican rig. The latter is a new boat and not fully fitted out. Though small in numbers and with cold and unpleasant weather, the first meet was a success, and will be repeated next season, it is hoped with a larger attendance. The number of canoes on the Delaware is increasing rapidly, both in Philadelphia and Trenton, and in the many small towns.

CANOE RACING ON THE SHREWSBURY.

AN open race was sailed on the Shrewsbury on May 30. Three minutes after the starting signal was fired 23 canoes, of all sizes and rigs, out of the 25 entered were over the line, presenting a pretty spectacle to the hundreds of interested watchers stationed on the neighboring wharves, boats and river banks, and provided with programmes showing the racers' numbers.

The wind, mainly astern for the first stretch of the three-mile triangular course (to be gone over twice), was variable and full of flaws, which would quickly drop down pretty hard on either side of the sails and as quickly leave the canvas flapping without a breath. It was such a bad day, indeed, that, had the canoes been classified, the poorest would have had a fair chance for first place. As it was, the broad beams, which could better take the flaws, won the day.

The Daisy, with her big blue lateen rig and double crew, the two-man Problem, the 15×40 jib-and-mainsail No Name, the Rival, Vixen and Medusa soon sifted out from the rest of the fleet and turned the first stake not far apart; but in the windward work that followed the first three gained a lead which they held throughout the second round to the finish, although the Problem's crew wasted two minutes cooling off in the shade of an oyster sloop, which they permitted to attach itself to their rudder yoke, until a passing catboat came to their rescue.

The No Name, Problem, Daisy and Vixen finished in the order named, but the second and third prizes went to the Daisy (Monmouth Club) and the Vixen, as the Problem was ruled out for accepting assistance. It is thought that because of his boat outclassing the entire fleet, the owner of the No Name (Monmouth Club) will do the graceful thing by relinquishing his right to the champion pennant.

An unpleasant feature was the conduct of a number of yachts with parties on board which, probably through ignorance, moved among the canoes, to their effectually blanketing them. Another drawback to exact sailing was a number of pretty girls who were gliding about in all manner of boats, and whose proximity few skippers could refrain from acknowledging. One jack tar reported a narrow escape from an upset when he doffed his cap to a pair of blue eyes that appeared alongside simultaneously with a good-sized flaw.

RED BANK, N. J., May 31.

THE WRECK OF THE RESTLESS.

Editor Forest and Stream:

Those who at Haddam Island meet were anxiously watching for Thornton Smith in his yawl Restless, as well as many of your readers who have heard of the Smith's Island Schooner Club and their Hell Gate pilot boats, will be interested in the following extracts from a private letter, showing why the Restless did not come to camp, and her sad fate since. OAHU.

MAY 31, 1887.—*Dear Oahu:* I sent a telegram to Vice-Commodore Butler yesterday morning to Haddam Island, stating my regrets in not reaching camp, so I will tell you why I failed to get there: I started Friday at 6 A. M. from New Rochelle, with my sister, Mrs. C., in the Restless. The wind was light and south, with prospects of a strong southerly before afternoon. I was provisioned and well packed for a long cruise and had everything aboard in good shape. It was 3:45 P. M. when we drifted by Smith's Island in a hot sun, 18 miles in 9 hours; so, rather tired for one day, we went ashore there and remained all night in our house on the island, as there was no wind to go any further with that day. I had the yawl ready for a 3 o'clock A. M. start Saturday. We arose at 2:30 and went out. Wind east and thus dead ahead. Concluded to wait until daybreak to see if the wind wouldn't shift. We waited until 8 A. M. and started out through the islands under reefed mainsail, dandy and small jib. We ran well off shore out into the Sound. It then blew harder with a bad sea, and I took in the dandy and kept her at it. The seas were too choppy for progress, though not wet. We stood about at 10:30 A. M. to work in shore, and reached the shore again by Southport at 11:45. Then I calculated the distance to Saybrook 45 miles, and 25 to Haddam Island, and saw that we couldn't reach camp in time while the wind was ahead. Then I left it to Mrs. C. what we should do, and there was nothing else but to give it up; and as I lifted sheets to turn back it went as much against me as anything you can imagine.

We reached Smith's Island again at 12:30 and scudded before the wind very fast. We lunched in the boat on shore under the lee, and lamented over our unsuccessful attempt to get to Saybrook. At 2 P. M. the wind had increased, and then seeing there was no chance of a change in it to south'ard, and not a vessel of any kind bound east, we left shore with our minds on Saybrook and what the Oahus would say at our not coming and what they would say at New Rochelle at seeing us return so soon. I reefed the dandy, stowed mainsail, set the small jib, and started for New Rochelle. It howled when we got off Stamford and here we scudded very fast. At 5:50 we were in our port and Pop met us. He saw we couldn't accomplish our trip, and he felt as badly as we did. It broke me all up. Last year I ran 52 miles in 10 hours, and thought I could make 95 miles in two days with any kind of leading wind; but luck was betting against the prow of the yawl, and she never was in better trim either. Yours, RESTLESS.

JUNE 2, 1887.—*My Dear Oahu:* If you know not already, then let me tell of the sad news of the wreck of the Restless at 5:30 A. M. yesterday during that hard gale. Like all other good craft, she was good for any ordinary summer weather; but a gale like that caused her to drag and go ashore, and what was a few minutes before a beautiful specimen of a well-equipped small cruiser, was in less than five minutes a sorrowful wreck, mixing itself up in the rocks and seaweed. I spent the entire morning collecting, not the boat, but sails, rope, brass and a thousand other things that she was fitted out with to attend the Eastern meet, to which she started, but ill luck on Saturday compelled her to return to what has proven her grave. * * * Of course, the kid is knocked out, but only for a short time. Other boats can be built, only it is hard luck to throw away so much time, to say nothing of the $ * * * * *

Yours, RESTLESS.

THE HUDSON RIVER MEET—MAY 28-30.

CROTON POINT, the scene of the Hudson River spring meet of 1887, is a beautiful spot, well chosen for a canoe camp. The camp site is on the southeast side of the point, where is found a good sand beach, a fine place to pitch tents on the meadow behind it, and good spring water in abundance. Close at hand there is also an old two-story house on the beach which had been cleaned up for the occasion, serving as a hotel, where a number found comfortable quarters. The camp was opened Friday evening by the Shattemucs, who awaited the coming of the visitors. Saturday morning brought some of the Newburgh club to camp, they having cruised down in the yacht Vision. Mr. Grant E. Edgar arrived in the afternoon in his new canoe (a beauty of his own build), having cruised down, the balance of the Dock Rats arrived soon afterward on Mr. Bartlett's steam yacht. The Amsterdam delegation were the next to reach camp, having sailed over from Haverstraw. The Yonkers Club arrived from the south, having cruised up. By this time the camp had the appearance of an A. C. A. meet; the evening was spent around the camp-fire. Sunday morning the Mohicans arrived, having stopped in Haverstraw over night. From the south came the Essex Club, of Newark, they having cruised to camp. In the afternoon a number cruised up the Croton River, under guidance of one of the Shattemucs and enjoyed the beautiful scenery found there, others ayailed themselves of the breeze, and a number of new and peculiar rigs were seen on the bay. The evening was spent around a huge camp-fire. Monday morning, after breakfasting and putting camp in order, every one was ready for the races. The day was all that could be desired for such a purpose, the wind blowing from the south in sufficient strength to make the races very interesting. The following was the programme with results:

First, 9:30, sailing, Class A, triangular course, 1½ miles; prize, a banner, won by A. Kayne, of the Dock Rats, in the Dido.

Second, 10:30 A. M., sailing, Class B, triangular course, twice around, 3 miles; prize, a gold medal, given by Com. F. Brandreth, of the Shattemucs; second prize, a banner, 14 starters, won by P. Wackerhagen in his new canoe; G. E. Edgar, Rat, second; G. Cox, of the Essex Club, third. This was a beautiful race from start to finish.

Third, 11:30 A. M., sailing, novice, 1½ miles; prize, a banner, won by F. W. Bartlett, of the Dock Rats, in the Dido.

Fourth, 1:30 P. M., sailing, any canoe, barring winners of Class A and B, triangular course, 1½ miles; prize, a banner, presented by the Newburgh C. and D. A.; second prize, a camp knife and fork, presented by G. Van Deusen, of Rondout, won by G. E. Edgar in the Rat; G. Cox's Vesper second.

Fifth, 2 P. M., sailing, special, any canoe, 1½ miles; prize, a banner, won by P. Wackerhagen, of Albany.

Sixth, 2:30 P. M., paddling, Class II., prize, A. C. A. pin, won by C. Stern, of the Essex C. C.

Seventh, 3 P. M., paddling, Class IV.; prize, a banner, won by F. B. Smith, of Newburgh.

Eighth, 3:45 P. M., paddling tandem, Classes III. and IV.; prizes, two singleblade paddles, won by Barlow and French, of Sing Sing.

The races were all well contested. The prizes were presented by the Shattemuc C. C. Monday afternoon and evening a number left camp, others stopped until Tuesday morning, and by afternoon all had left. On Monday a count of those in camp showed 55 canoes and 70 canoeists present. The following clubs were represented: Mohican, Rondout, Amsterdam, Poughkeepsie, Newburgh, Yonkers, Troy, Knickerbocker, New York, Columbia College, Essex and Shattemuc.

THE EASTERN DIVISION MEET, MAY 28-30.

THE members of the Eastern Divison, A. C. A., turned out in good numbers for the spring meet, which they have made a Division fixture, under the Division officers, a course that the other divisions are likely in time to follow. The camp was at Haddam Island, in the Connecticut River, below Rock Landing and some 25 miles from the mouth. Besides the members of the Eastern Division, there were present Com. Wilkin and Sec. Carter, of the A. C. A. Saturday and Sunday were spent quietly in the regular routine of camp life and Monday was given up to business and racing. The meeting was called in the morning and the Division officers elected, as follows: Vice-Comm., L. Q. Jones, Hartford C. C.; Rear-Com., Geo. M. Barney, Springfield C. C.; Purser, W. B. Davidson, Hartford C. C.; Member of the Executive Committee, Nathan Gibbs, of Norwich, Conn. The races of the day were as follows:

First Race—9:50 A.—Paddling, ½ mile with turn: First, C. M. McKnight, S. C. C.; second, Emil Knappe, S. C. C.; third, Dr. H. C. Rice, S. C. C.; fourth, C. M. Murphy, Salem C. C. First prize, pair spoon-blade paddles; second prize, silk flag.

Second Race—Hand paddling, 150yds.: First, L. Q. Jones, H. C. C.; second, C. H. McKnight, S. C. C.; third, G. C. Forrest, H. C. C. Emil Knappe, S. C. C., did not finish. Prize, silk flag.

Third Race—Tandem paddling: First, E. Knappe and Dr. H. C. Rice; second, C. H. McKnight and F. Walker; third, G. C. Forrest and C. Talcot. Prize, two silk flags.

Fourth Race—Novices' sailing: Narka, Dr. H. E. Rice. Prize, pair paddles.

Fifth Race—Standing paddling: First, E. Knappe, S. C. C.; second, L. Q. Jones, H. C. C. C. H. McKnight, S. C. C., and G. C. Forrest, H. C. C., did not finish. Prize, silk flag.

Sixth Race—Sailing, 75sq. ft., limited, 3 miles:

	Start.	Finish.
Pecowsic, G. M. Barney, S. C. C.	2 05 00	2 33 20
Blanche, Paul Butler, V. B. C.	2 05 00	2 33 45
Le Cid, E. C. Knappe, S. C. C.	2 05 00	2 34 30
Venture, L. Q. Jones, H. C. C	2 05 00	2 35 15
Hornet, C. H. McKnight, S. C. C.	2 05 00	. . . .
Xury, W. B. Davidson, H. C. C.	2 05 00	. . . .
Chrystal, C. H. Murphy, Salem	2 05 00	. . . .
Dimple, G. Forrest, H. C. C.	2 05 00	. . . .

First prize, silk banner; second prize, silk flag.

Seventh Race—Unlimited sailing, 3 miles:

	Start.	Finish.
Blanche, Paul Butler	3 15 00	3 44 00
Pecowsic, G. M. Barney	3 15 00	3 44 20
Venture, L. Q. Jones	3 15 00	3 45 10
Le Cid, E. C. Knappe	3 15 00	. . . .
Chrystal, C. H. Murphy	3 15 00	. . . .
Hornet, C. H. McKnight	3 15 00	. . . .
Dimple, G. Forrest	3 15 00	. . . .

First prize, silk flag; second prize, silk flag.

Eighth Race—Unclassified sailing:

	Start.	Finish.
Blanche, Paul Butler, V. B. C.	4 02 00	4 32 30
Pecowsic, G. M. Barney, S. C. C.	4 02 00	4 32 49
Le Cid, E. C. Knappe, S. C. C.	4 02 00	4 33 07
Stranger, L. Q. Jones, H. C. C.	4 02 00	. . . .
Phyllis, W. F. Girard, H. C. C.	4 02 00	. . . .
Chrystal, C. H. Murphy, Salem	4 02 00	. . . .
Wanderer, G. W. Burch, H. C. C.	4 02 00	. . . .
Rambler, E. H. Fenn, H. C. C.	4 02 00	. . . .

First prize, silk banner; second prize, silk banner.

ISLE ROYALE.—Duluth, Minn.—I pity, yet sympathize with "Ahmeek," especially as his wife had to suffer "the trials, the tribulations, the difficulties" of that awful night, hunting for any portion of beautiful Isle Royale, in big Lake Superior, but admire the grit that determines to explore Royale from truck to keelson this season. The next time he comes let him make his plans to catch the Lake Superior Transit Company's steamer China, India, Japan or Nyack, at Buffalo, and come through to Duluth. From this point I can put him on a steamer under a captain I have known for years as a good and careful navigator, and who knows every cove and inlet in Isle Royale, who makes two trips a week to that isle. The steamer leaves Duluth harbor Wednesdays and Saturdays. My wife would not think of going to Isle Royale without taking a small .22-cal rifle to "pot wildcat;" there are abundance of them on the island, and presume it was one of these animals that scared Mrs. "Ahmeek." You have my address; if I can be of any service to "Ahmeek" I shall be happy to do so.—NORMAN.

MOHICAN C. C.—*Editor Forest and Stream:* Will you please to announce through the columns of the FOREST AND STREAM to the brethren of the paddle and the world that tries to sell them all kinds of things, more or less valuable or trashy, that owing to my "weak understanding," caused by my illness two years ago, I resigned from the secretaryship of the Mohican C. C. last July, and retired from the active list in February of this year, when the good fellows of the Turtle Tribe made me an honorary crawler. By doing so you will relieve me of considerable correspondence and my messenger of carrying it.—FERNOW.

PEQUOT C. C.—The Pequot C. C. will hold its second annual meet at Morris Cove, East Side, New Haven, July 1 to 5. The club assembles July 1 and camps during the night at the Cove, making an early start July 2 for the Thimbles. Sunday will be spent in camp at Morris Cove. Monday, July 4, will be race day. There will be sailing and paddling races and an upset race. The club is prospering and has now twelve members. Canoeists in vicinity are cordially invited to meet with us.—PARKER LEWIS, Secretary (New Haven, Conn.).

THE A. C. A. MEET AND THE ADIRONDACKS.—The nearness of Bow-Arrow Point to the Adirondacks opens up a new cruising ground to the smaller canoes among the beautiful lakes of that region. Stoddard's new map of the Adirondacks has the A. C. A. camp marked plainly, with distance circles up to ten miles, and will be valuable to all who intend to be at the meet.

A. C. A. MEMBERSHIP.—Trenton, N. J., June 4.—*Editor Forest and Stream:* The gentlemen named below have applied for membership in the A. C. A.: Nathan D. Bill, Springfield, Mass.; J. M. Johnson, Norwich, Conn.; H. A. Cowles, Unionville, Conn.; Edward C. Talcott, Hartford, Conn.; Chas. E. Curtis, New Haven, Conn.; Maxton Holms, Norwich, Conn.—WM. M. CARTER, Sec. A.C.A.

BROOKLYN C. C. ANNUAL REGATTA.—The annual regatta of the Brooklyn C. C. will be sailed on June 18 off Fifty-fifth street, South Brooklyn. The programme includes a novice race for club members only at 11 A.M., a sailing race, 4½ miles or over, no limits to rig or ballast, open to members of all canoe clubs, and at 5 P. M. an open sailing and paddling race, 3 miles.

CAMP GROUNDS IN PENNSYLVANIA.—A correspondent writes to know of a good location within 150 miles of Philadelphia for a camping party, in a wild and mountainous region; also whether there is such a place on the Juniata, and if so, how it may be reached by rail.

Yachting.

FIXTURES.

JUNE.

9. N. Y., Annual, N. Y.
10. Dorchester, 98th Regatta.
11. Sandy Bay, Pen., Rockport.
11. Buffalo, Club.
11. Great Head, Open.
11. S. C., Annual, Open, N. Y.
11. Monatiquot, Club, Weymouth
13. Coriuthian Annual, N. Y.
13. Quaker City, Annual, Phila.
14. Dorchester, 99th Regatta.
14. Larchmont Pen., Larchmont.
14. Atlantic, Ladies' Day.
15. Quaker City, Ladies' Day, Phila.
16. Portland, Annual.
16. Atlantic, Annual, New York.
17. Cape Cod Y. C., Club.
17. Dorchester, 100th Regatta.
18. Cor. Penn., Hull.
18. Brooklyn Annual, Gravesend Bay.
20. Cooper's Point, Corinthian, Cruise down Del. River.
21. Yonkers, Annual Regatta.
22. Monatiquot, 1st cham., Weymouth.
23. Eastern, Annual, Marbleh'd.
23. Columbia, Annual, N. Y.
25. N. J., Annual, New York.
25. Boston *Globe* Open, Boston.
25. Hull Club, Marblehead.
25. Oswego, Ladies' Day.
26. Quaker City, Review, Phila.
28. Great Head, Pennant.

ATLANTIC Y. C. 22D REGATTA, JUNE 7.

THE first of the great regattas, that of the Atlantic Y. C., was sailed on Tuesday, and in spite of bad weather a very good race was made in all classes. It was in every respect an Atlantic day, as the two leading boats of the club, Atlantic and Shamrock, took all the honors, and it would have been easy on Tuesday night to have found plenty about Bay Ridge to back either against Thistle without any allowance. The race was the first that has been sailed under the new classification lately proposed by the FOREST AND STREAM, and if entries are any test the change is certainly a success. Both first and second prizes were offered, and the class limits were conveniently near, the result being a very fair turnout of well matched yachts. The schooners did not show up well, Magic, the only entry in the large class, not starting; while in the small class only two out of five entries went the course. The starters were:

Name.	Owner.	Length. L.W.L.
CLASS B—SCHOONERS, UNDER 75FT.		
Clio	E. Winslow	68.00
Southern Cross	J. H. Hanan	65.00
Gevalia	H. W. Coates	56.00
Agnes	J. N. Winslow	55.04
Leona	E. C. Sterling	46.03
CLASS C—SLOOPS, 75FT. AND OVER.		
Galatea	Lieut. Wm. Hemn	86.00
Priscilla	A. Cass Canfield	85.63
Atlantic	D. Chauncey	84.04
CLASS D—65 TO 75FT.		
Shamrock	J. R. Maxwell	66.09
Gracie	J. P. Earle	72.02
Titania	C. O. Iselin	69.09
Stranger	G. H. Warren	65.00
Fanny	T. P. Fiske	65.00
CLASS E—56 TO 65FT.		
Huron	Bloodgood & Kelly	63.00
Hildegard	J. C. Bergen	61.00
CLASS F—48 TO 56FT.		
Cinderella	W. E. Iselin	52.00
Athlon	E. B. Havens	53.00
Roamer	J. Cartledge	48.10
CLASS G—41 TO 48FT.		
Concord	H. C. Roome	45.00
Adelaide	R. Underhill	44.06
Rover	F. C. Swan	44.08
Vixen	J. C. Richardson	44.05
Enterprise	H. H. Hogins	44.02½
Ariadne	H. W. Banks	41.00
Nirvana	H. Hall	42.00
CLASS H—35 TO 41FT.		
Rival	Hope and Capman	38.03
Wayward	F. Beltz	37.04
CLASS I—30 TO 35FT.		
Mistral	G. V. Brower	34 00
Viking	F. C. Swan	33.00
Ilderan	W. Southwick	30.02
CLASS J—26 TO 30FT.		
Arab	N. D. Lawton	28.09
Hypatia	J. Weir, Jr.	26.07
Kangaroo	A. Bertels	27.00
CLASS K—UNDER 26FT.		
Gleam	T. L. Arnold	23.01
CLASS L—OPEN SLOOPS.		
Sirene	H. E. Doremus	24.07
Pilot	E. Fish	23.08
CLASS M—CATBOATS.		
Marjorie	W. H. Langley	21.00
Mosquito	W. H. C. Leverich	20.00

The courses were: For Classes A, B, C, D and E, from the anchorage of the club off Bay Ridge, down through the Narrows, to and around Southwest Spit buoys Nos. 10 and 8½, passing to the west of same, thence to and around the Scotland lightship, keeping the same on the port hand, thence to and around Sandy Hook lightship, keeping it on the port hand, thence returning to buoys Nos. 8½ and 10, going around same, keeping them on the starboard, thence to home stakeboat, going to the southward and westward of Beacon on Romer Shoal; 37 miles.

For Classes F and G, from the anchorage of the club off Bay Ridge, down through the Narrows, to and around stakeboat near buoy No. 8, off the northern point of Sandy Hook, passing to the west of the same, thence to and around the Scotland lightship, keeping it on the port hand, thence to and around Sandy Hook lightship, keeping it on the port hand, thence home, going to the southward and westward of beacon on Romer Shoal; 32 miles.

For classes H and I, from the anchorage of the club off Bay Ridge, down through the Narrows, to and around stakeboat near buoy No. 8, keeping the same on port hand; thence to and around the Scotland Lightship, keeping it on the port hand; thence home, passing to westward of beacon on Romer Shoal, 24 miles.

For classes J, K, L and M, from the anchorage of the club off Bay Ridge, down through the Narrows to and around stakeboat near buoy No. 8, keeping the same on port hand, thence home, passing to westward of beacon on Romer Shoal, 20 miles.

The finish for all classes will be at buoy No. 15, and all yachts must cross the line between said buoy and a stakeboat bearing the club flag anchored to southward and eastward of buoy.

All yachts to pass to westward of Fort Lafayette and the beacon on Romer Shoal, and to the eastward of buoys 11, 13 and 15, on west bank, both going and returning; and at home stake between buoy 15 and stake boat marking the line.

The day was cool and cloudy, the wind hanging in the east but not blowing at all, while a light drizzle fell. The fleet was ready off Bay Ridge, but at the hour set for the start there was no wind at all. About 11 A. M., however, a light breeze was felt from S.E., and all got under way, standing up the Bay against the young ebb. The starting line was between two boats moored about a quarter mile apart, in a line with the club house.

At 11:37:04 the first gun was fired and at 11:42:04 the starting gun followed. Shamrock was near the line but was obliged to tack to avoid crossing too soon, and Atlanta, breaking out jibtopsail, and with clubtopsail and balloon foresail set, was first over the line on port tack. Following her closely to windward was Titania, with Hildegarde so close on her weather quarter that boom and bowsprit were nearly interlocked, the latter hailing for room to clear the mark boat. Closely bunched came half a dozen yachts, Southern Cross, Fanny, Galatea, Stranger, Gevalia, Priscilla, Huron. Shamrock was handicapped a little and had the worst of the start. The smaller boats now struggled over, Concord nearly fouling the mark, not allowing sufficiently for the strong tide and light wind, while the little Gleam cut in very cleverly between her and the mark. All carried lower sails, jibtopsails and working topsails except the three large singletickers, who were allowed clubtopsails.

The wind was very light, but the tide carried the fleet down, Atlantic keeping over to Fort Lafayette and Shamrock following, while part of the fleet, Galatea included, held over toward the Staten Island shore. The two white boats gained by this maneuvre, Atlantic not only getting outside the Narrows first, but meeting there a better breeze a little nearer south, so that she could lay her course nicely, while Galatea, Gracie and a lot beside were well inside Fort Wadsworth and in the lee. Shamrock worked things so closely as to make up at once a big part of her lost time, and Cinderella was also walking well through the fleet. First of all outside the forts and in the new breeze, Atlantic sped rapidly down, holding to the east side of the Bay. Some distance astern were Titania and Hildegarde, then Fanny, Shamrock, Priscilla, Galatea, Huron, Stranger, Cinderella and Gracie.

At 12:20 Atlantic, still holding her spurt, was well down toward Norton's Point, while near Fort Hamilton was Titania, with Shamrock now in threatening proximity, both being on port tack, while Priscilla was astern but some distance ahead of Galatea, and holding all her lead. At 12:27 Galatea cast to starboard tack and stood in toward Gravesend Bay, Shamrock doing the same, with Titania following her, the latter still the head boat. They only held this leg for three minutes when Shamrock went on port tack again, with Titania immediately after, on her weather bow. Now came the tug as the white sloop crept up with a steady gain on the steel yacht; hand over hand she went, easily and surely through the other's lee, and within less than an hour after the start she had overcome the great lead that Titania had taken. Priscilla had held her course out in the bay longer than Galatea and had gained on the latter, but at 12:32 she tacked to the east, soon going back to her old course, which proved the best, as Galatea, further in toward Gravesend Bay, was not holding her.

Meanwhile Atlantic was nearing Buoy 10, sailing a little race of her own. Shamrock was also clear of the fleet and with the prize in her pocket, barring any unusual fluke. Of the rest of the fleet, Priscilla was still chasing Shamrock, but Titania had fallen into company with Galatea and Fanny, and all she wanted to keep her place in the trio. Off Buoy 12 Galatea ran up on Fanny's lee, but failed to force a passage, and they came to Buoy 10 together, with Titania barely ahead of them. The times were:

Atlantic	1 02 30	Titania	1 16 40
Shamrock	1 12 20	Fanny	1 16 59
Priscilla	1 13 05	Galatea	1 17 35

As the yachts made a wide turn, Atlantic in particular, holding well over toward Raritan Bay, these times are not strictly accurate, but will serve to give a good idea of the relative sailing of the boats. The wind still held as light as at the start, the water being perfectly smooth. Shamrock went on starboard tack after passing buoy 10, Priscilla holding to port tack after Atlantic, while Galatea and Fanny tacked in Shamrock's wake and Titania followed Priscilla. Atlantic held her port tack for six minutes, then went about and weathered buoy 8½ handsomely, standing on out to sea, tacking again twelve minutes later to clear the point of the Hook. Shamrock worked to the eastward, while Priscilla was still on the port tack, and when they came together off buoy 8¼ the big boat was still to leeward. Meanwhile Galatea had run through Fanny's lee, Titania had dropped astern of the pair, Huron had left Hildegarde, and Cinderella, going a shorter course and not rounding 10 and 8½, was now in among the leaders off the Hook with none of her class in sight.

At 1:30, when well off Sandy Hook, the positions were, Atlantic on starboard tack, far in the lead, Shamrock in her wake, Priscilla and Galatea still fighting their duel with the iron ship ahead of the steel one, then Titania, Fanny, Stranger, Gracie, Huron, Hildegarde and Cinderella. Some schooners had started with the fleet, but they troubled nobody and were not in the race as far as the spectators were concerned. Making out to the Scotland Lightship, Atlantic turned and was away for the Sandy Hook Lightship nearly a quarter of an hour ahead of the others. At 1:39 Shamrock went on port tack followed by the Priscilla, but while she tacked again at 1:42, standing to the eastward, Priscilla held her port tack far down the Jersey beach, not going on starboard tack until 2:30. At 1:55 Atlantic had tacked to the east, and at 2:02:20 she turned the Scotland and stood to the north for the next mark. As the others rounded they followed her, except Titania, who held on down after Priscilla. The times at the Scotland, as far as taken, were:

Atlantic	2 02 20	Priscilla	2 15 00
Shamrock	2 13 00	Galatea	2 18 00

Cinderella was holding her place bravely, though with no real competitor in her class, and Adelaide, in spite of her 46ft. length, was well up with the second class.

At Sandy Hook Lightship there was a very pretty spinaker drill as each came up on starboard tack, jibed and set her kite. Atlantic was alone while Priscilla was much smarter. Galatea rounded with her boom swung forward, swinging it aft smartly and running up the sail. Titania had her boom only slung as she turned, and some time was lost in stepping and lowering it. Cinderella was by far the best handled of the lot, breaking out as soon as she was fairly before the wind, a big feather for her Corinthian crew. The times were:

Atlantic	2 40 55	Adelaide	3 16 50
Shamrock	2 54 50	Gracie	3 19 32
Priscilla	2 59 20	Stranger	3 20 24
Galatea	3 00 05	Huron	3 21 58
Cinderella	3 06 22	Roamer	3 23 50
Titania	3 10 23	Hildegard	3 34 00
Fanny	3 14 10		

Galatea had fairly collared Priscilla at the mark and run to windward of her as they started sheet, with the intention of blanketing her, but the other slid out from under her lee and gained steadily from the turn in. The procession home was devoid of any special interest, the boats being well strung out. Wind and sea held the same until late in the afternoon, when the laggards brought a better breeze in with them, but it was too late to help the leaders. Once inside the Hook balloon jibtopsails were set in place of spinakers. Atlantic bowled along in the light breeze, seeming better suited with the weather than ever before, and there was no hope of catching her, while Shamrock was so far ahead of all others that the run was devoid of interest. With balloon jibtopsail full Atlantic ran across the line at 4:53:28, the winner of her first race. One by one the others came up, until at 6:39 the last schooner was timed.

The summary of the race is given below:

	Start.	Finish.	Elapsed.	Corrected.
CLASS B—SCHOONERS UNDER 75FT.				
Gevalia	11 46 08	6 07 06	6 20 58	6 13 50
Agnes	11 46 07	6 28 04	6 41 57	6 31 42
Leona	11 46 45	Withdrew.		
Southern Cross	11 45 19	5 55 32		
CLASS C—SLOOPS 75FT. AND OVER.				
Atlantic	11 44 06	4 53 28	5 03 22	5 06 50
Galatea	11 46 07	5 16 34	5 30 27	5 30 27
Priscilla	11 46 06	5 11 16	5 25 10	5 23 31
CLASS D—SLOOPS 65 AND UNDER 75FT.				
Shamrock	11 47 01	5 05 56	5 19 32	5 19 32
Titania	11 44 25	5 24 19	5 39 54	5 39 33
Fanny	11 45 33	5 29 15	5 43 42	5 39 52
Gracie	11 46 34	5 32 47	5 46 13	5 45 56
Stranger	11 46 30	5 41 45	5 55 15	5 54 08
CLASS E—SLOOPS 56 AND UNDER 65FT.				
Huron	11 45 53	5 38 16	5 52 23	5 52 23
Hildegard	11 44 32	5 44 59	6 00 27	5 59 22
CLASS F—SLOOPS 48 AND UNDER 56FT.				
Cinderella	11 50 42	5 18 56	5 23 14	5 23 14
Roamer	11 52 04	5 34 09	5 42 05	5 36 14
Athlon	11 52 04	5 42 07	5 50 03	5 48 01
CLASS G—SLOOPS 41 AND UNDER 48FT.				
Adelaide	11 49 28	5 29 57	5 40 29	5 39 34
Enterprise	11 52 04	5 44 02	5 51 50	5 49 54
Ariadne	11 51 29	5 55 10	6 03 41	5 58 01
Nirvana	11 49 24	5 55 26	6 06 02	6 00 06
Rover	11 51 18	5 47 23	5 56 05	5 55 10
Vixen	11 48 29	5 52 40	6 04 11	6 03 00
Concord	11 52 04			
CLASS H—SLOOPS 35 AND UNDER 41FT.				
Rival	11 52 04	4 46 02	4 43 58	4 43 58
Wayward	11 54 04		Withdrew.	
CLASS I—SLOOPS 30 AND UNDER 35FT.				
Ilderan	11 52 04	5 11 18	5 19 04	5 12 32
Mistral	11 50 48	5 02 32	5 11 44	5 11 44
CLASS J—SLOOPS 26 AND UNDER 30FT.				
Kangaroo	11 56 56	3 31 20	3 34 24	3 32 15
Arab	11 54 00	3 30 20	3 36 20	3 36 20
Hypatia	11 54 51	3 40 02	3 45 51	3 45 40
CLASS K—CABIN SLOOPS UNDER 26FT.

CLASS L—OPEN SLOOPS.				
Pilot	11 57 12	4 05 24	4 08 12	4 07 09
Sirene	11 57 00	3 41 15	3 44 15	3 44 15
CLASS M—CAT RIGGED BOATS.				
Marjorie	11 57 10	3 57 15	4 00 05	4 00 05
Mosquito	11 57 12	4 10 47	4 13 35	4 12 02

While the weather was of the poorest, the breeze, such as it was, was steady in force, and the only fluke was at the start, where Atlantic certainly made a big gain. This, however, by no means accounts for her victory, as what she made then she held fairly all day, keeping her place. In the hands of Com. Fish and Capt. Terry she was excellently sailed and piloted, but this alone will not account for all of her gain, as she was well sailed last season. Whether the alterations of the winter have made any substantial improvement, or whether her performance was due in part to the special weather of Tuesday, it is impossible to say now; in the puffs and squalls of Decoration Day she certainly seemed to act very much as last season. Shamrock's performance is something that all concerned in her may well be proud of, as she had the very worst of the start, but soon overcame the handicap and practically led the fleet after the first hour. The day, of course, favored the smaller boats, but she proved herself far and away faster than all the rest, including Atlantic, as the latter had a great lead of her at the line. Priscilla and Galatea kept up a very fair ding-dong game all day, the former having the best of it and winning by 7m. on the run, after losing at the turn nearly all of what she at first gained on the windward work.

Titania thus far has done nothing with the best of her class, barely tieing Fanny for second. She has beaten Gracie and Stranger, but that counts for little beside the rest. Cinderella sailed a shorter course than the larger yachts, so cannot be compared with them; but she held her place well while sailing with them outside the Hook, and in her own class she was virtually alone. In the next class the honors go to Adelaide, the new sloop built last year by Wood Bros. for Mr. Robert Underhill. She outsailed easily all of her class, winning the Livingston Memorial prize for best elapsed time, as well as the first class prize.

The new Class E created this year, brought out only Huron and Hildegarde, Thetis not being in commission, Thistle not ready and Mischief kept out through a serious illness in her owner's family. Arrow also will go in this class if she races again, and it should be a most interesting class in the future. The beating of 16m. in twenty miles which Huron gave Hildegarde on Decoration Day in a good breeze and the 7m. she took off her on Tuesday in the sloop's weather makes a very comical sequel to the claims advanced by a writer in the June number of *Outing* on behalf of this "typical American boat." If the writer still believes that "it has as yet, however, not been demonstrated that outside lead has developed greater speed than the older type possessed," perhaps a comparison of the times made by Hildegarde, not with her class, but with Cinderella and Adelaide, allowing for the five miles more sailed by the bigger boat may convince him. Pocahontas was not able to haul out in time, and was on Mumm's ways all day, but will sail to-day in the New York Y. C. regatta. We learn that, so far from Shamrock going by the stern, as we at first predicted, she really trimmed a little by the head, with anchors and chains in place, so that her inside ballast was shifted a little aft.

THISTLE, IREX AND GENESTA.

FOR the past ten days the attention of yachtsmen here, as well as abroad, has been fixed on that portion of the southeast coast of England about the Thames, where a series of preliminary trials of the new Scotch cutter have been under way. Though the events were only the regular ones of the early British season, they have possessed a special interest this year from the presence of a boat of such different proportions, to say nothing of her great size, and her performances with two tried boats such as Irex and Genesta, have been the subject of much study and conjecture. Thistle, as all know, is wider than her competitors by 5ft., her beam being 20ft., while in length they rate: Thistle 85ft., Irex 83ft. 6in., Genesta 81ft. Thistle, entirely new, is commanded by Captain John Barr, of Neptune and Ulerin fame, and so well known here from his work in the Clara for two years. He has with him a picked crew from Clara and Marjorie, twenty men in all. Irex is this year in much the same shape that she has been for her victorious seasons of '85 and '86, with O'Neil still in command, and the same crew practically that has raced her for three years, the most thoroughly trained racing crew ever in a yacht of her size. With her is Mr. William Jamison, famous among amateurs as Barr and O'Neil are in the professional ranks. Genesta has been altered this spring to the trim in which she raced in her first year, 1884. Her outside lead has been reduced, and her sails cut down to their original dimensions prior to her transatlantic venture. She is still in the hands of Captain John Carter, a skipper who made many friends here among those who came in contact with him during Genesta's visit. Though with much smaller sails than Thistle, both Genesta and Irex carry about the same crew, 18 to 19 men each. Besides these three, the races, all open club events, brought out a scrub fleet of small yachts, and cutters and yawls in the B and C classes, whose relative performances, with small rigs and exaggerated allowances, are valueless and may be neglected.

The series of races sailed up to date number seven, through which the usual proportion of fogs and calms have been interspersed, and perhaps the fairest way to sum up Thistle's capabilities thus far is to take the general impressions that the races together give, rather than to analyze and draw conclusions from each race. To sum up thus, Thistle, with her big rig, has shown up wonderfully fast in very light weather, and also able and fast in good breezes. She has generally outsailed Irex and Genesta by a good margin, and when she has lost it seems rather to be due to too small a crew, unable to handle sail alongside of Irex, than to any radical defect in the boat herself. The opinions quoted from across the water are generally favorable, and when the work she has done beside such a boat as Irex is considered, the difference in length being only 18in., it must be allowed that for a new boat she is very fast. The time allowance she gives Irex, by the new rule,

$$\frac{\text{Length} \times \text{Sail Area}}{6{,}000}$$

is about 7min. over a 55 mile course, but the corrected times thus far are not reliable, as none of the boats have yet been officially measured. The tonnages as given approximately are: Thistle 139, Irex 106, Genesta 104. The races may be summarized as follows:

No. 1. May 28.—New Thames Y. C., Southend to Harwich, 54 miles, light winds and calms, drifting match, Thistle wins easily, beating Irex by an hour, Genesta being second and Irex third.

No. 2. May 30.—Royal Harwich Y. C., off Harwich, 35 miles, thick fog for latter part of race, Irex first, Genesta, Wendur and Thistle. Thistle sailed well in early part of race.

No. 3, May 31.—Royal Harwich Y. C., Harwich to Southend, 54 miles. The weather was fair and warm, with a fresh breeze all day, making plenty of work jibing and shifting spinakers, at which Thistle's crew is reported as being slow, probably from her being undermanned. She came in at 1.01, with Irex at 1.04 and Genesta at 1.11.

No. 4. June 1.—Royal Thames Y. C., Lower Hope around the Mouse Light and return, 50 miles. The first half of the course was to windward against a strong breeze, Thistle beating Irex first at a luffing match, and leading Genesta at the turn by 8m., and Irex by over 9m. Home free she increased her lead, the wind at times being very light, and finished at 6.00.15, with Irex 6.23.50, and Genesta 6.25.02. The race was a very fair one, without flukes, and Thistle seems to have won entirely on her merits.

No. 5. June 2.—New Thames Y. C., course as on preceding day, 50 miles. There was more wind and sea, but Thistle with an increased crew of thirty sailed as fast as in the lighter weather. She carried topsail after Irex housed hers, and led the latter by 3 miles at the turn, losing somewhat on the way home. Genesta misunderstood the starting signal and was disqualified. At one point on the way home Thistle led Irex by 13m., but they were timed: Thistle 4.43.06, Irex 4.52.13, Wendur 4.59.54. The latter, a Class C yawl, took first prize on an allowance of 24m. 12s. from Thistle.

No. 6. June 4.—Royal Thames Y. C., Nore to Dover, 80 miles. The start was made off the Nore at 10 A. M., the wind being light, N.W. Genesta and Thistle led Foxhound at the start, but she passed both, the times being at West Gaza: Foxhound, 11:43, Genesta, 11:8. Irex soon after came up with Genesta, only to drop again to third place. At noon the wind was very light and Thistle shifted to balloon jib. The Shivering Sands Buoy was passed by Thistle at 12:25:15, Irex, 12:39:50, Genesta, 12:56, and Queen Mab, 10 tons, next in order. A calm followed, and off Ramsgate Thistle ran so far out as to lose the wind, being becalmed for some time, while the others carried a good breeze inshore. Soon a squall followed, Irex shifting her yard topsail for a jibheader, while Thistle housed her topsail, she also getting up a little. The leaders were timed at the East Goodwin lightship, Irex, 4:18:18, Genesta, 4:24:30, Wendur third and Thistle fourth. From here in was a beat, Genesta leading and finishing first, the times being: Genesta, 5:54:6, Irex, 5:54:19, Thistle, 5:59:39, Wendur, 6:07:13, Neptune, 6:22:37, Sleuthhound, 6:30:37, Foxhound, 6:38:58, Sibyl, 6:39:30, the latter, 26 tons, taking the prize on allowance. Thistle seems to have sailed very well until she ran out of the wind, after which she set no topsail. It is reported that she carried away topmast, and no other reason is known for her not setting topsail again, but still she took a fair place. In rough water she is reported to be much wetter on deck than the narrow boats, but she seems able to carry her big rig as long as they can their small ones.

No. 7.—Royal Cinque Y. C., Dover, triangular course, 44 miles, good breeze all day, Thistle easily led the fleet from the start. Times at finish: Thistle, 5h. 24m. 56s.; Genesta, 5h. 35m. 45s., and the Irex, 5h. 36m. 5s.

CAPE COD Y. C.—Regatta May 30. Course, from Brewster to stakeboat off Orleans, thence around New Found Rock back to stakeboats at Brewster; distance, 7⅞ miles; weather, cloudy at start, but sunshine before finishing the race; tide, flood. Summary:

	Length.	Start.	Finish.	Elapsed.	Cor.
CLASS I.					
Madge, Cummings & Howes	23.05	1 06 15	3 17 15	2 13 00	1 47 01
Percy Allen, F. S. Allen	21.03	1 06 45	3 19 30	2 12 45	1 44 46
Ariel, H. H. Sears & Co.	21.06	1 06 30	4 11 00	3 04 30	2 56 46
Guinevere, V. D. Bacon	20.10	1 07 15	4 50 00	3 48 45	3 20 08
CLASS II.					
Fawn, James Smith	23.00				
Gracie, Joshua Crowell	17.11	1 10 15	4 55 30	3 45 15	3 13 16
Iris, E. D. Crowell	17.08½	1 11 00	5 00 00	3 49 00	3 16 45
Magic, Thos. P. Lewis	17.10	1 10 15	4 58 15	3 48 00	3 15 55

Percy Allen, Madge and Ariel win in first class; Gracie, Magic and Iris in second. Wind light and baffling, mostly N.E., ending in a calm and hot. A light wind sprang up from the S.E., which enabled the second class to finish. Regatta committee and judges, D. W. Sears, Edgar Lincoln and E. Small.

MONTGOMERY SAILING CLUB.—Norristown, Pa.—The fifth regatta of this club was held June 4. Course 5 miles, wind light to fresh southeast, making a run to the buoy and a beat back. The start was made at 9 A. M. The finish and corrected times are as follows:

	Length.	Finish.	Corrected.
Cocktail	15.00	10 42 24	1 40 51
Josephine	15.00	10 44 06	1 42 58
Flying Eagle	15.00	10 43 38	1 43 05
Ino	15.00	10 51 50	1 48 25
Elsie	15.00	10 54 21	1 50 56
Gracie	12.00	11 01 04	1 51 28
Lulu	15.00	10 54 23	1 53 39
Little Tycoon	16.00	11 08 55	2 08 55

The Little Tycoon carried, in addition to her 30yd. mainsail, a 7yd. jib; but it did not save her from a crushing defeat. The Gracie used two narrow weather grips in this race; she sails much better in rough water with one wide one. Her favorite grip was broken and it could not be replaced in time for this race.—E. A. L.

LARCHMONT Y. C. PENNANT REGATTA, JUNE 4.

THE spring pennant regatta of the Larchmont Y. C. was sailed on June 4 over the long course of the club, from the anchorage around the buoy off Execution Light, thence around Mattinicock buoy, thence around buoy off Captain's Island, and home around Execution again, 22 miles. The smallest class, cats under 23ft., sailed the 17-mile course, omitting the Captain's Island buoy. Classes D and E had each but one entry, so the two yachts sailed together for a cup offered by Com. Alley. The principal event of the regatta was the sailing of the new Titania, this being her first race, and though she had nothing of her size against her, she beat Cinderella easily, though the course offered no windward work. The wind was from the north at the start, allowing spinakers to draw from the line to Execution, later hauling into the eastward, and finally coming out of southeast, so that spinakers were again set on the last leg from Execution to the finish. The start was made at 11:35, the order across the line being: Petrel, Santapogue, Cinderella, Fanita, Daphne, Clarita, Titania, Mariotta, Orienta, Nymph, Volusia, Punch, Fairy, Cruiser, Schemer, Nora, Lorna and Ananda. The last three were handicapped.

The big steel sloop led the fleet to the first mark, all carrying spinakers to port. The times at Execution buoy were:

Titania	11 58 30	Volusia	12 04 35
Cinderella	12 00 40	Petrel	12 04 50
Fanita	12 01 24	Sachem	12 05 06
Daphne	12 03 08	Cruiser	12 05 17
Santapogue	12 03 51	Fairy	12 06 02
Mariotta	12 03 55	Punch	12 06 38
Clarita	12 04 24	Orienta	12 06 40

The fleet hauled on the wind on port tack for the next mark, but before it was reached, the wind, lighter than at first, had headed them so that several tacks were necessary. Fanita tried a hitch to the north, but Daphne, holding on a little longer, finally went well to windward of her. The four were timed:

Titania	12 53 55	Daphne	1 07 25
Cinderella	1 03 25	Fanita	1 10 35

The positions were not changed much on the reach across to Captains Island, the times being:

Titania	1 25 20	Daphne	1 41 00
Cinderella	1 35 10	Fanita	1 43 30

The next leg allowed spinakers to port before a very light breeze, and Titania gained so much on Cinderella that she was at the line before her rival turned Execution buoy. Fanita had also gained on her rival and led her at the buoy, the time not being taken. As Cinderella turned the mark a nice breeze came in from southeast, before which she set her spinaker to starboard and ran quickly home. The full times were:

CLASS D—CABIN SLOOPS—60 TO 75FT.

	Start.	Finish.	Elapsed.	Corrected.
Titania	11 38 17	3 19 37	3 41 20	3 41 20

CLASS E—CABIN SLOOPS—52 TO 60FT.

Cinderella	11 36 41	3 42 23	4 05 42	4 05 42

CLASS I.—CABIN SLOOPS—42 TO 50FT.

Fanita	11 36 45	3 43 58	4 07 13	4 07 13
Daphne	11 37 23	3 44 46	4 07 13	4 07 13

CLASS II.—CABIN SLOOPS—33 TO 42FT.

Schemer	11 42 47	3 56 40	4 13 53	. . .
Santapogue	11 36 38	3 57 50	4 21 12	. . .
Volusia	11 41 14	4 11 21	4 30 07	. . .
Clarita	11 37 56	4 13 38	4 35 42	. . .

CLASS III.—CABIN SLOOPS—25 TO 33FT.

Nymph	11 40 16	4 04 11	4 23 55	. . .

CLASS IV.—CABIN SLOOPS—UNDER 25FT.

Nora	11 45 00	Not timed.		

CLASS V.—OPEN SLOOPS—OVER 25FT.

Lorna	11 45 00	3 49 24	4 04 24	3 56 02
Ananda	11 45 00	3 48 11	4 03 11	3 58 42
Mariotta	11 39 40	Not timed.		

CLASS VII.—CAT RIGGED—UNDER 23FT.

Fairy	11 41 31	3 46 17	4 04 46	4 04 26
Orienta	11 40 10	3 47 08	4 06 58	4 06 48
Cruiser	11 42 14	4 01 22	4 19 08	4 16 09
Petrel	11 36 27	4 04 27	4 28 00	4 28 00
Punch	11 41 25	Not timed.		

The Regatta Committee included Messrs. H. B. Willard, G. L. Forman and F. C. Griffiths.

CORINTHIAN Y. C. RACE, JUNE 13.

THE latest addition to the New York yacht clubs, the Corinthian, starts its second year with a race that promises to be one of the most interesting and important of the spring regattas, the details being so arranged, as will be seen by the following conditions, as to encourage a large number of entries from the ranks of those amateurs who race for the sake of sport rather than prizes. In two respects the programme differs from the ordinary ones; there is no attempt to give big prizes, and the yachts will be tried by three different ratings. In the matter of prizes, the departure is certainly a radical one, as in place of money prizes of one to two hundred dollars the club will give only pewter mugs, standing as record of the race. Of course, while prizes are necessary, yachtsmen have little respect for the man who races merely for money, and it will be a very interesting experiment to see how many will go in simply for the sport, with no hope of a money prize. The classification, that introduced by the FOREST AND STREAM, is ample, giving fair chances to every size of boat, the courses are good and the prizes should be sufficient to induce all to enter, as every owner has the chance to prove his boat the best in her class in a record race, and this is certainly far more than any money prize. The experiment of placing the three leading systems of measurement side by side under equal conditions is likely to throw some valuable light on this most important subject. In any given class it is generally not difficult to say which boat is best, or which won on her merits, and a comparison of the results of the three systems with the general opinion as to the boats cannot fail to be interesting and instructive. This first venture of the new club is certainly in the best interests of sport, and well calculated to advance yacht racing in New York, and yachtsmen can best show their appreciation of these efforts by full entries in the race.

The race, open to all yachts enrolled in any recognized yacht club, will be sailed in New York harbor June 13. It is proposed to give three prizes in each class, all of equal value, one to the winning yacht on a rating of sail area, one to the winning yacht on a rating of load water line length, and one to the winning yacht on a rating of load waterline length and sail area combined. It will thus be seen that each yacht has the chance of winning three prizes. It is the object of the club to foster the spirit of racing for the sake of the sport and the best interests of yachting, rather than for the money value of the prizes, and it is hoped that owners of boats belonging to other clubs will support this policy by a large entry. It is particularly desired that the entries include various types of boats, and to that end prizes are offered under three systems of measurement. The prizes will be pewter mugs suitably inscribed, and besides the mugs to the winning boats, a mug will be given to each amateur member of each winning crew. The courses are as follows:

No. 1. 37 Statute Miles.—Starting from an imaginary line between club steamer and Fort Wadsworth, to buoy 10 on the southwest spit, keeping it on the port hand, thence to and around buoy 8½, keeping it on the port hand, thence to and around Sandy Hook Lightship; keeping it on the starboard hand, and return over the same course to buoy 15, keeping to the eastward of buoys 9, 11, 13 and 15 on the west bank, and outside of buoy 5 on the point of Sandy Hook, going and returning.

No. 2. 30 Statute Miles.—From the same starting line to buoy 10 on the southwest spit, keeping it on the port hand, thence to and around buoy 8½, keeping it on the port hand, thence to and around Scotland Lightship, keeping it on the starboard hand, and return over the same course to buoy 15, keeping to the eastward of buoys 9, 11, 13 and 15 on the west bank, and outside of buoy 5 on the point of Sandy Hook, going and returning.

No. 3. 22 Statute Miles.—From the same starting line to buoy 10½, keeping it on the starboard hand, thence to and around buoy 1, off Point Comfort, keeping it on the starboard hand, thence to the finish line, buoy 15, keeping to the eastward of buoys 9, 11, 13 and 15 on the west bank, going and returning. If a stakeboat is anchored off buoy 1 it is to be rounded instead of the buoy.

No. 4. 15 Statute Miles.—From the same starting line, to and around buoy 10 on the east bank, keeping it on the starboard hand, thence to and around buoy 10½, keeping it on the starboard hand, thence to finish line, buoy 15, keeping to the eastward of buoys 9, 11, 13 and 15, going and returning.

The finish must be made across an imaginary line between the judges' steamer or the station boat and buoy 15. The first, second and third classes will sail course No. 1. The fourth and fifth classes No. 2. The sixth class No. 3. The seventh and eighth classes No. 4.

All yachts will be classed according to the load waterline length, as follows: First class, 65ft. and less than 75ft.; second class, 56ft. and less than 65ft.; third class, 48ft. and less than 56ft.; fourth class, 41ft. and less than 48ft.; fifth class, 35ft. and less than 41ft.; sixth class, 30ft. and less than 35ft.; seventh class, 26ft. and less than 30ft.; eighth class, less than 26ft.

The three racing ratings upon which time allowance is to be computed will be as follows, viz.: First—The square root of the area of lower sails and working gafftopsails. Second—Length on load waterline. Third—Half the sum of the square root of the area of the sails (lower sails and working gafftopsails), added to length on load waterline. Time allowances will be applied to the above ratings, according to the table of allowances in use by the New York Y. C. Entries must be made in writing or telegraph, to the secretary, M. Roosevelt Schuyler, 55 Beaver street, New York, before noon, June 11, or at the club house, Tompkinsville, before 9 o'clock on the morning of the race. The names of the amateurs in the crew must be declared at time of entry, and the entry must also declare length on load waterline and the area of sails (lower sails and working gafftopsails). There will be no restrictions in regard to sails, or the manner of setting or working them. Crews are limited to one man for each 5ft. of length on deck or fractional part. One man in three may be a member of the regular crew of the yacht; all others must be amateurs and an amateur must steer. Schooners and yawls may enter at one-third and one-quarter less than their actual measurement respectively, but shall not be classified by this reduced rating. The race will be sailed under the sailing regulations of the club, copies of which may be had by applying to the secretary, No. 55 Beaver street.

CEDAR POINT Y. C.

THE open regatta of the Cedar Point Y. C., sailed on May 30, was a complete success. The day opened with prospects of rain and with considerable fog, but cleared before the hour of starting; the wind was S.S.E., blowing a nice wholesail breeze. The course was from off Hill's Point to a stakeboat five miles, bearing S. by E., thence to a stakeboat one mile west of Penfield Reef light, thence to place of starting. The first gun was fired at 12 M. and the gun for Class C was fired five minutes later. The boats went off well together and no accidents occurred during the race. When the outside stakeboat was rounded the wind shifted to S. by E., making two sides of the race on the wind.

The Americus, Capt. Ed Sturtevant, with her butterfly rig, easily outsailed the entire fleet, with the Alice and Go Softly next. The following is the summary:

CLASS C, SLOOP-RIGGED BOATS 33FT. AND UNDER.

	Start.	Finish.	Actual.
Nellie, H. C. Eno	12 05 30	4 01 00	3 55 30
Silvia, E. S. Hall	12 06 10	4 08 15	4 02 05
Teal, F. Burritt	12 07 11	3 47 08	3 39 57
Helene, W. E. Bond	12 07 10	4 08 47	4 01 37

CLASS D, OPEN JIB AND MAINSAIL BOATS, 25FT. AND UNDER.

Number 4, S. S. Dayton	12 11 17	3 51 10	3 39 53
Alice, Ed Smith	12 11 05	3 43 40	3 32 35
Americus, Ed Sturtevant	12 11 55	3 18 30	3 06 35
Tilda Jane, L. K. Young	12 11 40	4 08 05	3 56 25
Tripoli, Capt. Fredericks	12 11 40	4 10 15	3 58 35

CLASS E, CAT-RIGGED BOATS, 21FT. AND UNDER.

Compo, Bradley Bros	12 18 08	4 17 00	3 58 52
Go Softly, E. S. Wheeler	12 17 47	3 53 32	3 35 45
Peggy, A. D. Sanford	12 15 35	4 00 45	3 44 50
Anna, J. H. Jennings	12 15 57	3 59 30	3 43 33
Katie, J. Mulloy	12 17 23	Did not finish.	

Best time over course—Americus first, Alice second, Go Softly third.

In Class C—Teal wins, with Helene second on corrected time.

In Class D—Americus wins, with best actual time over the course, with Alice second.

In Class E—Go Softly wins, with Anna second.

MONATIQUOT Y. C.—The opening race of the Monatiquot Y. C. was sailed off Weymouth on Decoration Day for cash prizes. Owing to the counter-attraction of the open regatta at South Boston a large number of the club boats were absent:

FIRST CLASS.

	Length.	Actual.	Corrected.
Posy, sloop, R. G. Hunt	22.02	1 53 50	1 25 29
Polly, sloop, J. F. Sheppard	26.09	1 53 43	1 29 31

SECOND CLASS.

Diadem, sloop, L. Hayward	18.06	2 02 07	1 29 31
Maud, sloop, G. M. Lincoln	18.10	2 04 32	1 32 22
Spider, cat, A. E. Pratt	18.10	2 11 57	1 39 47
Hester, cat, P. H. Blackman	18.07	Not taken.	

HUDSON RIVER Y. C. ANNUAL REGATTA, JUNE 6.—The annual regatta of the Hudson River Y. C. was sailed on June 6 in a light southerly breeze, the courses being: For classes A, B, C, D and E to Yonkers and return, and for Class F to Spuyten Duyvil Creek and return. The times were:

CLASS A—CABIN SLOOPS, 40FT. AND UNDER.

	Start.	Finish.	Elapsed.	Corrected.
Alexander F	11 42 13	7 13 55	7 31 42	7 08 09

CLASS B—OPEN BOATS, 26 TO 30FT.

J. T. Corlett	11 44 15	6 36 12	6 51 57	6 51 57

CLASS C—SLOOPS, 23 TO 26FT.

Clara S	11 45 03	7 13 17	7 27 44	7 26 19

CLASS D—SLOOPS, 20 TO 23FT.

Geo. B. Deane	11 42 10	7 10 43	7 28 33	7 27 13

CLASS F—ALL BOATS UNDER 18FT.

Tough	11 34 35	5 03 00	5 28 25	5 25 47
Happy Thought	11 35 05	5 21 00	5 46 55	5 42 25
Richark K. Fox	11 36 10	5 44 00	6 07 50	6 07 50

OSWEGO Y. C. CRUISE, May 28-30.—The cruise of the Oswego Y. C. to Big Sodus was arranged as a regular race, the times at start and finish being carefully taken. The start was ordered for 1 P. M., and at that time, besides the committee boat, Ross, the steam yachts Ruth and Aida were ready to accompany the fleet. The wind was light, the latter part of the race being made under spinakers. The times were:

	Elapsed.	Corrected.
Merle	3 51 30	3 50 27
Ella	5 54 06	3 54 06
Katie Gray	4 10 00	4 05 37
Laura	4 14 02	4 09 53
Cricket	4 18 50	4 08 42
Fascination	4 55 43	4 48 45

Merle is the new Burgess boat owned by Allan Ames. The Rochester Y. C. was to rendezvous also at Big Sodus, but the wind was so light that the fleet was obliged to tow, arriving early Sunday morning, the yachts being the Ripple, Ethel, Lady Eva, Petrel, Armida, Nokomis, Florence, Mary E. and Lily, with two launches. In the afternoon a review of the combined fleet was held, and on May 30 the yachts sailed for Rochester and Oswego.

PORTLAND Y. C. OPENING CRUISE, MAY 28-30.—The annual spring cruise came off May 29 and 30, seven of the yachts participating. Orders were issued May 21 for a cruise down the bay, starting at 3 P. M. on Saturday the 28th, returning the following Tuesday, but a severe easterly storm necessitated a postponement until the 29th, six boats starting then in fog and drizzle, and beating down to Hamilton's on the north side of Great Chebeague Island, where we lay comfortably until the morning of Decoration Day, which dawned cloudy with light wind from S. W. By 10 o'clock the sun came out bright and hot, and getting under way we made a short cruise in company around the island and up the Sound to Diamond Cove, 5 miles below the city, came to anchor, lay there an hour for dinner, and returned to the city by 6 o'clock. Although a short trip, this was none the less enjoyable, some thirty-five or more making up the party, including members and guests. In accordance with custom, an invitation to join the fleet was extended to yacht owners not members of the club, and the owner of the sloop Twilight, with a pleasant party, accepted and accompanied us, making a welcome addition. The boats kept in company during the entire trip, and as our club is essentially Corinthian, nearly all the owners handling their own yachts, there was much good-natured rivalry for advantage. The yachts taking part in the cruise were the Tempus (flagship), Idler (vice-Commodore), Warren, Gracie, Starlight, Clarence, Vera and Twilight, four sloops, one catboat and three sloops with cutter rig. Thus far this season the weather has been capricious, all our predicted westerly winds coming from the northeast; materially interfering with several contemplated private cruises to the eastward. Since the curtailment of the spring expedition, members are considering a fall cruise some time in September. Our club is prospering and its membership increasing. We shall be happy at all times to extend to visiting yachts such privileges and accommodations as our house and landing float afford.—K.

BOATBUILDING IN THE WEST.—We have received from R. J. Douglas & Co., Waukegan, Ill., their large catalogue of pleasure craft, including sailing yachts of 50ft. and over, steam yachts, sailboats, canoes, rowboats and hunting skiffs. The drawings are especially good, showing the lines of the boats, also sail and interior plans, and will prove very useful to persons at a distance. The boats built by Douglas & Co. are all of their own design, and the models in all classes are excellent. They make a specialty of several sizes of yachts, 20ft. x 8ft. 6in. by 18ft. draft, 25ft. x 10ft. 5in. by 3ft. draft, and steam launches of 40ft. x 7ft. 8in. and smaller sizes. By building to carefully prepared plans and having great advantage in obtaining suitable timber they are able to turn out these boats at very reasonable prices.

YACHTING AT DULUTH.—Duluth, Minn.—*Editor Forest and Stream:* I have sold before in columns of FOREST AND STREAM that Duluth was a beautiful city, that she possessed the finest yachting grounds anywhere on the chain of the great lakes, and we still think so. The inside bay, protected by Minnesota Point, a spur of land seven miles long and of sufficient width to keep any severe northeasters from intruding into the almost land-locked harbor. To yachtsmen who are looking for a summer cruise, look over a map of Lake Superior. At the extreme western end, from Bark Point to Duluth, a run of 40 miles, is admirable yachting grounds. Plenty of deep water, not a shoal spot in this run, and the road is about mid lake. The water shoals on the Wisconsin side out into the lake for some distance, but on the north shore the scenery is wild, bluffy, and at times grand. Boats can sometimes run in almost close to shore, but close as this rocks are found. The whole north shore is deeply scored with streams that abound in trout. The Wisconsin shores are famous for their trout streams, so that this Fon-du-lac Bay, as the old maps call it, 40 miles long and from 14 to 20 miles wide, presents an attractive and interesting ground for the yachtsman and pleasure seeker.—NORMAN.

LAKE'S IMPROVED STEERERS.—The Lake Manufacturing Company has lately opened an office in New York, at 291 Broadway, for the sale of their steering apparatus for yachts and larger vessels. This firm makes a specialty of the automatic holding or non-holding gear invented by Mr. Lake, in which the wheel is never locked but always free to be moved by hand, but at the same time the rudder is automatically locked fast, unlocking itself as soon as the wheel is moved. If desired the gear may be readily changed in a moment so as to leave the rudder free to swing. The same arrangement is fitted to use on a tiller instead of a wheel. The wheel gears are made in several varieties, single gear, double gear, and a special style for yachts with an outboard rudder, the gear being joined to the rudder head by wire ropes, so that it may be placed as far forward as may be desirable. The firm also manufacture a plain quadrant gear of excellent construction, and a powerful screw steerer, samples of which can be seen at the office in New York or at 608 Callowhill street, Philadelphia.

YACHTING LITERATURE IN GERMANY.—The increased interest in yachting in Germany is shown in the greater attention lately given to its literature, which now boasts several bright and enterprising periodicals devoted to water sports. Among these the *Wassersport* holds a leading place, and its publishers have also added several books already to the library of the German yachtsman. The latest of these, now being issued in parts, is the "Sailor's Handbook, by A. Munchall-Viebrook, Lieutenant in the Prussian navy. This work, a large octavo, deals with the design, construction and handling of yachts, both in theory and practice. It is fully illustrated with large plates, and promises to become the standard work in the German language.

SHIFTING BALLAST AGAIN.—Just at this time, when nearly all clubs have given up the practices of shifting ballast and unlimited crews and sails, and the New England Y. R. A. is doing such good work in aid of better principles, it is rather surprising to see a large and prominent club like the South Boston Y. C., go back to the old ways. At the meeting last week it was decided to alter the sailing rules so as to allow shifting ballast in all races and also to remove the restrictions on sails. It is too late at this day for such action to have any serious effect outside the club, as the majority of yachtsmen are thoroughly in favor of fixed ballast and limited crews and sails, but the effect on the club itself is certain to be injurious in the long run.

NEW JERSEY Y. C.—At the last regular meeting of the New Jersey Y. C., the date of the 15th annual regatta was changed from June 16 to June 25. The club intends this as an experiment, and proposes starting the race at 1 P. M., sailing over a triangular course from stakeboat in front of club house to a stakeboat in the region of Seventieth street, New York, and thence to Jersey shore, turning another stakeboat, and thence to place of starting, sailing over this course twice, making 15 miles. The cutter Mermaid, W. D. Anderson, Jr., arrived from Fall River on May 31, and is anchored off the club house. The sloop Wayward, Mr. Fred Beltz, has arrived from Port Jefferson, L. I., where she was fitted out. She is painted white this season.

THE SAILING OF FORTUNA.—After waiting for several days on account of an easterly storm, Fortuna sailed on June 3 from Marblehead for Greenock, Scotland, having her owner, ex-Com. Hovey, and Mr. Chas. A. Longfellow on board. Gitana was at Marblehead and accompanied her for a short distance, and a number of other yachts saluted her as she passed out. Fortuna carries her foretopmast on the mainmast, and no stick on the foremast. At 12:50 P. M. she passed Marblehead Rock, the wind fresh from S.W.

SHINNECOCK BAY.—A number of new boats have been added to the fleet, and there will be more racing than usual this year. The Modito, 20ft. on keel, a yacht that has never been beaten, has been purchased by Peter Gilsey, while Messrs. Bellows and Corwin have each a new 18ft. boat, making 9 in first class. In the second class, 16ft. on keel, are Fannie, James Carter; Flying Cloud, F. Carter; Comet and J. Perry's boat. In third class, 15ft. on keel, are a number of boats.

CIRCE.—The last addition to the fleet of the Corinthian Y. C. arrived at New York on June 5 on the deck of the steamer Ethiopia, from Glasgow, the five-tonner Circe, lately purchased by Captain S. Grosvenor Porter. She is 33ft. 4in. stem to sternpost on deck, 6ft. 1½in. beam, and draws about 6ft. 6in., designed by Watson and built at Barrow-in-Furness, in 1881. In size she will make a mate for Delvin, now in the club, but the latter is a more modern boat.

YOKOHOMA SAILING CLUB.—We have received from Mr. J. O. Averill, of Brooklyn, N. Y., for several years a resident of Japan, a copy of the sailing rules of the Yokohoma Sailing Club. The boats are rated under a formula—

$$\sqrt[3]{\text{Sail Area} \times \text{Length}} = \text{Sailing Length},$$

the time scale of the Y. R. A. being used, but it is provided that the new Y. R. A. rule may be adopted if deemed satisfactory. A race is sailed on each alternate Saturday from May 1 to Oct. 15.

ATLANTIC Y. C. LADIES' DAY.—June 14 is set for the ladies' day of the Atlantic Y. C., and a reception will be given at the club house at 2:30 P. M. A regatta will be sailed over an 8-mile course in the bay, ladies being carried on each yacht. In the evening there will be music and refreshment and an illumination of the fleet. If the day is stormy the entertainment will take place on June 15.

EASTERN Y. C. REGATTA.—The date last fixed for this race is June 21, the course for all yachts above 40ft. being from off Half Way Rock (outside Marblehead) to a mark boat off Davis's Ledge, off Nantasket Beach, distance 12 miles; thence to mark boat 12 miles out to sea, thence to point of starting, a triangular course of 36 miles. The Shadow-Shona class will sail out to first mark and back, 24 miles.

THE BOSTON GLOBE OPEN REGATTA, JUNE 25.—The circulars for the regatta given by the *Boston Globe* for fishing boats over 60ft. and for all yachts under 40ft. sailing length are now ready, and may be had of G. F. Clarke, 43 Milk street, Boston, Mass.

SPORT.—This keel schooner, said to be the oldest yacht in the United States, built in 1819, was sold at auction last week for $400. She has been re-built five times and only the keelson of the original boat is left.

LIGHT DUES FROM IMPORTED YACHTS.—By a recent decision of the Treasury Department, foreign built yachts owned by citizens of the United States must pay 50 cents per ton light dues.

DORCHESTER Y. C.—At the meeting last week Mr. Adrian Wilson delivered a very interesting lecture on practical sail-making, illustrating his remarks by diagrams on a blackboard.

CLUB BOOKS.—We have received the books of the Atlantic and Hull clubs for 1887.

NEW YORK CITY, May 18, 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it,* not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. CUSHIER.

The Fluttering Fly.
PATENTED MAY 4, 1886.

THE FLUTTERING FLY.
Patented May 4th, 1886.

With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the pu blic, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fis hing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are:

1st—The wonderfully life-like and fluttering motion this fly has when moved on the water.

2d—The fish is almost certain to be hooked if it touches the fly.

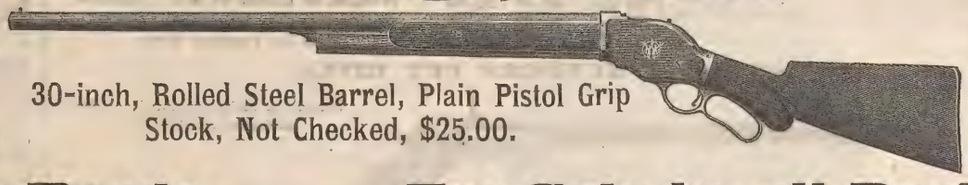
3d—Any of the present favorite combinations of color and form can be tied in this way. Thus, those who beli eve that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style.

4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that flies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies.

We take this means of notifying dealers and fly-tyers that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure such people that the same old course will be pursued by this firm.

We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentlemen into our advertisements.

Scientific American: "When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish."



Forest and Stream: " * * * more like a natural insect than the old patterns whose wings close when being drawn through the water. * * * Great merit lies in its superior hooking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly."

American Angler: "There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than by color or form. * * * This fly will certainly, when drawn against the current or over a placid pool, *seam* the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * * We are told that few fish are lost by those who use this fly. We do not doubt it.'

J. STEVENS' ARMS AND TOOL CO. CHICOPEE FALLS, MASS.

EXTRACTS from actual letters received. The full name of any party can be had on application.

I can truly say I have never seen an imperfect gun from the Stevens' factory. Dr. A. R. O., Dundee, N. Y.

I killed 5 turkeys out of 6 shots 40 rods, and then was ruled out, pretty good for a 32 caliber, and wind blowing. F. H. P., Crown Point, N. Y.

I received the Rifle all right, and parties are well satisfied with it; they have shot a bull's-eye of 1½ in the centre at 15 rods. Every one thinks it is a fine gun. C. W. Y., Barton, Wash. Co., Wis.

Just received the 38 caliber Stevens' Rifle. My first target was 4 bull's-eyes and one shot ¼ inch from the eye, out of 5 shots. I then wiped out my gun and made 2 bull's-eyes on a 6 inch target at 200 yards, in succession. You can cheerfully add my testimonial, as I think for accuracy and penetration the Stevens' Rifle cannot be beaten. F. H. P., Crown Point, N. Y.

My Pocket Rifle is the best shooter in the country. I have killed ducks 200 yards with it. M. E. H., Tule Lake, Oregon.

The Stevens' Pistols take the cake everywhere. L.W.C., Seymour, Ct.

I recently made 18 out of possible 20 at 200 yards, with my 32 cal. Stevens' Rifle. F. D. S., Dubuque, Ia

I have tested my Stevens' Rifle; it will shoot 300 yards accurately. It is a daisy. D. R. B., Somerset, Ky.

At the shooting match here on the 4th, I beat everything with my Stevens' Rifle No. 7, 32 cal., making 48 out of 50 at 200 yards off-hand. 11 clubs shot. W. H. H., Presque Isle.

I have one of your 10 inch 22 cal. old Model Rifles. It has seen 14 years' service, and is still a good shooter. I consider it one of the best weapons I have ever seen. W. F. B., Raleigh, N. C.

The new Model Pocket Rifle is worth its weight in gold. D. F., Mt. Vernon, Ind.

I have at the present time 5 Stevens' Rifles, and they are all good ones. C. O. F., Council Bluffs, Iowa.

I shot at a chicken 100 yards measured distance with a Stevens' 28 in. 22 cal. Rifles and hit it the second shot. Also shot at its head sticking through a board at 50 yards and killed it the first shot, shooting being done off-hand. F. M. McM., Star, Rush Co., Ind.

I fired 100 yards at a 6 inch ring and hit it twice out of three times. Am very much pleased with my Stevens' Rifle. C. C. H., Hallowell, Minn.

I must say I fully believe the Stevens' Rifles are as near perfection as is possible. I shall recommend Stevens' goods in all places. I can't tell you how I enjoy the Little Pet. G. D. W., Chesterfield, Me.

The Hunter's Pet is all you said it was. It is good for any distance from one to two hundred yards. H. & T., Eminence, Ky.

I think my Stevens' Rifle is a splendid little Gun to shoot. I can hit a place as big as a half dollar 12 rods every time. F. W. H., South Stratford, Vt.

My Stevens' Rifle takes the cake every time. L. H., Lawrence, Mass.

I have a Stevens' Hunter's Pet, 24 inch, 32 cal., and I have never had it beat yet. S. S. L., Halcottville, N. Y.

The little Stevens' Rifle I bought last Fall proved satisfactory in every respect. I have made some wonderful shots with it. I killed a hawk 250 yards and squirrels 100 yards. G. W. L., M.D., Cayuga, Hinds Co., Miss.

I have used a Stevens' Rifle for 2 years, 22 cal., and has given me perfect satisfaction. J. S. M., Greenville, S. C.

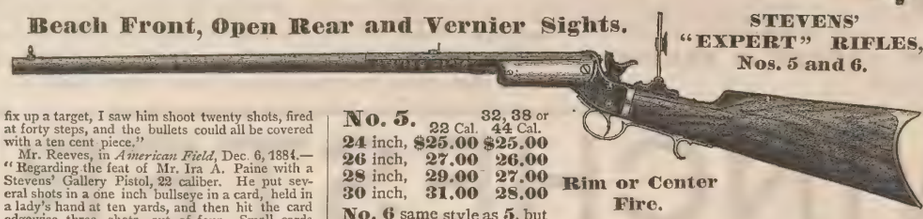
In regard to its shooting I never saw a Rifle that could equal my little Stevens. A. R. O., Dundee, N. Y.

I should like to testify to the merits of the Stevens' Rifle which I have. It is 10 inch, 32 caliber. During the last summer I have killed 27 woodchucks and have not made a specialty of hunting them either. A. W. U., Kensington, Conn.

STEVENS' "PREMIER" RIFLES, Nos. 7 and 8.

Swiss Stock with Fore-end, Vernier, Open Back Sight and Long or Beach Globe Sight, as preferred.
Shall send with Beach Front Sight unless otherwise ordered.

Rim or Center Fire.



American Field, Jan. 10, 1885.—"The next gun was a 22 caliber Stevens, and a pair of beautiful pistols, made by Stevens, on the Lord pattern. These weapons Dr. Carver uses on the stage, and does all his fancy shooting with. I saw him during the morning shoot with these pistols, in two consecutive shots, two half dollars thrown in the air, and he sent them whizzing away with holes nearly through the center of both. Opening a window, and calling upon Hans (one of his attendants) to fix up a target, I saw him shoot twenty shots, fired at forty steps, and the bullets could all be covered with a ten cent piece."

Mr. Reeves, in *American Field*, Dec. 6, 1884.—"Regarding the feat of Mr. Ira A. Paine with a Stevens' Gallery Pistol, 22 caliber. He put several shots in a one inch bullseye in a card, held in a lady's hand at ten yards, and then hit the card edgewise three shots out of four. Small cards measuring four and a half by three inches were then substituted with three spots in the center of the card, like the three of hearts when he put a shot through each heart. The next feat was firing at a walnut and grape placed on the top of his wife's head, on a small pedestal about one inch high. He knocked the grape off the first shot, and then the walnut at the second shot, all at the same distance—ten yards."

"Diamond" Model, 6 inch Barrel, 22 Cal., weight; 10 ounces, - - - - - - 7.00
"Diamond" Model, 10 inch Barrel, 22 Cal., weight 12 ounces, - - - - - - 10.00

No poor shooting weapon can leave this factory. Every one must make about as good a target as this or the inspector would reject it.

5 successive shots, 50 feet.

He would hardly allow even a 10 inch Pocket Rifle to pass unless it would make a better target than this.

5 successive shots, 50 feet.

WHY should every Lawyer, Doctor, Preacher, Teacher, or any one who needs pleasant recreation to draw the mind away from their daily cares, buy and constantly use some one of the various arms made by J. Stevens Arms & Tool Co.?

BECAUSE you can have **more fun in a day** with a Stevens' Rifle or Pocket Rifle than with a common weapon in a whole year.

BECAUSE when any one practices with weapons of such wonderful accuracy the interest does not diminish, but increases constantly. You can practice an hour or two a day, a hundred and fifty times in a year, without tiring. When your skill is such that you can make targets like the first, try it at a longer distance and you will be surprised at the pleasure that results from the accomplishment of the object.

BECAUSE all their arms are so light and convenient and easily taken apart to carry in a trunk or bag, or in a small package.

BECAUSE you can with a little practice become a really expert shot at a merely nominal expense.

BECAUSE when you buy one of these arms you are sure of an accurate shooter. Every arm before it can leave their factory must by actual trial make targets of which the best one above is a fair sample. No Fisherman's outfit is complete without a two-pound Pocket Rifle with which to knock over any game, large or small, he is likely to come across.

Mr. Jones, of Pittsburgh, lately made some remarkable shooting with Stevens' Rifle, with **22 short cartridge at 200 yards.** It is something new to see a Rifle with 22 short cartridge competing successfully on the 200 yard range with Rifles of the best makers shooting very much larger cartridges.

Mr. Butler, of Syracuse, N. Y., has four other Rifles of the best makes, but says he uses his little Stevens' a dozen times **as much as all the rest,** it is so convenient to carry and so **wonderfully accurate.**

Mr. R. B. Fuller, 172 South Clark St., Chicago, has a twenty dollar Stevens' Rifle that has been used in his shooting gallery **every day for eight years,** which is now in good order, after having been shot **over 500,000 times.**

Mr. Carpenter, of Louisville, Ky., lately went to a turkey shoot and secured **7 turkeys in a couple of hours.** He shot a 22 caliber 18 inch New Model Pocket Rifle weighing 2½ pounds, at

225 yards.

Mr. Ingersoll, who has two of the finest shooting galleries in Pittsburgh, (and probably in the world,) has at present **Thirty-one (31) Stevens' Rifles** in use in his galleries.

R. P. Cory, of Consecon, Canada West: I have used for three years a Stevens' 22 caliber Pocket Rifle, have shot it about 15,000 times, can kill all sorts of small game with it a great deal farther than with the best Shot Gun. For squirrel shooting I will **match this little Pocket Rifle against any man with the best Shot Gun that can be brought forward.**

From American Field.—"For careful boring and grooving, and perfection of workmanship in every particular, *I consider the Stevens' Rifle the superior of any in the market.*" COQUINA.

I remain the owner of a Hunters' Pet Rifle, which twice the money cannot buy. I cannot cease to recommend it. J. A. Mc., Tipton, Tenn.

Would not sell my Stevens' single shot 3½ inch Pistol for $5 if I could not get another one. H. S. V., Sandy Lake, Mercer Co., Pa.

I am entirely lost without the Stevens' Rifle, for it is a perfect gem. I would not part with it. I killed a night heron with it 68 yards and have killed swallows on the wing. It is what you call a new model, with skeleton stock. L. L. S., Lansdale, Montg. Co., Pa.

One week ago to-day I took my 10 inch, New Model Rifle and went hunting gophers, and I killed 14 out of only seeing 15, shooting some of them as far as 8 rods. Your new Model Pocket Rifles can't be beat for shooting small game. E. R., Hunter, Boone Co., Ills.

My little 6 inch Stevens' Pistol has proved more than a success, as it is a surprise to all who see it shoot. To hit a copper cent at 60 feet is no trick at all. I am highly pleased with it. C. E. M., Columbus, Wis.

The 18 inch Pocket Rifle which I bought, I am happy to state, has given me the greatest pleasure in its use, both as regards accuracy and convenience. On my trip to Cuba last summer, such was the admiration it excited by its accuracy amongst my countrymen, that I managed to sell the weapon for $30.00. E. L. C., Brooklyn, N. Y.

I went out and shot 50 shots with my Stevens' Rifle, and must say that it shoots the evenest of any 32 cal. Rifle I have ever seen shot. I killed mud hens on the river over 150 yards away. A. A. W., Albany, Wis.

I went out with a Stevens' 24 inch 32 cal. Rifle in Oct. last, and killed 5 wild turkeys, later in the month I killed 6 more, making 11 in 2 days. I killed 1 at 150 yards and another at 200 yards. I consider the Stevens' Rifle the neatest, simplest, strongest and best Gun in the market. B. P. B., Searcy, Ark.

There is a Stevens' 10 inch Pistol here that has a pretty good record. It has killed partridges enough to load a horse, not to mention squirrels and other small fry. For long shots I picked a king bird at 45 yards, and my friend a pigeon at 60 yards. I know it sounds big, but it was done. H. M. R., Yarmouthville, Maine.

Rec'd the Rifle all right, and it is a good one. I have beat the whole Club at 200 yards. I made the best target last Saturday with it at 200 yards that ever was made on the range. The boys have all fallen in love with it. W. H. H., Presque Isle.

I have used and sold over 200 of Stevens' Rifles and Pocket Rifles in the past 16 years. I can say that no Rifle I have yet sold has given such universal satisfaction as the Stevens'. M. W. D., Winsted, Conn.

The Stevens' Rifles "knock the spots" off from any thing in this part of the country. G. W. P., Emporia, Kas.

My Stevens' Pocket Rifle is a splendid shooter, has done the best shooting of any Gun around these parts for the size of a Gun, it is 22 cal. and 15 inch barrel. All Stevens' Rifles and Guns which I have bought are shooting as good records as this one, and the Pocket Rifles cannot be beat for accuracy. C. H. C., Warden, O.

The gentlemen I purchased the Hunters' Pet for is much pleased with it, at the first trial he hit a mark the size of a silver quarter 5 consecutive times at 150 feet, which was the longest distance he could get conveniently. He thinks it is perfect. S. C. S., Baldwinsville, N. Y.

I have shot a good many Stevens' Rifles and of other makes too, but I never struck a poor shooting Stevens' Gun. C. H. C., Omaha, Neb.

With my Stevens' Shot Gun at 75 & 80 yards, I have killed ducks, also a Blue Crane at about the same distance, seldom missing under that distance. She will drive No. 7 shot right through Squirrels. My friend is going to sell his Gun and buy a Stevens', it would make you smile to see his face when I make a successful long shot. D. W. C. Martins Ferry, O.

I have made 58 out of a possible 60, shooting Stevens' Rifle off-hand 200 yards, Mass Ring target. F. A. P., Thomaston, Conn.

I have 3 of your rifles in use and they cannot be beat. J. A. W., Bath, Me.

If I could not get another Stevens' Gun like mine I would not take its weight in silver for mine. A. I., Greenville, S. C.

I am highly satisfied with my Stevens' 32 Pocket Rifle, I only can tell you that I never have had a Pistol in my hand that has so much accuracy at long ranges. All the Pistols of celebrated European makers I have used (costing 4 times as much) never gave me such satisfaction. Baron H. S., Washington, D. C.

People begin to inquire about the Gun that put 3 shots in that card, 15 rods. D. W., West Randolph, Vt.

I have a Stevens' Rifle which I claim to be the best in the market. A. D. Y., Farmington, N. H.

The Stevens' Guns of any kind speak for themselves and they are the kind we have been looking for. W. W. W., Fountain, Colo.

Am in every way well pleased with my Stevens' Hunters' Pet, it shoots splendidly. N. R. V., Cohoes, N. Y.

I have a Stevens' 15 inch new model Pocket Rifle 1 year. I used it all last Winter in California, killing in all over 150 birds, from a Hummer to a Pelican, sitting and flying, at from 25 feet to 250 yards. C. E. S., Cleveland, Ohio.

The Stevens' are the Best little Rifles I have ever seen, we have been shooting the "22 short" forty rods and doing good shooting. H. L. D., New Lyne Station, O.

SOLD BY ALL GUN DEALERS.

"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

FOREST AND STREAM PUBLISHING COMPANY,
39 Park Row, New York.
LONDON: DAVIES & Co., 1 Finch Lane.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO. 39 Park Row.
LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

ANSWERS TO CORRESPONDENTS.

THE PITTSBURGH MEDALS.

IN another column is printed an interview by the reporter of a Pittsburgh paper with Mr. Elben, secretary of the last bench show held there. If this interview is authentic, the explanation given by Mr. Elben of the copper medal fraud furnishes a curious illustration of the elasticity of the English language. The catalogue of the Pittsburgh show said that in the champion classes gold medals would be given, but the secretary says that it was never intended to give gold medals. This statement throws a haze of doubt over the whole catalogue. What was the meaning of anything printed in it? Is it possible that where this publication read mastiffs it meant Yorkshire terriers? Where pugs are mentioned should we read rough-coated St. Bernards? If this is the case the problem of locating the different classes becomes at once too difficult for the average man to grapple with. This may possibly account for some of the atrocious judging there.

Mr. Elben says that the "gold medals" were not gold at all, but were composition. He is reported to have said further that no one supposed that they were gold, and to have hinted very strongly that exhibitors would have been bitterly disappointed if the promises made by the Pennsylvania Poultry Society had been fulfilled. This is a view that had not previously occurred to us, but now that it has been suggested it is easy enough to picture to oneself a circle of thirty or forty winners of champion gold medals, each worth $50 or $60, shedding salt tears of grief as they bit and whittled at their medals and discovered that they were after all real gold, and not composition. It must be confessed that it would have been a pathetic sight.

Mr. Elben is reported to have said that this is not the first time that this fraud has been perpetrated. That may very well be true, but why will not the secretary be a little more explicit and tell us by what club it has been done? If he is right, evidence to support his statement must be easily obtainable. Why should the Pittsburgh show alone bear the odium of this bad eminence if other clubs ought to share her shame? If it has been done elsewhere, let the facts be known. If Mr. Gregg and Mr. Elben only followed the example of other clubs, they cannot justify themselves on this plea except by stating who set them the example.

SIGNS OF THE TIMES.

IF God made the country man defaces it with patent medicine advertisements on the rocks. The advertising artists are ingenious in their way, but they have signally failed in repeated endeavors to make pill signs harmonize with the majesty of mountain crags or elixir notices set off the picturesqueness of cañon and waterfall. Even in the Far West, where enterprise is largely devoted to altering the face of nature in developing the resources of the country, there are plaints of the atrocities of these irreverent advertising sign painters. The Billings (Mont.) *Gazette* calls attention to the doings of one Zimmerman, a pushing citizen of that town, who is utilizing the historic Indian rocks of the vicinity by plastering "Zimmerman" in big letters over them. It can very readily be understood that a man who has dry goods or groceries for sale might scoff at Indian hieroglyphics and cover them up with advertisements of his wares, but most people will share the *Gazette's* opinion that "merchants who propose to paint posters on the rocks should order their workmen to avoid disfiguring the few points of interest left to mark the race that once possessed the land. When this valley is filled with homes made by the skill of mankind, let the rock-altars tell of the race that dwelt here when the country was designated as the 'Great American Desert.'"

Bad as are the pill and plaster legends on the rocks, they have been outdone by the startling "sermons in stones" for which the Salvation Army is responsible. Not content with beating drums and blowing horns in town, these people have gone about the country with pots of blue paint, and bedaubed highway and byway with warnings, entreaties, imprecations and exhortations of a religious character, all done in scraggly lettering, but in diction that is terse, direct and easily understood. With the nostrum notices and these irreligious signs confronting him on all sides as he travels, an angler in quest of fish and physical and mental surcease is not at all happy until he gets into the woods.

ONE SAMPLE CASE.

GWAS an editor wise. On six nights in the week he toiled from sundown well on toward sunrise getting a big daily to press. Once a week he had a night's respite from toil, and when the summer season came he figured to make an agreeable break in the round of labor out of this one day off. He found it by flitting away to a seaside hotel, finding bed and board and fresh air and bracing salt baths all awaiting his coming. He took train, moved with railroad regularity, got back on time and felt refreshed. But this was monotonous; he read an alluring "special" article about canoes. He would get one and would spend his weekly day off in a series of ever-changing trips here and there about the beautiful harbor of New York. He would investigate Staten Island, round and round. He would push up the Hudson over the track blazed by the original Hendrick. He would slip past Hell Gate with its queer tides and puzzling eddies and enjoy the waters about Fort Schuyler. There were lots of routes on the map, but first he asked the sporting editor a few questions and unfolded his plan. He was startled by the rush of queries which came back at him.

"What, you start out in a canoe? Ever been in one? Ever hoisted a sail? Can you swim? Do you know anything about wind and tide? Do you feel like buckling to with the paddle when the wind falls flat on you? Do you feel like wading ashore with your canoe under your arm to make a quiet landing? Would you feel huffy when you were flung on a lee shore by a sudden squall and your canoe and outfit evenly distributed for a mile or more up and down the beach? Are you prepared to work like a slave to get there and then turn to again and work like another slave getting up a meal for yourself? Are you willing generally to spread ten parts of the butter of enthusiasm over the one little portion of the solid bread of enjoymen?"

Editor G. gasped one general negative to all this and went on to explain that he would have a boatman bring about his canoe, hoist sail, and then he would step in, be wafted to the predetermined point, and there he would go to a hotel while the porter would attend to bringing up the canoe. That was his notion of things, and he turned to a heap of proofs just drawn and began to look them over. One caught his eye; it told how a catboat handy by had fished a canoeist out of the water after the canoeist had gone through a set-to with a passing tug. This story provoked thought in the would-be amateur sailor. Another proof told how a venturesome paddler had come out of a squall. There was quite a catalogue of wreckage and a long narrative of the long wave battle; and the deep shade of thought grew deeper on the young editor's brow. He will remain ashore. He will go as before to his hotel, will strut up and down the balconies, will listen to the band, will keep his cravat unruffled and will never know the rich reward which comes from a personal participation in any manly outdoor sport.

FARMERS AND SPORTSMEN.

A COMMUNICATION on game snaring, printed elsewhere, comes to us from a professional gentleman, who, at the last session of the Massachusetts Legislature, was active in securing the repeal of the snaring law. He worked in the interests of a number of Reading market-hunters who make a business of snaring for the Boston game stalls, and the reasoning he here advances as arguments was that which prevailed in the Legislature. The writer of the letter is not a lawyer, as his patent misconception of the principles of game legislation clearly enough proves, and it is equally clear that he does not speak with any authority for the 40,000 farmers in whose name he professes to make his plea. Not all sportsmen are depredating rowdies, nor are all farmers the curmudgeon dogs-in-the-manger he represents. Farmers and sportsmen are not two classes opposed to one another. Their interests do not conflict. As a matter of fact, hundreds of farmers in Massachusetts welcome hundreds of sportsmen to their lands, treat them courteously and receive courteous treatment in return. Any attempt to ignore the facts in the matter and to array class against class, as was done in the Massachusetts Legislature and is repeated in the communication of "Bay State," is of a piece with the mischievous rant of demagogues who harp on capital and "labor." The "labor" agitator poses as a reformer until his gulls discover that he has been stuffing his pockets at their expense; and a Massachusetts retired clergyman, who turns himself into a game legislation busybody and harps on the wrongs and rights of the farmers' boys, passes for a public-spirited citizen until it is discovered that he is laboring in the interest of a nest of professional market-snarers.

The principles of property in game, that is, the qualified "property," which consists of the sole right to take the game, have been so fully set forth in these columns that it is not necessary to go over them again at this time.

With tact and the exercise of average common sense and common courtesy by sportsman and farmer, each finds in the other not a natural enemy but a friend; and as a class the farmers of Massachusetts do not to-day occupy toward sportsmen the attitude of hostility attributed to them by the agents of the Reading grouse snarers. "Farmer Brown" does not always cover his lands with man traps, nor keep a gun loaded with buckshot to pot the first city sportsman who shows his head.

PROFESSIONAL TRAP SHOOTERS.

SOME time ago there was a discussion of the advisability of barring certain shooters from amateur classes on the ground that because of their skill they should be ranked as experts, or as agents of certain firearm manufacturers they should be classed as professionals. The managers of the recent Wellington Shooting Carnival made provision for all, amateurs and professionals or experts, and the attendance representing both classes appears to have proved the wisdom of the plan.

This subject of professionalism at the trap has come up with added force this season, and it is one which should be decided once for all. At the New York State shoot at Utica a curious complication arose. Two of the expected participants were members of the association, and so legally entitled to all the privileges of membership, but they were also agents of gun makers, whose arms they were paid to use for the purpose of practically demonstrating their merits. The delegates concluded that these members could not be barred from shooting, and so they politely requested them not to enter for the prizes. Happily there was no trouble about this, but it is too much to hope that such a conflict of interests can always be so happily adjusted.

THE DIAMOND HITCH.

III.

PACKING A SAWBUCK.

NOW you are ready for business. Your packs lie piled together, and in that little pile, on your saddles, and on your person are all the possessions in the camp. The mule being saddled, lead him up to where the packs lie piled together, so that his head is about even with and 8 or 10ft. distant from them, and slip the blind over his ears, so that his eyes are perfectly covered. This will keep him from moving, and the halter stem is dropped to the ground. Now tighten up your saddle cinches, otherwise when you cinch up on your lash rope you will find the saddle cinches loose.

The sling rope on a sawbuck is passed around the horn or the front cross pieces by two half hitches—a clove

FIG. 8.—SIDE PACKS IN POSITION, SQUAW HITCH. PACKS SWUNG LOW TO SHOW KNOT.

hitch—at its middle part, and hangs down in a loop on either side the animal, as in Fig. 3, the free ends being passed around the after crosstrees—or in the case of a riding saddle or a ring saddle, through the loops or rings, so that they will run freely—coming back in front of them and falling toward the ground inside or below the loop, as in Fig. 3. When you are ready to begin to pack, the nearside packer takes one of the side packs from the ground and places it on top of the saddle, holding it there until the offside man has it. The latter then slips it a little toward him, and supports it by his head and one hand, while with the other he grasps the

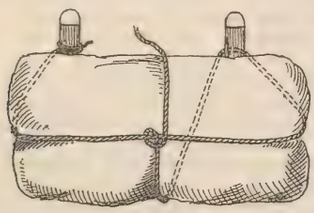

FIG. 9.—SIDE PACKS SLUNG WITH WEBFOOT HITCH.

loop of the sling rope on his side, and, throwing it over the pack, hooks it over the front and back crosstrees, and the nearside man does the same with his. Then the free ends hanging down to the ground are taken in hand, and if one pack hangs a little lower than the other, a slow steady pull tightens the loop, and after a little swinging and rolling the side packs settle down so that they just balance each other. The offside packer then throws his free end of the sling rope across to his partner, who ties it in a bow-knot over the bight and puts the ends between the packs on top of the saddle. This is called the squaw hitch (Fig 8). On a riding or a ring saddle

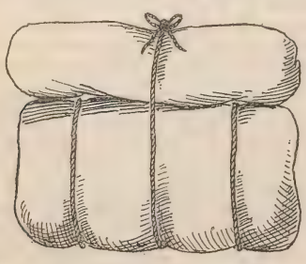

FIG. 10.—SQUAW HITCH. SLING ROPE TIED OVER CENTER PACK.

the loops are opened wide, and instead of being thrown over the side pack, the pack rests in the loop, which passes around either end, and outside of, or a little under, it. The free end is then drawn on till the packs seem to balance, is passed up, under and outside the pack, tied around the middle of the loop by an overhand knot or a half hitch, and is then thrown over to meet the other free end, being tied in a double knot above the saddle, where the loose ends are stowed away. The pack thus rests in a cradle. This is called the webfoot, or sometimes the basket hitch (Fig. 9). It is often used on a sawbuck for short bundles or boxes.

It is essential that the side packs should be nicely adjusted. They should be as nearly as possible equal in weight, and should hang at the same height so that the saddle will bear evenly on the animal's back. If one be heavier than the other, that one should be the higher of the two. The more nearly even they are, the better the load will ride. Sometimes the free ends of the sling rope are thrown over and tied above the center pack (Fig. 10). The side packs are now in position and the preliminary work done. The nearside packer now takes the pack which is to go on top and places it there, and the offside man assists in settling it down between the side packs, and placing it as nearly as possible in the middle. Perhaps one of the party thinks it too much trouble to carry his gun and wants that to go in the pack. He had better keep it on his saddle until he has learned something about packing, but if he insists on putting it in the pack it should be rolled up very carefully in a blanket and then be placed stock foremost between the top pack and one of the side packs, with the barrel projecting backward. No part of it must stick out in front, for it might catch on a stout limb of a tree and be broken or bent. The top load being on, the tent is folded almost square and thrown

FIG. 11.—THROWING THE ROPE. SLING ROPES NOT SHOWN.

over the load. It should reach forward and back so as to cover the whole load, and on the sides should come down half way on the side packs. Sometimes extra squares of stout canvas are carried solely to serve as pack covers.

Now comes the throwing of the lash rope, which is the important part of the whole operation. The nearside packer takes the lash cinch in his left hand and the coil of the lash rope in his right, and stepping up to his side of the animal, throws the cinch on the ground beneath its belly and the coil out behind it and toward the offside. The offside packer now stoops and picks up the hook end of the cinch in his left hand. The nearside man now gives the rope a flirt, throwing it up

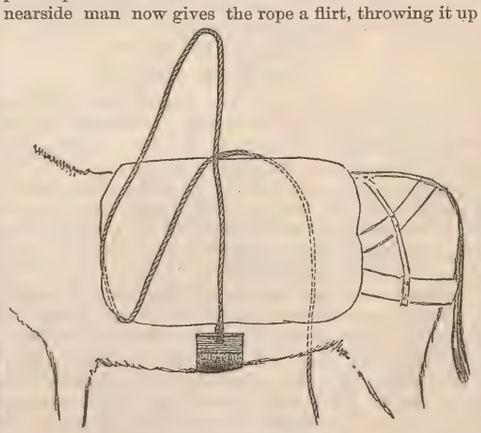

FIG. 12.—THE FIRST THROW.

over the load so that it runs diagonally across the load from the off quarter to the near shoulder. Standing near this shoulder he then rapidly pulls the rope toward him until he has gathered in eight or ten feet of slack, which he holds in a loop in his right hand, and stepping back even with the middle of the load (Fig. 11), throws this loop over to the offside packer, who catches the rope as it comes over, slips the hook through it, and pulls on the part coming from the cinch ring until he has drawn the hook and cinch well under the animal's belly and up close to it. Then he lets the nearside man pull over what slack there may be, and proceeds to arrange the ropes on his side. The nearside packer holds the rope coming from the hook in his hand until the other has the hook and cinch in position, and tightened just enough to keep the ropes in position. He then throws all the loose loop back out of his way, and passes the rope coming from the hook under the standing part below where it crosses the free end from behind forward, drawing the bight down and around the corners of the pack.

In the meantime the offside packer picks up the free end of the rope from the ground, and as soon as he has hooked the loop thrown over to him, as explained above, and has the cinch in position, he passes the free end between the two ropes coming from the hook, from before backward, well up on top of the pack, drawing through most of the slack and throwing the free end across and forward so that two or three feet of it will fall on the near side of the mule's shoulder. The result of this is that the free end when tightened will pull against the rope coming from the hook, which will make the forward part of the diamond. When all these operations have been gone through with the rope hangs loose, but is "all set."

The rope is now in position, the diamond hitch has been thrown, and it only remains to tighten the rope to set the load firmly on the saddle. Before any pull is made the load is examined from before and behind to see if it balances well and will ride evenly. If one side is a little too low it is lifted by the packer on that side, and the other side is pulled down or the side pack rolled or swung until it hangs just right.

FIG. 13.—LAST PULL.

Then the nearside packer steps up to the animal's side, opposite the middle of the load, takes the returning portion of the loop in his hand, turns his back to the load, and putting his shoulder under it or his back against it, to keep it from coming toward him when he pulls, prepares to put a strain on the rope. When all is ready the offside packer calls out to his partner, "All set?" and

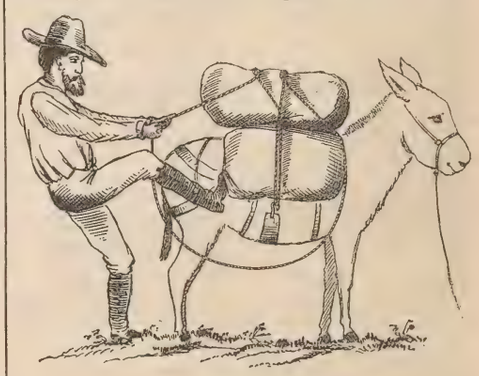

FIG. 14.—SAWBUCK PULL.

the latter replies, "Give it to her." The offside packer takes the returning portion of the loop in his hand, and putting his knee against the saddle, pulls out as hard as he can in a series of sharp jerks, and as fast as he tightens the cinch the nearside packer, by his steady strain, takes up the slack. When the cinch is as tight as possible and the offside packer can gain nothing more, he signifies it to the nearside man who, holding fast the returning part of the rope, so that he may lose nothing that he has gained, takes in his left hand the same rope in front of where it

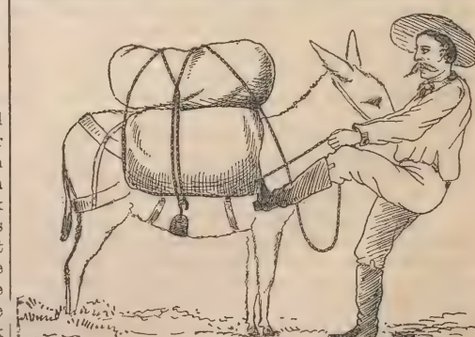

FIG. 15.—FORWARD PULL ON OFFSIDE.

passes under the standing part of the loop, and pulls it through until it is tight. Then by a series of sharp jerks forward the rope is slipped up under the standing part of the loop until it is near the top of the load. The tight pressure of the standing rope will usually keep the part which passes under it from slipping back.

Or, the nearside man may seize the rope at A, Fig. 13, close up to the standing part, and placing his left hand against the pack for a brace and to keep the pack in position, may take in slack there, and after he has got all he can, will put his foot up against the pack, as in Fig. 13,

but holding the rope at A, and pull hard. He will then, without letting it slip, pass the rope back under the front and after corners of the pack. The offside packer now grasps the rope, as shown in Fig. 14, and pulls back, taking up slack as soon as the nearside man has passed the rope under the corner of the pack. As soon as he has taken up all he can the offside man passes the rope forward and under the corners of the pack on his side, and gives the pull shown in Fig. 15. The nearside man then makes the last pull, shown in Fig. 13, and, passing the rope again under the forward corner of the pack, secures it at B, Fig. 13, taking care not to let it slip back, with two half hitches or a clove hitch made with the bight of the rope. Any end that may be left is fastened up on top of the pack out of the way.

It will be seen from this that the rope passing under the after corners of the pack pull against the standing part of the rope making the after part of the diamond, while that portion which passes under the forward corners of the pack pulls against the returning portion of the loop making the forward part of the diamond. The load is now packed.

THE NEPISIGUIT.

LONG ago, I received an invitation to go up into the wilds of New Brunswick and go afishing—and I went. Turning over the leaves of my old diary, I thought an account of what I saw and what I caught in the olden time might interest some of the readers of FOREST AND STREAM. It was my only trip, for I have never visited the river since, save in my dreams. Boston and the famous "Old Elm," Bunker Hill and Parker's Isle of Shoals, Portland, East Port, Grand Menan and Campo Bello, are not all thes fully described and fully inhabited? St. Johns and the noble view of river and rapids, the suspension bridge, the sail up that lovely river, through that, at that time, peaceful Acadian country; the constant tolling of the steamboat bell, the rowing out into the river of the passenger, taking him on board; Fredericton city, its cathedral, and our ride to Mirimachi, the road a capital one, the drive delightful, the valley most picturesque; past the Nashwalk, past quaint old-fashioned farmhouses half hid in trees, past countless streams—why, are not all these written in the Chronicles? Certes; tell us a new story. Story? why, bless you, sir, I have none to tell.

Well, we stopped at McCorges, at Boiestown, and so on to New Castle, and so down to Chatham and the "Widow Bowser's," and the next morning we drove over to Bathurst; on the way over our conductor drove us up to Mrs. Russell's, near the Bartibogue, where we took our first fly-casting lesson at trout. The drive during the morning took us through the celebrated burnt district, and a more desolate country could not be imagined, an immense tract of country had been desolated by fire—no end of timber and game and beasts destroyed—and many lives lost in the flames. Long after, the guides and hunters would come across the charred remains of those who had perished. On the stream we fished, it was told us that a woman with her children, seeing the flames approaching, sought shelter in the stream and saved their lives and her own by dipping them in the water. While standing thus, a large bear, panting and exhausted, walked quietly in, stood there all night without harming or being harmed, and went off at daylight, for other neighbors had joined her in her safe retreat. A violent rain storm extinguished the fire. We changed horses at the Tabusintic, drove by the "Esquidilloc," and reached Beulah Packard's at Bathurst by sundown, over the straightest road I ever traveled.

The next morning, with all our impedimenta, three canoes and six guides, awaiting us at the Pabineau Falls, away we went, armed and accoutered, reached our camp ground and "fell to fishing." The river comes foaming and dashing over the rocks, the scenery is wild and novel, the tents, the camp-fire, the laughter of the guides, their songs, their supper—all this was a delight to us. It was our first night in the woods to be remembered as would our first love.

Next morning we stopped at the Belervoc Falls. Here I captured a 5lb. grilse, and came very near killing a mink. "Captured" and "killed" here should be reversed. On we pushed to the chain of rocks, and caught more grilse or young salmon. Being "innocents abroad" after salmon, we took it for granted that the fish would grow larger the higher up stream we went. K. lost a 12lb. salmon here by the breaking of his casting line; just as the guide was going to gaff him, the ungrateful villain broke away. And here, as a Truthful James, I rise to say that fresh and innocent as we three were, we went for fur and feather and fin in a quiet, easy, tranquil way. Buck fever, bear fever, moose fever, the trembling with excitement, the smiling sardonically, the turning all sorts of colors worse than any chameleon—well, all this didn't attack us in the least. Our sensibilities were not sufficiently educated up to that high standard. My friend looked at the departing salmon "more in sorrow than in anger," and not long afterward we killed (I have it right this time) a ten-pounder; took him right out of cold water, and popped him into hot, a regular Russian bath; eat him up, every morsel, and voted him good enough to satisfy the taste of the most fastidious.

Night came on, and again we went into camp, and again the strange, wild beauty of the woods and splashing waters revealed itself. The twinkling stars, the glaring camp-fire, the cheery laughter and song and joke of guides, I think were as positive a pleasure as the fishing. Still, I satisfied myself that Canucks are too noisy for hunters. Indians do much better. I learned to shoot long before I ever saw a salmon; and I can stand a heap of silence when I go gunning. As I write this after a long lapse of time, and close my eyes and conjure up the whole scene before me, a horrible suspicion crosses my mind that those Canucks might have been laughing at our French as she was spoke. We all three of us, I think, privately prided ourselves on our "parlez vous," and here being a first-rate chance, it was not to be neglected. So we loaded up, unlimbered and went into action. Modesty forbids my saying much, and the victory was claimed by all parties. I don't think their patois was much worse than ours.

The next morning found us again paddling, or rather poling, up the river, and we admired the strong hearty woodsmen working day in and out, tireless and cheerful. We came across a bear trap, with a young bear in it weighing about 150lbs. He had fallen a victim to his curiosity, for in the deadfall was a little bundle wrapped up in birch bark which bruin must needs examine and tear to pieces, and his curiosity cost him his life.

As we pushed and poled on to the Grand Falls, suddenly one of the guides exclaimed "Diable! voilà un castor." Sure enough there was a beaver swimming leisurely along. We opened fire on him, and captured him. Then we skinned the bear and the beaver, and with the trout and grilse which had been caught, made a famous dinner. The bear meat tasted like a beefsteak served up a country inn. The beaver's tail was pronounced a novelty. I thought their skins the best part of them, and proposed to take the skins and leave my friends the meat; my generous offer was received with derision. It was explained to us that this beaver was an idler, and that as he preferred to loaf rather than work, the rest of the community had "fired him out." Wise animals. The best place to shoot the beaver is through the ear, but our beaver was shot through and through.

After dinner we shouldered bags and baggage and canoes, and made a portage of nearly a mile; it seemed to us before we got through about ten, and if anything is calculated to make a man think "Life is real, life is earnest," portaging will fill the bill, first, last and all the time.

The scenery of the Grand Falls is entrancing. The river leaps over the precipice 110ft.—in two plunges of 60ft. and 50ft., a miniature Niagara—and then glides through a succession of pools, Fall Pool, Lilly's Pool, Cooper's Pool, Landing Pool, Rocky and Unlucky. No salmon can jump these falls. The guides for a little extra tip poled us up quite close to the falls, and we gazed long and earnestly at the rush and roar of the river. On our asking them about the sources of the river, they told us that the Nepisiguit flowed from two lakes a long way up, and that no fishermen ever went up there, as there was nothing to catch save trout—no salmon. They laughed at the idea of going on a voyage of discovery, and that settled it, so up we went; but what we discovered and where we went, I will reserve for another article.

CAPT. CLAYTON.

Natural History.

THE WAYS OF PRAIRIE DOGS.

THE letter of Mr. J. M. Trimble, of Fort Keogh, Montana, in your issue of May 26, about prairie dogs, was very entertaining to your humble servant. Prairie dogs are my neighbors, living abundantly with me on my own grounds, and it is natural that I should be interested in them. Some people take more interest in their neighbors than they ought to, especially in "their faults and follies," as Robert Burns says. I trust that my interest in the prairie dogs is not limited to their weak spots only, but includes also all their virtues and their graces, if they have any.

Mr. Trimble says it is "now settled beyond all question that the prairie dog hibernates." That is to say, he falls into a state of profound torpidity, like a snake, on the approach of cold weather, his life suspended and practically extinct, until the return of warm weather revives him. It may be so in boreal Montana, but it is not so here. The prairie dog does not like cold weather, and he particularly hates it when it is wet and cold at the same time. When it is raining, hailing or snowing he hugs his hole in the ground; but he does not curl up for a three or four months' sleep and bid adieu to the world and all its joys. No, indeed; he is having a grand time of it down below with his friends. Perhaps he is practicing the art of the pugilist or wrestler in friendly matches; perhaps improving his residence; perhaps holding high discussions on matters of state. Perhaps they distill some sort of intoxicant and all get drunk on punch. I am told that in winter, when all things are snowed up in Canada, Vermont, Maine and other circumpolar regions, the people have their greatest gayety, feasting, dancing, having a fine time generally, because they can't do anything else. And it is evidently so with the prairie dogs in these parts. Mr. Trimble says they have "tons of hay" stored away in their holes. Why should they go to such labor if they know they are to sleep all winter? For they cannot eat while sleeping.

Many times I have seen them come out of their holes when the snow was just beginning to melt under a bright sunshine. But they don't stay long. They come up merely to see how things are getting along. Just as soon as the snow has melted away for a comfortable space about their holes, they swarm out in the sunshine, and are a very merry lot of fellows. And they stay out till the declining sun calls them to roost. They go to bed usually a little earlier than the chicken and they are late risers. They hardly ever get out of bed till all the rest of the world has had its breakfast, cleared off the tables, washed the dishes and is in the full tide of activity. We judge, therefore, that they are a luxurious people, in very comfortable circumstances, taking the world very easily. To their minds we bipeds, who go to bed late, rise early, laboring incessantly like galley slaves, must seem a most amusing set of fools. No doubt they think we are escaped lunatics.

And though the prairie dog does not hibernate in this country, he is certainly a champion sleeper. When he addresses himself to sleep he means business, and goes to sleep all over. When he has got a good hold on sleep, you can hardly awake him until his regular waking time arrives. You can pick him up and "tote" him around as much as you choose, and you can squeal in his ears, but he will sleep on in undisturbed slumber. When awake, if you tickle him in the short ribs, he will give lively manifestation of a very exquisite sense of enjoyment, and when you stop tickling he will plainly indicate that he would like to have a little more of that sort of business. But when you tickle him asleep, he will merely squirm a little, wink his nose a little, and sleep right on. I have seen many domesticated, and such was the way with them. Whether their wild kinfolks are such sound sleepers, I do not know, but perchance they are.

Mr. Trimble intimates that the prairie dog and the rattlesnake live together in the same holes, etc. I used to entertain that romantic notion, but do not now. It won't hold water. The rattlesnake cultivates prairie-dog towns simply because they furnish him abundance of provender. The prairie dogs hate him as a terror and an unmixed evil. To them he is an elongated and hideous bill of abominations. To circumvent him and destroy him doubtless gives them the keenest sense of happiness they ever experience in this world. And they sometimes do circumvent and destroy him. Every now and then we notice a prairie-dog hole closely corked up with stones. I saw some of these little creatures some months ago, on my own grounds not far from my house, very briskly engaged in corking up their hole in this way. They sealed it up splendidly, showing, as I thought, much knowledge of masonry. I showed this work to an old man of the plains, and asked him what it meant. Said he, "Why, don't you know? They've got a rattlesnake in there. He went in there upon them and they decamped and bottled him up. And he never will get out of that hole until somebody digs him out." He added that the prairie dogs will do this every time, if they find stones convenient, when a rattlesnake enters their holes in the day. If he enters at night, he doubtless examines the deep sleepers carefully and swallows that one which suits him best, departing at his leisure. Two to one the poor prairie dog thus swallowed has not been conscious of any change going on in his peculiar circumstances, and at his regular waking hour is amazed to find himself deeply housed in the belly of a rattlesnake, undergoing the process of dissolution and digestion. But it is not likely that he makes much noise or stir on this discovery, seeing that it would be useless.

I know an instance of a remarkable degree of good sense shown by a whole city of prairie dogs. I was riding with a friend in Presidio county, Texas, near the railroad station called Antelope. The road led through quite a populous city of prairie dogs—not a city like New York, but one about like Albany, say. My friend, as we rode through this town, said, "I can tell you of a strange thing about these dogs I have passed through this town nearly every day for months. About Sept. 1 I observed that all had suddenly left, leaving the city without a single inhabitant. This caused me to wonder so much that I looked around to see if I could find out anything. Well, sir, I found that the whole shebang had moved over yonder to that plantation and built brand new houses. Now, about two weeks after this—yes, sir, two weeks—it commenced raining like the very mischief, and on two occasions this valley was belly-deep to my horse in water, and it was full of water for a long time. Yes, sir, this was fully two weeks after the prairie dogs abandoned their town in this valley. After the weather became settled again and the water had all dried up the prairie dogs all came back again, and here they have been ever since. Now, sir, is it not certain that these prairie dogs knew what was coming and that to go away was the only salvation? And if they did know it I want you to tell me who came and told them of the impending flood and in what language did he speak to them?"

I could only answer my friend by calling to mind what was said by Him of Nazareth about the two sparrows and the Father.

N. A. T.

ABILENE, Texas.

AN EXHIBITION OF SNAKES.

TORONTO, Canada, June 12.—*Editor Forest and Stream:* The Biological Section of the Canadian Institute is at present exerting itself to the utmost to get up a fairly representative collection of American reptiles, batrachians and fishes, alive, to be carefully named and placed on view, with an educational object, in our approaching exhibition. It is the particular desire of the committee that the venomous reptiles of this continent be as fully represented as possible; but we find great difficulty in bringing ourselves into communication with the isolated naturalists that are stationed in the remote regions containing our desiderata.

With the aid of FOREST AND STREAM, however, we believe that we will be able to reach every one able and willing to render assistance, especially those inhabiting the Western and Southern States, which chiefly are without representative reptiles in our collection. We are willing to pay fifty cents per head and express charges for all snakes, turtles, etc., excepting garter and the smaller species of snakes.

The Western rattlesnakes and the Southern copperheads are especially desirable, and with proper care there need be almost no risk in catching them. If on finding one of these species the collector approach with a previously prepared bag like a large bologna sausage, the mouth of which is held open by the prongs of a long-handled forked steel, he will usually find the reptile ready to crawl into the apparent protection of the dark hole, after which it may be easily dumped into a suitable box.

In all cases where correspondents are willing to assist us, we would like to learn beforehand, by mail, the nature of the contribution and the probable expense of transshipment. Address, S. Hollingsworth, Secretary, 325 Parliament street, Toronto, Ont.

ERNEST E. THOMPSON.

[Doubtless "Coahoma" and others will find it in their power to furnish the specimens desired.]

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One rock kangaroo, ♂ (*Petrogale penicillata*), two vulpine phalangers, ♂ and ♀ (*Phalangista vulpina*), one raccoon-like dog (*Nyctereutes procynides*), one Spanish ichneumon (*Herpestes widdringtoni*), four Hamadryas baboons (*Cynocephalus hamadryas*), two mule deer, ♂ and ♀ (*Cervus macrotis*), one black-headed lemur (*Lemur brunneus*), one red-vented cockatoo (*Cacatua philippinarum*), one Chinese jay thrush (*Garrulax chinensis*), two nonpareils (*Cyanospiza ciris*), two whistling swans, ♂ and ♀ (*Cygnus americana*), one yellow-headed troupial (*Xanthocephalus icterocephalus*), two zebra finches (*Estrelda subflava*), two crimson-eared finches (*Estrelda phœnicotis*), three barn owls (*Strix flammea americana*), nine snow geese (*Anser hyperboreus*) one blue goose (*Anser cœrulescens*), and two yellow-bellied songsters (*Liothrix luteus*). Received by presentation—One raccoon (*Procyon lotor*), two Florida gallinules (*Gallinula galeata*), one barn owl (*Strix flammea americana*), two white-fronted geese (*Anser albifrons gambeli*), one pintail duck (*Dafila acuta*), one American magpie (*Pica melanolaica*), nine diamond-backed turtles (*Malaeoclemmys palustris*) one horned toad (*Phrynosoma cornuta*), one American crocodile (*Crocodilus americanus*), and one hawk-billed turtle (*Eretmochelys imbricata*). Born in the garden—One buffalo (*Bison americanus*), one beaver (*Castor fiber canadensis*), four muskrats (*Fiber zibethicus*), one hog deer (*Cervus porcinus*), four prairie wolves (*Canis latrans*), five Egyptian geese (*Chelanopex ægyptiaca*).

FERNS.

We have receit of fern-seed, we walke invisible.
—*King Henry IV., Part I., Act II., Scene 1.*

OF the plants that grow in the woods there are none more interesting, to my mind, than the ferns. I well remember, when a boy, I noticed for the first time the brown spots that appear on the under sides of the fronds in the latter part of summer. I wondered what the strange bodies were; what part they had in the life of the plant. I did not know that for a long time it had been a great puzzle to the botanists to tell what these brown patches were. A few years later, when I learned a little geology, my interest in ferns was greatly increased; for then I knew that this family of plants grew and flourished upon the earth ages and ages before the tall, thick-stemmed trees that now tower above them. In those days, we are told, the rich young earth was well nigh taken possession of by luxuriant fern forests. Their huge fronds bent and waved in the air; perhaps strange birds flew among them, and odd, ungainly reptiles hid in their cool shade. And these fern forests, growing year after year and century after century, gave rise to the immense coal deposits, the benefit of which we enjoy. From one-third to one-half of all the known species of coal plants, both in America and Europe, belong to the fern family.

Perhaps the most common fern is that called the bracken (*Pteris aquilina*). It is to be found growing in moist places in woods almost in all parts of our country. Its large green leaves or fronds rise sometimes to the height of 5 or 6ft. The stem from which they grow lies underground, and by the unknowing would be taken for the root. The true roots, however, are easy to be found, being thread-like and growing from the underground stem. The old plant endures for many years, the old fronds dying down and new ones shooting up annually.

The life-history of the bracken fern, or, for that matter, of any fern, is an exceedingly interesting one. Every one who has admired its handsome fronds and observed that it produces no flowers, and so, of course, no seeds, must have wondered in what way new plants are produced. It is commonly known, to be sure, that the brown spots on the under sides of the leaves are spore cases, and that the spores contained in them take the place of the seeds of flowering plants. But few know the remarkable process of the development of a spore into a new fern plant. The study my properly begin with an examination of the spore itself. Under the microscope it is seen to consist of a firm sack or case containing a soft fluid contents; it is, in fact, a simple vegetable cell. But though so simple in structure, there inheres in it that principle of life, so mysterious to us, which shall develop it into a new plant. When, by the rupture of the spore case, a spore has fallen to the ground, what happens is that, under the influence of warmth and moisture, it gives forth a tiny process comparable to a sprout. This process grows in length and at the same time gives off a branch which sinks into the soil like a root, which, indeed, it is. For the sprout-like part gets larger and larger and finally becomes a flat, two-lobed green leaf, getting its nourishment from the soil through rootlets attached to its lower surface. So the minute single-celled spore has developed into a true plant (called a prothallus) consisting of a leaf-like expansion with roots and, in respect to its structure, of very many cells joined together. But this plant is very unlike the fern plant which produced the spore. However, it grows no further, but it gives rise to the true reproductive elements of the fern-plant; elements which correspond to the pollen or flower-dust, and the ovules of the flowering plant. And this brings us to a very important difference between the ferns and the common flowering plants; the latter produce flowers, the essential parts of which are the male and female reproductive cells, which by their union give rise to seeds, and the latter having fallen to the ground spring into new plants like those which bore the flowers. But the ferns not only produce spores instead of seed, but these spores give rise to plants not at all like the fern-plant—plants which, in fact, have the same office as the flowers of the other class, namely, to produce the male and female reproduction cells. By the union of these cells a new fern plant is developed.

The most interesting and remarkable part of the life-history of a fern plant is that which relates to the production and union of these sexual cells. Let us return to our leaf-like prothallus. Soon after it has attained its growth, rounded elevations appear on its lower surface. They are very small, indeed, too small to be seen with the unaided eye; but they are destined to play a very important part in the generation of a new fern plant. When the elevations have reached a condition of maturity they split open and there issue from them small bodies possessing some very remarkable properties. Each is spiral in shape, thick at one end and tapering toward the other; attached to the thin end are a number of vibrating filaments or cilia. By the movements of these cilia the curious body swims about in the drops of water that adhere to the leaf—water formed as dew or having fallen as rain. To look at it as it swims about in this way no one would suspect that it was any part of a plant. It is difficult to resist the impression that it is an organism possessed with an individuality, that its movements are purposeful, that it glides to the right or left by its own volition. But we shall surely be nearer the truth if we say that the little body moves simply because it is a property of its substance to move, that it is a bit of living matter to which belongs, along with other properties, that of motion. To understand what object is served by its possession of this property of motion we must turn to another product of growth in the prothallus. At the middle of its wider end the leaf becomes considerably thickened, and on the lower surface of this thickened portion a slight eminence makes its appearance. This grows until it takes on a form comparable to a chimney. With a microscope one can see that at the bottom of the hollow of the chimney there is a round sac or cell. It is evident that the whole purpose of the chimney-like growth is the production of this cell, the parts surrounding it serving for its nourishment and protection. This cell, in fact, is destined to develop into a new fern plant. But before this development begins it is necessary that it shall come into union with one of the swimming spirals. Accordingly, one of these bodies, having found its way to the mouth of the chimney, enters it and works its way along the passage to the cell. The two seem to unite, and this having taken place an activity is at once set up in the cell. It rapidly grows and gives rise, by successive divisions, to other cells, all of them deriving nourishment from the thick portion of the leaf to which they are attached. The group of cells thus formed gradually takes on the form of a plant, one part becoming stem and another root. The root, as we shou'd expect, sinks into the soil, but the stem does not grow upward, as in ordinary plants, but horizontally, and finally itself becomes covered with soil. However, it gives rise to leaves which grow upward and become the tall graceful fronds of the fern plant. Meanwhile the little prothallus has quite disappeared; as soon as its purpose had been accomplished, which, of course, was the production of the male and female cells, it withered away. And here, again, the analogy of the prothallus with the flower of the higher plants suggests itself. Just as the flower withers away when it has produced the pollen and the embryo seeds, so the prothallus dies when it has produced corresponding elements. And this comparison further suggests that the differences in the life processes relating to the reproduction of the ferns and flowering plants are not so great as they at first thought appear. The chief difference appears to be only this: the flowering plant provides nourishment out of its own resources for the production of the seed-bearing parts; the ferns do not do this, but the seed-bearing part is provided with leaf and roots by which it gets nourishment for itself. The fern plant, therefore, is able to use all the food matter it gets from the soil and the air for the growth of its large leaves; it needs to use no energy for the production of flowers and fruit, except, of course, the small amount needed to produce the spores. This fact helps to explain the luxuriant growth of ferns both in geologic times and at present. To get a knowledge of ferns at their best we must go to the tropics. One species, *Cyathea medullaris*, found in New Zealand, grows to a height of 80ft., and *Alsophila australis*, in Australia, to even a greater height. The fronds of the latter are sometimes 20ft. long.

The reproduction of all ferns is essentially the same as that described for the common bracken fern. It is only about forty years ago that the facts were found out. In olden times there used to be a notion that ferns were produced from invisible seeds. Hence, the line at the head of this article. S.

Game Bag and Gun.

Address all communications to the Forest and Stream Pub. Co.

THE NATIONAL PARK.

LOWER GEYSER BASIN, May 30.—*Editor Forest and Stream:* We arrived here on May 24 with the first wagon to pass over the road this year. Leaving Gardiner, we found Road Superintendent Lamartine had two crews at work putting the roads in first-class condition. This work will require an expenditure of part of the $4,000 left over from last year's appropriation.

At the Mammoth Hot Springs some very necessary work is being done. All the old stumps on the flat in front of the hotels have been taken out and every unsightly object burned or carted off. The whole flat is to be hand-raked and cleaned. The old bath houses and many of the unsightly Government buildings will be removed. All this work adds much to the general appearance of the Springs. A few large drifts of snow yet remain about the Hot Springs and the terraces remind one of the severe winter just passed.

Following the road from the Springs, one finds no snow until Kingman's Pass is reached. Here there is one deep drift. The horses had to be unhitched and the wagon taken over by hand. Glenn Creek was crossed on a deep drift which hides the bridge, only a bit of the railing showing. From here on there was no snow until we crossed Willow Creek. Then the drifts increased in number and depth. Willow Park was covered with ice and snow. Entering the timber, the road was full of snow from 1 to 5ft. deep until Obsidian Cliffs was reached. We had no difficulty with the snow; where it was deep the horses and wagon went over it, the wheels cutting in but a few inches. From Obsidian Cliffs on there was snow only in the road where it ran through timber in shaded places until a place known as the Brick Yard was reached, about five miles from Norris Hotel. From there on we found no snow, except a little in the timber between Norris Basin and Gibbon Meadow. The meadow was wet and muddy, but much dryer than usually at this time of the year. The road over in to the Lower and Upper Basin is free from snow. About sixty trees had to be cut out of the way. Others were lifted around to one side, some we drove around.

In a meadow near Twin Lakes four elk were seen feeding. I saw one small silver-tip bear at Willow Creek crossing.

On the morning of the 25th a large yellow-faced grizzly bear came within 250yds. of the hotel here; he came from the Queen's Laundry Basin, crossed the Fire Hole and meadows within sight of the house, walking leisurely along, now and then stopping to feed on an ant heap, then entered some dead timber where he rolled logs over for grubs, hunted mice and beetles, but paying no attention to the carcas of a dead horse which he walked around. He was probably in delicate health and could eat only choice food. He would pick up a bit of sod with his foot, and after critically examining it, eat some root, then drop the sod and walk on in rather a zigzag course. Several times he came toward the hotel as though with the intention of making us a visit. We watched him through field glasses until out of sight in the timber on Nez Percé Creek. We then went out and measured his tracks, the hind foot not counting; claws were 8in. long. Judging from that he would weigh from 500 to 550lbs. at least, possibly more.

Several bears have been seen by the people residing in the Park, at the Upper Basin, the Grand Cañon and by people traveling the roads. There was one bison seen between here and the Upper Basin, and on the 24th, the tracks of eight where they crossed the wagon road; one of them a calf by the tracks. Elk are passing through the basins, scattering out for their summer range. The cows are now with their calves, the little things making a track like a young lamb. There is nothing pretty about a young elk but its head. When very young it is one of the most awkward of all the wild animals. After they are two months old they are very pretty and playful.

Sandhill cranes, geese and ducks are now nesting here. Thousands of song birds keep the air ringing with their music, meadowlarks and robins being most numerous. Several robins have their nests close to the hotel, one under the eaves of the kitchen. Not a day passes now without one's seeing game of some kind in the Park. The early tourist has come and seen game—bear, elk and deer. While the travel is light, game will be plenty along the roads, but when tourists are passing over the roads every day, the game of all kinds will get out of sight.

The worst enemy the Park has is fire. I noticed one small one on the Gardiner River, between the town of that name and the Mammoth Hot Springs, and a place where a small grove of juniper trees had been lately killed by a fire. How these fires were started I could not learn; not from camping parties, but from some smoker's burning match or cigar stump, I think.

Now is the time to use caution about fires. A little carelessness on the part of a camper, or even the tourist in coaches throwing a lighted match or unextinguished cigar or cigarette end in the dry grass or pines, will cause a fire. The damage it can do it is impossible to estimate. The game killed can be easily replaced by natural increase in a few years, but every acre of timber burned will take from fifty to a hundred years to replace.

All the streams in the Park are banksful, the rivers are hurrying the waters out of Park. By the time these notes are published the roads will all be dry and dusty, there will be no snow except in the mountains, the hotel will be opened, and the tourist will have possession. H.

GUNPOWDER TESTS.

Editor Forest and Stream:

In the FOREST AND STREAM for June 2, "F. F. F." quotes with approval from "that rifle expert P." as follows: "The Curtis & Harvey's No. 6 is not only 15 to 20 per cent. stronger than any American powder I have tried, but it is cleaner and better in every way for a rifle."

Thirty years ago Messrs. Curtis & Harvey probably made the best powder in the world, and that firm deserve great credit for having uniformly maintained a very high standard for some of their brands, and notably the "Diamond Grain." But it is of importance that sportsmen should know whether other powders can be obtained equally good, and the following tests can be relied on as made with the utmost accuracy, and with the benefit of the best appliances. The writer has carried out similar trials for many years, and the results here given are the latest, corresponding closely, however, with former ones. In the table, A, B, C and are the best powders of the four leading manufacturers in the United States. The next two are English, E being the "Alliance" of Pigou, Wilks & Lawrence, and F the "Diamond Grain" of Curtis & Harvey. G is made by a Canadian company.

RECORD.

Test December 21, 1886. Weather clear and fine; no wind. Thermometer 20° Fahr.; barometer 29.5 inches.

Powder.	Density.	Velocity.	Residuum.
A	1.745	1226.7	355
B	1.7553	1256.1	340
C	1.798	1119.5	419
D	1.73	1120.0	300
E	1.7549	1200.6	295
F	1.732	1228.1	320
G	1.781	1234.4	290

The density is the absolute specific gravity determined by the Bianchi mercurial densimeter. Other things being equal (but they seldom are), the more dense or hard the powder is the better. Measured charges contain greater quantity, the combustion, and therefore power developed, is more uniform, and the liability to deterioration from keeping or handling is less. On the other hand, light powder is quicker, and to that extent cleaner. For the remaining tests all the powders were first carefully sifted until grain was obtained of perfectly uniform size, in the present case one nearly identical with C. & H. No. 6. The velocity or strength was then measured with a Le Boulengè chronograph, the figures given being the actual speed of the bullet in feet midway between the electric targets, here 55ft. from the muzzle of the gun. This can be easily reduced to initial or muzzle velocity by the formula in the ordnance books, but it does not affect the result. The arm selected, on account of the heavy bullet, was the old pattern Springfield musket, .58cal., but of course one which had never been used. This was converted into a breechloader by E. Remington & Sons, and selected from the best they had in stock for the purpose. The powder charges, 77grs. each, were accurately weighed, not measured. The bullets were made to order by the Winchester Arms Co., and those picked out weighing exactly 480grs. each. The figures given are the average of ten shots with each powder. As showing relative uniformity, the maximum variation from that average was, for any single shot, in feet, of A, 36.4; B, 7.5; C, 20 5; D, 9.0; E, 9.0; F, 16.1; and G, 15.0. It should be remembered that in most rifled arms slowness within certain limits increases uniformity.

The residuum or cleanliness is determined thus. The thoroughly cleaned barrel of a 10-gauge single-barreled breechloading gun, made for the purpose with extra inside polish and an arrangement for instant detachment from the stock, is accurately weighed in a balance capable of showing one-half milligram with that load. Ten shots are then taken at intervals of one minute, and after the last the barrel immediately weighed again, before it can absorb any moisture from the atmosphere, and the increase noted. As some powder shows much less residuum when the barrel is cool, this test is then repeated, after carefully cleaning, with the same sample, but at five minutes interval between each of the ten shots. The mean weight of the residuum, in milligrams, from these two trials is the result given in the table. The charges are measured; 1¼ drams powder and 4 drams Tatham's No. 9 chilled shot. Eley's best paper shells and wads are used. In the present trial the maximum fouling in any series of ten shots was, C, 420 mg.; the minimum, G, 220 mg. It can be seen from the above that the powder in question stands very high upon the list, but taking everything into consideration there are two that surpass it, while a fourth makes a very close approximation. Evidently, however, the wise readers of FOREST AND STREAM (and are they not all such?) need be at no loss for good gunpowder. T. C. B.

INTERNATIONAL GAME PROTECTION.

Editor Forest and Stream:

The salmon in the Province of New Brunswick has received little or no protection on its spawning grounds from either the Dominion or local government; but fortunately for the preservation of that most valuable fish, certain citizens of the United States, who spend part of their summers on the wild and romantic shores of the Restigouche, have taken this matter into their own hands, and by means of a moderate expenditure of money in the payment of proper guardians, have so much increased the stock of salmon in that river that the right to fish therein has become a source of very considerable revenue to the Government of New Brunswick. The matter of moose and caribou protection in New Brunswick is now just in the same state as the fishermen from the United States found that of the salmon in the Restigouche when they first ascended that river. We have very elaborate laws for the protection of moose and other game, copies of which are being circulated abroad for the purpose of leading the sporting public of Great Britain and the United States to believe that our executive officials are really in earnest in this matter of game protection, which is not the fact. Far better were it that the present law should be expunged from our statute book, than that it should be allowed to remain there a virtual monument to executive incapacity or dishonesty.

This is not all. The peculiar system of enacting game laws, which are not enforced, is educating a class of scoundrels, who, allowed to do wrong by the connivance of the authorities in their own country, are encouraged by this immunity to make raids on that of their neighbors. What I have said regarding New Brunswick will, in all probability, apply equally well to the Province of Quebec.

Moose are being illegally killed in numbers every winter by men on snowshoes in New Brunswick, and they will soon be extinct there should no means be soon taken for their protection. By the expenditure of $2,000 per annum this can be done well, and in such case they will become again as abundant there as they were many years ago, and so long as such protection is continued the stock will never decrease while autumn hunting only is allowed. There is perhaps no part of the continent which is better adapted to be a home for the moose than the interior of New Brunswick, where hundreds of lakes dot the irregular surface of thousands of square miles, where the ground is so rocky and sterile that no husbandman will ever dispute with the wild beasts the possession of their gloomy and silent forests.

With respect to Canadian poachers extending their depredations into the territory of the United States, I may here mention that the extensive forests in the State of Maine on the head of the St. John, between Baker Lake and the Alleguash, were last winter invaded by hunters from the Province of Quebec, one of whom acknowledges to have slaughtered no less than twelve moose. This state of facts demands the attention of such of the public of the United States as are interested in the preservation of this noble animal, and the writer would suggest as a means to that end, and also for that of other game, the formation of an international association for the purpose of strongly urging upon the State and Provincial governments the necessity for prompt, vigorous and united action in the matter of game and fish protection in America. EDWARD JACK.

FREDERICTON, N. B., June 3.

A TWINGE OF PLEASANT MEMORY.

ONE spring, less than a hundred years ago, a party of congenial spirits made up a hunt to Beaver Lake, Indiana. Our party was pretty well organized; we had a treasurer, who was advance agent, made all bargains, paid all bills, etc. We drove from St. Anna twelve miles to the lake. It was a muddy road, and some of us walked a good part of the way; to do our very best those twelve miles grew to at least twenty, or it seemed so to us; it was cold, mud hub deep sometimes, and it took all the fun we could scare up to keep our spirits above zero. About 3 o'clock we came in sight of the lake. Our driver entertained us with the story of the horse thieves that once had their camp on an island in the lake, and he showed us the holes in the sand where the thieves had stables for the horses. According to his story the band became so strong the State militia had to be ordered out to capture them. As we came out into the meadows and pastures used by stock men, away to the left we could see thousands of ducks, and to the right could hear geese booming. It made our very fingers tingle. Soon we came to a house and asked for lodgings. Carl, as we found his name to be, took a good look at our party, and then smiled all over his face, went into the house "to see the old woman," came out and said all right.

After a dinner of roasted goose we started for a crack at the ducks. Carl said "You are just a little too late; you ought to have been here a week earlier." Did you ever hear that before? Just as we started a team of ducks circled and went down into a little marsh bordering the lake, and Pete said to me, "Mark, let's you and I go for them." I let him take the lead, and as I climbed a fence behind him I slipped out the shells loaded with No. 6 for ducks and put in shells loaded with No. 1 for geese. We went into the marsh side by side. When we came to open water the ducks were in plain sight, and almost immediately they sprang up fully sixty yards away. Both guns cracked at once and neither of us fired the second barrel. One old duck when high up turned over and came down with a whack. Pete, who had long boots, waded out and brought in the duck. As he came he kept turning back the feathers, and his first remark was, "Well, it has been a hard hitting gun that killed this duck." "Why?" "Because just one shot has hit her in the back and gone clear through and come out at the breast. What number shot did you have in?" "No. 6. What did you have?" "No. 1." He just put that duck into his pocket and coolly remarked, "Nothing smaller than a No. 1 could have gone clear through as this has," but he told Bob that night that it was "Mark" who had killed the first duck. Pete was a good fellow, but I should have rather enjoyed carrying that duck myself, and it has always seemed to me that he might just as well have owned up to me that I was one ahead; but he didn't. You see that was about the first duck hunt I was ever out on, and that is why I felt it so keenly. I didn't kill another that evening, though Pete did.

Four of us slept in one room that night, Bob and I in one bed, Pete and Gibbs in another; yes, and a trundle bed full of children between the two beds. Along in the night, some time, to help matters Gibbs began to snore; then the children got uneasy; the old house cat concluded there wasn't quite enough in the room and began to bring in her kittens one by one. So they all kept it up, kittens mewing, Gibbs snoring, the children fussing and Carl out in the other room scolding. Bob reached out, got hold of a kitten and hurled it straight at Gibbs. His aim was good; Gibbs gave a most terrific snort, which scared the children into a howl, and brought Carl in to see what the row was. Bob, of course, was sound asleep. I told Carl "it was the cat," and he finally got her out, when we had it tolerably calm until morning.

The next morning I went out without a guide, followed a fence that was partly under water for, I should think, nearly a mile. It had been quite cold during the night, and there was a thin skim of ice over the edge and all along that fence. I had to break it at every step. It was a rather ticklish business for an amateur duck hunter, but I finally got to the point I had set out for, and I just fixed a seat on that old fence almost hidden by the flags and wild rice; and then the way I knocked the ducks would tickle an older sportsman. There I sat through that day, and in the evening I would have given $5 to the man that would carry me and my load back to the house. Sitting so long on the fence in the cold gave me a rheumatic pain in my hip and I couldn't walk upright to save me. If I recollect right I bagged more ducks that day than any two of the others.

The following morning at 4 o'clock we were on the road to the station, and long before we could see we could hear the whistle of wings overhead as the ducks flew out to feed. Just before we left the lake shore we began to see shadows floating over us, and as a flock came over I fired into them, when out tumbled a spriggtail, the last duck killed by any of the party. This delay caused us to get into the station too late for our train, and we had to wait; but the train that we missed was wrecked, so you see we saved our bacon by being late.

On this trip we had no decoys, no dogs nor boats; but we had a big time, and all of us vowed that we would go back the next spring with everything necessary "to just slay them." Some of the party have since died, the others are scattered far apart, and if one of them should happen to read these lines he will know that one at least never forgets a hunt, no matter when nor how taken. Moreover, I can still feel now and then a twinge of that pain contracted on Beaver Lake, and whenever such a twinge comes over me I live over again the pleasant time we had there. MARK.

MORNING SUN, Iowa.

AMONG MINNESOTA WILDFOWL.

ST. PAUL, Minn., June 1.—*Editor Forest and Stream:* I append copy of a letter just received from one of your numerous and attentive readers which will explain itself: "C. A. Zimmerman, Esq.—Dear Sir: In conning over the FOREST AND STREAM of the 19th I discovered such gross plagiarism in the article entitled 'Among Minnesota Wildfowl' that I want to ask if you have noticed that portions are stolen from your contribution to *Scribner's Magazine* of October, 1879. I regard your 'Field Sports in Minnesota' as an ideal sporting article, and have read it so many times that it has been partly committed to memory, and I was therefore enabled to discover the straight steal of 'C. F. C.' Respectfully yours, ——."

Of course it is not possible nor will it be necessary to make exhaustive quotations, as an extract or two and a comparison will convince your readers that they, as well as yourself, have been very unfairly treated:

"C. F. C." in Forest and Stream.

"We employed the usual tactics of approaching the pond from different directions, and after getting ourselves in good cover Bart, at a signal, fired a random shot over the water. With a great quacking and rustling of wing the ducks sprang into the air and made a break in the direction of one of the large lakes. This brought them over to me, and a couple toppled over to my double report. This reception startled the flock, and in considerable disorder they turned only to meet with a similar reception from George. Again they were repulsed and sought a new direction, but such a height had they attained that I thought we should get no more. But Bart was the champion, for he stopped three ducks with one barrel."

* * * * * * *

"To me there is not much real sport in this style of shooting, although the game is large and fine; it lacks the excitement of pass shooting, while many birds are lost in the matted reeds."

* * * * * * *

"The main flight having passed over we are favored with more singles than flocks, and the shooting in consequence becomes more interesting because more difficult. The ducks begin to climb as they cross, and I replace my No. 6 shells for those loaded with No. 5. Clean misses are frequent at the swift-flying birds. It seems at times next to an impossibility to swing the gun rapidly enough to cover and avoid shooting behind."

Scribner's, October, 1879.

"We employ the usual tactics by surrounding it, each one approaching it from a different direction. * * * * * When every one is posted in as good cover as possible, Bill, according to previous arrangement, fires a random shot from his 'pin-fire' over the water. In an instant, with a quacking and a terrible flutter.ng the well-concealed ducks sprang into the air and made a break for one of the large lakes. * * * * * and two birds topple over almost before the double report of his piece has drifted across the puddle. This reception has startled the flock, and in considerable disorder they turn, only to be met by a similar reception from W. Again are they repulsed and seek a new direction, which brings them over my stand, but such a height have they attained that only one drops dead to my gun. But Bill is the champion, for he stops three ducks with one barrel of his gun, having had time to exchange his finer shot for No. 1."

* * * * * * *

"To me there is not much real sport in this style of shooting, though the game is large and fine; it lacks the excitement of the "pass" shooting, and many birds are lost by falling into the matted reeds and grass." * * * * * * *

"The main flight having passed over, and out of which we have taken fair toll, we are favored with more singles than flocks; the shooting is consequently more interesting, because more difficult. Clean misses at these swift-flying birds are frequent. It seems at times next to an impossibility to swing the gun rapidly enough to cover and avoid shooting behind."

Comments are not necessary; no doubt all your readers will see the point. C. A. ZIMMERMAN.

BUCKSHOT.—Will some of your readers give me the results of their experience as to different modes of loading buckshot, both in cylinder bore and chokebore guns. I should like their experience with bonedust and other powders to pack the shot in.—BUCK.

WHAT KILLED THE DEER?

I SAW in the FOREST AND STREAM, issue of May 12, the above question, and I wish to relate two similar instances that occurred on the Peshtigo River below Roaring Rapids in November, 1885. A party of Janesville, Wis., gentlemen was hunting them and one of them shot at a swimming deer. The ball struck the water in front of the deer's throat and three or four inches ahead of the deer, when the deer stopped swimming and floated down until pulled out. It was the only shot fired, and as the shot was a broadside one, of course the deer was not hit; this a very careful examination proved afterward, but it was killed as suddenly as if shot through the brain. A few days after at Caldron Falls, just below, another deer was pulled out without a shot mark or bruise anywhere on the body. I skinned it myself and took particular pains to examine it and I thought the cause of death must have been from the long race it had had, followed by the shock produced by the long swim or float after reaching the river, which must of necessity drive all the blood internally, thereby producing intense congestion, which was very markedly shown in the last deer. The lungs were full of bloody froth and the tissue was distended almost to bursting. Squirrels are frequently killed by shock from hitting the tree with a ball near enough to deprive them of all the vitality, and I think Mr. Wardwell's deer was killed by the shock of the shot and congestion, following the plunge in the water, as was the first deer in the Peshtigo. .45-60.

ST. PAUL, Minn.

UNTIMELY CALIFORNIA SHOOTING.

A California correspondent writes to protest against the article recently published in this journal entitled "Experience with California Game." The open seasons for game and fish up to January last were, for deer, July 1 to Nov. 1, (forbidden to kill doe or fawn); quail and grouse, Oct. 1 to March 1; trout, April 1 to Nov. 1. He writes:

In the second paragraph of that letter, its author states that he shot seven quail, "shooting five of them from the wagon." At the end of the third paragraph, he states that the road followed the bed of a stream which was now dry, (for the rainy season had closed more than a month before). This seemingly innocent statement contains the "milk in the cocoanut." When does the rainy season end in California? Is it not about April 15, or May 1 at the latest? If so, when was it that he was killing quail? In June evidently, and if in June, is that the open season for quail?

In the next paragraph he confesses that if he did not kill a doe it was not his fault, as on reaching the summit the deer was not to be found. A couple of paragraphs further on and we see him standing by the river side spear in hand trying to kill a salmon. Since when, pray, has it been lawful to spear a salmon?

In the very next paragraph he is trying to kill a deer again. Supposing he had been more skillful, and had secured a buck, would he or would he not, have transgressed the law again? Was it yet July? As to his trout fishing in Stony Creek, we have no word of animadversion. We have fished that stream ourselves, and can sympathize with any honest angler, who loses his tackle to the large trout its clear waters contain.

In the March number of the *Century* Mr. John R. S. Hassard has an article headed "Camping Out in California." In the second column of the first page of the article he states that he started for the mountains "on a bright morning in early June." If this means anything it must mean that he started some time during the first ten days of the month—nearly three weeks before the legal date for killing deer, and over three months after the legal date for killing quail. He then goes on to state that in the evening he made his first halt, and remained in camp two weeks. Here he proceeded to enjoy the lawful sport of trout fishing and the unlawful killing of quail (*vide* page 738). In this latter occupation he and his whole party—even to the Chinese cook—apparently took a hand, and he records it with unblushing effrontery.

That he did not further transgress the law by killing deer was evidently not his fault in intent, for on the same page he asserts that "although the guide and two or three of the most earnest of the party made long marches and spent watchful nights on the mountains, they saw only one deer, and him they did not kill."

From this to his final camp on the top of Pine Mountain his journey occupied another week, making three weeks in all, after which we will give him the benefit of the doubt as to the killing of deer. It must have been a close shave though, as he states that after the first establishment of his camp on the mountain he had venison in the larder continually (page 743).

On page 745 he chronicles the killing of a doe, which our law forbids, and on the next page is an account of a similar exploit. For a wonder he shot no quail after reaching his permanent camp, as, although he saw them, they were followed by young broods, "and we would not molest them." How wonderful considerate all at once. Yet, was it any worse to kill them while followed by their broods, than it was, two weeks before, while incubating?

On the same page, 747, is an attempt at humor in describing the killing of a grouse and his subsequent appearance at the table. It would not have been nearly so humorous if he had been obliged to pay the penalty of the "deep damnation of his taking off."

Does it not lessen our respect for our fellow men to see individuals of culture and intelligence leave their morals all at home when they start for an outing? Would either of those two men have been so unobservant of the law when at home and among their friends and neighbors? We think not. Then why did they proceed to transgress the instant they got out into the woods, when masquerading under the guise of sportsmen?

And, as if the actual commitment of these offenses was not enough, they must needs report themselves as offenders in the columns of two widely read periodicals This, again, is another evil, as it might lead innocent parties in other States and countries to suppose that all this sport was legal and so might induce them to come and do likewise.

Brother sportsmen who respect the law, speak out in the columns of the dear old FOREST AND STREAM and put all law breakers in the pillory of public opinion, and see if we cannot at least make such men ashamed to boast of their deeds before the readers of this journal. AREFAR.

AUBURN, California.

THE MICHIGAN WARDEN WORK.

GRAND RAPIDS, Mich., June 11.—*Editor Forest and Stream:* I send you herewith a brief abstract of the doings of the Michigan game warden, since his appointment on March 15 last, thinking that it may point a moral or adorn a tale to those who, in other States, are urging the appointment of a similar officer. The game warden is a State officer and is paid his salary and expenses by the State. He has the appointment of three deputies in each county, of which deputies there are eighty-two in the entire State. This being an entirely new thing the first month or so was passed in appointing wardens and getting the machinery of the office into working order. In the month of April last five arrests were made and convictions followed all of them. The fines and costs imposed that month amounted to $21.80. In the month of May the number of arrests was sixty-two, of which fifty-eight were convicted and four were acquitted, or nolle pros'd. The fines and costs imposed during the month of May under these convictions amounted to $322.83. Five of these convictions were for violations of the laws for the protection of fish and fisheries. The offenses were committed in twelve different counties, extending from one end to the other of the lower peninsula, showing how widely spread was the violation of the law, and how much somebody was needed to look after the offenders.

It will need but a few more months of prosecution as vigorous as this to put a stop to the greater part of the violations of the game laws. That so many have been prosecuted and convicted is a test of the interest taken in the subject by the deputy game wardens, who have made nearly all of the complaints. These deputies, as yet, are serving without any compensation, the only provision for their payment being that they shall be paid such compensation as the boards of supervisors in the various counties shall allow and for which the county boards have as yet made no allowances.

We hope to better this matter before a great while.

M. NORRIS.

MICHIGAN DEER HUNTING.

LAST fall, as has been my custom for the past sixteen years, with but one or two exceptions, I left home on Nov. 8 for a short hunt for deer. Our party, when gathered at our boarding place, consisted of five persons: Mr. P., from Penn Yan, New York; Cleveland and Harv, from North Muskegon; Cob and myself, from Palo, Mich. We boarded at Mr. Caster's, about seven miles northwest of Baldwin, a station on the Flint & Pere Marquette Railroad. We have made this place our quarters for a number of seasons, not because deer are more plentiful here than in other sections, but it is a good place to board, convenient to post office, etc. Cob had preceded the rest of the party by one week, and had been looking the ground over and had had a few shots, killed one deer and wounded another fatally, which he found when spoiled.

Cleveland and Harv arrived the same day that P. and I did, on the 8th. On the ninth there was no snow, and as we use no dogs, we concluded to drive and watch runways. Cob stationed Cleveland and I on a road some thirty rods apart but in sight of each other. After waiting for some time a cold rain set in and I concluded to go to the house, and started on a run, and had gone a few rods, when I heard a ball from Cleveland's .45-60 Winchester singing past me, and I turned just in time to see a fine doe go into the bushes on the opposite side of the road within three rods of where I was standing. I had lost my first chance and felt chagrined. Cleveland got in two shots but failed to hit. Cob got two shots but no deer; thus ended our first day's hunt.

Wednesday, the 10th, it snowed during the night, and in the morning tracks were quite plenty, but before noon the snow was gone. I saw one deer and shot at it with buckshot, but did not kill. Harv two shots and Cob three and no deer. Thursday Harv made seven short and got one buck. Friday Cob saw two tails, but got no deer. Saturday P. made five shots and got one deer. Sunday we rested and spent the day in reading. Monday Harv had seven shots, but killed no deer. I had a running shot at a fine buck and scored a miss. Tuesday nothing. Wednesday morning there was a light snow. Harv scored five shots, no deer; P. three shots and wounded a four-pronged buck. P. and I were hunting together to-day and had tracked this deer a long distance before raising him. When he jumped out of his bed P. got in three shots, but had a very poor chance. And now comes the unaccountable part of the story. We followed the track for a half mile or more and found neither hair nor blood, and we had concluded that the deer was not hit. But just at this point P. was following the track, and said to me, "Some one has shot our deer," for new blood was scattered on each side of the track profusely. Having heard no gun and no person appearing, we concluded that P. had hit him hard. We followed for about a mile further, the deer still bleeding freely, whether walking or standing. P. started him again and the blood stopped almost entirely. It now began to rain and the snow went off, and we didn't get the buck. This is the only instance of the kind that I have had in hunting during the past forty-eight years. I have shot a deer and not found a drop of blood when there was a good snow, but have found the deer dead. I have shot others that bled freely from the start, but soon stopped bleeding. Cob had two shots that day and killed a fawn.

Thursday, 18th, there was a snowstorm; no deer. Friday P. shot a fawn. Saturday P. and Cob hunted together and brought in three deer, a doe, a yearling and a fawn. Monday, the 22d, we concluded to hunt with a bell, Mr. Caster going with us, making six in the party. Cob had three shots, but failed to kill a deer. We had a big tramp and came home in a heavy rain, late in the evening somewhat tired. Tuesday we did not hunt.

Wednesday, the 24th, P. and I came home. The rest of the party remained another week and had a good tracking snow with deer quite plenty, and yet they didn't get the deer. Mr. Coster got a fine buck when hunting with them. Cleveland and I failed to kill a deer, and yet I enjoyed my hunt first-rate and hope to have another next fall. We had a good time, secured ten or twelve deer, which are as many as any small party ought to kill in one season.

A few years ago I wrote up a hunt of our party—"An Unvarnished Tale"—and thought at the time that I would write something about hounding deer, but finding that the Senate had failed to pass the bill to prohibit hunting deer with dogs I was so disgusted that I felt it would be as well to say nothing. The House has passed this session a good bill for the protection of game, but I presume the Senate will fail to pass it. Our State game warden and his deputies are doing something in enforcing the present game laws; but as long as the Michigan Sportsmen's Association favor hounding deer and practice it in all their hunts, the deer will soon be a thing of the past. Mr. Ed H. Gilman is very active in enforcing the present game laws against pot-hunters, and full as active in his opposition to a law to prohibit hounding deer. Such a law would interfere with his sport and no doubt would reduce somewhat the number of deer that he and his party report after each season's hunt, which is usually from forty to fifty.

STILL-HUNTER.

PALO, Ionia County, Mich.

A SENSIBLE HINT.—*Editor Forest and Stream:* Here is a quotation from a letter recently received from a Virginian at whose plantation Northern sportsmen, with their dogs, can be entertained in the hunting season for a consideration. I send it in no pharisaic spirit, but as a hint which many of your readers may need and be thankful for. He says: "I must thank you for remembering me much oftener than a good many of my hunting friends. Some I don't hear from until old Jack Frost puts in an appearance, and then they want to know 'how is the weather,' and 'how are the birds,' and 'how are the dogs, etc.'" Now, an occasional copy of FOREST AND STREAM, or the *Graphic*, or the *Sunday Sun*, or a cheerful letter, however short, falls like a sunbeam upon the leaden dullness of winter farmlife, and shortens amazingly Sundays and rainy days of spring and summer. With these few words to the wise I remain—J. L. K. (Perth Amboy, N. J.).

SNARING GAME.

Editor Forest and Stream:

A writer on this in FOREST AND STREAM of the 12th instant does not give the side of the law for Massachusetts. All valuables on the land, fixed or movable, belong to the owner of the land, whether cultivated or uncultivated. The decisions of the Supreme Court have settled this, as regards all wild fruits, nuts and berries, which are stationary by nature. In the same way the Supreme Court has decided as regards bees, fish and game, which are movable from one man's land to another's, by their own will. Their ownership goes with the land on which they are at any given time. A Bristol county decision of the Supreme Court ruled that a man in pursuit of his own game lost ownership and right to pursue when it went beyond his own boundary line. Fish in natural ponds of twenty acres and above are reserved for the public, but in brooks and smaller ponds they belong to the owners of the banks. Prior to 1884 the gunner had free range, liable only to damage by trespass, which ordinarily was of no account. But he was so taking it as a right, and sometimes so arrogantly, that a law was then passed allowing the owner to "post" his grounds, and so, if he would, keep off the gunner totally. This was in accordance with the court decisions referred to and conceded to the land owner total and absolute ownership and control of all game on his land. This "posting" law, fully enforced, would allow the game to die of old age, so far as the outside gunner is concerned. Still the farmer was tolerant of the gunner who disregarded this law, till in 1886 the sportsmen quietly secured a law which forbids the owner to snare on his own land. This was reserving all game for the gun and dog, which generally the farmers cannot use. It was the old story of the camel in the tent with no room left for the owner and no right for the camel to be inside. The farmers, of whom there are more than 40,000, became warm, and when the bill just passed was introduced it passed quite unanimously and with almost no division. They restored promptly a usage which has been enjoyed in Massachusetts from earliest colony time, excepting the one year of the law of 1886. Here are the rights and the laws and the facts as to snaring in this State. The "codfish eloquence" was not abundant nor needed, nor the "suggestions" of a "retired clergyman." The thing went itself when started. That gentleman, instead of being retired, was too busy with great educational interests east and west to do much. He got in only a few charges of No. 10 shot. Really, the gentlemen gunners are in a bad plight for partridge shooting, since they have passion and skill and splendid dogs for the sport, but no right in equity or law to any hunting ground. So to speak, they are thoroughly equipped and trained for a regatta, but have no water at control. No doubt if they let the owners' rights and snares alone and are gentlemanly toward them, they can have the shooting ground they once had, but they must ask the privilege of 40,000 farmers.

BAY STATE.

Camp-Fire Flickerings.

"That reminds me."

215.

I SEND you some notes from my old friend and campmate "Bush" D. The documents explain themselves to a degree. I will add that "Bush" is one of the most genial and ardent outers I ever camped with. I never knew him to take a gun or rod into the woods, or catch a fish, or bag anything but his trousers. But when you came to the commissary department, he was what you would call reliable. He was not fond of risks or adventure, and my light canoes were a standing terror to him. When we found it necessary to double-team and muzzle a fractious hound to relieve him of porcupine quills, "Bush" always went to roost on a log; and I have known him to take to a tree for a wounded woodcock. But all the same, he was the life of the party; and for genial good nature, wit and companionable qualities, not easily beaten. And once more before I die I should like to rest with him, for a brief summer week, on browse, under bark.

NESSMUK.

Reading the "Log of the Bucktail," where "Nessmuk" speaks of deer not being so plentiful as they used to be, puts me in mind of a question I once asked an old hunter of "Nessmuk's" town. He came into the store, and knowing his propensity for telling big stories, I started him by saying, "Mr. L., I suppose deer are not as plenty as they were when you first came to W." "Oh, no. I remember one morning of taking my gun down and going just back of my house just over the hill. I stopped to see if there was any deer in sight, when up popped a buck's head just over a knoll a short distance from where I stood. I raised gun to shoulder and fired, and down went the head. Before moving I loaded my gun, and just as I was putting on the cap up came the buck's head. I thought it very strange that I should miss such a shot, and I shot again and the second time down went the buck. The third time I loaded, and just as I was ready to start up came the buck's head again. Then I was thunder struck, but I shot again, and as before down went the buck; and, sir, as true as I am standing here, I loaded that gun eight times, and as many times appeared the buck's head. The ninth load I did not shoot, as the buck's head did not appear, so I thought I would walk over and see what had become of my deer, for I thought it must be mine by this time, and when I looked over that knoll there lay eight as nice deer as you ever saw. No, deer are not as plenty as they used to be around here."

The first time I ever saw a wild deer I was in camp with "Nessmuk" at the same eddy he speaks of in his letter in FOREST AND STREAM, of Sept. 11, 1886. There were four of us in camp, Capt. N., George D., "Nessmuk" and myself. There is one thing "Nessmuk" never goes in camp without taking with him, and that is a canoe, and a light one at that. After dinner one day, Geo. D. proposed taking the canoe and crossing the eddy to the other bank. "Nessmuk" did not care to go. Capt. N. was too tired (he was born tired). I myself have a slight remembrance of starting to cross that eddy in that canoe, but I remember walking back as vividly as if it was only yesterday. The sight of my first deer was the cause of our returning without the canoe. We were about half way to the other bank when "Nessmuk" called to us to stop as there was a deer coming down the mountain. We sat there a moment and a deer came into the Tiadatton above us, crossing at the riffles. After getting into the stream it stopped and looked at us, and the first thought I had was of buck fever. "But," said I, "no buck fever about me, if I had a gun and the law would allow it, we might have venison for supper." After watching the creature for a moment, "Nessmuk" gave a whistle, and the deer made a break for the woods. I don't think that the deer stepped on my toes, but I felt a shock that went through me from head to foot—something very like an ague, I think they call it—and I made a quick motion with my hands for the sides of that canoe, but they were not where I could put my hands upon them. The deer, the shock and the canoe all started at once, and this is the reason why George and I walked back to camp, wetter, if not wiser men than when we left. George can tell you just how deep the water is in that eddy, for he is taller than I am. The moral is: If you go canoeing with "Nessmuk," walk.

BUSH.

216.

It happened in the wilds of New Jersey. Two friends, A and B, went to spend a couple of weeks of shooting in the Orange Mountains. A had his old reliable Remington, while B was equipped with a Greener, for which, two weeks before, he had paid $100. The third day was one to make any sportsman thrill with joy. The two New Yorkers started at sunrise in quest of birds, and by noon had quite good bags. While eating their lunch and resting under a large tree they were startled by a rabbit which ran by them, not more than three yards away. It was closely followed by a mongrel dog. The dog had hardly disappeared in the thicket when the owner appeared, as true a specimen of a Jersey farmer as one ever met. Discovering A and B he stopped, and asked if they had seen a dog pass that way. B was about to answer, when all three heard the dog barking, 300yds. away, where it had run the rabbit to cover. All three immediately followed after the dog and found him in a swamp, which was too marshy to penetrate. So the countryman proposed that A go around to the right of the swamp and try and rout the game from its stronghold. After A had gone, the farmer asked B to let him have his gun and he would go to the left and try and get a shot at the rabbit from that side. After patiently wating for five minutes or more to hear from the countryman, B started to find him. After hunting for an hour or more he arrived at the conclusion that he had been taken in and done for by an innocent Jersey farmer. He decided to go back to camp, where he found A. The first thing A asked was where was B's gun. B mournfully replied, "I let the countryman have it." The whole affair immediately became clear to both of them, and after promising not to give the joke away to the boys they returned home, B unburdened by the weight of a gun.

HUTCH.

217.

It is not all of fishing to fish. I went fishing the other day and had a combination of good and bad luck, so will tell you all about it. In this part of the country the last of May and the first of June are the time to catch pike, so accepted an invitation from three fellows to go fishing out to Clear Water Lake, which is about ten miles from here. Our stopping place was where P. F. Douglas, of Minneapolis, is building a summer house, and it is a very pretty place to camp and fish. There being no barn, we had to hitch our horses to the trees, giving instructions to the men to keep an eye on them. We soon got off on the lake, P. and L. in one boat M. and myself in the other. C. and L. pulled down to the mouth of the lake while we struck across about one mile from the other boat. We fished until the score ran up to 18 nice pike, when M. said we would pull back and see how the boys were making it. As we came ashore one of the carpenters came down and told us that we would have to walk home, for the team had left us. About 4 o'clock the horses broke the halters and "lit out" for home. They ran about half a mile and then came to a wire fence. One horse went clear over, while the other struck the top wire and got flopped over on to its back, cutting its forelegs very badly on the barbs. A man came down and told C. and L., and they threw up fishing and put out after the horses, tramping the ten miles in the hot sun and getting into town half an hour behind the horses. When we came ashore it was 7:30 o'clock, and sundown; and to walk ten miles after dark was anything but fun. But the best thing we could do was to grin and walk. We were soon on the road, and seeing an Irishman asked him if he had seen the horses. The answer was "Yis, and they wint at full spade." We got home at 11 o'clock at night, to stand the laugh of the boys and the damage to the horse. So ends my first fishing excursion of this season.

RAMROD.

CLEAR WATER, Minnesota.

NEW YORK CITY, May 18, 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it*, not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. CUSHIER.

PLANK-SHAD.

I KNOW "plank-shad" are not classified in works on icthyology, yet fish epicures in and about the national capital refuse to admit there is any other worthy of mention in comparison. They divide mankind into these two great classes, those who have eaten "plank-shad" and those who have not. Candor compels the sad confession that the second class greatly outnumbers the first; but this is modified by the fact that the former are of the elect, and distinguished by an air of conscious superiority, born of triumph in the highest fish degree of gastronomy.

A certain Roman emperor sometimes found, and as often bewailed, that he had "lost a day," but ye who have never dined on "plank-shad" have lost all your days. Will you, reader, reform at once? If so, come with me on board the trim steamboat, the Corcoran, which will go this bright May morning sixteen miles down the Potomac to Marshall Hall, opposite Mt. Vernon, where Col. McKibben, the genial host and an old '49er, will see that you are served *secundum artem*. There, we are already on board, and are fast leaving behind us an extended view of the city, wherein the white dome of the capitol and the cloud-piercing pinnacle of the Washington monument will linger long after all surrounding objects shall have faded from sight. We steam swiftly past the green-carpeted and luxuriantly shaded Arsenal Point—sadly renowned since war days—past the broad mouth and picturesque bridges of Four-Mile Run, where, like many better, wiser and greater men, your humble *compagnon de voyage* is wont to resort for pastime in fishing and hunting; on past the city of Alexandria, deader than the hero from whom the name descended, and lastly past the peacefully frowning heights crowned by Forts Foote and Washington. Then the tolling steamboat bell announces that the bright green slopes and grand old mansion of Mt. Vernon are before us, and also that the end of our pleasant trip is reached. We disembark, to find a "summer resort" beautiful enough to merit a visit, even without the added attraction of "plank-shad."

But let us attend to the business of the day. Look down the river bank. You see fishermen—white, black and medium—hauling a long seine. It is full of shad, herring and perch, with a big sturgeon thrown in for luck. You see his back fin cutting the water like a razor as he darts here and there in the inclosure of the net, and some of the seine haulers are standing ready with club and gaff awaiting the first favorable moment for attack. There! they have stunned and perhaps killed him, and are hauling him from the net bag preparatory to ladling out the shad.

Well, you may now be sure that shad—our "plank-shad"—have been caught, and that you shall eat no stale fish. Now, come along to the outdoor kitchen, in the rear of the mansion, and look in at the open window. (It will be considered no serious intrusion if I explain that I want a "green un" to see how it's done). The black servants (whose heads are, by the way, all ornamented with red bandanas) are dressing the shad just caught.

Under that tall locust, a few yards from the kitchen, is seen a good fire of pine and cedar logs, and around them a row of planks—1ft.x2ft.—supported in nearly vertical position. A superannuated negro, a regular, old-fashioned "fo-de-wah" sort of darky, who is lame in one leg and "afflic wid rumatiz in de udder," hobbles around the firy circle, conspicuously and ostentatiously playing the rôle of inspector-general of shad cooking. With a knowing look at the planks, now browned by the fire, he gives the grand hailing sign, and forth from the kitchen comes a buxom bare-footed daughter of Ham, carrying a tray full of the fresh-caught and dressed shad. These the aforesaid inspector-general proceeds to nail to the planks with a haste limited only by dignity and rheumatism. You note that they are placed with the inner side next the fire; yet, please set down in your memory that it is preferable to give them a short "turn" to insure thorough cooking. The time has now come when the proud master of ceremonies can take up the insignia of his great office, to wit: a wand in the form of a long stick to one of whose ends a clean piece of linen or muslin is attached, and a bottle (or small bucket) filled with mysterious yellow liquid. Ever and anon he inserts the cloth end of the wand in the bottle, and then holds it above a steaming shad, so that the liquid trickles down over it. This is obviously shad basting.

"What is that liquid made of?"

"I've investigated and found out that it is melted butter, doctored with salt and pepper, nothing more; and, later, your appreciative palate will be duly thankful it is nothing less."

Note now the air and facial expression of the cook. They show he is conscious of your ignorance, and his own accomplishments. He looks down from his lofty height and wonders "why de pore white trash kin nebber larn dis ere trick." But note again how his manner changes. He's evidently becoming excited. What can it be? Are the fish ruined? Shall we have no "planked shad" after all? Oh! yes. Don't be alarmed. The cook sees that the looked-for climax is approaching. There! it has come. He gives another wild signal, and this time more than one dusky maid comes swiftly to the rescue, and in a trice the crisply-cooked shad are detached from the planks and borne away to the dining hall. Let us follow. We sit down at the table and begin eating at once, for in the lexicon of shad which a good stomach indites for deserved men, there's no such word as wait. Now for the first time in its dismal experience, your stomach—the fish corner of it—lives as it should. "It is a revelation." Well, I knew it would be. It is so to all. Better than any other fish you ever ate. Of course. But never mind talking of that, nor of "gratitude." There'll be time enough later. Eat and be full, for thus you'll be happy.

Dinner—such a dinner—is over, we rise with new dignity, because of added gravity, and wander slowly down the green lawn to a comfortable seat under the trees, whence the broad river and the opposite bank, with Mt. Vernon in the foreground, are in plain view.

Think of it! Just over there, from that high-columned portico, where yon sightseers are this moment wandering back and forth, Washington used to look out on this landscape, yea, this very spot. And then Lafayette and all the other historic personages who came to Mt. Vernon after the close of the Revolutionary War! What memories throng—

"Did Washington ever eat plank-shad?"

Your head is clearly as full of shad as your stomach. You can think of nothing else. Well, then, the interruption is pardoned, and I will answer your practical and prosaic question by saying I do not know. But let us, in thankfulness for the blessing of this day, not allow ourselves to doubt that to so good a man so great a boon as "plank-shad" was not denied.

The steamboat whistle sounds! We have spent a delightful day. Let's seek a quiet place aft, where we can look back on this landscape and indulge in reveries befitting its attractions, and make our plan for another visit.

WASHINGTON, D. C. POTOMAC.

AN EX-GOVERNOR'S POLE.

THE crowd of anglers to the Maine waters this season has been, in many sections, greater than last year, and yet the stay of the fishermen has been generally short, especially of those who were rather late in starting. With this the weather has had as much to do as any other cause. The last week in May was remarkably warm, as all will remember who had the good fortune to be on the Maine lakes. June came in with only a single cold day, and then came on a south wind and showers, with rain nearly every day for eight or ten days. The water grew warm at the surface, and the trout, as is their wont, sunk deeper than usual so early in the season, and all of the first week in June was very poor fishing. In fact those well acquainted with the Androscoggin lakes pronounced the temperature of the water equal to that of early July, and the smaller trout begun to rise to the fly near the mouths of streams and smaller rivers—something rather unusual for so early in June. I know of a number of trout being taken in that way in the Androscoggin waters, while the trolling was remarkably poor. With the poor trolling the sportsman began to get discouraged, and by the 10th of June the lakes were more destitute of sportsmen than ever at that date. But they did not all go home. Some staid for better luck, and if reports are true, they have had it.

The 11th of June brought a change in the wind. It came around to the northwest, and anybody familiar with the backwoods of New England in springtime knows what that means. The mercury fell 30 to 40 degrees in a few hours and the surface of the lakes was lashed to a foam by the cooling blast. The trout were pleased, and were ready for business again. One party of three caught seven large trout in two days, the united weight of which must have been not far from 30lbs., with a large number of smaller size. During three days before they had fished almost in vain. Dr. Mixter, of Boston, is on record in the papers as catching a trout in Mooselucmaguntic Lake weighing 11¼lbs. and measuring 29in. in length. It is also stated that the Doctor in two hours' time had not only landed this monster trout, but also two others, one of 8lbs. and another of 6lbs. This is a part of the record which followed the advent of a northwest wind and cooler weather on the Androscoggin Lakes. It is a well-known fact to those who keep their eyes open that warm water always drives the larger trout to the bottom in the Maine lakes, and those who would take them must either wait till the water cools, if indeed it does again cool for the season, or they must take their chances at very deep trolling.

A good many notables have been afishing this spring, and some of the good notables, too. The Hon. John D. Long, Massachusett's much loved Governor that was, now a member of Congress, and his young wife have been to the Androscoggin Lakes fishing, or else on a lark, I am not entirely certain which. They did ride in the cars to Bryant's Pond, the place where the sportsmen leave the railroad, by the Andover route to those lakes. But there they threw off conventionalities and started on foot. Report says that they walked some six or seven miles, almost to Rumford, when along jogged a farmer with his springboard; farmer kindly asked the lady to ride. She did so, sitting on the seat with him. The Governor stood up on the seat behind the pair, and they rode up to Rumford. There Deacon Tuttle, well-known to the sportsmen who go to the lakes by that route, let the whole story out, when in great surprise he shouted, "Why, Governor, is that you?" The farmer, Mr. M. F. Knight, never felt more honored in his life. But the Governor's lark did not end here. With his wife he kept on to the Upper Dam. There they made a halt. Perhaps that I should explain that they did not make the whole distance, some 35 miles, that night on foot, but they took the usual conveyance, viz., stage, buckboard and steamer. They found quarters at the Upper Dam, and the next day they went a-fishing. But neither the Governor nor his wife had a fish rod. Nothing daunted, however, they proceeded to cut two as straight poles from the woods the best they could find. The Governor was born in Buckfield, Me., and he had cut fish poles before. About his lady I am not quite so certain. They went up to Trout Cove. The Governor was his own guide, and rowed the boat. They fell to fishing and caught several trout. The Governor's wife appeared, so they say, "very much like other mortals, with a man's hat on and a veil tied over it." They walked back to the Upper Dam camp, rather proud of what they had done with what they were pleased to term their "fifty-dollar outfit." It is all right. If Governor Long and his wife prefer to support ugly heavy poles cut from the woods for a couple of hours—if they prefer such rods to a nice split bamboo, one of the achievements of the mechanical skill of the present day, a thing of beauty, weighing only a few ounces, then the sportsmen of the country have not the slightest objections.

In a former letter I suggested that the running of the little steamers on the Umbagog Lake, on the Bethel route to Richardson Lake, the Magalloway and Parmacheene, was likely to be a good deal hindered by the loss of the Errol Dam this spring. I find that this is hardly correct, since in building the dam, or another in the place of the old one, the location is to be slightly changed, with the old structure used to stop the flow of water while the new one is building. This is likely to keep up the water in the lake, so that the little steamer can run to Sunday Cove every day, and also to Errol Dam and Wentworth's location, where the sportsman for the Magalloway and Parmacheene is transferred by a team to the head of Aziscohos Falls to connect with the new steamer Magalloway for up the river to Parmacheene. This is a new route, or rather a new means of reaching that gem of the backwoods, Parmacheene Lake. SPECIAL.

VERMONT TROUT BROOKS.

"WELL, Charlie," said Ed, "let's take the horse and see if we can find a new brook, or at least one that has not been fished to death. A few years ago I was out with my cousin in B., and we struck a brook that ran this way and I caught forty-seven, weighing 11lbs., and I would like to try it again, but I do not know where it is."

Three of us, cousins, happened to be having a vacation during May in our native town in Vermont. We had had good luck around the village, but looked for greater things. Smith and I (the Charlie of the party) sneered at Ed's proposal, for we had pretty well scoured the country and thought we knew all the streams around, but we agreed for fun to try a trip; and it was settled that we should see what we could find the following Monday.

With tackle and horse I drove up at Ed's, and after getting the girl up found Ed had not yet arisen. It did not take him long to dress and eat; and off we went for Smith. He was found digging bait, but had had no breakfast. At last all was ready; and after stowing boiled eggs and crackers in baskets and pockets, off we went. We drove and drove, passing brooks that had been discovered; and meatime Ed, who is in the navy, told yarns. Eight miles out we met a farmer we knew and he informed us that there were two brooks further on that no one had visited to his knowledge and they were posted, too. On we went determined to try the one furthest on and then drive back and try the second one. We passed one and it looked thirsty; and the second looked the same; but we knew how streams would dry up for a distance and then go on, so we hitched the horse in the barn of the owner, obtained permission to tramp down his grass and started. Ed, 5ft. 4in. in a pair of boots 3ft. long, looked rather dumpy, but Smith was in the same fix with his boots. I went in a pair of shoes belonging in the family and large enough for the whole of it. As we supposed, the brook did start in and just below the road, so we baited up, chose positions and started.

"Hello, one here," I yelled, as I pulled up a nice one, "first blood;" and I looked down in time to see Ed unhooking one of about a quarter of a pound weight, and Smith just landing his. So on we went, at times the brook being so narrow that the grass covered it, and but for the swiftness of the water our lines would have been still. Up stream would dart the line, up would go the pole, and if we were lucky out would come the speckled fellow in the tall grass. So on we went, passing and repassing each other, crawling up to the bank and all the time going down the brook; past a schoolhouse, where the children gazed on us; through the barnyard, where we pulled out trout to the astonishment of the farmer; under the tag-alders, where we could but see the fish, as no one could put a line in, much less pull it out, until we came to where the dace were thick and trout few; and soon both ceased to show themselves, although the water was deep. But from the looks we knew the summer weather dried it all up, and the fish knew it too. Up the hill to a farmhouse we went, where the farmer told us that a man from B. had taken 125 trout the week before. Back we went over the ground, getting some we had missed, and at last came to the house. I kept on, getting two in the place where they washed clothes, and a nice one in a frog pond, it seemed to be, but the brook had dried up, so I returned. They had 48 and I 39 in our baskets.

On the old road, when we came to the bridge, I yelled. "Hold on," and out jumped Smith, and, creeping up, caught the two trout I had seen in the shadow of the bridge. Then on we went to the first brook. Ed drove on, leaving us to fish down. Smith struck in back of me, and, as I waited for him, caught three. Over the rocks, down through the woods, out in the meadows we went, until we saw the team hitched under the shed of a house near the road and Ed further down the stream. On the way I had caught a nice one and threw him into a hole in the rocks, where he was swimming around, near but yet far. Not to be outdone, I took the tin box out of the basket and bailed the water out until I caught the fish in my hands. Ed had been lost, so had no chance to fish back to meet us. He had not regretted it, and from the glowing account he gave of the farmer's daughter, who had piloted him to the right road, the family must have learned something of a sailor. Again the brook dried up, and we bundled into the wagon again, and first Smith and then I jumped out to fish the third and fourth brooks down, leaving Ed to drive as usual.

I fished till dark, found the horse and wagon, picked up the fellows, and we counted the spoils. Smith led with 79; how many had been transferred to Ed's basket for payment of bait I did not ask. I had 77 and Ed had 31, but the goddess of luck was with him after all, as his weighed as much as ours. Our 10lb. baskets were almost overflowing, we had found two brooks that were new (to us); and as at 9 o'clock we rolled into the village we felt that it had been a great day after all; and after supper I actually had life enough for a few games of whist.

Many of the brooks are posted, according to the Vermont law, but an application to the owner will generally bring permission to fish. I had good results every time I was out, and while the trout are not large, they are the right size for eating. One day I caught one that weighed a pound, one a half pound, and six of about a quarter pound weight, not counting those smaller; and I know from sight that I left one that weighed more than a pound and several smaller. These were all caught (and left) in a piece of water perhaps 40 rods in length.

There have been no large trout caught so far. The trouble with the fish does not lie in the over fishing, but the water, and the small streams that used to furnish most of the sport are now dry in summer. One brook in which was caught a trout weighing 2¼lbs. has not a fish in it from the same cause.

Fishing at Lake Bomoseen had not commenced, but from the zeal displayed in keeping out nets and spears and prohibiting tip-up fishing through the ice out of season, great results are looked for later on. I made a good haul of yellow perch one day, and wished that I had had a few flies, as they rose to the natural flies well. As it was, worms had to do for their diet if they came into my boat. NESHOBEE.

MASSACHUSETTS.—A visit to Pawtucket Falls yesterday disclosed a lamentable state of affairs at the old fishway. A dozen or more large fish were seen trying to leap over the falls, noticeable among which were several large salmon and some fine eels (lampreys), besides quite a number of others, which would gladden the heart of any "lone fisherman."—*Lowell (Mass.) Daily Courier, June 11.*

TROUTING IN PIKE COUNTY, PA.—Milford, Pa., June 12.—*Editor Forest and Stream:* The Shohola and Blooming Grove, at the Park, were rather high early last week, and will stand another week's running after this gets into print. I could do nothing with the fly, although cloudy days, but the wind was east. Others had some success with worms. Came on to Milford, waded Raymond's Kill with Charley Mott, who killed six or eight good fish and took fifteen last night, one of twelve inches. I got one of 1¼lbs. Tried Hamilton's stretch on Sawkill next day, saw plenty but caught few. Last night fished Penny's woods and meadows from 4:30 P. M. to dark. Got thirty, mostly small, saw no big fish. They took small cowdung, sometimes grisly-king or professor, and yellow-sally in twilight. Tried to cast a few minnows where Vandermark runs into Delaware, but had no success. Water very clear, but high, no bass taken so far. —GRAY JOHN.

A CATSKILL MOUNTAIN CLUB.—Judge A. B. Parker, Public Printer Benedict and a score or more of other prominent men in various parts of the country, have formed a club and purchased 600 acres of land at a cost of $1,200 at the base of Slide Mountain, one of the grandest localities in the Catskill Mountains. Workmen are building a log cabin. Other men are building a dam across a ravine for the purpose of making a pond. This locality is famous for the big fat trout that are caught in the streams. Where the club house is being erected it is a cool spot even in summer, for ice can be found in some of the clefts of the rocks in the dog days. The club house will be ready for occupancy in a week or two. The jurists, statesmen and prominent office holders, who, it is expected, will be the guests of the new club, will find not only good fishing, but good hunting and, perhaps, some very lively adventures.

FISHING AT LAKE GEORGE.—The season is now fairly open at Lake George, and fishing for lake trout has been fairly good. Gen. Lewis L. Arms opened the season two weeks ago and caught ten fish, the smallest of which weighed 6lbs. Last week I met your correspondent Mr. A. N. Cheney in company with Judge Ranger and his son Will, and they reported fine sport, their catch amounting to 96lbs. The largest fish was taken by Judge Ranger and weighed 13½lbs. As I write several parties are about starting for the fishing grounds.—HORICON.

SALMON IN THE HUDSON.—The Governor has signed the bill providing for a fishway in the dam at Troy, and also the bill protecting salmon throughout the State. The latter law inflicts a penalty of $100 or one hundred days' imprisonment for taking a salmon in any manner except by angling. In case the fine is paid, one-half of it goes to the informer. Salmon are now taken daily about Long Island and in the Hudson River, the results of the continuous plantings by the U. S. Fish Commission.

THE CANADIAN TRIP described in our issue of March 31, was taken in the year 1882 instead of in 1886, as some readers, we are advised, have inferred; and the managers of the Northern and Northwestern railways ask us to say that the date should be taken into consideration in connection with the experience of "Homerus" and his party in chartering a special train to speed them on their way.

SALMON IN NEW JERSEY.—New Brunswick, May 31.—A salmon weighing 18lbs. was caught in the Raritan River below town to-day.—It was caught in a seine.—A. L. MUNNDY.

SALMON IN CONNECTICUT.—A salmon weighing 19lbs. was caught in Housatonic River, near Milford, Conn., on Saturday, June 5, in shad nets.

WORK AT COLD SPRING HARBOR.

BY FRED MATHER.

[Read before the American Fisheries Society].

THE past season has been the most successful one we have had since operations were begun here in 1883. We have turned out more fish than ever before, the figures for 1886 footing up to over 6,000,000, while this year the figures are over 9,000,000. There was a decrease in the numbers of salmon hatched and planted, also in trout, but an increase in shad and Adirondack frostfish and other species.

SALMON.—We received 300,000 eggs from the United States station on the Penobscot River, which hatched in such excellent condition that our loss was only about 8,000, which is the best we have ever done; of these fish 50,000 were planted in the Housatonic River, near Kent, New Milford and Falls Village, Conn., 50,000 were placed in the Salmon River near Albion, Oswego county, N. Y., and the remainder were placed in the smaller trout streams on the Upper Hudson near North Creek, Warren county, N. Y., the terminus of the Adirondack Railroad. Mr. J. W. Burdick, General Passenger Agent of the D. and H. Canal Co. at Albany, very kindly gave us free transportation for cans and men to Albany, and Mr. C. E. Durkee, Superintendent of the Adirondack Railroad, offered us the same facilities over his road. Very encouraging accounts of our plantings of salmon in the Hudson are continually coming in. Last year over fifty were taken by different persons and this year we are hearing of captures every day. A letter from Judge Danaher, of Albany, says that some of the fish have gone above the dam at Troy and it is to be hoped that fishways will be placed there this year, a bill for that purpose being now before the New York Legislature. One salmon of 28½lbs. has been taken this spring, just below the dam at Troy, the largest fish of which we have any record of being captured in the Hudson. It has been proved conclusively that the Hudson can be made a salmon river. A bill introduced into the Legislature by Mr. Collins, which provides that no person shall at any time catch salmon in the waters of the State of New York with any device, save that of angling with line or rod, held in the hand and then only from March 1 to Aug. 15 in each year, passed both houses and is now in the hands of the Governor.

LANDLOCKED SALMON.—From 40,000 eggs received from the United States station at Grand Lake Stream, it was decided to plant 25,000 in the tributaries of the Hudson River, and the majority of the fish were sent to Mr. A. N. Cheney, of Glens Falls, who placed them in Clendon Brook, a trout stream where the sea salmon have done well for several years, while the remainder of the fry were planted in Long Island waters.

BROOK TROUT.—We received 90,000 eggs from the New York station at Caledonia, and from these and eggs which we took from our limited number of stock fish, we have distributed in waters in the State 148,986 fish and fry, and we may say that in all cases where the numbers are given there is no guess work about it. The eggs are counted in a measure and the rest are measured in the same glass, then when they are placed in the hatching troughs, an account is kept of the number of dead eggs and fry taken from each trough, so that we can tell exactly how many fish there should be remaining in each compartment.

BROWN TROUT.—We received several consignments of the brown trout, *Salmo fario*, the common brook trout of Europe, from the Deutchen Fischerei Verein, and also from Herr Max von dem Borne, the well-known fishculturist of Berneuchen. These were on account of the United States Fish Commission, and some of the eggs were sent to Michigan, Pennsylvania, Virginia and Washington. We hatched and distributed 34,000.

LOCH LEVEN TROUT (*Salmo levenensis*).—The eggs of this famous Scotch trout were sent to us by James Gibson Maitland, Esq., proprietor of the Howietown Fishery at Sterling, Scotland; 24,000 fry were produced from the eggs.

RAINBOW TROUT.—From 10,000 eggs sent us from the New York Station, Caledonia, we have 8,000 strong, healthy fry.

SAIBLING (*Salmo salvelinus*).—This handsome trout, which is a native of the cool lakes of Germany and Bavaria, and attains a large size, being one of the chars, is a very brilliant fish. I have seen a specimen of 5lbs., a male in breeding dress, in October, which was a brilliant crimson up to and above the lateral line. The eggs of this fish were distributed by the order of the U. S. Fish Commissioner in several States, some going to Virginia, Michigan and Pennsylvania. We sent some fry to Mr. Cheney for Lake George, and have retained some for breeders.

WHITEFISH.—From 1,000,000 eggs received from the U. S. station at Northville, Mich., we have planted in Dutchess county, N. Y., and on Long Island over 900,000 fry.

FROSTFISH (*Prosopium quadrilateralis*).—This fish, which is found in the Adirondacks, where in Chateaugay Lake it is called "shad," while in Maine and perhaps other places it is variously known as frostfish, shad-waiter, etc. We received some 250,000 eggs from the New York station at Lake Brandon, and planted 200,000 fry in Dutchess county, N. Y.

GRAYLING.—From 10,000 eggs sent to Mr. Blackford from France, we at first thought we could not save a fish, but we hatched and brought to the point of taking food 350 fry from these eggs. We placed these in a small pond of about 15ft. in diameter and 1½ft. deep, where there was a good flow of water, but we have never seen one of the fish since.

SUNAPEE TROUT.—From Mr. E. B. Hodge, of the New Hampshire Commission, we received 10,000 eggs of the large trout recently discovered there; it is of the Oquassa type, concerning which there has been considerable dispute as to its species. We hatched 3,000 fry which seemed strong and healthy, which we placed in a pond similarly described for the grayling, but we have never been able to see them since.

WHITE PERCH.—We obtained some eggs of these fish from St. John's Lake, near the hatchery, and we also took some by hand from the fish; in all about 10,000 eggs. The eggs are adhesive, and when laid by the fish are scattered similar to those of the carp. The fry are the smallest of any that I have hatched, and it requires a second look to see them in a small glass aquarium. We tried to retain a few, but we were not successful, as they died shortly after the absorbing of the sac.

SMELTS.—Out of over 4,000,000 eggs we hatched and planted 2,000,000, or about 50 per cent., which is as good as we have ever done. I have on two former occasions read papers on the hatching of the fish before your honorable body and have nothing new to add. The little smelt carries a great many eggs for its size, from 30,000 to 60,000, or perhaps more, and from 100 ripe females of good size probably 5,000,000 could be obtained.

SHAD.—We received from the United States Commission at Washington over 5,000,000 eggs taken on the Potomac River, packed there and sent to Cold Spring Harbor. From this lot we hatched 2,000,000 fry, the last lot of eggs being a total loss, perhaps because they remained in New York a day and were placed in a refrigerator, for the shad egg will not bear the chilling changes necessary to preserve the eggs of salmon or trout. Of the fry obtained 800,000 were placed in the Hudson River at Albany, and 1,200,000 in Long Island streams, shipments being made to the Nissequogue River, at Smithtown on the north shore of Long Island, and to the Connetquoit River, emptying into the Great South Bay; the planting in the latter river was made at Bridgehampton. The weather was very favorable for hatching and we used only spring water for them, and no time the temperature of the water fell below fifty-nine degrees.

Last winter was the third winter we hatched the little tomcod, and we turned out 3,400,000 in the harbor. This little fish, although not in great demand in the markets, forms an important item in the food supply to the inhabitants of Long Island, especially on the north side, as the boys catch them by hundreds and sell them to the people in the vicinity. Shortly after we began our hatching operations and paid some attention to this fish, Cold Spring, Huntington and Oyster Bay harbors have been literally swarming with little tomcods, which are all credited by the people here to our hatching operations. We made no attempt to hatch codfish because of the condition of our hatchery, in which we could not keep the salt water pipes from freezing; but if we get a new building, as we expect, we will no doubt be able to proceed with the hatchery of the cod, as has been done at Wood's Holl. Last winter, when every salt water pipe froze, we had a portion of our tomcod eggs in jars, and as salt water was not available we tried fresh water, and after hatching them in fresh water, we kept a large number in the fresh water until they were ready to take food. No doubt this little fish could be acclimatized in the Great Lakes, and if not valued for food, would be desirable as food for the other fishes, but on Long Island the tomcod is regarded as a very desirable fish, and they are taken from all sizes up to perhaps 1½lbs., which is the largest I have ever seen. They resemble the common cod in having three dorsal and two anal fins.

The following table gives a summary of this year's work:

Penobscot salmon planted in Hudson River	192,000
Penobscot salmon planted in Salmon River	50,000
Penobscot salmon planted in Housatonic River	50,000
Landlocked salmon planted in Hudson River	25,000
Landlocked salmon planted in Hatchery Pond	12,000
Brook trout planted in State waters	148,986
Brown trout planted in State waters	34,000
Rainbow trout planted in State waters	8,000
Loch Leven trout planted in State waters	24,000
Saibling planted in State waters	5,000
Whitefish planted in State waters	995,000
Tomcod planted in Cold Spring Harbor	3,400,000
Smelt planted in Cold Spring Harbor	2,000,000
Shad planted in Hudson River and Long Island	2,000,000
Frostfish (Adirondack)	200,000
Grayling	350
Sunapee Lake, N. H., Oquassa trout	3,000
White perch	10,000
	9,157,336

COL. MCDONALD—So far I have found no satisfaction in handling glutinous eggs, and the only real success I have met with was with the eggs of the white perch. We had collected some adult fish for Mr. Mather to send to Germany, and they were put in a perforated can in the river to keep for a few days, and on taking it out we found the side of the can coated with eggs, and sent it to the central station, hardly expecting any results, as we were not certain that the eggs were impregnated. In three or four days a large proportion of the eggs hatched; we had given them no attention at all, but simply left them alone. The eggs were evenly distributed on the can, and not hung in masses; now, perhaps as good a thing to do with glutinous eggs is to let them alone. The eggs of the yellow perch are laid in rows and hung over twigs and are merely suspended where the eggs hatch without being disturbed. The catfish also lays glutinous eggs, but they are not stuck together; when the female lays them she leaves the male to hover over them. Now it may be that in all our attempts to hatch glutinous eggs we have only tried the same methods which we use in handling eggs which are non-adhesive, and have departed too far from nature in this matter.

MR. MATHER—You will notice in my report I mention the fact that all the white perch which we tried to keep and feed died.

COL. MCDONALD—So did ours, and I would like to hear from Mr. Marks about the "jack salmon," or pike-perch, and what success he has had in hatching the glutinous eggs of this fish.

MR. MARKS—We have hatched them for the past two years, and always by separating the eggs and never in any other way. Although it is a long and tedious process to break the adhesive character of the eggs, it is the only way we have ever succeeded. Mr. Nevin has a paper on the hatching of the fish, but I can only say that our method is the same as his. The eggs are taken in the rivers and transported to the hatchery on trays.

The Kennel.

AMERICAN FIELD TRIAL CLUB.

REGULATIONS AND RUNNING RULES—1887.

RULE 1. The management of the meetings for the Annual Field Trials shall be entrusted to the Board of Control, and the interpretation of all rules governing the Trials lies with them, or with a representative by him appointed. They shall decide upon all matters pertaining to the trials not provided for in these rules.

RULE 2. For all stakes, the names, pedigrees, ages, colors and distinguishing marks of the dogs shall be detailed in writing to the Secretary of the Club, to be filed at the time of making entry or entries. Any dog's age, markings or pedigree which shall be proven not to correspond with the entry, shall be disqualified, and all the stakes or winnings of such dog shall be forfeited.

RULE 3. Dogs to be eligible for the American Field Trial Club's Derby must have been whelped on or after the first day of January of the year preceding the trial for which the dogs are nominated.

RULE 4. The forfeit money must accompany every nomination, and the balance of the entrance fee must be paid before the drawing.

RULE 5. Any objection to an entry must be made in writing and addressed to the Secretary of the Club, to be acted upon by the Board of Control, whose decision shall be final.

RULE 6. Dogs afflicted with any contagious disease, or bitches in season, will not be permitted on the grounds.

RULE 7. Immediately before the dogs are drawn at any meeting, the time and place of putting down the first brace of dogs on the following morning shall be declared and posted in a conspicuous place.

RULE 8. All stakes shall be run in the order of the programme when possible. Should, however, the competitors or their representatives in the various stakes agree otherwise, the order may, with the consent of the Board of Control, or their representatives, be changed.

RULE 9. Dogs shall be drawn by lots and numbered in the order drawn. The first two dogs so drawn shall run together in the first heat of the series, the next two shall run together in the next heat, and so on in like manner until all the dogs in the series have run in heats. The winners of a series shall run together in like manner in the next series, and so on until only one unbeaten dog remains, which shall be declared the winner of first place and prize.

The last dog beaten by the winner of the first prize shall compete for the second prize with the best of those dogs previously beaten by the winner of the first prize. The winner of this heat shall be declared the winner of second prize.

The discretion is given to the judges of deciding which is the best of those beaten dogs, in the competition for second, by selection or by running extra heats between them. After the first and second winners are declared, the judges may select the winners of any other prize from any of the remaining dogs in the stake without further running and without regard to the heats won.

Changes may be made as hereinafter provided. Any dog absent during the first series for more than twenty minutes after his number is called, in the discretion of the judges, may be disqualified from further competition.

RULE 10. If two dogs owned or handled by the same person should be drawn together in the first or come together in any succeeding series, the second dog so owned or handled shall change places with the first dog not so owned or handled. This change shall be effected in the order of running if possible; if not possible, then in the reverse order of running. If such separation is found impracticable, the running together of two such dogs may be permitted. The judges shall arrange and announce the order of running in the second and subsequent series before the running of such series is begun.

RULE 11. If in any series of heats there should be a bye, such bye shall run with the winner of the first heat of that series, as the first brace of the next series.

If a dog be withdrawn or fails to appear, the dog drawn to run against such dog shall run with the bye, if there is one, at the end of the series in which the bye occurs, or if three should be more than one withdrawal, the dogs drawn to run against such withdrawn dogs, shall run together in the order of precedence in which they were drawn, but this shall not be construed to interfere with Rule 17.

RULE 12. Each dog must be brought up in its proper turn without delay; if absent more than twenty minutes its opponent shall be entitled to the heat, subject to Rule 9.

RULE 13. An owner, his handler, or his deputy may handle a dog during the running of the heats, but it must be one or the other; and when dogs are down an owner must not interfere with his dog in any way, if he has deputed another person to handle him.

RULE 14. The person handling a dog may speak, whistle to and work him by hand as he may deem proper, but he shall be called to order by the judges for making any unnecessary noise, or for any disorderly conduct; and if, after being cautioned, he persists in such noise or disorderly conduct, they shall order the dog, which he is handling, to be taken up and adjudged out of the stake, or they shall, at their discretion, fine the handler as provided for in Rule 15. An opponent's dog must not be interfered with or excited. In such case an appeal should be made to the judges.

The privilege is granted handlers to ask the judges for information or explanation that has a direct bearing upon any point at issue; pending such questions the dogs shall not be under judgment. Handlers shall not load their guns until a point has been established.

RULE 15. The judge or judges shall assess a fine upon any

handler who, while handling a dog under their judgment may be guilty of misconduct or disobedience toward them. The fine so assessed for each offense shall not be less than $5 nor more than $25. The handler so fined shall immediately pay the fine or give satisfactory security for such payment. Upon his failure to do so, the judges shall declare the heat finished and the dog run by said handler out of the stake.

RULE 16. If either dog points game, the other dog must not be drawn across him to take the point, but if the judges so direct, if the dog is not backing of his own accord, he must be brought around behind the pointing dog. Handlers must walk within a reasonable distance of one another, so that the dogs will be on an equality in the competition.

RULE 17. If, with the consent of the Board of Control, or their representatives on the ground, a dog be withdrawn from a stake, either on the field or at any time during the holding of a trial, then the owner of said dog, or his authorized deputy, shall give written notice over his signature of said withdrawal to the Secretary of the Club, or to the Board of Control, or their representative. If the dog belongs to either or any of the officials of the Club, written notice must be handed to one of the other officials.

When a winner of one or more heats is withdrawn for any reason, the best one of the dogs previously beaten by him shall be brought into his place in the competition, if in the opinion of the judges he has a chance to win in final heats for a place. No owner or handler shall be permitted to withdraw his dog or dogs from a stake on the field or at any time during the progress of a trial after such dog or dogs have been allotted a position in any heat, without the consent of the Board of Control or their representative on the ground. Any such owner or handler withdrawing his dog or dogs without such consent, may be debarred from any future trials or be penalized at the discretion of the Club.

RULE 18. If any person openly impugns the actions or decisions of the judge or judges, or acts in an ungentlemanly manner toward them, or intentionally interferes with or annoys them during the progress of a trial, he may be debarred from further participation in the trials and ordered off the grounds. The judges are vested with full power to preserve order and decorum upon the grounds at all times. The grounds are the private property of the Club (by contract), and as the judges are its representatives, they have, in law, the same right as any owner of private property to regulate and protect it, and may expel any obnoxious or disorderly person, using force if necessary. They have authority to provide police protection, if required, for themselves, agents, exhibitors, guests, handlers, attaches or servants.

All persons are hereby notified that permission to enter or remain on the grounds of the Club is given subject expressly to the above granted powers.

RULE 19. No person other than the judge, judges, President of the Club, stewards or reporters of recognized sportsmen's journals will be permitted to accompany the handlers of dogs competing in any heat, except owners of such dogs running in charge of a handler or deputy, and they shall be permitted to accompany the stewards until the finish of such heat, when they shall retire until their dogs shall again come into competition.

Two persons are prohibited from working one dog at the same time. If from any cause the handler of a running dog is disabled to such an extent that he cannot shoot, the judges will select some person to shoot for him, and they may in any case require handlers running dogs to go through minutely the evolution of shooting either a blank or shotted cartridge over any and every established point, upon being ordered to flush a bird. The handlers shall handle their dogs in the trials as in ordinary shooting, and shall go together so that the dogs shall be on an equality as to ground, opportunities for finding, etc. Spectators shall not be allowed nearer the handlers of dogs running than seventy-five yards at the rear.

Gentlemen authorized under these rules to accompany the judges in the trials, will not be permitted to give any information to, or converse with, the judges on any subject whatever, and it will be the duty of the judges to see that this rule is enforced.

RULE 20. All stakes shall be run to a finish when possible. If it is impossible to do so, then the judges shall place the dogs at their discretion according to the work done, regardless of the heats won.

RULE 21. Should the owner of a dog, or his representative, induce the owner of another dog, or his representative, to withdraw such dog for a consideration or bribe of any nature whatsoever, all prizes won by either shall be forfeited upon the facts being satisfactorily proven to the Board of Control. If, however, either dog be withdrawn without consideration, from lameness, injuries, or from any cause clearly affecting his chances of winning, the other dog may be declared the winner, provided that the heat has already begun, and provided further that it is not a heat for a place, on the facts of the case being clearly proven to the satisfaction of the judge or judges, provided the dog has been withdrawn as provided for in Rule 17. Any heat for a place cannot be won by a withdrawal. Heats for a place in case of withdrawals shall be governed by Rule 17.

When more than two dogs remain at the end of a stake, which is not run out, the stake shall be divided; and in case of a division between three or more dogs, of which two or more belong to the same owner, the dogs so owned shall be held to take equal shares of the total amount won by their owners, and in the division, the terms of any arrangement to divide winnings must be declared to the Secretary.

RULE 22. The first and second prizes in any stake cannot be divided. The judges may, however, at their discretion, divide the third prize, but in no case shall more than four dogs have part in the division, and they may be selected from any of the beaten dogs.

RULE 23. The dog last beaten by the winner of the first prize may run the final heat for second place on the following day with the approval of the judges.

RULE 24. All protests, except as hereinbefore provided, must be made and delivered to the Secretary of the Club, or in case of his absence, to a member of the Board of Control, or their authorized representative, at or before midnight of the date of the running of the final heat.

RULE 25. If a handler, either from physical inability cannot, or for any reason will not, walk as fast as in ordinary shooting, the judges shall not restrain the competing handler, who shall be permitted to handle his dog while walking as fast as in ordinary field shooting.

RULE 26. No one shall be allowed to talk to a handler while his dog is under judgment, unless what is said is spoken openly in the presence of the judges, and nothing shall be said at such time that shall prove advantageous to the handler in working his dog. If the judges know that any information has been given to a handler while his dog is under judgment, that may help him to locate birds, the judges may require the handler to draw off his dog from the birds so located, or they may decline to give any credit for the work of the dog upon birds so located or may enforce Rule 18.

In case a dog is lost while on point or he has gone astray, the judges shall appoint those who may assist in finding the dog so lost. No person other than those appointed shall be permitted to take part in any search. In case any unauthorized persons take part in the search, any credit which might come to the dog so lost shall, on account of their interference, not be credited to him, if the judges so decide; and any demerit due to the competing dog, on account of the interference of such persons shall not be scored against him.

RULE 27. If in the order of running there shall be but three dogs in a series, so that one would run a bye, then, while the competing dogs are running their heat, the third dog shall run a side heat without competition. The judges shall appoint (or, if they prefer, may request the Board of Control, or their representative, to appoint) an extra judge to see that the dog running the bye shall, while the competing dogs are running their heat, be run and handled the same as if in a competitive heat. The side heat so run is for the purpose of bringing together the winning dog of the heat and the dog running the bye upon an equality for the final heat determining first place.

If the dog running the bye would not compete for first place the same day he would run the bye, the side heat need not be run.

INSTRUCTIONS TO JUDGES.

1. The judges shall order up the dogs as soon as they have determined which is the better. Unless a dog shows such a low order of merit, that in the opinion of the judges he cannot show creditably, he shall, if time permits, have at least two chances to show his good behavior on birds. Either or both dogs may be ordered up by the judges for want of merit.

2. Pointing fur, feather, reptile or scent of game birds shall not be considered a false point.

3. Retrieving shall not be required or recognized as a merit in the Derby.

4. The judges shall give a dog ample opportunity to discover whether he is on a true or false point.

5. No assistance shall be given by the handler to enable a dog to discover whether he is on a true or false point.

6. Judges shall avoid, as far as possible, holding a dog so long on a point, for the purpose of securing a back or otherwise, as to enable the birds to run. Dogs should be brought up to the back only when opportunity offers, without interfering with the pointing dog, and a dog drawing on or pointing game which he has found independently, shall be afforded ample opportunity to locate the game without competition, and the handler ample time to flush the bird, it being left to the discretion of the judges to direct when to opposing dog shall be held in check. A dog shall not be held an unreasonable time upon a point, and if held on a point by order of the judges for a dog to secure a back, he shall not incur any penalty for results.

7. The number of times a dog points, backs, etc., shall not necessarily give him the preference, but the judges shall consider the quality of the performance rather than the frequency of the occurrence.

8. When a handler calls a point, it shall be considered only as calling the attention of the judges to the dog.

Backing.—The judges are requested to give no credit for backing unless it appears to be voluntary. Any assistance from the handler shall deprive the dog of credit for his performance.

Ranging.—The judges are requested to give greater credit to the dog that maintains the fastest and most killing range throughout, wide or close, as the necessity of the case requires; that works his ground with judgment; that observes his handler's course and position as a base of operations, and that hunts to the gun.

Obedience and Disposition. The judges are requested to give much greater credit to the dog that works promptly, without noise or severity, and is obedient, prompt, cheerful, and easily handled.

The rules are based upon the principle that each heat is a complete race, and the winner of the trial is the unbeaten dog which has directly or constructively beaten every other dog in the stake.

The judges are requested to observe that the scale of points given below is set forth as the scale of the Club. They are requested to use this scale, but they shall not consider the keeping of a score obligatory. Any scores so kept shall be solely for their use in determining each heat as scored, and said scores cannot under any circumstances be required of them.

MERIT.

Pointing	Nose	25	35	40
	Staunchness	10		
	Style in Pointing	5		
Ranging		15	30	75
Pace		10		
Quartering		5	35	
Style in same		5		100
Obedience in Disposition		10	25	
Backing		10		
Retrieving		5		

DEMERIT.

False pointing, breaking in, breaking shot, chasing.

These faults shall be gauged by the judges in their discretion.

The third chase, however, loses the heat.

DEFINITIONS.

Breaking In, is where a dog, through imperfect breaking, or from excitement, leaves his position when the birds rise, whether the gun is fired or not, and starts to chase, but stops within a few feet from where he started, of his own accord or by command.

Breaking Shot, is where a dog runs in when a shot is fired with the intention of getting to the bird, and does not stop promptly at command.

Chasing is where a dog follows the birds, either when a gun is fired or not, to an extent beyond the control of his handler for the time being.

Pointing. The judges will rate a dog's merit under this head by the display of nose and judgment in finding and pointing birds and his accuracy and quickness in locating birds after he has caught scent of them. False pointing, flushing, or uncertainty will detract from a dog's score under this head.

THE LATE E. F. STODDARD.—Cincinnati, O., June 6.—At a special meeting of the Board of Control of the American Field Trial Club, held at Cincinnati, Monday, June 6, the following resolution was adopted: "Whereas, Mr. E. F. Stoddard, a member of the Board of Control of this club, has been suddenly called from life, Resolved, that the following memorial be adopted and made part of the record: E. F. Stoddard was a man of well rounded character, of quick and generous impulse, which endeared him to all with whom he came in contact. His sphere of activity in the community where he lived was large, and his death creates a void which will not be easily filled. A man of great versatility and inventive genus, his energies were directed largely in enterprises which tended to improve and ameliorate the condition of mankind. He was a consistent member of the Protestant Episcopal Church, and by his life and example helped to inculcate the doctrine of the universal brotherhood of man. He was an ardent and enthusiastic sportsman and contributed of his time and means to the elevation and advancement of field sports in this country. As one of the founders of this club he took a keen interest in its success and labored unceasingly to enhance its prosperity. His loss will be deeply deplored in every walk of life where he was universally beloved and esteemed.—C. W. PARIS, Secretary.

DOG POISONING IN OTTAWA.—Ottawa, Can., June 8.—*Editor Forest and Stream:* I inclose herewith a cutting from one of our local newspapers, which will show you to what an extent dog poisoning is carried on here. The letter gives the number of the victims as twenty, but this is far below the mark. There have been over one hundred dogs poisoned during the past month at the lowest computation. The majority were dogs whose taxes had been paid, and therefore the city is in duty bound to trace out the scoundrelly perpetrators of the outrage; but they do nothing. Dog lovers must take the matter into their own hands.—CLUMBER.

AMERICAN KENNEL CLUB METHODS.

Editor Forest and Stream:

In answer to letter of Mr. Watson in FOREST AND STREAM June 9, in regard to the charges made by J. Otis Fellows against C. J. Farley, I will say that I do not think the A. K. C. should or could take any action in the matter. I have always taken the position that the A. K. C. should never take upon itself original jurisdiction, but should be exclusively a court of appeal. If there has been any misconduct by this party at the Hornell Kennel Club's show, it is Mr. Fellows' duty to prefer charges against the party and give him notice and a trial, and if guilty disqualify. Certainly it is not expected that the A. K. C. will take up its time trying cases that should be first investigated by the club; and if the party is not satisfied he can then appeal. As far as the Buffalo club is concerned we have not any jurisdiction whatever, and we should not recognize the action of any club not a member of the A. K. C. In regard to the disqualification of Mr. Mitchell, as referred to by Mr. Watson, I will say that I do not see how any club could prevent his exhibiting his dogs nor why they should, as he was disqualified by a club not a member of the A. K. C.

Now, my dear Watson, if you are right, let us suppose that the Buffalo club should disqualify you; then all of the clubs should recognize the action of the Buffalo club, which is not a member of the A. K. C. You could not appeal to the A. K. C. to remove the disqualification of the Buffalo club against you, and consequently you would have no remedy. The A. K. C. can only recognize the action of clubs belonging to the association. It may be that the Eastern Field Trials Club was a member of the A. K. C. at the time it disqualified Mr. Mitchell. If such was the case, then the clubs would be bound to recognize the bar or disqualification, and if such was the case, Mr. Michell could appeal to the A. K. C. to remove the same, but if it was not a member at that time the A. K. C. would not have any jurisdiction in the case.

Mr. Watson is usually right, but sometimes he does slip clear off the log, and if he would think and look for an explanation he would write otherwise. I see that Mr. Watson, in the *Sporting Life*, says that the local delegate only has jurisdiction during the show. Under the old rule the local delegate could be appealed to from the action of the club. I expressly stated that we should have a rule of this kind, as we could then get a quick decision and that a large majority of the protests could and would be disposed of by the local delegate without bringing the case to the A. K. C.

C. J. PESHALL.

JERSEY CITY, N. J.

Editor Forest and Stream:

There is a rule of the American Kennel Club which reads as follows: "It shall be the duty of the local delegate of the club to examine all entries and see that they conform to the rules of the American Kennel Club." There being no penalty attached to non-performance of this duty little or no attention is paid to it, and as the you-tickle-me-and-I'll-tickle-you method of doing business does not permit of any person connected with an associate club being censured, we are left at the mercy of the delegate. Fancy Mr. Gregg, of Pittsburgh, doing such things. It is so much easier for him to wave his hand majestically and shout, "Away false phantom of the deep, thy bones are marrowless," or words to that effect, when a protest is entered, that he will never bother his head about seeing that entries are correctly made. There are others who ought to do their duty, and as examples I shall select Messrs. Peshall, Child and Donner as the most likely to see that the A. K. C. rules are enforced; but to see whether this is so or not I propose running through the catalogues of all the shows from Newark to Detroit and note infringements of the rules.

Newark had the benefit of Mr. Wilmerding's experience, and we must not expect to find many mistakes except those made by the exhibitor;

No. 14. Sir Charles, entered by R. J. Sawyer. No date of birth is given, the dam's name is omitted and a wrong breeder is named. Won first in his class. Should have been disqualified under Rule 3.

No. 26. Beda, entered by R. J. Sawyer. Date of birth and breeder omitted. Won first in her class. Should have been disqualified under Rule 3.

No. 39. Rigi, entered by J. W. Dunlop. Date of birth and breeder omitted. Won first in his class. Should have been disqualified under Rule 3.

No. 53. Adonis. Date of birth omitted. Won first in his class. Should have been disqualified under Rule 3.

No. 56. Jupiter, entered by Percy C. Ohl, agent. Won third prize. Should have been disqualified under Rule 2, requiring all dogs to be entered "in the name of the *bona fide* owner."

No. 65. Wacouta Rose, entered by Wacouta Kennels. Date of birth omitted. Should have been disqualified under Rule 3. Won second prize.

No 73. Irene, entered by Benj. Meyer. Name of breeder omitted. Should have been disqualified under Rule 3. Won second prize.

No. 74. Flora, entered by W. H. Croselmirs. Date of birth and breeder omitted. Should have been disqualified under Rule 3. Won second prize.

No. 75. Follie, entered by W. W. Silvey. No pedigree or breeder's name. Should have been disqualified under Rule 3. Won first prize.

No. 84. Jumbo, entered by F. W. Buerch. Pedigree given as "full pedigree." Should have been disqualified under Rule 3. Won third prize.

No. 137. Bang Bang—Countess puppy, entered by Westminster Kennel Club. This is not in accordance with the requirements of Rule 2. Should have been disqualified. Won second prize.

No. 177. Gerald. The first prizes won at New York and Philadelphia in 1885 were presumably in puppy classes, but it is not so stated in the record, which reads as if the dog should have been entered in the champion class.

No. 207. Edo, entered by A. F. Terhune. Pedigree given as Dash; no dam mentioned though bred by exhibitor. Should have been disqualified under Rule 3. Won third prize.

No. 478. Meg, entered by Wm. Conner. No pedigree, date of birth or breeder given. Should have been disqualified under Rule 3. Won first prize.

No. 480. Sprite, entered by R. Gildersleeve. No pedigree, date of birth or breeder given. Should have been disqualified under Rule 3. Won second prize.

No. 503. Dick, entered by P. Casedy. Pedigree given as "full pedigree." Should have been disqualified under Rule 3. Won second prize.

No. 504. Ben, entered by P. Casedy. Pedigree given as "full pedigree." Should have been disqualified under Rule 3. Won first prize.

As will be seen, all of the above are prize winners, and the list might have been greatly extended by including all of the dogs imperfectly catalogued. It is possible, of course, that some of the above may have been properly entered by stated "unknown" in the spaces provided on the entry forms; but we can only judge by what is before us in the catalogue, and as in many cases "pedigree unknown" appears, the presumption is that that did not appear in the cases set forth.

It is a pretty full list, and when we take into consideration that prize winners are in the main owned by men of experience in dog shows, it is fair to assume that the mistakes of the uninitiated will be proportionately more numerous. No effort appears to have been made for the enforcement of the A. K. C. rules at this show, and it will be seen later on that this was no exception to the custom prevailing during the season.

JAS. WATSON.

THE PITTSBURGH MEDALS.

Editor Forest and Stream:

I must dissent from your editorial as far as any alleged guilty knowledge of Pittsburgh directors is concerned. I am sure that nine out of ten men, taking one of the "gold" medals into their hands, without special attention to the question of their composition, would lay it down again without suspecting anything as to its character; one does not critically investigate such a point, unless specially drawn to it. Remember that the gentleman who first discovered the fraud, had accepted his "gold" medal as genuine, until his attention was drawn to it, by finding his "silver" one was pewter, and that the gentleman who won the "gold" one you analyzed, also accepted it without suspicion. Further, how could one of the directors suspect anything bogus about the medals, when he remembered that the directors had given positive instructions that all medals should be as represented, or none should be given? Surely, they could not think that such a positive direction, in the interests of common honesty, would be totally ignored? You may ask what authority I have for this statement; well my informant is very sensitive about having his name in the papers in any way, but I will say to you that Mr. —— told me, in the presence of Mr. ——, both being directors, that such directions had been given by the board. I append the names, and you can certify to their character for truth and honesty, and I am sure that either will verify the statement to you, personally, if not for publication.

As to the A. K. C.; I cannot believe that such men as Peshall, Grosvenor, Winslow, Donner, Seabury, Collins (if he will act himself) Osborne, etc., will permit such performances as "pewter" medals, rowdyisms, reversals, re-reversals and sur re-reversals, etc. They will go astray in the future as they have done in the past, but each slip is warning them that the "knock down and drag out" of knaves is the only mo e of their suppression, and slowly the A. K. C. is coming up to where it should be. Mark what will be the action (if it has not already transpired) on the folly of the reversal in the Beaufort-Patti M. case. W. WADE.

HULTON, Pa., June 11.

The talk among local dog fanciers during the past week has been the alleged exposé of the gold medals presented to owners of winning dogs at the recent bench show.

The story, coupled with mention of the supposed pewter medal business last year, raised quite a commotion. Last week, in a journal devoted to the kennel, a bitter attack was made on the management of the show. It charged them with defrauding their exhibitors by offering gold medals and awarding medals made of composition and only gold plated. This fact it was said was proven by an analysis. It was said that the matter would be brought to the attention of the American Kennel Club, and an effort made to expel the Pittsburgh organization for the proceeding.

To ascertain the Association's defense in the matter a visit was paid to Secretary Elben this morning.

"Oh, I know where that story comes from," said Mr. Elben at once. "Everybody interested in the kennel knows that the man in question will do anything to kick up a quarrel and is constantly pitching into us. Ever since the show two years ago, when he selected the judges, and the show was a failure, he has been fighting us. But to the medals. No, they were not solid gold. No solid gold medals, as far as I can learn, have ever been given out by any bench show in the country. We did not announce that they were solid, and our exhibitors knew that they were composition. Many came and asked that they be given medals instead of money prizes. Now, I don't suppose many exhibitors melt their medals down as soon as they get them, or even at all. Medals are tokens, and that fact is generally understood. The gold medals were made in the East and the manufacturer said that they were among the best he ever made. They were of a composition and very heavily plated. The same parties attacked us last year, claiming that we gave out pewter medals and had them billed as silver. They brought the matter before the American Kennel Club, and it was laid on the table to their disgust. Every person who buys a piece of silverware in the jewelry store knows that he is not getting solid silver unless he has made a request that the article be sterling. So it is with the medals. The attack will do us no harm."—*Pittsburgh Chronicle Telegraph, June 9.*

TO RECONSIDER A RECONSIDERATION.

The following letter is a copy of one written by Mr. H. T. Drake (delegate from the St. Paul and Minneapolis Club, of St. Paul, Minnesota) in relation to the recent action of the American Kennel Club in the Beaufort—Patti M. protest:

Mr. A. P. Vredenburgh, Secy. A. K. C.

MY DEAR SIR—After mature deliberation I feel it my duty as a loyal member of the A. K. C., and in spite of my friendship for Mr. Munhall, to move a reconsideration of the vote taken at the last meeting on the Beaufort—Patti M. contest. My reasons for this change of heart are as follows: I must confess to entire ignorance of the whole matter until I arrived in New York city, when Mr. Munhall told me that he had a personal matter that he was going to bring before the meeting of the A. K. C., but he did not enter into an explanation of it. At the meeting it was probably taken for granted that Mr. Newberry and I (who were both new members) were thoroughly conversant with the details of the contest and the merits of the case and but little explanation or discussion took place. When a vote was taken by acclamation I refrained from voting, for I felt that I could not do so intelligently. A second vote by raising of hands was called for, and I still refrained from voting. When finally compelled to vote when the ayes and nays were called, I favored Mr. Munhall, though I doubted if I was doing right and told him so at the time. I think that Mr. Newberry was in the same predicament and did not know much more about the case than I did; however, if he desires to explain his position, he will probably do so without any help from me. Before I left New York I was sure that I had made a mistake, but took no steps to correct it, as I wanted to see the executive committee of our club first.

I am fully aware that in making this move I am liable to stir up ill feeling and open old sores, and perhaps incur the displeasure of my friend Mr. Munhall; but I trust that he fully understands my position and knows that I am not actuated by any personal motives.

In closing I may be allowed a few critical remarks, viz., I consider that Mr. Peshall made a mistake, first in offering the special prize after the entries had closed, though every one knows that he did so from the great interest he takes in dog matters, and to make the Waverly show a greater success by bringing in dogs which were not previously entered, and secondly by allowing Nick of Naso to compete for a prize which he, the owner of the dog, had offered.

Again, Mr. Mason should not have entered Beaufort to compete for it, though he had a perfect right to do so under the terms upon which the prize was given. It was not wise to thus throw himself open to criticism.

Mr. Munhall had a right to refer the matter to the A. K. C. for decision, but should have allowed it to drop when it was once decided. It was not in good form for him to vote upon the question at the last meeting, as it was a personal matter with him and did not concern his club.

Mr. Munhall announced openly at the meeting that it was not the money that he wanted but justice. I and others understood him to say before the vote was taken that he would not make a demand for the money. I was, therefore, not a little surprised when I heard that he had formally demanded the amount of the prize from the secretary of the New Jersey Kennel Club.

Mr. Wade with righteous indignation and in very forcible language gives the A. K. C. a scoring for its action on this question. He should take into consideration the many extenuating circumstances, and also remember that the proxies and newly elected delegates committed this *faux pas* in the name of the A. K. C.

Pardon my prolixity. I shall try and do better next time. I hate dissensions, and try to keep out of them, but cannot help myself this time. Yours truly, H. T. DRAKE.

PEMBROKE DISQUALIFICATION.—New England Kennel Club, Boston, June 8.—*Editor Forest and Stream:* We beg to inform you that the greyhound Pembroke, owned by Mr. Chas. D. Webber, has been disqualified by the N. E. K. C., and his winnings at Boston withdrawn. This sustains the protest of Mr. H. M. Huntington that the dog was entered in the open class, when his owner knew he was a champion at the date of show. The committee find that Mr. Webber continued him wrongly classed, and has since stated in point that the blame for not transferring the dog rests with the committee, who accidentally overlooked the dog's record in the rush of work. We take this opportunity of saying that whatever blame can be attached to us by any construction of Rules 9 and 22, A. K. C., we think likely to occur again; and it is our opinion that an owner should be compelled to notify the committee of any change in his dog's record from the close of entries to date of show, and that responsibility to notice should rest with the party who is never ignorant of his dog's winnings.—BENCH SHOW COMMITTEE, NEW ENGLAND KENNEL CLUB.

Editor Forest and Stream: I have just received notice from the secretary of the A. K. C. stating that the N. E. K. C. have disqualified the dog Pembroke. I am sorry for this dog. What was the matter? Did he have the mange or some other contagious disease? If a dog has a contagious disease the Vet. in charge should order him out of the show; it is not necessary to disqualify him. Disqualification only may extend to dogs of exhibitor who has been found guilty of some violation of the rules, when the disqualification may extend to the dog. I hope in your next issue that the secretary of the N. E. K. C. will publish a letter of explanation and apology to Pembroke.—C. J. PESHALL.

WEIGHT OF A MASTIFF LITTER.—Wahpeton, Dak., June 6.—Herewith please find table of weights at the age of six weeks of a litter of mastiff puppies, which I think has never been equaled; certainly not when the size of the litter is considered. Comparing with the weights of the famous pair of Amidon puppies bred by Ashmont, it is seen that the bitch Asia weighs exactly the same, viz., 15½lbs., as the Amidon bitch, while the dog Atlas also weighs 15½lbs., 1½lbs. more than the Amidon dog puppy at the same age. These puppies are by Lee's Turk (A.K.R. 2222) out of my fawn bitch Sylvia (Major—Celeste), being Sylvia's first litter, and were whelped April 23, 1887. I attribute the large size and perfect development of these puppies largely to the fact that the dam has always been generously fed, her diet consisting principally of raw beef. Never having been chained or confined, her muscular system is splendidly developed. Weights at six weeks of age: Ajax, 15lbs.; Abel, 15¼lbs.; Atlas, 15½lbs.; Asia, 15½lbs.; Andrea, 14lbs.; aggregate weight, 75½lbs. These are genuine weights, taken in presence of responsible persons and can be substantiated. That the scales were correct was proven at the time by actual test.—ORTON GIFFORD.

THE UNITED STATES FIELD TRIALS CLUB, after an examination of the grounds in Maryland which had at first been selected for their trials, have concluded that they will not do, and now propose to rent grounds in North Carolina. Any persons having grounds are requested to communicate with Mr. C. J. Peshall, Hoffman House, New York city.

MILWAUKEE SHOW.—Milwaukee, Wis., June 10.—Our next annual show of the Wisconsin Kennel Club will take place on Sept. 20, 21, 22 and 23, in the Exposition Hall. Mr. R. D. Whitehead, vice-president of our club, also officer of the Humane Society, will manage the show. Full particulars later.—A. M. GRAU, Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Rumson Lilly. By H Johnson, Fair Haven, N. J., for liver and white pointer bitch, whelped April 25, 1887, by Mainspring (Mike—Romp) out of Marguerite (Robert le Diable—Belle Faust).

Marguerite II. By J. H. Dey, Red Bank, N. J., for liver and white pointer bitch, whelped April 25, 1887, by Mainspring (Mike—Romp) out of Marguerite (Robert le Diable—Belle Faust).

Frank Obo. By G. W. Canterbury, Cambridgeport, Mass., for black cocker spaniel dog, whelped April 23, 1887, by Shady (Obo II.—Darkie) out of Judy Obo (Obo II.—Daisy Zulu).

Lady Catherine. By E. C. Johnson, Framingham, Mass., for orange, white markings, St. Bernard bitch, whelped April 28, 1887, by Duke of Lancaster (A.K.R. 2862) out of Wm. M. Bullivant's imported Doris.

Ruby II. By E. F. Starkey, Fitchburg, Mass., for red Irish setter bitch, whelped April 15, 1887, by J. E. Thayer's dog out of Ruby (Elcho—Flora).

Ned Elcho. By E. F. Starkey, Fitchburg, Mass., for red Irish setter dog, whelped January, 1887, by Elcho, Jr. (Elcho—Lorna) out of ——.

Fred Gladstone. By C. Tucker, Stanton, Tenn., for black, white and tan setter dog, whelped Jan. 2, 1887, by Gladstone (Dan—Petrel) out of Flounce (Druid—Ruby).

Kamernap Kennels. By Cammeyer & Knapp, Brooklyn, N. Y., for their kennels of St. Bernards.

Ajax and Ajax II. Mr. Victor M. Halderman having a prior right to the name Ajax, we claim Ajax II. for our brindle, with dark points, mastiff dog, whelped April 23, 1887, by Turk (A.K.R. 2222) out of Sylvia.—RICHLAND KENNELS (Wahpeton, Dak.).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Kelp—Pride of Dixie. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Kelp (Prince Rob—Kate Jewell) to E. V. Hale's Pride of Dixie (Gladstone—Countess Druid), May 24.

Ruby Croxteth—King Bow. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Ruby Croxteth (Croxteth—Seitner's Lass) to their King Bow (Bow—Taffee), May 17.

Flirt—King Bow. L. F. Hatch's (Ann Arbor, Mich.) pointer bitch Flirt to the Detroit Kennel Club's King Bow (Bow—Taffee), May 30.

La Duchesse—Otho. The Hospice Kennels' (Arlington, N. J.) rough-coated St. Bernard bitch La Duchesse (A.K.R. 3022) to their Otho (A.K.R. 483), May 30.

Swiss Rhona—Otho. The Hospice Kennels' (Arlington, N. J.) rough-coated St. Bernard bitch Swiss Rhona (A.K.R. 3030) to their Otho (A.K.R. 483), May 31.

Bridget—Tuck II. A. B. Norcross's (Milford, Conn.) pug bitch Bridget (Fritz—Nell) to his Tuck II. (A.K.R. 2752), June 7.

Patti M.—Nick of Naso. C. Munhall's (Cleveland, O.) pointer bitch Patti M. (Donald—Devonshire Lass) to C. J. Peshall's Nick of Naso (Naso II.—Pettigo), June 2.

Temptation—Nick of Naso. Geo. McNeil's (Jersey City, N. J.) pointer bitch Temptation (Fogg's Don—Alden's Maud S.) to C. J. Peshall's Nick of Naso (Naso II.—Pettigo), May 25.

Beulah III.—Leph. J. C. Schuyler's (Berryville, Va.) pointer bitch Beulah III. (Tim—Nipp T.) to A. H. Christian's Leph (Graphic—Seph G.), May 29.

Gilt—Black Pete, Jr. H. D. Brown's (Waterbury, Conn.) cocker spaniel bitch Gilt (Col. Stubbs—Diamond) to J. P. Willey's Black Pete, Jr. (Black Pete—Miss Ginger), March 30.

Druidess—Turk II. Minnehaha Kennels' (Minneapolis, Minn.) mastiff bitch Druidess (A.K.R. 2221) to their Turk II. (A.K.R. 2222), April 8.

RANGE AND GALLERY.

CREEDMOOR, June 11.—The second Qualification and Marksmen's Badge Match was shot to-day, the weather was perfect, but a strong tricky breeze blowing from 1 to 2 o'clock was very trying to the competitors, who, however, made good scores. The attendance was large, about 200 men being present, of whom 150 succeeded in making a qualifying score. The following made 42 or over and thereby became sharpshooters and are entitled to a silver bar, those marked * being the winners of the match:

	200 yds.	500 yds.	Total.
*S W Morritt, Co B, 7th Reg.	22	23	45
*J D Burtis, 17th Separate Company	22	22	44
*J D Foot, Co F, 7th Reg.	19	24	43
*W A Stokes, Co I, 23d Reg.	20	23	43
*W A Robinson, Co A, 23d Reg.	20	23	43
*J T Hull, Co F, 23d Reg.	21	22	43
*C W Thom, Co F, 7th Reg.	22	21	43
*C L Kelly, Co C, 69th Reg.	22	21	43
*G F Hamlin, Co I, 23d Reg.	23	20	43
W C Holmes, Co B, 23d Reg.	19	23	42
F L Holmes, Co I, 23d Reg.	20	22	42
F S Kennedy, Co F, 7th Reg.	20	22	42
Geo Ball, Co F, 23d Reg.	20	22	42
F W Singleton, Co I, 23d Reg.	20	22	42
C C Brown, Co I, 7th Reg.	21	21	42
W J Underwood, Co H, 7th Reg.	21	21	42
D Bacon, Co K, 7th Reg.	22	20	42

Next matches June 18 and July 4.

THOMASTON, Conn., June 12.—Six members of the Empire Rifle Club were present at the range this P. M. and succeeded in doing some of the poorest shooting ever done on the range. The light was good, but the wind was a difficult one, veering from 3 to 9 o'clock:

Fred A Perkins	8	6	6	7	5	7	5	9	6	10—69
G G Gilbert	9	8	5	7	5	7	6	6	9	5—67
E Thomas	5	7	6	5	10	7	4	7	7	8—66
A Fox	8	8	6	4	8	8	5	5	5	7—64
G A Leumon	4	6	6	7	8	8	7	7	0	10—63
G P North	6	7	6	4	5	8	6	9	0	9—60

We use only the target center.—.52-CAL.

HAVERHILL, Mass., Rifle Club, June 11.—Record match, 200yds. off-hand, standard target. Messrs. Hill and Elliott are members of the Lawrence Rifle Club, and were very welcome visitors:

H Tuck	9	8	7	7	10	8	8	9	9	8—
J Bushell	7	8	8	9	6	9	8	7	8	10—
A Edgerly	8	8	9	8	8	7	6	7	9	10—
C M Hill	7	9	8	10	9	8	5	6	9	8—
J F Brown	6	7	8	9	9	6	5	7	8	8 10—
A D Elliott	6	8	8	9	7	5	9	5	9	9—
L Jackson	9	5	8	5	3	6	9	5	7	8—

HALIFAX, June 8.—The competition for places on the Nov Scotia team in the inter-provincial rifle match was commenced on Bedford Range to-day. The wind was very unfavorable, and made good scores impossible. There were 23 competitors, and the ranges were 200, 500 and 600yds. The best scores were as follows:

	200	500	600		200	500	600
Capt Bishop, 63d	29	23	28—90	Lieut Stevens, 66th	27	30	29—86
Lieut Fiske, 63d	31	31	28—90	Capt Garrison, HGA	28	30	27—85
Pvt Corbin, 63d	30	28	30—88	Lieut Adams, HGA	30	29	26—85
Capt Corbin	30	28	29—87	Gunn'r Fader, HGA	29	28	27—84

NIAGARA FALLS, N. Y.—The Niagara Rifle Association lately organized here with a charter membership of 10s, which includes nearly all of the members of the 42d Separate Co., N. G. S. N. Y. expect to have their range in readiness for an opening day some time this month. The Association is officered as follows: L. W. Pettebone, President; R. N. Campbell, Vice President; C. S. Rice, Secretary; Drake Whitney, Treasurer. It will be one of the finest ranges in the State, and as the Association contains some excellent marksmen, some great scores may be expected.—C. S. RICE, Sec'y.

NEWARK, June 7.—The John Magory Rifle Club met this evening, and after adopting a constitution and by-laws elected the following officers: President, E. Branigan; Vice President, Christopher Figuera; Secretary, J. Magory; Treasurer, G. Jothe; Sergeant-at-Arms, G. Vliet; Rifle Inspector, F. Schaeffer; Official Scorer, E. Howard. The regular meetings of the club will be held on the first and third Tuesdays of each month, at No. 84 Springfield avenue.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

DECORATION DAY TROPHY.

THE ties for prizes in the Decoration Day Trophy match will be shot off on Saturday, July 2, or Monday, July 4. A club may select either date and we must be notified at least one week in advance which date will be chosen. The conditions will be the same as those governing the original shooting, and the teams be made up as before.

WELLINGTON WINNERS.

BOSTON, Mass., June 12.—*Editor Forest and Stream:* There seems to have been a mistake in recording the list of prizes and names of winners in the late carnival held at Wellington, Mass. I herewith inclose you a correct list, according to the official score books. You will confer a great favor on the Association if you insert same in your next issue.—C. W. DEMICK.

19. Set of Ideal loaders, value $1.25, won by Gore, Boston	49
20. Set of Ideal loaders, value $1.25, won by Morse, Jr., Wellington	48
21. Set of Ideal loaders, value $1.25, won by Edwards, Boston	47

THE NEW YORK STATE SHOOT.

THE thirtieth annual gathering of the New York State Association was this year at Utica, and the arrangement was under the very excellent care of the Oneida County Sportsmen's Association. The last previous gathering of this Association was held in Utica in 1871, and there are many shooters who took part there just as enthusiastic to-day. The field portion of the annual programme began at Riverside Park on Tuesday morning, June 7. The day was bright and clear, and as there was no wind the weather could not have been more favorable for the sport. 12 blue-rocks, 4 traps, 18yds., 21yds. for ties:

Kendall	11100011101— 8	Whitney	11011101011— 9

The first prize, a hammerless gun valued at $100, given by L. C. Smith, Syracuse, was won by William M. Richmond of Rochester.

Ties on 11:

Baker	001111—4	Elliott	111010—4
Wagner	101111—5	Crouch	010111—4

The first prize, $33 in cash, was won by Charles Wagner of Poultney. The other three gentlemen shot off for second place, and F. A. Elliott of Clinton won.

Ties on 10:

Hillebrand	101 w.	Rickman	010 w.
Felton	01101—4	Hess	110111—5
Luther	11111—6		

G. C. Luther of Syracuse won the first prize, and H. R. Hess of Geneva second prize.

Ties on 9:

Besser	110111—5	Kendrick	110010—3
LeFever	11010 w.	Harris	0110 w.
Eames	111111—6	Whitney	1010 w.
E H Smith	01110 w.		

The first prize was won by F. W. Eames of Bay Ridge; the second was won by Otto Besser, Jr. of Buffalo.

Ties on 8:

Partis	011111—5	Kendall	001 w.
Kennedy	101 00—3	M C Smith	1100 w.
Erbe	001010—2	Koch	01110 w.
Hookaway	110110—4	McCormick	101101—4
Stacy	011101—4	Walrath	101111—5
Monroe	011111—5		

Messrs. Partis, Monroe and Walrath again shot off, the latter won. The first prize was awarded to A. Walrath, and the second to F. W. Partis, Ilion.

June 3.—There was a little breeze to-day, but not enough to interfere materially with the shooting, and the weather on the whole was favorable for good work. Sage, of Buffalo, acted as referee, Messrs. Elliott and Stice as judges and James Brown, of Rochester, as caller. The third contest opened at a half-past ten o'clock:

J G Stacy	101010101111— 8	C Oehnig	1000011010 — 5

W Richmond	1111111011110—10	A J Minton	0011101011111— 8

E. J. Rumsey, of Ithaca, who broke 12 straight birds, was awarded first prize, $100 in cash.

Ties on 11:

Jacob Koch	00011—3	J. S. Barnes	111111—6
W H Booth	101010—3	W C Hadley	111111—6

The prize for leading score, $50 cash, was divided by J. S. Barnes of Waterloo and W. C. Hadley, Rochester. Ties on 10:

Eames	111110—5	Richmond	10110w
Banta	100111—4	Harris	111011—5
Wheeler	010000—1	Hess	0110w
Erbe	111110—5	Catchpole	0110w

Messrs. Eames, Erbe and Harris again shot off, the former scoring 5, Harris 4, and Erbe 3. The first prize, $25 in cash, was awarded to F. M. Eames, of Bay Ridge, and the second to W. C. Harris, of Utica. Ties on 9:

Wagener	0101111—4	Whitney	10110w
M C Smith	0 10 0—3	Coolidge	1010l1—4
LeFever	01 00w	Brunner	011011—4
Luther	111011—5	Taylor	1111100—7
Hudson	111111—6	Story	111100—4

The first prize was won by E. J. Hudson, Syracuse, and the second by George C. Luther, of the same place. Ties on 8:

Stacey	00w	Elliot	111101—5
Kendall	111111—6	Hillebrant	1100w
Baker	10110—5	Mayhew	0100l1—3
Babcock	0110w	Felton	110101—4
Besser	111011—5	Gray	111100—4
Crouch	111110—5	Minton	000011—2
Hookway	101001—3		

F. W. Kendall, of Wolcott, a member of the Lakeside Gun Club of Geneva, won first. In shooting off the ties of 5, A. Baker, of Syracuse broke 5 straight targets and won the second prize.

There were forty entries in the fourth contest, which occurred in the afternoon. The prizes aggregated in value $341.50. Messrs. Brunner and Stice acted as callers, Messrs. Elliott and Klages as judges and Mr. Elliott as referee. The shooting was quite brisk, and several very good scores were made. The record was as follows:

Taylor	1101010111 0— 8	Hookway	1111111110 0—10
Kendall	0001110010 1— 5	Smith	0111111111 9— 9

Ties on 12:

Luther.....111101—5 Whitney.....111111—6

The first prize, a Le Fever hammerless gun, worth $100, given by the Le Fever Arms Company, was awarded to H. B. Whitney, of the Lakeside Gun Club, Geneva, and the prize for second score, $50 in cash, to George C. Luther, Syracuse.

Ties on 11:

Rumsey	111100—4	Elliott	111111—6
Baker	111011—5	Wolfe	00w
Barnes	100111—4	Wagener	1010w
Eames	111100—4		

The first prize, $60 in cash, was won by F. A. Elliott, of Clinton, a member of the Oneida County Sportsmen's Club; and the second by A. Baker, of the Geneva Sportsmen's Club, of Irondequoit.

Ties on 10:

Koch	110110—4	Hookway	110111—5
Rickman	111110—5		

Messrs. Hookway and Rickman then shot off their tie and the former won. The first prize was awarded to W. E. Hookway, Syracuse, and the second to A. Rickman, of Greece.

Ties on 9:

Richmond	111111—6	Booth	101110—4
Hudson	111011—5	Minton	101111—5
E H Smith	01110w		

The first prize was awarded to W. M. Richmond, Rochester. In shooting off for second place, E. J. Hudson, of Syracuse, broke five birds and won.

Ties on 8:

Taylor	111111—6	Felton	111101—5
Banta	111011—5	Catchpole	101101—4
Harris	1000w	Coolidge	000w
Besser	0110w	Walters	111110—5
Walrath	011111—5	Blakeley	111111—6
Hadley	100111—4	Scott	100110—3

Messrs. Taylor and Blakely shot off, and the former won, breaking five birds. The first prize was awarded to E. Taylor, Buffalo, and the second to M. J. Blakeley, of Syracuse.

June 9.—The fifth and sixth contests were held to-day. The rain of the morning cleared the air and lowered the temperature so that the day was most enjoyable. The fifth contest, for prizes aggregating $315, was the consolation contest of the week, and was one of the most interesting on the programme. Fifty-six entries were made. J. R. Stice was referee, Dr. Gottlieb and J. Koch were the judges and W. M. Richmond the caller. The score was as follows:

W McCarthy	0011010000111— 6	Walker	0010011000010— 4
E Taylor	0110111101011— 8	T Scott	0010010111010— 6

M J Blakesley	1101010111101— 8	J G Stacey	0100101111001— 6
G R Vine	0111101011010— 7	W A Hunter	0110001111110— 7
A Downs	1000011000111— 5	H L Gates	1011100010001— 6
A Walrath	0101101101111— 8	W S Porter	1111100000100— 5
A E Rickman	0111010101111— 8	Jersey	0011111111011— 9
O A Wheeler	1100101000111— 7	J E Coolidge	1111101011110—10
F H Dix	0101011010010— 5	W B Kirk	1001100011011— 6
D M Le Fever	1111011101011— 9	F W Lyons	1100001000001— 4
C J Rumsey	1011110011111— 9	M C Smith	1111111111010—11

B. Catchpole, of the Northern Wayne Gun Club, of Walcott, won the first prize, $100 in cash.

Ties on 11:

H Chesmore	0101100—2	M C Smith	011101—4

M. C. Smith, of Syracuse, won the first prize in this class, H. Chesmore, of Ilion, won the second prize.

Only one contestant succeeded in getting into the third class of ties, J. E. Coolidge, of Walcott.

Ties on 9:

J Banta	111110—5	C J Rumsey	1010w—2
E Howe	100110—3	A N Candee	101101—4
Hookway	11100—4	E Hudson, Jr	0111001—4
A J Minton	011111—5	L F Jersey	0110w—2
D M Lefever	10110w-3		

Messrs. Banta and Minton, in shooting off their 5 birds broken, tied a second time on a like score. A. J. Minton, of Buffalo, in the third trial, broke 6 birds to his opponent's 1, and took the first prize, J. Banta, of Johnstown, won second.

Ties on 8:

E Taylor	11100—4	A Rickman	111011—5
J Hillebrant	01110—4	Prettie	011100—3
M J Blakesley	11101—4	L Erbe	110111—5
A Walrath	111111—6		

A. Walrath won first, and L. Erbe, in shooting off his tie with A. E. Rickman, won second.

The sixth contest, for prizes aggregating $325, occurred in the afternoon. Dr. Gottlieb and Messrs. Hudson and Baker alternately acted as judges, and James H. Brown, of Rochester, as caller. There were 37 entries. The score was as follows:

W C Hadley	0111111111101—10	Stilson	1010111110001— 7
A Baker	1111111011010— 9	F M Eames	1101111011 0— 9

O Besser, Jr	0111111111111—11	Dr Booth	0010110110110— 6
Ed Taylor	1111111110110—10	F A Elliott	1110110111101— 9
W E Hookway	1101010111111— 9	G C Luther	1111111110111—11
E Hudson	1111001010112— 8	L F Jersey	1011111100001— 8
J Montgomery	1111011111111—11	M M Brunner	1110111111101—10
H R Hess	0010110111110— 7	J Banta	1011111011101— 9
E H Smith	0111010100011— 7	F A Partis	0010001110110— 5
C Wagener	1111111111112—12	B Catchpole	1111001111101— 9
O A Wheeler	1011111110011— 9	H Chesmore	0001000011110— 4
G W Crouch, Jr	0111110101111— 9	J E Coolidge	1100101111011— 8
J S Barnes	1111111111111—12	Storey	1110100000110— 6
J Northrup	1100001010111— 6	Felton	1001001011100— 5
Richmond	1101110010111— 8		

Messrs. Wagener, of Poultney, Whitney, of Syracuse, and J. S. Barnes, of Syracuse, tied on 12 birds broken. They divided the prizes in this class, consisting of $100 in cash.

Ties on 11:

Besser	111110—5	Luther	0110w
Montgomery	111110—5		

The second tie on five birds between Messrs. Besser and Montgomery was followed by a third five, a fourth of six, and a fifth of four. In the sixth trial O. Besser won the $50, J. Montgomery, of Jamestown, took second.

Messrs. W. C. Hadley, of Rochester, Ed Taylor, of Buffalo, and W. W. Brunner, of Utica, divided the prizes for the third class of ties.

Ties on 7:

Baker	1110l1—4	Eames	10110w
Koch	110111—5	Lefever	00w
Smith	111111—6	Erbe	1010w
Hookway	11010w	Elliott	111111—6
Wheeler	111110—5	Banta	110w
Crouch	010w	Catchpole	111111—6

In shooting off the subties of 6 birds a second tie of 5 was made by Messrs. M. C. Smith, of Syracuse, and F. A. Elliott, of Clinton. In the third trial Mr. Smith won first prize.

Ties on 8:

McCarty	0011100—2	Jersey	000 —0
Hudson	110101—4	Coolidge	011011—4
Richmond	111101—5		

The first prize was awarded to Mr. Richmond, of Rochester. Edward Hudson, of Syracuse, won second:

At 3 o'clock in the afternoon occurred the double rise contest between J. R. Stice, of New Haven, Conn., and Ed Taylor, of Buffalo. A large crowd had gathered to witness the shooting of these two champions. Mr. Stice, who is a large, finely built man, more than 6ft. in height, stepped to the score first. He is employed by the Winchester Repeating Arms Company, of New Haven, Conn., and used one of their repeating shotguns in the contest. Each contestant had a chance at 25 double rises. Mr. Stice scored 23 birds out of 50, and his opponent 36.

Friday, June 10, was the last and by far the pleasantest day of the State shoot. The air was cool and pleasant. Contest No. 7, for prizes worth $318.50, was called early in the morning with 36

entries. The shooting was the poorest of the week. Following is the score:

Richmond.....0111111111111—11	C W Walters.....0111011101000— 7
F M Eames .....1110111011110— 9	H Whitney.....1110001111111— 9

O Besser, Jr.....0111111111011—11	J A Davis.....0110300011101— 5
W McCarthy. ...1111101011003— 9	M M Brunner.....0111110011111— 9
D M Lefever. ...0111110111111—10	F Schwartz.....0010010000110— 4
H R Hess. .....0100111010111— 8	H Ayling.....0001000010000— 2
Dr Booth.....1110101001110— 8	W Prettie .....0011010111110— 7

There was no tie on 12, so the 11 class competed for the prizes of the first class of ties:

Richmond.....111111—6	F A Elliot. .....0110w—2
M C Smith..... ..110101—4	A J Minton. .....111101—5
O Besser.....011100—3	

W. M. Richmond, of Charlotte, won first, $100 in cash, and A. J. Minton, of Buffalo, the second.

Ties on 10:

E H Smith.....100111—4	D M LeFever..... . ..011011—4
C Wagener.... .....111010—4	

C. Wagener, of Pulteney, on the third trial won first, D. M. LeFever took second.

Ties on 9:

F M Eames.....111111—6	E Hudson.....111111—6
L Erbe.....110011—4	J S Barnes . .....10w —1
W McCarthy..... ...011101—4	A J Storey.... .....00w —0
H Whitney.....011011—4	M M Brunner.....0w —0
G C Luther..... ....011001—3	

In shooting off the second tie, E. Hudson, of Syracuse, won first, F. M. Eames, of Bay Ridge, won second.

Ties on 8:

A Baker.....000111—3	G W Crouch.....000000—0
H R Hess.....001101—3	Geo Stillson.....110110—4
Dr Booth.....010100—2	

Geo. Stillson, of Rochester, won first, H. R. Hess won second.

Ties on 7:

J Koch.....011001—3	C W Walters.....030001—1
W C Hadley.....111111—6	Prettie.....011100—3

W. C. Hadley won first, J. Koch, of Buffalo, won second.

In the afternoon occurred the annual shoot for the Dean Richmond trophy, a solid silver vase, beautifully ornamented. The trophy is valued at $1,150, and is to be held by the winning club each year in trust. The conditions of the contest were that it should be shot for by three members of each club entering, each marksman to shoot at 20 single live birds. Four clubs entered for the contest. The Oneida County Club would have joined in the match, but as there were not birds enough to go around, they withdrew in favor of the visitors. The scores made in the contest were as follows:

Audubon Club, of Buffalo.	Queen City Club, of Buffalo.

47	44

Referee J. R. Stice, of New Haven, Conn., formally declared the Audubons the victors. William Richmond, of Charlotte, acted as caller in this contest, and E. H. Smith, of Buffalo, and F. A. Elliott, of Utica, judges. Dr. W. H. Booth, of Utica, also acted as judge during a portion of the shoot. This is the third time the Audubon Club has won the trophy. Last year its representatives scored 56 birds, and two years ago 57 birds.

The best of feeling ran through the entire meeting. On one day out of 1,126 blue rock targets sprung but 4 were broken in the trap, while in the seven programme contests during the shoot 7,021 blue rocks were thrown from the trap with a total breakage by traps of 45, or an average of 1 to every 156 thrown.

C. W. Wagener took away more in value of prizes than any other marksman. His winnings in five days reached $300.

The capital reports of the entire shoot made in the Utica *Herald* enabled each participant to keep a very satisfactory record of the meeting.

MIDDLESEX GUN CLUB.—Regular monthly shoot at the grounds, Dunellen, N. J., June 8. A medium lot of birds, as it is difficult to get other than young birds at this time of the year. Old South Paw acted as referee in his usual quaint and honest manner. The match between Quinlan, Lever and Cannon did not come off. Quinlan sent word in time that he could not be on hand, and had his forfeit withdrawn. Lever was on hand, and as Cannon could not very well arrive before 1 P. M., Lever demanded and got the forfeit of $10, packed up his gun and left the grounds. Cannon arrived later, and the air became blue at once. The hasty action of Mr. Lever, though strictly or technically right, is open to and receives the reprobation of very many of the shooters on the grounds at the time. The Middlesex Club is decidedly a live club, and the most enthusiastic one we know in the live bird line. They will have birds no matter what they cost, and they will stay by the traps until the last bird is shot even until long after the sun has gone down. The following are the scores of the different sweeps:

Match at 4 live birds:

Forrest (20).....0111—3	Lever (30)..... .....1122—4
J H Force (30).....1111—4	C Smith (30 .....0111—3
Williams (30).....1111—4	Dean (27).....0110—2
Robby (27)..... .....1100—2	

Match at 4 live birds:

Forrest ....0211—3	Lever.....2112—4
J H Force..... .....2111—4	C Smith.....2101—3
Williams.....1121—4	Dean.....0100—1
Robby .....2011—3	Ties divided.

Match at 4 birds:

Williams.....1111—4	Robby.....0010—1
Dean.....1101—3	Forrest..... .....1111—4
J H Force.....1111—4	C Smith ....2201—3

Ties divided.

Match at 4 birds:

Williams.....1110—3	Robby..... .....2212—4
Dean.....0110—2	Forrest ....1211—4
J H Force.....1110—3	C Smith ....1121—4

Ties divided.

Mech at 4 live birds:

Williams (30)..... ....1122—4	Forrest (29).....1010—2
Cannon (26)..... ....2111—4	Voorhees (30).....1011—3
J H Force (30).....1111—4	Robby (27).....2011—3
McMurchy (31).....1111—4	S G Smith (30).....1021—3
Dean (27)..... .....0110—2	D Terry (30) .....1111—4
Lawrence (29)..... .. ..0121—3	Keller (29).....0021—2
C Smith (30).....1131—4	

J. H. Force, McMurchy and C. Smith first, ties on 3 divided, Forrest third.

Match at 4 live birds:

Cannon..... .....1111—4	C Smith..... .....2011—3
McMurchy..... .....1111—4	Voorhees..... .....1011—3
Forrest..... .....1110—3	Robby..... .....1000—1
J H Force..... .....1111—4	S G Smith..... .....2112—4
Williams..... .....1111—4	Dickens..... .....1020—2
Lawrence..... .....1101—3	

McMurchy and Cannon first, C. Smith second, Dickens third.

Match at 3 pairs live birds, 21yds. rise, ties at 26 and 31yds.:

Cannon ....10 10 11—4	C Smith..... .....00 10 10—2
Dickens..... .....10 10 11—4	Forrest..... .....10 11 00—3
Voorhees..... .....10 10 01—3	Terry..... .....11 10 11—5

J H Force..... .....11 00 10—3	S G Smith..... .....11 00 11—4
Williams..... .....10 10 10—3	

Shoot off—S. G. Smith first, Williams second, Cannon third.

Miss and out 30yds. rise: J. H. Force 3, Dickens 0, Williams 2, C. Smith 4, Forrest 3, S. G. Smith 1, Dick 4. C. Smith and Dick divided.—JACOBSTAFF.

TORONTO, June 4.—The third and final shoot for the McDowell team medals took place at D. Blea's, West Toronto Junction, this afternoon. The weather was splendid and a large number of spectators went out to witness the contest. The Toronto Gun Club team No. 1 won the previous match with 92 out of 100, and in this were victorious with 74, thus winning the match twice out of the three shoots. The West Toronto Junction team won them in the first shoot with 77 out of 100. The following are the scores at 20 birds per man:

Toronto Gun Club No. 1.	West Toronto Junction.
C Malloy.....18	H Royce.....17
W Felstead.....15	W Wakefield.....17
A Ellis.....15	D Blea.....15
W Briggs.....14	C Hinton.....12
D Black.....12—74	W A Clark.....11—72
West End Gun and Dog Sports Club.	Toronto Gun Club No. 2.
J Bailey.....16	W Jefferson.....15
E Dollery.....15	R J Kidd.....14
P Wakefield.....14	F Martin.....14
R Wilson.....13	G Pearsall.....12
G Clark.....9—67	H George.....11—66

Owl Gun Club (one man short).

J Townson.....18	G Carruthers.....14
J Douglass.....15	J Jobbett.....12—59

BROOKLYN, June 8.—Not a dozen members of the Fountain Gun Club were present at the monthly shoot of the organization this afternoon at the grounds at Woodlawn, but those who did stand behind the traps made good shooting. The birds were as good a lot as ever sprang from trap. The first heat was a club handicap, 21yds. rise, 7 birds, both barrels. Scores as follows:

J Wynne, 30yds.....1111101—6	W Stewart, 26yds.....1111110—6
C Carlos, 27yds.....0110010—3	E W Wheeler, 21yds..1101111—6
A Eddy, 30yds.....1111101—6	C Williams, 30yds.....1111011—6
L T Davenport, 29yds..1111101—6	M Donnoley, 29yds....1111111—7
J E Lake, 23yds.....1011110—5	H McLaughlin, 26yds..1011111—6
H P Kearney, 25yds....1010111—5	

In shooting off ties A. Eddy won in Class B and H. P. Kearney in Class C. H. McLaughlin did not shoot.

SAN FRANCISCO, June 5.—Members of the California Wing Club met at San Bruno to-day to shoot their third tournament of the present season. The medals shot for were as usual three in number and were well contested. The scoring did not average high, but this was caused by the high wind and great speed and strength of the birds. W. L. Eyre was judge and Rice manipulated the strings. Below are the complete scores, medal shoot, 12 birds each, 80yds. boundary, handicap according to gauge of gun:

Fay (30).....111012210111— 9	Coffin (30).....1211122102210—11
Haas (28).....1112100120222— 9	Slade (30).....1112121212120—11
Cross (28).....0010122101210— 8	Liddle (26).....1111200101001— 7
De Vault (30)...2012112021110— 9	Cole (26).....0110001122110— 7

In shooting off ties Slade won first medal, Coffin second and Haas third.

UNKNOWN GUN CLUB.—Sixth shoot of the season at Dexter's Park, L. I., Tuesday, June 9. Seventeen went to the traps and did some good shooting. The club rules provide handicap rise, gun below the elbow near the hip, and one barrel only:

E A Vroome (24)... ....1111111—7	J Rathjen (24).....1101101—5
A Hass (23).....1111111—7	W J Lee (21).....1000111—4
M Chichester (25).....1111101—6	M Meyers (23).....1010100—3
W Gillman (23).....1111101—6	A Ramphen (21).....0010110—3
W Tomford (25).....1011111—6	L Boyle (21).....0010110—3
H Knebel, Sr (25).....1101111—6	A Harned (23).....1110000—3
H Knebel, Jr (23).....1011111—6	H Pope (24).....0110010—3
J Bahling (25).....1110110—5	C H Ring (21).....0001001—2
R Monsees (25).....1011011—5	

Ties for first prize and medal: E. A. Vroome (24) 010—1; A. Hass (23) 111—3.

Ties for second prize: M. Chichester (25), 00—0; W. Gillman (23), 11100—3; W. Tomford (25), 00—0; H. Knebel, Sr. (25), 0—0; H. Knebel, Jr. (23), 1101—4.

Ties for third prize: J. Bohling (25), 1010—2; R. Monsees (25), 1011—3; J. Rathjen (24), 0101—2.

PHILADELPHIA, Pa., June 11.—Wayne Gun Club, regular monthly prize shoot, Ligowsky clay-pigeons, one Ligowsky clay-pigeon screened trap, 18yds. rise, Wayne Gun Club rules; 4 prizes:

Gus Hessler.....1111111111—9	A Hemingway.....1101001111—7
P F Yost.....0110111111—8	J W Sidle.....0011011100—5
E Handsbury.....1111101101—8	T Scargle.....0001111110—6
S Davis.....1001010101—5	J Sparks.....0011110011—6
Chas Briney.. .....1101101101—7	W Ulary.....0110110110—6
Hugh Kane.....1001111111—8	I Jackson.....1000011011—5
Frank Hessler .....0001010100—3	H Graham .....0001011000—4
Geo Harris.....1110011000—5	Geo Scargle .....1010111101—7
A Clifford.....1110111111—9	

Ties on 9 for first at miss and out, 21yds., Gus Hessler 4, A. V. Clifford 5; ties on 8 for second at miss and out, 21yds., P. F. Yost 0, E. Handsbury 0, Hugh Kane 1; ties on 7 for third at miss and out, 21yds., Chas. Briney 3, Geo. Scargle 4; ties on 6 for fourth at miss and out, 21yds., T. Scargle 4, J. Sparks 3, W. Ulary 3. Date of next match, July 4.—P. F. YOST.

SAN FRANCISCO, June 1.—The Parker Gun Club gave its first monthly shoot at Alameda Point to-day. Although the day was windy, excellent scores were made by some members of the club. Wm. D. Howe won the club's medal. The score stood as follows: Twelve birds each, 30yds. rise, guns all 10-gauge:

Howe.....11101111111—11	McChesney.....1101110011111— 9
Ettling.....1011111000100— 7	Mather .....1111011111111—11
Franks .....1111101010100— 8	Van Orden.....1011100011100— 6
Brown.....0010000111110— 5	Johnston.....0000010001000— 2

In shooting off the tie between Howe and Mather on 3 birds each, Howe won the medal. He killed 3 birds to Mather's 1. The club will give the next shoot July 2, same place.

LEONIA, N. J., June 11.—Leonia Gun Club, Dr. J. A. Wells and Charles Townsend, of Engelwood, against J. R. Beam, of Ridgefield, and Geo. W. Gladwin, of Leonia, 25 American clay birds, 3 American clay-bird traps, 18yds. rise, N. A. rules, for birds, ammunition and expenses:

G W Gladwin.....11101110111101010111110—19	
J R Beam.....10111001001101011111111101—17—36	
Dr S A Wells.....00100111110111011000111—16	
Chas Townsend.....11101010111111011011001—18—34	

The above match had excited considerable interest in the neighborhood and there were from 75 to 100 friends present to witness it. The club afterward held its regular monthly shoot at 10 American clay birds, same rules, J. R. Beam won with a clean score of 10, Chas. Springer second with 8, several tied for third place with 7.

TAUNTON, Mass., June 11.—T. F. and G. P. A., first sweep at 5 blue rock pigeons. Blue rock trap, 16yds. rise. J. A. Negus 5, C. T. Snow 4, G. L. Smith 3, E. Bowen 4, Hayward 3, A. Davis 4, Keith 4, Mangam 4.

Tie for second shot off in next sweep. J. A. Negus 3, Snow 5, Smith 3, E. Bowen 3, Hayward 3, Keith 5, Scudder 2, Mangam 4, J. Davis 4, E. C. Leonard. Ties divided.

Match at 5 bats: Negus 2, Snow 5, Smith 2, E. Bowen 2, A. Davis 4, Keith 1, Scudder 3, Mangam 4, J. Davis 4, E. C. Leonard 3, G. L. Walker 2. Ties divided.

Match at 5 bats: Negus 3, Snow 5, Smith 2, E. Bowen 3, A. Davis 2, Keith 2, Scudder 2, Mangam 2, J. Davis 4, Leonard 3, Walker 3. Negus won third on shoot off.

Match at 5 bats: Negus 3, Snow 5, Smith 2, E. Bowen 3, A. Davis 1, Keith 3, Scudder 2, Mangam 2, J. Davis 4, Leonard 3, Walker 4. Tie for third divided.

Match at 7 clays: Mangam 7, A. Davis 5, J. Davis 1, Smith 6, Scudder 3, E. Leonard 4, E. Bowen 2, Keith 4, Negus 5, Snow 7, Ties divided.

Match at 7 clays: A. Hardy 3, A. Davis 4, Leonard 2, Snow 6, Smith 6, E. Bowen 3, Scudder 2, A. L. Carpenter 3, Keith 4. Ties divided.

Match at 7 clays: A. Davis 5, E. Leonard 5, Snow 5, Smith 5, E. Bowen 2, Carpenter 1. On miss and out, Davis won tie with 2.

ARTIFICIAL TARGET PATENTS.—The patent suits of the Ligowsky Clay-Pigeon Co. vs. the American Clay Bird Co., which have been hanging fire in the United States Court for several years, came to an end yesterday by Justice Mathews and Judges Jackson and Sage entering a decree declaring the American Clay Bird patent void.—*Cincinnati Inquirer, June 4.*

IOWA STATE TOURNAMENT.—The tenth annual convention and tournament of the Iowa State Association for the Protection of Fish and Game will be held at Sioux City, June 21 to 24. C. A. Bryant, of Sioux City, is the secretary.

DR. CARVER reports that in the Pennsylvania Railroad depot at Jersey City last week he left unwatched for a moment his Greener hammerless and Spencer repeating shotgun, and a thief made away with them. The Spencer has a long fore arm, No. 10G, and the Greener stock has been straightened and bent. A reward of $100 and no questions asked, will be paid for their return to Mr. Henry C. Squires, No. 178 Broadway.

INDIANAPOLIS TOURNAMENT.—The first annual tournament of the Indianapolis, Ind., Sportsmen's Association will be given June 28 to July 1. Live birds and artificial targets. Open to all.—J. E. BOMBARGER, Sec'y.

SOUTH MANCHESTER, Conn., June 9.—At the last regular shoot of the Manchester Gun and Game Club, the following scores were made out of 20 Ligowsky pigeons: W. B. Cheney 15, W. Hyde 14, W. W. Cheney 11, F. E. Watkins 9, J. Shewry 9, Mark Cheney 9, J. D. Goulden 9, M. E. White 8, O. B. Treat 7, Geo. Taylor 7, Adam Schields 5, W. R. Tinker 3. The club will hold a tournament June 23, commencing at 9 o'clock.—F. E. W.

NEWARK, June 10.—The Fifteenth Avenue Gun Club shot today at 14 birds each, 25yds. rise. The score was as follows: J. Reiboldt 13, P. Trautfelter 13, L. Schilling 12, J. Jaquin 12, G. Cernachero 12, M. Bauer 11, J. Weber 11, C. Meisel 11, W. Fransel 12, E. Gromann 10, L. Spahn 10, A. Krause 10, F. Heller 8, F. Pippert 8, M. Doerzbacher 6, A. Gerst 5, N. Mabus 4.

Canoeing.

FIXTURES.

JUNE.

18. Brooklyn, Annual, Bay Ridge.
19. Quaker City, Annual, Philadelphia.
22. Newburgh, Club, Newburgh.
25. New York, Annual, Staten Island.

JULY.

2-5. Calla Shasta, Camp and Races.
3. Oakland, Edwards Cup.
4. Passaic Meet, Dundee Lake.
13-31. W. C. A. Meet, Ballast Island.
24. Oakland, Mayrisch Badge.

NEW BRITISH CANOES.

THOUGH the regular season of the Royal C. C., as regards sailing matches, does not commence until to-day, the muster of canoes at Hendon was so strong that the committee deemed it advisable to hold a "preliminary canter," in the nature of a handicapped sweepstake, which came off on Saturday last and produced a fine entry and good sport. The race was handicapped more particularly in regard to comparative sail area and length, though to some extent also on the known qualities of the competing boats; in the result, however, the fickle weather considerably spoiled the lesson which might have been learned, though the prizes undoubtedly went in the right direction. The starters were:

Pearl	E. B. Tredwen	1st class	Scratch.
Diamond	H. Church	1st class	4min.
Pearl 85	T. Knight	1st class	5min.
Nina	F. Miles	1st class	7min.
Minnie	H. Wilmer	1st class	9min.
Kitten	E. Leach	1st class	9min.
Sabrina	R. Turner	2d class	14min.
Atalanta	R. de Q. Quincey	2d class	18min.
Severn	H. Holding	2d class	20min.
Vanessa	B. de Q. Quincey	2d class	22min.
Spray	C. Dickenson	2d class	24min.

The match was under the charge of the mates, W. Baden-Powell and G. Herbert, and was started underway at 3.55 P. M. A frost-cold westerly wind was blowing at the start and during the first round, but it fell off into calms, doldrums and variable airs during the second round. The start was smartly made, and the performance of many of the second class was little short of the first class; indeed one, the Spray, appeared to be going the pace, and also pointing-up with the best of the first class. The Pearl took the lead at the start and held to it all through; she was three minutes ahead on completing the first round, and, though she eventually won with a safe lot of time in hand, the first round contained all the true sailing, and its times are the only performances worthy of note as a comparison between first and second class canoes. The round—a triangle of two miles, of which about three-quarters of a mile was close-hauled work, was completed in the times following:

Pearl 86	34 30	1st class.	Nina	40 03	1st class.
Pearl 85	38 30	1st class.	Spray	42 00	2d class.
Kitten	39 00	1st class.	Vanessa	43 00	2d class.
Diamond	39 10	1st class.	Severn	44 00	2d class.

The second round witnessed calms, streaks and shifts of wind, and Pearl 86 took first prize; Spray took second prize, saving her handicap time by 1m. 1s. The sailing of the second class, judged by their performances in the true wind early in the race, and where the sail area of the first class was brought by reefing to near about that carried by the second class (which is limited by rule to 75ft.), showed the second class canoes to be as fast through the water as several of the first class, though not quite so good at pointing to windward; and judging from the performances of similar sized craft in America, even this deficiency will be cleared off as fittings and practice improve.

At a subsequent period, two new craft were launched and taken out for a trial spin on the lake, and as these two new ships will probably figure among the leading novelties of the season, a word or two may here be in place as to their forms, though as to performance it is as yet impossible to speak definitely, as they were when out not completed in rig or fittings. The Churn, belonging to Mr. W. Stewart, is quite American in type; indeed the only distinction between her and the celebrated American Pecowsic (the lines of which are published in the FOREST AND STREAM paper and *American Canoeist*) is a difference in the actual modelling line, the type, or "notion," is quite similar. She is of extremely small displacement, with a very small amount of freeboard and body above water; in casual language she is like a craft would be if sawn through horizontally about 4in. above her load waterline, and her deck fitted on again to the bottom remaining. Her floor, as in Pecowsic, has a very considerable and straight rise, and her bilge turns, apparently, about the waterline, and is quickly ended by the aforesaid low freeboard. She is constructed on the "wave form of displacement," and therein, and therein only, we think, ceases to resemble Pecowsic, but this may prove a very important departure, for on all hands it was admitted against that celebrated craft that her performances, her marvellous speed and weatherly qualities would never have been prophesied from an inspection of her lines or model.

The Churn is rigged à la Pecowsic, with three standing leg-of-mutton sails, *i. e.*, "standing" in that they are laced to the masts, with battens across and boom at foot, the only rope beyond the lacing being the sheet; therefore, when once stepped into the mast hole, there they stand, and cannot be reefed or even topped up as at present rigged. The principle of the boat is, of course, light displacement, driven by light, small-area sails, and balanced by the outboard sitting position of the crew. In the few short spins after launching, she developed such high turns of speed, that those on the club raft appeared to turn thoughtfully silent, and, like Jack's parrots, "they didn't talk much, but they were beggars to think."

The new Nautilus, the other craft launched for a trial spin, is of a very different form to the Churn, being comparatively a deep-bodied boat; that is, though of only slightly greater draft of water, she has a flatter floor, larger displacement, and nearly double the amount of freeboard and sheer. The Nautilus is, however, as compared with other first-class canoes, a small-bodied craft; in fact, little if any larger than a second-class canoe, but owing to her being built with smooth skin instead of "clench with overlap," she is rated as first class. She has a fine bow but without any hollow in it. Her displacement is distributed in the "wave form" curve of area of sections, and is considerably greater than that of the Churn, as in addition to being heavier in construction, larger in bulk and more heavily rigged, she is designed to carry and accommodate a 13 stone instead of a 9 stone man, and also to sail at a load draft carrying 60lbs. weight of cruising gear and stores. Her steering is duplicate, the deck tiller being used with the skipper sitting outboard for reaching, and probably also for going to windward, and her footgear when the skipper sits below, for running. The two gears are worked upon a double-flanged wheel, set within the coaming and under a hatch, the tiller shipping into brackets on the upper surface of the wheel.

The rig of the Nautilus is a novelty in all parts and is at present only in trial stage, and it is doubtful if it can be completed in time for her to compete in the match on Saturday, 28th (to-day), at Hendon. The general feature of the rig is a triangular sail abaft the mast, in which the yard reef batten and spreader, or diagonal boom, radiate from one pair of jaws, the foot being kept flat by a light batten in place of a boom. The sail can be reefed up or down, peak lowered, or sail snugly topped up and down the mast. Being all abaft the mast, the windage of the mast on the sail, common to balance lugs when those sails are to leeward of the mast, is obviated. The Nautilus sail also can, by means of the transverse and diagonal battens, be stretched as flat as a drumhead, and the spreader prevents the foot topping of itself when before the wind.

The Churn was designed by her owner and built in a private yard. The Nautilus was built from designs of her owner by Turk, of Kingston. Mr. Turk has also built several new canoes this season, and of these six will probably compete in the Hendon matches.

The new boats vary in form and dimensions, and, with the older craft, form a fleet of some twenty sail, in which every type, from the featherweight Churn and second class cruiser to the weight-carrying, full-powered craft, such as Kitten or Marool, will be represented. With Pearl and Nautilus playing ding-dong, the Churn sailing half a point the other side of the wind, with Marool astern of her, and Sabrina with spinaker braced sharp up, a sailing treat will reward the lover of such sport who journey to Hendon on a match day.—*R. C. C. in London Field, May 28.*

THE PASSAIC RIVER MEET.

Editor Forest and Stream:

The programme for the races at the Dundee Lake meet, July 1 to 4, is: 1. Sailing—Class A. 2. Sailing—Class B. 3. Paddling—Class 1. 4. Paddling—Class 2. 5. Sailing—Class B. 6. Hurry-scurry. 7. Paddling—Tandem. 8. Sailing—Class A. 9. Sailing—Novice. 10. Paddling—Standing. 11. Sailing—Consolation. 12. Swimming.

Races 1, 2, 3, 4, are open to any canoe whose measurement brings it within the class designated. Races 5 and 8 are open only to home-made canoes. Races 6, 7, 9, 10 are open to any canoe. Race 11 is open to all canoes that have not won a race at this meet. Race 12 is open to all canoeists. All paddling races except No. 10 shall be one mile. All sailing races shall be two miles over a triangular course. The Consolation race will be divided into professional built and home-made canoes, both classes will start at the same time. All canoes, whether built by professional builders or by amateurs, will be measured according to A. C. A. rules, but latitude will be given to allow any home-made canoe, whose dimensions come reasonably near any class measurement, to enter that class. Races will be held on Monday, July 4. All sailing races will be sailed as the wind may favor to avoid drifting matches if possible, and all who enter therefore will hold themselves in readiness for the call of the race at short notice, so as to get the benefit of a good wind if there be any.

A. C. MOLLOY, Secretary Regatta Committee.
(Post-Office address, Arlington, N. J.)

NEWBURGH C. & B. C. RACES.—The second of the series of the Newburgh Canoe and Boating Association was sailed June 10. Course a triangular one of three miles, twice around. Wind light from the southeast. The elapsed time of each boat was as follows:

BOATS.

	Elapsed.	Corrected.
Scylla	1 40 30	1 40 30
Bub	1 42 30	1 41 00
Mabel	2 04 00	2 00 24
Ripple	2 08 30	2 05 51
CANOES.		
Pixie	1 43 00	1 34 00
Rat	1 43 30	1 43 30
Iolas	1 58 30	1 57 45
Cal-loo	2 00 00	2 0 00

Scylla was sailed by H. A. and F. W. Bartlett. Bub, H. M. Waring and S. J. Smith. Mabel, N. S. Smith. Ripple, J. T. VanDalfsen. Pixie, sailed by W. Williams. Rat, Grant Edgar, Jr. Iolas, C. D. Robinson. Cal-loo, H. A. Harrison.

This is the first appearance of the Pixie, and with the exception of the Croton Point races, the first for the Rat. The next race of the series will take place June 22. The Association held their first outing on the 8th inst. at Plum Point, (the site of the spring meets of '84 and '85). The Rats left the retreat with their lady friends, in all numbering over forty, about 5 P. M., in their various crafts. The point soon reached, the old salts repared the feast of good things that always is necessary on such an occasion, after which came the grand old camp-fire; music, vocal and instrumental; and a return home by moonlight. The weather was perfect and all things combined to make the event a most enjoyable one.

NEW YORK C. C.—The spring regatta of the New York C. C. will be held at Tompkinsville, Staten Island, on June 25, the first race being started at 2 P. M. This will be a sailing race over a short triangular course within full view of the club house. There will be three classes, novices, old canoeists, and a special class for sneakboxes, etc. There will be the usual paddling and upset races, the full programme being announced next week. The races are open to all amateur canoeists.

WESTERN C. A. MEMBERSHIP.—Cincinnati, June 6.—*Editor Forest and Stream:* The following is a list of new member of the Western Canoe Association: 120, Henry Theobald; 121, John Dover; 122, Lewis H. Vinsen; 123, Chas. W. Schaeffer; 124, Harry G. Hodge, Dayton, O.; 125, J. R. Bartlett, Fremont, O.; 126, F. G. Roelker, Cincinnati, O.; 127, Andrew Moos; 128, A. H. Rice; 129, N. S. Dryfoos, Fremont, O. A large meet is expected this summer. The canoe dock will be longer and larger this year, and there will be quite a variety of canoes in this meet. The Ruckawas, of Dayton, will send one of Douglas's finest works of art and one of Joyner's best. The Jabbers, of Springfield, send a duplicate of the Lassie. From the far North comes the Peggy with new rig. The Cincinnatis a Barney model and rig 16×28, and sails of latest invention. Cleveland and Sandusky will come again with their Mohicans and Princess.—S.

A. C. A. MEMBERSHIP.—Trenton, N. J. June 11.—*Editor Forest and Stream:* The gentlemen named below have applied for membership in the A. C. A.: A. R. Harriman, Ogdensburg, N. Y., H. A. Cooley, W. R. Hetherington, E. E. Knight, O. A. Marsh, J. G. Read, H. W. Rennie, C. E. Snow, and L. W. White, Springfield, Mass.; Chas. A. Lawford, Peterboro, Can.; G. W. R. Strickland, Lakefield, Can.—WM. M. CARTER, Sec'y.

QUAKER CITY C. C.—The first annual spring regatta of the Q. C. C. C. will take place on June 19, from the club house float. Four events are on the programme: 1. Class IV., paddling ½ mile, prize, canoe lantern. 2. Standing paddling, 200yds., prize, burgee. 3. Tandem paddling, Class IV., ½ mile, prize, "Nessmuk" camp kit. 4. Class B, sailing, triangular course of 1½ miles, no limit, prize, silver badge.—S.

CALLA SHASTA CAMP, JULY 4.—The Springfield C. C. will hold a camp at Calla Shasta from July 2 to July 5, with races on the 4th. All canoeists are invited. Those having no tents can find sleeping quarters in a barn near by, while meals can be had at a farmhouse. The regatta committee includes F. A. Nickerson, G. M. Barney and E. C. Knappe.

THE ASSAULT ON MESSRS. VAUX AND BURCHARD.—The case of Vaux against Johnson came up on May 31 before Justice Powers and the defendant was fined $10. The assault on Mr. Burchard will be brought before the Grand Jury at the end of this month.

IANTHE C. C.—*Editor Forest and Stream:* At the last meeting of the I. C. C a totem was selected: A blue butterfly 16in. from tip to tip and 13in. high, to be painted on the sail and decorated with yellow.—WM. P. DODGE, Sec'y-Treas. I. C. C.

Yachting.

FIXTURES.

JUNE.

16. Portland, Annual.
16. Atlantic, Annual, New York.
17. Cape Cod Y. C., Club.
17. Dorchester, 100th Regatta.
18. Cor. Penn., Hull.
18. Brooklyn Annual, Gravesend Bay.
18. Knickerbocker, Cabin Yachts
20. Cooper's Point, Corinthian, Cruise down Del. River.
21. Yonkers, Annual Regatta.
21. Eastern, Annual, Marbleh'd
22. Monatiquot, 1st cham., Weymouth.
23. Columbia, Annual, N. Y.
24. New Haven, Annual.
25. N. J., Annual, New York.
25. Boston *Globe* Open, Boston.
25. Hull Club, Marblehead.
25. Oswego, Ladies' Day.
26. Quaker City, Review, Phila.
28. Great Head, Pennant.

27. Great Head, 2d Cham.
30. Beverly, Cham., Mon. Beach.
30. Hull, Cham., Hull.
30. Cor. Open, Marblehead.
30. South Boston Club.

THE SPRING REGATTAS IN NEW YORK

WITHIN the past week four important races have been sailed over the New York course, and while taken in detail they are by no means satisfactory, yet enough good sailing has been seen to enable one to rate the principal boats very fairly. In only one of the four was there a sailing breeze from start to finish, but in spite of the flukes and calms that affected the others there were times in each when the boats were fairly tried. Out of the job lot of weather served out by the fickle imp that holds the strings of the windbags, we have had calms, moderate breezes, one or two heavy squalls, and a day of good working breeze in which the boats were seen at their best or worst as the case might be. To take first the large class, Atlantic of course has gained the greatest distinction, and the victories of the Pride of Bay Ridge are loudly proclaimed by her admirers as well as by the daily press. She has made a good record of four consecutive wins, but we believe the question of whether she is greatly improved since last year to be in no way determined. For one thing she is stiffer than before, with more ballast outside, and is much better in that respect though still a very cranky boat. Her model is the same and her appearance a little, and only a little, better. She has as fine a suit of canvas as a yacht was ever fitted with, well made last year and now in the best possible shape after the careful stretching they had in a season's sailing under Captain Joe Ellsworth's direction. Further than this, Atlantic has been well manned and steered, and there is not a lost point scored against her in the four days racing. Luck too has favored her in a wonderful way, for almost the entire time she has carried her own wind with her, regardless of what the rest had; but in this too there is a lesson that all can lay to heart, Providence helps them that help themselves, and she has been first at the line in every case, wind or no wind, and when she has found flukes it is because they were carefully worked and watched for. Both Mr. Fish who has had command in the races, and Capt. Terry of the Grayling, who with her crew are in Atlantic, have worked the boat to the best possible advantage.

As to Priscilla, she has undergone material alterations in the way of added sail area and more keel since last season, and this year is in good shape as far as bottom and sails are concerned, but she has not shown the smartness in getting away that has characterized the other, and in consequence she has sailed with the fleet and lost much time in her scrimmages with Galatea, all of which has gone to Atlantic's lead.

Galatea is sailing with the same rig as last season, a look at which, beside her class competitors, or even the canvas carriers of the 70ft. class, tells the whole story. She has, indeed, had a scupper breeze on two or three occasions, but at no time have her opponents been unable to carry topsails to windward. She has been handicapped by a very rough bottom, not being able to haul out preparatory to the races, which has told heavily in the drifts that have largely prevailed. On Thursday she had the benefit of Captain Ellsworth's pilotage, but the weather was such as to make this advantage count for little. In Saturday's race, the first working breeze she has had here, she was sailed all day by an amateur who had never sailed her before and who is unaccustomed to large boats, and while he did the work well it is not to be expected that he got the best she is capable of out of the boat. This, we believe, is a tolerably fair statement of the pros and cons for each boat, now what have they done? The story is told in detail last week and this, but in summing up not by the times, but by the actual sailing as seen, we would place the three very nearly on an even footing. Atlantic has won all the mugs and the glory belongs to her, but for actual performance when side by side at times, it is safe to say that neither has shown any great superiority. Wherever the three have been accurately timed over parts of the course in the same wind, the times are given, and they show very little in favor of one rather than the other if all circumstances are considered. Atlantic has done the best of the three, but we lay this more to handling than to hull.

As far, then, as they and New York are concerned, the question comes down to this: In speed the heavily-rigged sloops are a little better than the undersparred cutter. In case and safety of handling the odds are all in favor of the latter; in room and accommodation she is far superior, and she has been successfully tested as a seagoing cruiser, while few would care to ship for England in Atlantic.

It would have been far more satisfactory had one of the Boston boats been present in the races, that the changes in Atlantic and Priscilla might be accurately measured; but even without that it should be easy enough to form an opinion, and we venture to predict that Atlantic, now by popular rating the best of the three, will not be in it beside either Mayflower or Puritan, and that her reputation made this week will last only until she comes fairly beside them. This will not be until August, as she will stay in New York for extra head outside instead of entering at Marblehead. Priscilla and Galatea will be there, however, the cutter hauling out at Boston to get a racing bottom, and their sailing will tell the story.

The sailing of the second class has excited as much interest as the first, the two new boats, Shamrock and Titania, having been seen just enough before the races to make all anxious to see a fair trial. This they have seen and now there are some grounds on which to place them and the old boats. The first of the races, in light weather, showed Shamrock to be a very fast boat as long as she could carry her big rig, but how long this would be was not shown. Titania, on the contrary, did little in the drifts, and was twice beaten by her white rival.

In bottom the wooden boat was the better, as though new wood is none of the best, with seams just swelling and before a good surface is formed by repeated painting, yet it is far better than the rusty steel of the other, too new to hold the paint. It is needless to say that Shamrock has been well sailed, but Titania was not far behind her in this respect. The light weather honors went to Bay Ridge in second as well as first class, and for two days Boston stock was very low; but Saturday told another story. Shamrock barely held the steel boat on the first long reach, and when fairly into the windward work, with a strong breeze and good sea running, she fell astern both of Titania and Bedouin, being beaten by ten minutes in the ten-mile dusting to windward. She could not carry sail with either of the others, and when put to this test she was nowhere with them.

This work settled the yarns as to Titania's "tenderness" and showed her windward powers to the best advantage. It is well known that Bedouin is a hard boat to beat in a breeze to windward, but Titania did it, and we believe fairly, a fact that will, no doubt, be taken as evidence in favor of the compromises and against the cutters. As far as excellence of model goes, both Bedouin and Titania may be taken as representatives, but before any final conclusions are reached the difference of build must be allowed for. Bedouin, built of wood, has far less than the fashionable allowance of lead on her keel, much being stowed high up above a deep wooden keel, while Titania has her ballast in a steel box, all at the lowest possible point. Before the question of type can be satisfactorily settled by the races between the two, we must consider not the existing Bedouin, but a steel boat of the same model, with ballast in a trough keel, and spars and canvas increased in proportion. Shamrock has certainly a clean and beautiful model, and should travel fast under any reasonable rig; but while canvassed for the flukes and drifts of the New York course, she cannot hope to hold the others in any heavier weather. Titania is evidently a very powerful boat, and after her performance of Saturday there need be no question of her success, but something more is needed to bring her to the front in light weather. Before the season is out the three will have many bouts together, as there is nothing in their class to trouble them.

Pocahontas has not yet made her re-entrée, Fanny has been hopelessly left, and Gracie, though with her chances spoiled on Saturday by bad luck, has hard work to keep anywhere near the others by fast sailing. Hildegard is a peg lower, and cannot hold the pace with Huron. In the third class Cinderella is having it all her own way, with nothing in her class by which to rank her. Clara and Oriva are laid up and there is nothing now racing that is a match for her. In the hands of Mr. Alley and the old Oriva crew she has been well handled and has done well, as far as can be judged by the larger boats, being much ahead of last year, but until she meets another Clara we shall not know how much.

This year the schooner racing has been even below the average, and this in spite of two new and presumably fast vessels in the fleet. The day of its prosperity has long since passed and to judge from the little attention it attracted compared with the single-stick racing, it is not likely to return. Whatever the advantages of the rig it has nothing to commend for racing it beside the cutter rig for yachts of moderate size, and while those who own schooners will continue to race them, the interest in the sport has gone, and the great fleets of the past are not likely to be seen again in the regattas about New York.

NEW YORK Y. C. ANNUAL REGATTA, JUNE 9.

THERE may have been a time when the course of the New York Y. C. served the purpose of a real match course, as well as a picnic sail for the spectators, but if so, it was very long ago, and it has quite outgrown its usefulness as far as yacht racing is concerned. In the past three seasons not one respectable race has been sailed over it out of a dozen contests by the New York clubs, and after the miserable flukes of the past week it is time that a start inside the forts be abandoned by all the clubs. Even if this were done the course would be none of the best, and fluky and runney no breeze would too often prevail, but the cutting off of the first of the course, the two miles inside the Narrows, would be as great an improvement as the removal of the finish line to Buoy 15 some years since has proved. This spring a very good movement was on foot to lay out a uniform course for the New York, Seawanhaka and Atlantic clubs, but it was frustrated by the refusal of the latter to abandon its old starting line in front of the club house, to which is due a great part of the fiasco of Tuesday in the A. Y. C. regatta. The Seawanhaka C. Y. C. went so far as to give up the objectionable starting line directly in the Narrows, and to make the course the same as the New York Y. C., but this change helped matters but little. What is wanted is a common course for the three clubs, both start and finish to be outside the Narrows, thus cutting off the worst parts of the present courses. The main consideration now is that the best possible course for testing a large fleet of yachts should be selected. Its eligibility for purely picnic purposes is another matter; what is most essential is that the time and money invested in preparing for and sailing regattas shall not be utterly wasted, as it generally is in the spring races. At the same time there is no reason why the spectators, even the ladies, need be deprived of a full view of the race, with the numerous steam yachts now attached to the fleet, and the large and powerful steamers that are both safe and comfortable anywhere about the waters of New York.

On Thursday last course and weather were certainly bad enough, but they were made far worse by the wonderfully bad judgment displayed by the committee in starting the race when the fleet was becalmed far from the line and less than a third of the yachts had sufficient steerage way on to cast on one tack or the other. The morning was hot and sultry with a light air from S.W. at sunrise, and by 10 A. M. there was not a ripple on the Bay. Far up the river a fleet of working schooners were coming slowly down against the flood tide with booms off to port before a light N.W. wind; across on Constable's Hook the smoke from the tall chimney of the chemical works rose lazily in a vertical column; over the Staten Island hills a darker wreath of smoke curled across from S.W., indicating a breeze in that quarter, and down toward Sandy Hook a lot of small vessels were visible with booms squared off to starboard before a south wind. Where the wind would come from, if at all, wise ones declined to say, but at 11 o'clock the fleet worked out to the line, most of them in tow. At 11:30, the time set for the start, all were ready, with club and jibtopsails aloft, but there was a flat calm over all the Upper Bay. The tide was just on the turn inshore and still running up in mid-channel, and the greater part of the fleet was about balanced in the slack. Failing wind, no one knew when a start might be expected, and it was a surprise to all when at 12:25 a gun was fired from the flagship Electra, on which were the members of the regatta committee. At this time half a dozen of the fleet were about the east end of the line with a light S.E. breeze, but nearly twenty of the larger vessels were motionless half a mile above the line and unable to come nearer. Instead of waiting until they felt the wind, the first signal was given, the second following ten minutes later, and at 12:44 the final gun fired and nearly all were handicapped. The full entries were:

KEEL SCHOONERS.

	Measurement.	M. S.
1. Gitana	96.23	Allows
2. Speranza	83.16	7 02
SECOND CLASS SCHOONERS.

12. Titania	73.58	Allows
13. Shamrock	72.31	56
14. Gracie	71.02	1 27
15. Bedouin	71.45	1 34
16. Stranger	67.30	4 51
17. Huron	66.31	5 41
18. Hildegard	64.50	7 14
THIRD CLASS SLOOPS.		
19. Whileaway	57.50	Allows
20. Athlon	56.11	1 29
21. Cinderella	55.48	2 10
22. Isis	54.21	3 35
23. Bertie	52.08	6 16
24. Roamer		
25. Adelaide	48.98	10 08
26. Fanita		
27. Concord		
FOURTH CLASS SLOOPS.		
28. Espirito	47.08	
29. Ulidia		

The usual club course was sailed, from off Owl's Head, by buoys 10 and 8½, around Sandy Hook Lightship and return over the same course to Buoy 15, 37 miles (nautical). This year the time limit of eight hours has been abolished. Hovering about the line and going over with the first light puff were Ulidia, Fanita, Adelaide, Hildegard and Stranger. Isis and Atlantic also managed to work across in good time, while Huron and Cinderella barely shaved the final gun-fire. Gracie, Espirito, Shamrock and Agnes were also lucky enough to find a little wind to waft them over, but the rest were hopelessly left. Galatea, Priscilla, Sachem, Montauk, Gitana, Titania and the smaller ones lay idly above the line watching Ulidia as she felt the freshening breeze below, while Atlantic was under good headway and Shamrock was getting after the leaders. Tediously the minutes went by, all hands alternately whistling for wind and heaping blessings on the committee, and a full twenty minutes had elapsed since the leaders started before Priscilla drifted down to the line and slowly crossed, with Galatea abeam, both with 16 minutes handicap. Sachem came slowly after Galatea, but Bedouin and Titania were jammed by the tide further up and lost a lot more time. The actual times of crossing were:

Ulidia	12 37 02	Concord	12 54 53
Fanita	12 9 34	Priscilla	12 59 27
Adelaide	12 39 56	Galatea	1 01 21
Hildegard	12 41 50	Athlon	1 03 26
Stranger	12 41 56	Sachem	1 04 10
Isis	12 42 43	Whileaway	1 07 55
Atlantic	12 43 01	Clio	1 00 55
Huron	12 43 44	Titania	1 13 25
Cinderella	12 43 57	Speranza	1 14 20
Gracie	12 44 11	Montauk	1 16 20
Espirito	12 45 34	Bedouin	1 16 44
Shamrock	12 47 35	Gitana	1 25 37
Agnes	12 47 54		

All after Cinderella were counted as starting at 12:44; the yachts crossed some on port and some on starboard tack, and the fleet was soon scattered over the Upper Bay from the Narrows, where the leaders were doing a little sailing, to above Buoy 18, where some were not yet filled away. Priscilla went over the line on port tack, with Galatea to leeward, then tacked for the Bay Ridge shore, Galatea standing to the west. Priscilla ran well in before she went on port tack again, and soon had a good lead of Galatea. The latter had been lightened of two tons of lead a few days before, but she had been unable to dock and the bottom was very foul, besides not having been put in condition since lying in the ice all winter. At 1:10 the wind freshed a little for all, the leaders having quite a breeze. When well clear of the forts Atlantic had taken the lead, Cinderella was hanging to the big fellow, while little Ulidia was near by. Strung out across the mouth of the Narrows were Hildegard, Adelaide, Fanita, Gracie, Stranger, Huron, Isis, Priscilla, Agnes, Whileaway, Galatea, Athlon, Sachem, Titania, Clio, Bedouin, Montauk, Speranza and Gitana.

It was 1:23 when Priscilla went on starboard tack just under Fort Wadsworth and about half the fleet was then ahead and half astern of her. Kites were drawing, jibtopsails full and all looked well for a light weather race in which the compromises should carry off the laurels, when the clouds in the northwest began to grow dark and heavy. The fleet held down, some along

the West Bank and others scattered across as far as Gravesend Bay, when all at once the squall was upon them. For a few minutes matters wore a lively look and several had very large contracts on hand. Atlantic, in the lead, let both staysail and clubtopsail come down with a run as she rolled down. The topsail yard dropped into the belly of the mainsail, but did no serious damage. Under jib and mainsail only she ran along with rail under and decks awash. Priscilla, astern, was glad enough to follow suit and lowered clubtopsail in a hurry, getting into trouble with it as she did so. Titania came down as rapidly as possible to mainsail and jib, and was then heeling at a great angle, while Shamrock went down to her combings before the canvas was off her. Of the sloops only Cinderella and Gracie came out well, the little fellow lowered away at first, but soon found that she was all right and up went topsail again, while Gracie hung to her clubtopsail through it all. Near Atlantic was the tiny Ulidia, with topsail and staysail down as the squall struck, but at once on her way rejoicing and gaining ground. Bedouin, near Titania, was holding to her clubtopsail and standing like a house, every moment getting further from the steel ship, as the latter heeled under her reduced canvas. Now, too, was Galatea's time, the first in two seasons, and she was there to make the best of it. Barely holding her own with those about her a few minutes before, she went into the melee without starting tack or sheet until, as the first twister struck her, the jibtopsail was run down. On she went under the full clubtopsail, for the first time wetting her decks with American waters as the tops of the waves rippled in the lee scuppers. As the heavier puffs struck her she put her planksheer fairly down, but not once during the day was her rail near the water. A few minutes of the blow and it was soon she could carry more sail, and the jibtopsail went aloft again.

Priscilla was now astern to leeward, Huron was picked up and left astern, Pocahontas, out for a sail, started sheet and went out the Swash as Galatea neared her, and soon through the last of the heavy rain she was near Shamrock, having in a few minutes worked off her big handicap, as well as the ground lost in the light wind of the first half hour. Sachem and Gitana were in close proximity to Bedouin and Titania when the squall struck, all being near the Lower Island. The schooners held to their canvas and made up the loss on the singlestickers. As they neared Buoy 10 Galatea was abreast of Shamrock, both turning together. The times were:

Atlantic	2 23 00	Ulidia	2 35 10
Cinderella	2 26 25	Gitana	2 35 40
Gracie	2 28 35	Priscilla	2 36 10
Hildegard	2 28 50	Clio	2 36 45
Stranger	2 29 40	Adelaide	2 37 30
Shamrock	2 30 20	Speranza	2 38 35
Galatea	2 30 45	Fanita	2 38 50
Sachem	2 32 33	Agnes	2 42 00
Huron	2 33 00	Espirito	2 44 15
Montauk	2 33 05	Isis	2 44 00
Bedouin	2 34 05	Athlon	2 44 20
Titania	2 34 33		

Before the buoy was reached the squall was all over, the wind had dropped, and the pace had decreased accordingly. Galatea got out spinaker to starboard but was obliged to carry it well forward. Astern Sachem and Montauk were having a very pretty brush, the white boat setting balloon maintopmaststaysail, on which Montauk followed with hers, both spinaker and balloon jibtopsail were also aloft on Sachem and she continued to hold her lead. At 1:43 the point of the Hook was just abeam of Galatea, Shamrock and Stranger, with Atlantic well out to the mark, and Cinderella, Gracie and Hildegard ahead of the trio. Cinderella was doing excellent work and held her place well from the start. Here Shamrock ran up on Stranger's lee, but failed to force it, the cutter at once setting spinaker and drawing ahead. The white sloop made for her weather quarter, but Stranger bore away with spinaker full and left her. Galatea was now clear ahead of Shamrock, when the latter set spinaker but at once took it in. At 2:45 Galatea passed Hildegard, and soon Shamrock pulled up on Stranger. The wind was now very light from the rear of the fleet, but a breeze was perceptible on the eastern horizon and the vessels out at sea were bringing it in. At 3 P. M. Atlantic was near the mark, carrying the last of the northwesterly breeze, Cinderella was well in her wake with probably half a mile between her and Gracie, and Galatea as much astern of the latter. Sachem lay on Galatea's weather beam with Shamrock further astern, Montauk was just astern of Shamrock, and Ulidia and Hildegard were to leeward of the schooner. Bedouin was leading Titania well in toward the Hook, the rest straggling along as far back as the Southwest Spit.

As Atlantic neared the mark the new S.W. wind was waiting for her and she started home before it, after carrying a fair wind right down to the turn. It was just 3:10 as the first of this breeze reached the body of the fleet, coming very light, and at 3:15 Galatea, with spinaker in, filled on port tack. Atlantic came down and passed through the fleet, but before all were fairly filled away on the new tack, both Cinderella and Gracie, now the leaders, were seen becalmed and unable to reach the mark. There was nothing for all to do but to watch Atlantic moving slowly but surely in by the Hook, and to wait for a change of the vile luck of the day, until another catspaw helped the leaders around. The times at Sandy Hook Lightship were:

Atlantic	3 16 15	Titania	4 05 20
Cinderella	3 34 05	Montauk	4 05 20
Gracie	3 36 00	Ulidia	4 06 30
Galatea	3 39 00	Priscilla	4 07 20
Sachem	3 48 15	Agnes	4 07 50
Shamrock	3 48 17	Adelaide	4 07 50
Stranger	3 51 03	Speranza	4 09 00
Bedouin	4 00 20	Clio	4 10 00
Hildegard	4 02 10	Isis	4 11 00
Gitana	4 03 10	Espirito	4 11 30
Huron	4 04 00	Athlon	4 14 20
Fanita	4 04 05		

The boats now started home with a moderate breeze, and for the first time Atlantic's luck seemed to leave her, as she struck a calm off the end of the Hook and lay there idle. Galatea, under balloon jibtopsail, was gaining on Gracie and Cinderella, but Shamrock, with a kite as big as Galatea's, was overhauling her, and finally came up with her at 4:45 just outside the Hook, where Gracie and Cinderella were both becalmed. Ten minutes before this Atlantic had set spinaker and started again, only holding to it until 4:50, by which time she was well inside and in a new wind that took her along toward Buoy 8½. It was about 4:50 that Cinderella and the rest came to the Hook, where each in turn as she came up stopped short and there they lay until 5:30 drifting about and watching Atlantic gaining steadily, if slowly. At last the fickle wind came out from the north, shifting about from east to west, but making a beat for the last part of the way in. With the darkness came more rain, but the wind was light and the pace slow and tedious. One by one each yacht disappeared in the haze, only leaving behind two globes of red and green to tell her place if not her identity. Along by Buoy 9 Galatea and Priscilla fell into company, the latter just astern of Bedouin and near Huron, all being by the wind on port tack. With boom well aboard Priscilla came for Galatea's weather quarter to force her way through the cutter's weather. Sheets came in with a will, the cutter worked out to windward and Priscilla paid off under her stern. Again she came up for a second attempt, only to be met in the same way and to drop astern with bowsprit fairly over Galatea's counter. Buoy 11 was now on the weather bow while Bedouin was just clearing it, and Galatea was obliged to pay off when Priscilla tried again and this time reached well through her weather. Off the West Bank the wind lightened again and in the dark a new shift of places took place, Galatea coming out ahead of Priscilla again. Slowly the fleet worked up, when suddenly a broad beam of light flashed out across the dark water, here, there and everywhere—the search light of the flagship guiding the fleet in to the finish. Atlantic had passed in already, and the first its rays struck was Shamrock, nearly becalmed for a time near the line. Close to her was Galatea, then Gracie, and one by one the others, until all but Isis and Adelaide were accounted for, Whileaway, Athlon and Concord having withdrawn. The times were:

	Start.	Finish.	Elapsed.	Corrected.
KEEL SCHOONERS.				
Gitana	12 44 00	8 44 36	8 00 36	8 00 36
Speranza	12 44 00	8 50 10	8 06 10	7 59 08
SECOND CLASS SCHOONERS.				
Montauk	12 44 00	8 46 15	8 02 15	8 02 15
Sachem	12 44 00	8 40 10	7 56 10	7 53 15
THIRD CLASS SCHOONERS.				
Clio	12 44 00	8 52 07	8 08 07	8 08 07
Agnes	12 44 00	8 51 35	8 07 35	7 58 23
FIRST CLASS SLOOPS.				
Galatea	12 44 00	8 37 55	7 53 55	7 53 55
Atlantic	12 43 01	7 49 48	7 06 47	7 06 28
Priscilla	12 44 00	8 41 00	7 57 01	7 56 30
SECOND CLASS SLOOPS.				
Titania	12 44 00	8 43 25	7 59 23	7 59 25
Shamrock	12 44 00	8 36 00	7 52 00	7 51 01
Gracie	12 44 00	8 41 20	7 57 20	7 55 53
Bedouin	12 44 00	8 43 35	7 59 35	7 58 01
Stranger	12 41 56	8 45 10	8 03 14	7 58 23
Huron	12 43 44	8 47 10	8 03 26	7 57 35
Hildegard	12 41 50	8 45 45	8 03 35	7 56 41
THIRD CLASS SLOOPS.				
Whileaway	12 44 00	Not timed.		
Athlon	12 44 00	Not timed.		
Cinderella	12 43 57	8 44 12	8 00 15	7 58 05
Isis	12 42 43	Not timed.		
Adelaide	12 39 56	Not timed.		
Fanita	12 05 34	8 26 34	7 57 00	. . . .
Concord	12 44 00	Not timed.		
FOURTH CLASS SLOOPS.				
Espirito	12 44 00	8 54 45	8 10 45	. . . .
Ulidia	12 37 02	8 49 20	8 12 28	. . . .

Thus the Speranza wins the keel schooner prize, beating the Gitania 1m. 28s. The Sachem wins in the second class schooners, beating Montauk 9m. The Agnes beats the Clio in the third class 9m. 44s. Of the first class sloops the Atlantic wins, beating the Galatea 47m. 27s., and Priscilla 50m. 2s. Shamrock beats the Gracie 4m. 49s., and the Titania 8m. 21s. Fanita beats Cinderella 3m. 15s. in elapsed time, third class sloops; and Ulidia beats Espirito 1m. 43s., elapsed time. The re-measurement of some yachts may change the last result.

The times tell nothing as to the relative performances of the boats, Atlantic carried the wind with her nearly all day; Gracie and Cinderella lost their lead at the Hook when homeward bound; Fanita, half an hour astern of Cinderella at the outer mark, coming up then and beating Cinderella in. As the last boats came up the wind freshened, coming strong from N.E., and during the night it blew from the same quarter, holding throughout Friday, a glorious racing breeze.

SEAWANHAKA C. Y. C. REGATTA, JUNE 11.

FOR once at least, the first time in several years, both wind and weather conspired to make a good race over the New York course, and the week that begun so badly with the Atlantic and New York clubs came to a grand ending with the Seawanhaka C. Y. C. on Saturday. From a "picnic" point of view the day was perfect, but this is no rarity in June about New York. Further than this, however, the day was what all have been watching for, a real race day, when honors were won on merit, and flukes and such evils were entirely absent.

The danger now is that the weather in which most American races are sailed, and which has prevailed almost exclusively in the late international matches and the attendant trial races, will dictate a certain type of yacht which will win all the prizes in such weather, however deficient she may be in those qualities most essential to the interests of yachting. The problem is a complicated one, the question of measurement is a great factor in it; the number of races in which a boat will sail each year, compared with the cruising she does, will exert a great influence, the general improvement of the yachts and the increasing closeness with which the leaders are matched, must play an important part in deciding what type shall be built. For the greater number of races the light weather drifter must in the end bag the most pots, but the honors are just as certain to go to the abler and stauncher yachts, while in all that the yachtsman, as distinguished from the pot-hunter, prizes, the latter are incomparably ahead. As a matter of fact, there is no immediate danger that yachting will suffer any relapse from the awakening of the last ten years, or that the machines will again come to the front, but it is not unlikely that many such days as Tuesday and Thursday of last week, the three of race week last year, and that of the Citizens' Cups at Newport in September, would give a very false idea of the real merits of the yachts, and rate many good boats below their proper place. Fortunately, however, there are exceptions to this weather, and at Marblehead last June, at Newport for the Goelet Cup race last year, and also in 1885, when prizes are won solely on merit, and the relative ability of every boat entered may be fairly gauged. Such a day was Saturday, a day neither of calms and catspaws like the preceding ones, nor, on the other hand, of the howling gales and tremendous seas which it is now the fashion to represent as the dearest wish of the cutter men. A happy mean was struck between the two, a working breeze of about the same strength and direction all day, dealt out fairly to all alike, without flukes or favor; more than some wanted, and enough for the stiffest; while the smooth water of the early week was combed into very decent-sized furrows outside the Hook, though quiet enough within.

Throughout Friday night a merry breeze from N. E. rattled through the rigging and banged the shutters on shore, and many an anxious Corinthian wakened to hear it, and to breathe a prayer for more before trimming sheets for another reach into the land of Nod. The morning was bright and beautiful, clear sky, warm sun and a bracing breeze from N. E. that promised plenty of work as well as a change from the sultry and stifling atmosphere of Thursday. Before the time of starting the wind was about East, rather less than a lower sail breeze, and as the fleet came out and worked about for a time under mainsails and jibs only, it was evident that its strength was not increasing, and that jibheaders might be carried to advantage. The courses were the usual ones of the club, except that the start was changed this year, being for schooners and first, second and third class sloops and cutters, from off Buoy 18, to Buoy 10, on the S. W. Spit, keeping it to port; thence to Buoy 8½, keeping it to port; thence around Sandy Hook Lightship, keeping it to starboard, and return over the same course to Buoy 15.

For fourth class sloops and cutters to Buoy 10, keeping it to port, thence around Buoy 8½ keeping it to port; thence around Scotland Lightship, keeping it to starbord, and return over the same course to Buoy 15.

For fifth class sloops and cutters to Buoy 10, keeping it on the port hand; thence to and around Buoy 8½, keeping it to port; thence around Buoy 8 on the point of Sandy Hook, keeping it to starboard, and return over the same course to Buoy 11.

The Luckenbach was at the line in season, and on the minute the first whistle was blown at 11 A. M. The interval was but five minutes, and the second and smaller classes started five minutes after the schooners and first-class singlestickers. All were well above the line, Priscilla having set a small clubtopsail, the rest content with jibheaders. With booms to starboard and breaking out small jibtopsails the fleet went over in quick time, Atlantic again leading. It is always a pleasure to see a boat well handled, and the way that the Atlantic has been brought to the line for four days in succession is well worthy of note. Luck has certainly been with her this year, but in every race she has been just at the spot where it might be expected and at just the right time, and she has reaped good rewards for her smartness in getting away. The schooners were evidently looking for weather or cared to take less risk and trouble than the sloops, for Ibis went over with only small maintopsail aloft, while Clio had both topmasts housed. The start was as fine a sight as any one could wish, the boats having all the sail they wanted, to say the least. The flood tide troubled them but little with such a breeze and they were soon outside the Narrows. The times at start were:

Atlantic	11 06 01	Fanny	11 13 30
Galatea	11 07 01	Cinderella	11 13 57
Priscilla	11 06 46	Santapogue	11 14 18
Ibis	11 08 37	Mariotta	11 14 28
Clio	11 10 00	Bedouin	11 14 31
Magic	11 10 00	Mona	11 15 00
Stranger	11 12 51	Rival	11 15 00
Titania	11 13 04	Iseult	11 15 00
Gracie	11 13 13	Culprit Fay	11 15 00
Shamrock	11 13 15	Beatrice	11 15 00

Atlantic was again first, Priscilla and Galatea together astern of her and helping her as much as possible by bothering each other, a course they kept up all day. Atlantic sailed so well that the prize was fairly hers, but she gained throughout the race from the fact that both of the others were kept back by the close shaves and luffing between them. This work began almost at the start; at 11:20, when just out of the upper bay, the two clinched, Priscilla finally forcing Galatea's lee, on which the latter bore away under her stern and laid a course in the wake of Atlantic, directly for the first buoy, while Priscilla luffed out, evidently overpressed by her clubtopsail. At 11:30 the schooners and second class were just off Fort Hamilton, the order being Clio, Ibis, Magic, Shamrock, Stranger, Gracie, Fanny, Bedouin, Cinderella. Gracie and Fanny were jostling each other for place, a proceeding brought to an end at 11:38 by Gracie's topmast snapping off half way above the cap, a sequel to her spurt on Thursday, when she held to her clubtopsail through the squall. The wreck fell under her bows, but the crew did some smart work in clearing away, and she sailed the course as well as could be expected, even setting spinaker, with an Irish reef in it, on the way home.

It evidently was not Shamrock's day. She heeled under the steady breeze that was now drawing from about E.S.E., and her decks were wet well up, when at 11:35 she doused jibtopsail and working topsail. Titania, on the contrary, was carrying sail well and had the better of her rival, even at this time in the race. About 11:45 she was to windward and both were at it, hammer and tongs; the result, as seen from a distance ahead, being that Titania took the lead of the white boat. At the same time, when Atlantic was near the Bell Buoy, Priscilla was passing to windward of Galatea, having come to her course again, but a little later she began to prepare for work by lowering her clubtopsail, having the jibheader already set under it.

As Atlantic passed Buoy 10 Galatea was fairly abreast of Buoy 10⅛, ¾ miles astern, and Priscilla was midway between the two. Of the fleet, Atlantic and Cinderella, the latter alone in her class, were sailing practically on their own hook, to make the best time possible. Priscilla and Galatea were together in a very pretty duel that was to last all day, Titania was fully awake to the necessity of redeeming the reputation she had lost in the former races, or of getting a bad name that it would take a season of hard work to remove, and she was doing her best with Shamrock, regardless of all else for the time being. Fanny has a long score to work off against Bedouin, and now, if ever, with a good breeze, in smooth water and on a long reach, was the time to do it. She held to the cutter pluckily until they came on the wind a little later, and then her game was up for all day in a hammer to windward in a lop. Poor Gracie was out of the game, but still held on, and Stranger was doing her best to snatch the bone that Shamrock and Titania, a little way ahead, were quarreling over. The small fry astern were tumbling along, mostly reefed, and some with housed topmasts, having plenty of fun, but out of clear view from the middle of the fleet, and as for the schooners, though Magic and Clio were still hard at it, no one cared to waste much time looking at such tame sport with a field of crack racers on trial all about them.

The reach of 10 knots ended at Buoy 10, where the times were taken, and it is worth while to compare them, as such even sailing between so large a fleet is seldom seen about New York. The times were:

Atlantic	12 01 20	Stranger	12 18 12
Priscilla	12 02 58	Fanny	12 19 12
Galatea	12 03 55	Bedouin	12 19 24
Magic	12 16 08	Cinderella	12 34 59
Clio	12 16 16	Mariotta	12 45 09
Titania	12 16 56	Santapogue	12 46 56
Shamrock	12 16 56		

The elapsed times from the start were:

Priscilla	0 55 12	Titania	1 03 52
Atlantic	0 55 19	Bedouin	1 04 53
Galatea	0 56 54	Stranger	1 05 21
Shamrock	1 03 39	Fanny	1 05 42

These times were taken as the yachts stood past the mark, some more distant than others; but they are correct within a very few seconds. According to them Priscilla beat Atlantic by 7s., while she beat Galatea by 1m. 42s. The large boats did the course in about 10m. less than the second class, or, on a reach of 10 miles the extra length of 25ft. between the classes gave a gain of 1m. to the mile. Shamrock and Titania were even, both beating Bedouin by a little over a minute, while Fanny was nearly a minute astern of Bedouin and even with Stranger. As wind and tide were alike to all, and there was enough wind to neutralize any small advantages from pilotage or better bottom, the conditions were unusually favorably for a test.

It was a game of "Follow my leader," as Atlantic, with smallest jibtopsail set, held past the buoy on port tack and stood on into Sandy Hook Bay. Galatea was next, but to leeward of Priscilla, who was holding more than her own; then came the rest, the schooners under working topsails, and Shamrock now with a small jiptopsail set, lowering it at Buoy 10. Titania also lowered her large jibtopsail as she made ready for a beat out. Running well into the bay, Atlantic went on starboard tack at 12:11, and the other two followed at 12:12:30. They worked out past the end of the Hook and were soon hammering away out across the bar, where the rollers were tumbling in at a very good gait; no great sea for an ocean race, but plenty of motion to try the gear and sticks of heavily rigged racers. They held across to the eastward for a long time on port tack, Atlantic riding easily and traveling fast, while Galatea took the seas with a long, easy lope, every now and then bringing up a very large bucketful of green water on the end of her bowsprit. There was little difference in the speed of the three; but while every inch of Atlantic's canvas was drawing, Galatea's mainsail was on the shake far more than was good for her.

Meanwhile there was some lively work among the second class, still inside. Titania was first to tack at 12:23, with Shamrock about at 12:24:30, followed by Stranger at 12:27 and Fanny immediately after. Bedouin stood on until 12:28:30, and then ended Fanny's fun for the day by tacking square on her weather bow and rapidly leaving her astern. Fanny hung to it, but in vain, the weather was soon too rough for her kind and she was virtually out of the race. Titania by this time had settled her white rival and it was plain that her only care would be with Bedouin, now coming along. The iron sloop held to her jibheader and went along easily, showing, now that she was really on trial, none of the "tenderness" that it is now considered the proper thing to attribute to a new boat when nothing else is known of her. Shamrock had only plain sail and wanted no more, as from the Hook out she failed to hold either Titania or Bedouin. Titania led the way, breaking tacks with the big boats and standing down the beach on port tack. At 12:32 Atlantic, now well off shore, went on port tack, with Galatea about at 12:33, Priscilla still holding her course. Titania, now down toward the Highlands, was far ahead of Shamrock, and Bedouin, after crossing the latter's bows about 1 o'clock, was chasing the leader very fast. The two classes were far apart, and from the middle course followed by the steamers, a fine sight was presented on either side.

To the south was Titania, with Bedouin chasing her, both doing splendidly to windward, while Shamrock, Stranger and Fanny were astern, with Gracie making up some of her lost time. To the east were Atlantic, Galatea, Priscilla, seen now stern on as they r n off on starboard tack, and again in a line, beam to, the white sloop ahead, the cutter next and the iron sloop last. In the first position the angle of heel was plainly noticeable, Atlantic lying down beyond the narrow boat, while Priscilla seemed about even with the latter. Reaching past, the cutter seemed, if anything, to be doing the best footing, but the difference was little, and as the times show, any gain in the speed must have been at the expense of her weather position. When they finally came for the mark it was evident that Priscilla had thrown away a good deal by standing on too far, as she came down quickly, when sheets were started.

At 1:13 Atlantic went on port tack, Galatea following, and two minutes later she crossed Priscilla's bow as the latter held on, on starboard tack. At 1:40 they were near the mark, Atlantic on starboard and Galatea on port tack, Priscilla being astern of the cutter but well to windward, and at 1:41 Atlantic crossed Galatea's bow, tacking for the mark at 1:43. As she rounded and jibed she ran up the small jibtopsail, and made ready to set spinaker. Galatea and Priscilla turned very close together, the latter having rapidly overhauled the cutter after she had freed sheet for the mark. The club steamer, the big Taurus, ran directly to windward of the two and so close to Priscilla that the yacht seemed in danger directly under her sharp iron stem, as the steamer had no steerage way. The two yachts were becalmed under her lee for a moment and then went after Atlantic, now speeding rapidly homeward. The second class came up a little later, having gained greatly on the large boats, as the following times show:

Atlantic	1 49 08	Titania	2 02 46
Galatea	1 51 03	Bedouin	2 06 49
Priscilla	1 51 22	Shamrock	2 13 09
Stranger, Fanny, Cinderella and Gracie followed in order, but could not be timed.			

The times here were taken very carefully, as each of the leading boats passed between the tug and the lightship. The elapsed times of each from Buoy 10, ten knots in the most direct line, are:

Titania	1 45 50	Atlantic	1 47 48
Galatea	1 47 08	Priscilla	1 48 24
Bedouin	1 47 25	Shamrock	1 56 18

The smaller boats had beaten the large ones easily, notwithstanding the extra size in rough water, and Titania had beaten her nearest rival by 1m. 36s. and left Shamrock nearly 10½m. astern in ten miles of windward work. In the large class Galatea had beaten Atlantic by only ½m. and Priscilla by 1¼m., the latter having lost more than that amount by overreaching the mark. The figures then indicate the three are equal to windward in a good breeze, while those at Buoy 10 show that the cutter was 1½m. slower on a reach. The work outside the Hook in the large class, at least, had been all clean sailing, with no luffing matches, each of the three minding her own business closely all the way out.

Galatea was first to air her spinaker, setting also jibtopsail; Priscilla broke out her spinaker at 1:59 and Atlantic at 2, both setting balloon jibtopsails. The positions did not alter much on the way to buoy 5; Atlantic held her lead and Priscilla was unable to pass Galatea, even with the help of her clubtopsail, now mastheaded. At 2:40 Atlantic made a handsome jibe when off the point of the Hook, and Priscilla about the same time succeeded in passing Galatea, both taking in spinakers at 2:42. Galatea jibed at 2:45, but Priscilla held her course, running away from the mark and did not jibe until 2m. later.

As Atlantic came up to Buoy 8½ she had all ready for a jibe, and, sweeping around, she let her boom come over as she reached Buoy 10. Galatea was leading Priscilla as they came for Buoy 8½, but just as they reached the mark the sloop cut in cleverly and turned inside her. Together they ran the short distance to Buoy 10, and again turned so close that Priscilla could barely pass between the buoy and her rival. From astern, as both jibed, Priscilla's huge mainsail completely covered the cutter. Hardly were they clear of the mark when Priscilla's balloon jibtopsail traveled up the stay and went into strings; "All together, nothing first, just as bubbles do when they burst." Down the length of the stay was an

array of dry goods, of shapes and sizes that would discount the court yard of a tenement house on wash day; far out to leeward they streamed, and with them went her chances for second place, as Galatea luffed out across her stern and hauled away from her. Suddenly out to leeward went the great balloon jibtopsail of the cutter, the lee sheet having parted. Both crews had their hands full; on Priscilla they gathered in as best they could the worst of the wreck and prepared to send up a smaller topsail, and on Galatea the crew turned to, dropped the sail, and at last succeeded in securing the clew and bending a new sheet, by which time Priscilla had another topsail on the stay, though in rather curious fashion, as a hook fouled in hanking on and held the upper part of the sail to the stay. Together they went home flying, the finish being close and exciting, the iron sloop finally leading by 1m. It had been evident that the small boats were bringing the wind and picking up the leaders as they neared the Hook, and they were not far astern at Buoy 10, the times, as far as taken, being:

Atlantic	2 57 51	Galatea	3 02 43
Priscilla	3 02 41	Titania	3 09 11

Here was another surprise, as Titania in spite of 25ft. less length had run from the mark to Buoy 10 in 1h. 6m. 25s., while Atlantic's time was 1:08:43. Priscilla and Galatea were practically even, the times being 1:21:19 and 1:21:40. The times of the whole run of 17 knots from Sandy Hook Lightship to Buoy 15 were:

Atlantic	1 47 00	Titania	1 51 34
Shamrock	1 50 55	Galatea	1 53 00
Priscilla	1 51 31	Bedouin	1 55 22

The advantage of the wind was with the smaller boats, but still the time is remarkable when the extra length of the others is considered. The official summary is:

	Start.	Finish.	Elapsed.	Corrected.
FIRST CLASS SCHOONERS.				
Magic	11 10 00	Not timed.		
SECOND CLASS SCHOONERS.				
Clio	11 10 00	4 37 25	5 27 25	5 27 25
Ibis	11 08 37	Did not finish.		
FIRST CLASS SLOOPS AND CUTTERS.				
Priscilla	11 07 46	3 42 53	4 35 07	4 35 07
Atlantic	11 06 01	3 26 08	4 20 07	4 29 29
Galatea	11 07 01	3 44 03	4 37 02	4 30 07
SECOND CLASS SLOOPS AND CUTTERS.				
Gracie	11 13 13	4 33 40	5 20 27	5 18 55
Stranger	11 12 51	4 16 48	5 03 57	4 58 54
Titania	11 13 04	3 54 20	4 41 16	4 41 16
Bedouin	11 14 31	4 03 12	4 48 41	4 47 00
Shamrock	11 13 15	4 04 04	4 50 49	4 49 56
Fanny	11 13 30	4 29 15	5 15 45	5 11 49
THIRD CLASS SLOOPS AND CUTTERS.				
Cinderella	11 37 57	4 43 12	5 29 15	5 29 15
FOURTH CLASS SLOOPS AND CUTTERS.				
Mona	11 15 00	4 46 31	5 31 31	. . .
Rival	11 15 00	4 22 00	5 07 70	. . .
Santapogue	11 14 18	4 56 00	5 41 42	. . .
FIFTH CLASS SLOOPS AND CUTTERS.				
Iseult	11 15 00	3 06 00	3 51 00	3 51 00
Culprit Fay	11 15 00	2 59 15	3 44 15	3 42 46
Mariotta	11 14 28	2 43 00	3 28 32	3 24 50
Beatrice	11 50 00	Did not finish.		

Thus in the first class schooner class the Magic wins. In the second class the Clio wins. The Atlantic wins in the first class sloop and cutter class, beating the Priscilla 5m. 38s., and the Galatea 6m. 38s. The Titania wins the second class sloop prize, beating Bedouin 4m. 44s., and Shamrock 8m. 40s. The Cinderella wins in the third class, and the Rival wins in the fourth class, beating Mona 24m. 31. The Mariotta wins in the fifth class, beating Culprit Fay 17m. 56s.

CORINTHIAN Y. C. REGATTA, JUNE 13.

THIS year the regular events of race week were supplemented by a fourth race given by the newly formed Corinthian Y. C., whose station is at Tompkinsville, Staten Island. This club, organized last year, proposes to devote all its efforts to the encouragement of Corinthian yachting, and especially to racing. The first regatta was more of an experiment than anything else, coming on a Monday and after a busy week of hard racing, and lack of time, as well as the difficulty of procuring Corinthian crews, prevented many from entering. The full courses and conditions were given last week in the FOREST AND STREAM. The prizes were handsome pewter mugs, each bearing the club flag in enamel. The lack of entries is not to be ascribed to the absence of valuable prizes, but to the fact that the club is as yet little known, and also, as stated, to the unfortunate date, on Monday. The day was fair and warm, with a light wind from the north, the tide running toward the last of the ebb. The starters were, yachts over 75ft., Atlantic, Galatea, Cythera; 65 to 75ft, Stranger; 56 to 65ft., Huron, Vision, Cinderella being placed in the same class; 41 to 56ft., Ulidia and Fanita; 26 to 35ft., Culprit Fay, Beatrice, Ilderan, Delvyn; 26 to 30ft., Kangaroo, Alexander F., Corinne, Petrel; under 26ft., Gleam. The Luckenbach, with the regatta committee, Messrs. Clark, Barron, Woodbury and Plummer, was late at the line, and the start was made an hour later than advertised. At 11:20 the preparatory whistle blew with the fleet all to windward of the line, the tug lying off Fort Wadsworth. Spinakers were hanging in stops and booms were lowered to port for the run out to Southwest Spit. Cythera was too quick and mistook the signals, going over at the first blast, but seeing her error she returned, being badly handicapped. The flying start led to some pretty maneuvering for place, in which Galatea got the best of Atlantic, leading her over, but the spinaker sheet fouled and delayed her in getting it out, Atlantic drawing up to windward. They went along very evenly, Atlantic on the other's port bow for a long time, both bearing to the eastward, while Stranger and the rest ran close in to the West Bank buoys.

At noon, when near Buoy 10½, Atlantic was a very little ahead of Galatea, while further to the west was Stranger, with Huron astern of her, Cinderella abreast of Huron on the windward side, and Fanita and Ulidia astern of the pair. At 12:20 Cythera, coming down astern, jibed her boom to port, and at 12:28 Atlantic, having run too far to windward, jibed over and stood down for Buoy 10, with Galatea jibing and following close. Atlantic gained a little here, but they came to the buoy very well together. The times were:

Stranger	12 38 36	Cinderella	12 41 25
Atlantic	12 39 30	Fanita	12 42 50
Galatea	12 40 45	Ulidia	12 45 10
Huron	12 41 02	Cythera	11 52 30

The speed was very slow at the buoy, as the wind had fallen very much, coming now more from the east, and the times do not show the actual distance between the boats. At Buoy 8½ they were so close that Atlantic's boom was hardly 50ft. ahead of Galatea's bowsprit. Thus in the run of 10 miles in a very light wind, when Galatea's foul bottom might be expected to do the greatest possible damage, she had just held the centerboard boat. The two lost by the course they took, as the others carried spinakers to the mark, Cinderella, in particular, handling hers very neatly, taking it in just as the spinaker boom was over the buoy. The times at 8½ were:

Stranger	12 43 55	Cinderella	12 46 40
Atlantic	12 44 35	Fanita	12 49 10
Galatea	12 45 55	Ulidia	12 51 35
Huron	12 46 20		

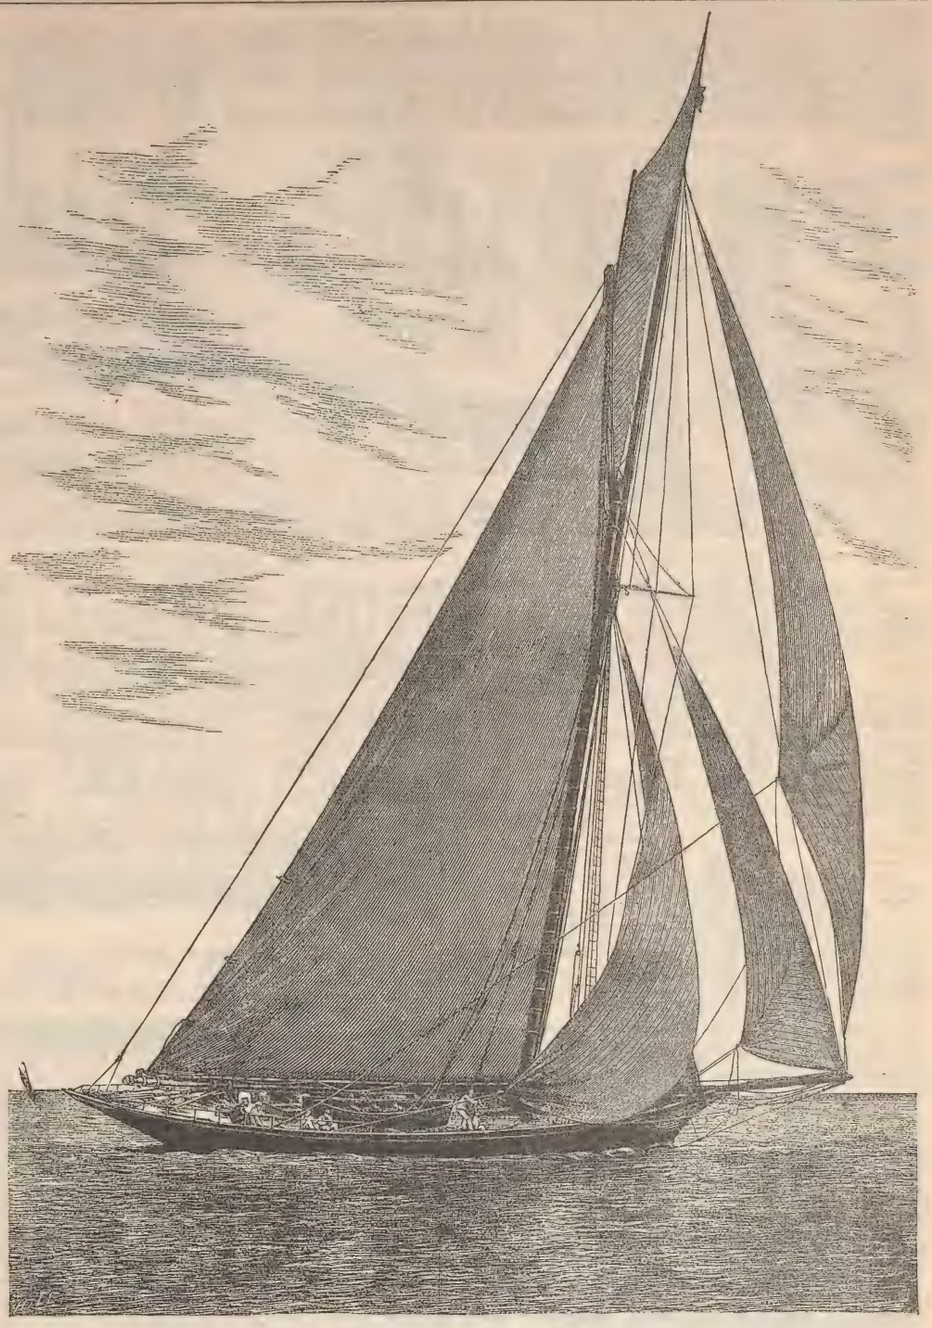
Past the mark, all came on port tack for Buoy 5, the wind falling until at 1:30, off the Hook. Atlantic dropped her anchor. Cinderella, very close in shore, was working the ebb out, but the rest were in no more than slack water. Galatea, outside of Atlantic, finally took a little air from the north and was away while Atlantic was getting her hook.

The puff proved but the first of a breeze, and soon all were boiling along fairly scuppers to, Galatea leaving Stranger to leeward and astern, and dropping Atlantic. Both carried clubtopsails and balloon jibtopsails, Atlantic having jib and staysail down. They had gathered way and were making good speed when an extra capful of wind was emptied out on the fleet from the north. Atlantic luffed up at once, dropping balloon jibtopsail, while Galatea held her course, also lowering balloonер. The rest worried through the squall all right except Cythera, who lost her maintopmast, and Ulidia, who parted a topmast shroud and had to lower topsails and repair damages, letting Fanita gain well on her. During the heat of the squall Galatea was leaving Atlantic, but the latter set her lower headsails and came up in hot chase. At 2:15 a lively luffing match took place, Galatea holding her weather berth, but Atlantic paid off under her stern, set jibtopsail and quickly ran through her lee. Out to the Lightship was a reach, with a good breeze, and Atlantic gained on Galatea, and at the end of the seven mile reach she was 1m. 20s. ahead. The times were:

Atlantic	2 33 55	Huron	2 40 40
Galatea	2 35 15	Cinderella	2 43 22
Stranger	2 40 20	Cythera	2 56 00

Atlantic's gain in sailing was more than the times show, as Galatea had much the best of the start when the breeze caught them at Buoy 5.

As they jibed sheets were pinned in for the close reach to the Hook and the two went at it in earnest. The breeze was dropping as they came in, though at the turn both were well heeled down, and at the Hook it was light again. They were timed at Buoy 5, Atlantic 3:16:15, Galatea 3:17:00. Galatea had thus gained 35s. on Atlantic, Stranger led Huron with Cinderella third.



The times at Buoys 8½ and 10 were:

Buoy 8½:			
Ulidia	3 20 20	Stranger	3 44 15
Atlantic	3 28 05	Huron	3 45 00
Galatea	2 20 00	Cinderella	3 50 21
Buoy 10:			
Fanita	3 20 10	Stranger	3 49 10
Ulidia	3 25 22	Huron	3 51 13
Atlantic	3 32 25	Cinderella	3 57 28
Galatea	3 33 38		

The breeze dropped, until off Buoy 10 there was hardly any, while a strong ebb was running. Fanita and Ulidia were met here, the small fry having passed up long before. Fanita was ahead, working to the eastward with a light breeze, while Ulidia was nearer to the black buoys.

Now began a long and tedious drift, from 4 until nearly 8 P. M. The race virtually finished at Buoy 10, with Atlantic 1m. ahead. From here on was a succession of calms and catspaws, the yachts barely stemming the strong tide. Slowly they worked across until Atlantic was off Norton's Point and Galatea off the East Bank. About 6:15 a light breeze came over Staten Island, Atlantic taking it first and standing across Galatea's bow on port tack into Gravesend Bay. Galatea, also on port tack, held on slowly but steadily until she was within a mile of the finish, and had Atlantic becalmed a long way to the leeward. About 6:47 Atlantic found wind enough to tack and went about, standing across under Galatea's stern until she came up to the West Bank, near Hoffman Island. She barely made her way across the tide, and Galatea now had come to a standstill and began to fall astern as the wind entirely left her, and the tide caught her weather bow and paid her off. The other boats were stealing up the line of black buoys with a barely perceptible breeze, and Atlantic at last worked into it at 7:30, setting her balloon jibtopsail. This finished the race; with it drawing she ran in while Galatea was trying to get sufficient steerage way to head on her course. Fanita was becalmed on East Bank and did not get in. The finish was timed as below:

	Start.	Finish.	Elapsed.	Corrected.
SPECIAL CLASS.				
Atlantic	11 25 00	7 40 31	8 15 31	8 14 27
Galatea	11 25 00	7 48 03	8 23 03	Allows.
Cythera	11 25 00	Not timed.		
FIRST CLASS, SLOOPS, 65 TO 75FT. ON LOAD WATERLINE.				
Stranger	11 25 00	7 45 48	8 20 48	8 20 48
SECOND CLASS, SLOOPS, 56 TO 65FT. WATERLINE.				
Vision	11 25 00	Withdrew.		
Huron	11 25 00	8 08 20	8 43 20	8 43 20
Cinderella	11 25 00	8 45 08	8 20 08	8 13 21
FOURTH CLASS, SLOOPS, 41 TO 56FT. WATERLINE.				
Fanita	11 25 00	Not timed.		
Ulidia	11 25 00	7 57 13	8 31 13	8 29 19

THE THISTLE.

From the London *Field* of June 4. It is from an instantaneous photograph taken by Capt. Clarke, of Boston, and shows her as viewed from abaft the beam, in the recent Channel match to Harwich. Her enormously taunt spars are made very apparent, but of course the fore-shortening takes off the length of hull. The waterline length is 85ft., and breadth 20.4ft.

SIXTH CLASS, SLOOPS, 30 TO 35FT. WATERLINE.			
Ilderan	11 30 00	4 16 55	4 46 55	4 43 37
Culdrit Fay	11 30 00	3 47 07	4 17 07	4 15 01
Delvyn	11 30 00	4 22 45	4 52 45	4 52 45
Beatrice	11 30 00	3 56 30	4 26 30	4 25 10
SEVENTH CLASS, SLOOPS, 26 TO 30FT. WATERLINE.				
Kangaroo	11 30 00	2 43 50	3 13 50	3 11 44
Petrel	11 30 00	3 13 45	3 43 45	3 42 53
Corinne	11 30 00	3 10 35	3 40 35	3 40 35
Alexander F.	11 30 00	2 45 15	3 15 15	3 14 58
EIGHTH CLASS, LESS THAN 26FT. WATERLINE.				
Gleam	11 30 00	3 09 30	3 39 30	3 39 30

Atlantic beats Galatea 3m. 36s. Stranger has a sail over. Cinderella wins in second class, beating Huron 29m. 59s. Ulidia wins in her class, Fanita not finishing. Culprit Fay beats Beatrice 11m. 9s. Kangaroo beats Alexander F. 3m. 14s., and Gleam, in the eighth class, sails over.

The prizes will be allotted under three systems of measurement, length, sail area, and the two combined; but the about results will not be changed.

The weather and other adverse conditions considered, the regatta was very successful, and is likely to become in the future an important addition to the events of regatta week. The club will adhere as far as practicable to Corinthian sailing, only making exceptions as in the present case, with the large class, in which full professional crews are allowed. It is provided in the small classes that one-third of the crew may be professionals, a very wise action, as long experience has proved that it is impossible to get full Corinthian crews trained to handle the yachts successfully. Corinthian sailing is the mainstay and backbone of yachting, and should be encouraged by every club, but in practice there is a limit to its operation. About New York the Corinthian contingent is composed almost entirely of men in active business, and few owners are able to get together six or eight good men and to give them the amount of practice sailing and drill that is necessary to put them on a par with professional crews. Raw material of the best kind is plenty; there are many who are fully competent to take a place in any crew, but the opportunities for practice are few, especially before the June regattas; the men are unused to working together, their hands are soft and unfit for much of the rough work, and they are far more at home on the deck than at the crosstrees. Practically there will be more boats and better manned if a proportion of professionals is allowed than if the Corinthian rule be strictly enforced.

THE START OF THE JUBILEE RACE.—The Jubilee race of the Royal Thames Y. C., around Great Britain and Ireland, was started off Southend, on Tuesday at 12:55 by the Prince of Wales. The starters were Aline, Sleuthhound, Dawn, Dauntless, Genesta, Mabel, Vol au Vent, Atlantis, Gwendolin, Bridesmaid and Helene.

ARRIVAL OF THE HILDEGARDE.—The three-masted schooner yacht Hildegarde, purchased in England by Geo. Gould, arrived off Staten Island on June 14, after a passage of 38 days.

HARLEM Y. C. ANNUAL REGATTA, JUNE 13.

THE annual regatta of the Harlem Y. C. was sailed on June 13, the courses being: Classes B and C, around Fort Schuyler buoy and around College Point, to and around a stakeboat near steamboat dock at College Point, the course to be sailed twice; 20 miles. Classes F and G, around stakeboat near Bowery Bay Beach, the course sailed three times; 15 miles. The wind was north at the start, dropping to a calm in the afternoon. The summary was:

CLASS B—CABIN SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Peerless	12 56 10	5 51 55	4 55 45	4 53 35
Charles Weide	12 58 00			

CLASS C—OPEN JIB AND MAINSAIL.

Bessie B.	12 57 19	Did not finish.
Nettie	12 57 00	Did not finish.
Geo. B. Deane	12 56 20	Did not finish.

CLASS F—CATRIGGED, UNDER 23FT.

Daisy	1 02 40	4 12 40	3 10 00	3 07 56¼
Nazlir	1 03 15	4 32 15	3 29 00	3 29 00

CLASS G—CATRIGGED, UNDER 18FT.

Harry C	1 05 07	4 30 20	3 25 13	3 22 15
Little Dean	1 04 13	4 39 13	3 35 00	3 35 00
Jean	5 01 11	5 04 45	4 04 34	4 01 26½
Tough	1 01 22	5 12 22	4 11 00	4 04 15
Irene	1 01 08	5 19 12	4 18 04	4 15 56½
Biles	1 00 58	Did not finish.		
Lillian L	1 01 47	Did not finish.		
M. McCarthy	1 05 00	Did not finish.		

Peerless won the Commodore's cup for elapsed time in Class B, and Harry C won a second leg for the Bailey Cup for elapsed time in Class G. The judges were R. F. Baxter, H. B. McAllister and A. Metzger.

ATLANTIC Y. C. LADIES' DAY, JUNE 14.

AS usual, the annual ladies' day sail of the Atlantic Y. C. was a very enjoyable affair. There was a race over an 8-mile course on the upper bay, with ladies on each yacht, and music and supper at the club grounds at Bay Ridge. The summary of the race was:

CLASS A—SCHOONERS OF 75FT. AND OVER.

	Start.	Finish.	Elapsed.	Corrected.
Grayling	3 26 26	4 08 23	0 41 57	0 41 57

CLASS J—SLOOPS 26FT. AND UNDER 30FT.

Arab	3 35 55	4 37 24	1 01 29	1 01 29
Myssa	3 37 13	4 53 35	1 16 23	1 15 57

CLASS K—SLOOPS UNDER 26FT.

Frolic	3 37 30	4 53 12	1 15 42	1 15 42
Gleam	3 37 08	5 01 04	1 23 56	1 23 16

DORCHESTER Y. C. NINETY-EIGHTH REGATTA, June 10.—Courses from starting line leaving Farm Bar buoy on starboard, Halftide rock on port, Old Harbor buoy on port, Farm bar on port, Halftide on port, Old Harbor on port, Farm bar on starboard to starting line; distance 7½ miles; weather fair and cool; wind east; tide high water at start.

FOURTH CLASS.

	Length.	Elapsed.	Corrected.
Mabel, F. L. Dunne	20.01	1 27 16	58 33
Jester, W. H. Besarick		Withdrew.	
Scamp, Frank Gray	18.04	1 28 21	57 31

FIFTH CLASS.

Mirage, G. E. Jordan	17.05	1 31 40	59 44
Rocket, H. M. Faxon	16.01	1 33 27	59 38
Sheerwater, C. H. Woodsum	18.02	1 34 46	1 03 42
Nora, G. B. Denning	16.07	Withdrew.	
W. E., J. E. Robinson, Jr.	18.00	Withdrew.	
Peggy, J. P. Bullard		Withdrew.	

Scamp won first leg so gets the cup in Class 5. Mabel wins one leg for the championship in Class 4. Mirage protested Rocket's measurement. Regatta committee, L. M. Clark, H. S. Carruth, H. B. Callender, Frank Gray, E. H. Tarbell. Judges, A. J. Clark, H. Davenport, E. R. Tilton.

MONATIQUOT Y. C., SECOND CLUB REGATTA.—Weymouth June 11.—Course, inside, first and second classes, distance 8 miles, third class 6 miles. Weather fair; wind light and variable, E.S.E. Start on last quarter of flood tide.

FIRST CLASS.

	Length.	Start.	Finish.	Elapsed.	Cor.
Posy, sloop, R. G. Hunt	22.03	3 25 07	6 17 06	2 51 59	2 23 43
Folly, sloop, J. F Sheppard	20.08	3 21 19	6 16 55	2 55 36	2 31 20

SECOND CLASS.

Maud, sloop, G. M. Lincoln	19.02	3 28 55	Failed to complete	
Diadem, sloop, L. Haywood	18.02	3 26 10	course within time	
Spider, cat, A. E. Pratt	19.07	3 29 19	limit.	
Spray, cat, C. F. White	19.02	3 28 14		
Nereid, cat, C. F. Colby	20.09	3 26 55		

THIRD CLASS.

Helene Snow, sloop, A. Lane	16.03	3 32 30	6 16 30	2 44 00	2 17 27
Flora Lee, cat, E. B. Glover	17.05	3 31 48	Time not taken.		

Sailing length, length on waterline plus 1-5 aft overhang. Posy wins in first class and Helen Snow in third. Second class failed to finish within time limit. Regatta Committee, T. D. Bagley, chairman, R. G. Hunt, C. G. Sheppard, C. J. Colby, A. W. Blanchard, G. H. Bicknell. Judges, Henry Gardner, Geo. H. Bicknell, Major E. C. Pierce.

MONTGOMERY SAILING CLUB, Norristown, Pa., June 13.—The sixth cruise of this club took place June 12. Course, 5 miles with a turn. Wind light to fresh from the east, making it a run to the buoy and a beat home. The start was made at 9 A. M. The following summary shows the finish and corrected times:

	Length.	Finish.	Corrected.
Cocktail	15.00	10 51 01	1 49 28
Gracie	12.00	11 02 15	1 52 39
E. C. Potts	15.00	10 55 45	1 53 49
Elsie	15.00	10 59 53	1 56 28
Flying Eagle	15.00	10 57 28	1 56 55
Little Tycoon	16.00	10 57 58	1 57 58
Priscilla	15.00	11 00 10	1 57 57
Igidious	15.00	11 00 00	1 59 27
Lulu	15.00	11 02 59	2 01 55
Josephine	15.00	10 57 48	Fouled mark E. A. L.

EAST RIVER Y. C. ANNUAL REGATTA, JUNE 13.—The annual regatta of the East River Y. C. was sailed on June 13 in a fresh north wind, the course being from the club house around the Gangway Buoy and back. The summary was:

CLASS A—CABIN SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Wacondah	1 04 40	4 43 40	3 39 00	3 39 00
Susie B	1 04 00	4 45 05	3 41 05	3 40 00

CLASS B—CABIN SLOOPS.

Maud M	1 08 01	4 43 05	3 35 04	3 35 04

CLASS D—OPEN JIB AND MAINSAIL.

H. H. Holmes	1 01 45	5 48 40	4 46 55	4 46 55

CLASS E—CAT RIGGED.

Ida K	12 58 00	4 45 23	3 47 23	3 47 23

The rest of the yachts were not timed, as the last of the race was a drift.

QUAKER CITY Y. C. TWELFTH ANNUAL REGATTA, June 13.—Course from line between committee boat and a flagstaff on shore at Gloucester, to Horse Shoe Buoy, keeping it on starboard; thence around station boat off Marcus Hook, keeping it on port, returning over same course, keeping to westward of Block House Bar and Chester Island, both going and returning; distance, 30 miles; weather clear, wind fresh, afterward light, N.E., tide ebb. Summary:

SCHOONERS.

Middleton Challenge Cup for first class sloops was won by Minerva. Valiette Challenge Cup for second class sloops was won by Consort, Leda being barred out by not being sailed by an amateur, one of the specifications of the conditions. Ellis Cup to the yacht making the fastest time over the course, irrespective of class or time allowance, won by Minerva (first class sloop). Regatta committee and judges, Wm. J. Thorman, Addison F. Bancroft, Charles L. Wilson.

GALATEA AS A RACER.

Editor Forest and Stream:

The races of the Atlantic and New York Y. C. may be dismissed without comment as the worst flukes ever seen in the harbor. The results were without technical value.

The race of the Scawanhaka Corinthian Y. C. last Saturday in a fair topsail breeze and light sea demonstrates that Galatea, Priscilla and Atlantic make practically an even match all round. Though Atlantic won by some five minutes, Priscilla covered Galatea on the run in and stole her wind. The latter pair also wasted time in a luffing match after rounding S. W. Spit coming home. But for this, all three would have made a very even thing of it over the whole course.

The honors of the match belong, however, to the cutter Galatea, with plenty to spare, for it must not be forgotten that the latter is racing under a sea-going rig, which is only a jury for racing in American waters.

The cutter is by long odds the stiffest of the three, which she ought not to be in view of her small beam. Were she rigged in proportion to her ability to carry sail, good judges are of the opinion that she would beat both Priscilla and Atlantic by ten minutes. The conclusion is that Galatea's cutter hull possesses greater possibilities for speed than our so-called sloops of New York, but the Galatea need look for no winnings as long as she sails to all intent and purpose with a reef down in light to moderate winds. Nothing less than a lower sail breeze can neutralize her extremely modest spar plan.

It is to be regretted that for lack of racing rig Galatea's true capacities remain obscured, and false inferences receive currency through the half-posted critics of the daily press.

Fortunately the new cutter Thistle will not rest content with mere hy-play, but is in the hands of keen men who are not so easy-going as to sacrifice their vessel's reputation for want of the rig to show what there is in her.

Although Atlantic has been the recipient of a good deal of Bay Ridge enthusiasm, cool heads see nothing in her performance last Saturday from which it can be inferred that she is doing any better than last year, and when she again meets the Boston clippers it will become suddenly evident that she has no more business with Mayflower or Puritan this year than she had before.

SALT HORSE.

CLEVELAND Y. C. CRUISE.—On May 30 the Cleveland Y. A. fleet sailed from the anchorage at 10 A. M., ten yachts following the flagship Wasp. The fleet anchored at Rocky River where dinner was served ashore, and returned in the afternoon, being struck by a severe squall on the way home. A new schooner, 38ft. over all, is now nearly completed at Buffalo, for Mr. Anderson, of Cleveland.

RACING ETIQUETTEE.—It seems hardly possible that any yachtsman would cross the finish line with racing flag flying and number shown when he has not gone the full course, and yet boats are timed at the finish only to be dropped afterward from the list. If you are out of the race for any reason, at once lower your racing colors and keep clear of the course.

LAKE ONTARIO.—Belleville, Ont., June 8.—Judging from various indications, I have come to the conclusion that the racing in class A and in the second class during the round of the L. Y. R. A. will be the sharpest that has yet been witnessed. Of the class A yachts the Norah, since her rebuild and remodeling, appears likely to prove even faster than last season. The Atalanta, at Brighton, is being smoothed up and getting a general overhauling. She needs, and will probably get, a new suit of canvas. These two, when they meet, will make a good race. In the second class the Iolanthe and Laura, both of which will receive every possible improvement, will renew their old rivalry. Mr. Ames's (of Oswego) new Burgess-built craft Merle, and the imported cutter Cyprus, as to the speed of both of which satisfactory reports have reached me, will add greatly to the interest of this class. Commodore Carruthers, Kingston Y. C., president of the L. Y. R. A., also intends to make an attempt to capture first honors in this class by importing a yacht from Boston. Thus there is rare sport in store for the lovers of yachting on Lake Ontario. I observe that some of the newspapers on your side of the line are already claiming, in view of the not improbable success of the Thistle in the America's cup races, that "she embodies many American ideas, and therein gets her great speed." Considering that nothing is known of the Thistle beyond her length and breadth, this does seem to be a little premature, as large cutters of beam as great as that of the Thistle were by no means a rare sight in British waters until the old measurement rule of the Y. R. A. caused their displacement by the narrow type, which will now in turn become obsolete under a more sensible rule of measurement.—PORT TACK.

YACHT BUILDING AT GLOUCESTER.—The yacht Sachem, built by Higgins & Gifford from the Osceola's lines, was launched just in time to sail her maiden race on May 30 and secure first prize in her class. The Wona, cutter, now building for the Cunningham Bros. of Boston, designed by Burgess, and the Trudette, building for ex-Com. Haskins, of the Sandy Bay Y. C., designed by Mr. Gifford, senior member of the firm, will both be launched the coming week. Much interest is felt by yachtsmen in regard to the sailing qualities of the two boats. While resembling each other in many respects, they are quite unlike in others. Higgins & Gifford have shipped during the past week to Savannah a small yacht from the celebrated Sassacus model. Sassacus is now at their shop, about ready to be launched, with an addition of more lead on the keel, longer and deeper centerboard of wood instead of iron, also a hollow mast. The Thisbee, Freya and Louette will also take water from the yard this week. Yachting on Cape Ann bids fair to be lively this season.

KNICKERBOCKER Y. C.—On June 18 a race for small cabin yachts belonging to the Knickerbocker Y. C., will be sailed from the club house around Fort Schuyler buoy and return, tacking around the buoy. Prizes will be given in each class for corrected and elapsed times, no prizes being given unless two start in a class. No shifting ballast allowed. The annual cruise will start on July 2 at 4 P. M., ending on July 4.

COOPER'S POINT COR. Y. C.—*Editor Forest and Stream:* Third race of the Cooper's Point C. Y. C. took place June 7, over the club course. The weather was threatening and only five boats started at 2:43 P. M., arriving at the home stakeboat in the following order: Item 4:30, Russell 4:35, Anderson 4:38, Allmond 4:39, Cook 4:40.—R. J. W.

EASTERN Y. C. REGATTA.—The annual regatta of the Eastern Y. C. will be sailed June 21, starting at 11:30 off Half Way Rock. Galatea and Priscilla will be in, but Atlantic will not enter, as some further changes are to be made in her.

ARROW.—The alterations in Arrow have progressed so slowly that she will not be ready before August, and so will not fit out this season.

THISTLE AND IREX.—These two cracks are matched to sail together in the Royal Mersey regatta of June 18.

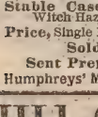
WRITE UPTHEGROVE & MCLELLAN, Valparaiso, Ind., for new catalogue of sportsmen's and civil engineers' wear.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

L. S.—We do not know addresses of parties who propose camping in the North Woods.

A. E. M., Hamilton, Ont.—The restriction will be reviewed in a special paper devoted to the subject.



INQUIRER.—The preparation will preserve the hides. The dates asked for will be given in our next number.

J. W., Newfoundland.—1. The arm is reliable; a larger caliber would probably give you better satisfaction. 2. See answer to "Target."

G. F. Q., Bethlehem, Pa.—I have just secured a bird specimen in length about 6in.; head and neck grayish brown, bill black, thick and almost conical; back, upper coverts of wings and breast gray brown; belly dull yellow, tail and wings gray, upper tail coverts ash gray under white, legs black, secondary coverts have a pinkish hue, and secondaries each have a small bright red plume at tip, and tail feathers have a bright yellow bar across tips. The bird has a small crest on crown of head. It is uncommon here. Ans. The bird is probably a cedar bird (*Ampelis cedrorum*), a common eastern species.

PROOF POSITIVE.—Strolling into an extensive establishment where some of the best stock in the country is kept, a fine animal was brought from his stall evidently suffering from severe colic. He could not stand a moment, scringing with pain, pawing, and could be hardly kept on his feet. The foreman eyeing him for a moment stepped to a little case, opened it, took a small bottle, and with a little bent glass tube ejected a few drops upon the tongue. The horse was soon easier, and after a second dose in half an hour, began nibbling his hay. "That's the way we do it," said the foreman; "no bottling, no balling, no bleeding or blistering for any disease, only Humphreys' Veterinary Specifics. They cure every time. We have not for years used any other medicines, and don't lose any stock from sickness." They are being used everywhere. —*Adv.*

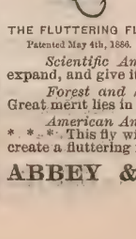
The Fluttering Fly.

PATENTED MAY 4, 1886.

With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fishing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are:

1st—The wondertully life-like and fluttering motion this fly has when moved on the water.



2d—The fish is almost certain to be hooked if it touches the fly.

3d—Any of the present favorite combinations of color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style.

4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that flies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies.

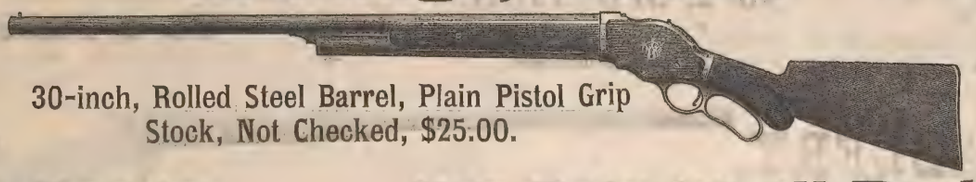
We take this means of notifying dealers and fly-tyers that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure such people that the same old course will be pursued by this firm.

We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentlemen into our advertisements.

THE FLUTTERING FLY.
Patented May 4th, 1886.

Scientific American: "When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish."

Forest and Stream: " * * * more like a natural insect than the old patterns whose wings close when being drawn through the water. * * * Great merit lies in its superior hooking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly."



American Angler: "There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than by color or form. * * * This fly will certainly, when drawn against the current or over a placid pool, *seam* the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * * We are told that few fish are lost by those who use this fly. We do not doubt it."

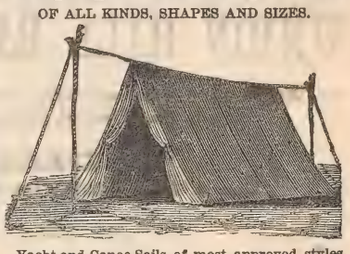
Adirondack Preserve Association.

The Association was incorporated last year, having for its object the encouragement of social recreation, and of boating, fishing, lawful sports and the preservation of game and forests. The club house is situated in Essex Co., close to Mink, Thumb, Beaver, Loon and Moose Lakes, and is to be kept open the entire year so that members can take advantage of any portion of the fishing and hunting season, winter or summer. Photographs of the lakes and principal points of interest can be seen at the office of the Association. The membership is limited and the initiation fee $100. Applications for membership may be made to J. G. CASE, Secretary, 178 Broadway, New York.

Salmon Fishing in Canada.



We have the largest stock in America of Forrest & Son's celebrated Salmon Flies, Rods, Reels, Casting Lines, etc., etc. We have everything in Fishing Tackle for the successful capture of Salmon and Trout in Canadian waters. "Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

39 Park Row, New York.
LONDON: DAVIES & Co., 1 Finch Lane.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO. 39 Park Row.

SPORTING & MINERAL

Prospecting Tour IN

NORTHERN CANADA.

A splendid opportunity to enjoy some of the grandest sport the continent of America affords, with an almost positive certainty of rich mineral discovery.

A party purpose prospecting in a portion of Northern Canada, parts of it hitherto unexplored, where large deposits of minerals, viz.: silver, copper, iron, mica, etc., are known to exist, will leave Orillia, Ontario, Can., about the first of August, and desire the co-operation and company of three or four gentlemen to complete the party. The trip will last about three months, through a country abounding with moose, deer, bear, duck, partridge, wild geese, mink, otter, beaver, etc., while the lakes and rivers teem with fish of every description. Experienced guide and all camping outfit, means of transportation, etc., found.

For further particulars, references, etc., apply H. F. SINCLAIR, Orillia, Ontario, Can.

For Sale.

FOR SALE

5,911 ACRES OF THE **Choicest Timber Lands** IN THE

ADIRONDACKS.

MUST BE SOLD AT ONCE TO CLOSE AN ESTATE.

This land has over *two miles of frontage* on the south shore of **Raquette Lake**, and is densely covered with the choicest trees of the forest, and more than enough could be realized on the pines alone—converted into lumber—to meet the price of the purchase, while there would then remain a dense and beautiful forest. At South Inlet Falls (on this land) one of the finest of mill-sites is afforded.

To capitalists who would invest money which will pay four-fold, to lumbermen who would quadruple their investment, and to sportsmen who desire to secure an *admirable private park and preserve*, such an opportunity has seldom been offered. **It will not be sold in parcels.**

For full information address E. R. WALLACE, jn16,1t Syracuse, N. Y.

FOR SALE.—POINTER PUPPIES BY CROXteth—Pearlstone, she by Bang—Hebe. The pups are liver and white ticked, nicely marked. Price $35 each. JAMES B. TURNER, 204 Dearborn st., Chicago, Ill. jn9,2t

FOR SALE.—MY KENNEL OF ENGLISH and black and tan setters, broken dogs and brood bitches; eight black and tan pups, 2 mos. old. Any one in want of a well-bred dog can get a bargain. Address with stamp jn9,2t HENRY MAY, Augusta, Ga.

FOR SALE.—BELLE STARLIGHT, BLUE belton setter bitch, in whelp to Young Gath, a first class dog; both are Llewellins. Price $40. Starlight II., black, white and tan, sister to Belle. Price $25. Two dog puppies, 3 and 6 mos. old. For particulars address H. W. DURGIN, Box 704, Bangor, Me. jn9,2t

ENGLISH AND IRISH SETTER PUPS, 3 and 4 mos. old, good field stock. Price $12. Also broken and unbroken dogs. ELM GROVE KENNELS, South Norwalk, Conn. jn9,4t

SPORTSMAN KENNEL FOR TRAINING and boarding of sporting dogs for private use. Pointers, setters and hounds, broken and unbroken, for sale. D. F. WILBUR, Box 303, Bridgewater, Mass. jn9,tf

FOR SALE, BLUE BONDHU.—ANY GENtleman wishing to buy a fine black and white Llewellin setter dog, 10 mos. old, that is sure to make a nice fielder, sired by the field trial winner Gus Bondhu ex Myrtle, can do so by addressing A. M. TUCKER, 85 Main st., Charlestown, Mass. jn2,tf

WANTED.—ONE OR TWO WELL-BRED ST. Bernard bitches for breeding purposes. Address with fullest particulars L. D., P. O. Box 1,888, New York. jn16,2t

FOR SALE CHEAP.—A LIVER COCKER bitch, with pup by Hindoo. Also cocker pups from 2 to 8 mos. old. *All colors.* For pedigree, etc., address, FLEETFOOT KENNELS, Delhi, N. Y. jn16,tf

BREEDERS, ATTENTION!—I WILL SELL cheap, stud dog Zanzibar, by Gladstone ex Mersey, and brood bitch Bas-Bleu, by Dashing Berwyn ex Dolly Varden (Druid—Nilsson). JNO. W. YOUNG, Box 164, Portsmouth, Va. 1t

FOR SALE.—BEAUTIFUL SMALL-SIZED black and tan terrier, 6 mos. old, will never exceed 5lbs. in weight. Also handsome Skye terrier bitch, 1 yr. old. Would exchange one or both for handsome large mastiff dog, or would buy dog for cash. JEWELER, Box 386, Suspension Bridge, N. Y. 1t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JUNE 23, 1887.

VOL. XXVIII.—No. 22. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price. $5 per year; $2.50 for six months. Address all communications,

ANSWERS TO CORRESPONDENTS.

THE PEMBROKE DISQUALIFICATION.

THE action of the Bench Show Committee of the New England Kennel Club in disqualifying the greyhound Pembroke is, though tardy, perfectly correct. The dog was shown in the open class, winning third prize, when he should have been shown in the champion class. The dog having won a prize for which he was not eligible to compete, there was nothing for the committee to do, upon learning the facts, except to render the decision they have given. The justice of their action is patent, irrespective of any consideration of who was to blame for the dog being shown in a wrong class.

When the committee go on to charge the dog's owner with entire responsibility in the matter, they are manifestly in error. The responsibility cannot be transferred from the local delegate of the American Kennel Club, upon whom it properly rests. When Pembroke was entered by his owner he was, as a winner of only two prizes, eligible for competition in the open class. Subsequently to the date when the entries closed he won another first at Newark, and thereby became eligible ican to compete in the champion class. The Amerionly Kennel Club rules prescribe that in a case like this a dog entered in the open classes shall be transferred to the champion class, and it is furthermore declared to be "the duty of the local delegate of the local club to examine all entries and see that they conform to the rules of the American Kennel Club." In this case, then, it was the business of the local delegate of the New England Kennel Club to see to it that the dog Pembroke was transferred from the open class to the champion class. It is not in good taste for the bench show committee to seek to evade blame for the dereliction of their local delegate. The rule is plain, and no rush of work nor other plea can be accepted in justification of the error. Local delegates must do their work; that is what they are appointed for.

If the American Kennel Club rules relative to this mean anything, they mean that the owner's duty ends when he has once correctly entered his exhibit. From that moment responsibility for any changes rests with the club local delegate and show committee. If the owner of the dog had been present at the Boston show, and had been aware of the negligence of the show authorities, it would have been his duty, as an honest man, to notify them of the oversight. But Mr. Webber was not at the show; he was in New York, and could not be expected to know that the local delegate in Boston was not doing his duty. He appears to have acted throughout in compliance with what he thought to be the strict letter of the rules, and to have lost the awarded prize through no error of his own.

We are not discussing the merits of the rule. If others agree with the Boston members that it is an unwise one, it can be very easily changed. But so long as it is in force clubs should live up to it, and if the press of business is so great that the local delegate does not or cannot perform his duties, exhibitors must continue to be the sufferers thereby.

THE LAKE CHAMPLAIN YACHT CLUB.

THE movement in support of rational outdoor recreation which originated last year in the efforts of Mr. W. H. H. Murray at Burlington, on Lake Champlain, and which culminated a month ago in the formation of the Lake Champlain Yacht Club, is so liberal in its scope that it calls for more than a passing notice from those who love healthy exercise and amusement.

The object which Mr. Murray had in view when he first began to advocate the movement was not to form an ordinary yacht club, but to organize a company of gentlemen in an associate capacity who should take courteous and benevolent charge of all the sports and pastimes natural to such a magnificent body of inland water. The gentlemen who quickly caught his enthusiasm, caught also his spirit, and it is not, therefore, surprising that the club has had a rapid growth. Its membership already numbers nearly three hundred, with ex-Gov. I. Gregory Smith, of St. Albans, for president, and Dr. W. Seward Webb, of this city, as vice-president. The personnel of the membership is most remarkable for its high standing and character; a wise rule of selection having shaped the canvas. A club house to cost $5,000, unfurnished, located on the very shore of the lake and commanding one of the most magnificent views in the world, is in process of erection, and when completed will be one of the most commodious and elegant aquatic club houses in the country. The membership is from all parts of our country, being truly national, and it is expected that Canada will bring a delegation to the list of its membership.

Lake Champlain is the natural rendezvous of all yachtsmen and canoeists, who would voyage from the coast to the St. Lawrence, or from the St. Lawrence waters to the coast, and such a club house as this will be will serve the very highest purposes.

All the expenses of the club are paid from an annual tax on the membership of $10 each, which is the sole financial responsibility membership imposes. The club, through Mr. Murray, who is Chairman of Committee on Membership, extends a cordial invitation to all gentlemen of standing who love the outdoor life, whether nominally yachtsmen or not, to join its membership and thus help provide for others, and personally enjoy themselves the facilities of pleasure which would not otherwise be attainable.

THE COLLIE TRIALS.

THE first annual sheep dog trials of the Collie Club of America are announced for Sept. 15 and 16, at Washington, Pa. This is a move in the right direction. Of late years great attention has been given to the importation and breeding of collies for the bench. At the shows the classes are well filled, and all things considered, as show dogs the collies are easily ahead of other nonsporting breeds. It is high time that due attention should be given, also, to the development of their actual field qualities and working merits. The collie is valuable as a pet, a companion, a "fancy;" but his true worth is developed only when he becomes the companion and aid of the farmer or stockman. Where there is one pure-bred working collie in America to-day there ought to be a thousand, and these collie trials in the practical work of sheep driving will demonstrate the merits of the breed much more effectually than competition on the bench. It is greatly to be desired that the meet at Washington may prove to be the beginning of a series of annual trials.

SNAP SHOTS.

THE Governor of New York has signed the bill making unlawful the capture of trout which are less than 6in. in length. The purpose of this law, which works hardship to anglers in certain localities, is to stop the indiscriminate killing of little fish by summer tourists intent on making a big score. Streams restocked at an expense of money and time have been made barren again because the immature fish have been caught out by greedy fishermen. The sentiment in many parts of the North Woods was strongly in favor of the six-inch clause, and the Legislature forfeited the respect of guides and woodsmen when, under the leadership of Mr. Hadley, it omitted the clause from a revised draft of the trout law. There is one consolation about New York game legislation; the botchery of one Legislature can be remedied by the next.

Numerous broods of ruffed grouse are reported by observers in different quarters of New England, and the stock gives every indication of being an abundant one, with promise of a supply in the fall that will entitle 1887 to distinction as one of the grouse years. There are forebodings of trouble from the ticks; but one experienced grouse shooter, holding the opinion that by a winter like the last, marked by numerous thaws and freezes, the ticks are destroyed, prophesies that the birds will not be troubled by them this year. It will be interesting to note whether his theories are sustained by the facts. The birds have been comparatively free from ticks for a number of years, and it may be that the time has come around again, irrespective of what the winter may have been, when the tick will again do his deadly work. The certainty of a good grouse supply is never so well established by any known signs that an experienced man would be willing to wager much on the game abundance until the season actually arrives.

Success and failure in the field and on the stream, as elsewhere, are comparative. What is counted "a big thing" by one person may appear only ordinary and insignificant to another. The angler who has cause to complain because he is not permitted to take the largest trout in his stream—none of them 6in. in length—could hardly expect much genuine fellow-sympathy from another angler who has a personal interest in watching the record of 10lb trout to see that no one detracts from his own claims to head the list. The man to whom the capture of a pound trout is an epoch in the outing score of years may be just as much of an angler as the other man who complains that a five-pounder is a little one. He is the true philosopher who takes whatever of reward the waters yield and makes the most of it.

Fly-fishing for shad in the Connecticut River at Holyoke, Mass., began on the 17th of the month, the fish rising freely. There appeared to be many shad in the river. The fishing is below the dam at Holyoke. The proper tackle consists of a light trout rod and line, with large trout flies, the red-ibis, almost any brown fly, and at dusk the white-miller. The best success is to be had in the early morning and in the evening. Mr. Thomas Chalmers, of Holyoke, will undoubtedly take great pleasure in giving any hints to visiting anglers.

Although so brief a note, Mr. Fellows's allusion in our kennel columns to the prizes and medals which he has won at past dog shows is very interesting. Mr. Fellows has been a successful exhibitor for many years, and the fact that he has not been able to find in his large collection of medals any bogus ones except those furnished by Pittsburgh is rather strong presumptive evidence that the clubs referred to by Messrs. Gregg and Elben are guiltless of the charges brought against them.

That is a very interesting report of bison in the National Park. This refuge for big game was established none too soon. There are so many men in Europe and America who long to add a bison to their record that, were these creatures not protected by the Park regulations, they would straightway be surrounded by as many rifles as would equip a company of militia.

Quail were cut off in large numbers by the New England ice storms last winter, but Bob White's whistle is heard from the fields, the same old familiar call, significant of the brown and russet of autumn days.

THE DIAMOND HITCH.

IV.

PACKING AN APAREJO.

BEFORE turning our attention to the articles which have been left out of the pack and to various little odds and ends which must be attended to before the train moves off, I may make some mention of the packing of the aparejo. As has already been said, the two operations are similar in most essentials but there are a few important differences. The manner in which the aparejo is put on has already been described, and Fig. 16 shows the rigging on an animal. The latigo, after the cinch is drawn as tight as convenient, is passed, from outside and above downward, through a little leather loop sewed on the aparejo cinch above the ring, and the end of the strap drawn down toward the ring under the ascending part. The pressure and friction of the ascending part holds the end in place.

The sling ropes are arranged in one way on a pack saddle, and in quite another on an aparejo. On the aparejo the rope is doubled, not quite evenly, and the loop is thrown over the saddle by the nearside packer and hangs down on the offside nearly to the ground. One arm of the rope lies within a few inches of the front of the aparejo, and the other within a few inches of the back. The free ends hang down on the nearside of the animal almost to the ground. The nearside packer now takes one of the side packs and, raising it above his head, places it on the top of the saddle and holds it there, while the offside packer slips it down a little way toward him, and, supporting it by his head and one hand, with the other hand takes both sides of the loop of the sling rope, and throws it up and over the side pack, holding it there. Meantime the nearside packer has taken from the ground the other side pack, placed it on top of the aparejo, holds it there with his head and one hand, takes the forward free end of the sling rope in the other, passes it through the loop of the sling rope from above downward and ties it to the other free end in a simple bow-knot. The side packs are now supported by the sling ropes in front and behind and balance each other high upon the aparejo, as in Fig. 17.

The lash rope is thrown in the same general way as on a sawbuck, but the method may be described again.

The nearside man having thrown the loop over the load, lays the rope remaining in his hand on the mule's neck. Then taking the part of the rope which runs forward from the free end, and on which the standing part of the loop—that leading up from the cinch ring—now lies (see Fig. 12), in front of where they cross, he turns it back over the standing part and passes it about the after corner of the pack close to the animal's side. Then he takes the returning part of the loop and passes this rope under the standing part below where that and the free end cross (see A, Fig. 13), forward, downward and around the forward corner of the pack on his side, and pushes the part of the rope between these two corners down to the bottom of the pack. The rope now lies just as it would have done if after passing about the after corner of the pack it had been brought forward, a loop passed under the standing part from the cinch ring around the forward corner of the pack, and the upper part of this loop shoved upward.

When the pulls are made on the aparejo, all slack of the rope passing around the front corner of the pack on the nearside is taken up, and the two packers taking hold of the rope just behind the after corner of the pack, and bracing themselves against the pack or the animal's quarter, surge back on the rope with all their weight, pulling backward and upward, as in Fig. 18. When it ceases to come, the nearside packer still holds it, and the offside man steps round to his side and pulls downward and backward on the rope, which passes below the after corner of the pack on the offside, taking up all the slack which has been gained by the pull on the other side. Both men now surge on this rope with all their force. This pull makes the after part of the diamond, for, if the explanation has been clear, it will be evident that those portions of the rope passing about the after corners of the pack are pulling back against the tightly-drawn standing part of the loop, crossing it on top of the load.

The offside packer, keeping firm hold on the rope, now steps forward to the animal's shoulder and gives several vigorous pulls on the rope passing under the side pack on his side, while the nearside packer, on the nearside of the animal's neck, takes the free end of the rope (see Fig. 13), gathers in slack by pulling downward and forward, and then bracing himself firmly, pulls on it as hard as he can. This pull makes the front of, and completes, the diamond.

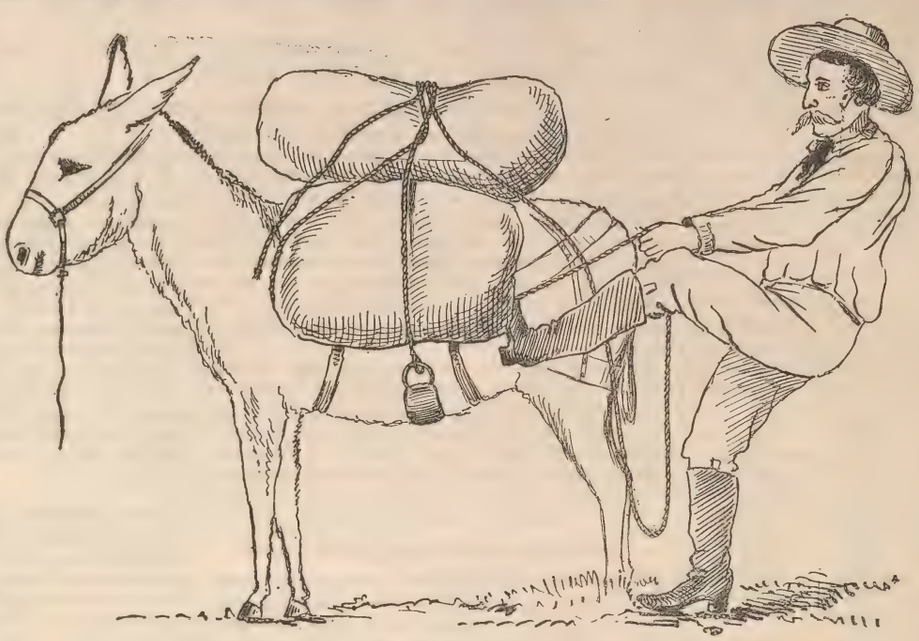

FIG. 18.—APAREJO PULL.

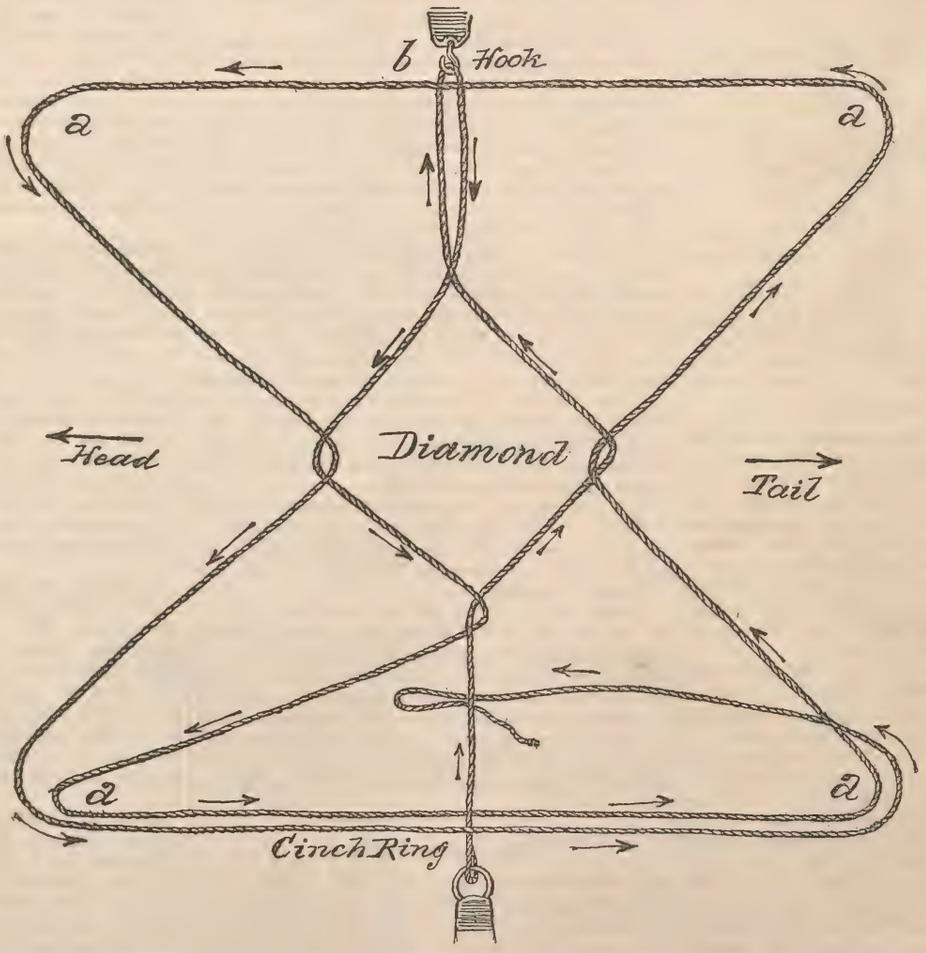

FIG. 20.—THE DIAMOND HITCH, FROM ABOVE. LASH ROPE ONLY. *a, a, a, a.* CORNERS OF PACK ABOUT WHICH ROPE PASSES.

In the case of the aparejo the rope, if long enough, is now passed around under the corners of the side pack and up on the side, and after being pulled tight, is passed once or twice double under the standing part of the loop, which holds it firmly. If the rope is very long it may be thrown again diagonally across the pack and fastened in the same way on the other side.

Now your animal is packed, but your frying-pan and camp kettle are still in sacks on the ground. Tie the camp kettle by its bail, behind the pack and high up, to the lash rope, and draw the corners of the sack which contains it under the lash rope and tie them. It must not swing, shake or rattle. If it does it will probably cause your animal to run away, or else to buck, and in either case you will have trouble. The frying-pan may also be carried on the outside by thrusting the handle beneath one of the tightly-drawn ropes and passing a string through the eye in the handle and tying it to some rope where it cannot slip. Turn the pan bottom upward and tie it close to a rope behind so that it will not be loose or jolt about.

Now you are packed, and you may take off the blind and lead your animal about a little to see how it will go. Very likely it will give you a fine exhibition of its powers. If it is an old and gentle beast it will go off quietly when started, but if young and wild, or it fancies itself too tightly cinched, look out for a display of ground and lofty tumbling. There will be plain, simple, honest bucking, varied by wild plunges, rearings, and finally throwing itself over backward. Let the creature have its buck out, and if your load remains firm, piously express your thanks to Heaven. If the load stays and the animal throws itself, make it get up at once and start off on your march. After the pack is on, you mount your saddle horses, and then ride around through the camp to pick up what you have left behind. You may be very sure that for the first few days you will leave something out of the packs every day, and these articles must always be looked for. Attention to this point will save much trouble and loss.

If the packers are experienced and the work has been well done, this load should ride all day. At night, when camp is made, the ropes are readily loosened, the hook taken out of the loop and the lash rope pulled over by the nearside packer or thrown back over the animal's tail to the ground. The top load is then lifted off, the sling rope loosened, and each man lifts the pack on his side to the ground.

There are a number of minor points about packing and pack travel, which can scarcely be enumerated, and are only to be gained by experience. Some hints may be given as to certain of these matters, but new circumstances will arise each day as you travel over the mountains, and, in general, experience must be your teacher. In traveling in a rainstorm the ropes of your pack will

get wet and shrink, and when the sun comes out and they begin to dry, they will stretch. It is necessary to watch the packs under these circumstances, and to tighten the ropes every little while. If this is not done you will have your packs all off before long. At all times the packs need watching, and it is better to have one man ahead of the train and one behind. The latter looks out carefully for the packs, and at the first sign

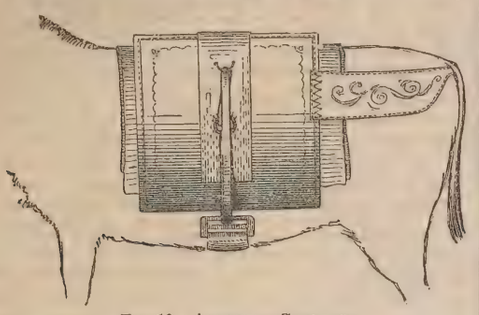

FIG. 16.—APAREJO. SADDLED.

that one of them is slipping, calls to the leader, who stops the train, catches the animal bearing the loose load, and with the assistance of his companion replaces it.

As the ropes bear on the packs very hard, the weight and strength of two men being employed to pull them taut, it will be apparent that articles of a fragile nature cannot be carried in a pack. If you are starting into the mountains with a fishing rod, the pack is not a very safe

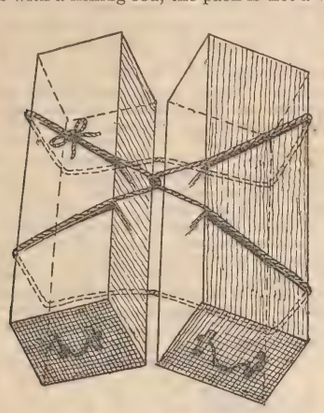

FIG. 17.—APAREJO SLING.

place for it. I have safely carried a rod over many miles of mountain on a pack, but I have also taken the implement off the pack and found it smashed into twenty pieces. If a rod is to be put in the pack, let it be put on after the ropes have been tightened. Run it through between a side pack and the center pack, and tie it by strings to the ropes. It should not project in front, but must run out behind. A heavy sole-leather case is a great protec-

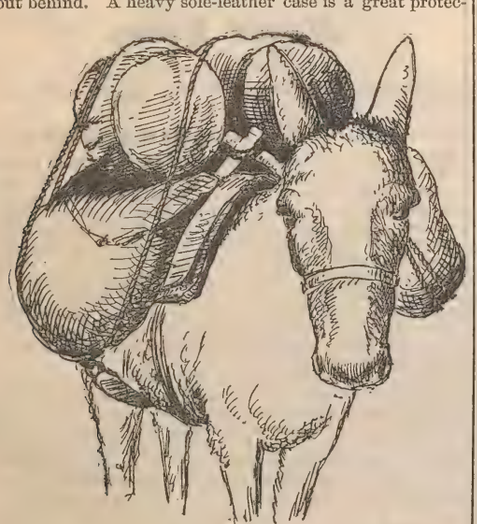

FIG. 19.—PACKED.

tion, but a stout cylindrical stick, with grooves cut for the joints, is even better.

See that you have no loose ends of rope or projecting loops about the pack to catch in the timber. You can be sure that if such things do catch, the mule will not stop, but will keep right on, pulling until something gives way, and probably by the time that takes place, the pack will be scattered on the ground.

Before leaving camp put out your fires, so that there shall be no danger of their spreading. Never by any chance build fires against trees or logs, or where there is danger of burning up the camp.

Whoop! Gunny-sack, git!" YO.

A ZEBRA CHASE.

"IF you are bound for the Transvaal, the Buffalo River will stop you, as it has been pouring on the Drakensberg for the last two days and all the streams are running banksful."

"Such being the case, I'll stop here, as the grass is good and I am in no hurry. Outspan, boys, and let the oxen have a regular blow out."

"That's right, as you will not be able to cross in two or three days."

And the transport rider, who had addressed me, yelled at his oxen, cracked his enormous whip and started down the road for the coast, while I knee-haltered my shooting pony, turned him loose to graze, and wandered over to the fire started by the Kaffirs to get a light for my pipe. After a few whiffs, it suddenly struck me that I was only some twenty miles, in a direct line, from the farm which I wished to reach, and I concluded that on the next day I would make the attempt of taking my light cart, which carried my bed and provisions, directly across an uninhabited portion of the country, and thus reach the banks of the river on the opposite side to the farmhouse, a short distance from it.

The next morning, after giving directions to the drivers of my heavy teams to remain camped for a couple of days, and then take the road leading around the headwaters of the river, I inspanned six oxen to the cart, and taking a couple of extra Kaffirs with the driver and forelooper, started off across the country. For the first six or eight miles there was but little difficulty, then I got into a series of wet-weather feeders of the Buffalo River and my troubles commenced. It was one huge gully after another, many being over 20ft. in depth, with sides sufficiently steep to appall any one who had not become acquainted with the wonderful effects of erosion, to be found in all the broken portions of South Africa. After crossing a number at the constant risk of upsets, I came to one which compelled the making of temporary diagonal roads on both sides, in order to cross with any degree of safety. Unyoking the oxen and allowing them to graze, I marked out the proposed road, set the Kaffirs to work with picks and shovels, and leading my shooting pony, we scrambled across, and then mounting I cantered up the rise in order to get a view of the country ahead. On reaching the summit I found myself on the edge of a saucer-like depression, in the center of which, some 200yds. distant, was a drove of some fifty or sixty Burchell zebras (*Equus burchelli*), regularly "rounded up" by a couple of vagrant curs. Hastily turning my pony back out of sight, I dismounted, threw the reins over his head and let them fall on the ground, which insured my finding him within a few feet of the place at any time within an hour. All the shooting ponies in South Africa are broken to remain quiet under similar circumstances. I then cautiously crept up the hill, and lying down behind a convenient boulder, had a clear view of the fun. The zebras were packed in a dense circular mass, heads in and tails out, slowly revolving like a huge wheel; while the dogs, on opposite sides, were ranging around without a whimper, and as one would occasionally venture too near it would be saluted by a series of vicious kicks, only to be equalled by those of a Kentucky mule. After enjoying the sight for some time, I sent a bullet from my Winchester pinging over the mass, whereupon the dogs dropped their tails and loped off in the direction of the river, while the zebras broke into an irregular body, and soon disappeared in a cloud of dust over the rim of the basin.

On returning to the cart it was found necessary to unload it, carry everything across the gully, then tie the wheels fast and skid it down one side, when the oxen were yoked, and after a deal of shouting and whipping, the empty cart was slowly drawn up the opposite side. Nothing in all my South African experience tried my patience so much as the oxen. So long as the loads were heavy and the roads decent I frequently made twenty-five miles per day, but when it came to a tight pinch in a bad place no dependence could be placed in them. I never saw one that was properly broken. The manner in which they are yoked would make a Yankee farmer stare. The yoke is simply a straight round piece of wood some three inches in diameter with holes mortised in it for the insertion of two wooden pins to pass down on each side of the neck, and all that prevents the animal from freeing itself is a small loop of rawhide caught across underneath the neck from the point of one pin to the other. It is a constant occurrence when one gets into a soft place, requiring a strong and steady pull, to find a majority of the team face to the right about and look the driver in the face. In colonial parlance a span or team of oxen consists of fourteen; so I don't think it would require a great stretch of imagination for the uninitiated to conjure up what a mess would be caused by such a number of half wild brutes stuck in a mud-hole.

After crossing I had but little difficulty in reaching the banks of the Buffalo River, which I found to be quite full. I struck it just where I proposed—in plain sight of the house, less than two miles distant—and while the Kaffirs were unyoking and preparing camp, a couple of heavy blank cartridges fired from my shotgun brought three Boers galloping down to the bank opposite me. Climbing into the cart and exhibiting a flask of gin caused an immediate disrobing, swim and handshaking with my friends. On telling them of my experience with the zebras, they informed me that the dogs of the neighboring farms frequently hunted alone, and if I had watched closely I would certainly have detected foals in the center of the revolving mass, as they were what the dogs were after. Moreover, as the river would not be fordable for a couple of days, they would get back home, make arrangements for catching a young one or two and rejoin me early the next morning. After finishing the flask they re-crossed the river and hurried off, while I had my supper, a pipe and turned in full of pleasant anticipations of the sport I expected to enjoy on the morrow. The Kaffirs were turned out early the next morning and had just made a pot of coffee, when a call from the opposite bank informed me of the arrival of the Boers, who soon crossed, swimming alongside their horses. After breakfasting, camp was broken up and we trekked back on my preceding day's track some eight or ten miles, when a halt was made and while I arranged camp matters, the Boers cantered off in diverging lines to hunt up the zebras. It was not long before they returned with the report of having discovered them and that there was a foal not over ten days old in the drove. It struck me at the time rather strange how they managed to speak so positively about the foal, but being a "tenderfoot" I felt ashamed to ask. After-experience taught me that they were not only magnificent shots at moving game, but that their eyesight was as keen as that of a Western Indian. I have frequently had one say to me, "There go gnus, zebras, blesboks, springboks, ostriches," etc., and on looking in the direction pointed, could indistinctly make out moving objects which, with the help of a field glass, invariably proved the assertion to be correct.

While eating dinner it was arranged that the elder Boer should guide me to a hilltop some miles distant, where we would have an uninterrupted view of the attempted capture by the two younger ones, one of whom rode a flea-bitten gray mare showing evident signs of Arab blood, a strain which was introduced into the Cape Colony by the original Dutch settlers, and can be frequently seen in the outlying districts. After reaching our lookout we did not have to wait long before a cloud of slowly rising dust warned us of the commencement of the chase. At the suggestion of my guide, I adjusted my field glass and could easily distinguish the two younger Boers driving the zebras in our direction. They had their horses well in hand, as it was a test of endurance rather than speed. When they came within about a half mile of us the foals began to knock under and fall behind, accompanied by their dams. Selecting the one with the youngest foal, which was furthest in the rear, the Boers managed to ride in between them and the drove, and gradually edged them off until a space of some 200yds. intervened. Then my young friend mounted on the gray mare, putting on steam, shot in between the colt and mother, separated them, and drove her back into the flying drove, which he forced over a piece of rising ground out of sight of his mate, who continued to press the colt. So soon as this was accomplished, he wheeled, and, taking an oblique course, was soon galloping alongside the foal, which was being pushed by his partner. Watching his opportunity, when it had been almost driven to a standstill, he drew ahead, quickly dismounted on the side opposite to which the colt would pass, and as it attempted to do so darted underneath his mare's neck with such force as to knock it entirely of its legs. Holding its head down until joined by his comrade, it was lifted on its feet and a portion of a pocket flash of gin poured down its throat and the balance divided between themselves. Soon after my guide and self joined them and I found the gray mare nosing the little thing as if it were her own progeny, while the captors were rubbing its woolly coat dry with wisps of grass. In order to give it a thorough rest, the horses were knee-haltered, allowed to graze, and we stretched on the turf until the sun notified us that it was time to start for camp. On mounting I was surprised to find that the Boers made no attempt to lead their little captive. It was allowed to trot alongside the gray mare, and acted precisely as if it had never known another mother. On reaching camp we found a couple of Kaffirs had arrived from the farm with a supply of fresh milk, which had been arranged for by the Boers while at home on the preceding evening. An ox horn, with a leather teat attached after the tip had been sawn off, served for giving the youngster its supper, but not without an incautious Kaffir getting a taste of its heels while it was tugging away at the horn, down which one of the Boers poured the milk. I frequently noticed in South Africa the invariable antipathy of all wild animals toward the natives, caused no doubt by the Kaffirs flinching and showing signs of fear while in their presence.

I once had a young zebra which would follow me anywhere, and it was frequently allowed to accompany me into town from the suburbs where I resided. The path led through some dense bush, filled with many varieties of thorny growth so characteristic of South Africa. In passing through, if I should happen to see a Kaffir coming in the opposite direction, I would quicken my pace, pass the Kaffir and leave the zebra well in the rear, who, so soon as he found out there was a native between us, would instantly charge as if he were going to eat him up. The Kaffir would be sure to press against the brush with his back to the path, so as to allow his enemy all the room possible for a free passage, when the zebra would rush past, but in so doing would manage to land his heels on the naked Kaffir's seat with such force as to pitch him headlong into the prickly brush, from which he would emerge filled with tiny prickly thorns. My pet finally became such a terror to all the native population that, so soon as I would turn into the main street of the town, the cry of "*Itubi! Itubi!*"* shouted from a dozen throats, would cause an immediate stampede of every native to the side opposite to that on which I was passing. One day, as I was returning home, the baker called me across the street with the information that a leopard had visited his pig pen in the suburbs on the previous night, and wanted to know if I could manage to shoot it as it would be sure to pay a second visit. While chatting with him his wife called out: "The zebra is eating all my tarts." On looking around, I found the zebra had passed behind the counter, poked his nose into the bow window and seized one of the cookies displayed therein, while the woman, flirting her apron and shooing vigorously, kept at a respectful distance, warned by his flattened ears and the ominous switching of his tail. Springing over the counter, I backed him out from behind it, and allowed him to munch away with my arm passed around his neck to prevent a repetition of the robbery, while I finished my conversation. Several times subsequently, but not constantly, when we would pass the shop, he would walk in, help himself, hurry out and trot down the street to catch me, chewing a tart, for which I had to pay. The idiosyncracies of animals, one of my favorite studies, must be my excuse for interlarding my narrative with these notes.

At nightfall when the horses were caught and tied to the wheels of the cart, the young zebra kept close to the mare and just before turning in we found it lying down almost under her heels. The next morning we started for the river, and on reaching its banks found it still too full to attempt fording. The afternoon was devoted to target practice, when my Wichester came into play and

*Zulu name for zebra.

caused great surprise to the Boers, as it was the first repeating arm they had ever seen. After firing awhile at 50yds. and 100yds. ranges, an ant-hill was pointed out, which the Boer said was 300ft., and laughingly asked if I could hit it, not believing that so light a looking weapon could be effective at such a distance. Adjusting the sights for that distance, I lay down, and resting the rifle across the pole of the cart, drew a fine sight and pulled the trigger. Fortunately I was successful, and as a puff of dust arose, caused by the bullet cutting a channel through the apex of the heap, one of the Boers who was watching yelled out "*Kek! Kek!*"* and started on a dead run for the target. On reaching it he signalled for the balance of the party to join him, when he told us that as the bullet struck the ant-heap he detected something dart around it and disappear, which was evidently a porcupine (*Hystrix cristata*) that had been sunning itself on the side opposite to ourselves, and being disturbed by the ping of the bullet had taken refuge in the hole mined underneath by a Cape ant bear (*Orycteropus capensis*) for the purpose of feeding on the ants. Pointing to the tracks to prove his assertion he called to one of the Kaffirs to bring the ox-whip from the cart, around the butt of which he wound his cotton handkerchief and thrust the long bamboo down the sloping hole. On withdrawal several quills were found sticking in the handkerchief, which proving he was right, preparations were made for an attempt at a capture. A tin-lined case in the cart was emptied, and with the picks and shovels taken to the ant hill, when the whip was again passed down the slanting hole and a measurement taken so as to sink directly over the porcupine. This was quickly done in the light sandy soil, as the depth was only some four or five feet. After the shaft was thoroughly opened it was found that the hole was tenanted by two porcupines instead of one as supposed, and a few vigorous punches started them up the incline. A Boer then jumped down and stopped the slant behind them with a large bundle of grass, which as the hole was enlarged was pressed up the incline until there was sufficient space to use a pick handle as a rammer, when the porcupines were shoved into the tin-lined case which had been turned over the entrance. The lid was then passed underneath, box righted and the top nailed fast, leaving a small slit on one side for air. The whole thing was managed so deftly and quickly that, coupled with the zebra catching incident of the preceding day I was compelled to acknowledge that my friends were certainly adepts in veldtcraft.

That night when the Boers rolled up in their karosses underneath the cart, I took to my bed above, very much inclined to spend the balance of my days in a country where, if the oxen were unreliable, one would be relieved of the worry of starched bosoms and weekly laundry bills, and the addition of a paper collar and soiled shooting jacket to a flannel shirt and moleskin trousers would transform one into a perfect swell.

*Boer for "Look! Look!"

FRANK J. THOMPSON.

THE NEPISIGUIT.—II.

AFTER sleeping the sleep of the just, bright and early next morning we started on our exploration. I fancied I traced an amused expression on the faces of the guides as they poled us along. Here, full of hope and enthusiasm, we were pushing our way up through a country where the foot of a white man had seldom trod (this last sentence comes in like a very old friend without knocking at the door), turning our backs deliberately on the salmon pools of the Nepisiguit. The river flowed quietly along, the country was wild, unbroken, fresh from the hand of its Maker. Here and there were seen the for provisions. Trout there were and no end of them; marks of the camp of the lumbermen, or a bear-proof house we could dangle our lines over the side of the canoe, skitter the red-ibis along the water and toss the fish into the boat. We struck Nine-mile Brook about lunch time, and went into camp "below the 40," the streams running into the river here being numbered 40, 41, 42, 43 and 44. Eating, fishing, sleeping, meditating—this *dolce far niente* existence agreed wonderfully well with us, I began to be rather alarmed about myself. Born under a lean star, the circumference of my waist was rapidly increasing. We poled up the river about 15 miles and had an addition to the family in the persons of Tom Narvey and Noel Prisk, the latter a fine looking man about 50 years old, and chief of the Indians who live near Bathurst. He and his son-in-law Tom were on a hunt after beaver, bear and moose. We invited them to dinner and then pushed on to Indian Falls. Here the river comes foaming over the rocks into a deep pool, and here we had to make another portage and go into camp for the night. Early next morning I threw in the pool, and at the first cast caught a trout weighing 4lbs.; the next cast brought out No. 2, of 3½lbs., and I was high-hook.

This Saturday morning, having taken leave of our friends, we struck a trout pool, where we would have been justified in taking leave of our senses; such fishing none of us had ever seen before, nor ever expect to see again. It is marked in my field book as the whitest of days. The pool was called the Devil's Elbow, and was just below Bear Island. The river takes a turn here, forming a sort of an elbow and a pool that would delight the eye of any fisherman. The guides had told us fabulous stories of the number and size of the trout, and here they were in full confirmation. Our canoes were drawn up on the beach. We three tossed in our flies, and in less than 15 minutes we had 60 odd pounds of trout, spread out on the beach, about the size of shad. Stop! We have enough, and more now than we can eat. And stop we did. But how long would those fish have remained there if the place had been more accessible? They would have been cleaned out on sight. The pool swarmed with them. As fast as we could throw our flies in, and we used two on our leaders, the fish would seize them and jump and fight for them, and the smallest fish we took was a 2-pounder; they would run right along 3 and 4-pounders.

And here "Truthful James" rises to explain and the truth to maintain. So much has been said and sung about deep and darkened pools, crystal waters, gurgling founts, the mad rush of the fish, their speckled beauty and their gleaming sides, the whirr of the reel and the soul-stirring emotions of the angler, to say nothing of the length of time in catching such a beauty—two hours and ten minutes—and so on *ad lib.*, that he feels called on to say that, with three-jointed ordinary trout rods and Conroy's rig, we quietly drew these five fish out of this pool and laid them down on the beach; and that all this was done in the most expeditious manner. I am not bragging; here we were, graduates of old Columbia, giving the trout Hail Columbia. Three old Knickerbockers, enjoying ourselves like boys out of school, keenly alive to the wonderful novelty of the scene and the beauty of the woods and river; not one of us but what would love, and does so still—

"To ses the man of care
Take pleasure in a toy,
To see him row or ride,
And tread the grass with joy,
Or throw the circling salmon fly
As lusty as a boy."

After a famous dinner off of these giants, I went off with one of the guides to look for beaver; long we sought him and we found him not, but the woods were a constant delight to me, and I felt no disappointment. On our return we came to a small stream, which my guide said he would carry me over, so I climbed up on his shoulders and perched up there like Robin Hood and Little John. Away we went—a stumble, a plunge, a wild shriek, splash, dash, and away I went head first into a villainous slough. What a mess. Oh, John! John! I had a hard time to make myself presentable, and K. and Jim, who had been strolling through the woods in various directions, were vastly amused at the figure I cut. No wonder. On we go up the river, dine at "44," our destination Silver Brook, which we fail to reach, and so camp at the South Branch of the Forks. Though there might be some monotony in the daily description of our fishing and camping; of our fights with that pest of the woods, the black fly, and how we suffered from their poison, yet the time never hung heavy on our hands, we never tired an instant of our sport. Here we are by Silver Brook. Bald Mountain and Squaw's Cap loom up before us; the scenery grand, wild, savage; the river winding along the base of the mountains; bear, beaver, moose tracks plenty; so are the cranberries and blue berries, of which the bear is very fond; trout in any quantity; pork and beans beginning to be valued. We pass a beaver dam, which well nigh obstructs our passage up the river, the active little workmen having nearly thrown it across the river. We pass a bear trap, a beaver and otter trap, and trail of Indians. Here we are at the "First Lake" at the headwaters of the Nepisiguit. We paddle through three lakes, each larger than the other, and go into camp on Caribou Isle, ninety miles from Bathurst. Our tents were soon up, fires going, everything in order, and leaning my gun against a tree close by my tent I joined my companions at grub, and then turned in. And here I made a mistake I have regretted all my lifetime, for instead of seeing my gun in good order I left it there, and mark what happened: Early the next morning, while K. and Jim were still asleep, I went down with the guides to get some trout for our breakfast. While fishing from our canoe, not far from shore, suddenly the bushes opened, and there stood a bull moose, weighing over 800lbs., looking calmly at us from the margin of the lake. What a magnificent animal he was! Head up, nostrils snuffing the breeze, expanded horns, motionless, he stood there looking at us as trespassers. The guide seized my gun, quietly cocked, and aimed, and fired. Snap went the cap of one barrel. Snap went the cap of the other. No report; and nothing went off but the moose, and how he did go when he got started; crashing through the bushes; and that was the last of him. The guide fairly howled with disappointment, and I didn't blame him, but I learned a lesson, at a bitter cost, I never forgot. K. and Jim, who was a good shot, walked over to the headwaters of the Tobique, and shot three grouse. I had not yet sufficiently got over the loss of that moose. The guides told us many a moose story, how to hunt him, where to shoot him, either behind the foreshoulder, side shot, or dead on through the jugular vein. They had before said the moose would not run at first sight of man. He will take one good look first. There was plenty of time to kill this fellow, if it had not been for my neglect. I walked out in the afternoon and shot a kingfisher and a rabbit and a grouse, (country boys always call them partridges), and I carefully constructed a fly out of flick and feather, that bore no resemblance to anything "in the heavens above or the earth beneath or the water under the earth." While gazing lovingly at this evolution of my inner consciousness, K. said, "What in heaven's name are you going to do with that thing?" Jim laughed outright, "Friend of my early days, are you going to heave the log?" "Now don't be jealous of me, gentlemen; if you do not know how to tie a fly don't laugh at the man who does. My boat is on the"—"Stop him!" So off we go in our canoes for trout. I am willing to swear to the following affidavit: At the first throw, when my fly struck the water with a mighty splash, a 2lb. trout grabbed it on sight and I yanked him into the boat, released him with some difficulty, the threads with which the materials were lashed together probably got jammed in his teeth, and launched forth again into the deep; up came No. 2, twin brother to No. 1. You couldn't tell them apart. This right under the nose of the scoffers, who hadn't caught anything yet. "Gentlemen, are you convinced?" "We are," and K. begged me to give him "the monstrosity" to take home with him, and present to Conroy. The fish actually tore that fly to pieces, wrenched and pried him apart, and we left him "alone in his glory." I felt his loss so keenly I never replaced him by another, he was my first, my only love.

So the time flew swiftly by, and at last came the day to say good-bye and pack up for our return. Down stream is easy rapid work; up stream "aye, there's the rub." We floated down to Bear Island and came across Prisk and Narvey again. They had killed a large moose, caught a bear in a trap, shot an otter, nine beaver and an animal they called "Lucifer"—he looked like the devil or worse. Head like a cat and legs like a kangaroo. We bought some moose meat from the old chief. Though shot might go through it, we could not get our teeth through; but moose meat at times is good and tender. Bidding them good-bye we pushed on down the river.

At Indian Falls we stopped over night and had a visit from the irrepressible Tom, apparently in great distress, his venerable father-in-law (not mother-in-law) had tumbled off a log into the river and lost his ammunition. We provided him—though honestly we did not believe a word he said—with powder and shot, and bought his otter and bear skins. He also showed us that night how to call the moose. "But will he come when you do call him?" "Oh, yes." He didn't put in an appearance, and I have a much higher appreciation of that animal. Any beast that could be deluded by the agonizing, mournful, Wagnerian sounds that Tom Narvey produced from his birchen pipe deserves "to be pulled down and shot on sight." I agree with General Dix.

"O for a blast on that dread horn
On Fontarabian echoes born."

No comparison. Here we are again down among the salmon and the grilse. Four grilse and a 10-pound salmon are scooped up out of the pool at Pabineau Falls; and we make up our minds to run the rapids. Next to ice boating, of which I will tell you one of these days, I vote for the rapids. We came down through a succession of them; and what fun it was. One man in the bow with paddle and pole, another similarly equipped in the stern, the boats managed with great skill, the water tumbling, dashing, foaming. Here a rock and there a rock—Scylla and Charybdis on a reduced scale. This was exciting sport. K. led the way, Jim next, I brought up the rear. Ah! dear Jim, I hope you have long since forgiven me for not exchanging guides with you on this our "rattling run." The court didn't see it; not much. Down we flew through Round Rock Fall, Busk's Fall, Willis Fall and the Roll, this last one is well named, for Jim rolled like a flash out of his canoe. Of all things to happen is the unexpected. Incredible, Jim's guides, young fellows, lost their heads, then their paddles, so they hung on to the canoe like grim death. Up goes my friend like a rocket, lights on a rock, which he clings to, and away goes the canoe, end over end, almost over another rock. Away bob up and down the guides, while pots, pans, kettles, rods and guns "were in one huge burial blent." Some sink, some go bobbing around. I had dashed past Jim like a flash, though I called to him, needlessly, to hang on, and floating quietly in the pool at the bottom of the rapids I surveyed the scene of the disaster. There was nothing to be done, save to quit fishing for salmon and fish for Jim's baggage, the most of which we recovered. We rescued our friend off of the rock, and landing just above Rough Water Falls, which the guides said were too rough to go through safely (though I offered to tip my guide well to try it with a canoe with only ourselves in) we spread everything out on the rocks to dry, rigged Jim up in a dry suit and walked in safe and Sound to Beulah Packard's.

Here we had a grand spread, paid off our guides, gave them our flies and fishing duds; and here, as a wind up to our frolic, occurred an incident that was long remembered. K. was a much more scientific fisherman than either his brother or myself, and much more dignified; in fact, great dignity is not my strong point. I have knocked around this ball of earth until my stock has somewhat given out. K. is, without any exception, in the woods or out of it, one of the neatest men imaginable; Haggard's major would be nowhere. He would step out of his tent in the morning as fresh as a daisy, and an object of unlimited admiration to our simple guides. When, therefore, in paying off our men, one of them burst into tears and howls of lamentation, crazy with grief: "J'ai perdu tous ce que j'avais," K. found out that his guide's cow, during his absence, had broken her neck. Milk and potatoes are all these Kanucks live on. A cow is a fortune. K. is kind-heartedness personified. "Packard, what will a cow cost?" "A fairly good one will cost you $25." We voted this not much to rescue a man from such an abyss of woe; chipped in and bought the man a new cow. Presto! change. With smiles and tears of joy this unkempt, dirty-looking guide dashed at my quiet, dignified, well-dressed friend quicker than a trout at a fly, flung his arms around his neck and covered him with kisses. You can faintly imagine the result. I got the worth of my money right back. So we bid good-by to host and guides, and so our trip to the famous Nepisiguit fades away into the past.

NOTES ON NEW MEXICAN SQUIRRELS.

VERY recently a number of people interested in our mammalian fauna, have written me with the view of obtaining information in regard to the several species of squirrels which I may have chanced to observe in the vicinity of this place, and this brief article is written with the view of placing on record a few notes respecting the three species of these interesting animals, all of which during the past few years it has been my good fortune to have collected here at Fort Wingate. The three species to which I have reference are: (1) Abert's squirrel (*Sciurus aberti*, Woodhouse); (2) the Arizona squirrel (*S. arizonensis*, Coues); and (3) the Gila chipmunk (*Tamias asiaticus dorsalis*, (Baird) Allen).

Two years ago *Science* (No. 123) very kindly published for me a short account of a specimen of Abert's squirrel, which I had at the time collected here, and in that article were presented both measurements and description of the individual in question. It was likewise illustrated by a life-size head of this squirrel, a female, being a reproduction of my own drawing, which I had made directly from the specimen soon after it was shot. As many of the readers of FOREST AND STREAM have possibly not seen this illustration, I reproduce it in the present connection, confident as I am that this splendid animal will well repay a second glance from those already familiar with the drawing, for it is a faithful likeness of the original, and I can only trust that those who have not yet chanced to see it, will be pleased with the figure.

In my description of the specimen in *Science*, I said that the entire upper parts were of a grizzly iron gray. Lower halves of inner aspects of ear-tufts, and a median broad stripe from shoulders to near root of tail, of a brilliant chestnut. Ear-tufts large, composed of straight black hairs. Entire under parts, borders of tail, circum-ocular stripe, and upper sides of feet pure white. A rather broad dividing line at either side, between white of under parts and gray above, jetty black. Central hairs of tail for its entire length, also black, forming a mid-third stripe down the member. Claws, horn-color and curved. Whiskers composed of six to ten black stiff hairs.

There is a splendid black phase of variety of this squir-

rel which is also said to occur in this vicinity, but up to the present time it has not been my fortune to meet with one. However, I have seen very dark gray ones which are really wonderfully handsome animals, as the white parts in them are generally purer, and the specimens improve by the contrast in the colors, which of course is still more decided when they are only snowy white and jetty black, which is said to be the case in the varieties.

They say that the California gray squirrel (*S. fossor*) is even a handsomer animal than Abert's, but never having collected the former it becomes impossible for me to express an opinion upon that point, though it is hard to believe that anything in the shape of a squirrel could surpass the present species in its spirited aspect, its grace and beauty, and then, too, it is one of our largest varieties, which also adds to its otherwise fine appearance.

Abert's squirrel is fairly abundant in the high pines which occur upon the mountain-sides, principally to the northward and eastward of Fort Wingate, and they have been frequently taken within a mile of the station. A good hunter once told me that he shot nine of them in two days, all within five miles of this locality, and only hunted for them a few hours each day.

The animal is essentially a tree lover, and rarely spends any length of time upon the ground. If you suddenly surprise one in the forest, it immediately seeks the nearest and largest pine tree within its reach by a series of very active jumps and skips, to ascend it with great rapidity to the first branches, where it often stops to take a glance at the intruder, thereby frequently affording the gunner a capital opportunity to bag the specimen.

FIG. 1.—LIFE SIZE HEAD OF A SPECIMEN OF ABERT'S SQUIRREL (ADULT FEMALE).

Now of the Arizona squirrel I have collected a number of specimens during my stay in these parts, and it is not infrequently seen within the immediate precincts of the station. In appearance it far more reminds one of our favorite gray squirrel of the East. It lacks the ear-tufts, though it differs markedly from the common gray squirrel in being more of a grizzly color above, and a mixed tawny one beneath. As to its comparative size I cannot speak with certainty, although I am inclined to believe, from recollection only, that it is rather smaller than the average gray squirrel of the Eastern States. It likewise has a broadish chestnut band rather than a stripe, down its dorsal aspect, between neck and root of tail. This latter coloration is but feebly marked sometimes, when a glance at the animal leaves the impression upon one's mind that it is of an ochrish color all over.

Unlike Abert's, the Arizona squirrel is rather partial to the crests and side-walls of the great cañons of this country, and is very much of a ground squirrel, rarely resorting to the trees when surprised by the hunter. Indeed, in recalling my captures of him, I fail to recollect an instance of ever having seen more than one in a tree, while on the other hand, I have frequently shot them as they skipped ahead of me on the ground, or clambered up the cañon-wall above me. My observations, too, incline me to suspect that this squirrel always rears its young in a hole, often dug in the side of a clay bank, or some similar locality; whereas I suspect the nest of the Abert's squirrel is placed up among the pine boughs, as is the habit of our gray one. In fact I have observed nests in the pine trees here, which I have taken to be the habitations constructed by *Sciurus aberti*, as they were evidently the handiwork of some representative of that genus of animals.

FIG. 2.—THE GILA CHIPMUNK (ADULT MALE, LIFE SIZE).

Next, to form our acquaintance with the third and last species of squirrel which occurs in this region, let us, this balmy June afternoon, pick our way through the fallen timber and masses of loose rock that incumber the bottom of one of the vast cañons hereabouts. In such a place you seat yourself for a moment upon one of the rough and partly-imbedded sandstone boulders, which long since took its plunge adown the cañon side to its present resting ground. Here you will be obliged to wait patiently for some ten or fifteen minutes in perfect quiet, when in all probability your ears will then be saluted by a not unpleasing little chirrup, which but partly reminds you of a sound often heard in the old, familiar woodlands at home.

With your eyes accustomed to peering into the recesses of nature's material that goes to make up the side of one of the rugged cañon walls in this part of the country, you are soon enabled to discover the presence of the author of this "*chip-chip, chip, ree, r-ree, r-reee, chip-r-r-rupp*," for stealthily issuing from his hiding place and coming over a broad sandstone slab with little measured steps and many nervous twitches of his tail, which is held almost vertical, you behold the timid little Gila chipmunk, one of the most interesting representatives of an exceedingly interesting genus. If you sit perfectly motionless, another, then another will now soon make their appearance at different and unexpected points, until fully half a dozen of these engaging little creatures may be in sight at one time. But upon the slightest movement of your body, off they all scamper to the weather side of rock, root or rubbish pile. You are not inclined to wait, however, another quarter of an hour, or perhaps longer, for a specimen, and as a fine male, bolder than the rest, has not taken part in the first general rush of the stampede, but stands displaying the pretty mixed gray of his back and the bright, though dark, fox color of the under side of his handsome tail, you awake the echo of the place as you fire a load of dust shot up in his direction. He is yours with hardly a visible mark upon him to indicate the cause of his so suddenly pitching down among the rocks, a *Tamias a. dorsalis* stone dead.

Even before he is cold, you cock him up in some pretty attitude among the rocks of his native haunts, and with your camera expose a dry plate upon him to take home and develop, and place aside for future reference. Then you have him life size in your collection sure enough. I made such a picture, and from it reproduced the drawing which now illustrates this article.

This chipmunk is a very different appearing little animal from his more handsome congener of the Eastern States (*T. striatus*). And although the markings, as will be seen in the figure, are quite distinct upon his head, the broad, diffuse stripes down his back, on the other hand, are but feebly defined, and hardly noticeable in some female specimens. He is of a dull ochrish, clay color beneath, and a brownish-gray on the back, while, as I have already said, the under side of the tail is a reddish chestnut shade, that extends to the nether aspect of the flank, on either side, where it merges with the color already described for the lower parts, beyond. In March here, I have found the females of this species heavy with young, and in May these latter are fully two-thirds the size of the adults. So I am inclined to think that they raise two litters and perhaps three in a single season. So much for the *Sciuridæ* of northwestern New Mexico, and after three, or nearly three years, residence here, there is nothing that gives rise in my mind, at present, to a suspicion that there may be any other species indigenous to this particular geographical area. R. W. SHUFELDT.

FORT WINGATE, New Mexico, June 10.

THAT "COPPER BELLY" SNAKE.—I think a specimen of the snake referred to in your issue of May 26 came under my observation about a year ago in Arizona. I was riding over the mesa in the vicinity of Fort Lowell when I came upon what I at first took for a black snake, about 3½ft. or 4ft. long. On nearer approach the reptile ascended a small meschite tree which stood near by, when I discovered the peculiar copper or pale pink color on the belly described by your Mississippi correspondent. The snake continued to climb the tree, and as he appeared to have no particular business on hand I concluded to make his acquaintance. Knowing the irritability of the black snake I decided to try the temper of my new acquaintance. I therefore dismounted and threw stones at him, which brought him to my side of the tree with such promptness and decision that I began to think I had stirred up the wrong fellow, and concluded to remount my horse. On reaching the extreme center branches on my side of the tree he began to descend in a manner most peculiar. Swinging by his tail he hooked his head over a branch below him, and swung down until his tail reached a branch still below, when wrapping his tail around this he repeated his previous maneuver, and this he continued to do till he reached the ground, when he started directly for me, and came on to within ten feet of my horse. He then turned to the right, and after a short pursuit disappeared among some rocks at the edge of the precipice. Though I tramped that region very thoroughly for nearly two years this was the only snake of the kind I saw, and have never found any one who could tell me its name. I feel quite sure it is the snake referred to in your Natural History column of issue of May 26.—J. A. P. (Fort Bidwell, Cal., June 6).

THE HORSE-HAIR SNAKES.—Galena, Dak., June 10.—I see by your issue of May 26 that Geo. D. Griffin, of Parkdale, Ont., is successfully raising horse and hog-hair snakes. Now, while I can have no fun yacht racing I want the fun of raising hair snakes. I will give $100 a pair or $1,000 for twenty snakes raised from animal hair. They may be delivered to the FOREST AND STREAM with a certified pedigree. As soon as I receive notice you will be authorized to draw on me for the amount.—W. W. ANDREWS. [It is not clear from Mr. Griffin's statement that he believes in the development of hairs into worms or snakes: but if he does, it would be prudent to let him hold his opinion, for a discussion of the "hair worm" question would be inopportune.]

THE MEDRICK GULLS AGAIN.—Portland, Me., June 14.—Mr. Grant, the assistant keeper of Matinicus Rock Light, writes me, under date of May 31, that the bird slayer, Mr. Cahoon, of Taunton, Mass., with an assistant whom he brought with him, is again shooting Medrick gulls in the vicinity of Matinicus Island. As there seems to be no way of reaching this fellow under the law, I trust you will hold him up to the opprobrium of all right-minded people.—O. A. BATCHELLOR, Commander U. S. N.

Camp-Fire Flickerings.

"That reminds me."

218.

OLD "Doctor" Deforest, a well-known character about Honeoye Falls, N. Y., was a great bragger as well as a famous muskrat trapper and sucker fisherman. One day the old fellow had considerable bilge water in his hold and was relating his exploits. Among them he told how one day he cut a hundred holes through ice a foot thick and took out over three hundred pickerel. "That's big work for a short day," said John Fish. "'Twant a short day nother," said the old man, impatiently, "it was one of the longest days in June." F. M.

NEW YORK CITY, May 18, 1887.
The U. S. Cartridge Co., Lowell, Mass.:
GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it*, not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,
—*Adv.* (Signed) C. W. CUSHIER.

BOUNTIFUL NATURE AFFORDS NO FINER SPECIFIC for skin diseases than Sulphur, a fact that is proven by the action upon the cuticle afflicted with eruptions or ulcerous sores, of that supreme purifier and beautifier of the skin, Glenn's Sulphur Soap. HILL'S HAIR AND WHISKER DYE—Black and brown, 50c.—*Adv.*

Game Bag and Gun.

IN THE CHEROKEE STRIP.—I.

TO my mind the Indian Territory presented always a beautiful, though vague and mysterious, appearance. That was when I was a boy, and used to read and dream about it. Even in late years—so strongly does an early, perhaps whimsical, idea of an unknown country often take hold of one—whenever I thought of the Indian Territory there came before me a picture of long, undulating reaches of grassy plains, broken by lines of noble forest growth, by clear streams and lovely interglades of level. And always, over the picture, softening every high light, lending its tone to every shadow, hung a deep, mysterious half veil of misty blue, dark, yet not unpleasing to the sense.

There are no seasons in the imagination, and my youth's picture was the same for all the year. Perhaps in the summer it may not be so very far wrong. Certainly, a couple of months ago, as I for the first time crossed the line into the "Nation," in the depth of wintertime, some points of the old picture showed true. There were the long sweeps of grass land, the bold lines of the timbered streams, the wide level plains; and, to verify the whole, over all hung a faint haze of blue, which deepened in the background into purple, royal purple, blue-black. It seemed then as if I already knew the country, though I afterward found that the peculiar blue haze arose from the effect on the atmosphere of the large burned districts which had lately been involved in the disastrous fires that had swept across the range; which latter had been set out by the fire-spitting monster of the railroad, that has already laid its serpent trail across the Cherokee Strip as far down as the Cimarron River.

Those who love a greyhound will remember that at the meet of the American Coursing Club, held at Great Bend, Kan., last October, the greyhounds of Mr. M. E. Allison quite bore away the honors. These hounds, the product of fifteen years of breeding and hunting, are known all over Kansas, and have killed all sorts of big game in all sorts of places. Mr. Allison had hunted with them over the very ground which we now proposed to visit. It was while describing this hunt to myself and my friend and partner, Mr. J. A. Ricker, the artist, that our comments induced him to form the notion of showing us a little fun with the same dogs and in the same country. Whereafter ensued tedious struggles to escape the fiend, Business. But at last we all did escape, or told each other that we had. At that time I found myself at Kiowa, on the border line, and here I was picked up by my friends, who came with the team overland from Hutchinson, two days' drive.

I found that the conveyance selected was a sort of Black Maria, a stout Surrey wagon covered with black curtains and fitted with light sideboards. The two ponies which pulled it were declared—by the liveryman—to be of the reversible sort, such as might be either ridden or driven. Inside the Black Maria were the two men, a few blankets and three greyhounds, in which latter I recognized the champion dog Sandy Jim, his runner-up Terry and the old veteran Mike. Behind the vehicle, coupled close together, trotted Buck and Drum, two trail hounds of such preternatural solemnity of countenance that I could never keep from smiling whenever I looked at them. These two foxhounds, coupled together as they were, always gravely, diligently and promptly whipped any dog which pitched upon them along the road, and then at once relapsed into mournfulness again. By the side of the team trotted old John, Mr. Allison's bay hunter, with ears thrown forward and eyes alert. John loves to hunt as well as anybody, and he and the dogs have a perfect understanding with each other.

Well, as I said, the Indian land showed blue as we rolled across the line. Our noses looked blue also, though, perhaps, not so picturesque. The thermometer was six below zero, and there was such a wind as only blows in the wide southwest. We found our curtained Black Maria very comfortable, however, though the poor greyhounds shivered pitifully. As soon as we had crossed the big wire gate which let us into the territory (for, as will presently appear, the Cherokee strip is only a big cattle pasture all under fence), we tied the foxhounds to the wagon, and kept the greyhounds inside for fear of poison. The coyote industry is a very prominent one in those parts, and we did not know when a dog might pick up a wolf bait and be gathered unto his fathers. And when a dog has as many fathers as some of ours had, in his pedigree, you don't want him gathered unto them. But, under any circumstances, the greyhounds would have ridden, for they were all more or less crippled up, by reason of recent argument with certain coyotes up around Hutchinson. Mike had been further lamed by a severe fall while running on ice; it is a question if he ever will get over this sprain, which is in his left hind leg. Jim was badly bitten up, and had a very tender ankle. Terry—not held to be so fast as either of the others—was the only one in fair condition. He seemed to be feeling pretty well, and lay on top of the other dogs, looking up at us intelligently and grinning perpetually. Terry has a peculiar undershot jaw, which gives him a strange look; but his eye is large and soft, and he is a singularly affable sort of a dog, so to speak, for a greyhound. Mike is very dignified, and won't speak to you without an introduction; if you ride well in the chase he will notice you a little.

They say that Mr. Allison always allows his greyhounds to ride, and, in fact, sometimes walks in order to leave room for them in the wagon. I do not know how that is; but I do know that a greyhound, even a big and strong one, is a running machine that is very liable to get out of order; for be it but a toe nail which is missing or injured, the machine is not at its best.

It was high noon when we rolled out of Kiowa, and 2 o'clock when we stopped at Mule Creek for a particularly frigid cold lunch. I should state that we were not intending to make a camping trip of it, but planned to stop at cattle camps during our time out. We were headed for the Cimarron River, and expected to do most of our hunting on the range of the 21 ranch. (Only tenderfeet speak of a ranch by any name olher than its brand). The 21 brand is the sign manual of the Messrs. Greever, from one of whom Mr. Allison had received a cordial invitation to come and bring his dogs, which invitation was seconded by Mr. T. H. Kirkpatrick, the foreman of the ranch, whom, by the way, we met at Kiowa. Just before we reached Mule Creek we passed Mr. Greever posting in for Kiowa to catch a train, and had but time for a hurried "How!" as we passed. We were, however, nothing daunted by the fact that our host was not at home. We just kept right on. That is the way they do in the cattle country.

It was some forty-five miles from Kiowa to the 21 ranch and the nearest stopping place out was at the Eagle Chief Pool, a distance of twenty-five miles. It should be understood that the "pool" part of this name has reference only to the company of cattlemen along Eagle Chief Creek, who have joined their assets and have agreed to stand each his *pro rata* in the expenses of the lease, fencing, ranch expenses, etc. There are several "pool outfits" in the "Strip."

At the risk of offending such as are anxious only for a hunt, I would perhaps better pause long enough to say a few words about the Cherokee Strip and the tenure under which it is held by the cattlemen, for it must be remembered that there is not an Indian in the whole of that great section of country, it being all leased to the cattlemen by the Cherokee people.

The rental paid by the cattlemen is two cents per acre—a ridiculous amount; yet one which affords the tribe an enormous income per annum; while it affords the cattlemen the opportunity of actually raising an animal to maturity for less than the taxes would amount to in the State of Kansas. Of course the cattlemen of the Strip pay no taxes at all. Blessed men. They have found Elysium on earth. Naturally, they want the lease renewed at its expiration—which occurs in a little less than two years. Politics will have much to do with it. If the Cherokees sell the land to the United States it is all over with the cattlemen. But if the matter is left with old Bushy-head, the present chief of the Cherokees, the lease will possibly be continued. Bushy-head is well educated and eminently level-headed. His views on the land questions were well voiced by his sub-chief—not so well educated as himself—who thus replied to the embassy of a certain syndicate who have long had their eyes on that favored country:

"Mebbe so Injun got hen," said he. "Mebbe so hen lay um egg. Injun take um egg in two, four week; buy um tobacco. Injun smoke; have a good time. Mebbe so Injun *sell* um hen. Get plenty dollar. Buy um plenty tobacco; have heap fun. Bine-by tobacco all gone. No have um egg, no have um hen!"

The red philosopher has the fable of the goose with the golden egg dead to rights, though he never heard of that celebrated fowl. His understanding, thus formulated, is the hope of the cattlemen.

The apportionment among the cattlemen of the land embraced under the lease was effected by mutual consent, or by arbitration, each "outfit" receiving what seemed fair for its count of cattle. Ten acres is the nominal allowance per head, but most of the ranges afford fifty acres per head. In case of heavy fires, one man may have to take the greater part of his "neighbor's" cattle upon his range. This is always done cheerfully. No class of men stand together so well as the cattlemen.

In establishing the lines of the different ranches, the survey committee followed the trend of the "divides." All the ranches are fenced. This whole great strip of country, big as a State, is crossed and threaded by wire fences. It is one enormous cattle preserve.

It is a game preserve, also. Into it no hunter is allowed to go under penalty of confiscation of his arms and property. Of course, the law is continually violated. "Granger" hunters come out every fall with wagon loads of deer. But let them come under the knowledge or the displeasure of a cattleman, and if the cowboys did not run them off at once, a word would bring a band of soldiers down on the gallop, and a very serious trouble would be the result. Some heavy confiscations have been made this fall, and the ignorant or wilful hunter has more than once learned that it won't do to kick against Uncle Sam.

Against any unpleasantness of this sort the members of our party were provided with proper passes, authorizing us to pass "Into and through the Indian Territory for the purposes of hunting and landscaping." As we met no soldiers during the whole trip, we were not called upon to produce the passes. Even had we not had them, we could perhaps have smuggled ourselves in as guests of the ranch. It is the marauding market hunter and game butcher against whom the soldiers have a grudge. They can tell one as soon as they see him, and once a darky soldier gets behind him with a gleaming bayonet, the butcher hunter is sure to march. I suppose there are times when officers are blind in the Territory as well as elsewhere; but if any one should ask how he could be assured of a safe trip into that country, and how he could arrange it, I would only say, don't go at all, unless you are on friendly terms with some cattleman. There are trappers and skunk hunters on the range in the Strip, who have been camped there all winter. They have no right there, but the cattlemen do not complain of them; perhaps because they kill coyotes, and coyotes kill calves. The 21 outfit do not allow hunting on their range—an exception was made in our case. The range is therefore better stocked with game than perhaps any other in the whole Cherokee Strip.

For the 21 range, then, under the circumstances hereinbefore set forth, we were, I believe, en route at the time the narrative stopped for lunch at Mule Creek.

Our piratical craft sailed over the six or eight miles of divide which lie between Mule Creek and the Salt Fork, and there met the first trouble of the day. The ice was very smooth and our ponies sorely disliked to venture upon it. A horse on ice is not a graceful object, especially when he assumes a supine position and waves his legs over his stomach as a signal of distress.

It was sundown, and we were very cold and quite chilled through when—having by great good fortune taken the right trail at a dubious cross road—we pulled through the gate into the Eagle Chief "pasture" (of some fifty or sixty square miles) and sighted the ranch house. A half dozen big greyhounds came out and greeted us noisily, but no sign of life appeared about the house. We were not acquainted with any of the owners here; but, according to the fashion of the country, had appointed this as a stopping place for the night. However, we met a rather funny rebuff here at first. Mr. Allison, while we others were unhitching the team, stepped up to the door of the house and knocked.

"Come in," said a voice. He did so, and espied a solitary figure sitting by the fireplace reading, which figure paid no attention to him—not even glancing up from the book.

"Can we stay over night with you?" asked Mr. Allison.

"S'pose so."

"Where shall we put our team?"

"Anywhere you please."

"Bring our traps in here?"

"Anywhere you please."

"Can we get some horse feed?"

"S'pose so."

Mr. Allison turned to go out. The young man looked up and said: "Got any chuck?" Mr. Allison intimated that we had not; that we intended to secure that at the ranches, but that we wished to pay for what we got.

"Oh, we aint that kind of an outfit," said the other. Then, as Mr. Allison murmured something about cooking, he inquired:

"Aint you as able to cook as I am?"

Here, indeed, was off-hand hospitality! Our embassy returned a little bit confused. We resolved next time to send Ricker, who was the good-looking man of the party, and who, as we jokingly told Mr. Allison, didn't so nearly resemble a horse thief. However, we attended to our team, making it comfortable in the ranch stables, and then sought again our new friend, who was now out cutting wood. We further introduced ourselves as having been sent to the Eagle Chief by Mr. Kirkpatrick, of the 21.

"You know old man Kirk? Come in, fellows," said our host. And we were at once made debtors to the universal popularity which Mr. Kirkpatrick has, not only on the 21 ranch, but all over the range.

We now transacted the formalities customary on the range, and soon we got pretty well acquainted with our entertainer, who thawed out rapidly and at once showed himself a very jolly fellow. He explained to us, as he went on cooking supper—he had had his own supper before we came—that there had not been more than two days in as many months when he had not had somebody come in on him. "I like to have company," said he, "when they're like you fellows and amount to something; but there's all sorts in this country, you know, and half or them just make a convenience of a cow outfit." At this we again had a laugh at Mr. Allison, and advised him to have his hair cut. There was not, however, very much room for criticism, for our cold weather clothes gave us all the appearance of hard citizens. We were not beautiful. But at the supper table we showed ourselves useful. Young Mason—for such was his name—cooked a big pan of biscuits (hot bread is the only kind known on the range) and these, though far outnumbering us, we routed ignominiously, together with much other slaughter.

After business session we spent the evening in talk about the big fireplace. The ranch house had but two rooms, and was built of boards and cracks. Mason informed us that he was alone most of the time in that one of the Eagle Chief camps at that season of the year. He had that day broken the monotony by taking the hounds out for a run, and had killed two coyotes. He told us that game was no longer plentiful on the Eagle Chief. The turkeys were nearly all killed off along the stream, where lately there were so many that he used often to run them down with horse and hounds (a feat not difficult on open country). Mason also reported plenty of poison above and below on the creek, and warned us that one range, which we were to cross on the following day, was full of poison.

We spent the evening pleasantly in comparing and discussing our pistols and rifles, and in talking over the cattle business. Then, having got our bearings for the remainder of our journey to the Cimarron, we folded each the drapery of his couch about him and lay down to pleasant dreams.

E. HOUGH.

BISON IN THE PARK.

YELLOWSTONE NATIONAL PARK, June 14.—*Editor Forest and Stream:* Having occasion to remain a few days at the Lower Geyser Basin, I took advantage of this opportunity to look up the bison. Starting out with the government scout to the south and west, we saw the first signs of bison three miles from the hotel. They had rubbed and scratched themselves against small pine trees, breaking the tops off and the limbs down, and using the stumps to rub against, leaving bunches of hair all around. Some of the trees were 4in. in diameter where broken off. In soft sandy places we found "wallows," where the bison had pawed and rolled until they had made quite a hole in the ground, some 10ft. in diameter, and from 1 to 2ft. deep, the soil being well mixed with hair, giving it the appearance of a mortar bed. Following up the sign, we came to places where they had bedded during the winter on warm sunny hillsides and sheltered nooks. Some of the tracks we saw were immense, 6 and 7in. wide, made by bulls; others were smaller, made by cows. Often we saw many fresh elk tracks, but we paid no attention to them, as we were not out to hunt elk, but buffalo. Soon we came to bison sign, made that morning, and not over three hours old, where they had been feeding in openings and willow marshes. While trailing them up we were overtaken by a severe snow squall, which lasted about twenty minutes. When this was over, we concluded to tie up our horses and take up the trail on foot, as the horses made too much noise going through the timber, and we were confident we were close on the bison. Our object being to see them, and, if possible, to avoid frightening them, we securely fastened our stock, made a short detour, and approached the opening in which we thought to find the bison feeding.

We crossed a wide trail used by the bison in winter, and several fresh trails. Cautiously moving forward we came out to the open swamp, when my attention was attracted by a crackling in some timber ahead, where some large animal was moving. At first we did not notice anything in the opening, and so moved forward to see what was ahead. When we were about ten yards out from the timber, picking our way through the swamp and examining the fresh tracks, Wilson the scout noticed a buffalo to our left, a fine four or five-year-old bull, less than a hundred yards off, quietly feeding. We used our field glasses and had a good chance to examine him. He was very fat and in splendid condition, but not shed-off, except that the rump had lost the winter coat. The rest of his body was covered with the old hair which, excepting that around his head and neck, was much faded and

bleached by the winter storms and spring sunshine. His head and neck were quite black and his eyes shining through the long black hair, gave him a very savage and fierce appearance. Knowing how wild and timid he really was, we were careful not to alarm him, but watched him as he fed from side to side just as domestic cattle do. At last he turned toward us, giving us a fine view of his size and movements. We were expecting that he would wind us at any moment, as the breeze was blowing directly toward him from us, but he was so busy feeding with his nose close to the ground that it was some time before he showed any sign of scenting us. At last he raised his head and looked directly toward us for a moment, and then went to feeding again. We took advantage of this and slipped back into the timber out of sight, but so that we could watch him for a while longer. Soon the bison concluded that something was wrong and slowly moved off across the swamp, stopping once to feed as some extra fine bunches of grass attracted his attention. His smooth, sharp, black horns looked like good enough weapons for defense against anything but man with his rifles. As we did not wish to frighten or disturb any of the bison we returned to our horses and then to the hotel, being satisfied with seeing the one animal. To have looked up others we would have alarmed our first one and probably have caused them to leave this section.

A few days later we visited another part of the Geyser Basin, and saw trails of bison and sign of their having wintered there. One fresh trail showed where quite a band had traveled westward. A few days later I visited that point again, and, carefully examining the trail, saw and counted the separate tracks of five buffalo calves, where, a little to one side of the main trail, they had traveled beside their mothers. I could not make out any more calf tracks with this band, which, I think, numbered at least twenty, not counting calves. Calf tracks could only be seen beside the trail; if any walked in it, the larger animals would obliterate any sign made by the young.

These are the bison I wished to hunt up last winter on my trip through the Park in the interest of the FOREST AND STREAM.

While looking around for game I saw the bones of buffalo in two of the hot springs, where by some accident they had fallen in and so lost their lives. Occasionally a tourist sees these bones. I have noticed where quite a number of animals have fallen into the hot springs throughout the Park, on the lake shore, in the Mud Geysers, in the Norris Geysers; and this spring on the road from the Mammoth Hot Springs to Norris a yearling black-tail deer or young elk, I am not sure which, is in a hot spring not 10ft. from the road, where any one can see it while passing along. Often one sees tracks where elk and deer have waded out in the hot water of the springs and pools, going into very dangerous places, stepping into water hot enough to scald one.

Several bears have been seen this spring by tourists and a great many elk, but no tourist has seen a buffalo.

Song birds are nesting. One pair of robins, whose nest is under the eaves of the hotel, had hatched out their young on June 3. Ducks, geese and thousands of water-fowl are busy raising young, to make sport for people outside of the Park.

In an extensively circulated advertisement by the Northern Pacific Railroad Company, it is stated as a noticeable fact that there are no song birds in the Park, while the fact is the Park is abundantly supplied with a great variety.

The roads are now in splendid condition. The trails have not been traveled up to this date, on account of snow in the higher parts of the Park. This snow is furnishing the water to feed the streams, which are unusually high throughout this section. The Yellowstone River has reached a point higher than ever known before by the whites, and is bringing down from the mountains great quantities of logs, whole trees and masses of drift-wood. All bridges over the river are in great danger from the floods of water now rushing to the sea. A short time ago this was snow and covered the lakes and mountains of the Park, and filled the cañons and the timber, over or among which a person could glide on snowshoes more easily than they can now walk on the ground.

The travel commenced in the Park this year before the hotels were opened. The weather was so delightful that tourists could not wait for hotels, but put up with any kind of accommodation. Some who could not procure transportation on account of the snow walked through. These are called FOREST AND STREAM tourists.

The Geyser Action in the Upper Basin has changed a little from that of last year. The Splendid, Castle and Grand give a daily display. The Giantess rests from nine to sixteen days between eruptions. The Giant has been seen but once in many months. The Grotto, Fan, Riverside, Sawmill, Turban, Lion, Lioness and Cubs, are in action, showing no noticeable change from last year. Old Faithful, the tourists' friend, keeps up its reputation with hourly eruptions. The Bee Hive is very uncertain, going off twice a day for a day or two, then remaining inactive for weeks. In the Lower Basin there is but little change, a little longer interval between the eruptions of Fountain and Great Fountain. No one has seen the Surprise in eruption this year, nor the Excelsior since the summer of '82. The Norris Basin shows an increase in activity over last year, and is becoming one of the most interesting Geyser Basins in the Park, well worthy of a day's study by any tourist, but is slighted by almost all, who hurry on by it with but a moment's time spent in running over a small portion.

Captain Harris's scout is making it very interesting for the hunters and trappers who venture into the Park. One man who thought it unsafe to go in from Gardiner, tried it by going around over two hundred miles, and then found Wilson in camp as he drove across the line. He is out of the Park now, after contributing a pack horse, traps and outfit to the collection made by the superintendents.

If fires are kept within bounds, and as well out of the Park as are hunters and trappers, it will be something for every one to rejoice over. H.

FOURTEEN YEARS OF FOREST AND STREAM.—Coralville, Iowa, June 14.—I have taken the combined papers for 14 years, nearly; and do not think I can afford to do without it. It seems to grow a little better every year.—JOHN WILLIAMS.

MOOSE IN QUEBEC cannot lawfully be killed before 1890.

THE DIAMOND HITCH.

Editor Forest and Stream:

I note with much interest "Yo's" opening articles on the diamond hitch. I wish that the spirit had moved him to write just one year ago, for then I was one of "two young men quite unacquainted with Western ways, who started to go through the Yellowstone Park," and who decided that they would not "hire an experienced packer." We had an aparejo, also the sawbuck saddles, and were not green hands at throwing most kinds of hitches, but a wall tent with its jointed iron-shod poles packed on the aparejo mule we never could manage. As a last resort each man shouldered a pole, for being government property we could not "forget them." Let me add this piece of advice to "Yo's." Economize in everything; horses, grub, guide and general outfit, but not on an experienced packer. If you do, then don't take an aparejo, a tent or poles, as they involve spending more time in packing and repacking than in traveling, more terrible swearing than Uncle Toby's army in Flanders, and such general ugliness of temper in the outfit that each man would be ready to wipe out his companion if the fact did not stare him in the face that then he would have to do all the packing himself. After we started in to carry the poles I hit upon a wrinkle which I think will be new even to "Yo." I made a flat square pack of the tent, then spreading it over the animal from withers to rump I lashed him up just like a hammock. NAVAL OFFICER.

NAVAL ACADEMY CLUB, Annapolis, Md.

Editor Forest and Stream:

A week or two since, in the first of the articles with the above title I said, "So far as I can learn nothing has ever been written about the method of throwing the diamond hitch." Since that was written I have come across a little pamphlet by Lieut. E. S. Farrow, U. S. A., entitled "Pack Mules and Packing," published in 1881. This brochure, while containing some useful hints, is not adapted to the wants of the novice at packing, because it takes too much for granted. Some of the sketches contained in it are, however, very excellent.—YO.

RIFLES AND BULLETS.—"R. R. R." hits the bull plumb center. We want and must have improved ammunition for hunting rifles. The light express hollow-pointed patched bullet, with a heavy charge of quick powder, fills the bill—almost. We want in addition the lands of the rifle reamed down at the chamber to give an exact center-bearing to the bullet so there will be no jump in starting; with the bullet seated in the shell just enough to hold it securely, and to load without inserting bullet and shell separately. I have discarded a repeater for a single-shot, and like the change, but am utterly disgusted with the common ammunition for big game.—WARFIELD.

OHIO.—Georgetown, June 4.—The prospect for plenty of quail here the coming season is most excellent, and the gunners are looking forward to great sport after Nov. 10. Our game laws are very well observed, every one being satisfied with the length of the open season.—N. S. G. W.

GUNPOWDER TESTS.—There is an error in the article mentioned, caused, I fear, by its being hastily written. Probably any sportsman will see that "1½drs. powder and 4drs. shot" should read "4drs. powder and 1¼oz. shot."—T. C. B.

THE BIG BEAR OF TOBY GUZZLE.—In my article, "The Big Bear of Toby Guzzle," I wrote the step was 36in. The compositor has it 26in., an error palpable to hunters, but perhaps not to others.—WARFIELD.

ONE SIDE OF IT.

Editor Forest and Stream:

Inclosed find cutting which will explain the situation in Arizona in regard to Indian affairs, and the cause of the postponement of the "Sierra Madre Exploration."

It was hoped by credulous people that the capture of Geronimo and his band would put an end to the Apache troubles, but as long as the San Carlos Reservation is kept up by the Government as a training school for these murderers and robbers there will be continued outbreaks.

I had just arranged with "The Sonora Land Company," of this city, for means to go on with the exploration when this news came here and upset the enterprise. "It was ever thus since childhood's hour." I wrote a "History of the Apaches" for General Miles last summer, commencing in 1542 and concluding with the capture of Geronimo. In the Sepoy mutiny the British government did not send the red-handed murderers to the orange groves of Florida; but to happier hunting grounds.

It seems to the frontiersmen very unjust for our government to educate, feed, clothe, arm and pamper these savages to turn loose on the settlers and murder, rob, ravish and plunder at their sweet will and pleasure; but experience does not give hope for anything better. It may be fun for the Indian agents, but it is death to the settlers. There has been no protection for life or property since the U. S. Government acquired the country in 1853. The army may give an excuse for its existence by chasing these renegades into Mexico at a cost of over a thousand dollars each, and when caught, if ever, I suppose they will be sent to enjoy the climate of Florida; and the humanitarian will howl because they are separated from their dear families. The subject is too nauseous for respectful consideration. CHARLES D. POSTON.

CHICAGO, June 14.

NEW YORK GAME LAWS.

THE Governor has signed the following bills:

Chap. 298, Senator Murphy's bill allowing certain privileges of selling in New York city, trout and other fish caught in other States during the off seasons in this State.

Chap. 512, Senator Comstock's provision for a fishway in the State dam at Troy.

Chap. 530, Assemblyman Collin's bill for the preservation of salmon.

Chap. 562, Assemblyman Winne's bill providing an appropriation for the development of a park in the Catskill Mountains.

The Fitch bill, making an appropriation for the fish hatchery at Cold Spring Harbor.

Reeves bill allowing the shooting of fowl in Gardiner and Peconic Bays.

McMillan's landlocked salmon bill.

Coggeshall's 6in. trout bill. Cornell's Keuka Lake bill. Giese's bill prohibiting bass fishing in Lake Erie or Niagara River between Jan. 1 and July 1. Sweet's bill relative to fishing with nets in Cayuga Lake. Hamilton's preserves bill.

Ambition and honest endeavor are to be commended. Make no mistake on this score, and there is a time when the rod and gun must be laid aside for the stern duties of life, but if our young friends will take the advice of the great and generally good *Telegraph* they will cling to youthful sports and pleasures as long as possible. You may not, in fact, cannot, all be President, however hard you may try, but don't forget that the President tries at times just as hard to be a boy.—*Macon Telegraph.*

TROLLING FOR TROUT.

SINCE reading "Piseco's" letter in your issue of June 9, I have thought how much my case was like his. For some years I have done all my fishing on strictly scientific principles, using a fly or nothing; and although I have been moderately successful, still there has been times when I have been strongly tempted to become converted from a "fly lunatic" to a "worm digger." I have, however, always resisted temptation until this spring, when a combination of circumstances was too much for me, and I became converted, at least for the time being.

About May 24 I arrived at Middle Dam and took room at the Anglers' Retreat. I may be a little superstitious, but I never fish on the day of my arrival at my proposed grounds; and so I spent the afternoon in looking around and listening to the reports of the day's fishing. The chance for fly-fishing, I was told, was not good, and if I wanted to get any fish I must troll or still-fish. This was unwelcome news to me, as I knew very little of the art of still-fishing and less of trolling, and at that time thought I did not want to know. So the next day I started out with the intention of catching fish with the fly or not at all; and I fulfilled my intention, for I did not get a rise, although I used nearly every kind of fly that could be thought of and in every manner I had ever heard of. It was all the more discouraging as when I came through Errol, people were catching nice trout with the fly, and had been quite successful at Andover, but it was of no use, and at night I made up my mind that if I wanted any fish it was troll or still-fish; and as still-fishing does not possess any more attractions for me than clam digging, I at once gave that up. But in order to troll I should have a guide, and as that could not be procured I must go alone. So getting a boat of Capt. Farrar I started out for the Narrows, the scene of success and disappointment of the last four days, with the determination of giving trolling a good trial. I had received instructions from one of the guides as to the proper manner to put on the minnow and felt that I ought to be at least moderately successful. When I got out in the lake I baited up and let out about 50ft. of line and laid the rod down at my feet within reach. I had not gone far when I had a strike, which nearly took the rod out of the boat. I grasped it as quickly as possible, but not quick enough to save the fish; he had gone before I could lay the oars down and get the rod up. I started on again and again had a strike and again lost him. And so it went all day; I had strikes enough, but could not get the fish. About noon some gentlemen who were stopping at the Retreat invited me to take dinner with them. After dinner I succeeded in getting one small trout of about 1½lbs. and lost another when nearly in the landing net, but still I continued until nearly all the boats were home, and then I turned my boat toward home too, and trolled across the lake, feeling that although I had not been successful I had done all I could, and as John Danforth says, "kept my line wet." At supper all were relating the incidents of the day; some were happy over a six-pounder, while others had to be content with a three-pounder, and others still, myself included, with less.

The next morning I told Captain Sam Clark, of the steamboat service, to get me a guide, if he could; this he promised to do, but day after day went by, and no guide came to me. I was not idle all of the time, but I did not fish much, as they were sluicing logs through the dam and this spoiled the fishing in the river. At last, one noon when the boat landed, Captain Clark said, "I have a guide for you," and presented Frank Dunn, of Andover, to me. I was quite pleased to have him come, as I had learned he was a good guide, and he had a good boat and everything complete. We fished a little up in the Narrows that afternoon, but did not have much success, for the fishing had begun to be poor by this time, there being no less than eighteen boats there nearly every day. When we returned that evening I made up my mind that I would try some place where others did not fish. The next morning I told Frank I thought we had better try the South Arm. Some of my friends laughed at that; in fact, they had rather laughed at me for the last few days, as I had caught no fish, but was waiting for "something to turn up." But Frank said my judgment was good, and that there were as good fish in the South Arm as ever were caught.

We crossed the lake and trolled down Saints' Rest, and just as we got by the point I had a strike and got a little fellow of 1¼lbs. We took him in and cast out again and soon had another strike, and got what proved to be another small one, about 1¼lbs. This convinced us we had got where the fish were, but their size was not much to brag of. I said to Frank, "This is more like it; but it will take a month to catch up with my friends at the dam." "You hold on an hour or two," said he, "and I will show you some that are worth while." Encouraged by his confident tone, I "braced up" and waited. I had not long to wait, for soon there came a strike that bent my 13-ounce split bamboo so that its tip went into the water. Frank noticed it and started for the middle of the lake and I kept a taut line on the fish, until, when Frank thought he had got out far enough, he stopped rowing and I began to reel in. I soon had the fish up where we could see him, and we began to bet on his weight; but there was no chance to decide the bet, for just as we were going to slip the net under him he was gone. I do not know how heavy he was, but we set him down as 4½lbs. Frank was a little discouraged at the loss of the fish; but I told him that my luck was coming and I knew it would hold out until I had as many fish as I wanted, or at least as many as I ought to have. We kept on trolling, intending to go to the South Arm for dinner and return in the afternoon.

We were just passing a point where a large stump had been lifted up on the rocks by the ice; and Frank said, "There ought to be a big fish under that stump." He had hardly got the words out of his mouth when the rod was nearly pulled from my hands and the line went off from the reel as though it would never stop. Frank uttered a remark of great force and surprise and started for the middle of the lake as if his whole aim in life were to get away from that stump. I had turned around so as to face

the stern, and hung on to the rod as if it were my last hope. For as many as thirty strokes did Frank pull and not a foot did the boat go ahead except as I let out the line; but at last the strength of Frank's arms were more than the fish could withstand and little by little the boat began to go ahead.

Frank kept his course for the dam and I had the tip of the rod up in the air as well as I could with one arm, while with the other hand I tried to control the line so the fish would not take it in; but it was of no use; I had to let out a little at each rush or each shake, as I was afraid the rigging would not stand such a strain. We had tested the whole business that morning at 9lbs., but the fish was pulling more than that. At last all my line was out and something must be done. "Frank, suppose you stop rowing while I reel in some line." "All right, but just look and see what time it is?" "Ten minutes of twelve; I guess we will be late for dinner." "Never mind the dinner, I would rather go without dinner for the next week than lose that fish. He aint no minnow now, I can tell by the way this boat pulls; see, you are drawing the boat back to the fish." And so I was, for every foot of line I reeled in, I pulled the boat back just so much.

At last I had 50 or 60ft. out, and as I thought that was as near as I cared to have the fish, I told Frank to go ahead. He began to row and slowly the boat moved, but it did not go very fast, for the fish all this time was not lying still like a log, but was using his utmost powers to break away from the line and free himself from that fearful minnow which was so much more powerful than himself. Line, hook and rod all did their part, and we kept on up the lake, Frank rowing strong and steady and I giving and taking line as occasion required. At last Frank asked the time. "Half past twelve." "Great Scott! Forty minutes. Well, he is a tough one. Why don't you bring him to the top?" "I don't dare to. If he should happen to be hooked lightly he would be sure to break away, for he would be afraid of us and make a desperate struggle. I am not going to get him any nearer until he breaks water, and then we can see how tired he is." After a while he came to the top and gave us a sight of back and tail; and then we were more anxious than ever to save him. "He will weigh more than 6lbs.," said Frank. I thought he would, too, but did not dare to say so, so I replied, "I will take you under and pay if I get beat." "All right, but you will have to pay, for he is a pound bigger than those that the gentlemen with me last week caught, and they weighed 6lbs."

Just then the fish came to the surface and turned over on his side, and we were both surprised at his depth. It was an exhausted fish, and I thought that it would do to try to land it.

"Now, Frank, you sit on that side of the boat and take the net. No, don't get up, you will scare him; sit right down and I will bring him up to you. Wet the net so that it won't be light colored, and be careful not to scare him." I then reeled in the line until I had the fish near the boat, then I swung him round toward Frank and held him upon the surface. "Now take him." He moved the net gently in the water until he got the fish in it, and then it came into the boat in a hurry. Down on the bottom of the boat we all were, and while Frank was getting out his "war club" to kill the fish I held it down, or in its frantic flopping and jumping it would have gone out of the boat again. "Now see what time it is," said Frank, as he laid the fish in the bow of the boat and covered it up with moss. "Fifteen minutes of one. We must have had hold of that fish an hour; he was a game one and made a good fight. I have caught fish that would jump out of water more, but I never got hold of one that it took an hour of steady rowing to tire out. How far have we come?" "Two miles and a half or more, we are most up to the dam." "Well, I guess we will go down and see what Mrs. Sessions has for dinner." "I was just beginning to think of that myself, a little dinner won't go bad by the time we get there." So we started for the house at the South Arm, where the people who come in by the way of Andover first strike the lakes. We trolled down but got only one, and that a small one. When we got to the house our fish weighed just 6¾lbs. "There," said Frank, "now pay your bet." I did.

Mrs. Sessions came out, and as she saw the fish she exclaimed, "My soul, Frank Dunn, where did you catch that?" "Up here by the island." "Well, well," said the old lady, "to think that you come down here and catch my fish." I hastened to explain to her that I was a stranger and did not know which were her fish, but we got gold of one that might have been hers so we let it go. Frank had dressed the small ones and just then brought them up and gave them to her; so with a laugh she went in and began to bustle around about our dinner.

After dinner Frank asked where we should go. "Oh, back up by the island; those fish up there are good enough for me." So back we went and trolled on the way, but did not get anything except one little fellow. Just as we got up to "our" stump another boat came around the point. They had hardly passed the stump before the gentlemen had a strike. Up he jumped in the boat, and then began such a jumping around as I never saw. His rod was bent double, and he kept reeling in as fast as he could. His guide told him to sit down, but he was too much excited to do so, and kept pulling on the fish. At last he got him up to the boat, when he seized the line with his hand and was going to have the fish in quick order; but the strain was too much, the hook pulled out, and away went the fish. With an exclamation the gentleman sank back in his seat and the disgusted look that came over him was mirrored in the face of his guide. We went on and left them trying to get the snarls out of the line. In a few minutes we passed the point again and as the bait came near the stump I had the hardest strike I ever had. "Go out, go out, Frank; I've hooked a whale." Quick as a flash the boat was pointed toward the middle of the lake, and Frank was pulling as for life. There were a number of dead trees standing in the water, and the fish was making for them. I knew if he got to them he was "a goner." Raising the tip of the rod straight up in the air and grasping the line to the rod with both hands I held on for glory. The fish was going at right angles to us, and although Frank pulled as hard as he could the boat advanced not a foot, but kept off sideways with the fish. At last he began to turn and soon came easier and we got out of danger. "Look at your watch," said Frank. "A quarter to three." "Now, do your best, for this is a big one and no discount." Just there the fish stopped short, and although I pulled as hard as I could he would not come. "He is snagged," I suggested. "No he ain't; give him line; give him some line or you will lose him; give him what he wants." I let him take it a little, but kept one hand on it. He would shake his head and start out to one side and take 10ft. or 20ft. of line; but at last he had to give up and come with us; and although he fought hard he did not have the spring and rush of the big one before. We had not gone very far before he came to the surface away behind the boat. Then we saw him for the first time, and what a big one he was. All we could see was his back fin and tail, but they were as large as a man's hand or larger, and made such a commotion in the water that you would have thought lightning had struck them. "That's the biggest fish I ever saw; he will go over 10lbs." "Well, I'll take you under." "All right, you'll see. I tell you that is the biggest trout that has been caught this spring, and don't you forget it." "I will try not to; but we have not got him yet." "Well, we will. If you lose him I will jump out of the boat and dive for him."

Just then the fish made a rush for the boat and we had some sharp work to keep him from getting slack line, but we succeeded in keeping the hook in place and in holding what line we got. He soon came to the surface and turned up so we could see his shining side through the water. Oh, he was a beauty—a perfect giant—a whale. We became somewhat excited and began again to make bets on his weight. There, at last he was within 25ft. of the boat. "Now, Frank, stop rowing and we will see what we can do." "I am afraid he will get under the boat if I do." "Well, you lay the oars down so you can get them quickly, and I will try and get him up here, but I never can while those oars are slashing around in the water in that shape." "All right, but you will lose him, now you see. You had better let me row a while longer." "I don't think so. We have hold of him now twenty-five minutes, and I am afraid that he will get the hook out of his mouth and get away." "There is no danger of that as he don't get slack line." Just then the fish turned up his side, we saw he was very sick, and that it would be well to land him then, so Frank lay down his oars and took the net and sat there all ready, and I reeled him to the boat and easily and slowly swung him around to the side of the boat—when all at once he came to life and started under the boat—but the rod was thin—he forgot about that—that was on irresistible summons calling him back, and he had to come. Our hearts were in our mouths and we thought he was gone, but by quick work on the oars Frank soon got him behind the boat and was taking him up the lake as if he were trying to get ahead of the steamboat. At last the fish was indeed done for. We stopped the boat, drew him up to the side, Frank landed him in a scientific manner, and he was "our meat." What a beauty he was. So large, such splendid colors, such a broad tail, such strong fins, and altogether so powerful that it took all of Frank's skill to hold him down while I hunted for the "war club." I hated to kill him. How I wished I could keep him alive and take him home to keep in the place of the one that died last summer. How pretty he would be, but he must be killed "to save his life"—and with a last struggle he was dead. We sat there admiring him a few minutes while Frank rested, and then he put on another bait. "Let's weigh him," said Frank. "Well, you just row enough to get this line out and then we will weigh him."

He pulled for the shore, for we were a mile out in the lake, and I had a strike. "Hold on, hold on. I have him." A look of surprise came over Frank's face. He did not know what to say, for a strike out there in the middle of the lake was an unusual thing. But got him I had. And then commenced as lively a fight as I ever had. The fish was not very big, but he was all fish—and trout at that. Frank did not row this time, and we had it all to ourselves. He went to the bottom and he came to the top, he was out one side and then the other, first up to the boat and then at the end of all the line I had; but he could not get away, and at last he came up to the boat, struggled hard to escape the landing net, then lay in the bottom of the boat with the big one. "Now," said Frank, "let's weigh them while we have time." So the scales were brought out and we put on the big one. "Well, he is a big one, 9lbs. 2oz.," said Frank, "and a handsome one at that. Now for the other one. By George! 4½lbs. How is that for one afternoon, three fish that weigh 20lbs!" "That is pretty good, Frank, now I guess we will go home; this is glory enough for one afternoon." "Well, let's troll home. We may get another big one." So we started for the South Arm.

Frank dressed the fish after we had their outlines drawn on paper, and then packed them in ice.

The next morning we started up the lake. We had not gone far before we had an "awful" strike, and looking around saw the line going for the snags. Frank pulled as hard as he could, and I hung on to the line, knowing that if we let the fish get into those bushes he would surely escape. We had got him turned a little and were pulling out into the lake when the line came in and we knew something had parted. It was a big fish that did it, for this was the same rigging that had caught the 9lb. fish, and had that morning been tested to 9lbs. pull. We fished all day, but the wind came up and blew so hard that we did not get a bite till night, and that was by a little fellow. We did not complain. We had had good luck, and when we went home we were not afraid of any one's laughter. Quite a number of people who came in and were going out saw our fish and pronounced them the nicest string they had seen this summer. The next day we went back to Middle Dam, and were congratulated by our friends and envied by others; and best of all, they did not laugh at me. That afternoon it rained, and as we could not fish we spent the time in making a crayon sketch just life-size of the 9lb. trout, and hung up the sketch in the office. The next morning we started for home with five fish weighing 27lbs., and nicely packed in moss and ice; they reached home in good condition and were highly appreciated by my friends.

Now, to go back to the beginning, I am a convert. I will fish with a fly whenever the fish wants a fly; when they want a minnow I will fish with a minnow, and if it is worms then I will be a "worm digger." In short, if there is anything that a 9lb. trout wants, and I can find out what it is, he is going to have it, provided he will take a hook with it. I may not be scientific, but I hope I shall be successful. C. D. C.

NORTHUMBERLAND, New Hampshire.

WRITE UPTHEGROVE & MCLELLAN, Valparaiso, Ind., for new catalogue of sportsmen's and civil engineers' wear.—*Adv.*

THE LARGE TROUT RECORD.

Editor Forest and Stream:

Under date of July 8, 1886, you published the following: "The Biggest Brook Trout.—We have to record the capture of a brook trout weighing 12¾lbs., by Mr. J. Frederic Grote, of 114 East Fourteenth street, New York city, in Mooselucmaguntic Lake, Maine, on June 11. The fish was a female and Mr. Grote kept it in a car for one week, when it died. It was weighed several times at the Mooselucmaguntic House, in presence of Mr. John Schultz, of Philadelphia, and the proprietors, Messrs. Crosby & Twombley. It was 26¾in. long, 17¾in. girth, 7¾in. deep, and was 4in. thick through the back. The guide was Jerry Ellis, and they were trolling with a live minnow bait in 40ft. of water with a 7½oz. bass trolling rod. The trout was brought to New York and shown to Mr. Blackford, who decided that it was a *fontinalis*. It had been proposed to send it to the Smithsonian Institution to have a plaster cast made of it, but there were doubts as to its standing the journey, as it was beginning to soften. It is now in the hands of Mr. Wallace, the taxidermist, and will shortly be on exhibition at Mr. Grote's place of business. We believe this to be the largest brook trout yet recorded."

The following week, on July 14, I wrote to Mr. Grote as follows: "Dear Sir—I learn that you are the fortunate angler who took a very large trout at Rangeley Lake. Will you kindly send me the exact dimensions and weight? Two or three varying statements have been printed, and I would like the exact facts. Please state what the trout weighed at the time of capture, and after he died, and who was present when he was weighed. Trusting that I shall have the pleasure of hearing from you by return mail, as I am leaving the city, I remain, yours truly, GEO. SHEPARD PAGE."

In answer to this letter Mr. Grote called at my office, but found me absent. In reply to a subsequent note written him, asking for the particulars concerning the large trout claimed to have been caught by him, he mailed me a copy of the FOREST AND STREAM containing the above article. This was very unsatisfactory to me, as it did not answer the questions asked.

Notwithstanding that Mr. Grote's trout had been dead for four days when weighed, it seems to be growing, as indicated by the following item which appeared in *Outing*, in November, 1886: "A splendid trout 28in. long and weighing 13lbs., was recently caught in Mooselucmaguntic Lake. It was the largest specimen of the kind ever caught in this country. The lucky angler was Mr. J. F. Grote, of New York." The same number of *Outing* had also the following: "Dr. Charles Haddock, of Beverly, Me., with George Oakes as guide, has captured a trout weighing 10⅝lbs. It measured 28½in. in length and 16½in. in girth."

Not being able to get the desired information from Mr. Grote, I communicated with Hon. Henry O. Stanley, Commissioner of Fisheries for the State of Maine; with Charles G. Atkins, Esq., late Commissioner of Fisheries for Maine and for several years in charge of the Salmon Hatching Works, at Bucksport, Me., and Landlocked Salmon Hatching Works, at Grand Lake Stream, Me.; and with G. T. Richardson, Superintendent of the Oquossoc Angling Association. Following are copies of the replies received from these gentlemen:

INDIAN ROCK, Me., July 26, 1886.—Geo. Shepard Page, Esq.: Dear Sir—The trout which was caught by Mr. Grote was one which his guide, Jerry Ellis, called an 8-pound trout, but did not weigh it. They put it in a car in which it died, and lay four days in the water. After the entrails were taken out it weighed only 8½lbs. Truly yours, C. T. RICHARDSON.

BUCKSPORT, Me., Sept. 18, 1886.—Mr. G. S. Page: Dear Sir—Yours of the 6th at hand. I find no salmon on our record so short as 26in.; only one of 27in., which weighed 7lbs. 14oz. in November. Our heaviest 30-inch salmon, out of a list of several hundred fish examined, weighed 10¾lbs. Truly yours, CHAS. G. ATKINS.

DIXFIELD, Me., July 29, 1886.—Geo. Shepard Page, Esq.: Dear Sir—Yours of the 27th received, asking my opinion of the probable weight of a Rangeley trout of the following dimensions: Length, 26½in.; depth, 7¾in.; girth, 17¾in.; depth through the back, 4in. Fish of the same measurements at those points may vary about a pound, as it would depend upon the proportions of the rest of the body. My opinion would be that one of the measurements above given would weigh from 8½ to possibly 9½lbs. I have a cut and picture of one in my office 27½in. long, 7½in. deep, and finely proportioned; weight, 10lbs. He was what you would call a very solid fish. Truly yours, H. O. STANLEY.

The following is copied from the Phillips (Maine) *Phonograph* of June 3, 1887: "Last Friday, the 27th ult., Mr. W. F. Whitcomb, of Boston, caught a splendid trout near the Mooselucmaguntic House that actually weighed 9½lbs. It measured 26in. in length and 17in. in girth."

It is well known that the general outline of the Rangeley trout and the Maine salmon do not vary much in their proportions. The salmon are slightly longer for the same weight than the trout. Following are the weights and measurements of three Maine salmon, caught within the past week:

No. 1, 8¾lbs., 27in. long, 15in. in circumference.
No. 2, 9lbs., 29in. long, 15in. in circumference.
No. 3, 10lbs., 29in. long, 16in. in circumference.

A salmon trout weighing 8½lbs., measured 29in. in length and 16in. in circumference. The entrails had been removed from the salmon trout. The salmon were intact.

I think I have fully established the fact that a Rangeley trout measuring 26½in. in length, 17¾in. in girth, 7¾in. in depth and 4in. through the back, could not by any possibility weigh over 9lbs.

In common with many of your readers who feel a special interest in the matter of weight of large trout which they have caught at Rangeley, in the Adirondacks, New Brunswick, or on the Nepigon, I shall be glad to hear from Mr. Grote in substantiation of his claim to have taken the largest trout on record.

The Rangeley trout with which my name has been connected since 1867, measured 30in. in length and 18in. in circumference. After having been confined for three weeks, transported 500 miles, and placed in my pond at Stanley, N. J., it died in a short time. It weighed (after death) 10lbs. 1oz. on a steelyard scale. A score of persons were present at the time of weighing. Prof. Agassiz told me personally at an interview had with him at C

bridge, that the fish doubtless shrank 2lbs. after having been taken. Its dimensions according to the statements of Messrs. Stanley and Atkins, would indicate that alive its weight would certainly closely approximate 12lbs.

This great trout was as shapely in form and as beautiful in color as a pound trout. Those of your readers who are in New York city can inspect the stuffed skin of the fish at my office, 69 Wall street.

The Smithsonian Institution has a plaster cast of a trout 11lbs. weight, taken about nine years ago in Lake Mooselucmaguntic. This was a male trout less in length than the one just referred to, but very deep, its shape being what is known by the expressive term of "pot-bellied."

After an experience of twenty-five years' angling in the Rangeley waters, I am among the number who believe that trout exceeding in weight 12lbs. are still alive, and I shall be among the first to congratulate the fortunate angler who is really entitled to claim himself as the possessor of the largest brook trout on record. But the evidence on behalf of my authorities certainly seems to indicate that Mr. Grote's trout could not have exceeded the weight of 9lbs. GEO. SHEPARD PAGE.

NEW YORK.

Editor Forest and Stream:

It has been suggested that the big trout are increasing in the Androscoggin waters, the acknowledged home of the largest pure *Salmo fontinalis* in the world. This would seem to be the true state of the case, if the capture of such fish within the past decade is to be taken as the true index of the case. But it is possible that to the improved tackle of the present day and the skill that has been acquired in pursuing these fish, together with the great increase in the number who hunt them, may be attributed a part at least of the record of the great fish that have been taken. It is certain that up to 1879 there was no positive record of a trout weighing over 9¼lbs. ever having been taken from the waters of these lakes, though there were accounts of "great fish" held in the memory of guides; and, besides, there were records written and drawings made of very large trout—done in pencil and with a bit of charcoal—in several of the renowned "old camps" at these lakes. But these records were usually spoiled by some envious or witty late comer, who wrote "lie" or "fish story" under the records, or else immediately proceeded to draw a much larger and impossible fish, and under it wrote a story drawn purely from imagination. Again, it is too much to expect that positive statements should have been kept of the weight of fish at that time, before the invention of pocket scales, and when a pair of steel-yards in a camp outfit that must be carried for many miles into the unbroken forest would have been looked upon as an impossibility. Indeed, when the positive record of big trout was first startled by the fish that weighed 11¼lbs., taken by the guide of Mr. Marble, Steve Morse, of Upton, Me., Sept. 29, 1879, there were no steel-yards or scales at the Upper Dam that would weigh him. There were a pair of old steel-yards there that would weigh up to 10lbs., and that was as far as they would go. But the great trout tipped the beam and a small pebble was hung on to balance him and the calculation was made that he would weigh 12lbs. Afterward an actual weight was taken which was found to be 11¼lbs. Mr. Marble believed that the fish weighed considerably more at the moment of capture. It was a most ungainly fish; a male with a wonderfully prominent hooked under jaw. I saw the fish a few moments after his capture—had seen him several times before on the spawning bed which the trout had made at that time a few feet above the dam, owing to the low water. The trout, evidently an old one, was thin and flat, but very wide, with a crooked back—the numerous pictures on the covers of guide books and on the advertisements of the Maine Central Railroad only do him justice in point of ugliness. Still he had the bright spots and the vermilion sides of the perfect *Salmo fontinalis* at breeding time. The capture of this trout has always been something of a secret, since Mr. Morse hooked him when alone, though I have always understood that Mr. Marble was there at the capture. The water was scarcely 4ft. deep at that point and some mill logs were floating over the spawning bed. By placing a board across the logs and lying flat upon it one could see the great trout as they came upon the bed—females followed by the males. There were some very large fish there. Several large ones had already been jigged up by excited sportsmen. The big one had been seen a number of times, Mr. Morse says, following a female considerably larger. Mr. Morse is also understood to have said that this female fish followed the male fish up to the very top of the water several times during the capture, but disappeared.

This great *Salmo fontinalis* was soon after obtained by Prof. Baird, of the Smithsonian Institute, as the largest specimen of that class of fish in existence, and mounted by his direction, and it is a prominent feature in the history of the trout family. But my reason for so extended a notice of this fish at this time is that another great fish has been caught, this time a female, as the following letter will explain:

BOSTON, June 18, 1887.—*Editor Forest and Stream:* In answer to your inquiries about the brook trout recently taken by me in Lake Mooselucmaguntic I send the following details: The fish was taken off Sandy Point on June 7, while trolling with a minnow in deep water, John J. Wilbur, guide. Weight 11¾lbs., length 27½in., depth 8½in., thickness 4in., girth 20½in. These weights and measurements were taken at the float of the Oquossoc Club, by members of the club, after the fish was dead. The fish was a female and contained a considerable quantity of ripe spawn, considerable of which escaped before the fish was weighed. There is no doubt but it weighed, when taken from the water some hours before, fully 12lbs. This fish was one of three consecutive fish weighing 9½, 6, 11¾lbs. respectively; total 27¼lbs.—S. J. MIXTER.

Here is a positive record of another great trout, fully equal to the Marble trout. I mentioned its capture in the FOREST AND STREAM last week, but up to that time I had only a newspaper account, and did not feel certain about the size. In the case of this fish the suggestions are several. In the first place, may it not have been the great female trout that Mr. Morse mentions as present at the time of the capture of the Marble fish? The lake was the same, but the points of capture three miles apart. Again, what a pity it is that this female fish could not have been put in the hands of Prof. Baird for the Smithsonian Institute, and for a companion fish to the great male already there. Dr. Mixter says that he never thought of it, but is it not singular that no member of the Oquossoc Angling Association present should have thought of sending so large a female fish where it might have been a feature in natural history for years to come? Again, Dr. Mixter would have been much pleased to have furnished this fish to science and history, but alas, nobody thought of it. Copies of the FOREST AND STREAM with the history of this fish should be on a prominent shelf in the camp of the Oquossoc Angling Association, and every other camp in the lake region, in order that the mistake of men not thinking may never again occur. It is a feature of these big trout worth mentioning that the largest have all come from Lake Mooselucmaguntic, the largest of the chain, though there is merely a dam between that lake and Richardson Lake below. The largest fish ever taken in the latter lake would not go over 10lbs., while the record of Rangeley Lake, above Mooselucmaguntic, is not much better. What causes the *Salmo fontinalis* to grow to such size in the Androscoggin waters? Why are not the trout as large in Moosehead and other Maine lakes? Cut open the maw of one of the great trout and the question is answered. There you will find minnows in several stages of digestion, from the one just gulped down to only the backbone of the first one eaten. It is the feed. Millions of chubs, cyprinidæ, are there for the trout to eat. It is probable that these minnows, cyprinidæ, are increasing faster than the trout.

SPECIAL.

Editor Forest and Stream:

An item has been going the rounds of the papers in northern New York, stating that the largest trout (*fontinalis*) ever taken in New York State was recently caught by a lady in Loon Lake, Franklin county. A gentleman who was visiting Loon Lake at the time gives the following particulars: A female employe of the hotel where he was staying was rowing on the lake and found the trout dead on the surface of the water. It was 23in. long, 13in. in girth and weighed 6½lbs. The trout, a *Salvelinus fontinalis*, was extremely fat, and "it was thought that the super-abundance of fat killed it." A few years ago two trout were caught in St. Regis Lake which weighed, if my memory serves me, 5¼ and 5½lbs. respectively. Mr. Hotchkiss, of New Haven, Conn., who caught them, told me that it was conceded at that time that they were the largest brook trout ever captured in the Adirondacks. I think that both fish were stuffed and are now at Apollo ("Paul") Smith's, St. Regis Lake, who can verify the weights. A. N. CHENEY.

GLENS FALLS, N. Y.

THEY WOULDN'T BITE.

Editor Forest and Stream:

Your editorial note in the issue of June 9 in relation to the "Farmer Brown's Trout" correspondence, is sound. That the interests of farmers and sportsmen are identical there can be no question, and it is in most cases no difficult task to convince the farmer of this, provided he is approached in a manly spirit.

In nearly every case it will be found that where a farmer repulses overtures civilly made, and looking toward the capture of game or fish upon his lands, it is because he has in the past been made the victim of thoughtless or dishonest practices.

Such annoyances and even losses as are caused by the failure to put up a set of bars, the leaving open of a gate, the tramping down of standing grass and corn, are bad enough in themselves, and often entail upon the toilworn farmer hours of labor which no one has a right to claim from him unpaid; and, when in addition, his rights as a property owner are defied or set at naught by reckless and dishonest men, he does as you and I would do, and "cave canem."

I know the American farmer as well as most, and can testify that in his normal condition he has commonly a strong fellow feeling for the true sportsman.

Usually he is, or has been, a fisher himself, and more or less of a hunter; and his trusty muzzleloader, perhaps long unused, but deadly still in the old man's hands, furnishes many a text for wise counsel to the amateur forester, or for thrilling tale of sylvan warfare in days when "game was plenty" and he was young.

Even though he be unskilled in the arts of the sportsman, he has probably sons or nephews whose tastes shall well atone for his deficiencies in this regard; he likes to see them come in full-handed from wood or river, and jeers them unmercifully when they fail of success.

If you be a gentleman—mind, I am not speaking of your clothes—he is quick to discern the fact; and will often go out of his way to show you "the best graound fer patridges," or "the crick where Pop Emmons ketched forty-three real pooty traout 'n one a'ternoon."

I speak of him as he still is, in some favored localities; as he *was* in many—to many more, where erst we and multitudes of your readers have passed in joyant quest of fin or feather, days which live still among the brighter memories of our past, where, alas, the feet of the poacher, the pot-hunter and the trout-hog since have been;

> And where the fish-hog's hoof doth prance,
> The sportsman gets but half a chance.

The lines quoted are from Byron, and their occult signification implies a belief on the part of the poet that when a farmer has been defied or trifled with, say a matter of fifteen or twenty times by the various breeds of swine above mentioned, the secretion known as "milk of human kindness" sours in his heart, or becomes deteriorated in quality to such extent that it is often unsafe to show a rod-tip or gun-muzzle on the homeward side of his defences.

My own experiences with the farmers over whose lands I have fished or shot have seldom been disagreeable, and I have tested the temper of these men in very many States of this Union. When I have found a farmer inclined to gruffness or incivility of speech, it has invariably appeared that I had been preceded by some "dead beat," or at least somebody who had, if knowledge of, certainly no respect for, the commonest equities or amenities of civilized life.

I seldom have found a farmer unwilling to listen to a reasonable request for the privilege of shooting or fishing in his preserves, and there has sometimes been a comical outcome to such experiences.

When living in Wisconsin, some years ago, I one day had occasion to drive about twenty miles into the woods, and took along my rod for the purpose of investigating the contents of a fair-sized brook, known by the name of Splinter Creek, the mouth of which I had often noticed issuing from the forest and losing itself among a collection of saw-logs in a small millpond. I was of the opinion that by going eastward from the "supply road" upon which I was traveling I could strike this stream at a point three or four miles above the pond.

I put up my team at a farmhouse, and, having completed the business part of my errand, started for the brook without having been able to get any information as to its contents or capabilities.

On my way I met a farmer named Archie, who, with another man of like calling and name lived near this brook, which traversed their clearings for some distance as they lay side by side. These men were unknown to me, but Archie No. 1, whom I had met, was civil enough and directed me how to reach my destination. I did not ask him about the fishing. The barn of Archie No. 2 stood within 20ft. of the brook, and the clearing was some eighty rods in length.

Walking leisurely up the stream until I reached a likely pool near the forest edge, I jointed my rod, long unused, sat down behind a stump and cast my hackle lightly over the surface of the stream. No; I am wrong; it wasn't a hackle that time, but a great green grasshopper, which was instantaneously seized by a ½lb. trout, which I landed without much parade, as I was after fish. Of these I had twelve very respectable specimens, when at last I strode forth in triumph from the shadow of the stump. About that time I may say that I felt good, and descending the stream until I had reached a suitable stretch of open water, I substituted for the traditional hopper an ancient red fly, which might perhaps have been an ibis, though this I doubt. Certainly it had long before seen active service on the Rangeleys.

There was a surge and a snap as the old relic floated through the air, and before it struck the water the trout had it, and I sprang to my feet just in time to keep his nose out of a cartload of roots and brush-wood, with the intricacies of which ligneous deposit he was evidently more familiar than I thought it advisable to become.

He was a good one, and as I had not fished for some time I was particularly anxious to save him, not that this made much difference, but it so struck me at the time and I did my level best, and so did he.

> "And up and down,
> And round and round,
> So fierce was his career,"

that more than once my heart sank within me as he missed but by an inch or two some "coign of vantage" he had vainly sought. No landing net or gaff had I, and he was hooked but lightly. Whew! how the leader hissed through the sparkling water as he made his final rush, after having sulked for a moment at the bottom of the pool. By good fortune it happened that his course lay for an instance toward an opening between two loose boulders, beyond which was a shallow with a gently sloping bank. Delicately as possible I put the helm hard down, he obeyed the signal and shot right into the opening. Somehow, he didn't stop until he had slid through the grass to a point about ten feet distant from the edge of the water.

Then I removed the hook, so slightly fastened that I was filled with wonder that the fish had not escaped. This done I proceeded to break his neck—unpleasant, doubtless, to the fish as well as to myself, but certainly merciful and a duty not to be neglected. Then I lighted my pipe and admired the trout.

Lastly I estimated his weight, and having no scales at hand with which to set at rest intrusive doubts, I had it all my own way, and continued to estimate after my pipe was out and I had recommenced my fishing.

I am still at times occupied in estimating the weight of that trout, and happy am I to be able to certify that since he quitted the seclusion of that brush pile in the edge of Splinter Creek, he has increased in weight until the more or less mythical "big bass of Bomaseen" would seem but as a minnow beside his magnificence.

Show me the idiot who totes around in his pocket a set of steelyards when he goes afishing, and—some time when I am in your office, or you in mine, I will give you my opinion of that man.

The brook narrowed and I resumed the grasshopper. Toward evening I had about eighty fine trout safely deposited at different points along the brook, and was just ready to "limber up." I neared the watering place just as No. 2 was leading his horse to drink. He saw me trying to work my hook into a hole concealed by a tangle of briers, and pleasantly said: "Tryin' ter fish, be ye?"

I nodded, and he continued: "The's traout here, but ye can't ketch 'em. We use ter see 'em when we was a-loggin' an' aburnin' in the foller (fallow), but they wouldn't bite. Hello! you hev got one, I swow. Well, I never see the beat," he continued, as having reeled up I proceeded to collect my fish. "Ye hain't got no fish hooks ter spare, now, hev ye?" It so happened that I had and we parted good friends.

Some months afterward I met him in town and he gave me a cordial invitation to come again and fish all I liked. Said he:

"T'other Archie tol' me 't he see ye a-pokin' 'raound the crick 'n 't fus he thought ye was a surveyin' 'n' then he thought ye was a dum fool; but nex' time I see him I tol' him 't was we 't was the dum fool, ter live alongside o' that crick long enough to clear up two farms 'n' never get the first mess o' trout aout on't." KELPIE.

CENTRAL LAKE, Mich., June 13.

BLACK BASS IN QUEBEC.—The open season for black bass and maskinonge began here yesterday. So far but few catches have been reported. The season opens fifteen days too soon for bass, for those taken now are engaged in family cares, protecting their young, and are in ill condition for food, The Fishery Department suspended the law protecting black bass for the Queen's Birthday, May 24, and hundreds of bass were killed that day, which means the destruction of millions of the young fry. Among the class of so-called intelligent anglers for black bass there is not one in a thousand that knows, or, I believe, cares to know, anything about the breeding habits of that fish; and there is no game fish that requires closer protection during their spawning time, and for at least one month after the fry are hatched, than the black bass. Until their habits are fully known and proper laws are made and enforced for their protection, their numbers in our northern waters will be few compared to what they would be if they were rightly protected.—STANSTEAD.

DR. JAMES A. HENSHALL has returned from his long European trip in perfect health. The Doctor called in our office last Monday, and on Wednesday left the city for Cincinnati and home.

WORM VERSUS FLY.

PISECO, thou reasonest well! Penitent, hopeful, trustful, come my son, into the confessional and listen to me; an atom, a worm of the dust, and not fit to catch even a trout with. Nevertheless listen patiently to the teachings of an old worm fisherman. Success will crown your efforts, and whereas you have fished with the careless "who of the dozen trout that come for their hooks, have taken the worms, and they no fish," I will show you how to take the conceit out of such fishermen or fish, and scoop up the greater part of those that bite. I know who you are by old acquaintance in FOREST AND STREAM, and gladly welcome you among the worm fishermen, and I will partially reveal myself that you may know I am an old-time fisherman. Question me. "Art thou a sailor?" No. "A sea captain?" I am not. "Who are you, then? give an account of yourself, that I may know whether you can fulfil your promise. Cheek you must have, to tell Piseco anything, let alone fishing." I have always "loved the ocean, and my delight." "Stop, stop, I've heard that before!" I am an old friend of Capt. Shufeldt's and Dinwiddie Bullock. So, too, did I meet with great kindness from "Poly Harrison" at Hilton Head during the war. I was in Charleston Jail with Prendergast and Paymaster Billings of the Water Witch. I came home from China before the mast in a clipper bark. Have been an old Seventh Regiment man and wear the bronze Cross of Honor of that dear old regiment. Have been mistaken for a captain of a North River steamboat; was a captain in the Army of the Potomac, and have fished for trout with worms for many and many a year. So not to keep you any longer in this box (a bad box for a fisherman) I will explain and unfold to you the possibilities of worm fishing, that may perchance interest you.

There are niceties of execution undreamed of by a neophyte. Though I have caught trout with a fly,

> "It is good to be off with the old love
> Before you are on with the new."

It is good and very good, O "Piseco," to discard such profanation as "poles," "chunks of lead," and "yanking," "slinging," "snaking 'em out." These are terms used by the worldly. Put your worm on scientifically, so shall you save your fish, your money and your temper—three things well worth saving.

Let us give the trout a chance, and get all the good we can out of the worm. Tadpoles may do; bloomers or dobsons are very good; so are bumble bees and grubs; but for steady work give me the "diet of worms."

["Piseco," *sotto voce*—"Will this old fellow never stop talking? Does he think I don't know all this?"]

First and foremost, you want a good, strong three-jointed 9-foot rod. I will give you a reason for the faith that is in me as I go along. With a stiff rod you can drop into all sorts of most inaccessible places, and your line will not continually tangle nor your hook catch. You want your tip strong enough and stiff enough to spring the fish out; observe, my penitent friend, "spring," not "yank." When the fish is thus hooked and sprung out he does not often get away. I have caught thousands on my Conroy rod, and hope to go fishing again. A half-pounder is readily enticed out in this way and landed on bank or beach. Lift him up tenderly, take him with care, deal gently, persuasively with him, coax him, entreat him, let him feel and see it is for his own good; so shall you save him, not lose him, nor frighten other fishes in the pool.

Your hooks should be of large size, say double 0, round bend Carlysle; they will catch any size, and you will not have to behead the fish to secure your hook. Take plenty of them with you. Choose a reel large enough to hold 100ft. of silk braided line, with a click, for large fish. Let your line be large, so you may the more readily see it shine on any water, dark though it may be, white of course. Your shot (not sinker) ought to be No. 5 shot, split and put on in numbers to suit the strength of the current; your casting line or leader of the very best gut and about 9ft. in length, thoroughly tested, and looped on with what you would call a "topsail sheet tie." (Ah me! my thoughts are miles away). And a basket holding about 12lbs., with a broad strap to go over the shoulder. These patent gimcracks and folding up creels are a delusion and a snare, let them all be. *Anathema maranatha.* Last of all you must dig a plentiful supply of worms and —don't whisper this secret—Ah, this is the rub, if possible get some one else to do this for you; so shall you avoid unseemly language, and the straining of your back. But worms you must have at any cost, and they must not be made of gutta percha. Patience, O "Piseco," if you have borne with a garrulous old man so patiently, you will soon be released. Everything provided, present and accounted for, repair to the nearest trout stream, such as I used to find in Connecticut; take up your worm gently, and let him be of ordinary size, (not similar to a small sized garter snake), and fresh and lovely. Put him head on, first, last, and all the time, this is the golden rule and this the golden secret. Nature hath given him a head and also a tail. What instinct is it that prompts all fighting animals to dash at head and throat? "They all do it, and sometimes they rue it." And so does the trout. Softly now pass the hook this side of the band that goes round his body some way below his head, and let it run down, and up to his head. Don't let your hook show at all. When properly put on, the worm hangs suspended, as does the sword of Damocles. Now wade quietly into the stream (look out for your shadow) and toss the worm from you quietly, quickly, gently, deftly.

In springtime when the snow water is not yet out, and the fish bite sluggishly, use your shot. When you can dispense with shot by all means do so and let your worm float away. Fishing down stream the worm will always float head first down, the trout will always grab him head first, and you can handle three times or more your length of rod in line. Besides this, you roil the stream a little, which is a very good thing. Toss it to him as you would a fly. Play your line criss-cross. Skitter it. Keep your worm moving. Do all this with a firm, light hand. You are not heaving the log, you are dealing with a very wide awake customer; treat him accordingly. Fish with a loose line; that is, pull your line up toward you and let it float at leisure down, not at its full length, in the stream. When you get a big fish on, of course play him a little, do not propel him into space like a sky rocket; hang on to him; fight him for all he is worth, as Jack would say, "go for him," and "trust to your sticks," he will soon give in and you can land him without frightening the others. The moment your worm is injured throw it away and put on a fresh one. Never use the same worm twice—well, hardly ever. Even the much abused eel likes pure sweet bait; all the old North River fishermen know this. So provide yourself with plenty of worms, and as to where you shall carry them; in your pocket, certainly; never in your hat, leave that to the fly man; nor in your vest, nor trousers. Provide yourself with an old shotbag, turn down the top all around, put in a sufficiency of loose dirt and stow them away in the pocket on the port side of your coat.

My friend, I hope you have enjoyed your forty winks. What do I hear! "I have told you an oft-repeated story?" Nothing new or strange? Well, I suspected as much. Let us leave this box and seek fresh fields and trout streams new. I, too, will now confess that this of course is intended only for young fishermen, and that I pray them to bear in mind Sydney Smith's receipt for salad and not try to experiment with these receipts, except in a thunder shower; then you may try; I don't believe you'll catch any fish then. If I can give my readers one-half the pleasure I have derived from "Worm versus Fly," fully satisfied will be CAPT. CLAYTON.

THE LEAP OF THE SILVER KING.

WE left Philadelphia Feb. 20 for Punta Gorda, arriving there in two days and nights by railroad, Coast Line. Trabuc, the passenger terminus, is a new place; there are several small hotels, and a large one being constructed; the town is being rapidly built up, and it is expected that Punta Gorda at the headwaters of Charlotte Harbor will supercede Tampa and be the main point of trade, especially for New Orleans, Cedar Keys, Key West and Havana. There is sufficient depth of water for the largest steamers of that trade to come to the wharf; this is not so at Tampa, where passengers and freight have to be transferred a number of miles from down the bay. At Trabuc we chartered a sailboat with all appliances to live on board, and sailed down Charlotte Harbor south to Carlos Bay. We stopped at St. James City on Pine Island, which we think a fine winter resort. From St. James we passed Cape Sanibel Light, then sailed into the Gulf. Just south of this cape we fell in with a school of the monster devil fish. It was calm and we could certainly see twenty at once near the surface of the water. Some came within a few yards of our boat, which gave us a fair sight of them. They appeared to be 10 or 15 feet broad, perhaps more; the largest are said to weigh two thousand to three thousand pounds. It was a strange sight to see those monsters swimming on the surface of the water with open mouths, some 2 feet by 15 inches. They are of the ray family, but their mouths are at the head as in other fishes, not under them as with the common ray. They are in no way like the cuttlefish, having no prongs, arms nor anything of the kind.

We sailed south to Cape Romano, where, with a suitable breeze, there is good trolling for Spanish mackerel and kingfish. Here we first fell in with tarpon, the fish we had come for, and we did our best for two days but utterly failed to get a bite. There appeared to be a mass of sharks that took our bait and hooks about as fast as we could cast out. There a vessel loaded with cattle was driven aground by a storm, where a supply of neither food or water could be got for them. Many dead bodies were about the bay and the lowing of suffering creatures made it painful for us. We sailed back north into Marco Pass, where tarpon were found again. Here we hooked plenty of sharks but not one tarpon. We went nearly three miles toward the main land into a small bay, where the water was not over 2ft. deep, with muddy and grassy bottom. Here the tarpon were numerous, but here again with our best efforts we did not get one bite from them, and we came to the conclusion that with a hook and line they could not be caught. We could readily have taken them with the grains, but we were determined to catch them with a hook or not at all. We concluded that those caught had been comparatively by accident, as other non-biting fish are sometimes caught on a hook.

We sailed from Marco into Big Hickory Pass; we were informed that at the head of this bay was an entrance to an inland creek called Surveyor's Creek, where tarpon had been caught with hook and line. We were determined to leave no place nor mode untried. We went to the head of the bay which we think is called Oyster Bay, and found a little nook or opening about 30ft. wide with 18in. of water. It looked absurd to us that big fish like tarpon should come into such shoal and contracted water; we might have passed it many times without noticing this little opening or imagining that it led to a large body of water beyond. On the flood tide we worked our boat into this little opening and found it much wider when we got inside. We were surprised to find holes 20 to 30ft. deep, then shoals and more holes for about a mile, then to our increased surprise we came to what appeared to be a river about an eighth of a mile wide and ten miles long, with from 6 to 30ft. of water. The novelty of the romantic and mystical scenery—on one side the live oak studded with thousands of air plants in bloom and draped with long hanging moss and the basket-rooted red mangrove, on the other side the palmetto and pine all in the wild state—fully paid us for our labor the like of which we had not seen before along the coast. We went up the river about a mile, then came to a hut where a lone Norwegian lived. His only companions were a dog, a cat and some chickens. He showed us where tarpon were caught in this creek, or more correctly not a creek but a long lake. The next morning with fresh bait we fished in the spot pointed out. We could see plenty of tarpon but not a bite could we get. Moving to where there was 8ft. of water and a clear bottom, we changed our way of fishing, and in a short time we hooked a tarpon. It jumped 10ft. out of water time after time, ten times in all, and shook its head as if to break loose. We must have played with the fish an hour, and it must have towed the boat a mile. It was a big fish 6ft. 5in. long. Then we were surprised at ourselves, (for we are considered good fishermen), having been so stupid and dumb as to fish on muddy bottom where the bait becomes so muddied that no game fish would take it.

After this we had no difficulty in catching all the tarpon we wanted. Our catch of them would measure from 3ft. 6in. to 7ft. 7in. in length, the largest being 46in. around the body. When they rose from the water and the sun struck them they shone like silver.

Tarpon are not used for food; the flesh is something the color of unhealthy beef; soft, flabby and having a strong smell. The only object of fishing is the excitement of catching them, and their very large, white, silvery scales are sought for.

Our experience in tarpon fishing has taught us that the tackle should be as follows: A stout 8ft. rod and a reel that will take from 500 to 600ft. of line, 18 or no larger than 21 thread, a cotton snood about twice the size, and a medium sized hook. For bait use a medium-sized split mullet, hooked in the thick part, the tail tied above the shank of the hook with a string so as to keep it in place and to conceal the hook. Cast as short a distance as circumstances will admit, then run off 20 to 30ft. of line to lay slack so as to have the least resistance possible to the bait or they will drop it. The object is to let the fish swallow the bait before it is snubbed. They are the most delicate fish to take the bait of any we came across. Avoid fishing in the inlets and main channels on account of sharks, and do not fish on muddy bottom. We are satisfied that tarpon, like many other fish, go into shoal water and grassy bottom on the flood tide to feed. In these fish caught we found shrimps, very small crabs and small fish. On the ebb tide they return to deep water where they digest their food and sleep; one caught then would be taken probably by accident.

Having succeeded in the art of tarpon fishing, the great hook-fish of Florida and perhaps of America, we cruised along the coast northward. Just south of Cape Sanibel we again fell in with a school of the monster devil fish as before; it is said they are always there. We passed a number of cities laid out on paper, such as the city of Naples, on the Gulf south of Cape Sanibel, one little shanty and a wilderness of pine, palmetto and sand, with at times a dense population of mosquitoes, gnats and fleas, the surface water not fit to drink. We are not aware of any good well water in South Florida. Rain water is the best they have. In the rainy season, from July to October, there is such an abundance of rain that it overflows most of that part of the country, especially on flat land. So with other paper cities we saw. Yet we are told many lots are being sold. How the people who buy these lots to settle on are to make a living is not apparent to us. Many have told us that they were badly disappointed.

In the passes along the coast in Charlotte Harbor and south of there is fair fishing for grouper, mangrove snappers and other small fishes. There is good trolling for Spanish mackerel and kingfish outside.

We sailed to Little Gasparilla, north pass of Charlotte Harbor, where we had good sport for small fish; thence we went into the different passes to Tampa Bay, where, in the early part of January one year ago, especially at Long Boat and Anna Maria Keys, there was an abundance of game fish, but we got scarcely a fish in any of these passes; in the cold snap of that January all local fish of these places were killed; there was 1½ to 2in. of ice and 1in. of snow; we were there at that time and sailed through stretches of thousands of floating dead fish of all the kinds in these waters. It will take years to replenish the fish supply.

We sailed up to Palma Sola on the Manatee River, thence went by steamboat to Tampa, took the cars at 8 o'clock Saturday evening, and arrived at Broad street station, Philadelphia, Monday afternoon at 3 o'clock.

We had a very pleasant and interesting excursion, and kept on the move so as not to tire of any one place. In Florida sportsmen miss it by having a boat of too great draft, because they cannot go into shoal bays and other places where the most interesting things are to be found, and where most of the food grows for fish along the coast. P. AND W.

PHILADELPHIA, Pa.

Tuxedo Park has recently been presented with a mounted tarpon, which was caught at Charlotte Harbor by Mr. A. M. Jones, of New York. Its weight was 135lbs., length 6ft. 7in. The party of which Mr. Jones was one at the time included Mr. Pierre Lorillard, Mr. Allen Thorndike Rice, editor of the *North American Review*, and President John G. Heckscher, of the South Side Club, of Long Island. Mr. Rice's biggest catch was a tarpon weighing 133lbs. and measuring 6ft. 11in. Mr. Heckscher's was a tarpon weighing 128lbs. and 6ft. 2in. in length, and Mr. Lorillard captured one 110lbs. in weight and 5ft. 11in. long. Over 40 tarpon in all were caught by the party, many weighing over 75lbs. Each of the largest fish has been stripped and mounted. Mr. Heckscher will send his to the South Side Club. Mr. Rice will keep his at his residence, and Mr. Lorillard will take his to his office. All the fish were captured on 600ft. of line of No. 15 thread, and the hooks used were No. 12-0, Cuttyhunk shape. The panels on which the fish are mounted are about 8ft. long. The success of these gentlemen was so gratifying that they have formed a Tarpon Club to meet every year at Charlotte Harbor in February, when the sport begins. This club includes members of the Tuxedo and South Side Clubs and prominent anglers of Boston, Chicago and elsewhere.

THE CUSK.—*Editor Forest and Stream:* Will some of your readers give me the proper name of a fish which is called "cusk" throughout the northern parts of the New England States and adjoining parts of Canada? It may be called by the same name elsewhere, and perhaps wherever found, but as I have never seen the fish except in the localities named I am in ignorance of the fact. The fish is found in lakes and large ponds and is an inhabitant of deep water. I used to catch them when fishing for lake trout with the minnow, and as they are a worthless fish, anathematized them accordingly. They resemble the true "torsk" or cusk of British waters very closely, but cannot be the same fish, as the latter are found in salt or brackish waters. I would also like to know the real name of Antoine's "bowfins," as described in "Sam Lovell's Camp." It is new to me by that name, and I fancy to many others of your readers. I hope the delightful *raconteur* of those tales will soon favor us with another dose, and no homeopathic one either, from his skillful pen.—AREFAR. [The "cusk" of fresh water is the same fish variously called ling, burbot, lawyer, and eelpout, the *Lota maculosa*. The "bowfin" is the *Amia calva*, and is called dogfish, Grindle, John A. Grindle, lawyer, mudfish, etc., in different parts. Both these fish are worthless for food and are found in the fresh-water lakes and streams, the former in the Great Lakes and in New England waters, and the latter everywhere except on the Atlantic coast north of Virginia.]

AMERICAN SILKWORM GUT.

ABOUT the first of this month I received a request from the noted German fishculturist Count von dem Borne, for cocoons of the American silkworm (*Attacus cecropia*), and wrote him that if possible they would be sent, but that the season was late and it was doubtful if they could be obtained. Letters of inquiry were sent to Mr. C. F. Orvis, Manchester, Vt., whose experiments in producing gut from the American worm have been lately recorded in FOREST AND STREAM, and also a correspondence was opened with Dr. E. Sterling, of Cleveland, Ohio. On June 15 Mr. Orvis sent me a box of cocoons, but they seemed to be so lively that there is danger of their hatching before reaching Germany, although they were immediately dispatched by a steamer sailing last Saturday. Mr. Orvis sent both the *cecropia* and *polyphemus* cocoons, and says that he has found the latter to produce nearly as large a worm as the *cecropia*, and very kindly offers to give Count von dem Borne the benefit of any experience he has had. Mr. Orvis has not found any difficulty in rearing worms this season, as he has raised great quantities of them.

A letter from Dr. Sterling refers to the experiments of the late Dr. Garlick, which have already been published in FOREST AND STREAM, and also by Mr. Wells in his book on fishing rods and tackle. He says that he saw Dr. Garlick draw a gut over 30in. in length from the worm, and it was as perfect in every respect as the most fastidious angler could desire. Dr. Sterling was unable to secure any specimens so late this season; years ago the wild rose swamps and the water sycamore bayous near Cleveland abounded with the cocoons of the *cecropia*, and a bushel could be gathered in a short time. All of these places are now converted into iron ore and coal docks, or filled up with warehouses and railroad buildings, and the insects have naturally abandoned the place. The best time to gather these cocoons for shipping would be February and March, so that they could reach Germany in favorable weather for development. Near Cleveland they do not hatch until the first or middle of June and sometimes not until the last of the month. They will devour the leaves of the ailanthus, common plum, currant, and, in fact, almost any of the soft and tender leaves. Dr. Garlick fed them almost entirely on plum leaves.

Should these worms reach Germany safely there are enough of them to give Mr. von dem Borne quite a start in experimenting with gut made from the American silkworm; but should they fail, I will try to obtain a lot for him next winter; which will no doubt reach him in condition to hatch after arrival. FRED MATHER.

COLD SPRING HARBOR, N. Y.

CANADIAN ANGLING.

THE wilderness north of Quebec is just now an attractive region to anglers, because the Quebec & Lake St. John Railroad makes it of very easy access, and because the region is still a wilderness in the true sense. Caribou, moose and bear may be had there; at this season it is trout fishing that occupies the mind. The entire country is filled with beautiful lakes, and almost every lake has an abundance of brook trout; in some are also pike and the fork-tailed trout. Such advantages of accessibility and an abundance of sport have already attracted many local anglers; some of the waters have been taken up by Quebec clubs, but there still remain a great many lakes, and even systems of lakes with connecting streams, unleased and ready to afford pleasure to a host of visitors. The railroad people, counting on sportsmen for a part of their revenues, find it to their interest as well as to their undoubted pleasure to extend every facility and courtesy to brethren of the rod and gun. The country is still too new to offer luxurious accommodations, but all is done that can be done to make one comfortable. The summer climate is delightful, with an elevation of 1,000 to 1,200ft., a northern latitude, and unbroken forests all around, the air is extremely wholesome and the nights are cool. The other day two men left the station of Lake Edward at 3 A. M., and returned at 6:45 A. M., after 2¾ hours of fishing, with 27lbs. of trout; the smallest weighed 1¼lbs., the largest 2¾lbs. As the water is still too high for fly-fishing, minnows are the bait. Plenty of these are caught in the lake. Another day two men, in about five hours, took 65lbs. of fine trout, the largest of which weighed 4lbs. 2oz. The famous Saguenay River, with its remarkable scenery, its salmon rivers and its landlocked salmon waters, lies at the end of the railroad. Altogether the region offers many attractions within easy reach. C. H. F.

COMPARATIVE WEIGHT OF MAINE AND CANADIAN SALMON.—Camp on St. Mary's River, Sherbrooke, N. S., June 15.—*Editor Forest and Stream:* I notice in edition of June 9 communication of Dr. R.. under date of May 29. Not wishing to enter into a controversy with the Doctor, but feeling that he is mistaken, I wish to say in regard to his remark (speaking of the Penobscot River salmon), "The average run of fish is larger than that of any river in the Eastern States or Canada, excepting the Cascapedia. Most of the salmon taken here are over 15lbs. in weight," that my experience will contradict him. In 1884 I killed 11 salmon on the St. Mary's River that averaged 30¼lbs. In 1886 I killed 42 salmon on the Restigouche that averaged 23½lbs. This season I have killed 8 salmon on the St. Mary's River weighing 28, 27, 32, 47½, 39½, 28, 24½ and 28lbs.; total, 254lbs., and average 31¾lbs. I was late upon the ground, and most of the large fish had passed along before I arrived.—LAWSON B. BELL.

TAKING CARP ON FLY-RODS.—For some time past it has been evident that there were some good-sized carp in the lakes of Prospect Park, Brooklyn, the result of plantings made there by Mr. E. G. Blackford, as agent of the U. S. Fish Commission. On Friday last Park Commissioner Somers, Mr. O'Reilly and Mr. Blackford tried the fishing in Long Pond, in the Park, with fly-rods, using crusts of bread instead of flies, and they took thirty-one carp in less than an hour. The fish were all scale carp and weighed from 1½lbs. to 6lbs. The carp were all saved alive and planted in the pond by the music stand. Bread crust is now in order as a carp lure, and at the next tournament of the Rod and Reel Association we may see a class made for "casting the bread-crust."

THE NORTHERN NEW YORK ASSOCIATION.—The Northern New York Fish and Game Protective Association, which was incorporated on Monday, held a meeting for organization last week at Troy. The following officers were elected: President, W. E. Hagan; Vice-President, Joseph DeGolyer; Secretary, Dr. C. C. Shuyler; Treasurer, Samual S. Bullions. The honorary members chosen follow: Marshall McDonald, United States Fish Commission, Washington; Eugene G. Blackford, New York State Fish Commissioner; the Hon. James Shanahan, Superintendent of Public Works, Albany; Fred Mather, Cold Spring Harbor, and N. A. Cheney, Glens Falls. The association has a membership of about 100.

FISH PRESERVATION BY ACIDS.

BY A. HOWARD CLARK.

[Read before the American Fisheries Society.]

AN important method of preventing decomposition of animal flesh is the application of antiseptic salts in a powdered form to the surface of the substance or to impregnate it with a solution either by atmospheric or hydraulic pressure. Among the commonest and most effective antiseptics, exclusive of chloride of sodium (common salt) are acetic, as contained in vinegar, and boracic acid. The latter preservative is fast coming into favor in the preparation of fishery products, because of its very satisfactory properties. As compounded with salt in the form of a powder or in solution with tartaric acid, boracic acid is found to effectually preserve either dry or pickled fish in good condition for a long time.

At the Fisheries Exhibition, at London, in 1883, some Pacific salmon were shown which had been packed in a solution of boracic acid and other ingredients for several weeks, and after their long land and water journey they were removed from the solution and exposed to the atmosphere at the fish market for several days, still retaining most of their original flavor and freshness.

It is my purpose in this paper to enumerate some of the more important methods of preserving fish by chemical treatment. Only a few of the numerous compounds which have been brought to the notice of fish curers have come into commercial use, though it is probable that many of them would upon trial be found effectual and profitable.

At the Centennial Exposition at Philadelphia, in 1876, there were some exhibits of fresh oysters and clams preserved in chemical liquids, and which the juries on awards pronounced of good quality. Boracic acid was reported to preserve animal matter for several months without changing the texture as common salt does. Citric and acetic acids also proved good preservatives, and fish cured in these acids were, after a little soaking in fresh water, found free from all unpleasant flavor.

In Portugal, fish are kept fresh for a considerable time by removing the viscera and sprinkling the abdominal cavity with sugar, when they are hung up to allow the sugar to impregnate the flesh as much as possible.

I shall notice the several methods in the order of their commercial importance, beginning with acetic acid, which, next to common salt, is perhaps the principal antiseptic in use in this country.

1. Vinegar, Spices, etc.—Lobsters, oysters, oyster crabs, mussels, scallops and some other marine products are preserved in vinegar alone, and, packed in glass jars, are common in the New York markets under the name of "pickled" products. Herring, mackerel, and other fish are largely prepared with compounds of vinegar and spices and sold as Russian sardines, marinated fish, soused fish, and by other trade names. The preparation of Russian sardines from the common sea herring was introduced into this country by some enterprising New York merchants during the Franco-Prussian war. The principal seat of operations was Eastport, Me., and the methods employed, as patented in 1875 by Messrs. Sellman, Reessing, and Wolff, have been as follows: The fish while alive are thrown into strong brine contained in suitable casks on board the fishing vessels. This part of the process is important, as it not only kills the fish but prevents them from spoiling while being cleaned and cured. After being kept in the brine for at least ten days they are beheaded, gutted, scaled, and are thoroughly cleaned in clear cold water and placed in large willow baskets or in sieves to drain off the superfluous water. In five or six hours they are spread upon packing tables and assorted as to size, each size being packed by themselves.

The fish are preserved and at the same time flavored by being packed with the following ingredients, the quantities given being for 120lbs. of fish: Two gallons vinegar, 1½lbs. allspice, 2oz. pepper, 4lbs. sliced onions, 2lbs. sliced horse raddish, 1lb. bay leaves, ½lb. cloves, ½lb. ginger, ½lb. coriander seed, ¼lb. Chili pepper, and 2½oz. capers.

In packing the fish a small quantity of vinegar and a thin layer of the other ingredients are placed in the bottom of the vessel and a layer of fish, placed back upward, are put in and gently pressed down. Another small quantity of vinegar and thin layer of the other ingredients are put in and another layer of fish, and so on until the vessel is full. The fish are ready for market and consumption in about four days in summer and from three to four weeks in winter.

Method of Sousing.—Soused mackerel and other fish may be prepared as follows: The fish are cut into pieces about 2in. long and cleaned. A souse is made of cider vinegar and cloves, nutmeg or other spices, with parsley, bay leaf and onions, and the fish are immersed in this souse for twelve hours, when they are put in a second souse, made the same as the first with the addition of capers, olive oil, Worcestershire sauce, and extract of anchovy and lemons After remaining in the second souse for ten hours, they are heated in the souse for four to eight hours at about 140deg. Fahr. and are then packed with the souse in air-tight pots or jars.

2. Acetic Acid and Carbonate of Soda.—The fish to be preserved are put in barrels, or other packages, with a liquid composed of acetic acid and carbonate of soda in sufficient quantities to make a slightly acid solution of acetate of soda, to which is added enough water to give the liquid a density of three to five degrees. A few grains of salt may be added to give an agreeable taste, and about five drops of nitrate of soda for each pound of the liquid to preserve the color of the substance. Prepared chalk may be used instead of carbonate of soda. The fish may be kept in this solution, or after being saturated with a denser liquid may be dried.

3. Boracic Acid and Common Salt.—In the United States, until within a very few years, little advantage has been taken in the fish trade of the effective preservative power of boracic acid in combination with common salt. In 1883 the writer found that at Gloucester, Mass., the headquarters in this country for the curing of dry-salted fish, the use of boracic acid was just begun, and then only by a few curers. Since that date, however, "Preservaline" and other chemical powders having the above substances as their base have come into quite general use, particularly in the warmer months, when without this preservative it is often found impossible to keep dry fish in good condition for many weeks or even days. This powder checks the peculiar reddening so commonly seen on dry-salted fish in summer.

The chemical powder used by the Norwegians in preserving fresh herring for export is a mixture of boracic acid and salt, using about two pounds of salt to each pound of boracic acid. Herring are packed in barrels in the ordinary methods with alternate layers of fish and powder, and after the barrel is headed they are "pickled" with a weak solution of pure boracic acid. Fish preserved in this way will keep perfectly fresh and of their natural flavor for a week or even longer. The Norwegians have already succeeded in profitably competing with Scotland in supplying the London market with fresh herring thus prepared. A more complete preservation of herring, so that they will keep in good order for a long time, is obtained by the Sahlstrom process and by the Roosen method by which a solution of boracic acid and salt is thoroughly impregnated into the flesh under a pressure of 60 to 100lbs. to the square inch. Successful experiments have been made in Scotland in treating fresh salmon by the Roosen process. Three hundred pounds of fish were packed in a strong steel barrel and with a pressure pump the solution was forced into the salmon until they were thoroughly impregnated. After three weeks subjection to this process the fish were cooked and found of excellent flavor. Strongly made wooden barrels may be substituted for steel barrels, or, after being treated under pressure, the fish may be repacked with the solution in common fish barrels.

4. Eckhart's Method.—By this process, devised by John Eckhart, of Munich, and patented in 1880-'82, fish are prepared in a preserving salt consisting of a mixture of 50 per cent. common salt, 47½ per cent. chemically pure boracic acid, 2 per cent. tartaric acid, and ½ per cent. salicylic acid. The fish are first stripped of skin and bones, and the flesh is mixed with the preservative in the proportion of 20 grams of the mixture to 1 kilogram of fish flesh. They are then packed in cases of parchment or other material and put into casks which are filled with a gelatine solution made in the proportion of 50 grams of gelatine, 20 grams of the preservative, and 1,000 grams of water. The casks are then headed and connected with a force pump and more of the solution is forced in until the contents are well saturated. The sacks or cases of fish are then removed from the cask and may be strewn over with more of the salt in dry condition and packed for shipment, or they may be shipped in casks with the liquid.

5. Boracic and Acetic Acids.—By the Am Ende process boracic acid either in a liquid or pulverous state, is compounded with acetic acid in the proportion of about one drop of acetic to every ounce of boracic acid, and the compound is applied in the usual manner. The acetic acid is said to prevent the formation of fungi, while the boracic acid prevents putrefaction by hindering the formation of bacteria.

6. Boracic Acid, Chloride of Potassium, etc.—The process devised by Hugo Jannash consists in subjecting fish to a compound prepared of chloride of potassium, nitrate of soda, and chemically-pure boracic acid, which ingredients are dissolved in water, then mixed under exposure of heat, thus forming an antiseptic salt composed of hyponitrate of potash, hypochlorate of soda, borate of soda, borate of potash, and free boracic acid. The compound is applied either as a salt or in a more or less strong solution according to the time for which the fish are to be preserved.

7. Borax, Saltpeter, etc.—By the Herzen preserving process meat is soaked for 24 to 36 hours in a solution of three parts borax, two boracic acid, three saltpeter, and one salt, in one hundred parts of water, and then packed in some of the solution. Before use the meat must be soaked 24 hours in fresh water.

8. Glycerine and Antiseptic Salts.—Oysters, fish, meats, etc., may be preserved by the use of a mixture of glycerine with phosphate of soda or other antiseptic salt in connection with aldehyde, formic ether or acid in a solution of carbonic acid, water, glycerine, etc., and the preserved substance is then covered with paraffine or stearine.

9. Miscellaneous Compounds.—Among the many other chemical compounds that have been experimented with, and some of which have been successfully used in the commercial preservation of fish, may be mentioned:

a. A solution of gelatine and bisulphite of lime forced under pressure.

b. Fish flesh ground into fine pieces, pressed, moistened with glycerine, and wrapped in tinfoil.

c. A solution of saltpeter and alum in proportion of 5lbs. of saltpeter and 4oz. of alum to 60 gallons of sea water.

d. A solution of thymol, thymic acid, or any of the thymate salts and water, alcohol or glycerine.

e. Acetate of lime solution in water at a density of six degrees by the ærometer, to which is added acetic acid of eight degrees, so that the liquid will produce sensible acid reaction upon blue reaction paper.

f. Sulphite of soda and carbolic acid in solution in proportion of 5gal. water, 2lbs. sulphite of soda and 2oz. carbolic acid.

g. Hydrocarbon substituted for the air, which occupies the space in and around the substance to be preserved and subjecting the same to a temperature of about 30deg. Fahr., the gas entering by a hole at the top and the air escaping through a hole in the bottom of the package.

h. A solution of salicylic acid dissolved in water, with which the fish is impregnated under hydraulic pressure.

i. Salicylic acid dissolved in hot glycerine and mixed with hot water. Preserving cans are coated on the inside with the above solution, then the fish are hermetically sealed in the ordinary manner.

j. A brine or composition for preserving fish, meat, etc., consisting of a solution of starch, sugar or glucose and common salt.

k Fish are packed in a dry powder of gypsum and carbon and then enveloped with plastic shell, composed of gypsum, carbon, silicate of soda and water.

FIXTURES.

DOG SHOWS.

Sept. 1 to 3.—Inaugural Dog Show of the Pacific Kennel Club, at San Francisco, Cal. J. E. Watson, Secretary, 516 Sacramento street, San Francisco, Cal.

Sept. 12 to 17.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary.

Sept. 20 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. R. D. Whitehead, Manager.

Oct. 12 and 13.—Stafford Kennel Club Show, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Sept. 6.—Manitoba Field Trials Club Field Trials. Derby entries will close July 1; all-aged entries Aug. 1. Secretary, Hubert Galt, Winnipeg, Manitoba.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5123.**

AMERICAN KENNEL CLUB METHODS.

ST. PAUL, Minn., June 13.—*Editor Forest and Stream:* Mr. Watson, in his communication under the heading "American Kennel Club Methods," in your paper of June 9, gives my name as that of one of the delegates who did not understand the vital point in the case. It should have been Mr. Drake's name. Had I been a delegate my vote never would have been given for a reconsideration of a decision that any one with a glimmer of sense should see was final. One does not need to be a lawyer to understand that a decision rendered by a court of last appeal cannot be reversed, even though the constituents of the bench have been changed since the last sitting of the court. The trouble seems to be that the court does not appear to know that it is a court, but appears to think itself an assembly of men without responsibility, and hence that a change of opinion on the part of those at the time forming a majority of the tribunal is sufficient for the promulgation of a new verdict setting aside the old one.

If the respective members of the A. K. C. could get it through their heads what the true functions of that body should be—the court of last resort in kennel matters—they would probably not get themselves into such foolish positions as they have in the past. Unless the A. K. C. can render just verdicts, it had better give none, for only decisions founded on equity and justice will be respected and obeyed, and unless its verdicts are obeyed there is an end of the A. K. C., for a court that is unable to enforce its mandates has become a mockery and a farce. Its usefulness has gone, and it becomes nothing but a laughing stock. R. A. CRAIG.

COLLIE TRIALS.

THE first annual sheep dog field trials of the Collie Club of America, will be held on the grounds of the Western Pennsylvania Agricultural Association, at Washington, Pa., September 15 and 16. Entries to be sent to Mr. G. A. Smith, Secretary, No. 331 Walnut street, Philadelphia, on forms which will be furnished upon application to him or Mr. A. G. Happer, Secretary, Washington, Pa. Entry fee, $5 for each dog. Entries close August 30. Held under rules of American Kennel Club. The following cash prizes are offered, open to all collies, or shepherds' dogs and bobtails, of pure breed: First prize, $50; second prize, $25; third prize, $15; fourth prize, $10. The following prizes can be competed for only by collies owned by members of the Collie Club: First prize, $25; second prize, $15; third prize, $10.

SPECIAL RULES.—1. All dogs must be on the grounds not later than 9 A. M., each provided with a suitable chain and collar. Any dog found loose within the boundaries of the course, except when working, shall be disqualified, and the heat then being run may, in the discretion of the Committee of the Collie Club, be ordered to be repeated. Any dog seriously biting or worrying a sheep shall also be disqualified.

2. The time for working a dog shall be at the discretion of the judge. The decision of the judge as to any matter within his province shall be final.

3. The order in which the dogs shall run shall be determined by lot, and any dog fifteen minutes late shall be disqualified.

4. The owner of any dog causing injury in any way to the sheep, will be held responsible for such an amount as the Committee of the Collie Club may determine to be adequate to compensate the owner of the sheep for the loss.

5. The boundary lines as shown by the starter shall be strictly adhered to.

6. The Committee of the Collie Club reserve to themselves the right to refuse any entry or entries they may see fit to exclude. But in case an entry is refused the entrance fee will be returned.

7. Entrance fees must accompany the entry blanks, or the entry will not be received.

8. The handler of a dog shall have an opportunity to display any particular, practical accomplishment his dog may have.

In the driving trials the dog starts from the shepherd or handler, goes to three sheep, which are about 100 yards distant, drives them around a circular course marked out by posts, and finally pens them by driving them between two upright posts or hurdles. The shepherd must remain in the same place and direct his dog from there.

A DOG WOULD HAVE COME IN HANDY.

IN 1876 Captain Lusk was running the old Shoebridge mill down in our valley, some five miles distant from the mining camp. The Captain is a genial, pleasant gentleman, having a large and seemingly inexhaustible fund of good stories, of which he is an inimitable *raconteur*. When the mill was shut down for repairs, and he was not otherwise engaged, he was ready to tell or listen to a story, and would at times indulge in other innocent amusements. Happening down to the mill one day when it was idle, the Captain suggested that we go out on the flat beyond the mill and kill a few jack rabbits. Upon looking for the guns we found everything had been loaned but a singlebarrel muzzleloader, that had once been an old flintlock musket, but cut down and a lock of more modern make, with hammer and nipple, adjusted. We were not to be balked of our sport, however, and we started off for the flat with the old gun, some ammunition and newspaper wadding. It was agreed that we should shoot, taking turn about with the gun. The old gun was loaded and the Captain started out for his meat, blazed away and scored a clean miss. This rather tickled me, as the Captain thought himself a pretty good shot; but he would have it that the fault was with the gun. It was my turn. I saw my rabbit and let him have it. I broke one of his legs and he was badly hurt otherwise, but he was a very lively rabbit yet. My reputation seemed at stake, and I was so determined upon having him that I took after him afoot, gun in hand. For about ten minutes that was the livelicst race ever seen. My strong lungs and generous length of limb stood me in good stead, and need were, for that jack rabbit soon realized that for him it was a race for life, while with me it was a desire to get that rabbit or burst. Away we went, over, through and around sage brush, in straight lines, at right angles and in circles, the Captain laughing and shouting all the time fit to kill himself. I would gain on the rabbit so that I would be right upon him, and, thinking a good kick would lay him out, would launch out with such force as would almost throw me on my back, when the rabbit would dodge, and away we would go again. I was so intent on getting the rabbit that I didn't have sense or presence of mind enough to drop the old gun, and thus divest myself of about 8lbs. of dead weight. The rabbit was game and so was I. Again I would close upon him and give a kick that would have lifted him into the clouds, and again he would elude my utmost effort and far-reaching kick, and we would be off. All this time the Captain was shouting words of encouragement and splitting his sides with laughter.

Finally, a well-directed kick laid the rabbit out, and, grasping him by the hindlegs, I held him aloft, a proud victor, for the Captain to see, when he shouted, "Bring me that gun; you don't need a gun to kill rabbits with."

After this episode the Captain would assure me, with no little gravity, and, I believe, with all honesty, that he "would rather go on a rabbit hunt with me than go to a circus;" but I got the first rabbit on that hunt, nevertheless.

BARCHLAND.

SILVER CITY, Utah.

FIVE NEWSPAPER DOGS.

I.

THE latest victim of the inter-state commerce law is a tramp dog who has for some time been a daily passenger on the trains between Stuart and Anaconda. It has been decided that he must pay his fare or walk.—*Billings (Mont.) Gazette.*

II.

John Losekamp is to-day trying to find a dog by the name of "Ben," which belongs to James Corson, who writes he left the dog in town, saying, "Catch him if you can and board him at my expense." If the dog is captured Ben Whitsett has taken the contract to board him. The dog is a small dog, white ring around neck, brown spots above eyes, one foot lame. Any information as to its whereabouts will be greatly appreciated by Mr. Losekamp, who cannot afford the time to run our streets, calling "Ben," "Ben!" after each band of dogs that follow the squaws about town. His large and increasing trade in the clothing line demands his attention more than the dog.—*Billings Gazette.*

III.

An amusing incident occurred at the Hill City wharf the other day while a large crowd was awaiting the ferryboat Myra. Among the number on the wharf boat was an overgrown youth of some 18 summers who belongs to that class who never miss an opportunity to do something smart, and who imagined he saw an excellent opportunity to get in his work by pushing a big mastiff into the water. The dog demurred to that arrangement, and in a hurried endeavor to escape slipped between the young man's legs, causing him to wind up a series of interesting gyrations with a very unwilling plunge bath. If he intended to amuse the bystanders the young man succeeded admirably.—*Chattanooga Commercial.*

IV.

A dog-loving family on Staten Island has a remarkably intelligent pet. Discussing his wit, one day, it was proposed to send him up stairs for his mistress's wrap. But first one of the ladies went up stairs, laid the wrap on the floor, and sat down on it with her sewing. The dog was sent, and quickly found the wrap. Vainly he tugged at it, first on one side and then on the other. Discouraged, but not dismayed, he paused for a moment, when, suddenly making a dive, he seized the sewing in his teeth, and ran toward the fire. His opponent, now off her guard, ran after him to rescue her work. This was enough; the dog dropped the sewing, ran for the wrap, and bore it in triumph to his mistress.—*The Epoch.*

V.

Edwin Booth told me a curious story about a dog that's worth printing. Mrs. Booth had a little pet dog of which she was very fond, and Mr. Booth was in the habit of holding this dog on his knee, and perhaps, during a conversation, pinching his ear in a kind of unconscious way. They went to Europe and left the dog at home, and, as they were away for some time, when they returned the dog did not seem to remember them much. Mr. Booth indeed did not seem to be recognized when he came back, and for a week or so the dog went about them in a purely perfunctory way. One day he had the dog on his knee, and in the old unconscious way began pinching his ear. The dog looked up at him for a moment, and then jumped up and licked his hand, and made every possible demonstration of delight. He had not recognized Mr. Booth until that old habit disclosed their familiar relations.—*San Francisco Chronicle.*

HIS NAME IS DAVIDSON.

Our London contemporary, the *Stock-Keeper*, has been interviewing Mr. German Hopkins, who is in England in charge of Mr. August Belmont, Jr.'s exhibits at the Jubilee Show. Among other things the interviewer reports Mr. Hopkins as saying:

"Then, again, no awards are printed, and, sharp as our American cousins are, they are decidedly behind time in the matter of dog shows; but the time will come, and you mark my words. As Macdermott used to sing in his Jingo song—'They have the pluck and the money, too.'"

"The sporting—pointers, setters, spaniels, and such like, are far and away ahead of the nonsporting division, although collies are certainly looking up."

"You said that the sporting classes were strong. It is said that the manner of showing setters is somewhat ridiculous."

"It certainly does seem funny, but one soon gets used to it. You see a man is perfectly right to show a dog the best way he can—and he endeavors in this to make his dog stand as for a model. One hand is placed under the dog's chin while the flag is held up by the other. I don't say that the practice is to be admired, but dogs that will not show themselves are by such handling undoubtedly set off to the best advantage."

"Do many new dogs 'come out' over there?"

"No; the same old faces, from one show to the other. All go the rounds, and take the 'off' chance that some others that have previously beaten them may be knocked back through distemper or some such disaster."

"Then when a new dog is imported there is a stir?"

"Quite a fluttering in the dovecotes, I assure you. Every one is eager to see him and criticise him to boot."

"Who is the most popular judge?"

"Well, that is a hard question, but John Davidstone, or, as he is familiarly called, 'honest' John Davidstone, is perhaps the most welcome face in the ring. He is a Scotchman—as canny as they make them—and a thorough good soul at the end of it."

"Then you are convinced that dog shows will become still more popular in America. Are they patronized well by the outside public?"

"Wonderfully so. Why, at Boston one could walk on the heads of the people. Indeed all the shows I was at were better patronized than they are here; but the more they have the more they are appreciated; and the fellows out there are determined to have the right quality."

"What sort of fellows are the American exhibitors?"

"As good as gold and as merry as sandboys. You, of course, know the fellows on this side; but upon my word I think they can give them a bit of weight and a beating."

The *Stock-Keeper* meant well, but the name of the judge is Davidson.

SHOW BENCHING.—We read in the same organ that the New York show has been a success, and, it is said, has more than cleared expenses. The reporter (FOREST AND STREAM) draws attention to an extraordinary custom in American shows which permits exhibitors to bench all their entries together, though they may consist of several different breeds. It is scarcely credible that the visiting public would put up with such a ridiculous and tiresome proceeding. Thank goodness no such high and mighty privileges and private vagaries are tolerated in this effete old monarchy. All the dogs of a breed together, irrespective of ownerships, is still good enough for English exhibitors.—*Stock-Keeper, June 3.*

SHE KNEW IT ALL.

WHILE on a recent visit to an excellent kennel of setters the subject of dog breaking was discussed, and the different methods practiced by various individuals commented on, no two systems being precisely alike, when the owner of the kennel stated that he had sold a puppy to a gentleman living near by who had never attempted to break a dog previous to this one, which was now about ten months old; and he had in this case carefully followed out the plans laid down in "Training vs. Breaking," by Hammond; and that he would have the bitch brought over in the evening and taken out into the field, to prove to us that any intelligent person by that method could thoroughly break his own dog.

Having been sent for, the gentleman came over in the evening, bringing a beautiful blue ticked bitch puppy with him, whose sire and dam, aside from being bench show winners, were also excellent field dogs. When cast off she ranged out a field beautifully, wheeled to whistle, dropping instantly to the upraised hand, came to heel, hied on, pointed and backed to order (a most important point in field trials where points and back are made largely that way), retrieved nicely, and altogether acquitted herself in a manner to satisfy the most exacting sportsman. Can't the kennel editor of FOREST AND STREAM now get out another book whereby the older and broken dogs of a kennel may teach the younger and unbroken ones? If so I will guarantee it even a larger sale than the first. JOHN DAVIDSON.

MONROE, Mich., May 17.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the June number of the *American Kennel Register:*

BEAGLES.

5037. Kino, A. C. Krueger.
5038. Tone, E. J. Kenneally.
5039. Victor G., M. J. Geary.

CHESAPEAKE BAY DOGS.

5040. Romp, Gard. G. Hammond.

COLLIES.

5041. Fannie IV., C. Chappell.
5042. Kiowilla Empress, B. Holmes, Jr.
5043. Kiowilla Queen, B. Holmes, Jr.
5044. Lady Macbeth II., Dr. A. P. Smith.
5045. Scottish Mary, G. L. Phelps.

MASTIFFS.

5046. Ajax II., A. E. Sunderhauf.
5047. Atwood's Patrol, K. C. Atwood.
5048. Baroness of Winchendon, N. P. Boyer.
5049. Beech Grove Gypsy, T. E. Gilpin.
5050. British Princess, N. P. Boyer.
5051. Countess of Graysmere, N. P. Boyer.
5052. Duchess of Devonshire, N. P. Boyer.
5053. Duchess of Gerolstein, N. P. Boyer.
5054. Eastern Queen, J. W. Alsop
5055. Eva, W. J. Dyer.
5056. Jill, J. W. Alsop.
5057. Lady Buff, W. E. Palmer.
5058. Oscar, J. T. Emery.
5059. Queen of Navarre, N. P. Boyer.
5060. Royal Beauty, N. P. Boyer.
5061. Zoe II., F. N. Riker.

POINTERS.

5062. Bertie May, J. C. Schuyler.
5063. Blanche May, J. Schuyler,
5064. Dick II., C. H. Haight.
5065. Don V., R. Browne.
5066. Don Quixote, T. White.
5067. Gunner, M. E. Hughes.
5068. Meteor's Madge, J. P. De Saussure.

PUGS.

5069. Bob S., W. Stewart.
5070. Maple Grove Goldine, R. L. Pate.
5071. Maple Grove Judy, R. L. Pate.

RETRIEVERS.

5072. Wilson Hunt, W. M. McDearmon.

ST. BERNARDS—ROUGH-COATED.

5073. Apollinaris, E. L. Handy.
5074. Cardinal, S. W. Coe, Jr.
5075. General Bem II., A. Dean.
5076. Lady Flories, J. Marshall.
5077. Lakme, F. Kimball.
5078. Marigold, Chequasset Kennels.
5079. Marquis II., E. L. Handy.
5080. Merchant of Melrose, J. Hellen.
5081. Merchant Prince II., O. W. Volger.
5082. Montavon, Chequasset Kennels.
5083. Monte Rosa, Chequasset Kennels.
5084. Rex III., Miss G. Stott.

SMOOTH-COATED.

5085. Asa, H. F. Vesper.
5086. Rhea, E. Platz.
5087. Queen II., H. F. Vesper.

SETTERS—ENGLISH SETTERS.

5088. Belton's Sting, F. Ashman.
5089. Bese IV., R. W. Miller.
5090. Blunder II., F. E. Click.
5091. Dorma Gladstone, G. W. Felter.
5092. Freda II., A. E. Burr.
5093. Geronimo, J. B. Murphy.
5094. Marion, J. B. Murphy.
5095. May Gladstone, W. G. Lawrence.
5096. Nina, W. B. Ryder.
5097. Otto, H. Hedeman.
5098. Pink, W. P. Ryder.
5099. Rose of Rancocas, Jos. B. Murphy.
5100. Snap, R. W. Miller.

GORDON SETTERS.

5101. Don Cameron, N. P. Boyer.
5102. King Philip, S. O. Meader.

IRISH SETTERS.

5103. Belle H., H. B. Hunt.
5104. Dash V., H. Machmer.
5105. Duchess of Erin, F. S. Flower.
5106. Duke II., W. Tucker.
5107. Lencho, J. Hellen.
5108. Peg II., C. D. Conig.
5109. Prince Glencho, G. E. Potts.

SPANIELS—FIELD AND COCKER SPANIELS.

5110. Clipper, G. W. Adt.
5111. Gypsie, I. Corbin.
5112. Trim, I. Corbin.

TERRIERS—BULL-TERRIERS.

5113. Daisy Deverell, Sunnyside Kennels.
5114. Lady Tarquin, Sunnyside Kennels.
5115. Flip, F. F. Dole.
5116. Lil, H. Russel.

FOX-TERRIERS.

5117. Bacchante, A. Perrin.
5118. Pretty Pickle, R. S. Ryan.
5119. Quaker Lady, W. T. McAlees.

SCOTCH TERRIERS.

5120. Capt. Good, W. M. Rodgers.
5121. Dr. Jekyll, T. C. Beer.
5122. Foulatta, W. M. Rodgers.

SKYE TERRIERS.

5123. Lass o' Gowrie, N. V. Ketchum.

DOGS IN ST. PAUL.—St. Paul, Minn., June 6.—*Editor Forest and Stream:* We have no law requiring dogs to be muzzled or confined. Each owner is compelled to pay a license of $2 a year for each dog in his possession and $4 for each bitch. A thorough canvass of the city is made each spring by officers detailed for that purpose, and every unlicensed dog is captured and taken to the pound, where he is kept three days for redemption; at the expiration they are turned over to the fertilizing company and destroyed. Our city is overrun with dogs, and whenever one bites a person the police shoot the dog. We had a State law which made dogs property, but our Granger Legislature repealed it for some unknown reason. The State of Wisconsin has an excellent law, passed last winter, making dogs the subject of larceny, and providing as a penalty upon conviction of stealing a dog imprisonment in the county jail for not more than six months nor less than ten days, or by fine not exceeding $100 nor less than $5.—H. T. DRAKE.

SENSATION.—The death of the pointer Sensation removes one of the ancient landmarks of the canine world, an animal about which there has, perhaps, been as much controversy as over any dog ever owned in America. Sensation had a marked influence on the pointers of to-day, and his blood runs in the veins of a very large proportion of them. Besides being written about the old dog was photographed and painted, and from one of the best of the paintings was made the steel engraving which we are now selling.

A BIT OF DOG CHARACTER.—That a dog's bark is sometimes worse than his bite is proverbial; it is not only true that very few dogs will attack a man who resolutely ignores them or appears indifferent to their presence, but many dogs which when chained will spring on the intruder and act as if they only wanted the opportunity to tear him to pieces, will behave very differently if by any oversight they allow you to come within their reach unchallenged. As an illustration I once went to a friend's tent unmindful of the fact that he had a bulldog chained near the entrance. With mind preoccupied I entered the tent, got what I wanted and left without even noticing the dog in his kennel, but at the distance of three paces from the tent I was startled by the savage growl of the dog springing at me from behind and struggling to get at me. I had just time to congratulate myself that I was beyond his reach, when the chain snapped and the fierce brute which had probably never considered what was the correct course to pursue under the circumstances, turned around and sneaked back to his kennel.—C. F. A.

A CARD FROM MR. NAYLOR.—Chicago, June 14.—*Editor Forest and Stream:* By your permission of space I wish to make an open apology to Mr. Kirk for the offensive language I used toward him at the Detroit show. While I do believe it has been overdone in some of the papers, I am willing to acknowledge the corn, and do not forget the part of a gentleman, nor will I criticise any of Mr. Kirk's decisions, but will leave the past dead. I cannot bear malice toward man, and am sorry my quick temper should have run away with my heretofore good judgment. A mule is allowed one kick and a dog one bite before they can be considered vicious; and I think Mr. Kirk will overlook this one kick of mine, as I have no ill feeling toward him. Bench shows are a kind of family reunion where many friends meet, and sometimes good men, like "Philip," go wrong.—JOHN H. NAYLOR.

GREYHOUNDS.—Caldwell, Kas.—*Editor Forest and Stream:* I have had quite a number of inquiries from owners of greyhounds through the Eastern States, asking me to take their dogs and fit them for the coming meeting of the American Coursing Club, Oct. 17, at Great Bend, Kas. I have all the dogs of my own I can possibly handle, and attend to my business at the same time, so it is impossible for me to take any. But I have prevailed on the secretary of the club to take charge of all the dogs that may be sent him at a merely nominal charge. Any owner of greyhounds, by addressing Dr. G. Irvin Royce, Topeka, Kas., can have his dogs trained to slips and put into proper condition, worked on jack rabbits, entered, run in the races and returned at the proper time. I have become a citizen of Kansas, and the Landseer Kennels will be located at Caldwell, Kas., hereafter.—DR. VAN HUMMELL.

FOX-TERRIER SHOW.—Long Branch, N. J., June 20.—*Editor Forest and Stream:* May I trouble you for space in your paper for the announcement by the American Fox-Terrier Club of their second annual bench show, which will be held at Newport, R. I., some time early in September. It is proposed by the bench show committee to give even a more liberal premium list than last year, and we hope to receive the support of all fox-terrier fanciers. Arrangements are being made with a prominent judge and exhibitor in England to come over and officiate in the ring. Until the list appears I shall be most happy to give any information necessary to all who may desire it. On behalf of the club, I am instructed to thank your staff for the kind consideration shown us in our first untertaking.—F. HOEY, Sec'y.

WESTERN FIELD TRIALS DERBY.—*Editor Forest and Stream.* I inclose corrections for Derby entries of W. F. T. A., published June 2 in FOREST AND STREAM. If you will kindly publish you will greatly oblige some of your patrons, and place under obligation, R. C. VAN HORN. Trinket's Countess is by Croxteth. Jill was entered by W. G. Mellier, Kansas City. Hattie West and Van Horn were sired by Brush, Jr. Laddie, Samuel S. and Ollie S. were entered by W. T. Bowdre, Memphis, Tenn. The dam of Miss Glee is Nell of Efford. Rene S. was entered by Will Davidson. The unnamed English setter (Roderigo—Lady Rake) is Silk B., owned by J. W. Besserer, Bozeman, Mont.

BOGUS MEDALS.—Hornellsville, N. Y., June 20.—*Editor Forest and Stream:* I wish to say that the statement of C. B. Elben is false and misleading. I have furnished medals for two shows, and I know that they were gold and silver. I have also won medals at all the prominent shows since 1880. I have had them all tested, and none were bogus or counterfeit except what I got at Pittsburgh. One champion badge from Chicago is very light and thin, cost about $2, still what there is of it is silver. I have one hard looking medal from the Cleveland Bench Show Association, but it is not engraved and I do not know when or where I got it.—J. OTIS FELLOWS.

A DOG AT THE TRAP.—Quebec, Canada.—A gentleman in this city, Mr. F. G. Verity, has an 11mos. old setter, a "blue blood," that takes great interest in trap-shooting, retrieves the unhit clay-pigeons, assists in springing the trap, etc. We may expect some good work from him in the field next September.—STANSTEAD.

PEDIGREE WANTED.—Chicago, June 9.—*Editor Forest and Stream:* Can you or your readers give me any information as to pedigree, or address of owner, of the mastiff dog Jacob, said to be owned by a Mr. Stevens?—ROBERT LOCKE.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Byron and Diana. By Dr. A. C. Heffenger, Portsmouth, N. H., for black and tan Byron foxhound dog and bitch, whelped April 24, 1887, by Bugle (Drive—Daisy) out of Fanny (Leader—Lady Gay).

Piper, Drive III. and Daisy. By Dr. A. C. Heffenger, Portsmouth, N. H., for black, white and tan Byron foxhounds, two dogs and one bitch, whelped April 24, 1887, by Bugle (Drive—Daisy) out of Fanny (Leader—Lady Gay).

Rushing Piolet. By J. W. Goodhart, Leesburg, Va., for liver and white pointer dog, whelped April 7, 1887, by Cary (Beaufort—Spot) out of Daisey (Joker, Jr.—Fussie).

Peter, Blucher and Judy. By H. C. Bronsdon, Boston, Mass., for black cocker spaniels, two dogs and one bitch, whelped April 23, 1887, by Black Pete (Obo, Jr.—Phonsie) out of Fannie Obo (Obo II. —Smut).

Premier, Shadow, Arrow, Lily, Grace, Violet, Pearl and Cloud. By W. Dubois, Cincinnati, O., for liver and white pointers, three dogs and five bitches, whelped May 18, 1887, by Bodine (Bow—Jaunty) out of Fleet (Dash—Spot).

Glencho's Berkeley, Glencho's Providence, Glencho's Grip, Glencho's Kerry Gow, Glencho's Edith and Glencho's Norah. By Chas. C. Doty, Providence, R. I., for mahogany red Irish setters, four dogs and two bitches, whelped April 21, 1887, by Glencho (Elcho—Noreen) out of Lady Edith (Rory O'More—Lady Berkeley).

Dartmouth Kennels. By A. H. Bassett, Somerville, Mass., for his kennels of English setters.

NAMES CHANGED.

Lady Beaufort to Queen Beaufort.—South Norwalk, Conn., June 20.—*Editor Forest and Stream:* June 5 we claimed name Lady Beaufort for liver and white ticked pointer bitch (Duke Royal, A.K.R. 2472—Lizzie Grace). Mr. Richard Fox, of Harrisburg, Pa., informs us he claimed the name two years ago for pointer bitch (Beaufort—Nellie Bird). We change to Queen Beaufort, as he has her entered for the field trials.—ELM GROVE KENNELS.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Rose—Ebony. D. Shea's (Worcester, Mass.) cocker spaniel bitch Rose to C. G. Browning's Ebony (Obo II.—Lofty), June 7.

Flossy—Ebony. G. L. Tarr's (Hopedale, Mass.) cocker spaniel bitch Flossy (—— —Smudge) to C. G. Browning's Ebony (Obo II. —Lofty), June 13.

Ida—Buckellew. Edward Dexter's (Buzzard's Bay, Mass.) English setter bitch Ida (Dashing Rover—Ranee) to W. A. Coster's Buckellew (Druid—Ruby), June 14.

Belle of Piedmont—Count Noble. Edward Dexter's (Buzzard's Bay, Mass.) English setter bitch Belle of Piedmont (Dashing Rover —Ranee) to B. F. Wilson's Count Noble (A.K.R. 1509), June 8.

Temptation—Nick of Naso. Manhansett Kennels' pointer bitch Temptation (A.K.R. 1590) to Naso Kennels' Nick of Naso, May 25.

Cassandra—Balkis. H. W. Huntington's (Brooklyn, N. Y.) greyhound bitch Cassandra (Debret—Dear Secret) to his Balkis (Clyto —Primrose), June 3.

Queen of Thorpe—Strephon. C. T. Sherman's (Philadelphia, Pa.) collie bitch Queen of Thorpe (Nullamore—Gem) to Chestnut Hill Kennels' Strephon (Eclipse—Flurry), June 16.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Fannie Obo. H. C. Bronsdon's (Boston, Mass.) cocker spaniel bitch Fannie Obo (Obo II.—Smut), April 23, eight (five dogs), by J P. Willey's Black Pete (Obo, Jr.—Phonsie).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Jet. Black cocker spaniel dog, age not given, by Dahl out of Dido, by H. C. Bronsdon, Boston, Mass., to E. S. Gilman, same place.

Judy. Black cocker spaniel bitch, whelped April 23, 1887, by Black Pete out of Fannie Obo, by H. C. Bronsdon, Boston, Mass., to J. E. Bronsdon, Milton, Mass.

Flounce Gladstone. Black, white and tan English setter bitch, whelped Jan. 2, 1887, by Gladstone out of Flounce, by George T. Hodgson, Athens, Ga., to Dr. R. I. Hampton, same place.

Count Noble—Belle Boyd whelps. English setters, whelped April 6, 1887, by Dr. Robt. I. Hampton, Athens, Ga., a black, white and tan dog to Hon. A. J. Crovatt, Brunswick, Ga.; a black and white dog to C. W. Vincent, Brooklyn, N. Y., and a white and orange bitch to Chas. F. Harris, Providence, R. I.

PRESENTATIONS.

Count Noble—Belle Boyd whelp. Black, white and tan English setter dog, whelped April 6, 1887, by Dr. R. I. Hampton, Athens, Ga., to Dr. Geo. G. Ware, Stanton Depot, Tenn.

DEATHS.

Bob O'More. Red Irish setter dog, whelped May 3 (Rory O'More —Gay), owned by J. McK. Bayly, Baltimore, Md., May 30, of intestinal worms.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

A. B., Little Rock, Ark.—A water spaniel is literally covered with lice. What would you recommend to get rid of them? Ans. Wash thoroughly with carbolic soap. If this is not effective, rub in some ointment of delphine or sprinkle on powder of same.

J. T. J., Newark.—My Yorkshire terrier is very badly constipated, and several times a day he will start off with a sharp, loud cry, as if in great pain. His appetite is medium; food, Challenge dog food and Spratts biscuit in milk. Ans. You must relieve the bowels at once. If necessary, give an injection of soap suds and olive oil. If the bowels move at all, give two or three doses of castor oil (tablespoonful each time). After the passages become regular, give a teaspoonful of syrup of buckthorn every other day for a week or ten days.

C. W. L., Leesburg, Va.—Will you kindly suggest a remedy for my pointer dog, age 6mos.? He has a rasping or gagging cough, accompanied by choking and vomiting frothy matter. He is in fair condition otherwise, seems quite well full of life, and has good appetite. Have dosed him for bronchial trouble, but without effecting a cure. He has had this cough for six or eight months and always seems worse at the beginning of exercise. The cough at times is quite loud and distressing, again short and husky, and I think worst in damp weather, though frequently bad when the weather is bright. Ans. Get the following:

℞ Acid hydrocyan. dil.
Chloroform.....āā ʒ i.
Tr. hyocyami.
Syr. tolutan.
Mucilago acaciæ.
Aq.....āā ʒ i.
Mix. Sig. One teaspoonful three or four times daily.

DUNROBIN, fox-terrier, is advertised for sale in our sale column. He comes of good blood.—*Adv.*

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

BOSTON, June 18.—The spring meeting of three days' duration at Walnut Hill came to a close to-night. The number of entries have been much larger than was expected. The standard of shooting never was so high, and it is seldom that so large a number of "crack shots" are pitted against each other. The summary:

CREEDMOOR.—New York, June 20.—The third Qualification and Marksman Badge match was shot at Creedmoor, Saturday, June 18. The attendance was very fair considering the weather, which being cloudy with light rains in the forenoon, was very favorable to the competitors, some very excellent scores being made. Following are the best scores of 42 or over, those marked * being the winners of the cash prizes and silver medals in this match.

J. MANZ, Jr., Asst. Sec'y.

The National Rifle Association matches at Creedmoor for July and August include only the military competitions. The dates are July 4, 16 and 30, Aug. 6, 13 and 27. The match conditions are as follows:

The Marksman's Badge Match.—Open to all members of the N. G., S. N. Y., and members of the National Rifle Association, 200 and 500yds., 5 shots at each range, Remington rifle, .50cal. (N. Y. State model). First prize 5 per cent. of the gate money, second 4 per cent., third 3 per cent., fourth, fifth and sixth 2 per cent. each. The competitor making the highest score in each match will be awarded a gold marksman's badge for 1887, offered by the National Rifle Association, to be held by him until the next succeeding match, the badge to finally become the property of the competitor who shall win it the greatest number of times prior to Nov. 8, 1887.

The Qualification Match of 1887.—Open to members of the N. G., S. N. Y. and N. R. A., 100 and 200yds., 5 shots at each range, Remington rifle, .50cal. (N. Y. State model).

MAYNARD RIFLE CLUB.—Chicopee, Mass., June 11, at Riverside range:

WILMINGTON, Del., June 17.—The medal offered on March 11 by William H. Pierson, to be contested for by members of C Company, First Regiment, D. N. G., was finally won this evening by Frank W. Pierson. By the terms governing this contest, the man winning the medal five times becomes the owner. The shooting took place at the armory every Friday evening, and during the time since March 11 there have been 13 matches, thirty-seven men contesting. The medal was won by James Geyer, three times; W. H. Pierson, Jr., twice; Harry Day, twice; J. J. Jordan, once; and Frank W. Pierson, five times. The following is the score made at the final match to-day.

F W Pierson	12	11	12	11	7	11	12	12	10	11—109
Nelson Gray	7	12	12	11	11	11	12	11	11	10—108

Geo Smith	5	5	5	2	7	3	8	11	9	2— 57

REVOLVER WORK.—The handicap revolver match, which terminated last week at Conlin's Gallery, Broadway and Thirty-first street, New York, included the pick of the best shots in the city. The handicapping was done by a committee, who made the distances from 10 to 14yds. Mr. P. Lorillard, Jr., and Captain T. H. Swift entered, but were unable to shoot on account of business. The contestant to gain first place and prize in the match was obliged to shoot 4 out of 6 shots within the radius of a silver 5 cent piece. The other two shots of the 6 had to touch the black part of the bullseye, counting 70 but of a possible 72 on each of the three targets. The highest score possible on the three targets was 216. Mr. Garrigues won the first prize, a handsome gold medal, with a score of 211. The following are the contestants, with handicap and scores:

G L Garrigues (11)	71 70 70—211	A P Kelly (14)	66 65 65—196
J T B Collins (14)	70 69 68—207	O A Davis (13)	65 64 64—193
A Brennan (11)	69 68 68—205	B Miller (10)	66 63 60—189
G Bird (14)	69 69 67—204	M Tilkie (10)	61 59 58—178

MUZZLE VS. BREECH.—Syracuse, N. Y.—An interesting contest in rifle shooting will take place near this city some day next fall, the exact date to be appointed. For some time past there has been a dispute between several riflemen as to the relative merits of muzzle and breechloaders. Horace Warner, widely known as a maker of muzzleloaders, and August Kloeler, in the employ of Wm. Malcolm, also known everywhere for his telescope sights, have agreed to meet and test the question for a purse of $100. One hundred shots are to be fired at 220yds. The weight of rifles shall be the same; no restrictions otherwise. "String measure" is to be used in making up the score, which is to be composed of ten strings for each rifle, Each party is to select a judge, and the judges will name a referee. Each party will shoot his own rifle, or choose a shooter, as he may prefer. Mr. Warner will unquestionably do his own shooting, and the match will, of course, be shot from a rest. The contest will awaken wide and general interest among riflemen, for the test will be very sharp and will have much bearing on a disputed question. Mr. Malcolm will supply some of the conditions to both parties.—D. H. B.

READMOOR RANGE.—Considering the bad weather June 10, the result of the shooting by the members of the Bridgeport Rifle Club at Readmoor Range was excellent. In the usual club contest the following scores were made: W. B. Wheeler 89, George E. Betts 84, W. H. Beardsley 88, D. E. Marsh 74, J. W. Brown 71, A. Wheeler 61, C. H. Barber 68. These were out of a possible 100, 10 shots. In the Bullard match scores were as follows, 30 shots, possible 300: G. E. Betts 235, W. H. Beardsley 223, D. E. Marsh 220, W. B. Wheeler 416, Dr. F. A. Rice 199.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE STILLWATER TOURNAMENT.

STILLWATER, Minn., June 15.—The gun club tournament opened at 10 o'clock this morning. The day was fine and the range good. The day comprised five shoots, several sweepstakes being sandwiched in, some of which were on the programme. The first shoot was 10 single Peoria blackbirds, entrance $2.50. The second shoot was 7 single and 4 pairs Peoria blackbirds, entrance $3. The third shoot, 10 blackbirds, $3 entrance; fourth shoot, 6 pair birds, $3 entrance; fifth shoot, 7 single birds, $2.50 entrance. Representatives from St. Paul, Minneapolis and other parts of the State were present. The scores were as follows:

Shoot No. 1.—Lake 9, Tuttle 6, Anderson 8, Parker 9, Jones 10, Forbes 8, Shaft 7, Daley 7, Bonte 7, Willman 7, Mann 9, Grimes 8, Burk 7, Holcombe 7, R. S. Kennedy 5, Shnider 9, M. F. Kennedy 7, Brown 5, Heisel 5, Foster 5, Best 8, Cumming 7, Catamoran 6. First, Jones; second, Parker, Snyder, Lake and Brown; third, Anderson, Grimes, Forbes and Best; fourth, Shaft; prize, Tuttle.

Shoot No. 2.—Forbes 10, Lake 14, Shaft 9, Bonte 10, Daley 12, Parker 10, Brown 12, Chantler 11, Jones 11, Tuttle 10, Anderson 12, Willman 9, M. F. Kennedy 12, Hart 11, Shnider 11, Best 8, Holcomb 11, Heisel 8, Grimes 11, R. S. Kennedy 9, Johnson 10, Foster 9, Wallace 10, Newquist 8, Cummings 9, Burk 14, Catamoran 10. First, Lake and Burk; second, Brown, Daley, Anderson and M. F. Kennedy; third, divided between 10 scores; fourth, Johnson; prize, R. S. Kennedy.

Shoot No. 3.—Parker 8, Grienner 7, Shaft 8, Shnider 9, Daley 8, Chantler 7, Newquist 8, McKusick 7, Willman 9, Lake 6, Burk 9, Brown 10, Scott 9, Anderson 10, Jones 8, Wallace 6, W. F. Kennedy 10, Bonte 9, Heisel 7, Hart 9, Holcomb 7, Forbes 6, R. S. Kennedy 5, Johnson 10, Best 8, Tuttle 9, Catamoran 10, Gregory 7. First, Brown, Anderson, M. F. Kennedy, Johnson, Catamoran; second, Shaft, Shnider, Willman, Burk, Scott, Bonte, Hart, Tuttle; third, Jones; fourth, Gregory; prize, Forbes and Lake.

Shoot No. 4.—Shaft 8, Grienner 10, Forbes 10, Chantler 11, Daley 6, Bonte 6, Lake 9, Shnider 8, Anderson 8, Parker 9, Willman 7, Jones 8, Brown 8, Best 7, Burk 7, Johnson 8, M. F. Kennedy 8, Sheans 8, Hart Scott 7, Newquist 7, Tuttle 10, Gregory 6, Holcomb 8, Catamoran 6. First, Chantler; second, divided; third, divided; fourth, Shnider; prize, Burk.

Shoot No. 5.—Shaft 8, Forbes 6, Bonte 6, Brown 8, Parker 5, Lake 5, Rogers 7, Chantler 5, Daley 6, Jones 8, Grienner 4, Anderson 5, M. F. Kennedy 6, Burk 6, Foster 4, Johnson 7, Hart 7, Scott 5, Spears 6, Tuttle 7. First, divided; second, Kennedy; third divided; fourth, divided.

June 16.—The scores of the second day's shooting of tournament at Stillwater were as follows:

Shoot No. 6.—Six singles and two pairs, entrance $2.50: Shaft 5, Greiner 8, Tuttle 9, Daley 9, M. F. Kennedy 7, Jones 8, Bonte 5, Anderson 8, Foster 6, Parker 10, Brown 6, Bell 5, Foxes 7, Johnson 6, Sibley 7, Pennington 6, Burk 9. Parker first, Burk second, third divided, Kennedy fourth. Prize, Foster.

Shoot No. 7.—Fifteen singles, entrance $3: Greiner 11, Bonte 9, Chantler 10, Daly 12, Parker 15, Hart 14, Bell 9, Tuttle 12, Anderson 11, Forbes 13, Burk 12, Willman 9, Freeman 9, Chase 7, Jones 11, D. V. C. 11, Brown 13, Janson 12, Sibley 8, Reed 9, M. F. Kennedy 13, Foster 6, Shaft 11. Parker first, Hart second, Forbes third, Burk fourth. Prize, Anderson.

Shoot No. 8.—Ten singles, entrance $2.50: Tuttle 8, Bonte 6, Daley 7, Jones 9, Rogers 6, Beck 7, Macy 7, Hart 5, Greiner 9, Anderson 9, Harrold 7, Brown 9, Sheans 6, Reed 7, M. F. Kennedy 8, D. V. C. 8, Parker 10, Sibley 5, Forbes 8, Johnson 6, Shaft 9, Burk 7. Parker first, Brown second, Forbes third, Beck fourth. Prize, Bonte.

Shoot No. 9.—Nine singles and three pairs; entrance $3: Anderson 12, Sheans 10, Hart 9, Beck 9, Jones 11, Parker 12, Chantler 9, Harrold 11, Gregory 13, Bonte 13, Miller 10, Daley 12, Holcombe 10, Dunne 11, Greiner 12, D. O. C. 10, M. F. Kennedy 12, Reed 13, Forbes 13, Johnson 7, Burke 11, Brown 13, Tuttle 13, Newquist 8, Shaft 13. First, divided; second, divided; third, divided; fourth, Sheans; prize, Hart.

Shoot No. 10.—Seven singles, entrance $2.50; prize, sack shot: Parker 6, Forbes 6, Anderson 5, Shaft 6, Brown 6, Chase 4, Daley 5, Hart 5, Gregory 5, Roberts 4, Jones 6, Forster 5, Kennedy 7, Burk 5, Bonte 6, Johnson 7, Greiner 6, Sheans 5, Read 6, Chantler 5, Holcombe 5, Tuttle 4, Beck 5. First, divided; second, divided; third, Gregory; fourth, divided; prize, Harrold.

The Minneapolis Gun Club held their first match on the new ground in the afternoon. The score was as follows: Joyslin 13, Brown 10, Warwick 8, Kennedy 11, Krueger 16, Knapp 9, Boardman 16, Marshall 11, Best 4, Dennis 13, Hoblett 15, Owens 5. Krueger and Boardman were tied on 16, and in the contest between the two Krueger won the badge offered as a prize.

June 17.—The third and last day of the shooting tournament opened with cloudless skies and cooling breezes. Shoot No. 11, 10 birds, entrance $2.50; Parker, Bonte, Brown, Anderson and Johnson each a straight 10; first money, $21, divided; second money, $12.60, Reed and Jones; third money, $8, Barnum; fourth prize, Burke; fifth prize, Hart.

Shoot No. 12, 7 single and 4 pairs; entrance, $3; first money, $17.10, Bonte and Brown; second money, $12.80, Parker, Kennedy and Anderson; third money, $8.55, Reed; fourth, $4.50, Greiner and Hart.

Shoot No. 13, 15 singles. First money, $18.80, Sisson, Minneapolis; second, $14.20, Parker, Burke, Forbes; third, $9.50, Anderson, Hart, Griener, Scroggins; fourth, $4.25, Bonte; fifth prize, Manwaring.

In the best average Sisson (Brown), of Minneapolis, 132 diamond badge, $75; Parker, 131, cash, $50; Anderson and Kennedy, 124, cash, $35; Forbes, 122, oil painting, $25; Burke, 120, opera glass and plaque, $25; Grieuer, 118, rod and reel, $15; Jones, 116, Betcher loader, $12; Shaft, 115, gold mounted whip, $10; Tuttle, 114, rubber coat, $8; Bonte, 113, hunter's companion, $7.50.

LIMA, N. Y., June 18.—The Lima Gun Club held a blackbird shoot this afternoon, entrance divided into four moneys. First contest, 18yds.:

C Goodrich	1111100101—7	S T Vary	0000001111—4

There was a high southwest wind.

CAMPBELL VS. HARVEY.—A match between Harry Campbell of the Middlesex Gun Club of Plainfield, N. J., and Irving Harvey of the High Rock Gun Club of Norwich, Conn., was shot at Norwich June 14, 50 blue rocks and 50 American clay birds, 3 screened traps at all angles, 18yds. rise. After the fifteenth round Campbell found he was being terribly punished by his gun, but he pluckily finished the match under unfavorable circumstances, and won the plaudits of the large assemblage present, many of whom were ladies. We were handsomely entertained by the members of the High Rock Club. Mr. E. Y. Yerrinton, of the Home Club, and Mr. T. Earl, of the New London Gun Club, were the judges, and Mr. C. Brand acted as referee. Following is the score, a fair one under the circumstances, as the wind was blowing a gale:

	Blue rocks.	Clay birds.		Blue rocks.	Clay birds.
Harvey	1111101111	1110111111	Campbell	0110111111	0010001101
	0111010000	1110111010		1111111011	1001111100
	1110110111	1111111010		1110101111	0101101011
	1111111010	1001010011		1110111101	1111011100
	0111011111	1001001000—68		1010111100	1011011110—69

TEE KAG.

NEW DORP, Staten Island, June 14.—Emerald Gun Club, match at live pigeons, ground traps, 21 and 25yds. rise, 80yds. bound, shot under club rules, four prizes. Voss and McMunn 25yds., rest 21:

T Codey	1011000010—4	H Rubino	1111111010—8
Geo Remsen	0111111100—8	John Bade	1101011001—6
Dr Hudson	1101111110—8	N Maesel	1110111101—8
J H Voss	1110111111—9	P Butz	1110111111—9
Dr Dwyer	1111100100—6	T Schrader	1100110111—7
R Regan	1110011101—7	J Klein	1111110101—8
M McMunn	1101110111—8	J Glaccum	0111111111—9
J Maesel	1101000111—6	L C Gehering	1111111101—9
P J Keenan	0100011101—5	T J Oseikei	0100010001—3
T P Mackenna	1100011111—7		

Ties on miss and out for first at live birds, 25 and 30yds.: J. H. Voss, 30yds., 1; P. Butz, 25yds., 1; J. Glaccum, 1½ and won; L. Gehering, 25yds., 0. Ties on miss and out for second at live birds, 25yds.: G. Remsen, ½; Dr. Hudson, ½; McMunn, 1111101 and won; N. Maesel, 1111094; H. Rubino, 1; J. Klein, 0. Ties on miss and out for third at live birds, 21yds.: R. Regan, 0; T. P. Mackenna, 1½; F. Schrader, 11, won. Ties on miss and out for fourth or Oseikei trophy, at live birds, 21yds., John Bade.

WASHINGTON HEIGHTS, N. Y., June 16.—Both members of Washington Heights Gun Club shot on club grounds a friendly shoot, this is the first of a series of such matches between these two shooters. Fifty bluerocks, 1 trap, 18yds. rise, 80yds. bounds, shot under club rules:

E H Fox	1011110011— 7	C D Davidson	0110111100— 6
	1101111000— 6		1010111111— 8
	0100111111— 7		1111100110— 7
	0111111101— 8		0111111111— 9
	1111100110— 7—35		0110001111— 6—36

HE CLAIMS TO BE A SHOOTER.—Germantown, June 20.—I send you the scores of matches between "Sir Roger Tichborne," the claimant, and Charles Myers, of this city, at 50 clay birds, for $50 a side:

Myers..... 0100111100100101110110101111011111010011000111—31
"Sir Roger"..... 1100110101100011010011011001010111100110101111011—31

After the match between "Sir Roger" and Myers, another match between "Sir Roger" and Chas. Munch, of this city, was made; conditions $25 a side at 15 clay birds, which was won by C. Munch.

C Munch..... 1011101101111001—11 "Sir Roger"...0110111010101111—10

The claimant does not seem to amount to much as a shooter; at least, if he wants to put money up, he can get all the matches he wants in Philadelphia.—H. T.

JERSEY CITY, June 11.—Several hundred persons visited the grounds of the New York Gun Club, Greenville, this afternoon, and saw good clay-pigeon shooting, consisting of sweepstakes. The following were some of the scores:

Hoffman	1011000111—6	Greene	0001001000—2
Cook	0101101111—7	Richards	1101010111—7

Richards won tie.

Hoffman	1110110110—7	Meyer	1110111001—7
Willis	1011101101—7		

In the shoot-off Willis came out ahead, killing 9 birds. The next match was between Richards and Willis. The score was:

Richards..... 1111101111—9 Willis ..... 1101111011—8

SAN FRANCISCO, June 12.—A large crowd was present at the San Bruno range to-day to witness the pigeon match between Ferguson and Kerrigan, two wing-shooters well known on the Pacific coast. The elements were not at all favorable for pigeon shooting. A slight morning breeze was fanned into a perfect hurricane, which lasted during the greater portion of the day. Had it not been for this it is expected a much better score would have been made on both sides. The birds with few exceptions were strong flyers, and in almost every instance they went with the wind, rendering the shooting very difficult. Ferguson shot with a No. 10 bore gun at 28yds. Kerrigan missed his first bird, and seemed to lose all interest in the match after that. Some good birds were, however, recorded on his unerring second barrel. Following is the score, 50 birds, handicap:

Ferguson 2—28—12121022012012111011001011221212120001212120102O—36
Kerrigan 12—30—02212120012011110012001101211020220100C01101121 1—33

Preceding the regular match an outside contest took place with the following result: 12 birds, 28yds. rise, no entrance:

Schultz	011101110000— 6	C Heath	1111111111100—10
Ferguson	1111111000w— 7	J Fanning	1111111111O—11

BROCKTON, June 18.—The annual shooting tournament of the Massachusetts State Glass Ball Association closed to-day. Following are the results:

1. Individual sweepstakes match, 7 clay-birds, 26 contestants—Eager, Schaeter and Stanton divided first.

2. Individual contest, 6 blue rocks, 26 contestants—Lawson and Bartlett divided first.

3. Grand championship contest for the Ligowsky gold badge and the individual clay-pigeon championship of the association, 15 single birds per man—Eager, Stone, Dickey, De Rochemont, Sanborn and Howard were tied at 14. The shoot-off was warmly contested by Eager and Dickey, the former winning on the fourth set. In the sweepstakes Eager and Dickey divided first, Schaefer, Swift and Stark second, Bartlett and Bullinton third, Lawson and Smith fourth.

4. Three men team match, 7 clay-birds per man—Massachusetts Rifle Association first, with 19; Wellington team second, 18; Brockton third, 16.

5. Individual contest, 7 blue rocks, 24 contestants—Stanton, Aldoes, Swift and Barry divided first.

6. Grand champion contest, 10 clay-pigeons per man, for the team gold badge of the association—Massachusetts Rifle Association team first, with 42; Wellington second, 41; Brockton third, 40; Brockton, No. 2, fourth, 38.

7. Individual expert match, 25 single clay-birds—Dickey first, with a score of 24.

8. Individual contest, clay-birds, straightaway, 20 contestants—Evans, Bartlett, Lawson and Swift divided first, Dickey, Stark and Edwards divided second, Aldoes, Wheeler and Howard divided third, Smith and Knell divided fourth.

9. Three pair clay-birds, 20 contestants—Wheeler and Stanton divided first, Allen, Dickey, Evans and De Rochemont divided second, Aldoes and Stone divided third, Lawson and Lovejoy divided fourth.

10. Individual contest, 7 blue rocks, 26 contestants—Fish, Wheeler, Snow and Barney divided first, Tisdale, Schaefer, Stark and Lovejoy divided second, Swift and Stone divided third, Buffington, Wright and Eager divided fourth.

WELLINGTON, June 18.—At the Wellington Gun Club range the winners of events to-day were: 6 bluerocks, Gerry; 6 pigeons, L. Brown; 6 bluerocks, Savage; 6 pigeons, Gerry; 6 bluerocks, Savage; 6 pigeons, Savage; 6 blackbirds, L. Brown; 6 pigeons, D. Brown and Gerry; 6 blackbirds, Moore and L. Brown; 6 pigeons, Savage; 6 bluerocks, Gerry; 6 pigeons, Gerry; 6 bluerocks, Moore.

CARVER'S ACCIDENT.—The principal topic of conversation in sporting circles last week was the accident to Dr. Carver, while he was giving his marvelous exhibitions with the shotgun at Ridgeway Park. Dr. Carver had raised his Spencer repeating gun to fire, and as it did not respond to the pull of trigger and fall of the hammer, he naturally supposed a snap had been made; on the same instant, with the extraordinary rapidity characteristic of his style of shooting, he worked the gun so as to throw out the snapped shell. As the shell entered the receiving block to be thrown out it exploded, having evidently hung fire. The force of the explosion was in an upward direction, and for a few seconds Dr. Carver believed that the sight of both his eyes had been destroyed. He was taken immediately to the Wills Eye Hospital, where relief was obtained through the skill of Dr. Behrens, who declared that Carver's escape from a serious accident was miraculous. In justice to the Spencer gun it should be stated that the plunger had been broken a few days ago, and a new plunger had been put in by Dr. Carver himself, which evidently did not strike the cap with sufficient force, as one or two snaps had occurred with it previous to the explosion already mentioned.—*Philadelphia Item, June 19.*

NOT ALL OF TRAP-SHOOTING TO SHOOT.—Solomon City, Kans.—At the grounds of the S. G. C. were gathered many people among whom were several of the sons of the gun or rather lovers of true sport, and ere old Sol had elevated sufficient to wither with his fiery rays the sweeping breath generally found floating over the Kansas prairies, for it blew a steady gale until his highness disappeared beyond the Rockies, leaving by its cause the monarch dusk to cease the echoing sound of the guns which called several old vets to witness the day's sport. Blue rocks, Peorias and live birds, everything passed off pleasantly and good scores were made. Everybody present seemed happy and longed to meet again. The following were the winners of the day: Irwin, Kraeuchi, Eicoltz, Silvey, Bonebrake, Lash, Edworthy, Crooks, Dewar, Sham, Kelly, Gould.—A. I.

ST. PAUL, June 15.—The Capital City Gun Club was organized this evening with a membership of 25. The organizers are C. A. Rose, C. E. Nathurst, Wm. Breitenstein and C. A. Sandstrom. Among those present were Nels Sandell, Dr. C. H. E. Cassel, Wm. Anderson, S. Seaton, F. E. Wcdaff, O. O. Rindal, A. Ostrum, O. N. Clause, M. Mattson, C. O. Searle, Oscar Ilin, John Engberg, C. Welmerstein, John R. Anderson, M. F. Kennedy, H. E. Humphrey, O. N. Nelson and H. C. Lawrence.

ERIE, Pa., will have a blue rock and live bird shooting tournament July 4 and 5, under auspices of the Erie Gun Club, open to all, sweepstakes.—W. W. DERBY, Sec'y.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

BRITISH VS. AMERICAN CANOEING.

THE R. C. C. opened its regular season of racing at Hendon Lake on May 28, with a first and second class match. The entries were numerous and the sport good. The craft which competed in these races were all of a high standard of efficiency, both as to model and rig, and the handling was in nearly all cases faultless. Racing in the Royal C. C. certainly cannot be said to be a chase of duffers, for a man who can successfully navigate a first-class canoe within reasonable time over three rounds of the Hendon Lake course must be above the average smallboat sailor in proficiency. The entries were:

Diamond	H. Church	1st class.
Minnie	H. Wilmer	1st class.
Nautilus	W. Baden-Powell	1st class.
Churn	W. Stewart	1st class.
*Pearl 86	E. B. Tredwen	1st class.
Pearl 85	F. Knight	1st class.
Kitten	E. A. Leach	1st class.
*Nina	F. Mills	1st class.
Sabrina	R. Turner	2d class.
Severn	H. Holding	2d class.
Spray	F. Dickenson	2d class.
Atalanta	R. de Quincey	2d class.
Vanessa	B. de Quincey	2d class.

*Did not start.

A flying start was made in a moderate N.N.E. wind, giving a reach and run for the first two sides of the triangle and a run home. Three rounds were sailed, making a course of six miles.

Nautilus, the new boat built this season, sailed her maiden race, and taking the lead at the start, was never headed, and won by 2m. 40s. She carried a new form of triangular mainsail of 75sq. ft., and an old m'zen, her new fit out of sails not being ready. Her most dangerous rival was found in Diamond, a Nautilus of 1886. Diamond sailed a very keen match, being only 1m. astern of Nautilus in the first round. The Churn (Stewart's new canoe) also sailed her maiden race. She is, as mentioned in the *Field* last week, almost similar to the celebrated American canoe Pecowsic, and sails under exactly similar rig; though in the first round she for a time held second place and exhibited a rare turn of speed in some of the puffs, she fell off in the lighter winds, and at the end of the first round was astern of Kitten and fourth in her class. She gave up shortly afterward, and having procured her third or middle sail, came out for a trial to leeward of the racers, but with but slightly better results as to speed. Kitten sailed better than ever, her mainsail, a large lug, being perfection in size and set. The final times in first class were:

Nautilus (first prize)	5 47 00
Kitten	5 54 00
Diamond (second prize)	5 49 40

The second class canoes were sailing the same course, and started at the same time as the first class. These canoes are somewhat smaller in hull than the first class—generally in the matter of length, as being about 14ft. to 15ft., and in depth of body 10in. to 14in. or so. However, the first class are rapidly coming down in size of hull, Churn, for instance, being shallower by inches than any second class canoe, and Nautilus, though of the beam common to second class—viz., 30in.—is only 1in. deeper at mid-body, *i. e.*, 11½in., but considerably deeper at bow, owing to her great sheer forward. The second class are, however, limited in sail area to 75 sq. ft. total, of which the mainsail may not exceed 60ft. The difference of sail area with first class average of, say 100ft., being 25ft., does not however, account for the very considerable difference of time in completing the triangular course of six miles, viz., first class, Nautilus, time over course, 2.16.00; Sabrina, 2.58.00, or 42m. difference. Such a difference of speed would tell heavily against the second class boat in any open water cruise, and would probably be even increased in cruising, as the small boat would have to carry a load of stores and camp gear. In the races the second class boat is generally sailed without any-

thing of weight on board, whereas the first class often carry more weight when racing than when cruising. The model of second class canoes is rapidly improving; the body is now getting to be of fair length, and the excessive hollow in bow and stern is disappearing. The most taking model in the second class is the Severn; probably she is also the best of the lot as a cruiser, owing to her stability and stowage capacity; but her sails are far too small for racing, or even long open water sailing, though possibly enough for a Scotch loch squall. There were several foulings in the second class, Sabrina and Spray eventually coming in close together, and, there being a question of fouling marks, it was finally agreed to re-sail the second class match on a subsequent day.

Monday, May 30, the second match of the season, saw all the above named boats (except the Churn) as starters for a first and second class match over the same course. Pearl '86 took a puff of wind just after the start, and got into first place, from which she was never ousted. She was sailing under her large sails, and traveled very fast at times. Pearl '85 was sailed by Mr. Edwards, of Peterborough, Canada (whose canoe, which is to compete for the challenge cup, had not yet arrived in England). Nautilus's racing sails not being ready, she was sailed at a disadvantage under a small suit, and only managed to play second fiddle; none the less, in such good company as Diamond, Pearl '85, Kitten and Nina, her performance was good. Nearly all the canoes are now sailed with the skipper on deck, instead of below, as of old; but Diamond and Kitten are sailed in the old style, and possibly some day their skippers will wake up to the fact that they lose minutes thereby in each round. The race ended with:

Pearl '86	1 03 00	Nina	1 18 00
Nautilus	1 03 00	Kitten	1 23 00
Diamond	1 18 00	Pearl '85	1 30 00

The second class had good sport. Sabrina fouled the buoy in the second round, and retired. Spray was well sailed, and made very good time while the breeze lasted; but it fell off rapidly, and the times in last round consequently became very long, though only a short distance separated the boats.

The interest of the race had been heightened before the start by the expectation that the two new (the latest) canoes—one for Major Roberts and the other for Mr. Ingram—might arrive in time to take part in the match. However, they remained at the builders. Spray eventually took first prize, and Atalanta dribbled in with a light air of wind and took second prize.

A second class race was held at Hendon on Wednesday, June 1. Start at 4 P. M. The wind was just a good sailing breeze from northeast. The starters were: Spray, C. F. Dickinson; Sabrina, Rede Turner; Severn, T. H. Holding; Vanessa, B. de Quincey. Vanessa made the best start, but was passed by Sabrina before rounding the first buoy. In the run down Sabrina seized the opportunity of setting spinaker, and held a good lead round the buoy. In the beat back there were several changes of place, and it looked like anybody's race, Severn, who had made a very bad start, having pulled up into second place at the end of the first round, and, trying to cut out Sabrina at the buoy, a foul unfortunately occurred, and Severn retired as did also Spray. The second round was barren of interest, except when Sabrina's spinaker gave trouble at the end of the run, and sent her a long way off her course. The finish was timed: Sabrina, 5.46.35; Vanessa, 5.50.35. The match was officered by Mr. Tredwen.—*Field, June 4.*

On Saturday, June 4, the sailing members of this club again met at Hendon. The events were a sailing race of two rounds for each class of canoe, and a maneuvering race in which both classes competed.

The entries for the first class were:

Nautilus..Mr. W. Baden Powell. Charm.....Mr. W. Stewart.
Pearl (1886)...Mr. E. B. Tredwen. Canadian...Mr. E. B. Edwards.

The wind was light from the W. at the start, giving a turn to windward down to the lower buoy. Nautilus was first away, with Pearl next, slightly to windward. Nautilus kept ahead all through the first round, and was about a minute ahead at the conclusion of it, Pearl being second, and Charm some distance astern. Mr. Edwards, in a new Canadian canoe, was unfortunate in breaking his tiller soon after the start, and had to retire. In the second round Pearl, standing closer to the shore, after rounding the buoy in the bight, got a slant of wind and weathered Nautilus half-way down the lake. Nautilus, however, came up again, and was the first round the lower buoy. In the run up Pearl again challenged for first place, and, after a splendid race, won by about two lengths.

	1st Round.	2d Round.
Nautilus (second prize)	3 45 30	4 20 00
Pearl (first prize)	3 46 30	4 19 47
Charm	3 49 45	4 44 00

The second class entries comprised:

Atalanta..Mr. R. de Q. Quincey. Sabrina.....Mr. Rede Turner.
Vanessa...Mr. B. de Q. Quincey. Severn.....Mr. T. H. Holding.

Sabrina soon took the lead in the race, and, near the conclusion of the first round was 5s. only ahead of Severn. Just before rounding the buoy, however, a strong puff caught her and she capsized. This left Severn with a good lead, which she maintained to the finish. The times were:

	First Round.	Second Round.
Severn (first prize)	3 56 05	4 42 00
Atalanta (second prize)	4 02 00	4 46 00
Vanessa	4 00 00	4 49 00
Sabrina	3 56 00	Capsized.

The maneuvering race brought out Pearl, Nautilus, Severn, Sabrina, Charm, and Atalanta. The competitors had, at a given signal, to throw overboard their paddle, recover it under sail, and then complete the course. At gun-fire the two old hands, Pearl and Nautilus, slipped over the line ahead of the rest, and were both smart in picking up their paddles. Nautilus led round the buoy in the bight, but in the run back Pearl closed up considerably. Nautilus, however, kept the lead, and a most exciting finish was witnessed, Nautilus securing the verdict by about 3ft. only.

The challenge cup race, for which there are 13 entries, will take place at Hendon this afternoon (June 11), at 3 P. M.—*Field, June 11.*

THE ASSABET CANOE.

THE FOREST AND STREAM has published instructions for building the ordinary canvas canoe, but there is another variety of this cheap and useful craft that has never been described in print. The canoe was first made in Hudson, about three years ago, and has proved itself to possess many good qualities, among which are strength, lightness, and above all, cheapness, which is a very essential point to most amateur canoeists.

The plan of the one I have used during the past two seasons is as follows: Length, 14ft.; width, 30in., and depth 12in. The well is equally distant from each end, and is 6ft. long and 18in. wide. Braces should run from the well to each cutwater, and also from each end of the well to keel. For the frame procure three strips of clear pine 14ft. xl½in. xlin., and about 20ft. of the same size to make frame of well and braces. The cutwaters are made of ash boards 1½in. thick, 12in. long and 6in. wide. The leading feature of these canoes, and one which renders them a favorite with amateur builders, is the ribs, which are made of clear, straight-grained cheese boxes. About a dozen of these are required, and can be obtained at any grocery store at from five to ten cents each. Full width boxes are used under the well and should be placed ¾in. apart. From well to the ends narrower ribs must be used, and it will be found necessary to steam the last two or three on each end. Care must be taken in putting on the ribs not to bend in the keel. For covering, 12yds. of drilling, costing about 12 cents a yard, is required. Before putting on the cloth it is a good plan to cover with thick brown paper which will make the cloth fit much better than it otherwise would. A coat of oil should be first applied and at least two coats of paint. Painting is one of the most important points in these canoes, and each coat must be thoroughly dry before applying the next, otherwise the cloth will soak water or the paint peel off.

A light moulding round the sides and well is necessary to protect the cloth from wear. The bottom is protected by a strip of ash 1½in. xlin., and running the whole length. This is beveled off at the stem and fastened by bolts to the keel. Thick varnish applied on each side where it touches the cloth is the surest way to prevent a leak.

During the high water in February, 1886, I took a trip to Rockbottom, about three miles down the Assabet, and the strength of my canoe was well tested, as it was caught in a jam and thrown up on a cake of ice without any serious injury. The first of last season I fitted my canoe for sailing, and during the summer had many pleasant and exciting runs, including a half mile sail in a thunder storm.

There are over fifty of these canoes in Hudson, and many different styles and sizes can be seen. In weight they run from forty to fifty pounds, but could be made much lighter if wanted. Last August I had the pleasure of camping two weeks at Lake Wauchacum, whose four Assabet canoes were in daily use, and for all practical purposes I think they are as good as a much higher priced one.

A. N. STOWE.

AMHERST, Mass.

A. C. A. REGATTA.—The races of the A. C. A. meet will begin on Aug. 22, and not on Aug. 15, as announced in the published programme.

TORONTO C. C. NOTES.—A couple of weeks ago I gave you a few notes about two of our new canoes, and just now a favorable time has struck me to continue them. Ten of us are out at Anlan's Island spending Saturday afternoon and Sunday, camping and enjoying the rest and pleasure that means so much to every cruising canoeist. As I said before, a favorable time has just struck me, I have just been engaged in a collar and elbow with our secretary, who grabbed the seat of my ancient trousers, and as we wrestled and squirmed I could hear several rips and tears mid much laughter from the crowd. At present I am occupying a seat in the sand waiting for one of the boys to hunt up another pair of pants, so I will improve the shining hour by continuing my last. Mr. D. B. Jacques now has the old Evora that figured in the A. C. A. novice race of 1884. Her centerboard, mast tubes, etc., have been replaced by new ones, placed where they will have more effect, and with new and well-made sails she will prove a fast craft. A. Anderson has the '86 Mac, now called the Vic and is doing some fast sailing with her. Our secretary, Mr. Geo. Sparrow, has Jacques's last season craft, which is now called the Petrel; with a heavy board, 50lbs. ballast and a 105ft. mainsail, he is of the opinion that the fellow who gets away with him has to do some pretty fast sailing, anyway. A. H. Mason, Tyson, Neilson and all the old members retain their last season's craft. Our first race of the season took place yesterday, a combined ¼ mile a side, twice around. The starters were: Com. Kerr, Ada K.; H. Neilson, Boreas; D. B. Jacques, Dottrel; A. H. Anderson, Vic; A. H. Mason, Evora; W. G. McKendrick, Mac; Colin Fraser, Una. The wind was a strong steady easter with considerable sea rolling. The Mac and Una were a tie in the paddle to the first buoy. The Mac hoisted a 75ft. balance lug mainsail and 37ft. mizen and went staggering along like a reeling man that a 12ft. sidewalk would not hold; however, he managed to hold first place till the last paddling stretch, when the Evora came sneaking along and with considerable more power in his elbow took first place. Mac spurted, but the Evora responded by increasing her lead until the buoy was reached, when he hoisted sail, and with a clear run before the wind, finished a good first, Mac 30yds. behind, with Una third. The Dottrel had her rudder unshipped by another canoe and the Vic's mizen halliard parted, so that their performance cannot be judged by the place they took. The general opinion before the race was that either one of them had the best chance for first place.—MAC (Toronto, June 12).

THE CALLA SHASTA MEET, JULY 2-4.—To the visitors who have once visited Calla Shasta a recital of its advantages for a meet is unnecessary. We have here a beautiful stretch of water nearly half a mile wide and a perfect paradise for river sailing. Perched on a bluff between 20 and 30ft. high is Calla Shasta with its settlement of canoeists and their "shanties." A better place from which to watch the races, or a prettier view than can be had from the veranda of the cottage would be hard to find. For all canoeists who cannot bring their tents there are accommodations just across the road, at the Lester farmhouse, where good, nice, plain country fare will be served. The following is the programme as now perfected: Saturday, July 2, formation of camp. In the evening a camp-fire. Sunday service will be held in the Pavilion. Monday the following races will be sailed and paddled. 1. Single paddling, one-half mile and turn, deck canoes. 2. Tandem paddling, one-half mile and turn, open or deck canoes. 3. Hand paddling, 300yds. 4. Standing paddling, 300yds. 5. Capsize paddling, 300yds. 6. Gymnastic exhibition in canoes. 7. Open sailing, 3 miles. 8. Limited sailing, 3 miles. 9. Combined sailing and paddling, 3 miles. The order will be announced on the bulletin board in the morning. I extend in behalf of the club an invitation to all canoeists to be present at the Calla Shasta meet July 2-4, and to those who come we promise a jolly good time. Space to pitch tents, straw and other accommodations may be had by addressing either of the officers undersigned not later than the 30th of June.—CHAS. M. SHEDD, Captain (H. D. Marsh, Secretary).

PASSAIC RIVER MEET.—In addition to the races announced last week, a pair of paddles is offered for the best flapjack cooked in a competition to be held at the camp, and four or five other prizes have already come to the notice of the committee. Class A, sailing, is limited to 80sq. ft. of sail, and Class B to 100sq. ft. The races will all take place on Monday, July 4; entries may be made at the meet. Chinese lanterns will be in demand for a torchlight procession and musical instruments will of course be brought along. Every one should be provided with some kind of tent and cooking utensils. Wagons from Paterson will call with provisions, but every one would do well to bring enough for a couple of meals with him. An attendance of more than a hundred is already assured. The distance is about ten miles from the Greenwood Lake Bridge at Newark, and two short carry will have to be made. Come with the tide and run up the creek at the Passaic Mills at high tide and make the short carry into the feeder. At half tide this creek is too shallow, and the river must be kept as far as the railroad bridge above Dundee Island; here there is a very steep carry into the same feeder.—J. V. L. PIERSON, J. M. CLOSE, Committee.

NEW YORK C. C. REGATTA.—Programme of annual regatta of New York Canoe Club, Saturday, June 25, off club house, Tompkinsville, Staten Island, at 2 o'clock: Sailing Race—First Class, seniors, two prizes; Second Class, novices, two prizes; Third Class, unclassified small boats, two prizes. Paddling Races—First, single, one prize; second, Tandem, one prize; third, race of local clubs in character; fourth, standing, one prize; fifth, upset, one prize. First and Second classes, sailing, will sail three times around a triangular course of a mile in length, in easy view of club house. Third Class, such as sneak boxes, Rushton cruisers, St. Lawrence skiffs, etc., will be started ten minutes before the canoes over a special course. All the events are open to amateurs. C. K. Munroe, C. L. Norton, B. H. Nadal, Regatta Committe.

RICHARDS.—The many friends of Com. Richards, (Mona) will be glad to hear that he is still canoeing, having sailed lately in a race of the Oakland C. C. Com. Richards was obliged to leave Canada on account of ill health last fall and went to California, where his health has improved. He is trying to induce some of the O. C. C. to visit Bow-Arrow Point.

RED JACKET AHOY!—Now is your chance to do something besides talking. The Dundee meet will give a race for large canoes (and there are some on the river) if there are any entries. The one short carry is nothing for a canoe though it might be for a yacht, so come on and show what you can do, or forever after hold your peace.—D.

A. C. A.—Trenton, N. J., June 20.—The following named gentlemen have applied for membership in the A. C. A.: Walter W. Lawson, Joseph P. Battles, David S. Goddard, Lowell, Mass.; W. H. King, R. Elmer Townsend, Boston Mass.—WM. M. CARTER, Secretary.

THE SHATTEMUC C. C. will hold their annual regatta on Saturday, July 2. The races will include sailing, single and double paddling races. Prizes will be given to the winners of each start at 4 P. M. at Sing Sing, N. Y.

Yachting.

FIXTURES.

JUNE.

23. Columbia, Annual, N. Y.
24. New Haven, Annual.
25. N. J., Annual, New York.
25. Boston *Globe* Open, Boston.
25. Hull Club, Marblehead.
25. Oswego, Ladies' Day.
26. Quaker City, Roview, Phila.
28. Great Head, Pennant.

JULY.

1. Miramichi, Annual Cruise, Bay du Vin.
2-4. Knickerbocker, Cruise.
2-4. Quaker City, Cruise, Del. River.
4. Cor. San Francisco Cruise.
2. Beverly, Open. Mon. Beach.
2. Hull, Penn., Hull.
4. Beverly, Cham., Mon. Beach.
4. Buffalo, Annual, Open.
4. Boston, City.
4. Cape Cod Y. C., Club.
4. Larchmont An'l, Larchmont.
5. Great Head, Moonlight Sail.
7. Shamrock-TitaniaMatch, NY
6. Monatiquot, Club, Weymouth

30. Hull, Cham., Hull.
30. Cor. Open, Marblehead.
30. South Boston Club.

SMALL YACHTS AT TORONTO.—The protested race between the yachts Mischief, Iris and Caprice and the skiff Uneasy, was resailed on June 11, at Toronto, the skiff winning by 5m. allowance, receiving 12m. 30s. from Mischief, the second boat.

FACTS ABOUT THISTLE.

WE are able to give the following facts concerning the Thistle, and trust that the critics of contemporaries will govern their pens accordingly:

1. Thistle was designed before Mr. G. L. Watson visited America.

2. The comparatively large beam of Thistle was selected for reasons of economy, for her designer is convinced that a six-beam cutter, such as an enlarged Doris (30x5.5), would answer equally as well in point of speed, but would entail greater cost owing to greater displacement than a wider boat.

3. The current yarn that Mr. Watson spent "months studying American models" and copied or appropriated "American ideas" in the Thistle, is devoid of truth. Mr. Watson was in America only a fortnight, collected no data, and spent but two hours in the club room of the New York Y. C., most of the time in general conversation. The Thistle is built after ideas incorporated for many years past in Mr. Watson's "length boats," and as the rule of the N. Y. Y. C. is practically a length rule, the proportions of the Thistle were adapted to suit the rule.

We may add that in view of the performance of the narrow cutters Madge, Clara, Ulidia and others, the possibility of attaining the highest rate of speed from that type cannot be logically questioned, whether such boats are desirable or not on other counts.

It may be taken as pretty well settled that there is a fixed relation between resistance and sail carrying power in well-designed vessels, regardless of their chief proportions. Extra sail carrying is derived from addition to beam or to displacement in dealing with the low weights accompanying it. In either case the addition means additional resistance, and competitive sailing between the various types shows this resistance to grow very nearly or quite in the same proportion as the increased stability or sail carrying power. On a large scale this is proven by the Galatea and Priscilla. These two yachts are practically alike in speed, and it is a very conservative statement to say that Galatea would be as fast as Priscilla did she carry sail area in the same proportion to her ability as has Priscilla. Yet Priscilla has great beam and small depth, and Galatea is exactly opposite in type. It may be said that Priscilla is not the fastest vessel which can be produced upon her dimensions. But the same is also true of the Galatea. Though over 85ft. waterline she is hardly a match for the Irex of 82½ft., and no one can assert that Irex is the best that can be expected on *her* length.

But since the old Y. R. A. rule has been abolished there is no necessity for adopting the extreme proportions of some of the latest English racing cutters, for it will be conceded by all that reasonable increase in beam does not interfere with attaining the highest rate of speed, while adding to accommodations, especially in small craft. Hence we may look for a moderate increase in the beam of English cutters in the future, but not to such an extent as to effect a change in type. The future cutter will simply be of normal instead of abnormal proportions. It is even likely that cutters built to sail under the English rules of "Length *multiplied* by sail area" will be designed as wide as the Thistle. For a narrow boat, say of five beams, would require less sail area to drive her, owing to diminished "wave-making," and could be lengthened without measuring more than Thistle. Such a craft would in all probability beat the Thistle. This will, however, be for the future to settle more definitely. What can be expected of "normal" or nearly normal cutters has received a striking illustration in the new Burgess boat Pappoose. It is not at all proven that Thistle beats Irex on account of her greater beam, because the two are designed by different men, and it can be rightly advanced that Thistle owes her success to superior grace of fashioning without reference to difference in proportions. That there is a possibility of equalling her with a narrow boat, were it desirable to do so, we know to be the fixed opinion of Mr. Watson himself.

THE FORM AND SPEED OF YACHTS.

UNDER the above title Prof. R. H. Thurston contributes to the June number of the *Forum* a very timely and interesting discussion of a subject that has of late obtained great prominence not only with those specially interested, but among scientists and with the general public. Speaking of the late international races, the author says: "In reality the contest for the America's Cup did not yield any such decisive determination of the relative merits of those widely different forms of yachts as was confidently expected on both sides of the Atlantic. In fact, it simply resulted in proving that the two constructions are substantially of equal merit; for although the Puritan and Mayflower gained their victories and preserved for us the prize, the Genesta and Galatea showed themselves so nearly equal in speed, under such conditions as arose during the races, that it was evident that the advantage gained was too slight to settle the great question decisively, and that any small improvement in construction, in handling, or even in the streak of wind struck on the course, might reverse the result. The impression left on the minds of such disinterested spectators as were familiar with yachting matters was probably that the British yacht might possibly do the best work in heavy weather, while the American type should be expected to excel always in light winds. It became evident that a yacht to be built broad and shallow or deep and narrow, and yet give substantially equal speed when pressed to its most favorable performance under most favorable conditions of wind and sea. The form of the cross section is thus, apparently, not of serious importance where speed is the principal object."

After considering the conditions of maximum speed the author touches on a very important subject, as follows: "One of the important unsettled problems of yacht construction is that relating to proportion of length to midship dimensions. Taking the product of the breadth by the depth, and extracting the square root, we have a mean measure of the midship section which can be applied to either of the two extreme types. The usual method of taking the length as so many times the beam is evidently not capable of affording a comparison of the wide with the narrow ship. An investigation made recently at the request of the writer by Mr. H. DeB. Parsons, and reported by the writer to the British Association of Naval Architects at the recent meeting, has shown that the fast-swimming fishes have all about the same proportions, thus measured, as the best modern steamships, and about the same as the fastest of the sailing yachts, *i. e.*, a proportion of eight to one nearly. Another problem seems to have received at least an approximate solution from the investigation just referred to; the question where should the greatest transverse section be located in the length of the vessel? It was found that in all the fishes studied, whether fast or slow swimming, the trout and the mackerel, the bluefish and the shark, as well as in the haddock and the slower fishes, the "midship section," as this maximum section is technically called, is placed at the distance of 40 per cent. of the length of the fish from one end, and 60 per cent. from the other, the length being taken as measured from the tip of the nose to the root of the tail, the length of the body of the fish." The paper goes on to show that these same proportions are found in many of the fastest yachts, both sailing and steam, but that in some cases the bow is the longer and in others the run. The general conclusions reached by the author are that as far as the principles of design are concerned, the proportions and forms, the best results have been practically reached, and that no radical improvement is probable, but that any further gain in speed or other desirable qualities must be looked for in the directions of lighter construction and improvements in details of build and fitting and in increased perfection in handling.

PAPPOOSE AS A CHILD OF REFORM.

Editor Forest and Stream:

The victory of the cutter Pappoose over the Shadow in the Dorchester match last Friday was a genuine triumph all around the course. It will be hailed with pleasure by all true salts, for it will do much to remove the ludicrous hallucination, that the centerboard "creates" speed and that a centerboard yacht has fundamentally superior possibilities for speed by virtue of her board.

It is easily understood that the majority of yachtsmen should object to extremely narrow small cutters like Shona for cruising purposes and that regardless of their claims to speed. But it is also certain that if the "moderate cutter," exemplified in the new Pappoose and the whole of her kind, can be shown to equal or surpass the best centerboard ever built, the great majority will not hesitate any longer between an uncapsizable, able, roomy, smart-looking keel ship and a shoal, centerboard makeshift without headroom, unreliable, unsightly and not ship-shape in hull or rig.

The Pappoose is only one more step in the inevitable evolution of the old-time American trap into the *bona fide* cutter of good all-round proportions and characteristics. Her splendid sailing will have an immediate and tangible influence in leading up to the general adoption of the English cutter of "cruising" dimensions, of which type thousands now exist in British waters with the new Scotch Thistle at the head of the list. To this end the "cutter men" have been striving, and Pappoose proves their reasoning and foresight well founded.

HONEST BOAT.

VOLUNTEER.—This will be the name of Gen. Paine's new steel sloop now nearly ready for launching at Wilmington, Del.

THE END OF THE BATTLE.

Editor Forest and Stream:

The cutter-sloop controversy is apparently reaching its end. Mr. Burgess in recent interviews has declared his readiness to design keel or centerboard for speed, without preference. He has already succeeded in doing this on a small scale in the new cutter Pappoose, which beat the famous centerboard Shadow so roundly in the Dorchester race last Saturday. If the Scotch Thistle does the same thing on a larger scale, the centerboard disappears from the "American idea," just as nearly all the other points made by "cutter men" have already been conceded in the difference existing between the modern improved so-called sloops and the orthodox "American idea."

Lead on the keel, cutter rig, and cutter style and kinks all through have been generally generally adopted. Even wide beam and light displacement has given way to moderate beam, more displacement and deep draft, as in the Pappoose.

The American sloop is now three-quarters cutter, and with the introduction of the keel, which seems likely enough in view of Pappoose's victory, the "American idea" will at last have conformed to the "normal cutter" of Great Britain.

May that day come soon, is the wish of every SAILORMAN.

YACHTING NOTES FROM SYDNEY, N. S. W.

THERE are few places better suited for boat sailing than Sydney Harbor and its adjacent waters, and few in which it is pursued more eagerly. The harbor, as many of your readers will know, consists of a land-locked gulf some half dozen miles long, and of varying width, the narrowest part below the city being about a mile across. The upper part gradually narrows to form the Parramatta River, up which one can sail for some 15 miles, and branches into other rivers and creeks, some of which are practicable for small craft. There are very many deep bays and inlets, of which those extending into the town are not particularly pleasant or interesting, while others, remaining in their natural wilderness, form delightful cruising and camping ground. The harbor generally has deep water, free from mud flats, and with clean sandy beaches. Though surrounded by high ground, it generally gets a true wind during the summer months, when the N.E. sea breeze mostly blows all day with a nice wholesail force, and blowing nearly straight up the harbor, giving a fair wind on the homeward run. After about a week of N.E. winds one may expect a "southerly bu'ster," often of considerable strength; but as the land separating the harbor from the ocean forms a weather shore, this wind causes no danger to careful sailors. In winter, though the wind is less satisfactory, consisting mainly of variable breezes from the west, there is smoother water, which is good for rowing boats. The weather is never too cold for camping. There is only one thing to complain of in the harbor, and that is sharks, which are large and numerous, and do not seem incined to disappear before the advance of civilization. The ocean outside is generally navigable even by small craft, if well found, but the leegoing current which runs southward along the coast rather discourages outside cruising. The tides are small, both as to rise and run, except here and there in narrow channels, where they make perhaps a couple of knots an hour.

A few miles off we have other rivers and harbors, most of which give good sailing, and being wilder than Sydner harbor, afford better fishing and shooting.

The pleasure craft on these waters consist of a few yachts, from about 30 tons downward, and a large number of half-decked and open boats. Among the yachts there is often some pretty racing, chiefly marred by the monotony of the same craft meeting again and again. All sizes are very heavily sparred, as the fashion of the place is to carry all the canvas you can, and to drag what you can't carry. It is curious to see even the smallest yachts crowded with ring-tail and water sail, and every kind of kites. It must need much smartness to get more good than harm out of such a lot of extra rigging.

The squaresail, which in English racing has mostly been superceded by the spinaker, here holds its own, and probably is better than the last-named sail for the short runs which occur in harbor racing.

Of large or even medium-sized yachts there are none, the small sizes proving more convenient for day cruising, which is all that is usually attempted.

The greatest amount of energy is shown in the open and half-decked classes, the general sizes being from 24ft. to 14ft. The half-deckers are a comparatively recent introduction, and are rapidly coming into favor, especially for pleasure sailing. They are worthy, wholesome little boats, and perhaps less over-sparred than the other classes.

The keel yachts and the centerboard half-deckers simply follow English designs, the open boats, however, are a distinctive local type. They seem to have been evolved from the ship's boats, with which the inhabitants were first acquainted.

The general form is an expanded V section, which, though not in itself a good form for stability, can be kept right side up by unlimited beam and plenty of live ballast, and seems to suit the short seas of the harbor very well. One peculiarity of the boats is the great width of the transom, adopted probably to gain room for sitting to windward.

For sail-carrying power they depend wholly upon the live-weight of the crew, consisting of as many men as can find room on the gunwale between the rigging and the transom, the top rail being extended in width by pieces worked to the outside, in order to afford a seat for them.

A few years ago the sprit rig was in favor, but it is now almost entirely superseded by the sloop. Lug sails are never seen, and there is a remarkable absence of experimental and fancy rigs. For some reason the local genius does not favor novelty, either in design or rigging. The main idea is to carry sail, and to have as long a boom and bowsprit as possible; so that one sees some of the boats sailing for hours with their sails half shaking, rather than carry less, and the clue of the mainsail dragged out on a great pole of a boom, of which the last few feet serve to extend about as many square inches of canvas. This custom of over-canvassing has grown to such an extent that in a race with a good breeze it is not uncommon for half the starters to "turn turtle," at least in the smaller classes, and the curious thing is that the men don't seem the least ashamed of it, but seem to think they have done rather a smart thing. In the handling of the boats they are very skillful, and can get a great pace out of them as long as they can keep them on their legs, though no doubt much speed is wasted by sailing such beamy craft at an excessive angle of inclination.

It would be interesting to see what success these boats would have against one of the Thames gigs with balance lug sail. Probably they would beat the Kingston crafts; but there are a few on the lower river which would have a very good chance with them. Perhaps some day a crew will take their boat to England and try this question.

The 14ft. class is practically the smallest, though there are boats as short as 8ft., rigged and sailed just like the others.

In all classes centerboards are carried, generally being of great depth and size. This is perhaps an error, as a moderate area will keep a boat to windward and offers less resistance. The reason probably of the large centerboards is this: Being made of iron, their weight acts as a metal keel would do, and, accordingly, it is found that the larger they are the better the boats will sail to windward. This effect, due to the weight, is attributed to the area; and, accordingly, the large boards prevail. Doubtless a smaller and thicker board, or one with lead inside, on Mr. Tyson's plan, would give better results.

A great many of the smaller boats are of canvas; not the tarpaulin affairs that one commonly connects with the name, but very smart and handsome craft. They are lightly planked all over, without any attempt at being watertight, and canvassed over the planking. By careful painting and filling, each coat being rubbed down with pumice stone, they have a beautifully polished surface, and if artistically colored, with a touch of the graining brush here and there, look almost as if they were hewn out of solid mahogany. This method of construction is very good, as the boats do not become leaky from the effects of the hot sun or from the strain of sailing, as wooden boats are apt to do. It would probably answer well for canoes. A curious thing is that, in spite of high wages and dear materials, boats are singularly cheap in Sydney. There are so many boat builders, besides numbers of ship carpenters and others who build a boat now and then at odd times, that the supply exceeds the demand.

Not much is done with canoes. The Sydney sailing men are very gregarious, and solitary sailing does not appear to be suited to their disposition. A few canoes have been imported from England, but the purchasers mostly seem discouraged by the complicated gear, and as the canoes do not perform well under sail at the first few trials—with an inexperienced crew and the gear all in a snarl—and take a long time to get under way, they generally are not much used. A few canoes are sometimes built here, but being made to any or no pattern, are seldom fit to carry sail, and being rigged with fore canvas only, of small area and ill fitted, and good for nothing on a wind, and are very uncomfortable, not to say dangerous, under sail. A canoe within the A. C. A. or R. C. C. dimensions, sailing in all weathers and holding her own with the other small craft on a wind, is a thing not to be seen here, but there are two or three of the Mersey type, nicely rigged and kept. There is at present no canoe club, but doubtless that is a matter for the future, and if we may judge from the energy shown in other departments of sailing, we may fairly anticipate that when canoe sailing once gains a hold it will go ahead rapidly. It will be seen, even from the above brief description of the water, that it is exactly the place for canoes, owing to the combination within a few miles of each other, of ocean, bay and river cruising grounds, a variety to which no other class of craft is so well suited. At present, however, though canoeists visiting the colony will doubtless find a welcome, we cannot offer them a chance of airing their racing flags, C. P.

BROOKLYN Y. C. ANNUAL REGATTA, JUNE 18.

THE annual regatta of the Brooklyn Y. C. was sailed on June 18, from off the club house, Gravesend Bay. The courses were: The course of Class C was crossing an imaginary line drawn from the judges' steamer to a markboat anchored in front thereof, at a distance of 200yds., to black buoy No. 7 on the lower end of the West Bank, leaving the same on port hand, thence home, crossing said imaginary line at the finish. Distance 12 miles.

For Class 2.—Start the same as above, thence to Southwest Spit Buoy 8½, leaving same on port, thence home, crossing said imaginary line at the finish. Distance 15 miles.

For Class 4.—Start as above, thence to Southwest Spit Buoy 8½, leaving same to port, thence to Black buoy 5 at Sandy Hook Point leaving same to port, thence return to Southwest Spit Buoy 8½, leaving same to starboard, thence home, crossing said line at the finish. Distance 19½ miles.

The times were:

THIRD CLASS KEELS.

Breeze, C. E. Paget	29.06	2 31 24	2 03 44
Lizzie F. Daly, Daly Bros.	26.03	2 33 20	2 07 35
Echo, Burwell & Isham	25.03	2 42 12	2 09 51
Prince Karl, E. L. Williams	29.01	2 37 58	2 09 57

THIRD CLASS CENTERBOARDS.

Atalanta, Isaac R. Thomas	27.08	2 37 25	2 08 05
Lizzie Warner, Thos. Lutted	25.02	2 48 37	2 16 44

FOURTH CLASS KEELS.

Volante, J. Minot Hall	22.05	2 37 44	2 02 37
Kitty, Tarbell & Adams	23.05	2 38 08	2 04 15
Thelga, H. L. Johnson	22.01	2 43 40	2 08 08
Saracen, W. P. Fowle	23.08	2 43 28	2 09 43

FOURTH CLASS CENTERBOARDS.

Posy, R. G. Hunt	22.00	2 35 13	1 59 34
Sea Bird, C. L. Joy	22.08	2 35 46	2 00 58
Black Cloud, A. Brown	23.07	2 34 46	2 01 05

Winners: Class 2, centerboards—Shadow, Vision; keels—Pappoose (*Globe* cup), Aglaia. Class 3—Breeze (K.), Atalanta (C. B.), Lizzie F. Daly (K.). Class 4—Volante (K.), Posey (C. B.), Kitty (K.), Sea Bird (C. B.). Regatta Committe—L. M. Clark (chairman), H. S. Carruth, Frank Gray, H. B. Callender, E. H. Tarbell. Judges—W. B. McClellan, C. Barnard, E. R. Tilton, A. J. Clark, J. S. Snell, H. Davenport and S. G. King. Much interest was shown in the comparative sailing of Shadow and Pappoose. The latter, a new cutter designed by Mr. Burgess, beat the centerboard sloop Shadow quite handily. Whether she will do as well with Shadow in stronger winds remains to be seen. Pappoose is a cutter of moderate type, an excellent craft for crusing and fast as a racer. She seems to be good proof that a properly designed keel boat can be made a good match for anything in the centerboard line. Posey, winner in fourth class, carried away her gafftopsail block and lost several minutes, but landed the prize with something to spare.

YONKERS Y. C. ANNUAL REGATTA, June 21,—Course to Tarrytown Buoy, 10 miles and return. There was no wind when the whistle sounded for the start, and the first boats over the line had the advantage of some catspaws, which gave them a lead which could not be overcome. About an hour after the start a good breeze from S.E. came up, which held to the end of the race:

CLASS A—SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Edith	10 58 30	3 22 15	4 23 45	3 54 35

CLASS G—CATBOATS UNDER 16FT.

Daisy	10 41 52	2 04 20	3 22 28	3 22 28
Uncle Jake	10 41 52	Did not finish.		

Prizes were awarded in the evening.

KNICKERBOCKER Y. C., June 18.—The Knickerbocker Y. C. has among its fleet a very good lot of cabin yachts of small size, and for the encouragement of this desirable class of boat the club has started a series of races open to them alone. The first of these was sailed on June 18, the course being from the club house at Port Morris, around Fort Schuyler buoy and return. All got well away at 2:40, only Ianthe being handicapped. The times at the turn were:

Nanita	4 00 00	Weary Wish	4 07 09
Thisbe	4 01 45	Gem	4 14 41
Idalia	4 02 58	Surprise	4 14 35

The full times were:

CLASS A.—CABIN SLOOPS AND CUTTERS UNDER 24FT.

	Start.	Finish.	Elapsed.	Corrected.
Weary Wish	2 40 25	6 12 50	3 32 25	3 32 25
Nanita	2 42 00	6 19 11	3 37 11	3 34 31
Ianthe	2 45 00	6 37 00	3 52 00	3 49 35

CLASS B.—CABIN CAT YAWL RIGGED YACHTS UNDER 26FT.

Gem	2 43 47	6 39 20	3 55 33	3 55 33
Raven	Did not finish.			

CLASS C.—CABIN CAT RIGGED YACHTS UNDER 26FT.

Surprise	2 42 00	6 34 15	3 52 15	3 52 15
Idalia	2 41 28	6 18 09	3 36 41	3 35 43
Thisbe	2 40 26	6 18 31	3 38 05	3 35 07

CAPE ANN Y. C.—Race set for July 4 will be sailed off Annisquam.

ROYAL NOVA SCOTIA Y. S. RACE, June 11.—Course No. 2, starting from H. M. lumber yard to buoy in Dartmouth Cove, thence to Man's Rock Buoy, leaving these marks on starboard hand, and finish off H. M. lumber yard, distance 10 miles 8 cables. Weather fair, fresh southerly wind, tide on the ebb. Summary:

	Length.	Start.	Finish.	Elapsed.
Halicia, cutter, Capt. S. Scott		2 2 22	4 34 25	2 32 03
Hebes, cutter, Capt. S. Scott	25.0	2 3 34	4 31 23	2 27 29
Psyche, cutter, Capt. Russell	24.2	2 3 16	Gave up.	
Wenonah, sch., J. Fraser, et al.	45.1	2 2 51	4 26 05	2 23 14
Phantom, sloop, H. M. Wylde	24.0	2 1 00	Broke rudder head.	
Daphne, sloop, F. H. Bell, et al.	23.7	2 1 25	4 43 58	2 52 33
Mentor, cutter, Wm. Black	20.6	2 1 59	Gave up.	
*Lenne, sloop, H. C. MacLeod		2 4 00	4 42 59	2 38 39

*Carried away bobstay. Hebe wins first prize, Wenonah second and Daphne third. Flag buoy in Dartmouth Cove lies south N.N.E. from starting line; Man's rock lies about due south from flag buoy in Dartmouth Cove. The yachts are not yet measured under new measurement (Y. R. A. rule) lately adopted by the squadron. Officers of the day, Rear-Com. W. H. Troop and F. C. Sumichrast.

AMERICAN Y. C. FIRST REGATTA, JUNE 11.—Course from stakeboat off city wharf around the inner can buoy and return, thence to the inner Hunf sands buoy, around a stakeboat off Ocean avenue and return to city wharf. Distance 10 miles. Weather fair and warm. Wind east, changing to east south east:

	Length.	Start.	Finish.	Corrected.
Freak, W. C. Thompson	21.01½	1 03 00	2 49 28	2 49 28
Teaser, Teel & Follensbee	20.05½	1 03 00	2 48 01	2 47 05
White Cloud, Rodgrass Bros.	17.11	1 03 00	2 46 13	2 44 29½
Budge, Paul J. Lowell	19.00	1 03 00	2 45 45	2 42 37½
Thorn, Lincoln S. Coffin	18.05½	1 03 00	2 44 40	2 40 39½
Clio, Elbridge G. Woodwell	17.05	1 03 00	Did not return.	
Hustler, C. S. Shackford	16.00	1 03 00	Did not return.	
Me Too, Ives & Pillegrew	16.00	1 03 00	Did not return.	

Regatta Committee, Henry T. Moody, Nathan Rodigrass and Lincoln S. Coffin. Judges, Elisha P. Pride, John W. Sargent, William E. Chase.

CAPE COD Y. C., June 17.—Course from stakeboat off East Dennis, around buoys on Shoal Ground to stakeboat off Brewster back to starting point. Weather, calm and rainy before the start, but clear at the starting time. Wind, N.E., veering to S.E., fresh breeze. Tide, ebb at starting, flood at finish. Summary:

	Length.	Start.	Finish.	Elapsed.	Cor.
Nobscusset, L. Hall	23.08	1 26 15	3 31 05	2 05 00	1 28 05
Madge, Cumming & Howe	23.05	1 25 45	3 29 08	2 03 23	1 26 07
Ariel, H. H. Leais & Co	21.06	1 26 00	3 37 50	2 11 50	1 31 54
Guinevere, V. D. Bacon	20.10	1 27 30	3 49 45	2 22 15	1 41 19
Fawn, Jas. Smith	23.00	1 28 45	4 12 10	2 43 35	2 05 46
Daisy, H. E. Radford	18.04	1 31 15	4 11 50	2 40 35	1 55 28
Gracie, J. Crowell	17.11	1 30 45	4 03 20	2 32 35	1 46 42
Magic, T. P. Lewis	17.10	1 30 45	3 57 55	2 27 10	1 41 08
Iris, E. D. Crowell	17.08½	1 30 30	3 56 15	2 25 45	1 39 29

Madge and Iris take firsts, Nobscusset and Magic second and Ariel and Gracie third. Regatta Committee, D. W. Sears, Edgar Lincoln and E. Small.

HULL Y. C. PENNANT REGATTA, JUNE 8.—The first pennant regatta of the Hull Y. C. for the year was sailed on June 18, the courses being 6 miles. The wind was light from east. The times were:

SECOND CLASS KEEL SLOOPS.

	Actual.	Corrected.
Lizzie F. Daly, Daly Bros	1 16 39	0 58 24

SECOND CLASS CENTERBOARD SLOOPS.

Atlanta, J. R. Thomas	1 11 55	0 54 16

THIRD CLASS KEEL SLOOPS.

Zetta, H. E. Fowle	1 27 46	1 05 09

THIRD CLASS CENTERBOARD SLOOPS.

Mabel, F. L. Dunne	1 20 32	0 57 24

FOURTH CLASS.

Rocket, H. Faxon	1 24 18	0 57 11

PORTLAND Y. C. ANNUAL REGATTA, June 15.—Course: Down the harbor, leaving buoys on Stanford and Spring Point Ledges on starboard, House Island on port, out by White Head ship channel, leaving outer Green Island on starboard, thence to buoy No. 9 on Trundy's Reef, leaving it on starboard, and in ship channel, leaving Jordan's Reef buoy on starboard, to the starting point, 18 miles. Weather cloudy on start, with showers. Wind, S.S.W. Tide, ebb.

SECOND CLASS SLOOPS.

	Length.	Start.	Finish.	Corrected.
Warren, J. W. Frye	36.08	11 01 50	Did not finish.	
Willie, J. F. Stubbs	31.10	11 02 21	2 49 20	3 02 19
Marie, Geo. A. White	30.3½	11 02 21	3 10 47	3 20 26
Millie, E. S. Paul	30.07	11 01 43	2 42 12	2 51 21

Regatta committee and judges: F. L. Mosley, H. R. Virgin, H. P. Larrabee, P. R. Slevin.

TORONTO Y. C., June 11.—A race was sailed at Toronto on June 11 between the small cutters of T. Y. C., the starters being: Verve, Cyprus, Rivet, Yolande (schr.) and Escape. The course was to Port Dalhousie. The start was timed:

Verve	3 01 00	Escape	3 02 45
Yolande	3 01 30	Cyprus	3 03 55
Rivet	3 02 30		

Cyprus was handicapped 4 min. but soon made it up, taking second place, but losing ground later on through an accident to her topmast rigging. The finish was timed:

Verve	6 51 50	Yolande	7 35 00
Cyprus	7 05 15	Escape	8 15 00
Rivet	7 15 32		

Verve beat Cyprus 2m. 5s. corrected time.

DORCHESTER Y. C. 99TH REGATTA, JUNE 14.—Course, the club course in Dorchester Bay. Weather clear. Wind east and strong. Tide flood:

	Length.	Elapsed.	Corrected.
Mabel, F. L. Dunne	20.01	0 53 19	0 38 00
*Teaser, J. Colter	21.04	0 50 45	0 36 13

*Teaser ruled out for being over 21ft. The Mabel consequently had a walkover and wins the cup. The boats only sailed over half the course according to the decision of judges. Judges, A. J. Clark, E. Rockwood Tilton and H. Davenport.

CORINTHIAN SAILING ON THE DELAWARE.—*Editor Forest and Stream:* One of the gratifying features of the Quaker City Y. C. race, 13th inst., was that amateur yacht handlers win in every instance over experts of other days. Winners, Minerva, No. 1, Capt. R. Thomson, first class sloop, with a pure Corinthian crew; Leda, second class sloop, H. Clay Funk, Commodore Cooper's Point Corinthian Club, and crew from same club, distancing all but the two first class sloops, and first in the fleet if time allowance was applied irrespective of class; Minerva, of Trenton, third class sloops, Rear-Commodore W. H. Mickel; Comfort, fourth class sloops and cutters, J. Chatten. The little cutter Lark, Capt. Whitehead, much the smallest boat in the fleet, a perfect picture of boat beauty, pleased every one by her stiffness and fine sailing, came in No. 2 in her class. These boats are singlehand cruisers, and next year will find this class for outreaching all others in the club, in numbers at least, thanks to your able yachting editor. Professionals will hereafter look on and learn. As usual, the Trenton contingent takes home their quota of prizes. The schooner yacht Helen, C. Middleton, hurried the first class singlestickers without setting light sails, as she unfortunately had no competitor. Yet she behaved wonderfully well, especially in the baffling airs on the home stretch. Racing regulations, first, a flying start. The very best get-away of the club. Second, course (another departure from the old rules) proved a complete success, enabling modern yachts of deep draft to successfully contend with the "dish," who with lifted board can no longer shirk the opposing tide along in the "can docks," or jump a shoal to avoid a back stretch. Third, new measurement rules; they have been corrected and revised so as to apply to local necessities, and work admirably. The gentlemen of the regatta committee, Messrs. Bancroft, Wilson, Works, Wood and others deserve great praise for their untiring energy in bringing about these grand results. The Q. C. Y. C. has now a future of its own. —R. G. W.

COHASSET Y. C.—This new club held its first meeting last week, a constitution and by-laws being adopted. Mr. Lawrence Barrett has presented the club with a large landing float. W. E. Crocker is the commodore, the committee being: Executive committee, William E. Crocker, Frank R. Pegram, Harry E. Mapes, Edgar Bullum, George Jason, Henry Brennock, Thomas S. Grassie; regatta committee, John Ainslie, John J. Grassie, Manuel F. Grassie.

GREAT HEAD Y. C.—The Great Head Y. C. sailed its first open regatta of the year off Winthrop on June 11. The winners were: First class, Black Cloud, Good Luck and Thelga; second class, Em Ell Eye, Topsy, Tarter, Mabel, White Wings; third class, Victor, Zoe, Scamp, Rocket, Wildfire; fourth class, Topsy, Mist and Etta.

ZOE—VICTOR MATCH.—A private match was sailed last week over an 8-mile course between these two boats, the time being: Actual, Zoe, 2.1.10; Victor, 2.2.28. Corrected, Zoe, 1.28.41; Victor, 1.28.2. Judges, James Bertram and Percy E. Burns.

LENORE.—A new yacht by this name has just been added to the fleet of the Royal Nova Scotia Y. S., being designed by her owner. H. C. McLeod, who also designed the Meteor, a very successful boat. The dimensions of Lenore are:

Length over all	32ft. 6in.
Length on waterline	27ft.
Breadth on waterline	7ft. 5in.
Greatest breadth	7ft. 11in.
Draft of water	4ft. 6in.
Area load water plane	129sq. ft.
Area wetted surface	261sq. ft.
Area lower sails per sq. ft. of wetted surface.	3.03sq. ft.
Displacement	10,800lbs.
Ballast on keel (lead)	5,821lbs.
Mast from fore side of stem	8ft.
Mast, deck to hounds	21ft. 6in.
Pole of mast	13ft.
Diameter of mast at deck	5½in.
Main boom	29ft. 6in.
Main gaff	18ft. 6in.
Bowsprit outboard	12ft. 6in.
Area of mainsail	560sq. ft.
Area of jib	230sq. ft.
Area of topsail	150sq. ft.

The Lenore was built by Messrs. Chambers, Turner & Layton, of Truro. She made her first race last week, but was beaten, having lost her bobstay by collision with a rowboat before the start, and so being unable to carry full sail.

FORM OF YACHTS.—Extracts from Prof. R. H. Thurston's article in the June *Forum* are remarkable for the coincidence of their conclusions with those set forth at length by Mr. C. P. Kunhardt in "Small Yachts," especially the conclusion that no "best" proportion of beam to length exists, but that beam should vary with depth or with displacement dependent thereon. Prof. Thurston further concludes that one type is as capable of speed as the other, just what Mr. Kunhardt has strenuously insisted upon throughout in the pages of this journal as well as in the books he has written, having for a long time been the only person to take this stand. As to the comparison with fishes, we cannot place much weight upon the deductions, because fish are modifications upon the form of least resistance in consequence of the structural demands created by propulsion by the tail and after body. Hence in fish the greatest section is further forward than it should be in yachts. Apart from this, the causes of resistance to progress of wholly immersed fish and semi-immersed vessel are different and demand different solution. Questions of stability, etc., other than those of resistance must receive consideration in the vessel but not in the fish, so that the analogy should be accepted with great caution. We welcome Prof. Thurston's article because it is such absolute substantiation of the position taken by this journal for many years, and will tend to enlighten the public, as we have been seeking to do.

LORNA-NAHLI MATCH.—A third match will be sailed to-day between the open boats Lorna, E. J. O'Gorman, and Nahli, W. E. Conner, from Sand's Point, 10 miles to windward and return, with Capt. Geo. Mackey as referee. In the first race, sailed last fall, Lorna only won by 2-5s., and it was agreed to call it a draw and sail again, which was done, Nahli losing her sandbags and Lorna winning. The two are very evenly matched, Lorna being 24ft.5in. l.w.l. and Nahli 24ft. 3in. The former will be sailed by Captain Samuel Travers and a picked crew of boatmen from Cow Bay, and Nahli by Captain Samuel Seaman with crew also from Cow Bay.

PAPPOOSE.—This new cutter by Burgess captured the *Globe* cup last Friday and is now the talk of Boston. Possibly she is the forerunner of a new lot of similar craft.

"GLOBE" DAY.—The entries for the prizes offered by the Boston *Globe* will run above one hundred and a big match and evening fete may be looked for Saturday.

REGATTA AT BAR HARBOR.—The date of the open regatta at Bar Harbor has been fixed for Aug. 25, and $1,150 will be given in prizes. There will be two classes for schooners, prizes $250 and $200, and four classes of sloops, prizes $250, $200, $150 and $100. The details are in the hands of Admiral Padelford, Cor. Y. C.

HALIFAX REGATTA.—A meeting was held at Halifax on June 14, at which it was resolved to offer a cup to cost $750 for a race to be sailed between Aug. 1 and 15, open to all yachts from the United States and Canada. Galatea and Stranger will be present and other yachts from the States are expected.

ATLANTIC.—The pride of Bay Ridge was hauled out at Mumm's last week for more lead on her keel. Her joiner work will also be completed before she leaves the basin, as thus far she has been but partly finished inside. She will not meet her class before the cruise of the Atlantic, or perhaps the New York Y. C.

THE JUBILEE RACE.—Since the start on June 14, the fleet has been lost in fog and little is known of the leaders though it is supposed that Genesta is ahead. The English yacht Dauntless, ketch rigged, one of the competitors, was run into by the steam yacht Pandora and disabled.

VIXEN.—The Vixen, well known as a fast sloop, has become the property of W. G. Loring of Boston. Vixen was originally a Bob Fish model, but has been raised in the side. She is probably as smart as anything of her length, and about a match for the Fanita.

BAY VIEW (MASS.) Y. C.—Match last Friday in light wind. In first class, over 28ft., N. & S. won in 1.52, corrected time, beating Jennie, Trio and Hager. In second class, under 20ft., the catboat Flash won in 1.27, beating Alice, Annie, Dolsie, Kit and Goat withdrawn.

DAUNTLESS.—This American schooner is not sailing in the Jubilee race around Great Britain. The Dauntless, reported run into by a steamer, is an English yawl of 163 tons.

MELUSINA.—Horace Binney's cutter, previously illustrated in this journal, has been launched after being two years on the stocks, her owner having been in Europe.

IREX AND THISTLE.—In the match at Liverpool on Saturday Thistle beat Irex easily in light weather. The details of the race have not yet come to hand.

WHISTLEWING.—This Hamilton cutter has been purchased by Andrew Rutherford, of Toronto. The T. Y. C. now has the largest fleet on the lakes.

SHEERWATER.—This is the name of the new steel steamer built for John M. Forbes by the Atlantic Iron Works, of Boston.

UNDINE.—This old-time New York sloop will be sold at auction Saturday, at Lawley's, South Boston.

TORONTO Y. C. will arrange a jubilee race at Niagara, July 2, open to all over 25ft. sailing length.

Flash, the finely-bred setter owned by Dr. C. A. Packard, of Bath, has a favorite house in the city which he often visits. The other day he was there at the dinner hour, and, civil dog that he is, he waited till the family rose from the table, when he made his presence known and was at once admitted as a welcome guest. One of the family, a lady, is very fond of Flash, and he reciprocates the kindness shown him. The lady is a great knitter, and as soon as Flash entered the hallway he passed to a room, secured the lady's knitting work, and brought it to her. Finding that the ball of yarn was not with it he at once returned and secured that also, and then laid himself at the lady's feet while she went on with her work.—*Brunswick (Me.) Telegraph.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

H. V. W., New York.—A.

C. A., Alston, Mass.—We never decide bets.

J. R. S.—The designer will not allow the lines to be published.

M., Roslindale.—Prince Waldemar is by Crown Prince and out of Negress (Colonel—Ida).

SMOOTHSKIN, Toronto.—The challenge trophy will be raced for but no intimation has been received from the British canoeists that they will be present. There will be a mess-room, but no boarding house at the camp.

MORTON, Los Angeles, Cal.—If a gunner steps to the mark, says "pull," the trap is pulled, the bird flies, he pulls the trigger, finds his gun not cocked, cocks his gun and shoots the bird in bounds, is it a dead bird or lost bird? Ans. Dead bird.

C. G. and W. B. B., Brooklyn.—Nothing will remove mildew from sails without injuring the fabric. See receipt for liming sails, FOREST AND STREAM, Sept. 13, 1883. Only constant care will prevent mildew, drying thoroughly every time they are wet.

W. H. B., Nashua, N. H.—A friend has a litter of pointer puppies one week old, one of which is entirely white, not a mark or spot of any description. Is not this unusual? Will his coat change as he grows older? Ans. It is not very unusual. He will probably show ticks as he grows older.

P. P. L., Morgantown, N. C.—Please inform me as to the best bait and methods and time for catching German carp. I am living near a large pond which was stocked five years ago. Few have been caught, some weighing as much as 10 to 12lbs., but they were in shallow water. I have caught a few with angle worms, but they were small. Ans. Carp will take boiled peas, potatoes, flour worked into wet cotton, and other baits. See account in this week's issue of taking them with bread crust.

TARGET.—The dimensions of the Creedmoor (National Rifle Association) targets: First Class, up to and including 300yds.—Bullseye, circular, 8in. diam.; center, circular, 26in.; inner, circular, 46in.; outer, remainder of target. 2. Second Class, to be used at all distances over 300 to and including 600yds.; target, 6x6ft.—Bullseye, circular, 22in diam.; center, circular, 38in.; inner, circular, 54in.; outer, remainder of target. 3. First Class, to be used at all distances over 600yds.; target, 6x12ft.—Bullseye, circular, 36in. diam.; center, circular, 54in.; inner, square, 6x6ft.; outer, remainder of target. The count and circles of the Massachusetts decimal and the standard targets are:

Count.	Mass. Decimal. diam. of circles.	Standard.
10	3 in.	3.36in.
9	5¾in.	5.54in.
8	8 in.	8.00in.

The Fluttering Fly.
PATENTED MAY 4, 1886.

THE FLUTTERING FLY.
Patented May 4th, 1886.

With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fishing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are:

1st—The wonderfully life-like and fluttering motion this fly has when moved on the water.

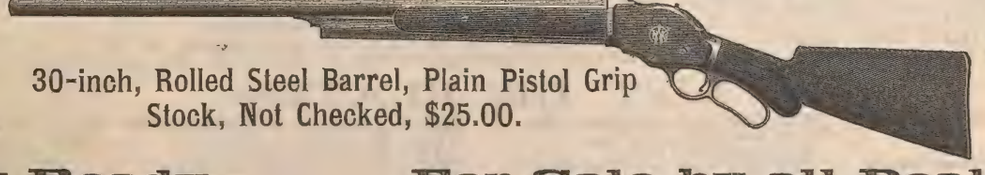
2d—The fish is almost certain to be hooked if it touches the fly.

3d—Any of the present favorite combinations of color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style.

4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that flies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies.

We take this means of notifying dealers and fly-tyers that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure such people that the same old course will be pursued by this firm.

We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentlemen into our advertisements.



Scientific American: "When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish."

Forest and Stream: " * * * more like a natural insect than the old patterns whose wings close when being drawn through the water. * * * Great merit lies in its superior hooking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly."

American Angler: "There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than by color or form. * * * This fly will certainly, when drawn against the current or over a placid pool, *seam* the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * * We are told that few fish are lost by those who use this fly. We do not doubt it."

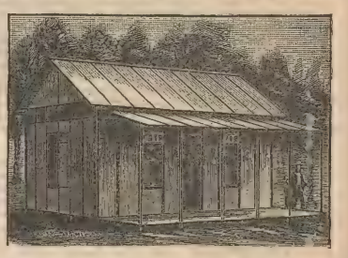
My beautifully illustrated circular now ready. Send stamp for price list. Address S. HEMMENWAY, 60 South st, N. Y. City.

CANOE HANDLING.



By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the large sale of this magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

LIST OF PLATES.

I. The Sloop Yacht Schemer.

"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

FOREST AND STREAM PUBLISHING COMPANY,
39 Park Row, New York.
LONDON: DAVIES & Co., 1 Finch Lane.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING Co., 39 Park Row
LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

Forest Runes.

—BY—

GEO. W. SEARS.

("NESSMUK.")

Adirondack Preserve Association.

The Association was incorporated last year, having for its object the encouragement of social recreation, and of boating, fishing, lawful sports and the preservation of game and forests. The club house is situated in Essex Co., close to Mink, Thumb, Beaver, Loon and Moose Lakes, and is to be kept open the entire year so that members can take advantage of any portion of the fishing and hunting season, winter or summer. Photographs of the lakes and principal points of interest can be seen at the office of the Association. The membership is limited and the initiation fee $100. Applications for membership may be made to J. G. CASE, Secretary,
178 Broadway, New York.

ANSWERS TO CORRESPONDENTS.

PROTECTING THE BIRDS.

THE interest in bird protection, which last year led to the formation of the AUDUBON SOCIETY, continues to increase, and the publication of the *Audubon Magazine* has added greatly to this interest. We are told by the Secretary of the SOCIETY that on June 30 its books show a registered membership of 36,000. This is just twice as many as the SOCIETY had Jan. 1 last, showing that in the six months just past as many members have been added as joined it during the first eleven months of its existence. This is but natural, when it is remembered that each member added to the roll is another missionary ready to preach protection for our useful birds.

Among farmers a prejudice against crows, hawks and owls still exists, but this feeling is yielding slowly to the efforts which are being made to show that these birds are more beneficial than injurious. It is so much easier to see the evident harm sometimes done by these birds than to estimate the silent, unnoticed services which they are constantly performing for the agriculturist. A number of trained observers are now studying this particular question, and it seems probable that within a year we shall have an amount of evidence on the subject which will convert even the most obstinate enemies of the crows and the owls into their warm partisans.

Measuring the future by the past, a still greater interest in our birds may be looked for, and as this interest increases and the services of the birds to man are more generally appreciated, protection will follow, and on the heels of protection will come the reward to the farmer in increased crops and in many other ways. If the senseless craze for birds in hats has been finally killed, one great motive for destruction will have been removed, and so protection will be made more easy.

It is difficult to over-estimate the good which the *Audubon Magazine* is accomplishing. It teaches the lesson of kindness, of humanity and of man's best interests in simple, practical fashion, and so entertainingly that the reader is unaware that he is receiving instruction. Its essays and stories fascinate young and old alike, and it has attained a success which is quite without precedent. No doubt it has before it a long and profitable career.

PADDLE YOUR OWN CANOE.

NOW that the annual meet of the American Canoe Association is in prospect, canoeists are setting their wits to work to devise arrangements for the transportation of their craft to the camp. The average canoe is not an ideal piece of baggage, and while on some of the Eastern railroads managers agree to carry canoes free just as they transport a passenger's trunks, the subordinates, who do the handling, look with no favor on the delicate craft committed to their charge. Owners find it advantageous to "soap" the baggage-smasher; for if liberally feed, say to the extent of an outlay equal to what the freight or expressage would be, he shows some consideration for the canoe and stays his hand. At best, however, a canoe does not fit well with heavy trunks, and the wise canoeist will personally look after his charge when transfers are to be made. It is the safest rule to paddle your own canoe when traveling by rail, lifting it to and from the baggage car yourself. If one feels peculiarly philanthropic he may also look out for the canoes of others who happen not to be along to take care of them themselves.

An instance of this came to our notice last year when two canoeiets from New York were on their way to the meet. In the baggage car along with their own canoes was a heavily-laden craft, whose owner was not on hand to look out for it. The two New Yorkers, prompted by fraternal zeal, hurried to the baggage car at every change, carefully lifted the heavy canoe and put it as carefully in place again; and at length saw it safely through to its destination, where they gave it the final lift and deposited it unscratched and unracked on the platform. Then emerged from the smoking car the owner, who tranquilly sauntered up to express gratification that his canoe had come through so nicely. The two philanthropists of the paddle then and there entered into a solemn compact for the future to let every brother paddle his own canoe.

DOGS IN THE CITY.

THE New York ordinance relating to dogs prescribes that every dog must be licensed and in public must be fastened to its attendant by a chain not more than four feet in length. Official dog catchers go about with a crate on wheels, capture unlicensed dogs and those which are loose in the streets, and take them to the pound, where, unless redeemed by their owners, they are drowned in the East River. A dog owner, who has evidently been a victim of the official dog catcher's zeal, addressed an inquiry on the subject to the Mayor last week, and received the following reply:

> You complain that your dog license does you no good. The answer is that it enables you to keep a dog, for without a license he would be seized and killed. With a license he may also be seized and killed, and properly so, if he is not muzzled, or held by a chain not longer than four feet. So far as the latter precaution is concerned, I have a case before me to-day in which a dog so chained and held by a boy has bitten a child, whose parents are naturally very greatly distressed. The truth would seem to be that right-minded persons should refrain from keeping dogs in the city. So far as my judgment goes, I would recommend the passage of an ordinance prohibiting the existence of dogs in the city of New York. In the mean time, however, I am doing what I can to keep the dog catchers under proper restraint, but if they should report to me that they had managed to destroy all the dogs, licensed and unlicensed, in the city, I should feel no personal grief.

To this the owner returned the following retort courteous:

> The character of your response to mine of the 21st I naturally anticipated in writing you originally. A man who would deliberately endanger the life of car horses, would manufacture as a private citizen tracks he could condemn as Mayor, who would revive dead laws for political reasons, would approve every action calculated to abridge the liberty of the citizen, as you have done. The publication of such a letter as yours of yesterday encourages thugs and ruffians by the knowledge of your support, just as your previous acts have encouraged our sanctimonious fanatics in the city to hope for absolute despotism under your proselytizing administration.

The dog question has thus, it will be seen, assumed importance as one of the political issues of the day. Probably Mayor Hewitt did not think three times before expressing his opinion on dogs. A discreet politician would have foreseen the strength of the love-me-love-my-dog principle in city elections as everywhere else; and after duly balancing the strength of the dog faction and the anti-dog faction, he would have maintained a secure perch on the fence and written a letter pleasing to both sides. As it is now, men in the street cars and other public places have freely expressed a determination never again to vote for Mr. Hewitt, since he has shown so little respect for their four-legged friends.

There are two sides to every question; and there are dogs and dogs. If the number of dogs whose taking off would have given the Mayor satisfaction had been limited by him to say a round ten thousand, few sensible citizens would have found fault with him. The Mayor is a victim of insomnia, has perhaps been kept awake at night by barking dogs, and can speak feelingly on the subject. A man's sleep is certainly of more importance than a dog's bark; and if the two cannot harmonize the bark must be suppressed. The law provides that if two citizens complain of a dog as a nuisance the police magistrates may order the canine nuisance abated.

The newspaper discussion of the dog question has recalled the fact that when Caleb Cushing was in Washington preparing the case of the United States against England in the Alabama claims, the eminent jurist was so disturbed by canine concerts at night, that he was unable to proceed with his work, and so it came to pass that either the dogs must be suppressed or the Government lose its $15,000,000. The dogs' owners were proceeded against, and bound over to keep the peace; but the serenades continued, and Mr. Cushing at length set about securing the enactment of laws to abolish dogs entirely and drive them out from Washington. Happily or unhappily for that city, the proceeding was interrupted by Mr. Cushing's departure from the city, whose dogs have multiplied ten fold since then, and will bay the moon with unabated yelp until another Alabama shall compass their ruin.

SNAP SHOTS.

THIS is the time of year when every one who can get away goes fishing, and it has come to be so common for a business man to take a day or a week off, that absence from desk or counter almost presupposes a fishing trip. A Michigan member of the "American colony" of runaway thieves in Montreal had occasion the other day to go to Coaticook, which is only ten miles from the Vermont frontier. A detective met him there and explained that the man he had come to see was absent on a fishing excursion, and he offered to drive the defaulter out to the pond. The Michigan man went along, but the route led over into Vermont, where the cunning detective promptly arrested him, and now he takes no interest in angling literature.

The inter-State commerce law has interfered disastrously with many fishing excursions. Your "true angler," whose pocketbook once bulged out with passes, has had occasion this season to restrain his fishing ardor within stricter limits than before; and editors have relief from the enterprising geniuses who were formerly eager to "write up" fishing resorts in consideration of railroad passes. In the palmiest days of dead-heading, however, only one sportsman tourist out of a thousand rode free. Railroads and steamboats have drawn immense revenue from passengers to and from shooting and fishing resorts.

A Philadelphia family have been poisoned by eating canned salmon. It appears that the salmon was all right when first opened, but it was allowed to stand forty-eight hours exposed to the hot and humid atmosphere, and by that time it was in a condition to poison a whole town, just as any other salmon, canned or uncanned, would have done. As canned goods constitute an important element in the camper's supplies, it is just as well to remember that canned meats and fish should be eaten when first opened.

The highest praise a recent obituary writer could give was summed up in these words: "He did more than any other person in this region to improve the breed of sporting dogs, and in this connection it is a sad pleasure to repeat that he was so highly esteemed for his conscientious and honest judgment of sporting matters that he was always sought to act as judge of field sports and bench shows, everybody being willing and anxious to have him decide such matters. His decisions were never called in question."

Men who enter their dogs at field trials and bench shows have a right to look for fair and honest treatment in these affairs just as they look for fair and honest treatment in business.

The Sportsman Tourist.

IN THE CHEROKEE STRIP.--II.

IT was an icy and blusterous air which greeted us on the morning of our stay at the Eagle Chief Pool. Our fingers stiffened as we harnessed up our team, and our faces were covered with icicles before we had gone half a mile. It was, indeed, so cold that we made a late start; it was well on toward ten o'clock when we said good-bye to young Mason, promised to "pull in when we went north," and started on down toward the Cimarron. A brisk trot soon warmed up our shivering horses, and then we took turns on foot and warmed ourselves up. We kept the greyhounds in the wagon and tied up the foxhounds, thinking it better to freeze them than to have them poisoned. This precaution we kept up until within about six or eight miles of our destination, when, thinking we were through the poison belt, we turned the dogs all out on the Holmes range, which we afterward learned was precisely the most dangerous place in the whole country! None of them found poison, however, although Mr. Allison turned gray in a single night when he learned what a risk he had run.

As we traveled on down through the country we had ample chance to see the disastrous effect the recent great fires had had on the range. Thousands and thousands of acres lay black and desolate behind us and presently we could see a vast burned strip on the other side of the Cimarron. We traveled for a long time through the pasture of the "Drum outfit." The upper Drum pasture lies just below Kiowa and embraces 110,000 acres. The lower range, through which we were now passing, comprises 300,000 acres. Here be figures. And all of this vast area is under fence. And upon the upper range at least, sleek and happy cattle in such numbers that you can't hunt coyotes in any comfort among them. There are, I believe, thirty odd thousand cattle on this range. Such cattle as we saw as we went down into the country were looking in very good order. There was none of the sad picture of death and desolation which we saw along our road on a trip into the Panhandle last spring—product of last winter's terrible severity. This winter of 1886-7 has been a very mild one in the Southwest for the most part and the cattle on the finely sheltered range of the Strip have come through splendidly.

About the middle of the afternoon we entered the timber of Wildcat Creek, and knew we were approaching our destination. The country now had an indescribably gamy look. Thick brakes and swamps appeared along the road; upon the right, dark masses of "black jacks" hung over the low hills; to the left stretched out long rows of sandhills; while ahead of us, through occasional gaps in the timber and of the boundary wall of the sand bluffs, we could see the picturesque southern breaks of the Cimarron, blue-black and rugged—Round Mountain, fifteen miles to the east; Gloss Mountain to the right of that; and their long, flat mesas, jagged, scar-faced bluffs and more ragged half-turrets, all the way up to the right and out of sight. The impression was one of a wild and unfrequented country, whose echoes never had been, and never would be, wakened by the sound of the church-going bell. For myself, I am never quite happy within the city limits. A little more wilderness, please. And now I could feel my blood hum a little and I began to grow quite comfortable. Fiend Business, said the vagabond of me, thou wilt have a hard time to find us these two weeks now here in the breaks of the Cimarron!

We crossed Wildcat Creek in a pleasant little open level; twisted around among the sandhills for three-quarters of a mile further, following the trail, and finally came out on a hill, whence we could see the broad bed of the Cimarron, with its tangled threads and splashes of silver, and with its rough bluffs upon the further side. At the same time there also came into view the rude inclosure of the corral, and nestled in the big trees upon the river bank the long, low ranch building and the stables of the home camp of the 21. With a rush we went down the intervening space, and soon were out of the wind in the nook by the house and exchanging greetings with a certain very well-fed and hearty young man, who came out in his shirt sleeves, as if he didn't know it was cold. This was S. P. Chestnut, in charge during Mr. Kirkpatrick's absence. The ranch name of this gentleman was "Red," and so we all called him. Baptismal records are at a discount on the range.

We turned our horses into a stable, which was made of split logs. Behind each stall there was stretched, on the inside, a big raw hide. The tails of these hides stuck out between the roof and the top of the wall, and waved gracefully in the breeze. It looked as if a row of cows had crawled through the crack up there. It was very hard to understand at first. This was the only attempt at ornament I observed about the stables.

On looking about the premises, we found the *raison d'être* of the camp in a beautiful little "spring branch," which gushed out of the bank just below the ranch house. This bold spring of clear, sweet water was caught in a little reservoir, and passed through a log "spring house," where it kept cool, and at the same time kept warm—for its water never freezes—certain jars of milk and butter; for, on this Elysian ranch, milk, butter and eggs are actually produced and used—a thing unheard of on the range. This little stream riffled and bubbled along, furnishing cover for schools of minnows, which we could see playing about under the logs, and after a short course of perhaps 75yds. lost itself in the shallow, lazy, useless Cimarron, whose waters are too salt for man to drink.

I do not see the use of the Cimarron River. The cattle leave it and go to the creeks to drink; it is not pretty; and it is so salty that no self-respecting fish but the salt herring or codfish of commerce can exist in it. This fact will keep it from being a popular fishing stream. For what man, unless he be a market fisher indeed, can take pleasure in taking out so tired-looking a fish as a dried herring or in pulling out a headless corpse of a cod, all split open down the back like a summer ulster? No; the Cimarron is no good for real sport with the rod—not what I should call sport.

We found the ranch house to be built of logs, and to consist of two rooms, separated by a wide hall or porch, which was covered by the same roof and inclosed, except upon the south side. This porch makes a nice cool place in the summer, and it is a good place to step on a dog in the winter. In this forum we found eleven dogs, not counting our own. Of these dogs three were bob-tailed shepherds and the rest greyhounds, with one staghound. A very fine litter of pups, not yet a year old, of bright fawn color and all very large and strong fellows, made up the majority here. A likely young blue dog, just engaged in his favorite occupation of whipping one of his associates, attracted our notice. There was also a grand black bitch, just recovering from bad injuries got on a wire fence in a single-handed fight with a deer; and there came hobbling up to us, looking up with meek, suffering eyes, a noble brindle hound, almost off his legs with a horrible gash in his thigh, got in an encounter with a big buck, which had cut him with its hind feet. This hound, Boots, was the best one on the ranch; he was not able to run during our stay, but we saw his hurt mending with marvelous quickness. Nearly all the pups had seams and scars on their sides and heads, young as they were, and we could see we were fallen among a tribe of warriors.

After our dogs had been presented—the brace of foxhounds occasioning much wonderment among the long-legged greyhound puppies, who had never seen such a thing before—and after certain questions of precedence had been decisively argued among the dogs, we went into the room which was not the kitchen. Here we met Jack (John Middleton), another 21 boy, and Buck (which his father's name was Hurt), the cook of the outfit.

As per request, we "dumped our traps" on the floor and took possession, just the same as if we belonged there. There is little ceremony in a cow camp and absence of all fine talking. You are privileged to enter; you are expected to wait on yourself; no one will tell you where to unroll your blankets, when to go to bed, when to get up, when or how to do anything. The comforts and conveniences of the camp will not be explained to you; they are so simple that you are expected to know them and to take advantage of them if you wish to. You are, in short, given the run of the camp. Whether you will be welcome again or not depends on whether or not you are found to be "white" and "square." And depend upon it, your freedom from color and your rectangularity will be pretty accurately determined. A dandy, a half-man, a feather-bed sportsman, a hunter who wants to pay somebody something to wait on him, would better keep out of the cow camps. Yet no better, no more generous, honorable fellows live on earth than these much misunderstood "cowboys." Consider, Eastern reader, how lonesome, how same is their life on the range, how void of all entertainment. Rob you of your opera, your ball, your theater, your social gathering, your church, your night-out in any form—your chance for a change; take away your opportunity to see different faces, and exercise different faculties—in short, gentle reader, apply your revered nose to a grindstone of any sort, and let it whirl for about twelve months in the year. Mark my words, if you don't get wild the only reason will be that your work don't make you healthy and hearty and strong like a cowboy's, and full of that brimming devil which goes with animal health and spirit, from Viking dogs down. Give you your night-off, your day in town, your nose-off-the-grindstone, and if you are foolish enough to drink bad whisky, as most of the cowboys don't know any better than to do, the first thing you know you'll be riding your horse up on somebody's billiard table; if you know how to ride.

I have lived in the far West a little, and I know who does the murdering and all that sort of business. It isn't the cowboy. It's the meek-looking fellow in black clothes, and a diamond pin, and a stiff hat. He takes your money in his little game. He practices the art of quick pulling, and if you pistorially object, he comes in a little ahead of you, in "self defense"; until he has a reputation, and then he can kill you just anyhow. Crowded too close, he may take to the range for a while, and stay at a cow camp; but he isn't a cowboy. The cowboy has his peculiarities, his love of style, his pride of calling, his affectations, just like the rest of us; with this exception, that his code of etiquette, his style of dress do not change. He wears a twelve-dollar white hat, because it lasts, and keeps the sand out of his eyes; he sits in a forty-dollar saddle, because leather costs money, and he must have weight of well-fastened leather to hold a mad steer; he wears gloves, just as you wear a necktie; he wears heeled boots so that his feet won't slip through the stirrups when he is "cutting out"—for he rides with foot full in, as you would also, if you had his riding to do; he carries a Colt's .45, army size, square stock, single action, because he can soak that in water, cram it full of sand, run over it with a bunch of cattle, or knock down a broncho with it, and it will still go off, sure. He will not have a Smith & Wesson pistol, though acknowledging they may do "for such as like 'em."

The cowboy comes from pretty much all over. Those at the 21 came from Texas and Arkansas. If one cowboy speaks of another, as like as not he will call him a "puncher." In Texas he is called a "cattle driver." He does not altogether like the name of "cowboy," especially if he come from the south. If you are visiting with cowboys you don't want to go up to any one of them and ask how many men he has killed, and want to see the notches on his rifle stock, and inquire about his name in the States. I am not certain that you ought to go off and write a whole lot of stuff about him, either, as I am doing, as if he were a six-legged pig or a headless rooster, and not just like the rest of us, a laborer in a business of his own, which he understands better than any outsider does. But if it ever be your fortune, as it luckily has been mine, to be somewhat with the cattlemen and the cowboys of the cow camps, you will say as I do, Thank God! here, at least and at last, is a class of men genuinely sincere, and a hospitality simple and unstrained.

But right here Buck stuck his head out of the door of the kitchen and sang out one long and magic word:

"Chuckawa-a-a-y!"

Greyhounds *erectis auribus*. *Exeunt dramatis personæ*, each bearing a stool. E. HOUGH.

During the rebellion T. Buchanan Read, the poet, was sitting in Col. Forney's room when the editor began to dictate a vigorous editorial in which the word "war" was used. Read sprang up at the sound and exclaimed, "War! war! Oh, that some beautiful bird from the South would make its nest in the cannon's mouth and stop this awful carnage!"—*Baltimore American*. A robin has built a nest in the mouth of one of the Parrott guns that ornament the burial plot of the Maquoketa (Iowa) Grand Army post—a picture of peace which it would be difficult to improve upon.—*Omaha Bee.*

SPARROWS AND INSECTS.

Editor Forest and Stream:

A paragraph, frequently headed "Food of the English Sparrow," has recently been going the rounds of newspapers and other periodicals both in this country and abroad; and, judging from the number of copies received at the Department of Agriculture, it is accepted by many people as proof positive that the imported sparrow is a most valuable bird. As the article warrants no such conclusion, but affords a typical instance of the popular misinterpretation of facts, it seems desirable to point out a few of its fallacies before they become more widely diffused and absorbed. As originally published, the basis of this paragraph formed part of a statement submitted by the Rev. F. O. Morris to the Select Committee on (British) Wild Birds Protection, June 26, 1873, and is as follows:

"Two pairs of sparrows were watched by an observant naturalist feeding their young in their nests in only one-half hour with the larvæ of the bluebottle fly from a dead cat. They fetched these in all 104 times, and one of the birds also caught fourteen flies on the wing. Now, the common housefly is computed to produce in one season, so prolific is its progeny after progeny, no less than 20,000,900, say in round numbers 20,000,000, and thus were prevented by these two pair of birds no fewer than 280,000,000 by the capture of fourteen flies, and 2,008,000,000 by the destruction of the 104 larvæ. Again, we read on unimpeachable authority, that there figured in the parish accounts of one parish in Gloucestershire a charge for seventeen dozen tomtits' heads; in another parish, Melbourne, in Derbyshire, a sparrow club destroyed in one year 4,577 small birds, and in yet another 3,500. Take the smaller of these two last numbers and multiply by it the number of flies just calculated as prevented by the two pairs of sparrows and it gives what we may very well call 'a grand total' of 7,280,000,000,000. Linnæus calculated that the progeny of three flies would devour a dead horse almost as quickly as a lion. The aphis, fed on by several of our smaller birds, produces of herself as is well known, female aphides, generation after generation. As many as eleven of these female generations have been produced in one year, and it is believed that it may go on in the same way year after year."

The probable inference of the average reader of this statement would be that the house sparrow in this particular case did a vast amount of good, while the further inference that the sparrow habitually consumes large numbers of injurious insects might naturally follow. In reply to this it may be said:

First—It is by no means certain that the sparrows watched were house sparrows, although this is rendered probable from the fact that when "the sparrow" is spoken of in England, the house sparrow is commonly meant. The birds might, however, have belonged to one of the three or four other species of sparrows common to the country, and it is even possible that the "hedge sparrow" (*Accentor*—not a sparrow at all) was the species observed.

Second—Granting that the birds which carried the maggots to their young were house sparrows, it must then be admitted that in doing this they did, not good, but harm; for, the blue-bottle fly and the house fly are two of the most beneficial insects known, and their work as scavengers is so important that their entire extermination would doubtless be speedily followed by an alarming increase of human disease, if not indeed by universal pestilence.

Third—The number of flies estimated as prevented by these four sparrows has very little significance. The computed number (rather over three billions), although less than the six-millionth part of the theoretical increase, is yet unquestionably several hundred thousand times too large. According to Packard, the house fly in Massachusetts lays about 120 eggs; and the entire period from egg to mature fly is from ten to fourteen days. In the latitude of Washington this would allow at least eight generations between May and October, and if we assume that one-half of each generation consisted of females, and that all eggs laid produced perfect insects, the eighth generation would give us about 336 trillions of flies, or enough (allowing 100 to the cubic inch) to cover sixty-nine square miles 1ft. deep with dead flies. If one-half the 118 flies and maggots caught by these four birds were females then it might be argued that the birds had prevented the production of more than enough flies to cover 4,071 square miles 1ft. deep! As the blue-bottle lays many more eggs than the house fly, and rears fully as many generations in a season, this amount might be doubled or even trebled!

Of course all this is absurd. No one can tell anything definitely about the number of insects prevented by birds, except so far as the individuals actually eaten by the birds are concerned. In the case cited they undoubtedly prevented the dead cat from being as quickly destroyed as it would have been had they let the flies alone. By what allowance or calculation the estimate of 20,000,900 for the aggregate annual product of a house fly was obtained, I cannot say, but I know of no reason for considering it more correct than any other estimate between ten and ten billions. Of the thousands or hundreds of thousands of eggs laid by flies on a single dead cat the chances are that not one in a thousand will ever become a perfect fly; while in very many cases such a carcase will not produce a single mature fly.

It cannot be denied that the sparrows in this case probably did lessen somewhat the number of flies which might have been reared from this cat, but any attempt to estimate the actual number thus prevented is utterly futile; and it must be remembered besides that for every one of these flies actually killed the sparrow deserves blame and not praise.

Fourth—This destruction of the flies was the work of at least twelve birds (four adults and eight young), yet the number of flies prevented by these twelve sparrows is multiplied by 3,500, the number of small birds destroyed by a sparrow club in one season, and it is left for the reader to infer that the grand total thus obtained fairly represents the prevention of insects which these 3,500 small birds would have accomplished in a half hour.

The assumption that all the small birds destroyed by "sparrow clubs" are sparrows, is without any foundation in fact. One would be glad to believe this the case, but there is every reason to fear that more than half these small birds were species infinitely more valuable than sparrows—species which never inflict any injury on farmer or gardener, but which are continually lessening the number of insect pests.

Finally—No observant person who has had a fair opportunity of knowing the facts, denies for an instant that

the English sparrow destroys considerable numbers of injurious insects in feeding its young; but it is as universally acknowledged that the adults rarely, if ever, take insects for their own use, while it cannot be disputed that they often, if not habitually, drive off other small birds which do.

The popular ignorance which includes all small birds in one category as beneficial, cannot be too deeply deplored or too severely criticised. There is no longer any excuse for the blindness which fails to recognize beneficial as well as injurious insects, and injurious as well as beneficial birds.

WALTER B. BARROWS, Ass't Ornithologist.

UNITED STATES DEP'T OF AGRICULTURE, June 18, 1887.

THE AMIABLE BULLSNAKE.

Editor Forest and Stream:

A couple of evenings ago I walked alone in a pasture of some 300 acres, not far from home. The object was relaxation and to consider the wild flowers and the birds. Such walks are medicine to the mind and body, tending to longevity. While wandering along the banks of Catclaw Creek my attention was drawn to a certain umbrageous elm, standing partly in the water, in which a multitude of little birds were making a great noise. They were popping hither and thither, uttering cries of distress. I went near to see what was the trouble and presently saw a snake gliding about in the tree from limb to limb with ease that was remarkable. He seemed as much at home in the tree as a fish in water. He had discovered a bird's nest far out on an upper limb, and was evidently intending to take it. No doubt there were little babies in it, for as the snake drew nearer the cries of the old birds grew very distressing. They could not move their babies, and saw the dread enemy approaching who was to devour them before their eyes. Who can tell how heart-rending was their distress? Their cries had drawn to them a number of friends, who could do nothing more for them than join in their cries. They did not offer to attack the snake; did nothing but utter piercing cries, as if they hoped either to frighten him or touch his heart with pity. But the snake felt neither fear nor pity. He moved steadily on to devour the fat, unfledged little babies before the eyes of parents and friends. I determined to interfere. Seizing a short club of mesquite I threw it at him. He turned and looked and seemed to discover that I meant business. He stopped climbing and undertook to hide among the leaves the best he could, but showed no intention to quit the tree. However, a stone well-aimed and thrown with much force convinced him that he must seek safer quarters. I expected to see him let go all hold and tumble precipitately into the water, but he did not do so. On the contrary, he glided gracefully from branch to branch until he was only two or three feet from the water, into which he then let himself down so skillfully that he did not even get his head ducked. He crossed over on the side opposite me, and going a little distance in the prairie stretched himself in the sun full-length, as if awaiting my departure.

The birds were beautiful little fellows with dark yellow breasts, dull red about the throat and dark dove or slate on the back, a jaunty topknot and lively wagging tail, which they generally carried at an angle of about 45°. Being stripped I judge they would not be bigger than the first joint of a man's thumb. When they saw the snake going away they immediately hushed all their noise. Their joy was probably so great they could not find utterance for it. They all soon left the tree except two, who were doubtless the proprietors of the nest.

Feeling curious regarding his snakeship, I crossed over to confer with him. There he was, still basking in the sun, but seeing me approach he began to move off. I overtook him and began to thresh his hinder parts with a light but keen switch. This caused him to put forth his best licks at running, which only proved him to be a poor runner at his best. Seeing no escape in this way he climbed into a thorny bush and gathered his folds into as close a knot as he could. I tickled his nose and lips with the switch, but he did not offer to strike at it. He was an inoffensive poor fellow, with a very innocent expression of the eye. It seemed impossible to anger him. When I teased him most, his eyes still expressed nothing but meekness and gentleness. Finally I made him come down, and drove him about on the prairie a considerable time, in any way that I would, just as one would drive a horse in a cart. Still his meekness of temper remained unruffled. I undertook to drive him into some prairie dog holes, but he would not enter them, seeming to prefer to take his chances with my switch rather than with such creatures as he might perchance find in the holes. At last I told him he might go, and he went. My purpose was to kill him when I crossed the creek, being exasperated by his evident intention to devour the little birds; but having thus practiced with him, and found him such a model of meekness and patience, I could not have the heart to do so.

He was what we call the bullsnake in this country, and is the largest snake we have. I have measured one that was 7ft. 8in. long and there is no doubt they grow much longer than that. Their general color and markings are much like a rattlesnake's, save that the black markings do not take the diamond shape. They are non-venomous of course. They have an evil reputation here, as it is said they will invade the poultry yard at night and eat whole basketfuls of eggs. They will take the eggs from under a sitting hen so deftly she will never be aware of what is going on and so not squeal out and give the alarm. At least so they say of the bull. I have often had my eggs missing, and the bull gets the credit of it on all hands, but I cannot say whether rightly or not. On the other hand he is so amiable I think he could be trained to be a pleasant and useful companion about the house. They say he sometimes makes a low roaring noise like a bull, but I never heard it. What is his name in science? As he is one of my neighbors I would be glad if some one versed in snake knowledge would tell us all about him. I find that interest in snakes is very wide-spread in the human family, to such a degree that it seems to be an original principle or element of the human mind. Old and young, kings and beggars, philosophers and clowns are readily held by narratives of snakes.

We have another snake here of nearly similar habits to the bull, but very much smaller and more active. His color is a mixture of yellow and green, mostly blended together. We call him the prairie snake, as he is seen only on the prairies. I treat this snake with high consideration, and have instructed my little boys when they go wandering never to harm him. Though small, they are of great courage and strength. They attack the rattlesnake boldly and kill him by the strength of their grip. I saw one hardly four feet long attack a monstrous rattler fully three feet longer and many times surpassing the little prairie snake in thickness. The struggle was terrible, but he would have killed the rattlesnake beyond a doubt had I not in my eagerness to witness the whole of the affray, ventured so near that he was frightened away from his enterprise, being very timid of man. As he slid off into the brush he seemed entirely fresh, while the rattler fell heavily and almost exhausted. And yet this little fellow is non-venomous too, and one of the most amiable of all snakes. He will not climb a tree, but the bullsnake, if meddled with, will, I think, always do so if he finds one convenient. N. A. T.

ABILENE, Texas, June 21, 1887.

[The bullsnake is probably *Pituophis bellona.*]

"THREE BLACK CROWS."—*Editor Forest and Stream:* You can readily understand that I am always interested in all ruffed grouse stories which do not have a gun in them, whether they relate to hybrids or full bloods. A few weeks ago, a man doing some work for me took special notice of my coops of ruffed grouse, and informed me that up in Michigan, where he came from, a gentleman had already been successful in breeding them in confinement. He insisted with such apparent good faith on his statement, that I procured the address as nearly as he could give it and sent out a letter of inquiry. One or two repetitions were necessary before the inquiry was answered, but I finally discovered the gentleman in question at Carp Lake, Mich. It appeared that the story was all a mistake, and had its only foundation in the fun-loving proclivities of some of the numerous guests who make fishing headquarters at Carp Lake. "We raised some fine bantam chicks," said my correspondent, "and the old hen looked so much like a partridge (grouse) that some people mistook the whole family for partridges;" and so the story spread that a family of young grouse had been raised in confinement. He does not say that the innocent tenderfeet were encouraged in their delusion about the grouse (bantams), but that, probably, was unnecessary.—J. B. B. (Toledo, O.).

NEW BIRDS FROM MEXICO AND SOUTH AMERICA.—In the Annals of the New York Academy of Science, Vol. IV. No. 2, the veteran ornithologist Mr. Geo. N. Lawrence describes three new birds from Mexico, Yucatan and Central America. These are *Regulus satrapa azteeus*, smaller than *R. satrapa*, but with a larger and longer bill and much darker coloration; *Troglodytes brachyurus* from Yucatan, which resembles *T. intermedius*, but is lighter colored throughout, has a longer bill, but shorter wings and tail, and lacks the concealed white spots on the rump; and *Othœca flaviventris*, which is somewhat like *O. gratiosa sclater*, but differs in color and in some of its proportions.

CATTARAUGUS BREAKERS.

THE old Cattaraugus breakers are a thing of the past. The term breakers was applied to the slate-rock cliffs that environ the curves and bends of that most turbulent, unnavigable and fish-forsaken of all waters, the Cattaraugus Creek, New York. It is ignored and given a wide berth by even the most inveterate fishermen, except at the mouth, where it empties into Lake Erie. The water has a buttermilky hue and runs over a bed of broken slate rock, which is some hundreds of feet lower than the adjacent tableland, and where the perpendicular wall of rock towers up on one side a corresponding bluff of equal height is seen opposite, not quite perpendicular but nearly so. The rock cliffs are a prominent feature, on one side or the other, for nearly the whole length of the stream, or up to the main forks. In the early days it was not a rare occurrence that deer, when hard pressed by dogs, would make a flying leap from the brink of the cliff, and dog and deer have been found on the bed rock below, each a shapeless mass of crushed flesh and bones. The stream has always been a barrier in the way of travel, especially among the early settlers, who could ill afford to construct a highway even across the most favored points, where the occasional gaps led down to the stream. It is only within the last decade that a railroad bridge has been built across the chasm at an immense cost. Happily the main stream is not very lengthy considering the size and volume of water. There are many forks, and the several tributaries embrace a large tract of country where, in the olden time, game was abundant, even to repletion.

Here my experience in woods lore began, and here in my boyhood days I was conversant with many hunting incidents which occurred among the early settlers, some of which are as indelibly stamped on my memory as if they had occurred but yesterday. These incidents were seldom of a tragic nature, but more often bordered on the ludicrous.

Once, two of the early settlers, King and Mayo, were out after coons. It was after a January thaw, the snow being about 2ft. deep. King, who walked on snowshoes, was a shrewd hunter, 6ft. 2in. tall, and carried a long-barreled English fowling-piece, which in those days was considered a very finely made gun, a flint-lock of course. Mayo was a heavily built Dutchman, much better skilled in chopping and log-rolling than hunting, so he carried an axe and was without snowshoes, but walked in King's tracks. Two large dogs followed up in the rear. They failed in their search for coons, although this game was plenty, but the thaw was of too short duration to bring them out. But the hunters struck the track of a bear, which had been made the day before; and this they followed, confidently expecting to find bruin high up in some large hollow tree. The track led them up to the borders of a deep ravine, on the brink of which the trunk of an old decayed tree had fallen, parallel with and jutting over the edge, and the crusted snow which had gathered on it projected over still further. The face of the bluff was too steep for any growth of timber, but a few boulders pointed out; and the bottom, which was some 60ft. below, was filled with snow which had blown in, to the depth of 5 or 6ft.

When they came up to the edge of the bluff, King, being one or two steps ahead, walked one step too far; and the snow bank caved off, pitching him headlong, just as the bear was routed from under where it had lain cooped up for the last two days. Mayo said he was quite sure that King struck square on top of the bear, and that the dogs lit on at the same time, and that they didn't slide down, but rolled, not separately, but in one promiscuous pile; and that it was a rolling fight from top to bottom, when the bear led off up the opposite bluff, followed by the dogs. But King had pitched head and shoulders deep down into the snow, his snowshoes being the most prominent feature. It was but the work of a moment for Mayo to slide down and pull King out of the snow. His snowshoes, which had been a sore impediment in his involuntary revolutions, still hung to his feet, and he had held on with a death grip to his gun. His clothes were badly torn; he had some rough scratches and was slightly bitten in the leg—didn't know whether it was by dog or bear; but otherwise he was not seriously injured. The dogs came back in due time, but the bear was seen no more.

As soon as King got righted up so as to breathe freely and was somewhat recovered, he turned to Mayo, half in anger and half in jest, and threatened to shoot him on the spot if he didn't promise then and there never to mention to any outsiders anything relating to the manner in which he got so unceremoniously thrown out of gear. At this Mayo burst into a roar of laughter, and called his attention to his gun, the barrel of which was bent into the shape of a half moon. King didn't seem to know how it was done, but Mayo thought that in his rough-and-tumble descent he had whipped it over one of the boulders which pointed out on the face of the bluff.

The generation to which King and Mayo belonged have long, long ago passed away; and the next have mostly gone, and the third and fourth are occupying their places. We might as well look for wild deer and bears on Broadway, New York, as anywhere in the region I have mentioned, which now contains a dense population. ANTLER.

GRANDVIEW, Tenn.

LYMAN MEETING HOUSE.

THREE miles from the town of Alfred, in York county, Maine, is a neighborhood which has been known for many years as Lyman Meeting House. It is a pleasant community of prosperous, intelligent farmers. For the meeting house itself, it stands alone, surrounded by pastures and woods. It is the old-fashioned, square edifice, in which New England Congregationalists have worshipped since the earliest times. Within a few years a bell tower, containing an actual bell, has been superimposed upon this ancient church, and a new and smart coat of white paint covers its gray and weatherbeaten walls. The sound of the "church-going bell" upon Sunday mornings has something startling and incongruous in it as it wakens the echoes in the near pine woods and the silent fields. Behind the church is an old burying ground, overgrown with weeds and brambles, and nearly filled with sunken graves and fallen headstones; yet it is such a peaceful and sunny spot that death seems a quiet sleep indeed. A few steps beyond an old lane opens from the highway, a veritable "grassy road." Here, in the hottest noonday, lingers a cool, dim gloom. The boughs interlace above it; tall ferns and sly, pale flowers love its damp green spaces. All at once, from this lovely walk, one comes upon a broad, smooth field, surrounded by a thick hedge of sumach, alder and gadding wild grape vines. In the middle of this field are the ruins of what was once the Congregationalist parsonage. The steps that led to its hospitable door yet stand in their accustomed place, but the feet which passed over them are still forever.

It is not an unusual thing for those who go on the first of September to hunt the partridge to lie at full length under some spreading tree, *recubans sub tegmine fagi*, pipe in mouth and faithful dogs by side, and muse on these surroundings, especially when they have been able to do but little else. Perhaps I should not say "but little," for Charles and Harry and I had six fine partridges and a woodcock as the result of a day's shooting and loitering through these beautiful woods and fields. I had a fine Irish setter (fine to look at but rather slow), while Charles swore by (and occasionally at) a black and white pointer, which he considered an uncommon animal. We held long discussions on the relative merits of pointers and setters, which were settled in this way: We came out, tired and thirsty, to a farmhouse, where the farmer and his tall, lank melancholy son drew water for us. "I say, pa," observed this youth, "I think the braown dorg [I prided myself upon his rich dark red color] is harnsomer than the bulldorg. Don't yeou?" Imagine the feelings of the pointer man!

When we finally reached home that day, where our wives and suppers were waiting, Harry, C.'s son, an irrepressible of fifteen summers, performed a lively war dance in the back yard, shouting "I've got one, mother! I've got one!" "You've got one," repeated his father sarcastically, "Yes you have. But [relenting into a smile]

"Little Nim'
Would have fared mighty slim
If he hadn't seen a partridge,
A-sittin' on a lim'."

A day or two after there came to our door a youthful native, accompanied by as "ornery" a cur dog as one would wish to see. This son of the soil carried an ancient muzzleloading gun; he also carried (ye gracious powers!) a tremendous string of partridges. I have usually in speaking of them said that they reached from his shoulder to his heel, and he was a tall fellow, too. I will now confess that this was somewhat exaggerated, but it was really a beautiful show of game. "Where 's Mr. ——?" asked he. "Gone out." "I 'd liked to a' seed him," said this mighty hunter. This wish was entirely upon his side. I did not yearn for his society. Then, followed by his "blarsted dorg," with his partridges dangling and flapping over his shoulder, he "went his ways." Soon after, I too, went mine, a sad and humble man. But if any one asks me if there are partridges around Lyman Old Church, I answer meekly, Yes, there are, for I have seen them. P.

MIDDLETOWN, Connecticut.

DUCKS AND DEER.

IN OCTOBER last year, wishing for a respite from business cares, I called in to my aid Mr. W. E. Towne, an artist of Chicago, who had been spending the summer with me; and we set out for a trip to the woods. Leaving the train at Section 19 of the Chicago & Northwestern Railway, a wagon was engaged and a five-mile ride across the hills and swamps brought us to the home of our friend Davis, where we were duly welcomed. Placing our boat and traps on a jumper, a half mile out brought us to Cold Brook; our boat was launched, everything placed aboard, and we turned her bow down stream with a good-by to Davis. Cold Brook is heavily fringed with tag alders, balsams and cedar for the first two miles. Although the trees nearly interlock for the first mile, the water was deep and the stream all clear, having been cleared out some years ago by lumbermen for running logs. After the first mile ducks began to rise. Getting my gun in shape, I soon had use for it. Turning a sharp bend in the creek five woodducks rose; one fell to our first barrel, to the second shot none. Shooting then commenced in earnest, and on arriving at Moses Island we counted heads and found we had 14 ducks, 9 woodducks and 5 mallards, and 6 rail. Our tent was pitched and then as Towne suggested, "I think we had better be getting something to eat, for our four-mile run makes me wolfish." The kettle was soon simmering and the aroma of ducks pervaded the air. After what seemed a weary waiting our supper was ready, and as we leisurely disposed of it, the chances of the morrow were discussed. By the time our meal was finished the sun was setting.

Moses Island is between the creek and the thoroughfare that connects the chain of three lakes—Haywood's, Mud and North Lake. The three lakes are seven miles long, and Haywood's and Mud lakes empty through the thoroughfare into North Lake; then the outlet is the Big Cedar River, thence Green Bay. As we cared for no more duck shooting, we sat and smoked and marked innumerable flocks of ducks flying up the thoroughfare. Soon our thoughts turned to deer. The island is a favorite haunt for them, and the whole surface of the ground is literally cut up with their tracks. The island for years has been their crossing grounds, and is directly on the runway that crosses the marsh. Towne having never shot nor seen a deer, was anxious for a shot. Telling him I would give him a chance in the morning, we turned in.

At 3 o'clock Towne woke me up, asking if it was not time for breakfast. I told him to keep still and let me sleep; but in the end I rose, dressed and went outside the tent. Towne already had the coffee pot sizzling on the fire. I started for the creek to wash. Stepping upon a log that I could see by dim light of the fire, I stepped out a few feet, and the next thing I knew I was plunged into the creek in about six feet of ice-cold water. Towne hollered and wanted to know what I had caught, if a whale. As soon as I could get my breath I called him to help me out, as the bank was a straight drop off. He soon pulled me out with the help of a paddle, casually remarking that it was rather late in the season to jig for suckers. A change of clothes and some hot coffee, and I felt none the worse for my sudden immersion.

A red tinge showed in the east, and telling Towne to get the rifle and come along, I took him to the east side of the island and showed him a blind about 20ft. high between two cedars; I climbed up and showed him which way to watch, then came down and passed him up his gun. From his blind he could overlook several hundred acres of dry marsh land, across the thoroughfare as well as the whole slough. Telling him to keep close watch I left him, going to the boat and dropped down stream. At the mouth of the North Lake I pushed into the rice and waited. There were very few ducks stirring, and the sun began to creep up high before a flight came my way. At length a flock of teal came with a rush. Holding well ahead of them I pulled first one trigger then the other. Both shots brought me one solitary teal. Then a big black one came, but fortune favored me, and the first barrel laid him low. I counted five gray ones coming; anxiously I watched them; when almost in range the leader swerved to the left; but the last one came nearer and was soon lying on his back. Just then I heard the crack of the big 75-grain Winchester where Towne was watching, half a mile above; and the reports continued until it sounded like a skirmish line. I counted seven shots, then with an interval of perhaps five minutes three more shots in quick succession. Then commenced some indescribable yelling that would have done credit to a Comanche Indian. I pushed my boat out in the stream, picked up my ducks and started up stream.

As soon as the foot of the island was reached I saw Tom wildly gesticulating and pointing up the thoroughfare. As soon as his excitement would allow he told me that while looking across the marsh by a bunch of willows he saw something move and soon three deer came in sight, walking toward the thoroughfare, which was where he was posted, only a few rods wide. Towne waited for them until they came to the edge of the water, when, as he expressed himself, he "just turned the old thing loose on them." At the second shot one dropped, one jumped into the water, coming straight for him and the other turned and ran straightaway. Towne "turned the old thing loose" again on the one in the water. He fired two shots at it before it got to the island; it landed a few rods below the blind. While Towne was putting cartridges into the magazine it stepped into the brush. As soon as he could get down he followed after it and saw it lying down, but before he could shoot it it bounded away a few rods into the grass and was soon out of sight. Towne soon routed him, when he opened on him again, firing three more shots, and at the last shot he went down and Towne had his prize. He dragged him to the blind and commenced shouting for me. When he had finished his story I pushed across he thoroughfare and we soon found the other, a fine yearling buck, shot through the spine just back of the shoulder. Towne could hardly keep in the boat while we returned to the blind after the other one. That, like the first, proved to be a yearling, but a doe. Putting her in the boat I told Towne to paddle while I looked over the last deer. I found four balls had hit, three striking well back toward the flank and one close to the shoulder. I told Towne that he wasted his last three shots, as four of the five shots fired at her while swimming had hit her and would certainly have killed her. Towne is a splendid rifle shot, but had never seen a deer before and I think his luck something wonderful on killing two out of three deer. Many an older hand could not have done better. At last our tent was reached and the deer taken ashore. Towne produced his sketching material and was soon engaged in sketching them. After he was through I told him one thing was lacking in the picture, that was himself as I saw him when I came to the foot of the island. After dressing the deer and discussing them, dinner time came.

Towne was anxious to go home and take his deer to Chicago with him. Nothing else would do; so the tent was struck and a 4-mile paddle up the creek began. Three more ducks were killed on the way up. We got to the landing at 3:30. Friend Davis was soon aware of our arrival, and came down with his jumper. A good night's rest refreshed us, and the next morning we were on our way to Sec. 19, and at 11:30 we were once more at Menominee. Towne packed his baggage and at 6:30 P. M. took the train for Chicago, while I returned to my work feeling years younger by my three days outing. S. E. B.

MENOMINEE, Michigan.

VERY WILD TURKEYS.

ONE beautiful day in April, 1886, we left the little steamer at Pleasant Bluff, Choctaw Nation, on the Arkansas, below the mouth of the Canadian River. My friend, Mr. B., who has been merchandizing at that point several years, had kindly invited me to stop and take a hunt with him. As I did not have my gun with me, my friends fitted me out with an old muzzleloader, the owner of which declared it to be the best in the Territory. Of that I had my doubts, but as beggars cannot always be choosers, I concluded to try and believe him until I had tested it. Mr. B. presented me with a box of caps and two bottles. One I filled with powder the other with shot, all of which, along with some paper for wadding, I put in an empty shot sack; and after fastening a cord to the corners of the sack, I called it a shot pouch, and put it over my shoulders as such. When we had gotten our salt and pepper, two boxes of sardines and about two pounds of crackers, and strapped our slickers to the hind part of the saddles, we mounted our horses and started, going west, to the right of Peter Scrabbles (as the cowboys call a pyramid of stones that they have built up on one of the highest points of hill on that part of the prairie as a landmark). Then we crossed Brier Creek, which we could trace several miles in its meanderings to the Arkansas by the narrow skirt of timber along its banks. It was a beautiful scene, the undulating prairie covered with grass and flowers, stretching far away to the wooded hills, and the herds of cattle and horses dotting the surface as far to the south and west as the eye could reach.

Now we came to the edge of the prairie, and upon the side of the hill and in the edge of the timber is the second and last house on our route, and as we forgot one of our lariat ropes, Mr. B. rode up to the porch (there was no yard fence) and asked the woman of the house for one. But there is too much cussedness about an Indian for one to speak English unless he or she wants something. When he spoke Choctaw to her, she said that she had no rope. Then we thought, like the man that Noah refused to take into the Ark off of the chunk, come to think of it we "didn't want their assistance noway, as we didn't expect this thing to last very long nohow". When we got over the first hill after leaving the house, the trails divided, one going east to the mouth of the Canadian River, the other took Greeley's advice to the young man. We chose the center one. On top of the next and higher hill we are on the divide between Brier Creek and the Canadian River. Here our trail runs out into numerous cow paths and finally vanishes entirely, so we start down a point of ridge leading toward the bottom. Mr. B. leads the way, and after going a short distance concludes that he is wrong; we turn back and take the next right hand ridge and go a short distance; and then he thinks the next right hand is the one. We cut across the head of the hollow, go down that ridge to the point, and find out that it is not the right one, but we conclude it must lead down into the gulch and follow it down to the valley. We find it very steep and rough traveling and have to be careful that the horses don't slip and fall on to us. Getting to the bottom at last and no harm done, we mount and come to the spring and the old camping ground; pull off the saddles and hang them on a limb of a tree, and put blankets and lunch on top, for we see some hog sign near by, we don't know whether of wild or tame ones, but know our things will be safest in a safe place. Then after hobbling one of the horses and lariating the other out, we shoulder our guns and start in opposite directions on a tour of inspection, B. going east and I going west. B. didn't see any game nor any fresh sign, I saw one squirrel and some turkey sign, but neither of us killed any game for breakfast or supper.

Lunch over I started a fire, not because it was cold, but just because a fire is to camp what a mother is to a home. I commenced gathering up some wood. Mr. B. thought there was no need of it, but before morning concluded that I had good ideas about camping out. It had been thundering all the evening, but we intended to get all the sleep we could, so after spreading down our slickers to keep out the damp, and then spreading the blankets on top we turned in. But the thunder kept getting louder, until we concluded that it meant business, so taking up the saddles we had used for pillows, we hung them up again, and rolling up our blankets put them on our shoulders, and guns in hand started for a shelving rock at the foot of a bluff a short distance above camp. It begins to sprinkle a little now, and crossing the creek on stepping stones that we can see only by the flashes of lightning, we get across all right; but the trouble now sets in. When we got up to the bluff we found that we had to hang on to the bushes and jutting points of rock to keep from slipping into the creek, and we reached our house of refuge only to find the floor covered with water. The next best thing was to go back to the fire, put on our slickers and sit on our rolls of blankets to keep them dry. By the time we had piled on an extra supply of fuel to save our fire, and had got settled on our respective rolls of blankets in Turkish style, the storm came up and kept us squatted out there (like two chickens in the rain) until about 2 A. M. Then it cleared off, and the moon came out in all her glory. We took off our slickers, spread them on the ground, put the blankets on top and took all the sleep we could get until about 3:45 A. M. Then we put our things away, changed the horses to where they could get fresh grass, and examined our guns to see if everything was all right. By this time it was getting a little lighter in the east.

Then we began to listen for gobblers. If there were any turkeys within a mile of us, we thought they will let it be known very soon. Listen. Was that a gobbler? There it is again. No, that was a dog barking, but so far away that you can hardly hear it even on the still cool morning air. Listen again. There, did you hear that? that's one undoubtedly, but at least 1½ miles away, and 2½ miles by the way we will have to go. But we had better start, for where there is one there are most likely to be more within hearing, for they will not leave the hens very far at this season of the year. Now let us cross the hollow to the west and go up on to that point; then we can follow the ridge right up to the divide, where he is. Now we are nearly to the top, let us stop and listen. Just hear that; one right across the hollow on that next ridge. Yes, I will go on up the ridge after the first one; you can try your luck on this one. He must be a large fellow; just listen to him strutting, how his wings thunder as he struts on a limb of some of those trees over yonder. B. gives a few yelps to let his lordship know that there is a lone hen awaiting his call. I start off as B. wishes. After going about ½ mile I hear another beyond the first one, and find that owing to the direction the ridge turns here I will have to cross a deep hollow to get within calling distance of the either one of them. When I got on top of the next hill I was very close, not only to him but several others, so creeping up as close as I dare go for fear of their seeing me, I give a yelp or two and get an answer immediately from a gobbler and a hen. Then I know that my chances of calling him up are rather slim. I lay low for it was all open oak and hickory woods; the ground was covered with young grass only 3in. high, and if I should rise up, any game within 300 or 400yds., if on top of the hill, could see me. I call again and get another answer from three or four hens this time, to let this supposed lonely hen know where they were, but they would not move a step in her direction, and now a gobbler appeared on the top of the ridge about 80 or 90yds. away and must have seen me although I didn't think so at the time. He said *put, put*, and was gone, flying across the hollow in the direction from which I had come. The others were just over the top of the ridge and in the head of a little hollow and only 75yds. from me (as I found out afterward), but I dare not rise for fear they would see me. They had been having a grand old powwow and walk around for several minutes, then there was a lull in the racket.

A minute later I yelped again, and there came back a low answer up the ridge and I saw about a dozen of them in single file going on a slow trot up the ridge. I saw that there was no chance to head them off or call them back, so I crossed the next hollow and went over on to the next hill where the second gobbler had been trying to burst his throat or make the hens hear him. When I got over there I found I was on one of the short spurs running down from the main divide on which he and another one were. I went as far up the ridge as I dared, then lay down alongside of a fallen tree lying with its roots in the direction of his lordship, and gave a few yelps. They both answered, but neither one wanted to do the fair thing and meet their lady half-way, but finally the nearest one could stand the suspense no longer, and thought better of it, as Mahomet did by the mountain. He made a start and came along down off of the divide, stopping about every 100yds. to strut and gobble. Now he comes within plain view but is not advancing straight toward me, so I give a low call; he hears and responds, then he comes just as straight as if he could see the supposed hen. Just now from the rear comes the well-known warning of *put, put*, and I know that there is a lone hen hunting company and she has seen me, but I dare not turn my head to look at her or she would be gone in an instant, and give her lord a gentle hint to be gone also, which hint most likely he would not be slow to take. But here he is within 50yds., and I with my gun ready and finger on trigger wait for him to step out from behind that little red oak that he persists in keeping behind. Now he steps out between those two small oaks and I begin to add him to the number on my list of big ones as I press the trigger. At the report my fine fellow springs about 8ft. straight up and then sails off down the hollow to my right, and I don't know whether I gave him a mortal shot or not, but go to see if any of the shot scattered enough to hit either of the little trees on either side of the range. I found where one No. 1 buckshot had struck a foot above range, showing that the gun had scattered very badly. It is getting late in the morning, my chances for another shot are rather poor, and I am vexed at myself for not having shot out the old loads and put in smaller shot while in camp; but then that's the way with the old muzzleloaders after a man has been using the others. But there is no use grieving over lost opportunities. I guess that B. has had better luck, for I heard the sharp report of his rifle nearly an hour ago, and there it is again, but a long way off.

I go up the ridge to the divide, then follow the divide east to where we crossed it going to camp the evening before. As I was walking along very leisurely looking for game, I saw four deer come up out of the head of a hollow to the left and cross the ridge about 200yds. ahead. But as I never like to shoot at game just for the sake of shooting, I didn't risk a shot at them at that distance. A little further on I saw a turkey flying across one of the hollows to my left. Arriving at our crossing of the evening before, I start down toward camp but cannot find our horses tracks, and conclude that I have not gone far enough, so I cross over to the next hill on the right. Still no tracks. I go down into the next hollow, get a drink, and sit down to rest awhile and guess, if I can, just where I am. Like the Indian I began to think that I was all right, but camp was wofully lost. Finally I have to give it up. Nearly all the hills and hollows on the north side of the divide look just alike. I conclude to follow the hollow down into the main valley, but have not gone far before I find it too rough traveling, and so I turn up into the side of the hill to the right where there are no bushes and only a few rocks. After going about a half mile I come to another small hollow on the right. I start across this, and have just got across the creek when I come up on to a smouldering camp-fire. I notice some turkey feathers and entrails on the ground, and noticed that there had been horses hitched close by; and am thinking it rather strange that I didn't hear their guns, but then that might have been their guns that I had heard and mistook them to be B.'s gun—when noticing some peculiarity in the shape of the partly burned log that the fire had been built against, the thought like a streak of lightning flashed over me that I am at our own

camping ground instead of half a mile further southwest, as I had begun to think I was. B. had got at least one turkey and had gathered up our things and taken the horses, and was hunting for me. I fired a shot but there was no response, and I began to think that I should have to walk back. Then I shot again and with better success. This time I heard B. answer, and on my going over there he told me that he had started to hunt for me, for he thought I had got lost, as the woods were so much alike here. But he does not know to this day that his fears were not entirely groundless. He had killed the turkey that I left him calling early in the morning, and had shot another very large one, but it ran a few steps and pitched down over a bluff; he ran up to the edge as soon as he could, but saw nothing more of it. I mounted my horse and we rode back to the bluff to await the return of the boat. ALPHA.

POWDER AND SHOT.

Editor Forest and Stream:

In your last issue I read a very interesting article headed "Gunpowder Tests;" please convey to Mr. T. C. B. my hearty thanks for the same.

In this connection I wish a word or two on shot. When I desire a number of pellets to the ounce I don't know what number to ask for. Makers seem to have no common standard. I think a sure way would be to ask for shot a certain number of pellets of which would cover, say an inch. I take a piece of paper and crease it; into this I run the shot and apply a rule, which, according to sizes, shows how many go to the inch, and I order accordingly. Why should not the makers adopt this plan and mark on the bags "13 to the inch," as the case may be?

Measures do not agree as to contents or weight. Of course none can represent the weight unless each referred to a particular size of grain or number of pellets. We all know the larger weighs less in the measure than the smaller. I therefore suggest that in speaking of quantities the weight and not the measure shall be referred to. It is an easy matter, after ascertaining the weight desired, to make a measure to suit; a shell cut to the desired size will answer the purpose.

I once shot a friendly pigeon match and won. The stipulations were 1¼oz. shot. My friend charged me with overloading in shot. I stoutly denied this. After going home I consulted my measure and found it on the figure 1¼. Not satisfied with this I weighed it and found the charge I was shooting weighed 1¼oz. The shot was No. 8. I did not try what No. 1 out of the same measure would weigh. Hence I say make weight the criterion and then there can be no doubt as to what you mean when you say one ounce, no matter what the size of your shot.

PICTON, Ontario. R. P. I.

ANOTHER TOBY GUZZLE BEAR.

ON the 10th of this month, Mr. Stewart, Mr. Seelye and two section men of the New Brunswick Railway in Canada were coming up the line of that road in a handcar. When they had reached a point about two miles north of Toby Guzzle they noticed a bear wallowing in the ditch at the side of the railway. The men who were propelling the car moved along so quietly that she did not notice the party until they all jumped off the car at her with a sudden yell. Terrified at the unexpected appearance of so many enemies at one time, the bear fled up the hillside, while her cub close by climbed an old yellow birch stub which stood near, to the height of about 20ft. At this juncture Mr. Stewart went to where the cub was, while the mother, chased by the rest of the party and traveling in a sort of a semi-circle, came to at the foot of the stub; then the fight commenced in earnest.

Mr. S. began the battle with a limb torn from a fallen tree, aided also by a dog which was with the party, which bit at the heels of the bear in a savage manner. The dog, however, was soon put *hors de combat* by a blow of the beast's paw in the ribs, which sent him off howling, and although no wounds could be seen, his death supervened the morning after the fight.

As the bear made charge after charge, one of the most excited of the party called out, "Boys, stand your ground like men," and when she turned her back the cry of "Charge now" was followed by a volley of stones and sticks, until finally she was driven off to the distance of upward of 100ft. from the tree. At this point one of the party climbed the stub after the cub; the mother seeing this turned upon the party which was standing around the stub, driving them off, and then ascending this stub herself after the man who was in pursuit of her young, had got about 6ft. from the ground, when Mr. Stewart, seizing her by the leg, hauled her off the tree. So soon as she struck the ground she ran after the party, which fled to the railway; then there was a succession of charges, they drove and were in turn driven, the fight waxing hotter and hotter all the time. The scene of the combat was in old burnt land, and for yards around the base of the tree limbs were torn off and stones were uprooted, until the whole surface of the ground presented the appearance of a veritable "bear garden."

As it was now becoming late Mr. Stewart saw that, without the aid of firearms the bears must escape, and determined that he would resort to this last resource, accordingly calling to three of his companions in clubs he promised them the reward of $5 if they would keep the cub up the stub until he went two miles to McAdam Station and back again with the handcar for the gun. Besides darkness was beginning to set in and the bear was getting the better in the contest. When he got back with the gun he found the mother at the foot of the stub and shot her there while the young one was secured by one of the men climbing the tree. The battle began at 6 o'clock P. M. and ended about 10 P. M. The old bear was about four years of age and weighed from 250 to 300lbs.

Mr. Stewart says that the Toby Guzzle bear whose fate was described in a late number of FOREST AND STREAM was seen by him twice, once at a distance of 20ft., when it sat down on its hind legs, eyed Mr. S. for a moment and quietly walked away; at another time he saw it swim out in the Digdequash River, not far from Toby Guzzle, ascend one of the granite boulders which are scattered over that desolate country and quietly seat itself on top of it, not moving until Mr. Stewart and the man who was with him, who were both unarmed, had got within 20ft. of it, when it quietly slid down, swam ashore and disappeared in the woods. EDWARD JACK.

FREDERICTON, Canada, June 21.

LAKE WINNIPEG DUCKING GROUNDS.

VERY little is known in the East of the Lake Winnipeg region in Manitoba, north of Dakota Territory. The Red River of the North, which flows in a direct northerly course, empties into this great inland sea. The trip from Winnipeg to the mouth of the river, distance about forty miles by land and forty-five by river, is much more enjoyable by the latter route, traveling in birch bark canoes. Each successive bend of the river unfolds to view the continuation of farmhouses, fields and hayricks, with snake-like fences reaching down to the water's edge, and where the farmer has his scow or boat, for ferrying, tied to a stake.

Past the stone fort, a massive fortification of masonry, where the Hudson's Bay Company do a large business, frowns over the river bank; from this place the settlement begins to thin out until the Indian reservation of St. Peter's is reached, and from that point down we begin to enter a wilderness of reeds. The current grows less perceptible until we are fairly in the back waters from he lake. The banks from here on are not over a few feet above the water level, but the surrounding country is hidden from view by the tall growth of reeds that line the shore. The river here forms a delta, and any one of the three channels can be taken with equal chance of success in the pursuit of ducks. We are now fairly in the marshy tract that extends for a distance of about ten miles on either side of the river, east and west, and runs back from the lake shore to about eight miles inland. The lake is about 300 miles long, north and south, and averages thirty miles in width, the consequence being that when the wind is from the north there is a rise of the waters, which flood this vast tract of marsh, and on the subsiding of the wind there is a strong ebb, the action of which during lapse of time has worn the marsh into a network of channels, through which the water flows in conflicting currents until it has reached the normal level. It is necessary to have an expert Indian guide to pilot one through those intricate channels that run into one another at all the angles known to a geometrician; from the canoe nothing can be seen but the walls of tall reeds about 12ft. high on either hand, and the diminutive perspective of curving channel ahead.

Seated in the bow, with the Indian in the stern paddling noiselessly, yet swiftly, around the curves and bends, flock after flock of ducks arise as the canoe appears, and at each report of the shotgun a veritable cloud of ducks arises from the surrounding but invisible channels, and fly hither and thither with a continued quacking for a while, until they gradually settle down in their haunts only to be again disturbed by the gun.

In half a day's sport we had a canoe so loaded down with ducks that we had to be very careful in our movements to prevent her from filling.

The Indians make a business of loading their canoes with ducks and selling them at the town of Selkirk for a mere song.

The only fishing in that region is catfish, goldeyes and whitefish. A species of large sturgeon is also caught, but they are very scarce, and when caught requires the efforts of four or five men to pull one of them on shore. The half-breeds catch them in big nets stretched across the river, but sunk beneath the surface near the bottom of the river.

But for duck shooting, I have traveled the Labrador coast, the Canadas, on the Atlantic coast and through the Southwestern States, and have never seen the equal of the Red River of the North as a resort for ducks. J. P. S.

A COUGAR.

A FLOOD of August's golden light just tipped the top of King's Peak and surrounding mountains, bathing them in a soft halo of golden light, as old Sol rolled from beneath the distant horizon, proclaiming "Sluggard, up and away!"

Springing from my bed of boughs I grasped my trusty rifle with the determination to bring in a fat buck before the sun should reach his meridian; for the country abounds in some fine specimens of this kind of game, and deer become exceedingly fat at this season of the year. My course lay along an open ridge for perhaps a half mile, then enters short brush and rose gradually to some lofty peaks about two miles to south of camp. The ridge having been burned over about two years previous made it very difficult to ascend on account of the dead mancineta brush at all heights from 1 to 4 or 5ft., catching and hooking to one's clothing in a very disagreeable manner. The young sprouts from the brush affording fine food for deer at this season of the year, they leave the open country about July and feed upon browse the remainder of the season until it comes fall. As I proceed I see plenty of small deer and occasionally an old buck as he is alarmed and bounds down the side of the mountain and makes cover in some green patch of brush that the fire has failed to burn in its course. I reach the summit of a sharp back bone, running back from the crest and terminating abruptly at the coast, where beneath rolls the mighty Pacific with its billows glistening in the morning sun. Turn and gaze inland and you will see the ridge as it turns and sweeps to the south as far as the eye can reach the dark frowning peaks growing dim and blue in the distance. Turning back from the coast I keep my course in pursuit of the buck which I am anxious to obtain.

Scrambling along the side of the mountain, turning a sharp point of rocks, I come face to face with a cougar, sometimes called panther or California lion. He also seems to be in quest of game, and stands with his head dropped very near the ground looking straight at me. I raise my rifle and fire. At the crack of the rifle he bounds in the air and turns short and rushes down the mountain with his tail standing straight up, smashing and cracking the dry brush in a fearful manner. After reaching a small bench he made cover in a thicket of green bushes. Here he made an awful tearing around for a few seconds, then all was still. Taking the trail I proceeded slowly along. Seeing plenty of blood on the trail I concluded he must be dead, and had approached within about six feet before I was aware that I was so near. Seeing two large fiery eyes glaring at me I concluded I was as near as I cared to be, and having no time to lose I raised my rifle and fired between his eyes. At the crack of the rifle he bounded into the air and dropped dead in his tracks. My first shot had taken effect in the head, but too low to kill immediately. The ball had entered his cheek and broken his jaw and passed along the back of his neck to the top of his shoulder blades and lodged against the skin. When dressing him I found him very fat. The next day I returned with Mr. Frebeg and Judge Faxon, my two camp companions. We skinned him. On telling the Judge that hunters eat them often, and that I had also eaten them many times, he cut a few pounds from the ham and took it to camp. We cooked it and made a square meal of it and pronounced it good. The meat was as white as the breast of a chicken and reminds one of veal. The Judge took the skin home with him. HUMBOLDT.

PETROLIA, California.

CHEAP GUN AND SURE AIM.—Once with my old muzzleloader, cost $2.25, I was duck hunting on Findley's Lake, N. Y. It was late in November, a cold, wet day. But few ducks were to be seen. There were three of us in the party. Finally getting sick of looking for mallard we decided to pepper anything that came within reach of our arms. My companions both had Parker's best. I was armed with my old government fusee which wore a cap as large as a cartridge shell. I was ashamed to do much shooting myself and thought I'd tend the oars and let my chums bring down the game. They had banged away at a diver, estimated distance 25 rods, ten times apiece without effect, when I suggested to them that I try my hand. I dropped the paddles in the water, and raising the old musket to my shoulder fired at the little speck in the distance. The diver dropped on his back and we rowed up and pulled in the game. So much for cheap guns and a sure aim.—E. W. H. (Poplar Bluff, Mo.)

BEARS AND CARIBOU.—James Nadeau, who lives four miles above Bean Lake, on the St. Francis, New Brunswick, was recently crossing the portage to Cabineau Lake and saw five bears devouring a caribou which they had just killed. They resented the intrusion ferociously. Nadeau went home for a gun and trap, and, not seeing the bears on returning, set the trap, and I have just learned he had taken one bear and expects to have them all. The killing of caribou by bears is something new to me. Doubtless the bears were lying in ambush, as the portage is a runway for caribou, and their fleetness precludes the idea of capture by chase.—WARFIELD.

RIFLES AND BULLETS.

Editor Forest and Stream:

I have read with great interest the discussions upon the relative merits of muzzle and breechloaders, large and small calibers, and heavy and light charges, which have appeared in the columns of your excellent paper, and my belief that the interest and desire for light in these matters is general among riflemen, is my excuse for adding to the much that has already been written.

I used to believe in the great superiority of the muzzleloader for accuracy, and when I was a lad I used a good many muzzleloaders that, for medium range, were beautifully correct shooters, but though that was not many years ago, the breechloader had not then reached the degree of perfection that it has since attained; and after having shot off the heads of grouse with the Sharps and Winchester for half a dozen years with but an occasional miss, my opinion upon the question of comparative accuracy has undergone a great change.

The muzzleloader is all right in its way, but in a game country I should feel almost unarmed with such a weapon. I believe it is Major Merrill who talks about "shaving a squirrel's head" along the whole range of 150yds. If he wants to pack a 15lb. gun that it takes ten minutes to load for the purpose of "shaving squirrels' heads," let him. That's the only use it is fit for.

The best shot, especially if a little out of wind, will sometimes miss or only wound a deer, even at short range, and if it takes him ten minutes with a monkeywrench and jackscrew to get a buckshot into his muzzleloader, he is not likely to get another shot that might retrieve the misfortune of the first.

It is bootless to talk about the muzzleloader, but about the caliber of hunting rifles I have found some difference of opinion among good hunters. While I have known expert game killers that put their trust in a .40-cal. and did excellent work with it, in all cases they used a long ball and a heavy charge of powder—never less than 70grs. The great majority of hunters in the mountains, however, use and prefer the .45-cal.; and my own experience—I have killed a good deal of big game—and my observations teach me that the .45, with about 90grs. of powder, and not more than 420grs. of lead, is the most satisfactory gun for our mountain game. More powder will, of course, give flatter trajectory and greater force, but it also gives greater recoil, and 90grs. of powder will drive a ball over any range at which one will have occasion to shoot with all necessary force and directness.

Other things being equal, a flat trajectory is desirable, but it is of less practical moment than is commonly thought. The novice will probably miss with any gun, but when the hunter understands his gun, and knows how it shoots at different distances, he will take care of the trajectory, and if his gun's point blank range is 100yds. he will "hold high" on a deer at 150yds. and low at 50yds., making proper allowance for what he has found to be the curve. More rifles, however, loaded as I have stated, will shoot close enough to the line of sight to require very little allowance in shooting at a deer from 50 to 150yds. If the mark is a squirrel's head, I shall get much closer than 150yds.

A small caliber ball, .40 for instance, with sufficient powder behind it, will give a flat trajectory, high velocity, and great penetration, but it makes too small a hole and does not let blood and smash up things enough to be the more effective missile for big game, while on the other hand a .50 travels too slowly, unless a very heavy charge of powder is used, in which case the recoil is too great for a hunting gun of the proper weight to stand. Whatever be the caliber, the powder should not be scrimped.

A few winters ago I ran across the camp of an interesting old hunter while on a hunt near Mt. Gunnison, who had hunted through the mountains of the Pacific coast for years, and had found the .44-40 Winchester sufficiently destructive for the white-tail deer of that country; but the blacktail of Colorado would run off with a shot that would have stopped a less hardy animal. Having lost deer enough to satisfy him of the trouble, he discarded his little gun and adopted the .45 Sharps, as did also his son, who had had the same experience, after which he had no difficulty. Experiences of this sort are common.

What your correspondent "F. F. F." says in your issue of June 2 about the Sharps will find a responsive echo in the heart of the old frontiersmen, to whom the "Old Reliable" is fondly dear. Hunters of the Rocky Mountains universally lament the retirement of the Sharps, and those who have one well preserved cannot be induced to part with it. No wonder, for there is not now upon the market a gun that, for shooting qualities, strength, symmetry, simplicity and general merits as a hunting rifle, bears any comparison to the "Old Reliable." Take it for all and all, I shall not look upon its like again.

The practical hunter cares little for the tangent and cosine demonstration of the man who shoots a .38cal. gun with thermometer and weather-gauge attachments, and all his abstruse reasonings and calculations, however logical and scientific, will not deter the said hunter when he goes after meat from taking about a 10lbs. or 11lbs. .45cal. breechloader that shoots a good stiff grist of powder and lead and which experience has convinced him is the most effective gun for big game that he can carry. But with any gun the hunter must "call his shot," never get rattled and put his lead where it will do the most good. Don't use a squirrel charge on elk. Humanity as well as self interest demands that we should not cripple game, only that it may wander away to become the food of coyotes, and a small ball will often do this, when a large one would be almost instantly fatal. M. F. S.

CRESTED BUTTE, Colorado.

NEW YORK CITY, May 18, 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it*, not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. CUSHIER.

Camp-Fire Flickerings.

"That reminds me."

219.

IMAGINE a camp in the mountains, three newspaper men and two guides lying on the ground by the fire, smoking and relating incidents of tortuous careers.

"Truth is stranger 'n friction," said Jerry, solemnly, "I heard a preacher say it onct, and I believe he knowed. 'Fore I left Pike county I went huntin' one day after bear, where I seen signs, and 'fore half an hour I found one, while I was lookin' over a bee-gum right at the bottom of an old oak tree. He was a big one, too, and mostly hid behind the tree so 't I couldn't get a shot at him. I just kneeled down on a bunch of dry leaves and rotten wood and took a good rest on the gum, and waited for a plain sight 'fore I pulled. The bear was nosing some acorns and wasn't movin' in sight much, but I knowed he'd come. While I was waitin' I see a settlement of yallerjackets bilin' outen the leaves where my knees was, buzzin' round and comin' fur me savage. In course I couldn't move, not with that bear there in twenty yards and likely to get mad if he found me out. You betcher life it was a stirrin' place. The bear didn't come in range and I was anxious, the yallerjackets drivin' into me like bee-martins into a crow. I must 'a' staid there nigh on to ten minutes, almost afeared to wink, 'fore that bear showed up right, then I turned the old gun loose and the bear rolled over quiet. The cur'ous thing was that all the yallerjackets was dead as well as the bear."

No one spoke up promptly to ask the reason of the singular phenomenon, or showed any vehement desire to know what destroyed the pugnacious insects. Jerry relighted his pipe and smoked thoughtfully. Finally Sunday, the other guide, unable to restrain himself further, asked what was the matter "with them air wasps."

"Well, you see, I had an old buckskin suit that was harder 'n a brass kittle, and that saved me."

"Yes, it saved you, but —"

"When a yallerjacket hit it, it just druv' his stinger back into him and killed him. See?"

"Truth crushed to earth may rise again," said the historian, "but it must be a painful effort," while Jerry patted the bowl of his pipe with his forefinger and preserved a calm demeanor. J. C. B.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

A MONTH UP THE SEVERN.

ALONG the Midland of Canada, on Georgian Bay, is situated the town of Waubaushene with its settlement of white houses and its lumber mills. It was from this point that in the early part of last July the Colonel and myself started for the mouth of the Severn River, intending to follow up that wild stream and its tributaries for a month of fishing. We engaged as our guide a native Canuck. In this country there are no regular guides to be found, and if you happen upon a native who would prefer the comparative luxury of camp life to the more laborious work of the lumber camp, you may consider yourself in luck. This individual demands $1.25 per day to paddle and cook. The wise fisherman pays him off in full when he is through with him. The Colonel and myself recall regretfully how one Almakook took French leave of us once at Waubaushene when we had returned for provisions.

And now a word or two about the country, for I doubt if you could find one rougher of its kind. It is a trackless wilderness of superb timber, through which flow innumerable streams, forming the many lakes with which the region abounds. So well watered is this lumber country that from some of the weather-beaten tops of the low line of "hog-backs" that seem to stretch out in every direction the region appears to you a labyrinth of mad rivers and picturesque lakes.

At Little Chute, fifteen miles from Waubaushene and just where the Severn empties into Big Lake, we built the camp which served as headquarters for the better part of two weeks. Here for a beginning we found a couple of log slants that had sheltered some hunters the previous fall. It was an ideal camp. Six Mile Lake lay but a few rods away, and the wild rapids at its outlet came tearing down just on the other side of the ridge and glided out into the exquisite stretch of water on whose thickly wooded shores we had made our camp. One could not have wished better fishing or more of it. The only hard part about it was—when to stop. In these waters we killed the very gamiest of black bass, all of them the hardest kind of fighters, and where the bass were there were pike and pickerel. There is very little choice of waters in this immediate region, one place seems as full as another. One might say, fish anywhere except through a log jam. These fish are not at all particular. Fly, spoon and bait to them are synonymous; the choice of lure lay at your discretion.

Yes, the flies in July and August are bad, but with your fly medicine you can keep well protected and finally you begin to forget them. In the early dawn, just as the loons commence to laugh and chatter away upon the lake, the flies lie on the water in great swarming patches. As the sun grows hotter they rise and go to the coolest parts of the woods, where they stay until twilight begins to settle, when they return to the water, where some hungry or sportive old bass with a plash and twist of his tail swallows them up. A "few" get away and find a corner out of the way of the smoke and blaze of the camp fire, and just under the roof of your slant camp. As you roll yourself up in your blanket after a good day's fishing they begin to be sociable, and then you reach over and from under the corner log extract the old bottle—tar oil of course—uncork it, and are soon asleep. As the hemlock brush fits into your shoulder blades you doze away. Again you give him the butt, and as his big tail swirls the surface, he zigzags his way across the rapids, drives his stubborn old nose among the rocks and—snaps your leader, with a start you awake to find the sun pouring in on you, and the pork fat enveloping your bass having a hot dispute with the Canuck. And so the days glide by. We regretted deeply leaving the Little Chute. We had become very much attached to the little camp to whose welcome roof we had returned so many nights after a good day's sport, but the almanac told us that we must push on up the Severn and so out to civilization and the railroad.

Up the Severn we found even better fishing. The bass were not so plentiful, but much heavier, ranging in weight from 3 to 4½lbs. In the Severn channel cat have been taken weighing 15lbs. I took one of these fellows on a rod in a pool below the Big Chute that weighed 7lbs., and gave me some logy fishing, although at times he displayed a great deal of power.

Thirty miles up the Severn, over log jams and hard portages and up rapids, brought us to the line of the Muskoka region and into Sparrow Lake. Along the shores of this lake lie scattered a few primitive farms, settled by the French Canadians and Indians. These were the first settlements we had seen since leaving Waubaushene.

The Severn continues as the outlet of Sparrow Lake, which is some six miles long, and winds in a stretch of still water, bordered by wild rice beds and willows, eight miles to Severn Bridge.

We killed no maskalonge on the trip, although Sparrow Lake is supposed to be the limit of the lunge region. The truth of the matter is they have been fished to death by the Indians.

At Severn Bridge the long canoe that has held us and our duffle for so many happy days is laid in the baggage car of the Northern & Northwestern R. R., and taken off and transferred to the Midland at Orilla; and that night she and her owners found themselves back again at Waubaushene. I can but add that I know of no country where you can obtain better bass fishing or will be more hospitably treated by the people. F. BERKELEY SMITH.

MAINE SALMON AND TROUT.

THE latest reports from Bangor, Maine, state that the "second run" of salmon in the Penobscot has begun, and the fishing is excellent, though the fish are smaller than they were in the "first run." A private letter from Fish Commissioner E. M. Stilwell yesterday says that "there has been an excellent run of salmon," and that "the fishing continues good." It is also understood, from other sources, that there have been more fish caught in the Penobscot with hook and line this year than last, while the capture down the river by the market fishermen has far exceeded last season. It is only reasonable to conclude that there has been a wonderful increase in salmon in that river—one that had nearly played out—and that this increase is the result of protection and propagation. There are numerous reports of the capture of landlocked salmon in the upper Androscoggin Lakes; particularly Rangeley Lake. The catches of trout are sprinkled now and then with a salmon or two. But I have heard of none in the lower lakes of that chain this season.

The reports say that the fly-fishing in Moosehead is uncommonly good this season, or has been up to date. The Kineo Club, a party of eight or ten Boston merchants and professional gentlemen, has just returned from its annual trip to this lake, and the members are more pleased than ever. Some of the names of the happy fishermen were: J. B. Thomas, of the Standard Sugar Refinery; Walter H. Sanborn, of the flour and grain trade; W. S. Hills, of the same trade; Leroy S. Brown, of the grain and provision trade; W. F. Nickerson, of the wholesale grocery trade. Mr. Lauriat, well-known in the book trade of Boston, was intending to be a member of the party, but a summons to Europe sent him across the water only two days before. Mr. Walter Sanborn is particularly pleased with his fishing trip. He is a sportsman who fishes with the fly only, but he made a score in nine days of 89 trout, with none less than ¾lb., and his largest weighing 3½lbs., a very respectable trout for that lake. He took two doubles and had a treble on his line. Mr. Thomas, also a reasonable sportsman, who can find as much pleasure in catching a few trout on a fly as the trout hog finds in his hundreds gobbled up with bait, says that the Kineo Club is made up of gentlemen who are above the taking of trout to be wasted. They fish for the pleasure of skillful capture and not for killing trout. It is a rule of the club that the trout shall all be used at the hotel, or, at least, none are allowed to be thrown away. The club charters a little steamer to take its members to the fishing grounds each day, and if at any time the catch is so great as to indicate that there is danger of a waste, the order goes forth to stop fishing. Still, not all the members of the club are above taking a trout with bait, if trout are to be had in no other way; but the feeling of a majority of the members is that fly-fishing is the proper method, and bait-fishing is generally discouraged. With the steamer the club is able to reach the more distant fishing grounds easily, and the cost of the boat is assessed on the members for the entire trip, no matter if a member cannot be present during all the time planned. Respectable strangers may be taken in, however, if there happens to be a vacancy, and charged pro rata, which income goes into the general fund. The largest trout taken on the fly by any member of the party this year was 5lbs.

A Mr. Woodward of the party had a curious experience, which rather set at naught such a thing as the selection of the "most taking fly." He fishes with two rods, one fairly heavy, weighing some 7oz., the other light, not over 3½oz. He usually has both with him, and after throwing the fly with the heavy rod until his arm is tired, he rests his hand by a turn at the little rod. He had three flies on each cast on the day in question, with no duplicate of style and name except in one case. He commenced to take trout, and each time he took one on a different fly till he had gone over the three on the little rod. He then took up the heavier rod, this time covering more ground than he was able to do with the little rod, but the selection by his trout of a variety of flies continued. He took each trout on a different fly till he came to the fly which was a doublet of the one on the rod, when no trout would take it. He had caught five trout, and each one on a different fly.

Mr. Harry Moore, of the firm of E. S. Soper & Co., in flour and grain trade, has just returned from his annual trip to the Maine waters. This time he spent his well-earned vacation on the lower Richardson Lake, with a party of six, one of whom wrote in the FOREST AND STREAM last week that pleasing letter from the same locality. Mr. Moore took a 7½lb. trout. He has a photograph of this fish, hanging against a tree, also a dozen or more other views of that lake and incidents of the trip. He showed them to his friends at the Chamber of Commerce yesterday, and it was rather amusing to listen to the guesses of the weight of the big trout. It strikes me that Boston merchants have never drawn more real pleasure out of the fishing in Maine than this year, and many of the Boston merchants are true sportsmen. Next come the vacationists, and the stream-strippers who fish for numbers. Little fingerlings must go to make up these numbers, for the vacationists could not tell a lie. He must have trout, and a trout is a trout to him. But he will never know the real pleasure there is in trout fishing till his spirit rises above the mere name of catching a certain number of fish, and until he gets him away to the lake at the season when the real trout are to be caught, and there, with improved tackle, he succeeds in landing one of the fishes that fall to the lot only of him who is a worshiper of the trout in his size and might. SPECIAL.

MY WIFE'S VACATION.

AN ARTICLE in the FOREST AND STREAM by "Special," dealt with the advisability of sportsmen taking the lady members of their families with them upon their camping out expeditions. Another article closed with the query why this is not oftener done. I suppose some wretches will reply that it is because they go for pleasure. I propose to tell you my experience.

In 1885 I promised my wife she should go with me, but later she agreed to wait a year if I would certainly take her then. So I went with a party of fellows, had a good time, and on my return told her I thought she could stand such a trip. Last winter I took her out with me on one of my trips to fish for pickerel through the ice. The fact that I never before saw her in such good spirits as on that day led me to think that there might be as much "Indian" in her as in me. But as another year came around, I dreaded for her the eight days of travel by rail, stage and buckboard which the round trip would necessitate, and I represented the tediousness of it to her in a manner which made her weaken.

One day in the early part of August, 1886, I went out to a neighboring village a few miles from here to see a friend with whom I have spent many happy hours in quest of sport and health, and when I returned I had concluded arrangements with him to camp out during September in the eastern part of Maine, close to the scene of the late deer warden tragedy. At the dinner table that day, I told the "party of the second part" of my plans; and I thought they were received with rather an ominous silence. I felt quite sure of her opinions next noon, for when I came home she notified me that I "might make my plans to go to Maine, where I promised to take her last year, as soon as I pleased, for she was going." That seemed to me to settle the whole business, and I so remarked.

I was more than pleased with the idea of having her with me though, and I knew that once there, all right, she would enjoy such a vacation, better than any other, but as she had never been strong I dreaded the experiment. There seemed to be a pretty good prospect, however, of settling the question.

We started Aug. 29, stayed that night in Boston and the next day went via the Boston and Maine road to Kingfield, Me., arriving there very late. At the Portland transfer station I counted over twenty men with guns or rods.

We stopped at the new hotel which had been erected during the past year, and found accommodations quite in the modern style. I kept close watch upon Madame, but to my surprise she said she was not tired in the least. The next day we took the stage for a thirty-mile ride up into the Dead River country. A light rain was falling, and the fog had settled into the valleys, so that the fine views of Bigelow and other mountains were wholly obscured. Still the ride was enjoyable and the passengers all proved to be charming company. What lots of fine fellows we meet when cruising around in this way. One of our party was a New Yorker, a Mr. Beck, who was going into the woods from Eustis for a month's "solitary confinement," except for the company of his guide, it being his seventh successive yearly trip to this place. At night Madame declared she had had a splendid ride, and was in perfect order. I could not quite see how this could be, for at home a walk of half a dozen blocks was liable to tire her out. All right, my lady, you may pretend to me that you are as good as new, but I know of a seven miles buckboard ride for to-morrow that will surely lay you out, or I am no prophet. Although it was now cold and raining hard, and only an hour or two before dark, she was for going on at once; and only strong resistance on my part, and good advice from some ladies who knew what such a ride in such a storm meant, induced her to change her mind. I had walked over the road several times, but had never ridden. The next morning I thought I would ride a short distance, and when she had become accustomed to this style of locomotion I would get off and walk. Before we had gone ten rods I had one arm around her and was holding on "for all I knew how," or she would have been thrown off as fast as she could get on again. It was an awful road. At one time three wheels would be in the air and one in a hole, and perhaps in a minute this order would be reversed. But all things generally come to an end, and so did the road. This was the point at which I was to carefully lift my exhausted wife from the buckboard and help her into a camp. But I didn't do it. She was off before I could shake myself together, and my word for it, I never was so surprised in my life as I was then to find her not in the least tired or lame, but in every respect in as good condition as myself. Although it made me out a false prophet, it was very gratifying. We found a good dry camp and a bed of boughs, the best an expert could make, and with sheets on it too. Think of that.

We spent two weeks here in solid happiness, fishing perhaps a couple of hours a day, and reading, resting, gumming and rowing about the lake, or passing time in any manner that suited us best. Madame saw lots of things that were new to her, such as ducks, loons, rabbits, etc., and one day she was lucky enough to see a deer while she was sitting in the door of the camp. She will not admit that she was disconcerted except once, and that was one night about midnight, when a tremendous "hooter" came close to camp and awoke every one in it with his dismal crying.

All who have ever been in this region will remember Kennedy Smith, at least by reputation. A week before

our arrival he had been crushed by a tree, and we found him in camp here making a big struggle for life, and laying plans for a new camp another year, which he said would be by waters never yet fished, and at the same time easy of access. Good luck to him.

The fishing seemed better this year than ever. I have thought many times if I were running a camp of this kind, I would allow no one to fish who did not take a small car along with the boat and keep the fish alive if possible, and put them in a larger one I should have near the landing at night. This could be drawn upon for food and emptied when too full, and a useless waste of fish prevented. I saw a party bring in 289 dead trout one day which were not needed for food, and I am sure the boys would have been full as willing to have brought them in alive as dead. In my last three days of fishing I brought only five trout to camp, returning to the water all others caught, while the party I mentioned brought in 571 in the same time, all dead. Such a reckless waste as this could easily be prevented, but no one seems to care. In some such way only can sport for future years be assured, whereas I predict that under present arrangements one of the best fishing resorts in Maine will, in five years, have become one of the poorest.

Of the five trout I spoke of saving. I caught a double of half-pounders, one a silver trout and the other a blood red fellow. One was hooked through the back and the other through the belly. They made things lively, and I felt that I had done well when I had landed them. Madame fished two days with fair success, using bait; then she laid down her rod and said she was through fishing until she could use a fly, like other folks. She stuck to it, too, and this spring I am engaged to give her lessons in casting.

One evening after supper we went out for a little while, and saw what I had often read of, but had never been lucky enough to see, the water "alive" with fish. This evening every trout seemed to be feeding upon the surface, and I tell you I flew around. As a natural consequence I broke the tip of my rod the first thing. It was too late to go to camp and rig another, so I was compelled to quit or do the best I could. But it was one of those scarce days when fish are looking for you, and will bite at anything. Fancy casting wasn't needed, and I would point out the fish I would take next, and then get out my line as best I could, and I generally got him. Darkness came altogether too soon to suit me, but not before I had gathered in a couple of dozen. Fish are freaky creatures. The best day's brook fishing I ever had was one when, according to all traditions, I ought not to have had a bite.

Madam's vacation ended before we were half ready. She had been perfectly happy, and I was a false prophet. If it rained and the camp leaked a little she moved her chair and kept on with her work or reading and let it leak. In short, she took things as they came, like an old camper. The result of my experiment was a conclusion that any woman almost can not only take such a trip, but will enjoy it and be benefited thereby as much as her husband or brother, if she can only get the chance.

I was very glad that I gave one woman a chance, and that is not all, I shall never go again without her.

A. G. McK.

MIDDDETOWN, Conn.

SALMON AND TROUT TACKLE.

Editor Forest and Stream:

Now that the fishing season is once more fairly upon us, and every true and worthy angler begins to be troubled with repeated twitchings of the wrist and elbow only to be cured by much casting of the alluring and deadly fly over deep and troubled waters, perhaps it may not be amiss to reflect a little on the tackle used, especially by the salmon and trout fisherman. What a difference there is in salmon rods alone. From the costly split bamboo of New York manufacture to the simple but efficient greenheart of Castle-Connel make is a big jump; there is also some difference between the heavy 20ft. weapon wielded by the muscular Scotchman and the light 14ft. rod of St. John make.

These differences, doubtless, have their *raison d'être*. On large and heavy waters fished from the shore, often in half a gale, the long and heavy rod is an enormous advantage, well worth the extra labor involved in its use: but for summer fishing, such as ours is, and with a handy canoe always at hand, a far less powerful rod answers our purpose and is far preferable in every way on one of those hot, bright days American anglers so frequently enjoy during the season. It must be confessed, however, that the very light rod and line generally employed are very trying with anything of a breeze blowing, at least I have found it so.

As between splices and ferrules, who shall decide? Both have their advantages, but I certainly think the "splicer" has the best of the argument. A spliced rod is lighter for the same length, throws a better line, and there are no ferrules to come apart from the wood, as they generally do in this dry climate every winter. But how delightfully handy a ferruled rod is at times; so it comes to pass that, though being in theory a "splicer," I often use a ferruled rod.

Of course the character of the rod governs the weight of the line; but a heavy line is a great advantage on a windy day. A line should always be tapered, a fact denied by some fishermen of the old school resident in these parts, but true nevertheless. I have some lines five years old and strong as ever. We are here unfortunately obliged to use single gut casts, owing to the transparency of the water. I say unfortunately advisedly; for do I not annually experience the torture of losing fish through bad gut? If we could only use it twisted even to the very hook, how many salmon it would save every year to be sure. "Some likes pork and some likes onions," so also some like multipliers and some plain reels, personally I prefer the latter, though some of the New York patterns are a wonderful improvement on European importations. The conflict here now is about double or single hooks, and the battle rages fiercely, but at present the smoke and dust of action is so dense that no man can foretell the issue. From experience gained I should say that the single hook hooks more fish and pricks fewer fish, but the double is a great institution when once fairly driven home, rarely coming back in one's face as the single occasionally does. The best style of gaff for rough service here is undoubtedly that with a long shank to tie on, all other sorts are clumsy or else dangerous.

Trouting may be divided into two broad divisions; fishing in small streams and fishing in large rivers or lakes, requiring very different tackle and methods. In the small sparkling streams, such as we have so many of in this Province, and which teem with trout of five to the pound weight, a short rather stiff rod, in two or three joints ferruled, I find catches the most fish, enabling the fisherman to deposit the little beauties on *terra firma* without risking the dangers incidental to a struggle in a small stream incumbered with bushes, drift wood and all other obstructions, specially made and provided for such occasions. By the bye, I heard of one take of seventeen dozen with worm the other day in Nashwaak, though the average was doubtless less than five to the pound. In the large and heavy river, where the so-called sea trout are found, a different rod is wanted. I well remember the appearance presented by a small, elegantly furnished single-handed trout rod after two days fishing in a small, rapid northern river, where trout ran to 4lbs. in weight and over. Double-handed rods about 14ft. long are to my mind the most satisfactory. These sea trout require a large and gaudy fly. Last week they took well a fly that has since been christened the "Gesally-Jigger;" why it was designated by this elegant cognomen I am at a loss to discover. Dressing, scarlet body and hackle, gold twist wing and tail slips of gray goose; salmon heok.

FREDERICTON, June 16. CHAS. A. BRAMBLE.

ALBANY FLY-CASTING TOURNAMENT.

ALBANY, N. Y., June 22.—*Editor Forest and Stream:* I inclose a copy of the official score made at the first tournament of the Albany Fly-Casters' Association, on Tuesday, June 21, and a clipping from the Albany *Argus*, of June 22. The weather was very much against us, blowing hard from the south during the whole day. The place where we were casting is so situated that we got the wind in squalls as it came over the hills and trees and about the neighboring buildings. Under the circumstances we are all quite pleased over the result. This was our first tournament as an association. Of the thirteen contestants all but four used the Spalding rod, Wood and Ball used the Leonard, and Parkhurst used one made by himself. The *Argus* reports is as follows:

Wind and weather were forbidding enough yesterday to have discouraged the most ardent disciple of the reel and rod. The sky was full of big black clouds and now and then a few scattering rain drops spattered in the water of the park lake, about which gathered about thirty members of the Albany Fly-Casters' Association, at a little before 11 o'clock yesterday morning, intent upon carrying out if possible the programme of their first fly-casting tournament. A small float moored near the east end of the lake house held up the contestants as they sent their lines whizzing out over the ripples toward a line of bobs set one foot apart on a long cable. Beyond bob 75 was anchored a boat containing the judges, Dr. Herman Bendell, Mr. W. W. Byington and Dr. S. B. Ward. Owing to the non-appearance of expert Roosevelt, from New York, Mr. William Kirk was chosen judge at the float. The competitors were divided in two classes. The first included those who had cast and fished with a fly previous to Jan. 1, 1887; the second those who had neither cast nor fished with a fly up to that date. Four prizes were originally offered for the first class and three for the second, but as Mr. H. Olcott was the only person who entered in the latter, two of the three prizes were transferred to the first class. When all the preparations had been looked after the contestants drew lots for positions, and Mr. P. M. Luffman took his place on the float as number one. After his rod had been weighed and measured he poised it daintily, and with a quick turn of the wrist sent the line whizzing out over the water and dropped his fly 40ft. from the toe line drawn across the float. After ten minutes of careful work, whipping the rough surface of the lake, he retired with a record of 71ft. for the long distance cast. The other contestants followed in regular order, each casting twenty-five times in addition at a buoy sunk one inch in the water 40ft. away from the float, as a test for accuracy and delicacy, twenty-five points being allowed for each. The total for both with the distance cast was recorded as the final score. This appeared at the close of the contest late in the afternoon as follows:

FIRST CLASS.

	Length of rod.	Weight of rod.	Distance in feet.	Delicacy.	Accuracy.	Total.
	Ft. In.	Oz.				
P. M. Luffman	11 2	9	71	20	9	100
H. R. Sweny	11 3	9½	73	21	3	97
H. D. Frothingham	11 6	9	74½	23	8	105½
Fred Wood	11 2	8¾	69	19	5	93
S. G. Spier	11 3	9½	61	18	6	85
Edwin Parkhurst	10 2	7	65½	22	9	94½
G. A. Brooks	11 3	9½	59½	20	4	83½
Dayton Ball	11 3	8½	65½	17	4	86
W. G. Paddock	11 3	8½	70½	16	6	92½
B F. Reese	11 4	8¾	60	24	7	91
W. W. Hill	10 7	7¼	63	24	10	97
Howard Paddock	11 3	9½	71	22	5	98

First Prize—Fly-rod, given by A. G. Spalding & Bros., won by W. D. Frothingham.
Second—Automatic reel, won by P. M. Luffman.
Third—Bray fly-book, won by Howard Paddock.
Fourth—Bray fly-book, won by H. R. Sweny.
Fifth—Fifty yards enameled line, won by W. W. Hill.
Sixth—Fifty yards enameled line, won by Edwin Parkhurst.
Seventh—Two dozen assorted trout flies, won by Fred K. Wood.

SECOND CLASS.

H. M. Olcott	10 7	7¼	58	10	0	68

First Prize—Automatic reel, won by H. M. Olcott.

Despite the unfavorable weather and the flawy wind, which descended at times in a spiteful manner upon the surface of the water, cutting it into a lace-like foam, in which the bobs were hardly perceptible, the records made were excellent, and every detail of the programme was carried out with scrupulous smoothness and accuracy.

Mr. Howard Paddock, who won first prize last year, was forced to be content with third place, much to the disappointment of many, who expected to see him again in the front. Mr. W. G. Paddock surpassed his previous record, and the winning cast of 74½ft. breaks the record in this vicinity. The number of spectators was large, many of them being ladies, who watched the sport from the lake house and their carriages. Among the admirers of the art who were present but did not participate were Chief Willard, Mr. A. B. Benson, Mr. Worthington Frothingham, Rev. Russell Woodman, Mr. John H. Farrell, Mr. Simon Vine, Superintendent W. S. Edgerton, Dr. Balch, Mr. J. W. Burdick. The association is considering the question of holding another tournament in the autumn.

A CATCH IN THE DARK.

BY A LADY CONTRIBUTOR.

IT WAS when we lived near Bull Creek, in White county, Arkansas. Our house was not more than twenty rods from the deep hole where I had some catfish hooks set. My husband had taken off two fine catfish that morning, and I had saved some of the entrails for bait. I did not get time to attend the hooks until after supper; but the moon was shining brightly upon the grass field that lay between the house and the creek, so taking my can of bait I set out for my hooks.

It it was light enough in the field, it was terribly dark under the trees along the bank, and as I entered the dark place an owl up stream began to hoot, while the frogs were calling in every direction and some of them said very strange things. It was a dark, damp place, and in spite of myself a shudder crept over me.

But I was not afraid. Was not Joe at the house or the stable? Of course he was. And my dog Dash—but now I remembered that I had left her watching a rabbit we had treed in a huge white oak; I could not get it and told her so, but she refused to believe me and would not leave it, so I had to go home without her; and now I was alone.

I took up a stout cane pole and put a fresh bait on the hook, and giving a good cast out toward the middle of the stream, drew it slowly toward me. Suddenly something seized my bait. I jerked too soon, let go, and when I felt my hook, I found the bait intact.

"Next time you bite you may take the hook along and swallow it at your leisure," said I.

So I threw in again and soon had the creature high on the bank. And now the fun began.

By this time my eyes had become a little used to the obscurity of the place, and as the thing went past my head, I saw that it was more than 2ft. long, and all too slim for a fish of that length.

Immediately I thought of the great moccasin snake I had seen there the day before. Meanwhile the thing was writhing and jumping all over the place. Sometimes right against my feet; and in an instant it would be as far off as the line would let it go. I held to the cane and knew the hook was fast in its mouth, "so then it cannot bite me," I thought, and it may be an eel. Quick after this came another thought. If its tail is flat it is an eel, if round a snake. Just then it squirmed up to me and I set my foot on the part I supposed must be its neck, and reaching down, felt for its tail. Yes, it was flat.

But the thing was so slick, and so cold, and so all over alive, that for a moment I did not know what to do. The next minute I had my apron off, and was down on my knees, wrapping it tightly around him. The hook was still in his mouth, so I wound the line around the bundle and went home dragging the pole after me.

The grass field looked brighter than ever with the moon shining on it. About half way to the house I met Dash. She had come home, and not finding me there had started to find me. We had a nice dish of eel for our breakfast next day. I like them better than fish when properly cooked; and Dash, who had a good piece as well as all the bones, seemed to think it as good as the rabbit would have been.

There is plenty of game here. A good many deer were killed near here last winter, and I often see wild turkeys, but I have never killed one, for my 8lb. muzzleloading shotgun will not carry large shot far enough. I have killed several ducks and quite a number of squirrels as well as hawks and owls with it. I mean to get a breech-loader one of these days, and then I will write you again if you print this. MRS. M. R. BARNES.

WHITE COUNTY, Ark.

A FORMULA FOR TROUT WEIGHT.

Editor Forest and Stream:

Apropos of the discussion in late numbers of the size and weight of trout, particularly that in your last issue by Mr. Page, the following may be of interest:

The weight of a trout if of normal shape, and by this I mean not excessively short and chunky, extremely so, in fact, may be approximated with great closeness by the following formula:

$$W = \frac{L\,G^3}{1{,}000}$$

in which w equals weight, L equals length from eye to root of tail (not total length), and G equals girth, which, as the formula shows, should be cubed. The result is the weight in ounces. In fish up to say 5lbs. this is extremely close, in larger fish it, of course, is liable to slight differences, increasing as the fish departs from normal form.

Applying this now to some of the fish whose measurements and weights are given by Mr. Page, say for example his own trout, which was 30x18, and subtracting a reasonable amount for nose to eye and tail (for the length was of course total length) we find the weight 10½lbs., which is close to Mr. Page's figures. Applying it to Mr. Grote's we find it about 8½lbs., which is what the fish must have weighed. If it weighed what it is reported there are several hypotheses to account for it. First the fish was of the same girth from head to tail. This is hardly supposable. Second, he was loaded like the jumping frog with Tatham's chilled before b ing weighed. Third, the scales were out of order. Because a fish of that bulk weighing 12½lbs. would have such great density that he could no more swim than a stone, providing the rest of his composition was normal. PERCYVAL.

NEW HAVEN, Conn.

THE CUSK.—*Editor Forest and Stream*: I was surprised to see that in your issue of June 23 you pronounced the fresh-water cusk a worthless fish. I have nothing to say in favor of its beauty or game qualities, those attributes being far below par; but a chowder made from cusk taken out of the deep cold water of Sebago Lake (Me.) is good enough for any one, and we have passed our plate a second time for the fish when fried or baked. During the winter, many parties living within a radius of thirty miles of Sebago Lake, visit it for a few days, or rather nights of cusk fishing, knowing that if they catch more than their families can use their neighbors are more than willing to relieve them of all extra fish. In Sebago Lake is an unlimited supply of fresh-water smelts, which are there the principal food of the cusk. Does the food of the cusk in these waters make its flesh better than elsewhere, or is it perhaps a better fish than it gets credit for being? Should like to hear from others who have eaten fresh-water cusk.—BLACKSPOT.

JUNE RISE ON THE ASPETUC.

THE beauties of the Housatonic, river and valley, the "Schaticoke" and Berkshire Hills, have all been fully described. No lover of wood and water can turn away from that succession of hill and dale and not confess his expectations have been fully realized. All the way up that lovely river, countless streams ripple and leap down from the surrounding hills; and in the olden time they were full of trout. They would be full now if half, yes one-twentieth, part of the trouble were taken to replenish them that has been spent on depleting them. There are few if any streams anywhere near Kent or New Milford that I have not fished; and one pleasant day in June stands pre-eminently forth in my memory as giving me more sport than I shall ever look for in that part of the country. Last summer I fished the same stream and never had a rise.

But on one occasion I went down the well-known Aspetuc with very different results. There had been a steady rain in the latter part of June and I made my preparations accordingly. One good rainy day, and I among the first to get on the stream, would, I thought, give me a chance to get some fishing. Bright and early on a lovely June morning by 4 o'clock, I started off "over the hills and far away" on a five mile tramp. I dislike very much getting my feet wet, and I would rather charge on a battery any day than run across a snake. "A son of Adam and of Eve" all through. I was known all through the country as the man with the "Ingy rubber boots;" and though they are heavy and logy, I kept them for wading, and lest some of my readers may think it strange an old campaigner should mind such trifles as wet feet or snakes, I beg leave to say that one of the bravest officers in our Navy would tremble at the sight of a mouse and shiver and shake at their being any where near him—which he seemed to be aware of instinctively

Away I trudged, up hill and down, over a road every inch of which was familiar to me, until at last I came out at Hill's Mills. Then I walked down leisurely to just below the old dam, put my rod together and set to work. Those of my readers who have honored me by perusing my article on worm fishing will know how I go to work to catch trout. Those (and many there must be of the FOREST AND STREAM) who know this and other streams in the vicinity of which I write are aware that one cannot throw a fly on these brooks. The banks are fringed with willows and alders and overhanging branches; the streams are comparatively small and you have to go along carefully and slowly and take your time.

All the trout in any trout stream are not hungry at the same time. Only patient, quiet fishing will get you your fish. So I pulled up my boots and waded in. The very first fish caught I knew was a new comer. How bright and fresh and shiny he looked. He had his Sunday-go-to-meeting suit on—no store clothes there. I waded down, now tossing in by yonder whirl, now by that ripple, now off to the left by the old tree, again to the right by where that little brook comes murmuring in; and every fish was looking his best and I was doing fairly well.

How the trout can get up the streams they do, where a flying fish could hardly succeed, is one of those mysteries no fellow knows anything about. That they do go up we know, but the "how" is a conundrum. Across from Kent, on the Charles Edward stream, how do they skitter up that lofty rock at the base of the brook as you begin to fish? There was a stream, I made up my mind, in the olden time that must have trout in it. Every one laughed at the idea. I explored the stream and found, of course as I expected, that it was full of small mountain brook trout. I had a grand day's sport. It was like fishing among the Catskills. What will my readers think when I tell them that, though I circulated alarming stories of encounters with rattlesnakes, in order to keep the trout destroyer away, a so-called friend of mine "gave me away," and in one week's fishing 550 odd trout were taken out of that brook by actual count, and now some folks wonder why are there no more trout. Yet are there younsters there yet; and all they want is a tariff for protection, and that they will never get.

And here were a lot of new arrivals, and how they got over the damway down by the mouth of the stream was what stumped me. I kept on my way, and had passed a place where not long before one spring two little urchins saw two wild geese come flying along as if tired out; they splashed into the water and these two boys ran down and plunged in and captured both birds and took them home. Here the stream narrows and runs swiftly through quite a reach, at the end of which there is deeper water, and an old beech tree stands on the left, half in and half out of the water; and here I had famous good fortune at the very first cast of my worm. I let my line swirl and float down through this channel, and I knew a big one had hooked himself—big for that stream. I brought him up, for I knew my tackle would hold him, though he showed good fight, and he just went across my basket—13in. to the pound is fair measurement. Again I let my line go down, and again No. 2 tries his hand and again he is taken into camp. A third time and No. 3 dashes at the bait, hooks himself, and gives up after a gallant fight. Now, here I stood in rapid running water, alders on both sides of me nearly touching me, and branches overhead. No chance for light work or fly, or playing my fish, tiring him out by the spring of my trusty rod; and I caught three fish weighing a pound apiece. As with cutters and centerboards, so it is with fly and bait rods; adapt them to the waters you use them in.

So soon as I could get to a landing place, I waded out and took account of stock. I had twenty-one trout, which when dressed weighed over 11lbs. I looked at my watch, it was a very little after 10 o'clock, and I had 5 miles to go to get my fish put up for New York, to catch the 12 o'clock train. I'll try it and away I leg it, as fast as I can go. I am a little tired, and have fish and boots to lug. But I have a big brother in town, and I want to give him some trout as a change for salmon. He's an old salmon fisherman. So I keep my mouth shut—which is a very hard thing for me to do as a general thing—and I pull through and reach the depot. Charley and Dan, old chums of mine, turn too and help me. We clean our fish, give them a pinch of salt all round, put them in ice cold water, get some nice clean sheeting, wrap them in a fold of linen, then fish, then another fold of linen, and so on until all the fish are carefully covered up. Then I procure a box large enough to hold them; put them in, pack them in solidly around the sides with fine ice, nail on cover and direct them. All aboard! Off goes train with fish billed through for prompt delivery; and off I go contentedly home. The sequel is this telegram:

"NEW YORK, 22d street, 7 o'clock.—*Dear Capt.:* Fish come to hand in A 1 order and were delicious. Yours affectionately, SALMO." CAPT. CLAYTON.

GOOD STRIPED BASS FISHING.

THERE has been the best fishing for striped bass in Martha's Vineyard that has been known for over three years. At the Cuttyhunk Club the fishing opened June 18, and the record of the catch there up to noon on Saturday last, one week, was 60 bass, weighing 818lbs., averaging 15 3-5lbs. each. The largest fish was taken by Judge McGown and weighed 41lbs. The next largest was captured by Mr. William A. Woodhull and weighed 38½lbs. The smallest fish taken weighed 7lbs. The bait used was lobster tails, no menhaden having appeared there this season.

Hon. Henry P. McGown left Cuttyhunk on Saturday, and has kindly allowed us to copy the following from his score book: June 19, 3 fish, 14½, 10½, 9¼—34¼; June 21, 6 fish, 18¼, 15½, 14¾, 14¼, 12½, 10¼—85½; June 22, 2 fish, 16½, 12¾—29¼. The two following days the wind blew a gale and no fishing. June 25, 2 fish, 41, 8½—49½. Total for 15 fish 198¼lbs., averaging 15¼lbs. each.

Mr. McGown used a split bamboo rod, with ash butt and solid reel plate, which weighed 20oz., but without the butt and plate would not weigh more than half that. The fish were all taken on a nine-thread linen line. He reports excellent fishing at Pasque Island and other clubs. At No Man's Land Mr. Butler took 6 bass, which weighed 300lbs., the largest one turning the scale at 60lbs.

THE TOURNAMENT.

Editor Forest and Stream:

In the FOREST AND STREAM of June 9 you have taken the liberty of referring to me in an article assailing my friend, Mr. C. G. Levison, and in justice to him as well as myself, I wish to say that the statement in reference to the salmon casting contest for short rods, that Mr. "Levison agreed [to loan me his rod] but stipulated that Prichard should give him any prize that he might win, and as Prichard won first prize, a handsome grilse rod, Mr. Levison claimed and took it" is a decided misstatement of the facts. On the contrary, Mr. Levison made no stipulations whatsoever, nor did he refuse me the rod, but offered to loan it to me before the tournament. I took no rod of my own because it was understood that I was to use his, and I believe he loaned it to every other contestant in that class. I knew I would beat Mr. Levison, and thinking it hardly fair to use his rod under the circumstances, I offered to exchange prizes with him; but as for him taking the rod I won, even after my offer, he would not do it, but kindly got it the following day on my order for me and delivered it to me. He took the third prize, which he won. I cannot perceive how Mr. Levison's views of the tournament contests can be deduced from a consideration of such an incident, even if it were true, but think his views are perhaps fairly suggested by the devoted assiduity with which he labored to make the tournament a success.

Hoping the above correction is sufficient to right the wrong which has been done Mr. Levison, and that you will give this as prominent a place in your paper as you did the article it refers to, I am yours,

HARRY PRICHARD.

NEW YORK, June 20.

[About a week after the publication of our notes relative to this matter, Mr. Levison called at this office to explain that the reason he took charge of Mr. Prichard's rod was because Mr. Prichard could then not take charge of it himself. Mr. Levison was requested to put his explanation in writing, but he appears to have preferred to ask Mr. Prichard to write, as above. Mr. Prichard's letter, it will be noticed, is dated June 20. Inquiry has developed the fact that the rod was returned to Mr. Prichard after the publication of our article on June 9. We know of a gentleman who heard the bargain between Levison and Prichard, which was that Levison was to have the rod if Prichard won it. That Mr. Levison regrets his action at the tournament there is no doubt, and there is also no doubt that Mr. Prichard is willing to try and smooth the affair over. It is to be hoped that in the future there may be no repetition of such unpleasant incidents at the angling tournaments. The Association should add to its organization a governing committee to take cognizance of such matters and provide a remedy for them.]

THOSE SILKWORMS FOR GERMANY.—Cold Spring Harbor, N. Y., June 25.—*Editor Forest and Stream:* In your last issue I recorded a shipment of coccoons of the American silkworms to Herr von den Borne, of Berneuchen, Germany. They came to me by mail and I put them in a cigar box and remailed them. After lying in the post office at New York for four days they were returned marked "over size and over-weight," and several had hatched. Owing to the lateness of the season we cannot send our German friend any more this season.—FRED MATHER.

WHO LOST THIS FISH?—Thomaston, Conn., June 21.—A dead trout, weighing 3lbs. 10oz., was found in a branch of the Naugatuck River in this town a few days ago. It had a hook through the root of its tongue. It is the largest ever seen here, and but few trout are caught in the stream.—E. M. C.

WEAKFISH.—Weakfish are in. I was down at Gifford's last Saturday, and two rods got 21 weighing 16lbs. They took shedder and shrimp; lots of the latter on the dock. Go for last of flood and first of ebb.—GRAY JOHN (New York).

STURGEON IN THE CONNECTICUT.—Sturgeon are rare fish in the upper Connecticut waters, but an ugly little 5½lb. specimen was caught last week opposite South Hadley.

DRUM FISHING on the New Jersey coast is said to be good now. Anglesea is the place to go to.

BOUNTIFUL NATURE AFFORDS NO FINER SPECIFIC for skin diseases than Sulphur, a fact that is proven by the action upon the cuticle afflicted with eruptions or ulcerous sores, of that supreme purifier and beautifier of the skin, Glenn's Sulphur Soap. HILL'S HAIR AND WHISKER DYE—Black and brown, 50c.—*Adv.*

PRESERVATION OF FISH BY ACIDS.

[Discussion before the American Fisheries Society.]

AFTER the reading of the paper on the preservation of fish by acids and other compounds, by Mr. Clarke, published in our last issue, the following discussion was held:

MR. MAY—The paper just read treats of preserving fish by means of acids and other compounds, but does not say what effect these preservatives have upon the human stomach. Is there any member present who has eaten fish which had been kept by any of these processes?

MR. MATHER—I once ate a trout which had been kept for some ten days without ice. It was given to me by Mr. Thomas J. Conroy, of New York, the dealer in fishing tackle, and had been preserved by a patent process or powder called Rex Magnus, not now on the market, and which probably may have been largely composed of boracic acid, and the fish was fairly eatable, a little dry but still better than no fish.

MR. MAY—As our worthy secretary still lives, it is fair to presume that the use of these preparations does not bring on instant death, but what would be the result of eating a thousand such prepared fish?

MR. MATHER—I cannot say. Prawns preserved in some acid come to New York from Charleston and other southern ports, and I see them at Blackford's daily. I have here the quarterly number of the *Journal of Fishculture*, published by the Fishculture Association of England, in which there are two items referring to this matter, which I will read. The first one favors the use of acids and the second one condemns them.

There are two sides to all questions. The *British Medical Journal* writes thus as to herrings cured with boracic acid: "Large quantities of herrings preserved with salt and boracic acid being at present imported from Norway, and sold in the London and Newcastle markets, attempts have been made to prevent their sale. The National Sea Fisheries Protection Association discussed the question at a recent conference at Fishmongers' Hall, but no decision as to such fish was arrived at. It may, therefore, be worth while to point out that boracic acid, being the essential ingredient of our many food preservatives—be it in the form of the acid, of boroglyceride, or of borax—has been used for years, especially to preserve milk in hot weather, and no evidence has ever been brought forward even to suggest injurious effects upon the health; it may, therefore, be taken to be perfectly harmless. The Norwegian herrings preserved with salt and boracic acid are of exceptionally fine quality, are perfectly fresh when brought into the market, and are of course, subject to the usual process of inspection by the market inspectors, whose power of rejection is almost absolute. If, nevertheless, an outcry is heard against this sale, it is difficult to resist the belief that it is dictated by the jealousy which is notoriously rife in Billingsgate circles.

"The introduction of cheap food from new sources, welcomed as it always is by the public, is invariably opposed by the trade who, after all, reap the chief advantage in the long run. One has but to recall the sneers of the meat venders at American and Australian meat to value the agitation against Norway herrings at its proper worth. Hitherto, happily, we have been spared the bitter discussions which have on the Continent led to legislation against certain food preservatives, such as salicylic acid, which we in England admit without hesitation. The question is mainly one of public economy: Shall good food be wasted for want of a preservative, even if certain objections may be urged against their use, or shall we put up with these objections and aim at cheapening food for the masses, provided, always, that nothing which could injuriously affect their health is allowed to be present? A sufficient guarantee is afforded by the vigilance of medical officers, public analysts and market inspectors against the abuse of antiseptics and food preservatives."

On the other hand, a fish trader writes to the *Fish Trade Gazette:* "Hundreds of barrels of herrings from Norway out of one cargo were condemned, and also, that there were about 1,500 barrels unsold lying in London at that time. France will not admit the Swedish and Norwegian herrings nor any other fish cured by the process named. Many shopkeepers soon find out to their cost that once their customers have tasted herrings cured with acid they don't ask for them a second time."

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5123.**

MASSACHUSETTS DOG LAW.

BOSTON, June 22.—*Editor Forest and Stream:* This State has just passed an act of considerable interest to dog owners. Until now there has been nothing in our law to fix the age at which a pup becomes taxable as a dog and subject to our dog license laws, which are strict. The fine for keeping an unlicensed dog is $15, and $5 goes to informer, and the magistrate has no discretion to reduce the fine or abate it.

The new law provides that dog breeders keeping five breeding dogs or less pay a fee of $25, or more than five breeding dogs $50, and such persons are entitled to keep the pups until they are six months old without being taxed for them. The implication is that all other persons are taxable for pups under six months old. There may be some question whether unweaned pups would be taxable, but there is no question but weaned pups under six months old are taxable to all persons who have not taken out the breeder's license provided for by our new law, which took effect May 26 of this year. S. W. HATHEWAY.

ESSEX COUNTY KENNEL CLUB.—A kennel club has been organized at Lynn, Mass., to be known as the Essex County Kennel Club. The present officers are as follows: President, Robert Leslie; Vice-President, Dr. O P. Macalaster; Secretary, Benjamin Phillips; Treasurer, E. L. Rogers. The object of the club is to encourage the breeding of blooded dogs, and to hold bench shows and field trials. The club was formed to meet the want being felt by the owners of dogs throughout Essex county for such an organization, and its list of members is rapidly increasing.

AMERICAN KENNEL CLUB METHODS.

Editor Forest and Stream:

It is to be hoped that out of all the recent discussion of the Beaufort-Patti M. case some good will arise. The last decision was a piece of nonsense; there is no reason for discussion on that point, although lots of people may be of a contrary opinion. Mr. Drake in his letter says there are many extenuating circumstances, giving as reasons that the *faux pas* was committed by the proxies and newly-elected delegates, and that some of those who voted knew nothing of the case. Well, certainly, the principal movers in the reopening of the case can't make that plea. They at least fully understood all about the matter in all its bearings, for it was thoroughly discussed at the December meeting, and they must certainly have known that the New Jersey club would have taken their decision then given as final, and have paid over the money according to that verdict. It certainly is not a mitigating circumstance that the motion to reconsider was made by Vredenburgh, who at the last meeting was not entitled to vote, and a stickler for propriety would hardly indorse the making of Mr. Hanna a sub-proxy for Mr. Munhall. How can a proxy delegate his powers? I am informed that Mr. Elliot Smith ruled that there would be no objection to Mr. Munhall appointing Mr. Hanna as sub-proxy. But surely Mr. Smith's approval was not the only necessary thing. It would appear to me that the one who appointed Mr. Munhall as proxy was the one to be consulted. He might have been satisfied with Mr. Munhall, but how does the latter know that his shifting of his responsibilities on to the shoulders of Mr. Hanna was satisfactory? However, these are merely incidents in the main folly, and as such are not of the importance that the definite settlement of the case is. For this certainly is a matter of importance. The American Kennel Club has made plenty of mistakes before, but probably none of such colossal stupidity as this, the latest.

There are some people who only look at things superficially and therefore imagine it is a great deal of fuss about a small matter. But the fact of the matter is that the American Kennel Club has reached a point at which it either has to get itself on a business basis and act out the purpose for which it only has a reason for existence, or it can go on blundering and lose the respect of decent men and practically fall to pieces. It is a critical period in the history of dog shows in this country. We have arrived at a time when thoughtful men see that if dog shows are to be successful in this country, there not only must be a rigid code for their government, but a court capable of interpreting the code and enforcing its articles upon all, no matter who they be. If this does not take place there will still be dog shows, but a very large portion, and that the most respectable portion, of the breeders of the country, will not exhibit. Entries will be poor and receipts light, and the public, that only now is just beginning to support dog shows with its entrance money, will come to look upon dog shows and dog men with suspicion and disgust, and support them not at all. We can not have an autocratic body in this country, like the English Kennel Club. It must be a representative body, and in all such abuses are liable to creep in if the men elected do not act in good faith and with regard for justice.

It seems to me that the A. K. C. does not know what its functions are; in its deeds it cannot separate the act from the man. If he is "one of us" the severest thing that can be done is a mild censure. It appears to be afraid of handling anything without the gloves lest it should hurt the feelings of some one. Why did it take no action upon the Pittsburgh pewter medal business? I am informed the reason was because there was no special article in the rules that it could act under. And yet the president of that society is a lawyer. Could he not help them out of the difficulty they were in of not being able to find some mode of action? If it could do nothing else, could the A. K. C. not have placed itself on record as being opposed to such practices, even if indulged in by one of the members of the association? Let us have done with child's play. In the Beaufort—Patti M. case there are two courses open by which the A. K. C. can right itself. The proper way is for a declaration to be made that the action of the last meeting was illegal and the decision rendered null and void on the ground that the mover of the resolution was not entitled to vote at that meeting, and further, that a decision on the case having been filed last December it was out of the power of the A. K. C. to reverse that decision, its action in its capacity of appellate court necessarily being final. Judging from the past it is not likely that the A. K. C. will take that course, although it is the most manly one.

The other course is for it to speedily act upon Mr. Drake's motion to reconsider, and let it do the crawfish act. The new constitution and rules do not take effect until September 1, and under the old rules this method of doing business by correspondence is yet permissible, and Mr. Drake's motion is in order. If it will straighten out this case by either of the above two methods there is yet hope for belief that in the future the follies of the past may not be repeated, and that affairs will be conducted upon a sounder basis than they have been.

As long as the central governing body is lax in its methods the clubs composing that body will not be less so in the management of their shows. In FOREST AND STREAM for June 16, Mr. James Watson furnishes a list of seventeen entries, at the Newark show alone, which were incomplete and upon which that club should have taken some action. No action was taken because so much of this kind of carelessness exists that much is not thought of it. These errors are as they appear in the catalogue, and it is possible the blanks as filled out by exhibitors may be without the errors. I suggest this as I appear as one of the guilty parties, the date of birth of Wacouta Rose having been omitted, and I remember at subsequent shows to have seen errors in the catalogue that I am positive were not committed by me on the entry blanks. The unreliability of show catalogues is so notorious that no exhibitor would turn to one to settle any disputed question as to names or dates. This should not be so. It is now time for a change; let us hope that after the A. K. C. has squared its record, a new start may be made and in future a more rigorous enforcement of the rules be had, so that the bench shows of the next season will be carried on upon a less slipshod method than heretofore. WACOUTA.

ST. PAUL, Minn.

Editor Forest and Stream:

Surely Mr. Peshall wrote without due reflection when he said that the A. K. C. should never have original jurisdiction. If this were the rule how could a member be disciplined for any wrong, however glaring? In the case quoted by Mr. Peshall I think he is right. Ordinary offenses should first be published by the club concerned, and then the A. K. C. give its final on the subject, but to restrict its jurisdiction exclusively to hearing cases on appeal would often be a flat denial of justice. Nor is it correct that the A. K. C. should not take cognizance of wrongs unless committed at shows of their members. This should be the practice but not the rule. Suppose some glaring fraud, some vile outrage had been committed at the Buffalo show; should the perpetrator go free because the Buffalo show was not held by a member of the A. K. C.?

On this general point I have always admired Mr. Elliot Smith's famous "opinion" on the Perry disqualification. He took the ground that while it would appear proper that only the club at whose show the wrong occurred should disqualify, yet in the newness and rawness of dog show precedents, and the danger that local influences might operate to the detriment of justice, it was not safe to trust to this, and therefore he voted to sustain the principle that one club might disqualify for a wrong committed at the show of another club; and in spite of "Porcupine," I maintain that this was one of the soundest, clearest decisions ever given in connection with the A. K. C. It puzzles me, however, to understand how Mr. Smith subsequently decided or allowed that the secretary, without a proxy or authority to act for anybody, could move a reconsideration of previous action of his, when he was duly clothed with power as a proxy.

I cannot agree with Mr. Watson's reasoning as to a dog's being disqualified because one of the identification items required is not given. Sufficient must be given to clearly identify the dog, and none must be of the deceptive character that "full pedigree" involves. But suppose there is an uncertainty as to some item, say whether Jones or Smith was the breeder, you cannot say that the breeder is "unknown," for that involves that nothing is known of him, while the only question in doubt is, which of the two was the breeder? Or it may be uncertain which of two names of the dog's sire was the correct one, we know that it was both Tom and Jack. Can we say it is "unknown?" And further, does not the leaving of one item unstated imply an uncertainty as to what it should be stated as?

After prescribing the "musts" required for identification, the rule says, "Otherwise it must be entered as 'pedigree unknown.'" If the name of breeder is not given, it must be entered as "pedigree unknown." The rule is stupidly vague, and Mr. Watson makes the mistake of applying, with Draconian severity, an indefinite rule. This will not do. Strict constructions can only apply to clear, unmistakable rules. Nothing, however, except ignorance on the part of the user, can excuse that stupid evasion "full pedigree." If used in good faith, the requirements of the identification rule as to sire and dam must be known to the user; therefore, why not give them? If they are not known, then he cannot know whether the dog has any pedigree. This piece of humbug is a survival of the old ramshackle days of "good fellows," humbugs, etc., that gave birth to pewter medals "100 cents on the dollar," etc. I remember how astonished I was to find my dog Tiny entered at Louisville as "full pedigree," when I had entered him as "pedigree not yet ascertained."

Mr. Drake is hardly happy in his use of the word "extenuation" as applicable to the "back action" act; for those who knew the history of the case, the full discussion that had been had on it, and the final decision that had been rendered, there can be no extenuation. For himself and Mr. Newberry, new members, entirely fresh at the subject, "extenuation" seems too strong a word, a mixture of excuse and justification would seem nearer the mark. I am not generally accused of being slow in "shooting off my mouth," but I confess had I been in the predicament described by Mr Drake I would have done as he did. Whether the answer to the question "Is the A. K. C. to live?" will be affirmative or negative, depends simply on backbone. The accession of Messrs. Grosvenor, Seabury, Drake and Newberry, and Mr. Child's shoes being so worthily filled, adds vastly to its promise of usefulness, which, however, can only be fulfilled by positive and decided action; squarely sitting down on a few knaves or knavish actions will do more than all the flapdoodle administered to it in the intervals of study of "citrate iron and strychnine pills." W. WADE.

HULTON, Pa., June 24.

THE PEWTER MEDAL FRAUDS.

Editor Forest and Stream:

The paragraph you published last week, taken from a Pittsburgh paper, would seem to prove that Mr. Elben, the secretary of the Pittsburgh Pewter Medal show, was made of a composition "heavily plated" with brass. His statement only occupies about twenty lines of type, yet almost every line contains a falsehood. He admits that the medals were not gold—but his catalogue says gold and silver, not brass and pewter, medals were to be given—and he thinks it all straight, because they did not say they were to be "solid" gold, as they really contained a thin scale of gold on the surface. The statement that "every person who buys a piece of silverware in a jewelry store knows that he is not getting solid silver unless he has made a request that the article be sterling," on the face of it is so absurd that no one would imagine that any but a fool would have made it. Mr. Elben would imply that there was something that gave value in the word "solid." When the United States mint issues a gold coin it is not gold, then, unless it is publicly stated to be "solid." If I call Mr. Elben a fool or something stronger, it does not mean anything unless it reads a "solid" fool, and for the sake of the libel law I will omit the word "solid." So, too, when the catalogue stated that a special prize of "one box fine cigars, value $10," was to be given for the best mastiff, that I, as the owner of the dog who won this special, should not feel myself aggrieved at finding them to be worth only $5, because the catalogue did not say a "solid" $10 worth of cigars, but merely a plain every day $10 worth, which, of course, every smoker knows only means $5 worth. But in justice to the donors of the cigars, let me say that I have found that they stated the box was only worth $5 when they gave it to the show authorities, and they marked on the box $5, but this same secretary Elben raises the $5 to $10, but considers it all right, as the word, the magic word "solid" was not prefixed. Mr. Elben says he does not suppose "many exhibitors melt their medals down." True, but medals from other shows are worth keeping. The only one of this season I have yet received is from Philadelphia, and that is a handsome "solid" medal, a work of art, and it has a genuine ring to it, so pronounced that one does not need to "melt it down" to find what it is made of. It is only Pittsburgh medals that need that treatment.

Here's a contradiction to Mr. Elben on the point that no other show ever gave solid medals. We did right here in St. Paul. It was not a "bench" show, as the dogs were not benched; but it was a dog show, and held on our ice palace grounds last February. We announced "gold and silver medals," not "solid" gold and silver. There were some thirty medals in all, and the gold ones were 22 carat gold, and the silver were coin silver. What simpletons Mr. Elben must consider us to be, when, according to his method, and that which he claims to be the universal practice, all we had to do was to promise gold and silver—omit the prefix "solid"—and give three cents worth of composition.

By the way, it might be interesting to know who were the many that went to Mr. Elben and asked that they be given medals instead of money. If this is true, does it not prove that the other statements of Mr. Elben are not correct, when he says, or implies, that people do not expect gold or silver when it is so stated in the premium list—for who on earth, who goes to the expense of sending a dog to a show, at often large cost, would beg for a medal worth three cents in place of money? Should any one prefer a medal to money prizes (and exhibitors sometimes do so), they only do so when they have reason to expect the medal to have some artistic and genuine value.

It is bad enough to get such a medal as I have, but it is rubbing it in too much to have it followed by such an exhibition of imbecility and mendacity as that put forth by Mr. Elben in defense of the action of his club. It is a disgrace to the kennel world—the attempt to cover their own iniquity by claiming that all others do the same. After this public statement I think it right that all other kennel clubs put themselves publicly on record as to the kind of medals they gave when they announced gold or silver. WACOUTA.

ST. PAUL, Minn.

WRITE UPTHEGROVE & MCLELLAN, Valparaiso, Ind., for new catalogue of sportsmen's and civil engineers' wear.—*Adv.*

NON-SPORTING SPANIELS.

Editor Forest and Stream:

Is there no one among all the judges, breeders, exhibitors and lovers of the "crocodile cocker" who is willing to take up his pen in defense of his pet? Here I should say was a good chance for Mr. Mason, but I hardly think he could demolish "Uncle Dick" as easily as he has the most of his opponents, for Mr. Fellows is clearly in the right, and I for one wish to indorse all he says in your issue of May 5, and I take this opportunity of publicly thanking him for sending me such a fine and workmanlike brace of spaniels. Although but eight months old when I received them last September they required but little training; in fact did good work the first time I had them afield. It would astonish Eastern sportsmen were I to tell them how many woodcock and ruffed grouse I had killed over them or how many ducks they have retrieved. They once brought me a swan against a head wind for at least an eighth of a mile. They also, when only eleven months old, tracked and held at bay two wounded deer. No mud is too deep nor day too long for them. When I ordered the pair I wrote: "I want no long-backed, short-legged dog, but one that can work six days in the week and then be ready for the next," and I am pleased that I can say I got what I ordered.

I once had a brace from New Hampshire; their sire and dam were champions. They had very long bodies and very short legs, but they were positively useless for the field, as they had no ambition; snow or mud would stop them in fifteen minutes. I often used to wish I had left them at home. I gave them away and one is now in the champion class, having won three first prizes. At our show here the judge gave all the prizes to the non-sporting dogs that I am almost certain are useless afield. As Mr. Fellows says, the judges are to blame, for I well remember the same judge at Cleveland in 1883 scored that king of cockers, Dandy, 94½ points, which is nearly perfect; but Mr. Fellows writes me that Dandy would not be noticed now in craze for the non-sporting spaniel, and strange as it may appear, Mr. Kirk, although one of the committee that made the standard, was the first to depart from it, and by so doing forced the "crocodile cross" to the front.

I did not exhibit my dogs here, as they stand 14in. at shoulder and are only 30in. long; but I was told they could not win under Mr. Kirk, especially if there were any dogs from Canada on exhibition.

Now the remedy for all this nonsense is field trials for spaniels; let them be tested in the field, and mark my words the working type will beat the "crocodile" type every time, and the more he has of the Dachs-weazel-double-action-Skye cross, the less will be his chance for a place.

B. A. OSBORNE.

DETROIT, Mich.

THE PEMBROKE DISQUALIFICATION.

[COPY].

BOSTON, June 6, 1887.—*Mr. Chas. D. Webber:* Dear Sir—In reply to your favor of May 31, we beg to inform you that we sustain the protest of Pembroke (by Mr. H. W. Huntington), being shown in the open class when he was a champion, and have disqualified the dog Pembroke and request you to return the prize card. We take this opportunity to say it is our decided opinion that the owner and exhibitor ought to be responsible and notify the committee of any change in his dog's class preceding the show, and hope the A. K. C. will make the rule positively so. We have noted your attempt to throw the blame on the committee for not transferring the dog. But we think this unfair, because you positively knew your dog belonged in the champion class, whereas we might have known (and ought to by the rule) had we time to have examined [*sic*] the record of every dog during the rush of getting a show ready, which we think is nearly impossible. We changed every one we noticed, and think the committee ought not to be responsible for transfers. Very respectfully yours,

BENCH SHOW COMMITTEE, N. E. K. C.

[COPY.]

NEW YORK, June 20, 1887.—*New England Kennel Club:* Gentlemen—Yours stating Pembroke has been disqualified received, and I inclose you, per your request, the prize card which you desire returned. Your letter is somewhat complicated in its construction, and do not in certain sentences "catch on." However, permit me to say, at the time of mailing the entry and fee I supposed so far as exhibitors was concerned the transaction closed, providing same was correctly filled out, as mine was. I admit that my calling your committee's attention to the additional win it would helped you, but according to Rule 9, and especially Rule 22, it remains with the local delegates of the club to examine entries (the exhibitor not being called upon), which, as you say, was done in a number of cases you noticed, but unfortunately for me Pembroke was overlooked, and you now ask the A. K. C. to make the rule positively apply to the owner of notifying any additional win, and in the meantime I must accept the disqualification through errors. I sincerely regret the occurrence and trust that exhibitors have profited thereby, and avoid trouble in the future, especially those contemplating going in the show business, and can only add that whatever dealings I may have with dog shows to come, will be, "as I believe I have," according to the A. K. C. rules. Very respectfully, CHAS. D. WEBBER.

JUMBO.—A member of the Worcester Fur Company, of Worcester, Mass., asks us to reprint, from our issue of Feb. 15, 1883, this account of the doings of the foxhound Jumbo. The story comes from Oxford, Me., under date of Dec. 6, 1882: "I will relate the experience of a party of five hunters (three amateurs and two professionals) with their dogs, Jumbo, Tassle-tail, and Diamond Dick. There having come about six inches of snow upon the night of Nov. 29, we proposed to give the dogs a run, and try our luck for a fox. At break of day upon the morning of Dec. 1, we shouldered our guns and started for the Highland Farm, a noted place for foxes at this time of the year; we had no trouble in finding a fresh track. We cut loose the dogs, Jumbo going to the front with music that would quicken the blood of the laziest fox hunter that ever sat upon a stump waiting for his faithful dog to drive a fox down his gun barrel. It was not many minutes before reynard was upon his pins; taking a circle across the little Androscoggin, he ran over a poplar ridge with the dogs within forty rods of him; it was music to my ears to hear them go; but pretty soon they were coming back and we deployed for a shot. Lorenzo King, an old fox hunter, sighted him first and stood as straight and as stiff as a stump. When the fox was within ten rods Lorenzo's gun went to his shoulder; the cap snapped; his gun hung fire; and reynard went on his way to the next man, who also was an old fox hunter, Wm. Heywood, of Pittsfield, N. H. William stood by an old brush fence, and the first thing he saw, reynard was sitting up within six rods looking for the dogs. William's gun went to his shoulder, his fingers pressed first one and then the other of the triggers; but no go. He looked and discovered that he had forgotton to cock his gun. The fox seeing the movement, skipped over the fence, and went on his way to the next man. This was George Edwards, an amateur, and the proprietor of Jumbo. George saw the fox coming and was straightway taken with the shakes; he afterward confessed that the fox looked as if it was 30ft. long. Having a heavy charge in his gun, George took hasty aim and pulled the trigger. There was a terrific explosion. George turned two or three back somersaults, picked himself up and hollered, 'I've got him!' but upon

investigation it was found that he had shot the top off a pine tree some eight or ten rods away. Reynard meantime had quickened his pace and passed along to the next man. This proved to be Lewis Edwards, brother of George, and the proprietor of Tassel-tail. Lewis saw the fox coming, and like George began to shake; but as he had an open field and the fox was coming straight for him, he dropped upon one knee and covered the fox with his gun until reynard was within twenty-five rods, when he shook so violently that he discharged his gun and then jumped up and sent the other charge after the fox; while reynard shook out another reef, skipped over the fence, across a field, down over a bank and into his hole—a sadly frightened and persecuted fellow, but a sound fox still. I rushed to the front and demanded my turn for a shot. Louis pointed at the hole and said: 'There he is in there; shoot away.' I declined a shot and summoned a council of war. George proposed to dig him out, but we concluded that it would be a disgrace to take so mean an advantage of a fox that had run the gauntlet so nobly and come out so well. Our verdict was to let him rest. We'll give him a try some other day.—W. R. F."

RUDOLPH II. AND SIBYL.—We have shipped to the Maple Grove Kennels, East St. Louis, Mo., Mr. Robert L. Pate, proprietor, the well-known imported rough-coated St. Bernard prize winner and stud dog, Rudolph II. (champion Cadwallader—Myra), and the rough-coated bitch Sibyl (Hearn's Monk II.—Thorne's Sheila). Breeders at the West are to be congratulated that so valuable a stud dog as Rudolph has proved is now within easy reach. He is four years old, vigorous and in perfect health, of unusual quality and coat, grand carriage and style, and all that can be desired in character and intelligence. His kennel companion, Sibyl, is one of the largest bitches in America, excellent in build, a fine breeder, and also a healthy, strong, handsome animal. She has been lately bred to Duke of Lancaster, and we anticipate the best results from this combination of blood. Mr. Pate has also added to his stock of pugs the imported prize-winning little bitch, Lady Flossie (Max—Dot), and Nan (Sam—Titania). Both are fine brood bitches and of valuable pedigree. At the age of fourteen months, Nan has already successfully weaned a litter of five pups.—CHEQUASSET KENNELS (Lancaster, Mass.).

A DOG POISONER JAILED.—Suspension Bridge, N. Y., June 25.—*Editor Forest and Stream:* During the past few weeks nearly all of the valuable dogs at Niagara Falls, Ont., have been poisoned. A detective was set to work on the case and soon arrested one Douglas Cook. Strychnine was found in his possession, and he was found guilty and sent by Judge Hill to Central Prison for one year, and to pay a fine of $100. Cook is a crank on the subject of dogs, and it is believed has destroyed hundreds.—C. E. LEWIS.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Ivy. By L. Gardner, Mt. Vernon, N. Y., for white, black and tan English setter bitch, whelped Dec. 6, 1886, by Blue Dick (A.K.R. 936) out of Queen Meg (Prince Al—Moll).

Pride of the Stubble and Sage of Graystone. By L. Gardner, Mt. Vernon, N. Y., for white and liver and white and lemon ticked pointer dogs, whelped March 12, 1887, by Pap Smizer (Meteor—Diana) out of Cute (A.K.R. 2632).

Black Pete II. By Harry D. Brown, Waterbury, Vt., for black cocker spaniel dog, whelped Aug. 29, 1887, by Black Pete (Obo, Jr.—Phonsie) out of Chip (Obo II.—Darkie).

Max. By B. P. Van Court, Detroit, Mich., for black, white and tan English setter dog, whelped April 24, 1887, by Major (Van—Bailey's Queen) out of Belle II. (Nixey—Old Belle).

Idyl Guss, Idyl Fred, Buckingham II., Idyl Buckingham and Lady Buckingham. By A. S. Hoffman, Morrisville, Pa., for black and white Llewellin setters, four dogs and one bitch, whelped April 11, 1887, by Buckingham (Clinton T.—Kate Gladstone) out of Idylwoof (A.K.R. 4669).

Nimo. By Wm. C. McArthur, Burlington, Ia., for white, brindle spot over left eye and cheek, bull bitch, whelped March 18, 1887, by Moses (A.K.R. 323) out of Katie (Sultan—imported Katherine).

Prince Karl. By G. R. Johnson, Portland, N. B., for black cocker spaniel dog, age not given, by Shady (Obo II.—Darkie) out of Edith (Brush II.—Olivia).

Flossy, Fussy, Frolic and Fury. By Col. R. J. Hamilton, Springfield, Mass., for four blue Skye terrier bitches, whelped June 17, 1887, by Taffy out of Cute.

Robine and Robinette. By Geo. Shepard Page, Stanley, N. J., for two dark brindle deerhound bitches, whelped April 16, 1887, by Dunrobin (Torrom—Loyal) out of Shelloch (Ossian—Brenda).

Bradford Dot and Bradford Pet. By G. E. Peer, Rochester, N.Y., for light fawn and silver fawn pug bitches, whelped May 24, 1887, by Bradford Ruby (Lovat—Jenny) out of Nellie (A.K.R. 4895).

Ashland Grove Kennels. By Geo. E. Peer, Rochester, N. Y., for his kennel of pugs.

Monastery Kennels. By W. H. Jocckel, Jr., Whitestone, L. I., for his kennel of St. Bernards.

NAMES CHANGED.

Rattler to Laick's Rattler. As there are several beagle dogs known by the name Rattler, and to avoid mistake, I change the name of my imported beagle dog Rattler (Chancellor—Careless) to Laick's Rattler.—GEO. LAICK (Tarrytown, N. Y.).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Van—Mainspring. Dr. Geo. H. Bailey's (Portland, Me.) pointer bitch Van (Bang Bang—Zanetta) to J. T. Perkins's Mainspring (Mike—Romp), June 22.

Nellie Dale II.—Gus Bondhu. W. A. Faxon's (Braintree, Mass.) English setter bitch Nellie Dale II. (A.K.R. 3779) to A. M. Tucker's Gus Bondhu (Dashing Bondhu—Novel), June 22.

Myrtle—Chimer. W. E. Deane's (Somerset, Mass.) beagle bitch Myrtle (Minstrel—Handmaid) to Woodbrook Kennels' imported Chimer (Jack—Dandy), June 10.

Dixie—Little Duke, Jr. W. E. Deane's (Somerset, Mass.) beagle bitch Dixie (Elmore's Flute—Thorne) to his Little Duke, Jr. (A.K.R. 2389), Feb. 18.

Little Duchess—Rattler III. W. E. Deane's (Somerset, Mass.) beagle bitch Little Duchess, formerly Jewell (Racer—Dolly) to his Rattler III. (A.K.R. 2789), June 15.

Phyllis—Black Pete. H. D. Brown's (Waterbury, Vt.) cocker spaniel bitch Phyllis (Obo II.—Darkie) to J. P. Willey's Black Pete (Obo II.—Phonsie), May 12.

Cadess—Bayard III. Weimer & Lincoln's (Boston, Mass.) St. Bernard bitch Cadess (Cadwallader—Myra) to Blackmore's Bayard III., May 27.

Newton Abbot Lady—Black Pete. A. C. Wilmerding's (New York) spaniel bitch Newton Abbot Lady (Bend Or—Ladybird) to J. P. Willey's Black Pete, April 6.

Fan B.—William Tell. H. J. Bates's (Webster, Mass.) pointer bitch Fan B. (Bigelow's Don—Fan) to C. A. Parker's William-Tell (A.K.R. 2640), April 28.

Dot—Laick's Rattler. P. P. Lewis's (Tarrytown, N. Y.) beagle bitch Dot (Ringwood—Maida) to Geo. Laick's Laick's Rattler (Chancellor—Careless), June 6.

Rye—Laick's Rattler. Geo. Laick's (Tarrytown, N. Y.) beagle bitch Rye (Ringwood—Roxy) to his Laick's Rattler (Chancellor—Careless), June 15.

Cricket—Laick's Rattler. Geo. Laick's (Tarrytown, N. Y.) beagle bitch Cricket (Bugle—Pittsburg) to his Laick's Rattler (Chancellor—Careless), June 21.

Wacouta Rose—Wacouta Nap. Wacouta Kennels' (St. Paul, Minn.) mastiff bitch Wacouta Rose (Montgomery—The Princess) to their Wacouta Nap (Morgan's Lion—Morgan's Bess), May 15.

Little Bess—Rex Gladstone. A. S. Hoffman's (Morrisville, Pa.) Laverack setter bitch Little Bess (Antic—Bartlett's Dream) to Wm. A. Boland's Rex Gladstone (Royal Gladstone—Molly Druid), March 15.

Queen Obo—Doc. American Cocker Kennels' (Camden N. J.) cocker spaniel bitch Queen Obo (A.K.R. 3082) to their Doc (A.K.R. 3795), June 18.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Maida. Dr. J. W. Greene's (New York) spaniel bitch Maida (Black Prince—Marion), Feb. 11, three (two dogs), by A. C. Wilmerding's Newton Abbot (Black Prince—Newton Abbot Lady).

Lou. Woodbrook Kennels' (Baltimore, Md.) beagle bitch Lou (Kino—Fly), June 8, four (three dogs), by their Chimer (Jack—Dandy).

Dixie. W. E. Deane's (Somerset, Mass.) beagle bitch Dixie (Elmore's Flute—Thorne), April 26, four (two dogs), by his Little Duke, Jr. (A.K.R. 2389).

DEATHS.

Sport. Black cocker spaniel (A.K.R. 4212), owned by G. B. Sweetner, Toronto, Ont., June 22.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. A. B., Warsaw.—Puppy's legs will jerk so that after standing for a few minutes he has to lie down, and his legs are very weak. Ans. Examine the passages for worms. If you detect any give twenty grains powdered areca nut made into a pill with lard. Purge the puppy first with a teaspoonful of castor oil and feed with milk only.

COCKER.—A cocker 4mos. old is just over distemper and is becoming very bowed in front legs. I am feeding now on dog cake and milk with tablespoonful powdered bone twice a day. She has taken this turn in the last month. Ans. See a veterinary surgeon and ascertain whether he can straighten the legs by the application of splints. Get the following:

℞ Syr. hypophosphit. cum ferro..... ʒ vi.
Sig. One teaspoonful three times daily.

A. M.—My foxhound, one year old, about four months ago was troubled with worms. I gave him areca nut. After that he was troubled with distemper, and ever since that there has been a twitching in his left shoulder and leg, and in his paws; his leg is very weak; he has been this way for about three months. Ans. Keep the bowels in good order; put 5 drops of Fowler's solution of arsenic in the food night and morning and get the following:

℞ Ferri et strychnin. citrat..... grs. xxiv
Div. in pil. No. 12.
Sig. One three times daily.

W. N. W., Boston.—An English setter 14 months old, has been for the past four months fed on meal and house scraps; since getting him home I have fed pearl barley and Challenge food. He is very poor, his bones quite prominent. He is lively; coat not rough but smooth; appetite perfectly enormouse. Instead of eating his food in a rational way he simply bolts it whole. He has had worms. ANS. Purge with castor oil (one teaspoonful) or if necessary give injection of soapsuds and olive oil. Give nothing but a small quantity of milk for 36 hours. Six hours after purging give a teaspoonful of powdered areca nut, made into a bolus or pill with lard. Keep the bowels loose for two days afterward with syrup of buckthorn or oil. He still suffers from worms.

Rifle and Trap Shooting.

THE PRESIDENT'S MATCH.

THE N. R. A. of America.—New York, June 23.—*Editor Forest and Stream:* I inclose copy of an autograph letter from President Cleveland that speaks for itself, and shows that he still keeps up his interest in that important branch of the National Guardsman's education, rifle practice.—JOHN S. SHEPHERD, Secy.

EXECUTIVE MANSION, Washington, June 18, 1887.—John S. Shepherd, Esq., Secretary, etc.—Dear Sir: Your letter of May 9 has remained unanswered thus long because I had an idea that the programme of which you wrote would give me more information regarding the matter. Your letter having been again presented to me, according to my direction, of course I can see that all the matches must be filled or provided for before the programme is issued. I desire to contribute to the extent you indicate to the success of the objects of the association, and inclose herewith my check for $25, the amount of the prize to be offered for the second stage of the President's match.—Yours very truly, GROVER CLEVELAND.

THE BULLARD ARMS MATCH.

SPRINGFIELD, Mass.—Appended are the returns of the competition in Series 2, Match No. 3. It will be seen that the National Shooting Club, of San Francisco, Cal., are the winners of the prize, one of our detachable and interchangeable rifles with fancy P. G. stock checked, Swiss butt plate, nickle plate, wind-gauge and Vernier sights. The score of 1099 made by the California riflemen is good, they used the straight military rifles, with 6lb. trigger pull, which according to our rules gives them a handicap of 75 points, which brings their team total to 1174, a very fine score indeed and one which it would be very hard to beat under the same conditions.

The targets and score cards as received from the Massachusetts Rifle Association did not correspond, the targets show 150 shots with a total of 1189, while the score cards show but 148 shots and a total of 1170. It is to be regretted that circumstances should occur that debarred the fine score made by the gentlemen of the team, as their shooting was very good indeed. There were 50 entries, but returns have been received from but 30. Some of the clubs write us that they were unable to shoot owing to causes which could not be foreseen.

The teams entered from the Massachusetts Militia could not shoot owing to the annual State encampment, occurring June 6 to 11. The highest individual score was made by Mr. E. F. Richardson, of Lawrence, Mass., who made the fine total of 258; Mr. F. J. Rabbeth, of Boston, making 254; Mr. G. H. Wentworth, of Dover, N. H., 252, and Mr. O. M. Jewell, of Lawrence, 251. The individuals who made strings of 80 or better were:

E F Richardson, Lawrence, Mass	89
O M Jewell, Lawrence, Mass	89
F J Rabbeth, Boston, Mass	88
J B Fellows, Boston, Mass	88
C L Cobb, Brattleboro, Vt	88
G H Wentworth, Dover, N H	88
C F Walsham, San Francisco, Cal	86
Mat Gindele, Cincinnati, O	85
Ed Hovey, San Francisco, Cal	84
H Nieman, Cincinnati, O	84
L Brehm, Pittsburgh, Pa	84
Geo E Betts, Bridgeport, Conn	84
C D Palmer, Manchester, N H	84
C W Jones, Waverly, N Y	84
Capt J E Klein, San Francisco, Cal	83
C H Galusha, Carson City, Nevada	83
G C Thaxter, Carson City, Nevada	83
Ben Huggins, Pittsburgh, Pa	83
W M Boothby, Manchester, N H	83
A B Dodge, Manchester, N H	82
G R Russell, Boston, Mass	82
R H Buns, Jamestown, N Y	82
Geo Hodgdon, Pittsburgh, Pa	82
S Curnor, Virginia City, Nevada	82
O B Hull, Collinsville, Conn	82
Geo Wilcox, Carson City, Nevada	82
M H Burke, Virginia City, Nevada	81
G B Read, Brattleboro, Vt	81
H C Browning, Oakland, Md	81
J W Adams, Waverly, N Y	81
H W Hawes, Central Valley, N Y	81
F L Norton, Jamestown, N Y	80
J H Bidwell, Collinsville, Conn	80
J Saffell, Jr, Carson City, Nevada	80
G H Prevar, Leomenster, Mass	80

Match No. 4 for the championship off-hand gold badge will be shot July 11 to 16. There are 250 entries from almost every State in the Union, and some fine scores may be expected, as in several clubs the individual members who are entered are practicing diligently. Some of the teams in match No. 3 report very poor weather indeed, which accounts in part for some of the poor scores made by teams that were expected to be pretty near the top of the list. BULLARD R. A. Co.

National Shooting Club, San Francisco, Cal.

RANGE AND GALLERY.

BOSTON, June 25.—To-day the riflemen met at Walnut Hill for their weekly shoot. The wind was unfavorable for large scores, but some fair work was done. A 100-shot match with an army revolver at 50yds. distance, was shot by W. W. Bennett, the amateur pistol shot of Boston. The match was under the same conditions as that shot by Captain Paine, and Mr. Bennett scored within four points of Captain Paine's total, the score standing: Paine, 841; Bennett, 837. Bennett's highest score was 93 to Paine's 90. B. L. Knapp, Company D; H. V. Thayer, Company C, First Corps Cadets, each win the bronze medal in the State militia match. The following shows the best scores made during the week:

Decimal Match.

Richardson	8	10	9	7	8	7	10	10	9	7—85

	5	9	6	8	7	6	9	6	7	7	—69
Dr Dinsmore	7	9	6	7	8	8	5	5	7	7	—66
	9	6	7	6	5	8	6	7	6	5	—65
	7	6	4	7	10	10	6	3	7	6	—66

[To be intelligible to other people, rifle scores should have details of distance and target, rest or off-hand, etc.]

FRANKLIN RIFLE CLUB, Hartford, Conn., June 18.—Winning scores made at the public shoot held by the Franklin Rifle Club. All ties were divided, which gave better satisfaction than ranking shots; thus ties on first of 73 divided first and second prizes. German ring target at 100yds., 3 shots to a score, entries unlimited:

H Andrus	24	25	25	—73

J. P. M. GREEN, Sec.

SAN FRANCISCO, June 19.—During this day forenoon there was a private shooting match at the Shell Mound range between Messrs. McBrun, Hahn, Orelup, Susbuttel, Finucane and Bennett, the distance being 200yds. It resulted as follows:

McBrun	3454453453—40	A Susbuttel	4453543543—38
J Hahn	2354323245—34	W Finucane	3454435543—40
Orelup	3454443335—38	Bennett	2345453535—36

THOMASTON, Conn., June 18.—Low scores again to-day; no wind but a bad light:

G A Lemmon	7	6	5	7	9	6	9	8	6	5—68
Fred A Perkins	6	8	10	8	6	6	6	7	7	4—68
G P North	5	8	5	7	8	5	8	7	8	5—66
C F Williams	6	8	5	6	3	8	5	6	7	4—58

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

LAKE CITY GUN CLUB.

MADISON, Wis., June 19.—*Editor Forest and Stream:* The second annual tournament of the Lake City Gun Club, of Madison, Wis., was held at the Lake Monona Park grounds June 14, 15 and 16, in the presence of a large concourse of spectators interested in shooting.

The tournament, which was a grand success, was under the following committee of arrangements: Geo. Joachim, chairman; J. E. Howe, A. C. Mayer, C. F. Ford, A. H. Chamberlain. Shooters were present from Oregon, Prairie du Sac and Whitewater, Wis., McGregor, Ia., also from Janesville, Wis., and in addition to about sixty shooters of the Lake City Gun Club, made things lively for trap setters. The tournament was presided over by Mr. Joseph Cuddy, of Madison, as referee, and Mr. Walter C. Giddings, of Nashua, N. H., as scorer and judge, and passed off very pleasantly to all parties present. The following are the scores made on regular matches during the two days and a half of the tournament:

June 14.—10 single and 3 pairs Peoria blackbirds, score to count on citizens' purse of $50:

R W Hurd	1111110011— 8	10 10 11—4—12

A A Mayers	1011000010—4	11 01 11—5— 9
Howe	1111100110—7	11 10 11—5—12

On the shoot off J. B. Howe won first, Schlotthauer second, A. A. Mayers third, Daggett fourth.

Ten singles and 3 pairs Peoria blackbirds:

Nostrom	1111011101—8	10 10 10—3—11
Luckensmeyer	0001000001—1	withdrawn.
M Gaertner	0000001000—1	withdrawn.
Hoverson	01000 withdrawn.	
H Gaertner	01000 withdrawn.	
Wyman	0111011001—6	withdrawn.

A. H. Chamberlain wins first prize, $3.50; J. B. Howe, silk umbrella; Hippenmeyer, lady's work basket; A. C. Myer, sack of shot; C. Ford, bottle of cologne; Geo. Joachim, pointer painting; Sol Tuttle, box cigars; Northcott, silver butterdish; Wm. Dunn, silk handkerchief and box cigars; S. C. Baas, silk handkerchief; J. C. Land, lamp; A. G. Park, fish basket and cologne; K. Wood, camp chair; A. M. Daggett, telescope; Wm. Baas, card table; Fred Curtis, umbrella; Sutherland, whip; Geo. Smith, box cigars; C. Meyers, meerschaum pipe; T. Lucas, snipe painting; Van Slyke, cup and saucer; Schlotthauer, pair stuffed birds; Fitch, sack of shot; Paul Giese, lady's slippers; F. Conover, fish rod; L. Fauerbach, tobacco set; Bancroft, box cigars; Wm. Foresman, album; Wm. Buergin, gas lamp; F. Bowman, goat's slippers; R. Jackson, picture and box soap; H. Allen, clock; Robert Lang, woolen shirt; M. Breckheimer, hunting knife; J. M. Thorp, alcohol lamp; F. Spurling, silver pickle dish; E. Meyers, $3 cash; Fred Hurd, fruit dish and oil stand; D. Daggett, silver castor; H. Gaertner, cigar holder; Luckensmeyer, umbrella; Cooley, carving set.

THE NEW ORLEANS TOURNAMENT.

NEW ORLEANS, June 30.—To-day was the first of the first annual tournament of the Louisiana Gun Club. Notwithstanding the rain, a fair crowd was present at the New Orleans Base Ball Park. The shooting was very good and was participated in by many visitors. The following are the scores:

Match No. 1—Class shooting, 10 single birds, 25yds.: H. B. Febiger 10, T. A. White 10, W. Maroune 9, H. Reinecke 9, H. DaPonte 9, L. P. Nap 9, W. W. Stroup 8, J. Mayans 9, W. N. Jackson 8, J. Stumpf 7, B. James 7. Ties on first divided by Febiger and White; second, H. DaPonte 6 straight, Reinecke 5; third divided by Stroup, Mayans and Jackson.

Match No. 2—Class shooting, 10 double live leather-winged bats, 25yds.:

P L Maspero	11 11 11 11 11 11 11 11 10 11—19
Dumont	10 11 11 11 11 11 11 11 11 10—18
Jos Custer	10 11 11 11 11 11 11 00 11 11—17
E Landry, Jr.	11 10 11 11 11 11 11 11 11 10—17
L P Nap	11 10 11 11 11 11 11 10 10 10—16
F A White	11 11 11 11 11 00 10 11 10 10—15
J Stumpf	10 11 11 00 11 11 10 10 11 11—15
E Stanton	00 10 11 11 11 10 11 11 10 11—15
H DaPonte	10 11 00 11 11 11 11 10 11 10—15
H B Febiger	10 10 11 11 10 10 10 10 11 10—14
W Mayronne	10 10 10 11 11 10 11 10 11 10—14
H Reinecke	10 11 11 11 10 11 00 11 10 10—14
V M Jackson	00 10 11 10 00 10 11 00 11 11—11
E Jones	11 10 10 00 11 11 00 00 10 10—10

Third money divided.

Match No. 3—Class shooting, 15 American clay birds, 5 traps, 18yds.: H. E. Febiger 13, W. Mayronne 12, V. M. Jackson 11, F. A. White 11, E. Landry, Jr. 11, L. P. Nay 10, J. Custer 10, E. Phillips 9, B. James 9, W. W. Stroup 9, H. Reinecke 7, J. Boltz 7. Ties for third: Jackson 2, White 3, Landry 0.

Match No. 4—Class shooting, 7 single live birds, 30yds.: H. B. Febiger 7, L. P. Nap 7, F. S. White 7, C. B. Rich 6, J. Stumpf 6, W. W. Stroup 6, W. Mayronne 5, H. Reinecke 5, J. Mayans 5, H. DaPonte 5, V. M. Jackson 4, P. L. Maspero 4, E. Landry, Jr. 4, Schaffer 4, B. James 3, E. Phillips 3. On ties for first White killed 3 straight and won, second divided by Rich, Stroup and Stumpf.

June 21.—Second day of the Louisiana Gun Club tournament. First Match—Special match, 10 live pigeons, 26yds.: H. B. Febiger 10, F. A. White 10, J. Stumpf 10, H. DaPonte 10, W. W. Stroup 9, L. P. Nap 9, H. Reinecke 8, J. Mayans 9, V. M. Jackson 7. Ties for first: Febiger 3, White 3, divided. Ties for second: Stroup 5, Nap 4.

Second match, 8 single live pigeons, 26yds.: W. Mayronne 8, J. Stumpf 8, L. P. Nap 8, H. B. Febiger 7, F. A. White 7, W. W. Stroup 7, V. M. Jackson 6, C. Rich 6, J. M. Parker, Jr. 6, J. Mayans 6, Schaeffer 6. Ties for first: Mayronne 7, Stumpf 7, Nap 8. For second: Febiger 3, White 3, Stroup 3, divided. Third divided by Jackson and Schaeffer.

Third match, 10 single live pigeons, 28yds.: H. Reinecke 10, F. A. White 9, W. Mayronne 9, Voigt 9, J. T. Smith 8, C. Rich 8, H. B. Febiger 8, L. P. Nap 8, W. W. Stroup 8, Schaeffer 7, J. M. Parker, Jr. 7, V. M. Jackson 6, J. Stumpf 5. Ties for second: White and Mayronne each killed 11 straight, Voight 10. Money divided by White and Mayronne.

June 22.—Third day of the tournament. First match, 10 single live leather-winged bats, 30yds: E. Landry 9, Joseph Custer 9, John Stumpf 8, L. P. Nap 8, F. A. White 7, W. Eberle 7, H. Da Ponte 6, H. Reinecke 6, V. M. Jackson 6, J. T. Smith 6, W. W. Stroup 6, Dumont 5. Tie for first, Landry 2, Custer 2. Second tie, Landry 2, Custer 1. Tie for second, Stumpf 0, Nap 2. Ties for third divided.

Second match, 10 single live pigeons, 25yds.: H. B. Febiger 11, J. Stumpf 9, F. A. White 9, J. Custer 9, H. DaPonte 9, W. W. Stroup 9, V. M. Jackson 8, L. P. Nap 8, W. Eberle 8, A. M. Jumel 8, E. Philips 8, H. Reinecke 7, J. T. Smith 7, George Baltz 7, E. Landry, Jr., 6, J. Mayans 5. Tie for second, White 3, Stumpf 3, Custer 3, DoYont 3, Stroup 0. Second tie, White 11, Stumpf 0, Custer 0, Da Ponte 11; White 3, DaPonte 1. White wins. Tie for third, Jackson 0, Nap 1, Eberle 3, Jumel 3, Phillips 0. Eberle and Jumel divided.

Third match, 10 single live pigeons, 25yds.: H. B. Febiger 10, W. Eberle 10, W.W. Stroup 10, L. P. Nap 9, H. Reinecke 9, H. DaPonte 9, J. Dumont 9, F. A. White 8, Allen Jumel 8, G. Baltz 8, J. T. Smith 6, V. M. Jackson 6, J. Stumpf 5. Ties for first, Febiger 3, Stroup 2, Eberle 2. Ties for second, Nap 11, Reinecke 0, DaPonte 8, Dumont 3. Tie for third, White 5, Jumel 0, Baltz 5, divided by Baltz and White.

Fourth match, 8 single live pigeons, 28yds.: E. Landry, Jr. 8, E. Phillips 8, F. A. White 8, J. T. Smith 7, L. P. Nap 7, W. Eberle 7, H. B. Febiger 7, H. Reinecke 6, J. A. DeHart 5, W. W. Stroup 5. Tie for first divided by White, Landry and Phillips. Tie for second, Smith 4. Nap 4, Eberle 7, Febiger 0.

Fifth match, 8 single live birds: L. P. Nap 8, E. S. Voight 7, H. H. Febiger 6, H. Reinecke 6, W. W. Stroup 6. E. Phillips 4.

June 23.—The Louisiana Gun Club held another day's shoot today. The weather was excellent and the birds strong on the wing. Match No. 1—5 double live birds, 24yds.:

L P Nap	10 11 11 11 11—9	W Eberle	01 11 11 00 10—6
J V Shakspeare	01 10 11 10 11—7	F A White	10 11 10 11 11—8
H Reinecke	11 01 01 00 11—6	W Stroup	11 01 11 10 01—7
H B Febiger	10 01 01 00 10—4		

Match No. 2—5 double and 10 single live pigeons, 20 and 26yds.: H. B. Febiger 14, J. V. Shakspeare 16, L. P. Nap 14, E. Landry, Jr. 10, S. P. Jones 10.

Match No. 3—10 single live birds, 26yds.: L. P. Nap 9, H. B. Febiger 8, J. V. Shakspeare 8, W. Eberle 7, E. Landry, Jr. 8, H. Reincke 5, J. Stumpf 7. Ties for second: H. B. Febiger 3, J. V. Shakspeare 0 and out, E. Landry 3; divided by Febiger and Landry.

Match No. 4—10 live birds, 26yds.: J. V. Shakspeare 9, J. Stumpf 8, H. B. Febiger 8, H. Reinecke 9, E. Landry, Jr. 5, L. P. Nap 9, W. Eberle 7, G. Lafaye 6, M. Scott 6, F. A. White 9, A. Hart 7.

TAUNTON, Mass., June 25.—T. F. & G. P. A.—A few members met and shot at blue rocks. First match, at 5 blue rocks, 3 blue rock traps, 16yds. rise:

G L Smith	01101—3	A Davis	10100—2
C T Snow	11110—4	E C Leonard	11111—5
J Davis	11010—3	F S Keith	00111—3

On shoot off Smith and Keith divided third.

Match at 5 blue rocks:

Smith	11111—5	Leonard	11110—4
Snow	11011—4	Keith	10111—4
J Davis	10111—4	G H Davis	00100—1
A Davis	01111—4		

On shoot off Davis and Leonard divided.

Match at 7 blue rocks: Smith 4, Snow 7, A. Davis 2, Leonard 6, Keith 5, G. and J. Davis 6 each and divided second on shoot off.

Match at 7 blue rocks: Smith 7, Snow 6, J. Davis 5, A. Davis 5, Leonard 5, Keith 4, G. Davis 6. J. Davis and Leonard divided on shoot off.

Fifth match: Smith 7, Snow 5, J. Davis 5, A. Davis 4, Leonard 7. Ties divided.

Match at 3 pair blue rocks: Smith 4, Snow 4, J. Davis 2, Leonard 2, A. Davis 2. First divided, J. and A. Davis second. For third, miss and out: Smith 6, Snow 2, J. Davis 5, Leonard 3, A. Davis 0.

BISMARCK, Dak., June 21.—The following scores were made by the Bismarck Gun Club this evening. Ten birds and 5 balls, 21yds.:

Tyler	0111110101— 7	11101—4—11	
Redner	1111111111—10	11001—3—13	
Richholt	0110011001— 5	11011—4— 6	
Scott	0110110111— 7	10100—2— 9	
Williamson	1010000011— 5	11101—4— 9	
Wetherby	0011101100— 5	01111—4— 9	
Ward	1011031101— 6	11101—4—10	
Wachter	0111011101— 7	01010—2— 9	
Newburn	1111111111—10	11111—5—15	

Five bird shoot:

Tyler	01010—2	Wachter	10001—2
Newburn	11011—4	Richholt	11101—4
Ross	10011—3		

Newburn, Redner and Wetherby used light 12-bore guns.

MIDDLESEX GUN CLUB.—The regular semi-monthly shoot of the Middlesex Club was held at Duneilen, N. J., June 22. The day was stormy and the attendance, early in the day, very slim, so the boys had a few sweeps at clay birds. Later the guns began to come in and the sweeps at live birds began. There is some talk of the State law prohibiting live bird shooting being enforced; if so the boys will have to learn to smash the crockery.

Ten clays, 15 clay birds, 3 traps, all angles:

C Smith	0110101011111101—10	Keller	0111101101111111—11
Vochel	0001030000101001— 4	Wheeler	0110110001100001— 7

Ten clays, same conditions:

E Miller	1111011011— 8	Wheeler	0:01010101— 5
Voorhees	1010101100— 5	C Smith	0101001111— 6
Keller	1110111111— 9		

Ten clays, same conditions:

Miller	1111110111— 9	C Smith	1110101111— 8
Keller	0111111111— 9		

Three live birds, handicap rise; ties, miss and out:

Miller (30yds)	011—2	Keller (28)	112—3
C Smith (30)	021—2	Creeley (30)	110—2
Voorhees (30)	211—3	Ties divided.	

Four live birds:

Cannon (26)	0210—2	Voorhees (30)	1221—4
Miller (30)	2112—4	Dickens (30)	0101—2
Richards (26)	2111—4	Keller (28)	1100—2
C Smith (30)	1121—4	Creeley (30)	1110—3
Conover (30)	1101—3		

On shoot-off, Richards first, Conover and Creeley second, Cannon third.

Four live birds:

Cannon (26)	2010—2	Conover (30)	1101—3
C Smith (30)	1200—2	Richards (26)	1102—3
Dickens (30)	1110—3	Creeley (30)	0111—3
Miller (30)	1212—4	Keller (28)	0101—2
Voorhees (30)	1111—4		

On shoot-off, Miller and Voorhees first, Dickens second, Keller third.

Four live birds:

Conover (30)	1111—4	C Smith (30)	0110—2
Miller (30)	2111—4	Williams (30)	1221—4
Richards (26)	1102—3	Cannon (26)	1101—3
Chaffee (30)	0121—3	Dickens (30)	1020—2
S G Smith (30)	1102—3	Creeley (30)	1012—3

Conover and Miller first, Cannon second, Dickens and C. Smith third.

Three pairs live birds, 2yds. rise; ties shot at 3 pairs 26yds. rise:

Cannon	10 10 11 01 10 10—7	Richards	11 01 01 10 00 w.
Miller	11 01 10 11 01 11—9	Chaffee	11 10 10 10 11 10—8
S G Smith	11 11 10 10 11 10—9	C Smith	01 10 10 —3
Williams	11 01 10 10 00 0w.	Dickens	11 10 11 01 10 w.
Conover	10 11 10 11 00 w.	Creeley	11 11 10 01 11 01—9
Voorhees	11 01 11 11 w.		

S G Smith and Creeley first, Miller second, Chaffee third.

Four live birds, Cannon 26, rest 30yds.:

Cannon	1111—4	Dickens	1111—4
S G Smith	1101—3	Conover	1111—4
Miller	1111—4	Creeley	1010—2
Chaffee	1001—2	C Smith	0221—3

On shoot off Miller and Conover first, S. G. Smith second, Creeley third.

Miss and out, one barrel, 30yds. rise: Cannon 1, S. G. Smith 0, Chaffee 1, Dickens 2, C. Smith 3, See Me More 0, Creeley 2, S. Smith 0.

Miss and out, one barrel, 30yds. rise: Cannon 0, S. G. Smith 0, Chaffee 2, Dickens 0, C. Smith 1, See Me More 0, Creely 3, Kronic 0, Billy C. 1.

SAN FRANCISCO, June 19.—Since the disbandment of the Cosmopolitan Club, the once leading shooting organization in this city, several of the more prominent members have been anxiously looking forward to some means by which the club might be reorganized and the former members again enlisted in the ranks. And it was decided to give a pigeon shoot, open to all comers, at San Bruno to-day. The reorganized local crack shots were present in full force, and the weather was favorable for shooting. The conditions of the shoot were: Twelve birds each, 10yds. rise and 80yds. boundary, no entrance fee being charged. There were nearly twenty competitors, twelve of whom were formerly members of the Cosmopolitan Club. Bowen made the excellent score of eleven birds out of a possible twelve. He missed his first bird, a blue rock, by having it drop dead on the outside of the boundary. Considering that several of the contestants had not handled a gun for some time and lacked practice, the scores, as a whole, were very good. They were as follows:

Ault	2S—110212201101— 9	Slade	30—111011121100— 9
Rix	30—121220011220—10	Coffin	30—101211111101—10
Bohen	30—012111211112—11	Osgood	28—121111111100—10
Putzman	30—110111221110—10	Pearson	28—111111121211—12
Kelly	28—121001120110— 8	Kerrigan	30—112011112212—11
Liddle	30—220211120111—10	Scott	30—011111111111—11
Sharten	30—102009011110— 7	Heath	30—121120111001— 9
Edwards	30—112112100022— 9	Fay	30—211111011211—11
Smith	28—122121011222—11	Ferguson	30—111201111021—10
Meed	30—101120211211—10	Browell	30—012100111211— 9

As the conclusion of the first shoot a "freezeout" was gotten up, with 9 entries: Fay 1, Osgood 6 Much 2, Kerrigan 1, Fox 2, Bohen 6, Ferguson 1, Pearson 6, Neith 6. Osgood, Fox, Pearson and Neith, who killed the largest number of birds, concluded to divide the money.

A second sweepstake was shot off and resulted as follows:

Osgood	111011—5	Coffin	011100—3
Day	110100—3	Meed	111111—6
Fay	101111—5	Ferguson	111111—6
Fox	111111—6	Pearson	111101—5
Kerrigan	111000—3	Bohen	111111—6
Slade	111111—6		

The five contestants who tied divided the pot. Garrity and Ferguson, as a team, tried conclusions with Rix and Ault, with the result that the latter team won by killing their six birds while the others killed only four.

WORCESTER, Mass., June 25.—The Worcester Sportsmen's Club had their seventh prize shoot this week. In the classification shooting each man had a possible 10 blackbirds, 10 blue rocks and 10 clay-pigeons; the prize shooting was a possible 10. The work of each man in detail was as follows:

Class A.

	Classification. B.	B.R.	C.P.	Prize Score.
W S Perry	6	9	6—21	1111111—7
C W Howe	8	7	4—19	1111111—7
M D Gilman	5	9	8—22	1110111—6
W L Davis	7	6	9—21	1011111—6
A R Bowdish	7	7	9—23	0111111—6
E T Smith	5	9	7—21	0011111—5
F Stone	6	4	9—19	1100111—5
C Whittaker	8	4	8—20	1001111—5
G W Russell	6	6	8—19	1110001—4
C Doane	7	7	6—20	1000w

Class B.

J B Tougas	5	7	5—17	1110111—6
E F Swan	4	5	7—16	1011110—5
C S Day	8	5	4—17	0101111—5
L R Hudson	2	3	3— 8	1011110—5
H Colvin	3	3	3— 9	0111001 4
C R B Cloflir	2	7	5—14	0110100—3
G J Rugg	3	3	6—12	0001110—3
J B Gardom	8	6	2—16	0100100—2
L S Kilburn	1	4	2— 7	0000w
Dr Frank	3	5	1— 9	0000000—0

Ties divided. In the contest for 1,000 shells, five averages, there were 19 entries, G. J. Rugg was first, E. T. Smith second, J. B. Tougas third, M. D. Gilman fourth, G. W. Russell and C. Doane fifth.

WELLINGTON, June 25.—The Wellington Gun Club held its regular weekly shoot to-day, and the pleasant weather attracted a large number of gunners. Following are first prize winners in the several sweeps: First, 6 clay-pigeons, Brown; second, 6 blue rocks, Savage; third, 6 clay-pigeons, Gerry; fourth, 6 blue rocks, Gerry and Savage; fifth, 6 clay-pigeons, Gerry and Savage; sixth, 6 blue rocks, Brown; seventh, 6 clay-pigeons, Brown; eighth, 6 blue rocks, Moore and Brown; ninth, 6 clay-pigeons, Savage; tenth, 6 blue rocks, Gerry; eleventh, 6 clay-pigeons, Gerry; twelfth, 6 blue rocks straightaway, Nichols and Perry; thirteenth, 6 blue rocks, Gerry; fourteenth, 6 blue rocks, Snow and Sanborn; fifteenth, 6 blue rocks, Baxter.

THE BOSTON SHOOT.—New York, June 24.—*Editor Forest and Stream:* The Cleveland Target Co. donated a handsome watch and chain, costing $150, to be shot for at the Boston tournament. The writer, who was present, saw Mr. F. G. Strater (Stanton) win the prize with a score of 20 straight. In your report and all other published reports of the tournament, no mention is made of this valuable prize. The Cleveland Target Co. would like to know what disposition has been made of their watch and chain? And it strikes me very forcibly that if such donations are silently ignored or forgotten, very little encouragement is given to donate anything in the future.—CHAS. RICHARDS.

PHILADELPHIA, Pa., June 18.—Wayne Gun Club. Match at Ligowsky clay-pigeons; one Ligowsky clay-pigeon trap; 18yds. rise; club rules:

A Clifford	1000000000— 1	A Hemingway	2020000001— 3
S Davis	1110001011— 6	P F Yost	1111103001— 6
Geo Scargle	0110111120— 7	H Graham	1111121111—10
A Ulary	1001010102— 5	Geo Harris	1111111100— 8
E Handsbury	2011122220— 8	C Briney	1000212101— 6
I Jackson	1010111101— 7	J W Sidle	0201011020— 5
T Scargle	1011101011— 7	Hugh Kane	1010120000— 4
W Ulary	1010011111— 7		

Miss and out, Kane 1, T. Scargle 8, G. Scargle 0, W. Ulary 5, Davis 5, Clifford 0, Briney 7, Graham 1. *June 25.*—Match at Ligowsky clay-pigeons; Ligowsky clay-pigeon trap; 18yds. rise; club rules:

H Kane	1101111012—8	I Jackson	0001100101—4
T Scargle	0101101111—7	W Ulary	1001011011—6
P F Yost	0001100111—5	Joe Scargle	111110 w.—5
H Graham	0000111110—5	Wooner	00001 w.—1
J W Sidle	1010100110—5	A Ulary	1111111100—8
S Davis	1021001102—6		

Miss and out, T. Scargle 0, W. Ulary 0, Graham 10, Davis 9, Sidle 2, Yost 1, Jackson 1.

SAN FRANCISCO, Cal., June 19.—Lincoln Gun Club, very hot weather, at Alameda Point; 15 clay-pigeons, 5 traps, 18yds. rise, National rules, gold medal prizes:

First Class.

Schendel (18)	111111100111011—12	Ford (18)	101000101101101— 7
Dunshee (18)	101111111011111—13	Richter (18)	010010101001010— 6
Campbell (21)	001111111010100— 9	Lee (18)	011001000001001— 5
C H Cate (18)	111011110111101—12	Bruns (21)	110111011010111—11
Potter (18)	100011011110010— 8	Parks (21)	101101100111010— 9
Edler (21)	100101111010100— 8		

Dunshee takes first class medal for one month only.

Second Class, 18yds.

Quinton	000000111011101— 7	Boyce	000010010101111— 7
Holmes	111000000111101— 8	Nutz	001111110100101— 9

F Cato	010001100010000— 4	Doane	000011100110110— 7

Wenzel takes second class medal for one month only.

LEONIA, N. J., June 25.—Leonia Gun Club team shoot, Dr. John A. Wells and Chas. Townsend, of Englewood, vs. J. R. Beam, of Ridgefield, and Geo. W. Gladwin, of Leonia. 50 American clay birds, 3 A. C. traps, N. A. rules, birds and ammunition prizes:

Townsend, 15yds.	111011010010101011001111111010111000001111011111010—32		
Wells, 16yds.	111101101111111111001111011111101010111111111111111—42		
			—74
Beam, 16yds.	111110111100111111101111111101000111111111111111011—42		
Gladwin, 18yds.	001100111111110111101111111010111011110110110001101—35		
			—77

This was a return match, first of which was also won by Gladwin and Beam.

TORONTO, June 21.—The West End Gun and Dog Sports Club held a Jubilee meeting at Nurse's place at the Humber this afternoon. In spite of the rain there was a large attendance and some good sport. Ten Peoria blackbirds, 3 screened traps, 18yds. rise:

First Class.

Bailey	1111111011—9	Kipp	0111111111—9
Blea	1011110111—8	Brown	0110111111—8
Wakefield	1110111111—9	Dollery	0001111111—7

Ties at 5 birds: Bailey, 5; Wakefield, 4; Kipp, 3.

Second Class.

Howell	0110111000—5	Boswell	0011110110—5
Beatty	0111110000—5	Spiller	1000111000—4
Derry	1111011101—8		

Third Class.

Jackson	0111101101—7	Hobart	0100100010—3
Hill	1011010001—5	Gorman	1001000000—2
Evans	0010101100—4		

KINGSTON GUN CLUB SHOOT, June 3, 20 bluerocks, 18yds. rise:

Frazier	00101001001011001110— 9	Overba'gh	10011111101111110111—16

Weber	01001110010100111101—11	Short	10111100101111101w —11
VanBuren	11111101000000103011—10	D. C. OVERBAUGH, Pres.	

TORONTO, June 22.—The Owl Club's tournament was opened to-day, when the following scores were made, shooting at 25 birds: Whitney 23, Roote 22, Cameron 22, Townson 22, Glover 21, E. H. Smith 21, Lewis 20, Felsted 19, P. Wakefield 19, D. Blea 19, McDowall 17, Smyth 17, Campbell 17, Colborne 17, McCarthy 17, Bowman 17, Stevens 15, Ayre 16, Wake 14, Jefferson 14.

June 23.—There was some good shooting at the Owl's tournament to-day, as the following scores testify. At 25 Peoria blackbirds, 18yds. rise, 5 screened traps: H. Whitney 23, J. Wayper 23, W. L. Cameron 22, J. Townson 22, Adam Kay 22, J. Rooke 22, J. R. Humphreys 21, C. K. Rogers 21, E. H. Smith 21, J. Glover 21, J. Lewis 20, Wm. Scott 20, H. George 20, J. Griffith 19, D. Blea 19, P. Wakefield 19, Wm. Felstead 19, John Walker 18, J. Jobbett 18, J. Colborne 17, J. McCarthy 17, Wm. Bugg 17, J. Campbell 17, Isaac Smith 17, W. McDowall 17, Dr. J. W. Smith 17, F. Mallett 16, B. Barrow 15, F. Stevens 15, C. Ayre 15, A. Ellis 15, W. Wakefield 14, J. C. Unwin 14, J. Jefferson 14, W. Lush 14, A. R. Lockhart 14. Whitney and Wayper divided first and second, Cameron third, Townson fourth, Kay fifth, Rooke sixth, E. H. Smith seventh.

WALNUT HILL.—The Massachusetts Rifle Association, Walnut Hill, Mass., on Wednesday, June 29, and succeeding alternate Wednesdays, viz., July 13 and 27, Aug. 10 and 24, Sept. 7 and 21, Oct. 5 and 19, Nov. 2, 16 and 30, Dec. 14 and 28, 1887, will, in addition to the regular practice and sweepstake matches, offer for competition a series of silver prizes, and the elegant gold Macomber target badge, originally donated by the Boston Gun Club, won by Mr. O. R. Dickey, and presented by him to be competed for at Walnut Hill on the days above named. The merchandise prizes will be on exhibition during continuance of the match at the store of Messrs. Wm. Read & Sons, 107 Washington street. Total value of prizes, $125. All the competitions will come off at the designated time, regardless of weather. Class shooting in all matches. Shooting to begin at 10 A. M.—H. S. HARRIS, Sec., Equitable Building, Boston.

WINCHENDON, Mass., June 23.—Winchendon Gun Club scores: F. E. Mann 9, H. J. Lawrence, F. F. Hapgood, A. H. Fitch, Dr. J. G. Henry, each 7; J. Sutherland and H. M. Eaton each 6, A. D. Lawrence and P. S. Davis each 5.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

JULY.

2-5. Calla Shasta, Camp and Races.
3. Oakland, Edwards Cup.
4. Passaic Meet, Dundee Lake.
18-31. W. C. A. Meet, Ballast Island.
24. Oakland, Mayrisch Badge.

AUGUST.

1-12. Northern Division, Stony Lake.
7. Oakland, Edwards Cup.
12-26. A. C. A. Meet, Lake Champlain.
13. Lake St. Louis Chal. Cups, Lachine.

SEPTEMBER.

4. Oakland, Edwards Cup.

OCTOBER.

9. Oakland, Edwards Cup, Mayrisch Badge.

NOVEMBER.

6. Oakland, Edwards Cup.

DECEMBER.

4. Oakland, Edwards Cup.

A. C. A.

FOR membership apply to the Secretary, W. M. Carter, Trenton, N. J. Required age, 18 years or over. Application to be accompanied with $3 and recommendation of an active member. Sec'y A. C. A. Central Div., E. W. Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y W. C. A., J. O. Shiras, Cincinnati, O.

THE ASSOCIATION MEET.

Editor Forest and Stream:

I have just noticed an article written some time since by a New Jersey gentleman, in which he makes complaint that the A. C. A. meet for the current year was fixed at such a great distance from his dooryard. Seated in my easy chair and musing upon the article in question, I fell asleep and dreamed a woeful dream. Methought in my slumbers that this New Jersey grumbler had torn himself away from his native mosquito land and had moved out here into the wild, wild West, as so many Easterners seem to consider the State of Ohio. When the time drew near for the A. C. A. meet he determined to attend. The meet was to be held at a point dimly defined in my dream, but seeming in some unaccountable manner to combine Lake George, Stony Lake, The Thousand Islands and Bow Arrow Point all in one. This emigrant from the New Jersey swamps began to cast about him for the ways and means of making the trip. He found that the A. C. A. transportation committee, having labored under the impression that the scope of the Association was bounded on the west by the western limits of New York State, had failed to arrange for special rates or conveniences for members residing outside the charmed circle, and therefore he must negotiate for his own accommodations over the 800 miles of railway which lay between him and his Mecca. After paying out a part of his next year's salary for a passenger ticket, he turned his thoughts toward solving the question as to the best manner of transporting his canoe. He interrogated an old hand at canoeing who had made the journey repeatedly, but the old hand refused to advise. Perhaps the hesitancy of the old hand in giving advice was caused by the remembrance of a time when he himself had shipped his canoe by express to the point at which the meet was held, and the fact that when it arrived he found it was damaged just too little to bring suit against the company for damages, but just enough to spoil the looks of his handsome canoe and to keep his temper at boiling point during the meet. Or he may have been influenced by the memory of the sardonic smile which pervaded the express fiend's face as he handed him a bill for transportation which was marked boldly with the figures $38.45. Then, again, he may have remembered another blessed experience of his when he had shipped his canoe by slow freight three weeks before the time for the meet and it had arrived at the camp two days after the meet was over; and he, poor soul, had been compelled to sponge off of his fellow members for blankets, tent room, etc., his effects having been shipped with his canoe. Is it any wonder that the old hand didn't feel competent to advise? Then the unadvised New Jersey man concluded to take his canoe with him as baggage. After something less than a ton of correspondence with the numerous officials of the various railroads over which he must travel, he succeeded in getting permission to take his craft in the baggage car over the greater parts of the route. He started. He had failed to have the word "gratis" inserted in his baggage permit, and before he had journeyed far it seemed to him that the railway corporations of the particular lines over which he traveled had imported all the vampires of South America to act as baggage men on their roads—they bled him so much and so readily for handling this extra piece. He was compelled to travel two nights and one day to reach the meet. In that time he changed cars so often that he lost all sleep, and at each change the new baggage man struck him for from one to five dollars. When he reached the meet he was worn out from loss of slumber and his canoe was almost a total wreck.

Then, in my dream, I thought that this whilom New Jersey man turned his eyes toward his old home and wept. He remembered how (through arrangements made by the A. C. A. or his club, and without trouble to himself) he was wont to load his canoe on board the car assigned for that purpose, climbing in his sleeper some pleasant evening, and on the next morning find himself at the place of meeting, his temper unruffled, his canoe uninjured, and withal the merest trifle expended for fare and transportation. Just as this New Jersey exile was beginning to realize what a pleasant thing it was to be an Eastern member of the A. C. A., I awoke.

Yes, Mr. FOREST AND STREAM, we Westerners pass through a great deal of tribulation in getting our canoes to the meet, and it seems as though if any grumbling is to be done we should be allowed to lend a hand. But when we look at the fact that members come to the meet from Montana and other portions of our far West, we haven't the heart to grumble over our little journey of a few hundred miles. This is not a grumble, for I have attended the meet at each and every place where it has been held since the organization of the A. C. A., and am now looking forward to the privilege and pleasure of taking my canoe under my arm and "stepping around to see the boys" at Bow-Arrow Point next August.

But, remembering the effect upon the Canadians of holding a meet in Canada, I think it would be beneficial to the Association, as well as to its Western members, to hold one big meet of the A. C. A. at some Western point; at least as far West as Michigan. There are hundreds of unattached, practical canoeists here in the West, and such an action of the A. C. A. would give a boom to Western canoeing such as nothing else could.

ORANGE FRAZER.

WILMINGTON, O., June 20.

TORONTO C. C. RACES.

SATURDAY last saw the following canoes in line ready to start for the decked and open sailing medals which go to the competitor winning them the most times during the season, the races for each being limited to 5.

Dawn	W. A. Leys	Decked.	
Mac	W. G. McKendrick	Decked.	
Dottrel	D. B. Jacques	Decked.	
Acis	A. H. Mason	Decked.	
Boreas	H. Neilson	Decked.	
Ripple	W. A. Cooke	Decked.	
Una	Colin Fraser	Open.	
Werra	R. O. McCulloch	Open.	

The course was the usual triangular one of 3¼ miles, twice round. The start was made in a moderate wind and the Mac quickly took the lead with Dawn second and Dottrel third. At the finish of the first round the positions were the same, with the Mac about 100yds. of a lead. On the next leg of the course the two leading canoes had to go about three or four times on account of steamers and yachts, and when the buoy was rounded the Dawn had a lead of 50yds. The wind continued to fall lighter and lighter and the race was finished in a drift with the Dawn a good first and the Mac 2m. astern, none of the remaining canoes finishing. The Una was leading the Werra when they took to their paddles to get back in time for tea. After a short rest the paddling race was started.

Dawn	W. A. Leys	Decked.
Wanda	W. H. Weston	Decked.
Mac	W. G. McKendrick	Decked.
Ripple	W. A. Cooke	Decked.
Acis	A. H. Mason	Decked.
Modjeska	W. B. Raymond	Decked.
Werra	R. O. McCulloch	Open.
Una	Colin Fraser	Open.

The Dawn, which has so distinguished herself, was designed by W. P. Stephens and built by Ruggles. She was rigged with a new and ill-fitting sliding gunter mainsail of 70sq.ft. and borrowed mizen of 20ft., and if she is as fast in heavy weather as in light, she will soon own all the silverware of the club. MAC.

TORONTO, June 26.

AMERICAN CANOEING IN ENGLAND.—The sailing of the new canoe Charm at Hendon last Saturday took the old hands at the sport quite by surprise; but they generously congratulated the owner on his skill both as a designer and sailer. The canoe is said to be on the wave-form system, but so is the Nautilus, so that beautiful system *per se* could not be the cause of the success of the Charm. No doubt the small hull and sails, well balanced to suit the weather, were the main features which led to her success, but we should not like to go so far as to say that she would not have beaten Nautilus and Pearl in a harder blow. The American style of sailing these boats, with the "crew" sitting on the gunwale, and prepared on an emergency to produce a cataleptic back extended to windward, has resulted in some advantages from a speed point of view and portability; but for many purposes the roomy old Nautilus or Pearl is much to be preferred.—*Field, June 18.*

OAKLAND C. C.—On June 9 the Oakland C. C. gave a reception in honor of Vice-Com. Richards, now in San Francisco. The fleet turned out for a moonlight sail, each canoe carrying a lady; and after returning to the house at 11 P. M., a supper was served. Vice-Com. Richards has taken part in several scrub races at Oakland.

SQUAW POINT.—The ladies are already planning for a big camp at the new Squaw Point on Lake Champlain. Among others who will be present are Mrs. Carter, Mrs. and Miss Furman, of Trenton, Mrs. and Miss Seavey, of New York, and Mrs. W. S. Herriman and Mrs. R. N. Dennison, of Brooklyn.

BROOKLYN C. C. REGATTA, JUNE 18.

THE friends of the Brooklyn C. C. who enjoy a good sailing race had a treat on Saturday last, when Grant E. Edgar, Jr., canoe Rat, of Newburg, won the first open race given by the club.

The course was from a buoy off the club house to and around Buoys Nos. 18 and 20, and finish at the starting point, about 4½ miles.

The starters were G. E. Edgar, Jr., Rat; B. S. Nadal, Sea Urchin; Wm. Whitlock, Guenn; R. J. Wilkin, Queen Bess; H. C. Ward, Evangeline; M. V. Brokaw, Minx; R. N. Denison, Yvonne; R. S. Blake, Kelpie; F. L. Dunnell, Niente.

Queen Bess was first away, with Guenn and Evangeline close behind, Rat and Niente having the worst of the start. The Evangeline, sailing very fast, soon took the lead, working well to windward, and rounded the first buoy some distance ahead.

From here it was a run to Buoy 20 with the tide; Rat, taking second place, followed after the leader, who mistaking the position of the buoy was running off to leeward, the error giving those in the rear a good chance to better their position, all rounding the buoy nearer together than at any time since the start, Rat having slightly the best of it. From here it was very close to the finish, Rat winning by 40s., Evangeline second, the others following in the order named: Guenn, Minx, Kelpie, Yvonne, Sea Urchin, Niente. Queen Bess became disabled after rounding the second buoy and withdrew. The second race on the programme was a combined paddling and sailing with four starters: Guenn, Kelpie, Evangeline, Minx. The Minx took the lead and increased it till the last half mile, when the Evangeline, by superior windward work, took first place and the race.

The steam yacht Marion, chartered by the club for the occasion, followed the races with a jolly party of ladies and gentlemen on board. The success of the regatta was due to the exertions of the committee in charge, Messrs. Ward, Gould and Tucker.

THE ROYAL C. C. CHALLENGE CUP RACE.

ALTHOUGH no one from the States has been able to cross and enter in the race of the Royal C. C. on June 11, the contest was really of an international character, a continuation of the races sailed here last year, as the winning boat was distinctively of American model, while American methods of sailing contributed to her success. The following account, from the *Field*, tells the story of the race. Com. Edwards's many friends will be sorry to learn of his ill-luck, as he had a very fine canoe with him. The increase in the cruising or second class canoes has evidently exerted a very good influence in the racing fleet. The *Field* says:

The sailing race for the Challenge Cup took place at Hendon on Saturday last, and was productive of one of the best exhibitions of sailing over witnessed since the formation of the club. The entries reached the fair number of fifteen, of whom thirteen actually came to the line, including Mr. E. B. Edwards, of Toronto. The race resulted in a surprise to many, as Mr. Stewart, in his new canoe, the Charm, took the lead at the start, and gained steadily throughout the course, finally winning by nearly nine minutes from Pearl. Nautilus, during the fourth round, was unfortunate enough to carry away her main halliards, which put her out of the race. At the time she was holding second place, and having a ding-dong race with Pearl, there being every prospect of another close finish between these two old opponents. The Charm has already been described in these columns, but it may be as well to state that her lines are totally different to those of any canoe previously sailed in these waters, and her success is likely to lead to a marked change in the construction of our racing canoes. While sufficiently light to paddle with ease and at a good speed, she showed wonderful weatherly qualities under sail, and great credit is due to Mr. Stewart for the manner in which he designed and sailed his new craft. Several second class canoes competed in the race, and special mention should be made of the Spray, whose owner, Mr. Dickinson, sailed her well and pluckily, and completely spread-eagled the rest of the cruisers.

SAILING RACE for the Challenge Cup (value 50 guineas), and a presentation prize of £5; course, five times round the lake (ten miles). Entries:

Charm	Mr. W. Stewart	1st Class.
Pearl (86)	Mr. E. B. Tredwen	1st Class.
Nautilus	Mr. W. Baden-Powell	1st Class.
*Pearl (85)	Mr. F. G. Knight	1st Class.
*Nina	Mr. F. Miles	1st Class.
Diamond	Mr. H. Church	1st Class.
Kitten	Mr. E. A. Leach	1st Class.
Minnie	Mr. H. Wilmer	1st Class.
Marool	Mr. W. E. Hammerton	1st Class.
Sintram (decked Cana'.)	Mr. E. B. Edwards (Toronto)	1st Class.
Spray	Mr. C. F. Dickinson	2d Class.
Sabrina	Mr. Rede Turner	2d Class.
Atalanta	Mr. R. de Q. Quincey	2d Class.
Vanessa	Mr. B. de Q. Quincey	2d Class.
Severn	Mr. T. H. Holding	2d Class.

*Did not start.

At first gun fire there was a nice breeze from the westward and the canoes had to be careful to avoid collisions. One competitor, evidently thinking thirteen an unlucky number for a start, proceeded to settle the difficulty by running over Vanessa and capsized her promptly. Severn indulging in "watery wanderings," on the port tack, ran into Pearl and threw her on her beam ends, but she was cleverly righted and escaped with a bucket or two of water aboard. The second gun was fired at 3 P. M., when Charm was first across the line, followed by Nautilus, Diamond, Pearl, Sintram, Minnie, Sabrina, Spray, Severn, Atalana and Kitten, the last named having put about to the assistance of Vanessa.

Charm was first round the buoy in the bight, all having to make a board in order to fetch. After rounding, she settled down for a steady ping to windward, during which Charm more than held her own and Pearl walked into second place. The Canadian canoe here showed very good form and made a tough fight of it with Nautilus. The times at the westernmost buoy were taken as under:

Charm	3 25 00	Kitten	3 34 00
Pearl	3 27 00	Minnie	3 34 30
Nautilus	3 29 00	Severn	3 34 30
Sintram	3 29 00	Sabrina	3 36 00
Diamond	3 30 00	Atalanta	3 36 15
Spray	3 30 15	Marool	3 36 15

On the run up the lake, Pearl and Nautilus gained slightly on the leader, but Charm was still two minutes to the good at the conclusion of the first round, which was timed as under:

Charm	3 33 00	Severn	3 41 30
Pearl	3 35 00	Minnie	3 41 32
Nautilus	3 36 30	Atalanta	3 42 00
Sintram	3 37 00	Marool	3 43 00
Spray	3 38 00	Sabrina	3 44 00
Diamond	3 38 15		

On the turn to windward, in the second round, Charm again increased her lead, and Nautilus closed up with Pearl, and the times of the canoes at the W. buoy were:

Charm	3 58 00	Severn	4 11 15
Pearl	4 00 15	Sintram	4 12 30
Nautilus	4 00 30	Minnie	4 16 00
Diamond	4 08 00	Marool	4 19 00
Spray	4 09 00	Atalanta	4 19 30

Sintram shipped a lot of water in a puff, but was quickly righted. In the run up this time Charm ran the others, and during this round Sabrina took his customary bath. The times were:

Charm	4 04 30	Sintram	4 21 00
Pearl	4 08 45	Minnie	4 24 00
Nautilus	4 09 15	Severn	4 24 02
Diamond	4 17 40	Atalanta	4 47 45
Spray	4 17 45	Marool	5 12 00

After rounding, the breeze piped up a little, and Sintram, heavily pressed, failed to right herself, although her skipper did his utmost, and she sank close to the raft. Nautilus managed to slip past Pearl on the beat down, and rounded the W. buoy five seconds ahead of her old rival, but Charm had meanwhile been pegging away merrily, and was seven minutes and a half to the good; Pearl and Nautilus, however, gained a minute on her in the run up this time, and the conclusion of the third round was timed:

Charm	4 36 00	Minnie	5 07 30
Nautilus	4 42 00	Atalanta	5 11 00
Pearl	4 42 30	Marool	5 12 00
Spray	4 56 00	Severn	5 30 00

During the fourth turn to windward Charm appeared to just hold her own with Nautilus, who, in turn, was two and a quarter minutes ahead of Pearl at the west buoy. Shortly after rounding the buoy, the main halliard of Nautilus parted and let the sail down with a run, but the skipper smartly rigged up a fresh halliard with the topping lift, and made a fresh start. Half way up the lake, however, his "second string" carried away, and he was unfortunately forced to retire. It had been for some time evident that, bar accidents, Charm must win, and she eventually did so with great ease. The times of the fourth and fifth rounds were as follows:

	4th round.	Finish.		4th round.	
Charm	5 09 50	5 34 15	Minnie	5 49 00	Finished the
Pearl	5 17 00	5 43 00	Severn	5 42 00	course but
Spray	5 29 00	6 06 00	Atalanta	5 45 00	times not
			Marool	5 47 00	taken.

The winner sailed with the conventional Chinese lug and mizen in this race, instead of the three leg of mutton sails with which he raced on the previous Saturday. Too great credit cannot be given Mr. Stewart for the successful manner in which he has lowered the flags of two such formidable opponents as Pearl and Nautilus, and his victory ought to serve as an encouragement to the junior members of the club to persevere in their efforts to become masters of the art of canoe sailing and racing.

MOHICAN C. C.—Five miles below Albany the Mohicans have built a lodge on a knoll overlooking the Hudson, with a boat house on the beach below, and are rejoicing in their new possession. An ample piazza, luxurious rocking chairs and lounges, a big fireplace and well filled provision kits are good aids to the enjoyment of a lovely bit of river scenery; and last, but not by any means least, the one fleet of old and new boats, handsomer and swifter than ever before even in Mohican meetings is a source of pleasure inexhaustible. July 2, 3 and 4 are to be gala days, especially the last, and for friends of the Turtle the doors are wide open as ever. The club is not racing much yet, perhaps the flyers are nursing for bigger contests than with one another; perhaps there is so much enjoyment afloat that they have no time to waste in racing. After all the critics have said there is pleasure in canoeing without a three-mile course. Yet we have a three-mile course in reserve too.

A CANOE CLUB AT OGDENSBURG.—The Oswegatchie Canoe Club has been formed at Ogdensburg, N. Y., with a membership of 25. Joseph M. McNaughton is Com.; James G. Knap, Vice-Com., and F. S. Cooley, Sec-Treas. The club are now making arrangements to build a $2,500 club house.

A. C. A. MEMBERSHIP.—Trenton, N. J., June 27.—Messrs W. L. Wright, H. S. Davidson, of Springfield, Mass.; Chas. M. Baker-D. C. McEwen, of Brooklyn, N. Y.; and Wm. Brandon, of Haliburton, Can., have applied for membership in the A. C. A.—WM. M. CARTER, Secretary.

NEW YORK C. C.—The calm of Saturday last caused a postponement of the regatta of the N. Y. C. C., the fleet starting but coming home under paddle. It will be sailed on July 16.

Yachting.

FIXTURES.

JULY.

1. Miramichi, Annual Cruise, Bay du Vin.
1. Brooklyn Cruise.
2. New Rochelle Annual, New Rochelle.
2. Nahli—Loma match postponed.
2-4. Knickerbocker, Cruise.

OCTOBER.

1. America's Cup Match, N. Y.

EASTERN Y. C. REGATTA, JUNE 23.

IT is very evident that the tendency of American yachting is toward the extinction of that ancient and once popular institution, the regatta, that its day of usefulness has passed, and that it must make way for something better. There was a time when the real regatta, the day specially given up to water sports, with craft of all kinds in competition, served a good purpose in attracting the popular attention to a branch of sport then but little known and appreciated; but this period has fortunately passed away, and now the water sports, at the head of which stands yachting, need no such assistance, their place, in the public favor as well as among sportsmen being too well assured. Year by year it is more apparent that if the needs of the racing men are to be first considered, the courses and arrangements must be altered from those of old, so as to suit the modern demands for match sailing rather than the old regattas. The problem is apt to cause much trouble to regatta committees before it is finally settled how to equalize the two conflicting interests. The non-yacht owners, always a large part of each club, look to the regatta in its full sense for a return of a part of their contribution to the club treasury in the shape of a pleasant day's excursion and a good dinner for their families; while, on the other hand, the men who race, generally the hard-working division of the club, look to their interests receiving the first consideration at the hands of the regatta committee. As to the financial aspects of the question, the cost of any of the half-dozen great regattas of the year may be placed at about $2,500, of which a little more than half goes for prizes, tug boat, printing and some minor expenses connected with the racing, while the remainder goes for the hire of a large steamer, for dinner for several hundred members and their families, and for music. To spend the whole amount so that one portion shall not be entirely wasted is a very difficult matter, as long experience shows. Every one familiar with yachting will recall days by the dozen where all was favorable but wind, the club guests had their sail and spectacle, but the money spent for prizes was simply thrown away by the failure to make a close race; while there are almost as many instances where there has been a rattling race which those on the steamer were too sick to see, the "picnic" feature being a complete fizzle. Worse still is the frequent case where, in an effort to do justice to both, two failures result.

As we have had occasion to remark before, the way of the regatta committee is seldom strewn with roses, but that of the Eastern Y. C. this year was more than usually thorny, and the points touched on above were all brought into more prominence than common. The day set for the annual regatta was June 21, the place being off Marblehead; but as luck would have it, morning dawned, or tried to do so, through a fog so dense that the fleet in the snug little harbor was invisible, even from the club house on the beach. The judges' tug and the big steamer Twilight had been engaged to come down from Boston, another tug had been sent to lay out two mark buoys, and all the preliminaries for a race had been well arranged; but in the fog there was nothing but doubt and uncertainty as to what was best. To make matters worse, the fog lifted at intervals and a glimmer of light gave promise of better weather, only to darken again in a few minutes. At noon it was decided to give up for the day, and word was sent to the steamer which was waiting with a crowd of impatient sightseers at a wharf in Boston. Hardly had this been done, however, before a breeze came, driving away the fog and making a very good race possible; but the committee very properly did not feel justified in starting the great regatta of the year in the absence of the club steamer, so the opportunity was lost. As soon as it was decided not to start, Galatea and Stranger dressed ship in honor of Jubilee Day, with flags from the truck to bowsprit and boom end. At night the fog shut in again from the sea and held through next day, with rain at times and a thunderstorm in the evening of Wednesday.

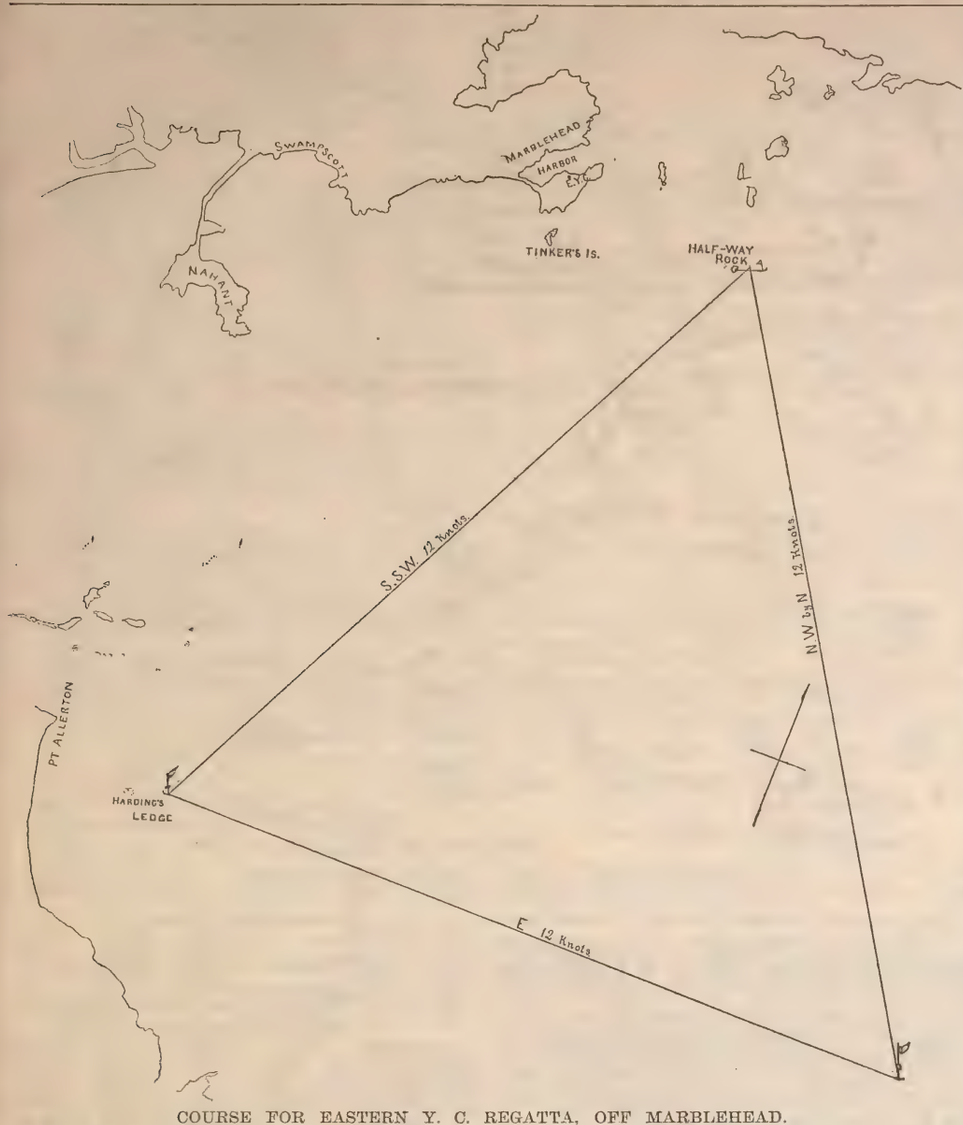
On Wednesday morning the Twilight left Boston in company with several other steamers, as the weather was clear and there was every prospect of a race, but after running a few miles the fog was met and the day was spent in steaming through it, the disgusted guests being landed at Boston in the afternoon without having seen one yacht. The steamer was given up, after having cost the club nearly $1,000 for her alone, and it was decided to sail the race, as soon as the weather permitted, without any club steamer.

The experience of the Eastern Y. C. on this occasion is only one of many instances that point to the need of separating the picnic from the match sailing in the large clubs, though how it is best to be done is as yet an open question. At any rate, whatever provision be made for the amusement of the non-racing members, and they certainly deserve some sport of their own, the interests of the racing contingent seem paramount and should be first considered by committees, both in the selection of courses and in starting the race whenever the fleet is ready and there is weather and wind. It may be possible to organize a review of the fleet with some incidental racing in which the interests of the spectators shall be first considered, or to institute a club sail in which the non-owners shall be taken on the yachts, but the first question now is to give the best test of the yachts for the satisfaction of those who put out their time and money freely in preparation.

As a regatta, that of the Eastern Y. C. must be set down as a decided failure, racing men were worried and disappointed by two days of fog and the spectators saw nothing in the shape of a race; but curiously enough the sequel to all this was a series of brilliant and exciting matches between the leading cracks in several classes, and a race that was as fair a test as any could desire. As set forth on the programme, the "annual regatta" was open to all schooners and sloops of any yacht club, and the anticipation was that there would be a large gathering of racers and that each class would be well filled. On the contrary there were few starters and they were such that the regatta resolved itself into several close matches between different pairs of boats. This year New York was not represented, the only yachts from around the Cape being Huron, an Eastern boat until this season, and Iroquois, from New York, but sailing her first race under an Eastern owner. Neither Atlantic, Priscilla, Bedouin, Titania nor Shamrock were present. The entries were:

	Sailing Length.	Allowance.
FIRST CLASS SCHOONERS.		
Mohican	104.50	
Gitana	96.23	3 06
America	91.44	5 25
Sachem	88.47	6 55
Iroquois	81.75	10 34
FIRST CLASS SLOOPS.		
Mayflower	87.99	7 11
Galatea	86.87	7 43
Puritan	83.85	9 23
SECOND CLASS SLOOPS.		
Stranger	67.25	20 29
Huron	66.31	21 17
SECOND CLASS SCHOONERS.		
Adrienne	65.72	21 40
Meta	64.21	22 54
THIRD CLASS SLOOPS.		
Dream	46.46	41 37
FOURTH CLASS SLOOPS.		
Clytie	36.00	
Shona	35.13	00 40

Iroquois is the new steel Julia, lately sold by C. W. Chapin to T. J. Coolidge, and re-christened by her new owner. Puritan, Meta, Dream and Clytie did not start and Shadow made a post entry. Pappoose did not enter as her owner was busy with the Harvard examinations.



The field was not a large one, but as events proved it gave better sport than if each class had filled to the limit. In the schooners Sachem and Iroquois sailed a very pretty race, the first for the steel boat, while Gitana and Mohican were fighting out a battle of their own astern, America being too far in the rear to trouble any one all day. Puritan declined to start, as her bottom had been badly prepared and the putlead and varnish were in poor shape, so the class was left to Mayflower and her plucky rival of last season, and at last they had what all have eagerly looked for, a good breeze and clear course. Of course it was a disappointment that Puritan was not in, and with the strong breeze that held she could have entered as well as not, but it left the course unimpeded for the duel between the two cracks, and the result was more satisfactory than if there had been a third boat. In the next class Huron and Stranger made a good fight all day, finishing so closely that a remeasurement is necessary to determine the prize, and in the small class Shadow found revenge for the defeat of last September in the Beverly Y. C. race, by beating Shona badly.

After two days of fog it was a relief to see the shores of Beverly and the vessels out at sea on Thursday morning, even though it was through a steady drizzle. There were whitecaps to be seen from the rocks on the Neck, and a strong and steady S.W. wind had come in place of the sluggish east wind that had brought and held the fog. It was clear that there would be a race and a good one, though the prospect was for less wind as the day advanced. The committee were on hand, the tugs were in the harbor, there was no steamer to be waited for until the breeze had gone, and at 10 o'clock Galatea broke out her jib, turned on her heel like a weather cock, and under jib alone kicked her way out of the crowded harbor and through the fleet. Puritan, with topmast housed, also came out, but shaped her course for Boston instead of for the starting line. After Galatea came the rest, Gitana stopping by the way to pull the topmast out of a little sloop, the Carmen. The club this year had two experiments on trial besides that of an open race; the yachts were all numbered, and the course was laid further out than usual, being from off Half-Way Rock, a triangle of 36 miles, 12 mile sides.

The course was around an equilateral triangle, the starting stake-boat at the north angle, about a third of a mile from Half Way Rock, thence twelve miles to a mark buoy, consisting of a small raft, having a mast with a red ball and red flag above which was anchored about half a mile east of the Harding Bell Buoy, thence to a similar mark or raft at the eastern angle, bearing twelve miles east from Harding's and twelve miles southeast by south from Half Way Rock with a steam tug lying near. The bearings of the legs were respectively, S.S.W., E. and N.W. by N.

The smallest singlestickers sailed only to first mark and back. The wind was S.S.W., holding there pretty steadily during the race, and as the first leg sailed was from Half Way Rock to Harding's Ledge, it was a dead hammer to windward. The start was set for 11:30 and by 11 A. M. the fleet was off Half Way Rock, to the east of which a schooner was anchored, marking the starting line. Mayflower was under three lower sails with topmast housed in readiness for bad weather. Galatea carried working topsail and No. 2 jib, with a reef in the foresail. In towing from New York the hawser got under her bows at one time and the lower link of the bobstay was so badly bent that in the effort to straighten it, it broke, disclosing a flaw in the center of the bar. An anchor shackle was shipped in place of the broken part and the bowsprit was sent in to first reef with No. 2 jib. Iroquois carried main gafftopsail at the start, but Sachem had housed her foretopmast. Shona and Shadow had topmasts down and reefs in mainsails. When the whistle blew Mayflower was at the west end of the line, near Half Way Rock and she went over on starboard tack at 11:32:35. Galatea was at the other end of the line, coming up for a sharp turn as the whistle blew, but the committee boat lay just beyond the markboat and directly in her way, so that some time was lost before the tug ran astern and gave way for her. She was timed at 11:33:20 as she reached along the line for a little way and then went over on port tack, heading in shore. Next came Iroquois, saving her time, but the rest of the class were handicapped. The actual times of crossing were:

		Handicap
Mayflower	11 32 35	
Galatea	11 33 20	
Iroquois	11 34 35	
Gitana	11 36 35	1 35
Mohican	11 39 04	4 04
America	11 41 16	6 16
Sachem	11 38 41	3 41
Stranger	11 41 16	
Huron	11 42 17	
Shadow	11 46 03	
Adrienne	11 46 09	6 09
Shona	11 46 40	

COURSE FOR EASTERN Y. C. REGATTA, OFF MARBLEHEAD.

The second class started at 11:40 and the fourth at 11:45. While Mayflower held off shore, Galatea ran in on port tack for the land, and at 11:40 Mayflower came about and stood after her. At this time there was just wind enough to put Galatea fairly planksheer to, while Mayflower could have carried gafftopsail from the start, as events proved, and saved the time it took to run up topmast and set it a little later. As the wind was in the morning it was only good judgement to start to windward with the stick down, and she was as well off without topsail for the first half hour, but at no time was there so much wind that she could not carry it all her working sail. As for the sea, there was a very sizeable tumble to it, such as would have been death to the old sloops, but that experience proves, does little harm to the more modern boats.

As the whole point of the race hinges on the weather it is well to understand exactly what the conditions were. The breeze that rustled about Marblehead last Thursday has since grown in force as it traveled over the country, by telegraph wires and the daily papers, until now it is a howling gale of unexampled severity; while the sea has continued to rise to the same gigantic proportions. Beaufort's scale is the standard of wind force, and in the slightly modified form necessary to apply it to small vessels instead of large ships, a rate of 10 to 15 knots per hour is classed as No. 5 fresh breeze, in which any good yacht should carry jibheaded topsail. From 15 to 20 knots per hour is rated as No. 6 strong breeze, in which one reef would be carried, the intermediate point between the two being at 15 knots, a lower sail breeze with topmast housed. A "gale" is placed at from No. 8, 26 knots, to No. 9, 36 knots, for heavier weather than many races have been sailed in for a long time here. The wind on Thursday was for the big boats no more than a working breeze in which all plain sail could be carried with safety and advantage, without a thought of reefing or even striking topsail on either boat after its force was once ganged. The sea was a long roll, rough in places but not short and hilly, and has as they were driven, neither boat took a bit of water on deck. In short, there was nothing abnormal in the condition of wind or wave, and a boat of 85ft. which would suffer any serious discomfiture from either is not fit to be considered a yacht.

Taken all through the conditions were only what any yachtmen could fairly ask for a test of the best boat, a true working breeze, an open, deep-water course, and water rough enough to tumble anything in the way of a skimming dish or fair weather racing machine. Such conditions have been reached but once in all the cup races of '85 and '86, for a half of the last Puritan-Genesta race, and the friends of both Mayflower and Galatea have looked anxiously for their recurrence in a race between the two, the latter believing that the narrow boat would show far better than in the extremely unsatisfactory weather of the cup races of last September. For this both boats waited at Marblehead last year, for this Lieut. Henn went into the races in New York, expecting Mayflower to enter, and for this he went again to Marblehead last week. Now for the performance of the boats: For a time they held pretty evenly, but shortly after Mayflower came on the same tack it was evident that she was more than holding Galatea. On they went, Galatea holding her tack until her bowsprit was almost aboard of Tinker's Island at noon, when she went on starboard tack. Mayflower was nearing her, and a little later crossed her bows, weathering her with a good margin, and tacking to windward of Galatea's beam. Now the race began in earnest as the two hurried on, Galatea holding better to windward, but the white boat gaining slowly in distance. The wind had decreased enough since early morning to indicate that it would blow lighter rather than heavier as the day wore on, and now Mayflower felt the need of her topsail, as Galatea's was evidently aiding her. Up went the topmast at 12:10, but it was nearly 12:30 before the sail was set. At once the gain was more apparent, as Mayflower continued to gain. The road to the second mark was long and rough and there was still a chance for Galatea to make up her loss, but it was soon evident that the other was too much for her. Bravely she kept up the fight, the time had come to show herself, and all on board realized it and no chance was neglected, but still she could not hold the pace. Sailing along boldly she looked higher than Mayflower and worked well out to windward of the latter's course, showing now none of that crabbing off which was perceptible in light airs last fall, but work out as she would the other was too long in the legs for her, and inch by inch she was left astern, so that there was no hope of her lifting far enough to windward to counterbalance Mayflower's speed on end. The leg was a long one, ten miles, and the wind held steady, only coming at times in chunks as they worked more in under the land; there was no question of spinaker drill or spar tossing to test the training of the crews, but the big spars lay snugly lashed on deck all day. It was a square bout to windward between the two, and Mayflower won it. A light rain was falling, at times coming down heavily and then ceasing for a little, but in other respects the weather was as good as a yachtsman need want. For over an hour the pair held on, Mayflower gaining slowly but unmistakably, until at 1:10 she tacked for the mark. Galatea held on until clear of her lee and then followed her around. The rain and light mist on the water made it very hard to distinguish the mark, and both had overstood a little.

Mayflower came for it with balloon jibtopsail aloft in stops, and as she rounded it was broken out, the whole maneuver being well executed, but it could not be sheeted close in with such a breeze. As Galatea neared the mark Mayflower flew past her on the second leg, but the black boat swung about quickly, the great boom jibed, and she was off in hot haste at a pace only a little less than her rival, setting a jibtopsail as soon as she was on her course. As Mayflower neared the first mark a bark, the Edna H. May, bound from Boston to Honolulu, luffed up to give her a clear way, dipping her ensign at the same time, a marked contrast to the conduct of the steamer Stamford and the steam yacht Viking, both of which crossed Galatea's bows nearly together, paying no attention to the latter.

The two leaders were so far ahead that they monopolized all the interest in the race, but astern were one or two battles just as closely fought. Iroquois had started with a good lead while Sachem was handicapped, and the former was third boat for a long time, holding starboard tack to seaward, while, in company with Gitana, Sachem worked along nearer shore. That she was picking up the leader was evident, but it became still more apparent when the two came nearer together off shore and both left Gitana. Mohican and America were sailing astern and troubling nobody, the historic old craft being hopelessly left again in spite of all improvements. Sachem was coming up on Iroquois when the latter set a maintopmast staysail and knocked her head off most effectually, spoiling what chances she had left. Adrienne was sailing a walkover and could afford to take her own time, but Huron and Stranger were making a very close thing of it in the second class, holding together along the shore. At the start and in the rough water Shona had the best of Shadow, but as soon as the time came to shake out reefs the latter left her for all day. The little cutter sailed on through what was for her a tremendous sea, but she was nowhere beside the larger and more powerful boat. At first mark the times were:

Mayflower	1 34 49	Mohican	2 13 30
Galatea	1 40 07	Stranger	2 15 55
Sachem	1 55 45	Huron	2 15 30
Iroquois	1 59 56	America	2 18 25
Gitana	2 08 18		

Mayflower had thus beaten Galatea 4m. 33s. in the 12-mile beat to windward.

After jibing the boats brought the wind on the starboard quarter, and for a time the puffs fell heavier than they had yet done. Both of the leaders heeled considerably, Galatea being nearly rail to in the squalls, but never putting her rail under. At this point the deck angle was considerable, as may be imagined, but the speed did not decrease, as Mayflower gained less on this leg than on the former, though she should have outreached the other far more than she beat her to windward. Half of the leg was covered without any material change except that Mayflower was gaining slowly, when her big balloon jibtopsail went to leeward like a soap bubble, blowing completely out of the bolt rope, and being hauled in over the stern like a log line, after falling in the water. This cost her some time, but in the end she lost little, as she was better off with the jibtopsail quickly sent up in its place, and the balloon had to be taken in, a troublesome job as the wind was. Sachem, too, tried a ballooner and lost it, and Iroquois fared still worse, as her big maintopmast staysail pulled the topmast out of her when half over the leg. No official times were taken, as the judges' tug was not at the second mark, but the leaders were timed from one of the press boats as follows:

Mayflower	2 50 55	Sachem	3 01 30
Galatea	2 58 22		

Iroquois, Gitana, Mohican, and America followed in order but were not timed. Thus Mayflower had gained 2m. 54s. on a 12-mile reach.

Another jibe brought the wind on the port beam of the last leg, Mayflower traveling very fast until she struck a soft hole in the wind, when her speed lessened. Galatea continued to draw up on her, but at last Mayflower reached past the calm and took the strong off shore breeze. Now came Galatea's turn, she too struck the calm and with it came a drenching downpour of rain, the heaviest during the day. For a time she made little way while Mayflower was steaming home with the shore breeze, but at last she too was free of the doldrums and off for Half-way Rock at a good pace, but too late to make up anything on the leader. Following her came Sachem and then the tail, the times being as given in the following official table:

	Start.	Finish.	Actual.	Corrected.
FIRST CLASS SCHOONERS.				
Sachem	11 35 00	4 35 20	5 00 20	4 51 07
Iroquois	11 34 35	4 56 27	5 21 52	5 07 47
Gitana	11 35 00	4 52 42	5 17 42	5 13 34
Mohican	11 35 00	5 06 38	5 31 38	5 31 38
America	11 35 00	5 14 44	5 39 44	5 32 41
FIRST CLASS SLOOPS.				
Mayflower	11 32 35	4 15 17	4 52 42	4 33 07
Galatea	11 33 20	4 30 07	4 36 47	4 46 30
SECOND CLASS SCHOONERS.				
Adrienne	11 40 00	Walkover.		
SECOND CLASS SLOOPS.				
Huron	11 40 00	5 32 57	5 52 57	5 31 40
Stranger	11 40 00	5 32 56	5 52 56	5 32 21
THIRD CLASS SLOOPS.				
Shadow	11 45 00	5 04 34	5 19 34	5 19 34
Shona	11 45 00	5 19 17	5 34 17	5 33 01

Of course the event of the day was the match between Mayflower and Galatea, but next in importance comes the performance of Sachem. In spite of a heavy handicap she made a splendid race, and overhauled both of the leaders when off the wind. The question between her and Iroquois is still open, as the latter was badly sailed by a cruising crew and skipper and also came to grief in the middle of the race, but all through the day Sachem did the best sailing of her class. The popular reports of the race overlook the difference in size of the two, Sachem being 86ft. and Iroquois but 80 on l.w.l. This fact offers another strong argument in favor of the uniform classification proposed by the FOREST AND STREAM. Had there been a definite and permanent schooner class between 80 and 90ft., Iroquois as well as Sachem would have been built up to it in all probability, and these two boats, the finest of their class ever built, would have raced on even terms instead of trusting to the chances of weather and measurement rules to show which is the winner. They will no doubt meet often in the future, but how much more exciting would the racing be, and how much more valuable the results, had time allowance been practically eliminated by a common length of waterline. Gitana won easily among the keels and America was never near enough to be considered in the race, being beaten 45m. by Galatea. Shadow beat Shona by 15m., and though in the late races the little cutter has been badly handicapped by a very poor suit of new sails, she can never hope to sail on even terms with a boat so much larger as Shadow, to say nothing of the new Pappoose.

As to the main feature of the day, the result has been a disappointment to the many friends of Galatea who have believed throughout that she was not fairly tested in the previous light weather races and that she would do better in such a day as was found last week. The fight has been a fair one and there is a certain satisfaction in having it definitely settled, however distasteful the conclusion may be to us and to many others. After what we have seen of all the performances of Genesta and Galatea with the two Burgess boats there is nothing to be said but that the latter are faster in any ordinary racing weather, from a drift to a lower sail breeze, than their rivals, and this carries with it the conclusion that Mayflower is faster than Irex under the same conditions, judging by the relative performances of Irex, Genesta and Galatea. This means that, in the largest class yet built, that tonnage boats, built under the old Y. R. A. rule, are slower than the best boat of the same length built in this country and without regard to the tonnage rule; and practically the question is settled in favor of the compromise against the tonnage rule boats in the 80ft. class.

There may be yet some who decline to accept this conclusion, and who may urge that not one of the three is the best possible boat on her dimensions, or further that weather may yet be met in which they will badly distance the Boston boats, but neither of these arguments is admissible. Given certain dimensions, no one can argue over an ideally perfect boat that has never been built, but all must accept the best existing representatives of each class, and base judgment on the actual performances. As to performance under other conditions than have thus far prevailed, it is merely a secondary consideration, and even though a boat may show great superiority under two reefs, or in a gale and sea, it will count but little from a racing standpoint if she cannot stand the test of speed under fair working canvas and normal conditions of weather such as yachtsmen care to race in. We have rejected the results of such races as those of Genesea and Galatea over the New York course as proving of themselves nothing; but the same cannot be said of a race like the present, when the conditions were thoroughly fair to both types, and such as must commend themselves to all sportsmen as encouraging no type that is radically bad, such as the old skimming dish.

The question of type in the abstract is not of necessity settled, but it is unlikely now that it will be disputed further in the large class. In order to test it thoroughly it would be necessary to build a Doris or a Clara of Mayflower's length, and there is no doubt but that such a boat would be far and away the superior of any large tonnage boat yet built, but the draft would be 17ft. instead of the 13½ and 13ft. of Galatea and Genesta. With the enormous gain in stability, the extra sail area and an increased lateral plane, the disadvantages apparent in the present boats would disappear and we could confidently expect to see the wonderful work of Clara and Doris repeated in the first class. The difficulties in the way of such a boat, however, are insurmable, even if she should prove very much faster than Mayflower and her successors. The first cost of such a vessel would be very great, she would be debarred from many courses and from most harbors along our coast, and there are few docks or railways that could handle her. The mechanical difficulties, too, would be great, if one considers the relative size and weight of the average man compared with the spinaker boom or topsail yard of a 52ft. and an 85ft. Clara, and the great difficulty of handling the large spars on so narrow a deck, as well as that of holding the big mast in place. It is highly improbable now that such a boat will ever be built, and while the friends of narrow beam feel not unnaturally a disappointment that the issue they have defended so long is not to be carried to a decisive end in the hands of such masters as Mr. Watson and Captain Barr, they do not fail to recognize the fact that while a vindication of their position by a big Clara would be very acceptable to them, the gain to yachting at large would be but small, as for the reasons given above such a boat would not be practicable for general use in England or America.

No doubt the advent of the Thistle will work good to both sides, but while her beam is great for a British racing boat, it must not be taken for granted that all others in the future will be nearly as wide, and in this connection we may quote Mr. Waton himself, who in regard to the choice of Thistle's dimensions says, "The point at issue I took to be this: Given the laws of nature *and certain laws laid down by the New York Y. C.*, who shall most successfully build a yacht under these laws?"

We have declined thus far to accept the common opinion as to the abilities of Mayflower and Galatea, and the classes they represent until they had raced under more satisfactory conditions than have before prevailed, but without attaching too much importance to a single race, making all due allowance for the small rig of Galatea and for the scratch crew with which she sailed last week, recruited partly from local fishermen never before on her deck, with the small margin between Genesta and Puritan in their only decisive race still in view, and the possibility that Galatea may yet in her races here make a better showing than she has yet done, we must concede freely what we have thus far denied—that in the question of speed in racing weather the boats of the first class built in this country are superior to those built under the tonnage rule of the Y. R. A. The conclusion that our opponents will draw from this admission is easy to foresee. "The Burgess boats are wide and have centerboards, the cutters are narrow and have keels, ergo, beam is the correct thing and the centerboard is better to windward than the keel." This is the conclusion that will be reached by many, but the truth lies below the surface for those who care to seek for it. As to type and narrow beam we have shown above that in the size of boat now under consideration the narrow cutter of over 5 beams cannot practically possess the advantages of the smaller sizes, in which the greatest successes have been scored, or in other words, that the extreme type is not the best in these sizes, all the requirements of racing being taken into account. Certainly in the matter of beam more will be taken than has been done for a dozen years in Great Britain, while the new boats will have an enormous advantage in ballast over the old ones of the same beam. As to the exact proportion, we place it at about 4¾ beams, or 18ft. absolute beam for the length of Mayflower and Galatea and Thistle, and a little more in the smaller sizes. This, it is true, is a great departure from the 5¼ beams of Galatea, but it is by no means a "concession to American ideas, or a surrender of the vital principles involved in the original controversy between the British cutter and the late lamented American sloop.

On this side the question of beam is a much more difficult one to predict. We have held the view for a long time that the coming boat was a cutter of modified beam to suit the altered conditions of American yachting, a keel boat, except where shoal waters dictated the contrary, and to-day we see this realised in all respects but two, the beam and the board. Depth, keel, ballast and rig have all been naturalized within the past five years and are now just as thoroughly American as a New York alderman or the reconstructed brigand who dreams of the smoke of Vesuvius as he watches the steam rise from his peanut roaster.

The question of board vs. keel is already settled for all who have watched the races of the last few years and seen how closely the extreme boats, though handicapped in other directions, have pushed the best results of fifty years' experience with centerboard boats; and to-day the best informed and most liberal friends of the compromise boats admit that for speed the board is inferior to the keel. Coming events cast their shadows before, and in the complete defeat of the fastest centerboard of her size ever built, a boat with a reputation held against all comers for sixteen years, and sailed by a crew that has handled her in many victorious races, the wise ones see a forecast of the contest of next September. The new boat Pappoose is virtually a small Thistle, a keel boat of wide beam and great depth, but with a form such as has never yet been found in the many previous efforts about Boston to combine these two elements. Fresh from the builder's yard, with new sails and gear stiff and unwieldy, and sailed by her owner, a young man just in the midst of his college examinations she beat the famous Shadow with Captain Crocker at the wheel, by 10m. in 20 miles, the wind being light and the water smooth. The waterline lengths of the boats are: Pappoose 36ft., Shadow 34ft.; beam 12ft. 4in., and 14ft. 4in. respectively; draft 7ft. 6in. and 5ft. 4in. There were no flukes, the race was seen by many, and it has set all Boston to wondering just how the moral can be applied to Mayflower and Thistle. This is but the beginning of an attempt to bring to bear in the designing of keel boats untrammeled by extraneous conditions, the same skill and knowledge that has been for years expended on centerboards, and we are content to leave the result to the near future, confident that the old dogma of the inherent excellence of the centerboard to windward is nearly disposed of, and in the meantime can do no further harm.

The question of the coming proportion of beam in America is a far more difficult one than that of keel; the movement in behalf of much less beam was quite strong two years since, but of late the success of the modern compromise boat has caused a recoil, and just now the beamy boats are at the front. The old extremes were wide apart, three beams on this side the Atlantic and six on the other, and even if the latter be proved too little it does not follow that the former is just right. Mr. Watson has made a step into the space between the two and we believe that he has hit very near the mean of future American practice. No one now will build a Galatea, but it would be as absurd to imagine a man putting his money into a Fanny. Just now Mr. Burgess is working earnestly on the wide side of the question, as in Titania and Pappoose, and evidently with fair success, but before a definite conclusion is reached these boats must be tried with others of similar build and ballasting but of less beam. Both were built exclusively for racing, and whatever other merits they possess are incidental, while few of the narrow keel boats that are likely to meet them have the same proportionate advantages. Bedouin, the acknowledged head of Titania's class thus far, though she has won the first place as a racer, is, in construction and ballasting, but a cruiser, with only a portion of her lead outside and cabins elaborately fitted up in hard wood. With ballast all outside and light pine bulkheads, she would not be the same boat, and until Titania is matched with a boat of the opposite type, but of similar construction, no accurate measure of the types can be had.

Formerly the differences of build counted for little, but racing has now reached a point here where every refinement is made use of, and not until racing boats are matched against racing boats can exact and definite conclusions be reached in cases where the difference between the first and last of a fleet of half a dozen is measured by less than as many minutes. Never before have the conditions been as favorable on both sides of the Atlantic for a test of these two issues of beam and board, nor have there ever been so many experienced and competent men on both sides at work on the problem. In America the standard of design and construction has been greatly elevated; the boats of to-day were never before equalled in build, in ballasting, or in equipment, while as a rule they are better manned and handled than of old.

In England the old rule that for some years past has pressed so heavily on design has passed away, making room for a far more liberal measurement, under which a new period of development may be looked for. The yachts of the two nations are now sailing under the same rig and on a perfect equality as far as materials and methods of construction are concerned and with the racing growing keener and better as the boats improve, it is safe to leave the few points now in dispute to the hard logic of future events with the confident expectation that successful boats will be the best for the permanent advancement of yachting, and that whatever type may ultimately be adopted it will embody as its most essential qualities, safety, seaworthiness and general efficiency, as well as the greatest speed.

Though the racing career of Galatea in America has not been successful, it has certainly set before American yachtsmen an example of the true sportsman's spirit, and there are many owners of racing craft who can profit by it. Entering boldly every race open to him, throwing out a challenge for an ocean race that no one cared to take up, confident to the last as every sailor should be in the abilities of his ship and fighting for her against all odds, Lieut. Henn has won the good opinion of every one who has come in contact with him, doubling it now by the frank admission of his defeat when it has at last come in a perfectly fair race.

BOSTON Y. C. CHAMPION CUPS, June 23.—The first of two matches for the Pfaff and Meer cups was sailed on June 23 over a 15 knot course from the club house down Broad Sound, around whistling buoy off the Graves, and back. Unfortunately the two postponements of the E. Y. C. race prevented the entry of Shadow and some others, and only one class filled, the second class sloops. Edna won the Pfaff Cup for the third time, so retains it. Eight races have been sailed for the cup. The Meers Cup is still to be won. Echo takes second prize, $20. Summary:

	Length.	Start.	Finish.	Elapsed.	Corrected.
Edna, K	28.10	11 02	1 52 50	2 50 50	2 08 27½
Echo, C.B	25.02	11 02	2 03 58	3 01 58	2 14 03½
Majel, K	27.04	11 02	2 00 48	2 58 48	2 14 18

The race was sailed in a S.W. wind, the weather being cloudy, with rain. The tide was against the yachts both ways.

ONONDAGA Y. C. OPENING REGATTA, JUNE 20.—Courses: Onondaga Lake start, Lake View Point to buoy off town of Liverpool, to buoy off town of Geddes, to Lake View Point; distance, 6 miles. Weather, fair. Wind, north northeast:

	Length.	Start.	Finish.	Elapsed.	Cor.
Eclipse	25.00	3 27 15	5 40 00	2 12 45	2 12 45
Rival	20.08	3 27 00	5 38 00	2 11 00	2 08 46
Crow	15.04	3 27 45			

Winners: First prize, $15, Rival; second prize, $10, Eclipse. The Rival was bought by Commodore Masters at the close of the race. Regatta Committee—E. C. Stearns, C. R. Nott, J. J. Keefe, J. G. Warner, H. L. Kennedy, C. G. Masters and C. F. O'Donnell. Judges—H. L. Kennedy and C. R. Nott.

CAPE ANN Y. C.—The first penannt race of the Cape Ann Y.C. was sailed on June 22 over an 8-mile course and in a light wind, coming strong from S.E. during the latter half of the race. The times were:

	Length.	Elapsed.	Corrected.
Lark, Bishop and Murphy	18.03	1 49 21	1 28 46
White Wings, Perry and Docherty	19.07	2 04 38	1 45 07
Osceola, Higgins and Gifford	21.02	2 06 10	1 47 48

BAY VIEW Y. C.—Eight yachts sailed in the regatta of the Bay View Y. C. last week, over the courses of the South Boston Y. C. The times were:

FIRST CLASS—ALL BOATS OVER 20FT.

	Length.	Corrected.
N. S., Ivar Jensen	26.03	1 52 00
Jennie, R. Barr	21.07	1 55 51
Trio, J. H. Fleming	21.03	1 58 09

SECOND CLASS—ALL BOATS UNDER 20FT.

	Length.	Corrected.
Flash, D. McCarthy	17.06	1 27 00
Alice, C. J. Harris	17.05	1 34 24
Annie Laurie, J. Fleming	17.07	1 37 48
Doisie, A. Jones	12.00	1 34 30

CHANGES OF OWNERSHIP.—The market for yachts has been unusually active of late, and a number have changed hands. Thetis has been sold by Henry Bryant to Oscar C. Ferris, of New York; Triton, schooner, has been sold by the estate of the late Edward Pomeroy to J. F. Fay, of New York, and Azalea, schooner, has been sold by J. M. Forbes to Edmund Blunt. Valkyr, centerboard cutter, has also been sold by J. E. Schermerhorn. The purchaser of Sentinel, steam yacht, lately sold, is G. L. Ronalds. Mr. Henderson, of New York, has purchased Kelpie, keel sloop, from J. N. Winslow. A report has been current of the sale of Mayflower to E. D. Morgan, owner of Amy, steam yacht, but though he has been negotiating for her no sale has been made.

COURSES FOR "GLOBE" REGATTA, OFF BOSTON.

THE "GLOBE" OPEN REGATTA, JUNE 25.

YACHTSMEN are familiar enough with "newspaper" yacht races; they are usually sailed in mid-winter when the fleet is laid up, the courses are far out at sea, and the winners are boats that are never seen at the line in summer. It has been left to one of the brightest and most enterprising of the great American dailies to inaugurate a reform and show what a newspaper can really do in the way of a yacht race when it tries, and the result has been successful in the extreme. The great open regatta given by the Boston *Globe* on June 25, following on the gift of a $500 cup for the Dorchester race of a week before by the same paper, testifies to the great interest at present felt by the public as well as by those more directly interested in yachting, as well as to the enterprise of the paper which has so liberally come to the support of the sport. The details of the race were in charge of the South Boston Y. C., and the courses sailed were those of the club, as shown on the accompanying chart. Of the 135 entries, 75 went over the course, many others starting but giving up. The race for fishing vessels did not fill, as the fishermen are busy now at a profit and have no time for racing. The full summary or the race is as follows:

FIRST CLASS CENTERBOARDS, 30 TO 40FT.

	Length.	Actual.	Corrected.
Shadow, John Bryant	34.00	3 44 50	3 01 29
Magic, E. C. Neal	31.01	3 49 39	3 02 17
Mabel, Childs et al	33.06	3 55 59	3 11 58
Violet, Henry McKee	33.08	4 17 26	3 33 40

First prize, $40, Shadow; second, $20, Magic.

FIRST CLASS—KEELS.

Carmen, B. L. M. Tower	30.00	4 25 15	3 36 14

First prize, $40, Carmen.

SECOND CLASS—CENTERBOARDS, 24 TO 30FT.

Eva, D. Sargent	25.07	3 41 44	3 01 12
Folly, J. F. Sheppard	26.04	3 45 03	3 05 16
Atalanta, I. R. Thomas	27.08	3 55 37	3 17 29
Sea Bird, C. H. Joy	24.00	4 11 08	3 27 53
Hector, T. Floyd	25.00	4 14 23	3 32 47

First prize, $30, Eva; second, $20, Folly (These awards are subject to a protest of Eva by Atalanta on the ground of false start, and of Folly by Atalanta for a foul at the start); third, $10, Atalanta.

SECOND CLASS—KEELS.

Prince Karl, E. L. Williams	29.01	3 39 26	3 03 01
Breeze, C. E. Paget	29.06	3 40 52	3 04 54
Trudette, L. M. Haskins	24.11	4 02 49	3 21 01
Lizzie F. Daly, Daly Bros	26.08	4 00 48	3 21 22
Echo, Burwell & Isham	24.11	4 03 37	3 21 49
Optic, G. S. Hutchinson	25.01	4 34 20	3 53 30
Raven, J. Donavan	26.07	4 39 34	4 00 01
Scobin, Higgins & Canfield	26.08	4 54 27	4 15 01
Quimber, H. T. Wheeler	26.04	4 55 28	4 15 36

First prize, $30, Prince Karl; second, $20, Breeze; third, $10, Trudette.

THIRD CLASS CENTERBOARDS—21 TO 24FT.

Black Cloud, A. Brown	23.07	2 26 46	1 47 05
Posy, R. G. Hunt	22.02	2 23 24	1 47 58
Madge, Cummings & Howes	23.09	2 33 28	1 56 50
Silver Cloud, John McLaughlin	21.07	2 37 02	2 00 50
Petrel, H. H. Paul	21.09	2 39 43	2 03 44
Good Luck, J. B. Farrell	21.09	2 39 55	2 03 56
Myth, P. X. Keating	21.09	2 40 31	2 04 32
Wanderer, Joseph A. Turner	21.05	2 43 36	2 07 11
Percy Allen, F. S. Allen	21.05	2 44 43	2 08 18
Pearl, J. F. Lee	22.09	2 49 54	2 15 22
Osceola, Asa T. Gifford	21.11	2 54 15	2 18 30

First prize, $25, Black Cloud; second prize, $15, Posy; third prize, $10, Madge; fourth prize, $5, Silver Cloud.

THIRD CLASS—KEELS.

Kitty, Tarbell & Adams	23.05	2 38 23	2 04 30
Halcyon, James R. Hooper	21.09	2 43 35	2 07 36
Wanda, George W. Griffis	23.03	2 42 41	2 08 36
Thelga, Benj. R. Hall	22.01	2 45 05	2 09 33
Fearless, H. Stickney	21.04	2 46 26	2 09 54
Volanta, J. Minot Hall	22.08	2 57 05	2 22 17
Alice, R. O. Harding	21.01	2 59 15	2 22 23
Violetta, Henry S. Porter	22.09	3 05 47	2 31 05
Diana, Henry Burgess	23.05	3 12 13	2 38 25

First prize, $25, Kitty; second prize, $15, Halcyon; third prize, $10, Wanda; fourth prize, $5, Thelga.

FOURTH CLASS—CENTERBOARDS, 18 TO 21FT.

Em Ell Eye, P. M. Bond	19.03	1 44 32	1 12 54
Coyote, M. K. & W. Abbott	20.03	1 45 01	1 14 02
Zoe, W. A. McField	18.01	1 48 20	1 15 11
Tartar, J. B. Forsyth	19.06	1 46 38	1 15 18
Scamp, Frank Gray	18.04	1 50 42	1 17 53
Tom Cat, C. H. Lockhart	19.00	1 50 17	1 18 21
Mabel, F. S. Dunn	19.11	1 49 40	1 18 50
White Wings, Perry & Dougherty	21.00	1 49 54	1 19 28
Nereid, C. F. Colby	20.04	1 50 15	1 19 55
Jester, W. H. Besarick	18.08	1 52 32	1 20 10
Myrtle, R. C. Poor	19.02	1 53 10	1 20 26
Sheerwater, C. H. Woodsum	18.02	2 01 08	1 28 06

First prize, $20, Em Ell Eye; second prize, $15, Coyote; third prize, $10, Zoe; fourth prize, $5, Tartar.

FOURTH CLASS—KEELS.

Vesper, R. Benner	18.10	1 54 25	1 22 15
Zetta, Fowle & Warren	18.06	1 55 38	1 23 02
Annie, C. H. Cousens	19.07	1 58 04	1 20 51
Twilight, Rideout & Borden	18.08	2 08 29	1 36 07
Vidette, P. F. Burke	19.05	2 08 59	1 37 33
Annie May, Johnson & Pratt	20.03	2 09 12	1 38 46

First prize, $20, Vesper; second prize, $15, Zetta; third prize, $10 Annie; fourth prize, $5, Twilight.

FIFTH CLASS, 15 TO 18FT.

Victor, Hildreth	17.01	1 10 00	0 44 05
Alpine, Wm. P. Tarr	16.02	1 15 50	0 48 53
Wildfire, H. A. Keith	17.09	1 15 05	0 49 53
Mirage, G. E. Jordan	17.05	1 17 09	0 51 36
Nora, E. M. Dennie	16.02	1 20 17	0 53 29
Shadow, Weeks and Freeman	16.00	1 20 43	0 53 39
Helen, C. E. Hodges	18.02	1 19 44	0 54 42
Mamie, H. T. Bowers	17.10	1 19 17	0 55 10
Lydia, J. E. Conway	15.02	1 23 25	0 56 15
W. E., J. E. Robinson, Jr	17.01	1 21 55	0 57 48

First prize, $20, Victor; second prize, $15, Alpine; third prize $10, Wildfire; fourth prize, $5, Mirage.

SIXTH CLASS, LESS THAN 15FT.

Bessie, J. R. Tufts	12.00	1 05 13	0 46 17
Minnie, Henry Jackson	13.08	1 05 00	0 44 51
Lucy, W. H. Ransome	13.11	1 05 03	0 45 07
Amenda, Griffis and Anderson	14.01	1 06 24	0 46 59
Archie, R. J. Bibber	14.09	1 07 30	0 48 22
Sport, J. F. Gaskin	13.08	1 08 20	0 48 01
Baby, Fred Borden	12.08	1 09 51	

First prize, $10, Bessie; second prize, $5, Minnie; third prize, $3, Lucy.

It is of course impossible to give the details of the work in each class, but of the larger boats Shadow again won, chasing Magic all the way to Egg Rock and rounding ahead of her, leading on run home. In the second class keels the new Prince Karl, sailed by her owner, won easily, beating Breeze, Echo, Trudette, and the famous Lizzie F. Daly. This is the second race only of this new boat, and when in good racing trim she promises to do still better. The protests will not be decided until this week.

The regatta committe included Arthur Fuller (ex-officio) Chairman; John J. Brigh, Secretary; A. Henry Hall, Frank T. Christian, Fred G. Cooley, James Bertram, Guilford S. Reed (ex-officio), J. W. Sherman, Jr., W. J. McArdle.

The judges were: George A. Stewart, Chairman; William Morris, Thomas Christian, W. H. Godfrey, G. F. Clark, C. McKenna, Herbert Pope, J. P. Bullard, Charles Griffin.

MONATIQUOT Y. C. FIRST CHAMPIONSHIP REGATTA, JUNE 22,—Courses: Fort Point. First and second classes, 9 miles; Third class, distance, 7 miles. Weather slightly foggy. Wind S S.E. heavy. Tide, 12 M.:

FIRST CLASS.

	Length.	Start.	Finish.	Elapsed.	Cor'ct'd
Folly, J. F. Sheppard	26.08	2 35 55	4 27 42	1 48 47	1 21 29
Posy, R. G. Hunt	22.03	2 35 30	4 34 20	1 58 50	1 27 02
Alice, A. W. Blanchard	25.00	2 40 25	Did not finish.		

SECOND CLASS.

Tartar, J. B. Forsyth	19.05	2 40 25	4 45 52	2 05 27	1 30 12
Diadem, L. Hayward	18.02	2 41 12	4 52 06	2 10 54	1 37 44
Maud, G. M. Lincoln	19.02	2 43 47	Did not finish.		

THIRD CLASS.

Rocket, H. M. Faxon	16.02	2 45 42	4 22 00	1 36 18	1 09 21
Flora Lee, E. B. Glover	17.05	2 47 12	4 35 20	1 48 08	1 22 35
Helen Snow, A. Lane	16.06	2 48 00	Did not finish.		

Folly and Posy win in first class. Tartar and Diadem in second, Rocket and Flora Lee in third. Wind just before start light from W., five minutes after start shifted to S.S.E., blowing a half gale; all yachts double and three-reefed. Posy lost greatly by topsail fouling on gaff. Maud sprung a leak. Regatta Committee—P. D. Bagley, R. G. Hunt, C. G. Sheppard, C. T. Colby, G. H. Bicknell, A. W. Blanchard. Judges—H. Gardner, G. H. Bicknell, N. F. Hunt. Vice-Commodore's steamer, Bessie B., judges' boat.

NEW HAVEN Y. C. ANNUAL REGATTA.—The annual regatta of the New Haven Y. C. was sailed on June 24 in a strong breeze. The summary was:

CLASS B.

Thistle	5 01 30	Wild Pigeon	5 04 34
Concord	6 05 09		

CLASS C.

Mascotte	4 17 14	Marguerite	5 58 05

*Anita	6 28 14	*Vidette	6 38 00

CLASS E.

Venus	5 51 05	Dare Devil	6 09 14

*Actual time. †Corrected time.

SIREN, schooner, carried away her foretopmast head in the heavy squall of June 19, off Hog Island, and was towed into Larchmont by the steam yacht Oneida.

ALVA.—William K. Vanderbilt has for some time been considering the arrangements for an extended voyage on his yacht, the Alva. Accompanied by his family and a select company of friends he will sail July 2 for Cowes, stopping at the Azores on his way. From the Isle of Wight they will proceed to Southampton, and after spending a few weeks in and about England and Scotland, will probably proceed upon a trip up the Mediterranean Sea; but what their route will be or where they will afterward go has not yet been determined. In Scotland Mr. Vanderbilt has engaged a moor for the shooting season, and due attention will be given to that before the tour is resumed. The voyage is expected to last six or eight months.

A "QUACK" YACHT IN TROUBLE.—One of these nuisances, a yacht with a patent medicine advertisement on her sails, was in collision with a ferryboat last week in the North River. Her crew of two were thrown into the river but were rescued. The boat was badly damaged, but will probably be repaired and started again on her evil course. It is a pity that there is no means of suppressing such a nuisance as these craft with flaring puffs of patent pills and Cheap John tailors, which are seen now wherever yachts congregate.

THISTLE AND IREX.—Since Thistle reached Gourock on June 21 with seven flags flying, she has added two more to the string by that number of victories over Irex. On June 25 in the R. N. Y. C. regatta only 20 miles were sailed, owing to the light wind. Irex kept to windward over the first leg but was finally beaten by 12m. 1s. elapsed and 9.21 corrected time. On June 27 the pair again met over a 50-mile course, Thistle winning by 1m. 8s. over the allowance.

A MISSING YACHT.—The yacht Zena is reported as sailing from Somerville, Mount Desert, on May 13, and has not been heard from since June 7, when she was at Portland, about to sail for New York. She was formerly the Moette, and is 29ft. over all, 26ft. 6in. l.w.l., 6ft. 2in. beam, and rigged as a pole-masted cutter. Her crew was composed of two men, Clifford B. Richardson and Harlan P. Mason. A yacht resembling her has since been reported off Chatham, Mass.

THE JUBILEE RACE.—The Jubilee race of the Royal Thames Y. C. was won by Genesta on June 27, her time from South End to Dover being 12 days, 16h. 55m. Gwendolin finished at 2:11 P. M. June 28, Selene at 2:59, and Aline at 7:13 P. M. Genesta takes the prize of 1,000 guineas, which she has very fairly won, but it seems a great pity that so much money should have been recklessly squandered in a race that has done absolutely nothing for the advancement of yachting or the encouragement of racing.

PLYMOUTH ROCK.—Wellsboro, Pa., June 24.—*Editor Forest and Stream:* If Gen. Paine wants a name for his new yacht, what's the matter with Plymouth Rock? The name suggests itself. It is a natural sequence. Puritan, Mayflower, Plymouth Rock. Plymouth Rock is as pat for New England as Thistle for Scotland. Let the Thistle try conclusions with the Plymouth Rock and the best win.—NESSMUK. [Gen. Paine has already named the boat.]

ROYAL CANADIAN Y. C.—At the annual meeting on June 4 the following officers were elected: Com., J. Leys: Vice-Com., G. Gooderham; Rear-Com., G. Boyd; Hon. Sec., S. Bruce Harman; Committee, R. Cochrane, B. Jones, C. C. Dalton, Dr. J. Leslie, A. M. Cosby, A. R. Boswell, E. W. Edwards, A. B. Lee, T. E. Robertson. The Governor-General has presented a cup to the club.

LARCHMONT Y. C.—The annual regatta will be sailed on July 4, as usual. The yachts are divided into 18 classes, with good prizes in each, and as the race is open to the yachts of the New York, Eastern, Seawanhaka, Atlantic, Corinthian, Oyster Bay, New Haven and New Rochelle clubs, large entries are expected.

ATLANTIC Y. C. PENNANT RACES.—On June 25 the first of a series of pennant races for the small boats of the Atlantic Y. C. was started over an 8-mile course off Bay Ridge, the entries being: Frolic, Gleam, Cygnet, Musquito and Owl. The wind fell so light that after three hours trial the race was abandoned.

NEW JERSEY Y. C. ANNUAL REGATTA.—The attempt of the New Jersey Y. C. to sail the annual regatta on June 25 was a failure from lack of wind, so it will be resailed on July 9. The course this year is up the Hudson instead of down the bay, a triangular course from the club house.

COLUMBIA Y. C. ANNUAL REGATTA, June 23.—The 20th annual regatta of the Columbia Y. C. was set for June 23, but the rain and fog made a race impossible, the yachts which started failing to finish, so it was postponed, the date being unsettled as yet.

REPAIRS AND ALTERATIONS.—At Bay Ridge Atlantic is out for more lead on keel. Ilderan also will have two tons transferred to the bottom of her keel. Titania has had her boom and gaff lengthened, each 3ft.

JULIA—IROQUOIS.—The steel schooner Julia has been rechristened Iroquois by her new owner, T. J. Coolidge, of Boston, as Mr. Chapin has reserved the old name for his new schooner now building.

EASTERN Y. C. CRUISE.—The cruise of the Eastern Y. C. will begin next week, the rendezvous being Marblehead on July 6. The Commodore has appointed R. D. Sears fleet captain.

BONITA—GERTRUDE.—A match is reported for some time next month between the new Burgess boat Bonita and Com. Pearson's Gertrude, modelled by Mr. Philip Ellsworth.

ECLIPSE, sloop, formerly owned by E. H. Willard, has been sold by her late owner, E. H. Wales, to Samuel Fessenden, of Stamford, Conn.

VOLUNTEER.—Gen. Paine's steel yacht will be launched at Wilmington this afternoon and will be towed at once to Boston.

STAG Y. C.—A new organization under this name, incorporated Nov. 1, 1886, opened its new club house at Bay Ridge last week.

WASP.—Com. G. W. Gardner, Cleveland Y. A., is now on a cruise through the lakes in his sloop Wasp.

REGINA, sloop, is at Mumm's for a new stern and general repairs after a winter's cruising.

BANSHEE.—The new yacht building at Poillon's for Mr. Pearsall will be named Banshee.

TILLIE, steam yacht, formerly Polynia, has been sold by W. H. Starbuck to Henry S. Ives.

FORTUNA.—Com. Horey's schooner reached Queenstown on June 28.

DECOY, sharpie, has been sold by H. S. Wood to John Dimon.

HEALTH OF OUR CHILDREN and "Health in Our Homes," by "Dr. Frank," are two valuable little books lately received. These neat volumes do not aim at being exhaustive, but, as the author himself says in one of them, they are a series of talks upon matters too often neglected. In "Health of Our Children" the subject of infant feeding is thoroughly discussed and much valuable information given; and under the important heading of "Clothing" and "Sleep," we find many useful facts and suggestions. In "Health in Our Homes," "Dr. Frank" proves himself a zealous advocate of country life, and outdoor work and sport, especially for growing children. As, however, a large part of our population must necessarily live in cities, he has given considerable space to the ways and means of mitigating the unhealthiness of towns and tenements. The vexed problems of drainage and plumbing are touched upon, and ventilation is thoroughly treated. Overheating of apartments is severely condemned. We feel sure that the head of a family will find that either or both these books will amply repay the reading, and will thank "Dr. Frank" for the information so pleasantly given.

A short time ago Mr. Aderhold, of Douglasville, Ga., saw a large black snake drive a partridge away from her nest and swallow the eggs. A few days later Mr. McElathers, of the same town, saw a covey of young partridges fly out one by one from the snake's mouth and gather around it. They had evidently just been hatched from the eggs in the snake's belly, and the reptile seemed very fond of them. Not long after this Mr. Butler observed the snake gliding through a patch of oats and picking the kernels from the oat-heads. After filling its mouth the snake would drop the kernels on the ground to feed the young partridges as they followed it.—*Douglasville (Ga.) Star.*

The Fluttering Fly.
PATENTED MAY 4, 1886.

THE FLUTTERING FLY.
Patented May 4th, 1886.

With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fishing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are:

1st—The wonderfully life-like and fluttering motion this fly has when moved on the water.

2d—The fish is almost certain to be hooked if it touches the fly.

3d—Any of the present favorite combinations of color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style.

4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that flies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies.

We take this means of notifying dealers and fly-tyers that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure such people that the same old course will be pursued by this firm.

We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentlemen into our advertisements.

Scientific American: "When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish."

Forest and Stream: " * * * more like a natural insect than the old patterns whose wings close when being drawn through the water. * * * Great merit lies in its superior hooking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly."

American Angler: "There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than by color or form. * * * This fly will certainly, when drawn against the current or over a placid pool, *seam* the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * * We are told that few fish are lost by those who use this fly. We do not doubt it.'

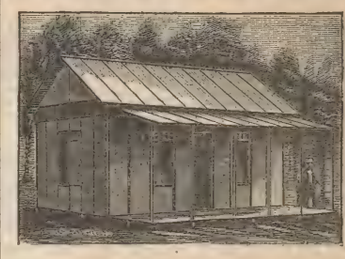
CANOE HANDLING.



By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the large sale of this magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability. Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

FOREST AND STREAM PUBLISHING COMPANY,
39 Park Row, New York.
LONDON: DAVIES & Co., 1 Finch Lane.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING Co., 39 Park Row.
LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

Forest Runes.

—BY—

GEO. W. SEARS.

("NESSMUK.")

Large octavo, 208 pages, printed on heavy paper, bound in cloth, gold lettering, with a portrait of the author. Price, $1.50.

FOR SALE BY ALL BOOK DEALERS.

Forest and Stream Publishing Co., 40 Park Row, N. Y.

Adirondack Preserve Association.

The Association was incorporated last year, having for its object the encouragement of social recreation, and of boating, fishing, lawful sports and the preservation of game and forests. The club house is situated in Essex Co., close to Mink, Thumb, Beaver, Loon and Moose Lakes, and is to be kept open the entire year so that members can take advantage of any portion of the fishing and hunting season, winter or summer. Photographs of the lakes and principal points of interest can be seen at the office of the Association. The membership is limited and the initiation fee $100. Applications for membership may be made to J. G. CASE, Secretary,
178 Broadway, New York.

For Sale.

GREEN RIVER.—THE SUBSCRIBER OFfers for sale a ten years' Government lease of the exclusive right to fish in about 30 miles of the main Green River in the Province of New Brunswick, Canada. It is thus named from the purity of its waters. One day by rail from Fredericton will place the sportsman at its mouth, where men and canoes can be had; it is navigable for these and light boats to its sources; it runs through picturesque forests, and is probably the best river for trout in Eastern America. Full information given on application to the subscriber. Reference is given by permission to J. H. PHAIR, Esq., Fishery Commissioner for New Brunswick. EDWARD JACK, Fredericton, New Brunswick, Canada.

THE ANNUAL SALE OF SPORTING DOGS from the kennels of R. J. Lloyd Price, Rhiwlas, Bala, Merionethshire, North Wales, including the celebrated field trial winners Dixie, Irish setter, Sandy, Laverack setter, and Luck of the Goat, pointer, will take place at the Royal Aquarium, London, on Friday, July 8 next at 2 o'clock. Particulars from the auctioneer, J. FARMER, 15 Cockspur st., London, England. jn23,2t

SPORTSMAN KENNEL FOR TRAINING and boarding of sporting dogs for private use. Pointers, setters and hounds, broken and unbroken, for sale. D. F. WILBUR, Box 303, Bridgewater, Mass. jn9,tf

FOR SALE, BLUE BONDHU.—ANY GENtleman wishing to buy a fine black and white Llewellin setter dog, 10 mos. old, that is sure to make a nice fielder, sired by the field trial winner Gus Bondhu ex Myrtle, can do so by addressing A. M. TUCKER, 85 Main st., Charlestown, Mass. jn2,tf

$45. RARE CHANCE.—LADY FLORA, small pug bitch, in whelp to Silver Shoe; last litter brought owner $87. Particulars, J. H. BOWDEN, 141 Bank st., New York. 1t

FOR SALE.—FIVE WIRE-HAIRED FOXterriers, three bitches and two dogs, out of Bristles by New Year's Day, both well-known winners; also young dog out of Bristles, about 9 mos. old. For price, etc., apply to G. BELL, Walker House, Toronto, Can. jn30,3t

FOR SALE.—TWO CHESAPEAKE BAY pups, dogs, whelped Nov. 24, 1886, out of my Romp (A.K.R. 5040) by Albert Nickel's Fritz; both have had distemper, an exceptionally fine pair in every respect, strong, bright and intelligent; just right to train for use this autumn. GARD'R G. HAMMOND, Walnut Grove, New London, Conn. 1t

FOR SALE.—VERY FINE COLLIE PUPpies, by Associated Fanciers' King Bruce out of a premium bitch; also collie bitch Gypsey, vhc. in New Haven, 1886. For prices, etc., address H. FORBES, Box 167, West Haven, Conn. jn30,1t

FOR SALE.—THE CELEBRATED ROUGHcoated stud St. Bernard The Silver King (K.C.S.B. 16,032), whelped April 14, 1883; also a grand rough-coated bitch, Maritana (K.C.S.B. 19,389). The dog is now in capital form and show condition, 34in. full at shoulder, maximum weight 180lbs. During the first three months at stud he sired the 1st prize winner Alpine Jack, and also other winners since. Selling through no fault, but declining to keep so many St. Bernards. Pedigree and list of prizes on application. Lowest price £100 sterling. The bitch is prize bred by champion Bonivard, whelped April 21, 1883; best litter, six dogs and six bitches. She is in show condition and a thoroughly handsome St. Bernard. Lowest price £25 sterling. Apply to A. E. DYSON, ESQ., The Hollies, Timperley, Cheshire, England. 1t

FOR SALE.—TWO RED IRISH SETTER bitch puppies, out of Mill (A.K.R. 2884), delivered immediately. P. O. Box 707, Schenectady, N. Y. 1t

BEAGLES FOR SALE.—ONE DOG, 2 YRS. old, a good hunter; one bitch, Bunnie, 2 yrs. old, a first-class hunter, sire Keno, dam Bessie; Bessie is out of Racket—Fly, full sister to Trailer; also two puppies out of above bitch, and one of N. Elmore's get. Address E. P. LARKIN, P. O. Haydenville, Mass. 1t

HUNTING BEAGLES FOR SALE.—ONE dog, 2yrs., 16in. high, a beauty, elegantly bred, a fine hunter; one young 10 mos. dog, son of champion Rattler III., will be 16in. high, has been run on deer, foxes and hares in Alabama, will be a rattler. This is a grand pair for rough country. Also two grand pups from best bred working stock. A. C. KRUEGER, Wrightsville, York Co., Pa. jn30,2t

FOR SALE.—HANDSOME BEAGLE BITCH Myrtle B. (A.K.R. 2923, Dodge's Rattler ex Katie); also trained beagle dog Caro; lemon and white setter dog Captor (LaBelle—Creole); trained Llewellin setter bitch, collies, pointers and greyhounds. Box 472, Pittsburgh, Pa.

FOR SALE.—THREE VERY HANDSOME, nicely marked fox-terrier bitches. Will sell cheap to make room for two litters expected soon. L. A. VAN ZANDT, Yonkers, N. Y. 1t

WM. GRAHAM, NEWTOWNBREDA, BELFAST Ireland, is prepared to purchase and ship dogs for importers. Dogs purchased from him had the following prizes awarded to them: At New York and Chicago, 1883, sixteen firsts, nine special, three second and one third. At New York, 1884, seven firsts, six specials and one third

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JULY 7, 1887.

VOL. XXVIII.—No. 24. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded: No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 50 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

MR. PARKER'S DEER.

IF he has presented a true bill, the individual who signs himself A. M. Parker, in the Putnam (Conn.) *Patriot*, of June 24, 1887, is one of those shameless braggarts who break the laws when in the woods and then think it smart to boast in print of their misdemeanors. This Parker writes from an Adirondack camp, which, he says, is thirty miles from Corry's hotel on Indian Carry, Upper Saranac Lake. He went in via Casey's, and if he has not already gone out again, the game protector (if he cares to take this hint) may intercept him there. His camp companion is spoken of as Dr. Miller. The guides are Ance Parsons, Marshall Brown and George Johnson. Johnson appears to be like the average Adirondack guide, ready to do whatever his "party" pays him for; and in this instance he helped Parker in his law breaking. Parker writes as follows:

George and myself had quite an experience the other day at a lake about ten miles from camp, where we had gone to fish and hunt. Now although the law is on against shooting deer at this season, it is a well understood forest law that a buck once in a while straying across our path might possibly, I might say accidentally, help to increase our camp larder and keep grim starvation from the door. We fished until nearly evening and then, not having the best of success, decided to try our hand with the rifle. There was one big buck about a mile down the lake on the right hand shore which I longed to possess. * * * With noiseless paddle we pass out from behind the point and follow close to the line of shore in the direction of the big buck, only paddling while his head is down and he is feeding, and at a snail's pace almost approach nearer and nearer to the deer. We pass two does on our way, approaching nearly to a shotgun distance to them before they are aware of our existence on this mundane sphere, and just to see them stand an instant and gaze in speechless wonderment at the intruders of their forest home and then bound away into the woods, seemingly 20ft. at a jump, well repays us for coming so far from home. It is considered no honor in a sportsman to shoot a doe at this season of year. * * * George's paddle made no sound, not a ripple in the water, but it was tedious to sit so long in one position without venturing to move a hair's breadth. The end was slowly approaching, however, for when within a little over a hundred yards, just a beautiful rifle shot, the buck suddenly raised his head and with startled eyes took in his danger, his ears and horns in the velvet, for deer drop their antlers every season, and high extended head forming a picture as indelibly rooted upon our remembrance as if but a half hour gone by. All the shakiness of buck fever has departed, and in that second while he stood before turning to flee, the rifle rang out its sharp report and without one struggle his majestic head drooped. The rifle ball had passed through his right shoulder and reached his heart, and with a splash lay in the water dead. * * * A feeling akin to sorrow for the death of so kingly a beast possessed us, but with the thought that if not I, he would have fallen to some other's bullet, came the exultation of our capture. George and I "shook hands over the bloody chasm," and then lifted with all our strength to deposit the buck in the canoe, and as it was fast growing dark and we had a rough carry to get over, etc., etc.

There are in Putnam, as the FOREST AND STREAM happens to know, right-minded anglers who can go into the woods without leaving their respectability behind them. They should reason with these Adirondack tourists on their return, and if not successful in inculcating morality, at least strive to arouse a sense of local pride which shall for the future deter Putnam June deer killers from heralding their achievements in Putnam papers.

There are two classes of game law breakers, one, those who are ignorant of the law and thoughtless, the others who know the law well enough but deliberately violate it. Neither class is excusable. For the first ignorance of the law cannot be plead in extenuation. In this year of grace, when a person takes firearms to kill something, it is his business first to learn if the game may be killed lawfully. In default of such investigation his unseasonable shooting is culpable.

It does not compare with the acts of the second class of men who, as this Parker, know the law perfectly well, but instead of regarding it, find a spice of satisfaction in killing game and defying the law at the same time. These fellows are not sportsmen. They were not born with the instincts of sportsmen. They have not acquired the sentiments of sportsmen. They can never be sportsmen. They have nothing with the guild. They belong outside. A thousand pairs of antlers to their score and a thousand trout added to that could not make them sportsmen. When they get themselves up in hunting suits and hire a guide to wait on them, they are only parodies strutting about in a rig that does not fit them. When they write of their prowess and herald in their home paper their woodland abominations, no sportsman nor self-respecting, law-abiding citizen finds anything very pleasing in their vaunting reports of misdemeanors committed.

As the two classes are different, so are the remedies. Your ignorant, thoughtless June deer killer may be taught better; and then he will do better. But your intentional game law violator can be cured by nothing other than a moral regeneration, and to achieve that is a task of such magnitude as to be indeed well nigh hopeless.

SNAP SHOTS.

THE Helena (Mont.) *Independent* of June 22 prints a Washington dispatch, which states that J. W. Shively, who gives his address as Brainerd, Minn., has written to Secretary Lamar asserting that the National Park is infested by a lot of robbers, cut-throats and thieves, "who are now engaged in slaughtering Rocky Mountain sheep by knocking them down with clubs while they are stuck in the deep snow in the mountains and unable to escape." The man referred to as authority for this statement is a deaf mute, who entered the Park about June 1 and went as far as Norris Basin with Henderson, once an assistant superintendent. Here there was some disagreement about the price of transportation, and Shively left Henderson and walked back to the Hot Springs. After leaving the Park, Shively made a complaint, charging that an attempt had been made to rob him at Norris Basin. An investigation showed that there was no foundation whatever for the charge. No special comment is needed on the charge that mountain sheep are being clubbed to death. *Ovis montana* in June is fairly well able to take care of himself, and is not likely to be run into the snowdrifts. It is thought by those who are in a position to judge that Shively's troubles arose wholly from his own infirmities.

An expedition has started form the University of Michigan for exploration in the Philippine Islands. The party consists of Prof. J. B. Steere, whose chair in the University is that of Zoology; Messrs. Worcester and Bourns, students; Mr. E. L. Moseley, of the Kent Scientific Institute, of Grand Rapids; and a native of the islands, who came from there with Prof. Steere when he returned from a former expedition. It is proposed to spend fifteen months in study of the flora and fauna of the Philippines. Much of the time will be spent on Mindanao, the southernmost island of the group, next to the largest, and whose interior has never been explored. It is anticipated that the results of the expedition will add very much to our knowledge of the islands. In his former stay there, Prof. Steere discovered thirty-nine new birds, which were named by Prof. R. B. Sharpe, of the British Museum. The FOREST AND STREAM has arranged for a series of letters from one of the members of the party.

The many friends of Professor Spencer F. Baird will be glad to know that he has improved in health sufficiently to go to Wood's Holl, where he now is. Two months ago he was seriously ill and went into the Adirondacks, leaving Profs. Langley and Goode in charge of the Smithsonian and the National Museum, and Maj. Ferguson, Assistant Fish Commissioner, in charge of the other work. The Adirondacks did not agree with the Professor, and he returned to Washington a month ago. At that time the newspapers published rather exaggerated accounts of his illness. Although better, he has not yet resumed work.

All things come to him who waits. A faithful rifle bearer, who has gone annually for seven years to the Adirondacks for a panther, declares that he will keep it up for seven years more, and another seven, if necessary, but a panther must fall to his aim. There are two or three noted panther and wolf slayers in the North Woods who for a suitable consideration ought to be willing to lead this enthusiast to the game. A skilled panther hunter is not apt to divulge any knowledge of this sort without being duly rewarded; for the bounties accruing from a carefully protected pair of panthers count up.

Wolves are said actually to be on the increase in the North Woods. Most of the Adirondack wolf stories when sifted prove to be based on fiction. The average wolf turns out to be a smooth-tailed specimen. That there are genuine wolves in certain parts of the range is quite true; and this despite Mr. Robert B. Roosevelt's theory that the Adirondack mongrel deer hounds are an efficient force of four-legged police to rid the country of such varmints.

One day last week a Passaic, N. J., boy climbed out on the limb of a tree overhanging a canal after a bird's nest. He secured the prize but fell into the water and was drowned. The moral of this is that if small birds are to lure small boys into deep water, the small birds should be exterminated forthwith.

The second series of the Decoration Day Trophy matches were shot July 2 and 4, and the scores are given in our trap columns. There are new ties for the Trophy and first and second money prizes. The ties for the Trophy will be shot off; the others may be shot off or divided.

If ever there be pleasure in turning to records of wood and field and stream life it is found in these days when newspapers are filled with war talk and partisan harangues. There is at least one weekly in whose pages politics have no place.

ARTIFICIAL TARGETS.

TRAP-SHOOTING artificial targets is a sport that is booming, and the wiseacres who used to tell us that there could be no lively trap-shooting except at live birds are beginning to see that they did not know all about it after all. The professional alarmists, who were wont to beat the tocsin and tell us that any legislation against live-bird shooting was but the entering wedge and meant nothing less than the entire abolition of field sports, are coming around to a calmer view, and we hear little of their rant.

The New York State Association for the Protection of Fish and Game at their last tournament employed artificial targets in the place of live pigeons in all matches where live birds were not called for by the deeds of gift of certain prizes. It is probable that by another year the entire shooting will be at artificial birds. At its recent convention in Sioux City the Iowa State Association went so far as to discuss the adoption of a resolution forbidding live-bird shooting at future tournaments. The vote showed that the delegates were about equally divided, the resolution being lost by a single vote.

These are indications of the tendency of the times. The substitution of clay and tar and plaster for live birds means an increased participation in trap-shooting.

HUNTING WITHOUT A GUN.—I.

MY boat parts from the oozy bed where it has lain so long that the marsh weeds overlap its gunwales, with a sound somewhat like a sigh, I know not whether it be a sough of relief, or of regret, but I, afloat again on Little Otter, feel something of the old exhilaration that warmed my heart when I first beheld it shining like a floor of silver at my feet; something of the delightful trepidation that thrilled me when with old Mingo Niles, the good black angel of my childhood, as caretaker and boatman, I first adventured upon these waters. Back through the lapse of years come to me the childish awe of the dark water only an inch board's thickness under foot and encompassing me all about; the wonder at strange sights, the delight at being here at last in the fulfilment of the vague promise that I might "some time go a-fishing with Mingo," in what had seemed such far away, almost unattainable waters as they gleamed in the breadth of their springtime encroachment on marshes and lowland, or in summertime ribboned the green levels with a silvern or golden or azure band. The memory of those sensations is revived with such vividness that I am appalled by the swiftness of time. It was more than forty years ago, and yet it seems that it might have been but last summer. Can it be that in so short a time the little tow-headed boy has come to man's estate and grown old enough to be grizzly? Looking down into the still waters, the gray-bearded face I see there returning my questioning gaze with something of wistfulness, something of reproach, answers, "Yes, even so; and with youth old friends are gone, and in the swift years old scenes have changed," and I am constrained to admit that even so it is, but breathe a silent prayer that my heart may continue somewhat longer in youth and in the enjoyment of what in youth delighted it. With these softening memories upon me I have no desire to kill anything, not even time, though I wish I might cripple him as he has me, and retard his flight a little, and am quite as happy in hunting without a gun to-day as I would be with the most approved and improved hammerless. Indeed, I would not hunt with a hammerless gun. I wish to see how a gun does it when I take a shot at a bird on the wing, or as often happens in my experience, how it does not do it. If I am to hunt with a gun, give me at least the time-honored form and semblance of the weapon. Presently, I doubt not, we shall be given that safe ideal gun of the old woman's, "without lock, stock or barrel," and as the rapid disappearance of game would indicate, presently such a gun will be as good as any. Then we may all go hunting without any show of a gun, and enjoy the pleasant and quiet pastime of shooting without fire, smoke, noise—or game. So I am hunting to-day, in close time, for all fowl but those that no one but a murderer of innocents would care to kill.

Such is my unprotected friend, the kingfisher, who comes jerking his clatter along the channel till he spies my harmless craft, then sheers off, distrustful of all mankind. Far astern he poises in fluttering steadfastness over the waterway, then drops like an arrow fallen from the sky, throwing an upburst of crystal drops skyward. I hope he got his prey; it was no fish that I care for and it will comfort him greatly. With such approval he might greet my taking of the pickerel that is forever robbing him of his minnows. As unprotected, a bittern starts from his damp seat among the weeds with a guttural squawk. Then a stately heron breaks from his statuesque guard of a minnowy shoal and fans his way to some more undisturbed retreat.

It must have been hereabouts that Tom Sweet belabored with his paddle and drowned his bear, the only bear of whose death there is any tradition in this neighborhood, and a memorable instance of the success that hunting without a gun may bring, for Tom had only come a-fishing from the back side of the township, armed with no deadlier weapons than his fishpole and paddle.

Rounding the bend, half-way between the Myers Landing and the Sattley Landing, I come to the turn of the channel that I can never forget while I remember anything of the stream, for here I killed my first duck, shooting it on the wing, astonishing myself no less than Jule Dop, who paddled the boat for me. I was so swelled up with pride that I wonder now how that scow, roomy as it was, could have held me and Jule and the duck, a dusky duck that certainly was, as I remember it, as big as any goose. But the good boat contained and upheld us with our burden of glory, and when we rounded the wide marsh off Horse Pasture Point, another duck went splashing and fluttering and quacking out of the wild rice straight landward. I blazed away at her, though my paddler said, "She's too fur." Down she tumbled, but so far away in the wide unmarked level of marsh that we could not find her. Yet it was enough to have that incomparable paddler regard me with unfeigned admiration and say: "Well you're a cuss to shoot!" and he not less than three years my elder, and as his mother said, "Lawge of his age an' smawt as he was lawge!"

If I might by any shot at anything, once more have my heart warmed with such exhilarating fire as those two shots set aflame in it, I could not with any sincerity recommend this blood-guiltless hunting, nor practice what I now uphold.

Poor Jule! many years ago, while he was yet a boy, he resigned this weary world and tobacco-chewing and departed into the unknown. I doubt not that Charon impressed him into his service, for he would not let so good a paddler depart into eternal uselessness. Poor vagabond, he was good for nothing else, nor ever could nor ever would be. I fancy that in my last voyage I shall be assured by the noiseless stroke and undeviating course of the craft, that Jule propels it, as I go hunting then as now, without a gun, in search of I know not what. I must confess that this companionless revisiting of old scenes is somewhat depressing to the spirits.

The yearly growth of lily pads, wild rice, rushes and sedges, is the same that it was forty years ago, but I miss the old familiar trees that then bent over the marshes from the shores, now only naked banks of clay, and the broad primeval forests, in whose place are now only dreary acres of blackened stumps and scant herbage. I miss the once teeming wild life of the marshes. I do not see one duck, nor hear one, and few bitterns, and only one heron; there are not so many kingfishers, and even the blackbirds are scarce, scant flocks of them rising in a scattered flutter out of the wild rice, where once arose a black cloud with a startling thunder of wings that made one's gun spring toward his shoulder in expectation of larger fowl worthier of its lead. Some alarmed fish break the water with retreating wakes at my approach, and I see some signs of muskrats, the floating remnant of their late suppers and early breakfasts, and hear sounds behind the green arras of rushes, splashes, plunges and smothered squeaks, that I attribute to these little representatives of their long departed bigger brothers, the beavers. It is comforting to one who loves the inhabitants of the wild world to know that some of them still fairly hold a place in it in spite of all persecution and all encroachment of civilization. Every spring, three or four hundred or more of these fur-wearers are taken out of the marshes of Little Otter by the trappers and shooters, and yet there are muskrats, and the chance of their continuance for many years to come, for it is hardly probable that the water and the marshes will be improved off of the face of the earth within the lives of several generations of men.

I notice as many as ever of the marsh wrens' nests on their supports of gathered rushes, and hear the rasping notes of these birds, always reminding me of those well-intentioned persons who have neither voice nor tune, but will always be trying to sing.

Button bushes are not worth cutting, even in malicious spite of woody growth, and their wide patches of scraggly, impenetrable tangle flourish and bear balls of purple buds, white inflorescence, and green and brown fruitage, whose bristling rotundity nothing seems to assail.

There is promise of a great crop of wild rice this year, but the old-time harvesters will not come in any force to gather it, as they did in the days of our youth. Then by the middle of September every stalk was stripped by the hordes of ducks, and the wet fields so cleanly gleaned by the throngs of blackbirds that it was a wonder how a kernel was left for next year's seeding. It is sad to think how the few survivors of that countless peaceful army will be harried by the more numerous army of gunners, and will not have a day's, hardly an hour's, truce given them to rest and feed in the midst of this bounteous fare. Sometimes as one considers the ruthless bloodthirst of his kind, he is almost ashamed that he is of mankind, and then, considering how little better he is than the meanest of his fellows and how much safer he is to be one of them than to be any wild thing, however harmless, he is humbly reconciled.

The blue spikes of pickerel weed bristle as of yore against the pale of rushes, and the white blossoms of saggitaria thrive there, above the spent arrows of their leaves, that some time since were shot up out of the mud and water by invisible sprites of the under world.

The white dots that toss on my boat's wake as it stirs the border of rushes to a rustling of their intermingling tips I fancy at first are the breast feathers of some murdered waterfowl, or possibly a drift of castaway land blossoms; but upon examination they prove to be what my friend the botanist tells me is a species of buttercup—a milkman's buttercup it must be, so white and so watery, yet nevertheless a pretty flower.

In every little sheltered cove, or rush-locked pool, is moored a great fleet of duckweed, with as unstable anchorage in the shifting waves as have the myriads of water bugs that thrid the mazes of their dance in midchannel and among the lily pads. I have an impression that that motionless green lump is a bullfrog, and slowing my stroke until the boat lies almost motionless abreast of him, I detect the solemn wink of his eye, and presently he begins to thrum the strings of his water-soaked banjo, which his brethren hearing and quickly catching the old air, all join in a melody of thin but resounding bass. I am constrained to admit, much against my stomach, that I enjoy them more so than fried in bread crumbs, and indeed there is less grossness, less animalism, in feasting one's ears than in feating one's stomach. The twang of the bullfrog's chorus coming to our ears, the blush of the apple blossoms to our eyes and their scent to our nostrils, used to inform us that it was time to go fishing for "pike," as we always called, and I suppose always shall call, the pike-perch, in defiance of correct nomenclature, as long as we call our commonest thrush, robin. The habit of using familiar names is hard to break one's self of in the ever-present temptation to make one's self easily understood. Ask the ordinary country boy whether there are any ruffed grouse in such a piece of woods, and if you get any answer but a blank stare it will be in the negative, possibly supplemented with the remark that he "never heard o' no sech critter." Meet him half-way and inquire for partridges, or come quite down to the level of his speech, beyond that unnecessary first "r," and he will tell you all he knows of those familiar woods-acquaintances of his, all the more readily if you are hunting without a gun, for he is jealous of those who hunt with one.

Floating lazily along, without even a rod to hinder day dreaming, my thoughts and fancies run counter on the trail of time, back to the old, old days when, on the shores behind the marshes, the border of the primeval forests bristled streamward in a great abattis of prone trees and trees slanting in all inclines toward their final fall. Then the moose and elk and deer came here to feed on the succulent water plants; the woody walls tossed back and forth the scream of the panther and the howl of the wolf; the wake of the otter broke the stream that, in three languages, he gave his name to, and such innumerable hordes of waterfowl as one can hardly imagine now, bred here and congregated here in their passage to and from northern and southern homes.

Waubanakees and Iroquois prowled in the bordering coverts, and neither for safety nor sport would one have chosen then to hunt or even to journey here without a gun.

These waterways were the paths of the pioneers who first adventured here, paths smooth and unobstructed in summer and winter, leading up into the depth and mystery of the forest. Where the marsh spreads widest from channel to shore, or where the shining path stretches toward the sunrise, those travelers caught glimpses of such unmistakable landmarks as Mozeodebe Wajo* and Tawabede Wajo† towering above this frayed seam of almost unbroken forest. Otherwise they saw only the undistinguishable sameness of the fringe of willows, the lofty palisade of water maple, ash and elm, overtopped by dark crests of pines behind them.

The sense of loneliness and isolation must have fallen heavily on those not born to the spirit of adventure or to the as alluring love of solitude. I wonder if these voyagers were garrulous, and if many jests were bandied back and forth among the crew or whether they were well nigh voiceless, using only eyes and ears and muscles. Doubtless they lightened their hearts with jests, as Kane's men did theirs in midst of Arctic desolation, and were not so lonely as I am here to-day, though I am attended by ghosts of departed friends who were once here in the flesh and by ghosts of slain trees and by memories—what ghosts haunt one more than memories—of sports that are gone forever. Sad company are they, but yet far better than none. To have seen them and known them as they were in the happy past is something to cherish,

All along the creek the memory of old homesteads lingers in the names of landings, where foundation stones, a pit that was once a cellar and a few scraggy apple trees are all that are left to show where men once lived. Almost as faint traces of human occupancy as the pot shards and flint chips that mark the sites of old Indian camps.

The same instinct of happy choice seems to have governed the white man as the red, for I think of four landings, bearing English names, where there are traces of quite permanent aboriginal occupancy. The Hazard Landing, better known now as Mud Landing, and better so named, as any one will attest who has set foot in it—and I say in, advisedly. At the Myers Landing, where old John Myers's locusts still flourish; at the Davis Landing, nearly across stream from this, and most notably at the Sattley Landing as well as what is now called Hawkin's Landing, its former name being lost, some of the red pre-possessors of the shores dwelt long enough to make a yet enduring mark. All of these were places where shore and channel wooed one another, and the access to land or water was easy to lazy Indians or tired white men.

Where the East Slang is yet bounded by stable shores of its own, at the spot where my friend Sam Lovel once built his camp, there is a landing that never had a name in modern times, unless for a little while old John Cherbineau was its godfather, where is abundant proof that Sam instinctively chose a good camping place. On a lucky day one may find handsome arrow points there, on any day chips of flint and fragments of pottery to show that for reasons not all apparent now, this place was in favor with those ancient campers out. No doubt they had a name for it as drowsily musical as the gurgle of a brook or the lazy song of a wood pewee. The Waubanakees spend no unnecessary strength in the triviality of speech, never struggling, as we do, with rough consonants, but just opening their lips and letting the smooth words ooze out. What a lazy, effortless sound their "yes" and "no" have, "Onh honh," "n' dah." They have not to stir their tongues nor pucker their lips to utter them. One can but wish their christening of these streams had been recognized and held to by their successors. Such names as Peconktuk, Wanakaketuk and Sungahneetuk certainly are better than Great and Little Otter and Lewis creek. They suggest something, even though one does not know that they mean the Crooked River, the River of Otters and the River of Fish Weirs.

A bumble bee comes blundering aboard my craft, and after a brief inspection of crew and cargo, settles on my paddle handle. I wonder if he can be the same old golden-coated voyager who used to board our craft in those long ago September days when we came here duck shooting? His dress and manners are most familiar, especially his unceremonious manners. In spite of statistics, I am willing to believe that he is our fellow voyager and visitor of those days. Also that the hoary-headed eagle who swings in majestic rounds above the bluff at the creek's mouth is the same one we used to see there in just such noble flight, scorning this lower, creeping world, even when he deigned for a little while to enthrone himself on the tallest of its trees. It is pleasant to fool one's self with the belief that not all the wild life of those days is extinct.

A family of wood ducks, the youngest well grown and strong-winged, rise out of the marsh with a prodigious startling splash and flutter and squeaking, close at hand, and offer such a tempting shot that I take aim with my paddle, and tell them how lucky it is for them that it is close time and that I am hunting without a gun. So is his majesty of the skies over there, above the mouth of the creek, but I warn them to beware of him, for he has cruel weapons.

Poor, persecuted wretches, get you into the furthermost nooks of the marsh, hide behind the thickest screen of rushes and bide there, for these waters will be populous with men who are hunting with guns when the first September morning dawns.

Somehow this dispersed congregation of ducks convince me that I have had enough of hunting without a gun for to-day, and I turn my prow homeward, pondering, as the swallows skim and wrinkle with their light touch the blue-black path before me, on recent advice concerning the loading of shells.

SOME INDIAN SONGS.

AFTER trying for some time to arrange business matters so as to give me a chance to do a little investigation into Indian archæology in an amateur way, I succeeded a month ago in partly carrying out my plan. Some notes on the subject of Indian songs made with a good deal of care and trouble at that time, may interest your readers. To show the amount of credit to be attached to these records I will briefly tell the circumstances under which they were taken down.

An old Mexican friend of mine had for long been telling me about the last remnant of the once considerable population of the islands of Santa Barbara Channel. These islands, Santa Rosa, Santa Cruz and San Miguel, were from the time of the first discovery by Cabrillo up to the early part of the present century inhabited by a race of simple, mild-mannered fishermen. All the island Indians were, however, at last removed to the mainland by the mission priests in order the better to wean them from their idolatries. The Indians of the coast have now few living representatives, but the last relic of the island tribes is a white-haired palsied man who has been blind for fifty years, and whose intelligence, never bright, is clouded by the failure of his senses. This old man was

brought down from the interior, where he had lived since his blindness, and from another direction was summoned one of the coast Indians, nearly or quite as old as the islander, but much more intelligent. The coast Indian was a "capitan" or chief of his scanty tribe. His eyesight was impaired through age; his hearing was defective, and his speech muffled by loss of teeth, but the brightness of his mind was surprising.

These two interesting people lived for some time in a roomy adobe house under the care of my Mexican friend. There I interviewed them for several successive days, taking down partial vocabularies of their language and writing out at dictation animal stories and accounts of the manners and customs of the lost tribes. Both of the Indians spoke Spanish and were in so far easy to communicate with. On the last day of our meeting we had progressed far enough to take up the subject of music, and this was the occasion of some excitement. Some part of the small presents I had given the Indians had been exchanged secretly for rum, as was perceived by the breath and demeanor of the two culprits, but the amount drunk was luckily not enough to dampen their artistic ardor, rather to inflame it.

Dresses and native rattles had been provided, but the latter alone were used, the performers being clad in modifications of civilized clothes. Four songs in all were taken down in the Indian tongue. I attempted to get the right metre for all these by marking the accented syllables. Complete success in this matter was only had in the "canoe" song. The others are nearly right but not certainly so. The English translations given preserve the metre and the idea as near as may be, though not precisely literal.

The difficulties experienced in getting even these short songs were great. The singers could not, it seemed, give any part of the song without going back to the beginning. You would catch the first few words and ask for a repetition of the next. Then the performer would start his rapid shouting and go over the whole thing, leaving you to understand what you could; just as children repeating by rote have often to recur to the very beginning in order to remember the connection of words.

The "airs" of all these songs were, I was told, of Chuma or island origin, while in process of time the early words had been replaced by those of the "Mish-khon-a-ka' " dialect spoken by the Indians of Ventura. The melody, so to call it, did not appeal to our ears, but there was clearly a fixed succession of notes, some low and some high in the scale. The many repetitions made this sure. In measure, however, or beat, the songs were remarkable, and when accompanied by dancing, the dancer's movements also were in perfect time.

This feature is found, I think, in most of the barbarous systems of music, though some Asiatics, as the Chinese, seem to regard neither time nor melody, valuing noise alone.

For two of the songs dances were given—the bear dance and the canoe dance. So much spirit and vigor were shown in these renderings that I feared the police would come to check the flow of science. This danger, however, was avoided.

With this long preface I proceed to the songs.

SU-TI-WEU-EUSH—SONG.

Ká-yu-wa wil'-le-le
Ni'-mu-stu mé-sip-pokhsh
Si'-mus-il ká-teush-weu
Sá-li-o li-o
Lwéu-neu

Now will I tell you all.
Uneasy my troubled heart.
Charm-stone is lost by me.
Sad am I; am I.
Sad, sad.

This describes the grief of a man who has lost the magic stone which, when hung around the neck, protected the wearer from the arrows of the enemy and gave him strange powers.

Each line was repeated many times in this as in the other songs. The last two lines were groaned out with lengthened despair.

The next song I can give only in the Indian tongue, and for that reason the words will be left out. It is all the more interesting, however, for that, if I may be allowed the enigma.

The song was entitled "El-yé-weun"—The Swordfish. It was repeated many times in the same exact way, syllable for syllable and tone for tone. The singular part of it was that the Indians did not know the meaning of a word of it except the title, which was of recent origin. The rest was said to have been comprehensible to the tribe that formerly lived on the island of Santa Catalina, near San Pedro, far to the eastward. This fact is a curious commentary on the investigations of some scientific men who declare, if I remember aright, from skull measurements, that the race living on Santa Catalina differed from those on the other islands. The swordfish song showed more decided trace of melody than the others and was elaborate in its composition, there being three divisions, one singer taking the first part, another the second, and both joining in the third.

The title of the next song is "Wi'-ma" or the "Canoe." Wi'-ma is also a proper name signifying a former Indian village on Santa Rosa Island. The village was probably named from the canoe, but the derivation goes yet further back. Wi'-ma in the Chuma language meant a red-wood tree. This tree does not grow here and the early Indians only got those trunks that floated down from the Northern coast on the ocean. These prized logs were the material for their canoes.

WI'-MA—CANOE SONG.

Li'-sa li'-sa lis' po
Ki'-la-pak teú-pa
Sli'-a-kas khá-min
Wás-ku-pa só-mu
Yá-ki-sis te'ks

Come now. Come now. Come now.
With your hands kindle
Flames in the mid-sea.
Thus shall we slaughter
Those that live there.

The song ended with a powerful stress on the word "teks," somewhat as in the Yale song of "Saw my Leg off" the final word "short" is brought out with great emphasis.

The song was used as a religious ceremonial before going fishing to give the fisherman luck. The idea of kindling a flame in the ocean's heart has the poetry of bold imagining at the least.

With this song we had a dance. Perfect time was kept by the excited performers, and it is to be noticed that the dancer goes through a dramatic act and does not attempt to sing the words of the song; while the singer who shouts and rattles does not dance.

The dancer in this case went through the motions of shooting with the bow in vivid style. This may be partly because fish were sometimes taken in that way. More probably it is because the dancer's movements have become more or less conventional in the course of time, and that the shooting motions appropriate to so many subjects are applied also to other and foreign ideas.

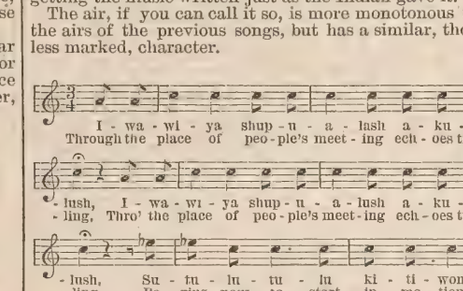
NE-WUS-I-KHUS—THE BEAR.

A'-pi-ii ták-tak
Sákh-khive-khe-wán-a-las-pái
Si'-wu-lu lú-khe-mi shúp
Sá-li-shu-a-lákh shik'
Ek-shi-spu-kú

Listen! men. Listen!
Grumbles the monster above;
Solid earth crumbles beneath.
Painful the bones of his foot.
Ah! how it hurts.

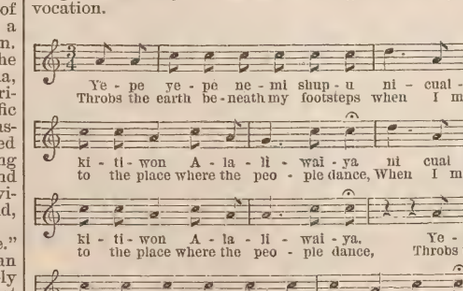
The song was acted out by the old blind Indian with great effect. It represents the lumbering march of the bear, so ponderous as to injure his own feet, and the last line is accompanied by heavy stamping.

The apparent confusion in the song arises from the fact that the second line represents the feelings of the bear divinities in the sky, sympathizing with their awkward earthly brother, whose mischance is related in the latter part of the performance.



This ended the list of songs that I was able to take down at this time. They form, however, but a small part of the repertory of the Indians, and much matter of great interest can be amassed by a careful patient observer who has time to spare. If the observer be skilled in musical notation the result will be still more valuable.

I will give here two more songs, known as bear songs, taken down from the words of an Indian of the Tsa-má-la band that lived at and near the Santa Ynez Mission.



The words are in a dialect differing somewhat from that of the songs given before.

My brother, a cultivated musician, spent a morning in getting the music written just as the Indian gave it.

The air, if you can call it so, is more monotonous than the airs of the previous songs, but has a similar, though less marked, character.

The words show, to a striking degree, how far the songs had lost any devotional meaning or tendency to invocation.

I asked the old man what the fog bank in the second piece had to do with the bear, and he answered, logically enough, that it had just as much to do with him as the dancing place had. The music had, in fact, become conventional; merely the melodic accompaniment of tribal dances.

The two words A-la-li-wái-ya and I-wa-wi'-ya are proper names, the first referring to a place consecrated to Indian dances in a valley called the Alamo Pintado, near Santa Ynez, and the second to another locality devoted to the same rites.

Notwithstanding this fact it is noticeable that in all the music that refers to the bear you find the lumbering power of the brute's march a prominent idea. Clouded as the subject may be by later and incongruous applications, the central conception still remains, clothed often with strongly poetic language.

H. G. DULOG.

CANOEING IN MAINE WATERS.

THERE were two of us besides the canoe. We speak of the canoe as almost a personality, so strong grew our affection for the fragile little bark before we reached our journey's end. The less important members of the expedition were a young man usually called Mell, M. T. Cates and the chronicler.

We left Bangor Aug. 2, by the Piscataquis 1:30 freight, reaching Upper Abbott station at about sunset. We slept in the station loft that night or tried to. The heat was so intense, sleep was almost out of the question anywhere. We drew what consolation we could from the thought that our faces were toward the north. At daylight next morning a friend appeared with a team, took us, our canoe and camp furniture aboard, and before noon we were at Greenville, a small village at the foot of Moosehead Lake. About 3 o'clock we put ourselves and all our belongings aboard a steamer for the forty-mile trip up the lake, passed picturesque, beautiful Kineo half way up, reaching the head of the lake, Northeast Carry, a little after sunset. The Winnegarnock House stands at the head of the lake in a wilderness of scrub growth. We took a room there for the night, leaving our traps piled up out of doors, with instructions to have them hauled across the carry early in the morning.

We were out at daybreak, and finding our canoe and luggage loaded on a wagon just going over the carry, we concluded to go with it and eat breakfast on the bank of the Penobscot River. Here a short two miles divide the waters of Maine's largest rivers, the Penobscot and the Kennebec. The Kennebec drains Moosehead Lake. The part of the river we launched upon is the west branch of the Penobscot, some 75yds. in width, with little current at that point. As our eyes took in certain interesting topographical facts we were speedily made conscious of another fact not so agreeable, viz., that the location was favorable to the development of that lively outrage upon man, the cheerful mosquito. When he is around he usually has the cheerfulness all to himself. It is hard for any one else to keep much unless he be a hardened camper. As we set about breakfast he made it known that it was his breakfast time too. The west branch mosquito is as wide-awake, enterprising, persistent a type of his kind as can be found, not excepting even his far-famed Jersey relative. We don't swear either of us, but we did not bless the mosquito, and his bloodthirsty fellow pirate, the black fly, save in a vague left-handed way which could not by any possible twist of language be construed into a compliment. Many songs in the night did the former give us. He was lots of company, though not what we should have chosen if we had been allowed voice in the matter.

Mell took the bow, I the stern, and off we set in the charming morning. Eighteen miles would bring us to Chesuncook Lake. The way was between plain wooded banks, amid unvarying scenery and through alternating stretches of quick and dead water. It was a warm day, and we were glad when the help of a smart current, with an easy glide, came in to aid the paddles. There were stretches, however, where the current was a little too zealous; too much in a hurry to comport with vacation moderation. We had no guide and had never been over the course before, but had heard of two places in this part of the river where we should need to be well awake. These are Rocky Rips and Pine Stream Falls. The first is down a sharp grade, in water made very ragged by the boulders that fill the channels but we rip it without a drop of water slopping in, Mell handling the setting pole, I the paddle. We did this so easily that we approached Pine Stream Falls, a mile beyond, with a good degree of confidence. Perhaps we felt too proud. If so, pride, as well as water, had a fall that afternoon. As a faithful historian, I must tell all the truth. I can't tell a lie, or, at least, I will not about this, for Mell would tell the truth and I should be found out. These falls have three distinct pitches, each quite a drop off. The first is the worst. We did not take it in the right place. Our canoe pitched over, struck and stuck. Instantly our poles were out, but we could not lift off. Water began to pour over the gunwale. There was nothing else to do but jump out into leg-deep water, lift off, leap in again and paddle ashore to empty out the water before running the rest of it. Nothing was damaged except our good feelings. We humbly accepted the hustling received, and with meekness and caution safely ran the other two falls. Two miles more through slack water brought us to Chesuncook Lake, which is little more than a bulge in the river. It is eighteen miles long and from one to three miles wide. As we rounded a bend in the river and advanced upon the lake we obtained our first view of Mt. Katahdin, standing like a grim old king in the midst of a bodyguard of lesser heights. We worked down the lake about five miles and camped on a ledge point on the right shore.

Refreshed by a long sleep which we very much needed, we leisurely made ready for a start next morning and got away at about half-past seven. The day was clear and hot, we were in no hurry, so we paddled slowly, reaching the foot of the lake about noon. Here is a dam, built to aid in driving logs out. From Chesuncook Lake the water flows over a succession of falls to Ripogenus Lake, half a mile below. Of course we had to carry by this. There was a good road, made by the driving crews, and before dark we were comfortably camped on the Ripogenus with beans simmering in the bean hole. The next day was Sunday, and we were glad of a day of rest. It was a lovely spot for a halt. Ripogenus is a gem of a lake, with bold, bluffy shores in part, and a good view of Katahdin from our tent door. Beans for breakfast made it seem quite like Sunday, despite our novel surroundings. We had a minister with us, but as the audience did not care to go to meeting that day we did not have the regular service—we had beans. And how good they tasted. This sort of life is an astonishing appetizer as we had demonstrated several times before. As an ominous destructiveness of victuals rapidly developed, the usual anxious question was raised on the very eve of the expedition, have we rations enough to last through? Horrible doubt!

We were astir early Monday morning, and after breakfast struck tent, loaded everything into the canoe, and launched out to fish in what we deemed the best part of the day. We got plenty of fishing but no fish. It appeared that no part of that day was a good time to catch trout in Ripogenus Lake, at least where we dropped hook. We finally brought up at the foot of the lake near where the river makes out of it. A shower threatening we pitched tent, stowed our baggage within, then took our fishing rods to explore and fish the river below. And a very tumultuous river it is for two miles and a half. A good part of the distance it leaps like an arrow through a wild gorge between rocky walls, sometimes 100ft. in height. In places the river is narrowed to 12 or 15yds. The Big Heater and Little Heater, so named from their fancied resemblance to flat irons, are curious freaks of nature. In the case of the Big Heater, the rock is rifted to the depth of 100ft. in two channels, leaving the Heater between its top on a level with the lofty banks. The grandeur of nature's display well repaid us for our tramp of a mile and a half, though we took no fish. Rain began to fall before we reached camp. When we came to our tent we found a party of four pitching tent close by us. They proved to be Messrs. Mudgett, Blakir and Garland, and Knox, the guide, the two former from Bangor, the other from Bradley. Very pleasant, companionable gentlemen we found them.

At the foot of Ripogenus Lake, by the angry water just noticed, a carry of two and a half miles was before us. Here is where the fun does not so much come in. A mile is a long thing when you are measuring it with a canoe or big pack on your back. But before starting on this adventure we had learned just how much lugging there would be and were never put out by a mile or more of carry. Ripogenus Carry is the longest by much of any on this trip. But we had been on the way three days and had not seen a trout. Where were the trout? About a mile along this portage is a small pond called Carry Pond. We had heard of it and had planned to visit it. The rain holding up after dinner, Will and I took our canoe along to this pond. It is a shoal little affair, and at first we doubted the propriety of catching a fish fool enough to live in such a place. Over in a small cove some cold springs send their waters into this pond, and the fish there are some of the smartest, prettiest trout we have ever seen, and we had sampled the genus in many localities. They were not so very large, ranging in weight from half a pound to a pound and a half, but their flesh was hard and delicious owing to the cold water in which they live. It showered at intervals, but what true fisherman cares for rain when the fish are biting. Hoeing corn in the rain is altogether a different matter, and an unspeakable hardship. Six hungry men had more trout for supper that night than they could eat. Rain, in the form of showers, strung on streaks of lightning fell nearly all through the night. They have a saying, "It always rains on the Ripogenus," and we saw no reason while we were round there to dispute the truth of the proverb. The abundance of water in this region, and the Katahdin Mountains near by to condense its vapor, combine to give copious rains, sent largely as thunder showers.

Early next morning the members of the other party began transporting their effects across the carry. About nine we took each a load of our stuff two-thirds of the way over, to what they call the "putting in" place, where some take to the water again, but most carry all the way. We returned to the old camp, and after dinner shouldered the rest of our property, bade good-bye to Ripogenus Lake, carried as far as the pond, and went out to try the fish again. We quickly had the bottom of the canoe lined with trout. There was no more apprehension of a trout famine. We carried everything except the canoe to the "putting in" place

and camped there for the night with the others. Of course it rained nearly all night, and the next morning the foliage was pronounced too wet for the stern work of "sacking" camp furniture. But it was not too wet to go fishing. Mell and Blaker went back to visit Carry Pond again. The two others wandered elsewhere, while I spent the forenoon smudging mosquitoes, reading "Last of the Mohicans," cooking oatmeal, and varying these pursuits with some mild theological sparring with the guide, who was deep in culinary mysteries close by. That afternoon we moved everything to the foot of the carry and camped there that night. The Chronicler used the waning light of that evening to put a patch on the seat of his pantaloons, which had approached a state of alarming tenuity. He was not the only one of the six haunted by a terrible fear of reaching civilization in a new style of undress uniform. A huge slice had to be cut from an undershirt to furnish the patch in question. The one who planted it was interrupted more or less by mosquitoes during the operation, but he got it hitched solidly. It conduced much to after peace of mind to be able to sit down without dread of consequences.

The next morning all hands started off down river, a fleet of three canoes. Passing through two miles of quick water, leading by one pitch, we came to Gulliver's Pitch, or, if you want, to its Indian name, Ambajemackemus Falls, as they sometimes call it for short. Here we had to carry a hundred yards or so. At the foot of this fall begins what is called the "horse race," two miles of rushing water. It is a hard stretch to run, especially for amateurs. The bed of the river is filled with boulders of all sizes, some pushing above the surface, others lifting their backs almost in sight—lying in wait to catch the unwary canoeman. It is nerve-trying work dodging all these and spots of tumbled water, when very likely sheering off from one difficulty leads into a whole school of others. It is not easy to decide in three-quarters of a second which one of six different things to do, any one has time for, even if had been told that a setting pole would not work here. We did not see why, for it was plain the river had a bottom, and it was not far down. We soon learned why. The guide with Garland led, Blaker and Mudgett followed, and we brought up in the rear at the start. I took the paddle and Mell stood up in the bow with the pole. He did not stand long. After a few rods his pole caught between two rocks and refused to let go. The onward sweep of the canoe seated him very abruptly and emphatically. As my end struck the pole it struck me an ungentle blow in the jaw, and we rushed on, leaving it standing stiffly up in mid-channel, a moment of misplaced confidence itself. We did not long keep the order of our going as inaugurated. Blaker and Mudgett deposited the middle of their canoe on the top of a rock, and whirled round and round, giving themselves a rapid and comprehensive survey of the scenery at every point of the compass. Then a rock reached up and called halt to Mell and me, and we too paused and gyrated for a little space. Again a huge boulder lifted itself high in the air so suddenly we could not in the time given us determine which side to go, and making a splendid header we took it plumb in the center. We did not hurt the rock any and at once decided without debate that we could not go that way, so backed up and went round. But to cut this part of the story short we ran the race without damage to man or canoe, and without shipping any water worth noting, as good a record and possibly a little better than is averaged in this undeniably bad water.

At the foot of the "horse race" begins a three-mile course of quiet water called Sourduahunk Deadwater. This is one of the most beautiful parts of the river. The clear air bright with falling sunshine, the smooth, limpid water reflecting the wooded banks, Sourduahunk and Katahden mountains in the perspective, filled all this three miles with ever-varying charm. This deadwater is suddenly broken by Sourduahunk Falls. Here is a carry of forty rods, with a good spring and plenty of blueberries. We ate dinner before carrying as our morning's trying work had given us all an early appetite, and below these falls the Sourduahunk stream empties in the Penobscot. We camped here one night. A few rods up the stream at the foot of some falls we took some very fine trout, larger than any we had caught yet. We found no pleasanter camping ground on the whole trip than this. The water of the stream was cool and drinkable, the scenery altogether satisfying, blueberries were abundant, and there were trout. We should stop longer there another time if possible. We had all the blueberries we wanted most of the way, a valuable contribution to the larder, and indeed to health, since vegetables are too bulky and heavy to carry.

The next forenoon we dropped easily down river three miles with a strong and for most of the way still current to the mouth of Sand or Aboljackarmegassic Stream. As we had our choice of these names we always used the first and so had more time for fishing. From here we were to make the ascent of Mount Katahdin and from this point the finest view of the mountain is obtained. When the air was clear it bulked itself so hugely and clearly as to seem right in our dooryard, so to speak, when in reality it was five miles away. A few rods above Sandy Stream is the mouth of Aboljackarmegas Stream. We were glad to find this name already abbreviated for us. They call it Abol, as also some falls just below, hence we were not delayed by any struggle with its pronunciation.

It was Friday, Aug. 19, when we pitched tents and all six started for the mountain. The usual plan which we followed is to leave the tent by the river, tramp to the foot of the mountain in the afternoon, sleep there that night, make the ascent next morning and return to camp in the afternoon. The trail is hardly more than a spotted line, though some of the way a faint path has been worn. No special incident occurred on the march. Once a covey of partridges created a little diversion. One of these birds took position on a knoll and looked and listened with apparently serene satisfaction while two of our party emptied their revolvers in its direction, the other members of the crowd soothing and encouraging them with such remarks as "Heave a club at the bird," "Kick him over," "Lay for him on him." The partridge seemed ever so interested, probably thinking it was some show brought in for its special entertainment. It finally hopped leisurely away as some of the others began to look for stones. We wonder why so many men and boys spend money for revolvers; hardly ever is anything hit with one, save by accident.

We reached the foot of the west slide about 5 o'clock. These "slides," of which there are several, are the light up and down streaks one sees upon the mountain in summer when viewing it from a distance. It is where the surface has given way and rocks and gravel have slid down. After supper the ambition of Mell and myself took fire, and we determined to try the ascent that night and sleep on top, a laudable ambition enough perhaps but one not based on a very intelligent idea of the situation. Night shut down when we were yet quite a long climb from the edge of the table-land, where we would still have been a mile from the highest point. The ground was tilted up at so sharp an angle it was hard finding a spot level enough for a bed. We finally found a shelf about 2ft. wide, half under a rock, and behind another big one which kindly fenced off the strong cold wind. I hooked my neck over a crooked root to prevent rolling down the mountain, and trigged up Mell who took the back side of the bed. This sleeping in the clouds made us acquainted with an interesting feature of the upper air. There was no moon though it was a clear night. On the lower levels the eye could cover but short distances and then see indistinctly. But up there, as I lay looking out, ponds glistened clearly, seemingly so near that I should roll into the one of them if I fell out of bed and got well going, when in reality they were some six, eight, ten miles away. We rested well until half-past four, when we rose and scrambled to the top. All tree growth ceased at the line near where we slept. As we rose over the steep, a plain a mile in extent was before us, sloping gradually upward to West Peak, the highest point. This plain is covered with moss, sprinkled here and there with three or four varieties of hardy little flowers. In a depression we found springs of good water. As we crossed this plateau clouds dashed upon and enveloped us from time to time, though when we reached the peak we were above most of them. It was a novel and exhilarating sensation to be skylarking with the clouds in this free and easy way. As the sun came up the air cleared and we drank in the wide magnificence of the view, a happy mingling of forest, lakes and mountains. We will give a specimen of the ease with which the eye devoured distance. We had been told of a place further on in our route in lakes Ambajejus and Pamedomcook, where we were liable to become confused and lose our course. From Katahdin, though twenty miles distant, we saw plainly the way we should go, took mental note of certain landmarks, and three days after went along there by aid of those signs without the slightest uncertainty.

As we sat sheltered from the wind behind a cairn of rocks built on West Peak, we could look straight down half a mile into the Great Basin. The mountain curves about this huge well or crater, in which lies a pond nearly a quarter of a mile long, but from our aerie it appeared but a few rods in extent. For years this was one of those fabulous ponds without a bottom; but not long ago some one took the trouble to drop a line into it, and found a reliable bottom a few score of feet down. We crept across the sharp-backed path to East Peak, a dangerous peak when the wind blows hard. Here we also found a monument of stones, and in emptied meat and fruit cans quite a list of names left by visitors, among them several signatures of ladies. One pathetic record told a story we knew how to interpret before we reached camp. Some one—of course a man—had written this outburst of anguished feeling: "I wish I hadn't went!" Well he might wish that if he was played out at the top, for the descent is harder on toes and knees than the ascent. We did not feel like that, but were glad we "had went." It was worth more than it cost, and very reluctantly we turned our steps downward. The others of our party were going up as we went down, so without waiting for them we proceeded at once to the camp on Sandy Stream, arriving about 1 o'clock, tired and footsore, but well satisfied. The others joined us toward night.

Next day our four companions went on, but we were content to wait and rest. We went back three miles to the last camp to look for a coat I had left, and spent the remainder of the day reading, resting, cooking and eating, congenial pursuits all, especially the last.

Monday morning we were up at half-past 4 and got away before 6. Half a mile took us to Abol Falls, where was a short carry on the right. A mile through Abol Deadwater took us to Pockwockamus Falls. The carry, about 60yds., is on the right. At the foot of these falls begins Pockwockamus Deadwater, three miles long, containing numerous islands. Along here, and, in fact, all day, the course was most interesting, the scenery charming. Another time we should move more slowly through this very pleasant and beautiful part of the river. Fine views of Katahdin were obtained all day, though the old mountain grew dim as we proceeded.

At the foot of this deadwater are Debsconeak Falls, where we had again to carry nearly half a mile on the right. Then came Katepsconegan Lake, merely an enlargement of the river. There are about four miles of this. In the course of it the river changes direction, and is so broken up with islands there is some difficulty in finding the way. Ducks were plenty. If it had not been against the law we should probably have hit some. At the end of this stretch we found Passamagamock Falls, and another carry on the left about a hundred rods long. Here we took dinner and should have stopped for a long rest, but the mosquitoes and black flies drove us to the canoe again. Two miles more brought us to Ambajejus Falls, with a half mile portage on the left. This was our last carry, and we began to think it time for the last one. That sort of thing had become somewhat monotonous. You grow too well acquainted with pieces of property you have picked up, lugged and laid down about four hundred times. Half a mile of quick water from these last falls took us into Ambajejus Lake. This lake is in two parts, connected by a thoroughfare, the first part long and narrow, the latter broader. Some of the way across we had a stiff breeze and a disagreeable sea against us. Ambajejus lets into Pamedomcook through a chain of islands. The way looks blind, no passage presenting until close to these islands. Pamedomcook Lake is quite a body of water, eight miles long and five or six wide. We only crossed its lower end, and camped on a sandy point near the outlet. We were ready to camp. We had done a big day's work and had come twenty-five miles, with the extra delay and labor of the five carries. This account of the day's run may seem too statistical to be interesting. I give details and distances for the benefit of those who may possibly make the trip some time. We could tell by the roar when we were approaching the falls, and had no difficulty in finding the entrances to the carries.

We made no haste to leave in the morning, as we had a pleasant camping place, where the mosquito ceased from troubling. I have not told yet how we secured sleep all these nights when the mosquito was omnipresent. We laid rocks round the edges of the tent so they could not crawl under; then, driving them all out, we pulled the flaps of the tent open enough for ventilation and fastened screen cloth over this opening. They would cover this outside, glare in upon us, and blow their horns the livelong night. But how they did go for us when we went out to cook breakfast! Here, at the foot of Pamedomcook Lake, we found no mosquitoes, and yet we were not loneseme.

A half-mile passage leads from this lake into North Twin Lake. Four miles of paddling through this brought us to the outlet at its foot. We did not call on the other twin, South Twin Lake, which lay at our right as we went through the former. We took it for granted it was a likely pair of twins, judging from the one we saw. We had to grope a mile before finding the river and the way out. Once in it, and a mile of distance covered, we were at North Twin Dam. With this dam, before the West Branch drive passes, an enormous quantity of water is held back in Ambajejus, Pamedomcook and the Twin Lakes, to float the logs as they take the river below. Of course it was running free now, as the drive had passed. Below the dam we found some of the liveliest perch fishing we ever enjoyed. We would sit on the pier, let the line run down with the current just at the edge of the eddy, and about as soon as it was out 50ft. or so a fish would strike, and strike hard, for they were large. We fished about an hour and caught so many we were almost ashamed, it seemed so like slaughter.

Did you ever see a cat try to go along and up an icy roof, slipping nearer the eaves all the time? Then you know about how we looked as we worked across the river below the dam, after we started again on our travels. There was about a hundred yards of comparatively smooth but swift water, then a fall and dangerous running unless we got well over to the shore, where we could get along with reasonable ease. Of course everybody knows without my telling that we shoveled water with tremendous diligence while we clawed across, every second sliding nearer the bad drop-off. But we made it, and shaved by the bad water without dipping up any. We would not have gone that way, only that the man stationed at the dam said that was the way he always did, and it was easy enough. It would never do to show that we were afraid of what was so easy to him. From the dam a mile of rapid water took us into Quakish Lake, a swell of the river filled with islands. Two miles of this and a mile of swift water and we were at what is called Fowler's Carry, though Fowler does not live there now. Instead of going down the river several miles through very rough water, and by Grand Falls, canoeists cross here, two miles, into Millinoket Stream, go down that and come into the Penobscot by a nearer and much easier route. We walked across to the house, had the man haul our traps to the bank of the Millinoket, paddled a mile down that beautiful stream to Shad Pond, the last bulge in the Penobscot, then up river a little to an opening near the foot of Grand Falls, where we overtook the other party and camped there with them. The falls are 15ft. or so in height, and are well worth turning back to see.

Our friends went on next morning, but as we cared only to reach Bangor Saturday, we stopped another day resting, luxuriating in blueberries, and fishing with indifferent success. We were twelve miles above Medway, and our minds dwelt upon that twelve miles with some nervousness. The man back at the carry had comforted us with the intelligence that we should find ahead of us worse water than we had come through. We were sorry to have him talk so, for we had already passed over some quite bubbly places and hoped the rest would be smoother. We found the whole reach to Medway sharp-running water, with five distinct falls, requiring all our skill and strength to run safely. Think of sliding down a hill twelve miles long with five very jolty places and you have a pretty good description. But we had been learning and went over it all without any disaster. Now and then in the falls a little water would come over into the canoe, but we sponged it out as we passed the quieter spots. At Medway the east and west branches unite to form the main river Penobscot. We reached Mattawamkeag, eleven miles below, a little after noon, where we posted letters and found some from friends. Here tourists on a trip like ours usually take the cars for Bangor, fifty-eight miles distant, but as we had more time than money, we decided to go by water all the way, though this would keep us out two nights longer. We should have chosen to do this anyhow, regardless of any bearing of the money question. This night we camped on an island just above Lincoln Center, the next night, Friday, on the left bank of the river, near Olamon. We reached the water works, Bangor, about 4 o'clock P. M. Saturday.

PITTSFIELD.

AMONG THE NORTHERN LAKES of Wisconsin, Minnesota and Iowa are hundreds of delightful places where one can pass the summer months in quiet rest and enjoyment, and return home at the end of the heated term completely rejuvenated. Each recurring season brings to Oconomowoc, Waukesha, Beaver Dam, Frontenac, Okoboji, Minnetonka, White Bear, and innumerable other charming localities with romantic names, thousands of our best people whose winter homes are on either side of Mason and Dixon's line. Elegance and comfort at a moderate cost can be readily obtained. A list of summer homes with all necessary information pertaining thereto is being distributed by the Chicago, Milwaukee & St. Paul Railway, and will be sent free upon application by letter to A. V. H. Carpenter, General Passenger Agent, Milwaukee, Wis.—*Adv.*

NEW YORK CITY, May 18, 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it*, not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. CUSHIER

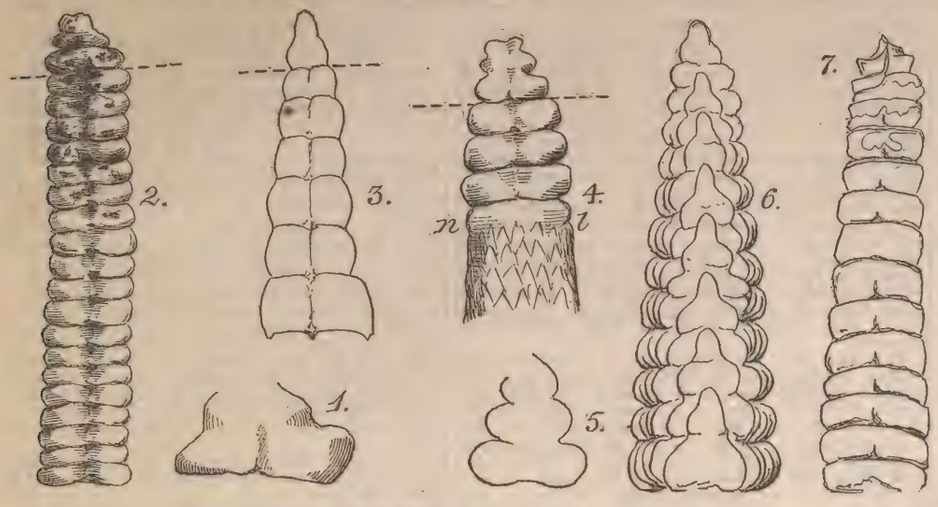
THE RATTLE.

IN Mr. Hay's very interesting paper on the massasauga, in the March number of the *American Naturalist*, his speculations on the use of the *Crotalus* rattle attracted my special attention; hoping he would add a few words on the growth of the rattle as well; very few authorities having, so far as I know, afforded us much information on that subject. I cannot credit a *Crotalus* with sufficient intelligence to designedly warn or alarm an enemy by sounding its rattle, though it may have that effect. It seems simply indicative of fear or anger as other snakes—other reptiles one may say—and all other animals who possess a tail, express emotions in the action of it. The long-tailed lizards and newts are particularly eloquent in the action of this appendage, lashing or curling it, as may be, when alarmed or displeased. Most snakes vibrate their tail in expressing fear or anger, and would also sound it had they a sounding apparatus, and, indeed, do sometimes sound it, when by accident it is in contact with loose and light rubbish, dead leaves, etc., so that it has been mistaken for the *Crotalus* rattle. As other snakes hiss, so, as Duméril explains, the *Crotalus* is able to produce continued and prolonged sounds by the aid of a special organ that supplies the office of the voice, which in these serpents is lacking.

Regarding its development also, the rattle has given rise to various opinions. Dr. Elliot Coues supposes it to have "possibly resulted in the course of time from the continual agitation of the caudal extremity of these highly nervous and irritable creatures."

Among the many theories that have obtained regarding the growth of the *Crotalus* rattle, the most popular appears to be that the length of it, that is, the number of links it contains, indicates the age of the snake, an additional link having been developed each year. The next most popular belief—and a far more rational one—is that a new link appears each time the snake sheds its skin, an idea not wholly inconsistent with the previous one, if, as is often stated, the snake casts its cuticle only once a year. But a regular annual change can by no means be established as a fact, so far as observation of snakes in confinement leads us to decide. The casting of the epidermis depends very much on the condition of the reptile, its health and its habitation. The old coat, when soiled or uncomfortable, is discarded for a new one, which is ready for the emergency, a sanitary arrangement that some superior animals might very well like to adopt if equally practicable. Granted, therefore, that a new link to the rattle is developed with each change of garment, and that a *Crotalus* changes twice or thrice a year, which it often does, we perceive that the length of the rattle determining the age of the snake is a fallacious theory that may be dismissed at once. The rattlesnake may or may not change once a year and once only. In our London Reptilium we have known them to change as often as three or four times a year; generally, but not invariably, developing a new link to the rattle on that occurrence. There was one *Crotalus* that for many years developed no rattle at all worth calling such, although it cast its skin at irregular intervals like the rest. An abnormal, deformed sort of "button," just one terminal link (Fig. 1) was all that it ever boasted, although sometimes this single link seemed to give indication of increasing, there was never a second joint to produce the slightest sound when the tail vibrated. A young snake of 15in. long it was when brought to the Zoological Gardens; it lived ten years, attaining a length of fully 5ft., and was to all appearance in good health, but this is all the "rattle" it had with which to express its emotions. The tail was eloquent in action, as usual, but inaudible.



Indeed, when we reflect on the exceedingly fragile nature of *Crotalus* rattles—a mere arrangement of loose links easily separated or broken off, it is surprising that the idea of length, as indicative of age, should ever have prevailed, and should even continue to prevail. It is an every day occurrence to hear persons when visiting a reptilium, speculating on the age of the *Crotalus* by carefully counting the joints of its rattle. An amusing instance of this occurred quite recently. We have in the London Zoological Gardens at the present time a full-grown *Crotalus durissus* that has been in the collection about two years. Until lately it boasted a splendid rattle of twenty-three links, attracting the attention of the majority of visitors. "Oh, there's an old snake! A fine old fellow," some one would say. "One, two, three," and the gentleman would make repeated attempts to count the links of the rattle, which did not always please his snakeship to hold quite still for the purpose. "Why, that snake must be more than twenty years old!" continued the patient reckoner, after many not quite satisfactory efforts to count accurately and wait for the "bothering thing" to keep still. A few days after this the keeper found the boasted appendage lying in the cage and the quondam possessor with now only three remaining links wherewith to announce his presence. Probably one of the other snakes in the same cage was lying upon it when the owner moved away, or it might have got wedged under the edge of the water pan, and being so easily separable, was thus left behind; accidents that may so easily occur in the woods and wilds as well as in a cage, and all helping to exemplify the fallacy of deciding on the age of a snake by the length of its rattle. But that very day along came another visitor who evidently thought he knew all about rattlesnakes.

"Now there's a young snake, but big for his age," exclaimed the observer. "One, two—why that fellow can't be more than three or four years old."

"If you go by the length of the rattle," quietly remarked the keeper, "he was twenty-three years old yesterday."

And then ensued a series of astonished, though somewhat crestfallen and incredulous inquiries, until the keeper produced the portion actually detached, and showed the visitor that even that had previously lost the earlier links (Fig. 2).

By measurement as well as careful copy this is the exact size and length of the rattle broken off. That it is a rattle developed since the snake had attained its full growth may be seen in the fact that the links are all of the same size, except in those slight variations which, in common with nails, claws, horns and hair—the substance

THE RATTLES OF THE RATTLESNAKE. (Sizes not exact).

being the same—are seen in a single individual. Probably it is very seldom, indeed, that a full-grown snake preserves the perfect and entire rattle from its earliest development. A perfect rattle may be always known by its tapering form and by the roundness and compactness of the terminal link. (Fig. 3).

Just as the claws and nails of younger creatures are smaller than those of adults, so are the first links of a *Crotalus* rattle. This one was copied accurately from a specimen in the writer's possession at the time. The difference between the terminal link or "button" in this perfect specimen and in those of Fig. 2 and Fig. 4 will be readily seen. They are indicated by the dotted lines, the lobes or bulges in them, similar in Figs. 2 and 4, showing that they interlocked with the previous and earlier links, whereas in Fig. 3 there could be no interlocking of that rounded, tapering "button."

Fig. 4 is an exact drawing from what remains of the late rattle. Since the principal portion (Figs. 5, 6) was broken off the snake has had a new coat once and one new link on that occasion. At the present time (May 12) it is again about to cast the cuticle; an indication of a new link (*n l*) may be distinctly traced beneath; so that probably before this meets the eyes of our readers the snake will again possess a tolerably respectable rattle. This particular *Crotalus* may develop its rattle more rapidly than the majority of its relatives, a question which can be decided only after very accurate observations of many individuals. With better certainty we may surmise that the next ready reckoner, according to links, may decide him to be "five years old," and by the same suppositious rate by next Christmas be declared "six or seven years old." If the lives of both of us are spared the new developments will be carefully watched and accurately recorded by his faithful friend, CATHERINE C. HOPLEY.

*In my work on "Snakes" I have devoted a chapter to the development of the rattle according to Duméril, one of our best authorities from personal observations, and many illustrations from nature are there given.

THE BARBAROUS ENGLISH SPARROW.

Editor Forest and Stream:

Two instances have lately come to my notice illustrating the vicious character of the imported sparrow; and as I think reports of such cases tend to harden the hearts of the people against the bird, I consider it desirable that they should go on the record.

My attention was called one morning to the excited actions and notes of a pair of white-breasted swallows, which were rearing a brood in a box near my door. Looking at the box I saw a male English sparrow at the entrance, alternately thrusting his head inside and facing around to ward off the assaults of the swallows. Suspecting mischief I shot the sparrow, and my suspicions were confirmed. His bill, covered with blood and down, proved that he was deliberately murdering the young swallows.

The other case is similar. Dr. Adams, of this place, reports as follows: One morning he observed English sparrows apparently occupying a box in which he knew swallows were nesting. Investigating he found in the nest the body of the mother swallow, with the fresh wounds on the head from the sparrow's bill.

Now this is simply atrocious. I would like to have some friend of this bird—and I understand there are yet a very few such—set forth a single item in his favor to offset the huge pile of indictments against this filthy, noisy, quarrelsome and bloodthirsty foreigner. Something must be done. How long are we to stand with our hands behind us saying, too bad! too bad! Probably until it is too late, if, indeed, it is not so already. It should be "war to the knife!" F. C. BROWNE.

FRAMINGHAM, Mass., June 25.

A week ago I called on a farmer friend, where I often go to get a good bowl of bread and milk with cream not missing. My friend's wife, knowing my weakness for things pertaining to birds as well as to kine, handed me a box containing an English sparrow's egg. They had heard a hen cackling in the orchard, and found her in the top of one of the apple trees trying to get into a nest nearly as large as a half-bushel measure. On getting up to it, my friend found that the nest contained three eggs like the one shown to me, two of which the hen had broken in her efforts to add to their number. Mr. Green destroyed the nest, but had he replaced the sparrow's eggs with a set of hen's eggs I have no doubt that in due time he would have had a brood of chickens up there in the tree, for the sparrow is very persistent in incubation as well as in rebuilding its nest when destroyed. My next door neighbor has pulled down a nest more than half a dozen times from under the roof of his piazza this season, and it was rebuilt each time within twenty-four hours. I am confident that the English sparrows are breeding in hollow trees in woods half a mile from any building or orchard. A year ago a boy brought to me a set of six of the eggs (one of which is no larger than a humming bird's) that he took from a woodpecker's hole, in woods two miles from the city. And within a week I have seen young English sparrows that could hardly fly, in a large dense woods half a mile from any building—and there were also plenty of old birds with them—and I might add that I did not see any other small birds but a very few song sparrows, while a year ago I saw plenty of the latter, and a few yellow warblers and indigo buntings. Now that there has been a law passed making it a misdemeanor to feed or protect the English sparrows, they may all take to the woods; and then where shall we look for the song birds? J. L. DAVISON.

LOCKPORT, N. Y., June 20.

WAYS OF PRAIRIE DOGS.

Editor Forest and Stream:

In your issue of June 16, your correspondent "N. A. T.," of Abilene, Kansas, gives the readers of your paper an exceedingly interesting account of the ways of the prairie dogs, as observed by him in that locality. I can from personal observation and experience subscribe to all he says of this interesting rodent, and that even in boreal Montana, not more than a hundred miles west of Fort Keogh, viz. at Fort Custer, I have repeatedly observed the dogs outside of their burrows on a clear, sunshiny winter day, even if the mercury was below zero, and I have not the slightest doubt but what the same thing can be seen at Keogh any winter; they certainly do not hibernate in the strict sense of the word.

In regard to the popular belief that the prairie dog, the rattlesnake and the burrowing owl all live in harmony together in the same hole, this is mere nonsense, like many other myths in natural history. The latter both unquestionably live to a greater or less extent on the young dogs, whenever these are to be had, and it is astonishing how quickly one of these little owls is able to capture and kill rodents a great deal heavier and larger than themselves. I never have seen an owl actually capture a prairie dog, but have time and again seen them dispose of the western ground squirrel, which is about the size of a half grown prairie dog, and is very common in portions of Oregon and Washington Territory. As I have already published a lengthy article on this subject some years ago in the *Ornithologist and Oologist*, I will say nothing further about it here.

The fact that the dogs and owls do not live on friendly terms at all times was clearly demonstrated a few years ago at the Zoological Gardens at Philadelphia. If I remember rightly, I think it was Mr. Arthur E. Brown, the superintendent of said gardens, who told me that during that season he had received several burrowing owls from the West which he placed in the wire inclosure in which quite a colony of prairie dogs were kept. In order to prevent the owls from flying away their wings were clipped, and laboring under such disadvantages they were at once set upon and promptly killed by their so-called friends, the prairie dogs, who undoubtedly enjoyed meeting their old-time enemies in such a fix. I have not the least doubt but what a partly crippled rattlesnake would fare the same way. C. E. BENDIRE.

DOMESTICATING WILDFOWL.—Cold Spring Harbor, N. Y., July 5.—*Editor Forest and Stream:* I can report a little better success, to date, than last year. From thirteen wood duck eggs there are now three ducks, which are ten days old and are lively, following a hen and getting their own food along the ponds. The pintail laid seven eggs in a nest on the ground, broke two, and after hatching the young a week ago escaped from the wire netting and has not been seen since. My Chinese mandarin duck laid twelve eggs. Two of these were hatched under a hen and crushed in the nest. Another hen was set on seven mandarin eggs and hatched four birds yesterday, one of them a perfect albino, and last night crushed one. The old duck sat a week on three eggs and then abandoned the nest. Therefore, I have at present writing only three young wood ducks and three mandarins.—FRED MATHER.

THE STEP OF A BEAR.—*Editor Forest and Stream:* I do not see just why it should be apparent to hunters, as one of your correspondents suggests, that the latter meant 36in. for a bear's step when your printer put it 26in. My experience is that large fat bears—common black bears—step very short. I would set down a 36in. stepping bear as too lean, poor and fond of traveling to make it worth my while to follow it. Of course, with a trap it matters not how long a step is. When a bear is so heavy that in ordinary walking, when unmolested, it steps little more than the length of its own foot, there is inducement to follow it.—CECIL CLAY.

Game Bag and Gun.

Address all communications to the Forest and Stream Pub. Co.

IN THE CHEROKEE STRIP.—III.

OUR first morning at the 21 dawned windy and very cold, the thermometer—for the camp boasted such a piece of furniture—showing 12° below zero. It was too cold for horseback hunting, or at least Mr. Allison and all the ranch boys thought so. Ricker and I were the only ones to venture out in the morning, we resolving to still-hunt down the river.

Ricker and I had each secured one of the new model Winchesters, .45-90, for this trip, and these arms attracted some attention at the camp. They were not, however, liked by the boys of the ranch, who all pronounced them "too heavy." The old popular worthless .44-40 is the favorite gun with the cowboys. They didn't know anything about a rifle; and I imagine they like that old arm because it is light and handy and does pretty well for a saddle gun. There has been more game killed with these old .44s than with all other guns put together, and they are or have been the most popular gun on the plains and in the mountain, so far as the native population is concerned. Because cowboys have used them, cowboys think cowboys ought to use them. I suppose I wouldn't have one, with a prize package thrown in, myself. But I think the .45-90 a very excellent arm; only they will have to get the action a trifle smoother, though I never saw but two of the new make, and got the first one which came into the State of Kansas.

The .45-90 is the rifle I shall use, until the Winchester people make a .50-110 repeating rifle of this model (or one with even greater powder charge), in which either express or solid balls can be used, the former of not over 300 grains weight. This action is so arranged that a cartridge of that length can be easily thrown by it, I think. I would want the gun to weigh at least 9½lbs., and to be not over 24 or 26in. in the barrel. The action of the '86 model being so short, the result would be a gun short enough in its entire length for one to stick in a saddle holster, and run his horse as hard as he wants to go without fear of the horse getting the rifle between his legs and giving his rider a fall. I would most assuredly want the rifle to have a shotgun stock of exactly the same length and drop of stock my shotgun has. It is much a matter of fancy, this gun business; but it is my fancy that in the above I would find a practical gun for practical hunting, flat, accurate and so terrific a hitter that I would stop a deer or any large animal every time the ball struck him. If there be such a thing as shooting a heavy solid ball from an express rifle, the penetration of a solid ball from such an arm would be something fearful. But as far as range and accuracy are concerned, there is no one who can often hit a deer over 200yds., especially if it be running. He would be just as apt to do it with a wild-shooting gun as with an accurate one. There are many who might hit a small target regularly at that distance, or even a deer on paper, but I mean a deer with hair on it. The express charge would therefore give range and accuracy enough for deer shooting.

But, as I had not the .50-110, I took the .45-90, which is, practically, about as good. Ricker shouldered his favorite, a fine three-barrel Daly gun, which shoots a rifle cartridge of .38-55, and shoots it mighty accurately, too. With this, and a handful or so of buckshot, he calculated to make the air warm about any deer that jumped near him. I persecuted him for a pot-hunter. I believe a man can get more deer with a good three-barrel gun. He can get more fish with a seine, too. He can kill more squirrels with a good shotgun than he can with a rifle, too. Ricker and I were talking about this business when we parted at the edge of the sandhills, and I had almost persuaded him to give his gun away to some object of charity; but by night he had backslidden entirely, and I shall have all that work to do over again.

There are some 280,000 acres in the 21 range, and most of this is on the south side of the Cimarron; yet I walked for a long time through the sandhills of the north side before I came to the wire fence which marked the boundary of the range. I walked nearly ten miles down the river, and got well over on the T5 range. I must confess that the day was dull for me. The weather was so cold that nothing was moving, and I saw so little sign that I doubted if there were any deer in that country. Indeed, I did not see a living creature all that day, excepting a poor innocent little woodpecker, which I noticed just as I got back to camp, and which I was wicked enough to shoot at and kill with my new .45-90, thereby winning for it the name of the "woodpecker gun" when I told the boys at the camp what I had shot at.

When I got in, nearly at nightfall, I learned that Jack, one of the boys, had been out after we left, had jumped a buck in the edge of a swamp, and killed it running with his .38 Winchester. He had also seen four other deer in the black-jacks north of camp. This was more encouraging.

Presently Ricker came in, tired but happy. He had been down about the same distance as myself, though nearer to the river. He had seen no sign of deer until he came to the top of a big sandhill which was scooped out on the further side, and had a clump of large trees growing in the hollow. The tops of these trees came up nearly even with the top of the hill. As he peered down through the trees, a sudden whistle and a smashing in the brush announced an occupant, and he saw a big doe rushing down the hill for the tall grass. Did that benighted heathen use the rifle part of his machine? No. He just launched about seven hundred buckshot over in that direction, and took his chances. Hit something? Why, of course. And then that poor doe, denied a civilized death, ran on down the hill, blundered, stumbled, and fell in a bunch. Buckshot, sir! Four hundred buckshot. Murder? How can we ever know he killed the deer he shot at, and not some other deer, somewhere around there?

All hands now ate supper. The fact was developed that Buck, the cook, made excellent biscuits. I broke about fourteen straight myself. I wish the hotels in Kansas could bake as good biscuits. We came very near losing one of our best dogs on this trip before we ever got into the territory at all. He would have been drowned in crossing a river if he had not been tied to the wagon. He had in an unguarded moment swallowed a hotel biscuit at a

little town called Hazelton. Now, Buck's biscuits would not drown a dog.

On the following morning we found the thermometer still low-spirited, and the wind still very buoyant. The ground was frozen hard, and would have made bad running for the greyhounds, even had it been warm enough to ride with any comfort in the open country. Ricker took a pony and went after his deer, while Jack, who was to get a load of wood, concluded to bring in his game on the wagon. I started up the river through the sand hills in the direction opposite to that of the preceding day's hunt. Mr. Allison stayed at home with Red and Buck, and studied history.

A light snow had fallen during the night and trailing was easy. Ordinarily it is almost impossible, in the dry and sliding sand of these hills, to tell whether a trail be fresh or old. I crossed a fresh wildcat trail a mile west of the camp, and saw several coyote trails; but though I went up the river fully eight miles, I saw no sign whatever of deer. The country was wild and rough looking, covered with scattered bunches of timber (for which the local name is always "mottes"), especially along the little spring-fed streams which ran down toward the Cimarron. The sandhills all looked exactly alike. It would be almost impossible not to lose one's way among them, if one had not a compass or was not sure of his course from the direction of the wind. Indeed, at one time I found myself lost—the English language permits me so to speak—and was so turned around that I came upon my own trail when I thought I was going straight ahead on my old course. I reflected how serious a matter it is, as Bill Nye says, to be lost, while the whole country is left in suspense during one's absence. But at last I climbed a high sandhill and found I could see my own private landmark—a peculiar bluff on the other side of the Cimarron, nearly opposite the camp. Then I tired of my fruitless hunt and started back for the camp, getting out into the level bottom land, where the walking was easier. I was wearing a pair of felt boots, with light rubber overshoes—the very perfection of footgear for riding, but not good for walking, especially if there be a wet snow. My boots began to crawl down into my overshoes, and I found that the softness and lack of support made the ankles and feet very tired and sore. It seemed as if I never should close up the gap between my landmark bluff and the long mesa from which it jutted out. From the camp the bluff line appeared to be unbroken.

When about two miles above camp I heard a noise which very soon made me forget all footsoreness and drove every ache out of my body. It was the note of the foxhounds, belling rich, clear and deep. They were running! The day had been clear, the weather had warmed up, and the moist ground offered so good a chance for trailing that the other boys at camp had taken the foxhounds out late after dinner to see if they could start a wildcat out of the swamp which lay along the spring branches above the camp. The voices of the hounds came strong and clear, nearly in the same spot. Then I heard them roaring in a changed note, which clearly said, "at bay." Then came a shot. Then confused barking and fighting. Then "Oo! Oo! Oo-oo-oo-oo-ow! Ow! Ow! Ow-oo-oo-oo-oo!" The animal was off again. Four-legged Persistence, wrinkle-headed Fate, black and tan Destiny after him. Sure to catch him.

I struck the earth occasionally I suppose, but I don't remember anything about it.

"Come ahead," called out Mr. Allison, as I smashed through the tangled flags, "we've got a cat!"

It seems that they had struck the trail soon after putting the hounds into the swamp, and they could see by the tracks in the snow that it was a wildcat. Red and Mr. Allison were on horseback, and they kept as close to the dogs as the tangled cover of the swamp would permit. The swamp was not large, and as they sat their horses at the edge, they several times saw the cat—a very big fellow—slinking along in the reeds not 10ft. from them, seemingly not in the least mindful of their presence, and not very much concerned about the dogs. They could have shot it easily, had they wished to end the sport in that way. Closely crowded, the cat had taken to a tree once, and Red had purposely cut the limb under it with a ball from his six-shooter; whereat it sprang far out from the tree, slid out from among the dogs, and was now off again.

The second run of the cat was a long one. We followed it fully two miles out into the sandhills, then back into a second swamp. Here we took stations, and urged the two shepherd dogs into the swamp also, keeping the greyhound puppies—for these were the hounds which had been brought out—upon the outer edge of the reeds.

Presently the shepherds gave tongue—a thing they never did except when in sight—and at the same instant the musical complaint of the foxhounds changed into an angry roar. A spotted, sinuous figure sprang up from among the rushes and struck the trunk of a small tree, clung fast, and glided up among the branches.

"Don't shoot, anybody!" went the word; "put in the greyhounds!"

The greyhounds put themselves in. Every dog in the pack had his eye on the cat. The beautiful creature lay flat, claws working, ears back, mouth wide open—a perfect picture of feline beauty and feline venomousness. It did not seem to be very much afraid.

We threw a stick or two at the cat. It growled and tried to lash its sides with its tail, but couldn't, because its tail wasn't long enough. A wildcat isn't built that way, or else he'd lash his sides. We threw some more sticks. With a big scream the cat vaulted out into the air and fell right among the dogs.

Did you ever see a dog fight? One with nine dogs in it? And did you ever see a cat fight with about fourteen large-sized cats in it? Well, you combine these and shake before using. It may give you some little idea.

Not one of the greyhound puppies had ever seen a wildcat, but they all showed their breeding out of fighting stock. The cat had not struck the ground before it was covered with dogs, and every dog stayed in the fight, too. The puppies did not know much about fighting tactics, but each laid hold wherever handy, catching by the foot, back, neck, or anywhere else; one young enthusiast seized the cat by the tail, and seemed to think he was doing more than almost anybody toward paralyzing the foe. A wildcat is a very strong and active animal, and his natural weapons are something terrible in their way; and although not very thick-skinned, its tenacity of life makes a struggle of this kind a long one. The yelps and howls of the dogs gave notice that they were being badly punished, and once in a while one broke out of the ring with a split ear, a bloody face or a lame foot, only to shake himself, and, with loud clamors for revenge, to plunge again into the fight. Over all the tumult sounded the roar of the foxhounds, both busy as they could be. The growl of the cat was only occasionally heard. The fight was going on in the middle of a bunch of flags, so dense that we could only see a whirling mass of legs, tails and fur. We knew, however, that the dogs had the cat strung out, so that it could not use its hind feet in that terrible ripping stroke which sometimes disembowels a dog outright. We, therefore, concluded not to push in and kill the cat with the knife, but to let the pack finish it. We stood around in the flags and shouted and jumped and stood on one leg and urged on the dogs. Presently there was a general movement toward the open, and the whole pack pushed out, each tugging at his hold, and all bearing the cat stretched out clear above the ground, limp and dead. The gallant fighter had made his fight and had yielded to the majority.

The dogs now felt very proud of themselves, and wished constantly to kill the cat all over again. With difficulty getting it away from them, we tied it behind a saddle, and then, petting up the wounded dogs, and calling them all "good dogs," we started home, the dogs trotting behind in long file—Drum, the young foxhound, occasionally lifting his nose up toward the fallen victim, and giving vent to a loud boom of exultation, as if to announce to all the country about, "We've got him, sure!"

We now had something to put on the game-rack; and we ate supper very cheerfully, feeling that the trip was opening well.

E. HOUGH.

IOWA GAME AND FISH.

THE tenth convention of the Iowa State Sportsman's Association met at Sioux City, June 22, and had a very successful tournament. Des Moines was selected as the place for next year. President J. G. Smith, of Algona, was re-elected, and with him are the following officers: President, J. G. Smith, of Algona: First Vice-President, Charles Hinsdale, of Newton; Second Vice-President, F. B. Gove, of Creston; Secretary, A. L. Zwort, Des Moines; Treasurer, G. L. Easton, Des Moines. The president appointed as directors C. W. Budd, Des Moines; L. Wordney, Waverley; J. B. Aldrich, Atlantic; C. A. Bryant, Sioux City; W. Howard, Davenport. The Law Committee, also appointed by the president, is as follows: Geo. E. Clark, Algona; G. Parsons, Des Moines; A. L. Hudson, Sioux City.

Mr. Pierce offered a resolution prohibiting the shooting of live birds or animal targets at future tournaments. After a lively debate of the resolution it was lost by a vote of 21 for and 22 against. A resolution was then carried that the question be considered at the next annual meeting, that the delegates present might be enabled to intelligently represent the wishes of their clubs in the matter.

PRESIDENT SMITH'S ADDRESS.

In looking over an assembly of gentlemen like this I feel myself hardly competent to speak to them as one should do who presides over them. Yet as we have met for an interchange of views I will express mine to you in as short and concise a manner as possible. This is the tenth annual meeting of our association, and being a regular attendant at all the meetings I have found a great deal of pleasure in the attendance. Here I meet old friends and find many new ones, and when sportsmen meet there is a kind of an affinity between them, one knows that he has found friends, and friends that it is a pleasure to meet. If we accomplish but little each year, our meetings will do much good. We are at present the largest State association, and there seems to be more interest taken in the fish and game laws in the State of Iowa than in any other State. And it is with us, gentlemen of the State Association, to protect and preserve the game and fish so that our children's children may know what it is to have good shooting and fishing. We have laws enough, and all there is for us to do is to see that those laws are strictly enforced. During the last twenty years there has been a large amount of game destroyed. Game laws have been violated in almost every county. But we can see a change within the last two or three years. The formation of clubs so that sportsmen can work together has produced a change. And there are but few counties in the State at the present time where it is not looked upon as a disgrace to violate the game laws; and the day is not far distant when we shall scarce hear of a violation of our game or fish laws.

The prairie chicken must go. I do not see any help for them in the State of Iowa. There is not waste land enough in the State. Almost every acre can be cultivated, and that leaves no chance for them to nest. The fire, plow and reaper will soon do their work. Already we see large flocks of old male birds together, which shows us that the female birds will soon be among the things "that were." The wildfowl, the quail, the snipe and the plover we can always have if we will take means to enforce the game laws.

The fishing in the lakes and streams may, with proper care, be good as long as these lakes and streams last, and it is with you, fellow sportsmen, to preserve and protect these fish. See that we have a competent man for fish commissioner, one who understands the work and whose heart is in it. It was a direct insult to the sportsmen of the State of Iowa when Gov. Larrabee appointed the present fish commissioner. Nowhere in the State has there been so much violation of the fish and game laws as in Dickinson county. The present commissioner has lived there some fifteen years, and who ever heard of his trying to enforce the "game" or "fish law." Not a single case has been prosecuted in Dickinson county. His mill wheels have ground up thousands of fine fish. And yet for all this he receives the office as fish commissioner for the State of Iowa.

I am no politician, but I could not speak to you to-night without expressing to you my feelings in regard to such an insult to the sportsmen of Iowa by the present governor. I had intended to say a few words on the subject of spring shooting, but I fear I have already taken up too much of your time. But I will say this, that I am not in favor of passing any law that does not stop the shooting of wildfowl the first day of December of each year all over the United States. I do not believe in a law that allowed men in the Southern States to shoot till March 1 and then say stop when the birds leave for the North. Let the birds rest in the South December, January and February, and then they will have as much open season as we of the North. In most parts of Iowa the spring shooting is better than the fall. Many of our sportsmen would never have a chance to kill a wildfowl except they did so in the spring. They have not the means to go where the wildfowl are. And were it not for a few days' shooting in the spring they might as well have no game. It is less than ten years since any sportsmen could go to Spirit Lake and have a good day's shooting. He did not have to wait for a flight of birds from the north. It was good shooting any time after the 20th of September till the lake froze over. How is it now? I do not believe there has been a good day's shooting there for the last three years. And why? Not on account of the farmer boys. Not on account of the "spring shooting," for there is no "spring shooting" there of any account, as the lakes seldom open till after the birds have gone north. The trouble is in July and August the visitors to those lakes go out over the country to every slough where the waterfowl breed and destroy those birds before they can fly. Ten years ago most of the ducks that bred in Dickinson county as soon as they could fly went to the large lakes. The northern ducks dropped down among them. The wild celery tempted them to stay; and I believe I have seen twenty thousand ducks in East Okoboji Lake at one time.

There is one change I would like to see made in our game laws, and that is in regard to the shooting of ducks, geese, and brant, the 15th of August. I do not think the season ought to open before the 15th of September. We should then have more decoys to decoy the flight birds and many more would stop with us. As it is at present, many ducks that are bred here are killed as soon or before they can fly. It also gives men a great chance to violate the law in regard to "prairie chickens." They can go out after ducks and geese, but will kill more chickens than ducks and geese.

One word before I close, in regard to the careless handling of firearms. I wish there could be a law passed in the State of Iowa making it a "criminal offense" for one person to point any kind of a "firearm" (loaded or not loaded) toward another. I would make the offense punishable by five years in the State's prison. Scarcely a month passes by but that some one is made to suffer by the careless handling of a gun or pistol, and it is the old story, "Did not know it was loaded." In my own county over twenty persons have been killed within the last twenty years by the careless handling of guns, and it seems to me that it is time something was done to stop it.

THE DIAMOND HITCH.

Editor Forest and Stream:

"Naval Officer's" brief story of a "pilgrim packer's" trials and tribulations, as detailed in your issue of June 23, is interesting, and, may I confess it, just a little amusing. It brings up again the subject of packing tent poles, to which I had at first intended to allude in my remarks on the diamond hitch, but which on second thought I determined to omit. It is difficult enough to learn to pack an animal with ordinary supplies, and I did not wish to add to this difficulty by putting tent poles in the pack. These, unless they are properly put on the load, will rack it to pieces in a very short time. Besides, in the Yellowstone Park, where timber is so abundant that one can camp every night at the edge of a grove of trees, tent poles are scarcely necessary. By means of a couple of ropes tied to the corners of the ridge and drawn tight about two trees, a tent can be spread very comfortably and the labor of packing poles entirely avoided. Besides this, there will perhaps not be more than two or three days on the whole trip, when the party will care to put up their tent. On this you cannot depend, however, and when you do require your tent you will need it badly.

The tent poles, like everything else in the load, must be lashed together compactly, and the best method that I know of for doing this is to put the loop of a lare rope about one end of a bundle of from four to six pieces, and draw it as tight as possible. Then pass the long end of the rope—at the untied end of the bundle of poles—under one pole and draw it smartly back as near the loop as possible. Then take a half hitch about the bundle and tighten; pass the rope under another pole and draw back nearly to the half hitch; make another half hitch, tighten, pass the rope under another pole, and repeat this until you have either got to the end of the poles or made the bundle so tight that you cannot pass the rope between the remaining poles. Now fasten by means of a couple of half hitches and your bundle will not come undone. This is essentially like a hammock hitch, except that the rope is passed between the poles to tighten the lashing. The bundles of poles, two bundles to a mule, should go between the top and side packs, pretty well back, the ends projecting very little, if at all, in front of the load. As an additional security, they may be tied to the lash rope after it has been tightened, but this should not be necessary if the latter is properly arranged. A wall tent can, of course, be packed well enough; but two small A tents would be much more conveniently handled, and one of these will furnish abundant tent room for two persons.

If I understand "Naval Officer" correctly he wrapped his mule up in his tent, but if he did this he must have made the tent meet under the animal's belly, or nearly so, or else the ropes of the lashing must have galled the poor creature. May I ask why the tent was not put on over the load, or else under it, over the aparejo?

The spectacle of "Naval Officer" and his companion marching through the Yellowstone Park armed with tent poles must have been highly diverting to those who saw them. Such or similar ridiculous experiences have, however, befallen most of us who prefer to depend on ourselves, rather than on others, who can always be hired to do the work, which is really an important part of the pleasure of one's outing.

A word more as to side packs. I have seen the Mexicans use canvas sacks, about 18in. deep and from 2½ to 3ft. long, from before backward, in place of side packs. These are fitted near the top and on the side next to the animal with stout leather loops to hook over the cross trees of a pack saddle, and are provided with a flap which buckles over on the outside to keep the contents from spilling out, as well as to protect from rain. My friend, Capt. Bendire, tells me of a long narrow sack, working somewhat on the same principle, which the Mexican packers used in the Gunnison country back in the '50s. This sack was

closed at both ends, but was slit across on one side. The sack was placed across the aparejo, the uncut side down, and the load for either side was introduced through the slit, which opened in the middle line above. The two ends of the sack were loaded so as to balance each other, and, of course, after the lash rope was put on, there was no chance for it to slip.

Boxes and baskets are often put on as side packs, but the latter, unless specially arranged for the purpose, are likely to be crushed and racked to pieces after being in use for a short time. Yo.

NEW YORK GAME PROTECTORS.

FOLLOWING are brief abstracts of the reports of the State fish and game protectors for the month of May:

Geo. W. Whitaker, of district No. 1, traveled 256 miles and expended $20.07. Among other places he visited Meacox Bay to see and inquire about the shooting of small birds and snipe. As usual, the witnesses to whom he was referred knew nothing except that they heard guns and supposed that some one was shooting birds.

Joseph H. Goodwin expended $10, but does not appear to have done more.

Francisco Wood, of district No. 4, traveled 230 miles and expended $37.50 in a hot search for illegal fishing apparatus, which, however, he was unsuccessful in discovering.

Seymour C. Armstrong traveled 304 miles and expended $13.60. In Lake Champlain he seized fourteen fyke nets, worth $500, part of which were destroyed and the rest are at Whitehall. He also seized one in Saratoga Lake valued at $15. The suit against Leander Pasco for hounding deer in Warren county was concluded by the discharge of the defendant. He says that the evidence was very plain and conclusive, but the jury acquitted the man.

John Liberty of district No. 6 reports that he recovered $100 in penalties from Wallace McFarland, and that he has a suit pending against Fred Lewis, Jr., for killing a deer. Mr. Liberty traveled 111 miles and expended $16.75.

Peter R. Leonard of district No. 7, including St. Lawrence and Franklin counties, is a very active man. He traveled over 300 miles, spent $36.40, brought three new suits for killing deer, disposed of three suits brought on the same charge, and has one pending for illegal trout fishing. He has destroyed one seine, value $25, and one scoop net valued at $3, and taken two trap nets valued at $50 each. He has recovered $75 in fines.

Thomas Bradley of district No. 8 traveled 364 miles and spent $27.35.

J. L. Brinkerhoff of district No. 9 succeeded in traveling 307 miles and spending $31.38. He captured a set line worth $1.50

Nathaniel C. Phelps of district No. 10 traveled 188 miled and expended $20.92.

Fred P. Drew of district No. 11 is another active man. He traveled 592 miles, and expended $5.70. He has brought suits against John Kelley, N. M. Burdick, H. Burdick, George H. Adams, Arthur Burton, Morris Stowe, Burton Stowe, F. Schlosser, and W. Archer, for hauling seines in Oneida county and against George H. Adams, for catching bass and pike in the closed season. He has recovered $200 from parties who were convicted of seine hauling. He has destroyed nets and other apparatus in the lower end of Oneida lake, worth $700.

William N. Steele, of district No. 12, has captured $510 worth of nets, traveled 196 miles and paid out $27.85.

William H. Lindsley, of district No. 13, has destroyed 2,900 feet of gillnets and brought a suit against W. Kline for violating section 23.

G. W. Schwartz, of district No. 15, has destroyed nearly $800 worth of nets, and brought two suits for illegal fishing and has three suits pending.

T. O. Roberts, of district No. 16, has destroyed $60 worth of nets on the shore of Lake Erie. The month's work was a good one.—*Utica Herald.*

ALBINO WOODCHUCK.—Indian Rock, Me., June 29.—Did you or any of the contributors or readers of the FOREST AND STREAM ever see or hear of a white hedge hog? I killed two last evening, one young black and one white; the black one was quite small. Some six or eight men saw them and said they never saw nor heard of a white one before. I have seen a white woodchuck, and only one, but have heard of others.—C. F. RICHARDSON.

CLINTON, Mass., July 1.—The Clinton Sportsmen's Club have elected officers for the ensuing year as follows: President, G. Walton Goss; Vice-President, William H. Gibbs; Secretary, George S. Avery; Treasurer, A. G. Larking; Directors, Walter D. Bowers, Henry W. Welsh, Charles H. Lasselle. A committee has been appointed to arrange for a meet some time the present month.

THE RIGHT TO SNARE GAME.

Editor Forest and Stream:

In your edition of June 16, in an editorial criticising the communication of "Bay State," you lay strictures on the sportsmen of Reading, calling them "market hunters," "grouse snarers," etc.; and by the general tone of your editorial show your want of sympathy with us. Of course you are not personally acquainted with any of us and are obliged to get your information at second hand and from persons who wish to vent their spite and venom through your paper. These are the facts of the case: The farmers of this vicinity, or those representing about 5,000 acres of our best hunting ground, were very tired of being liable to a fine of twenty dollars for snaring a bird on their own land or permitting their children to so do, and among them was the retired clergyman of whom you speak as a "game legislative busybody," who is here held in high esteem; and they very properly brought the question before the Legislature, which promptly restored their rights after the most strenuous opposition from a lot of men who like to hunt on others' land. The farmers naturally did not like to be denied the right to take their birds in their own way, and yet to see daily parties of sportsmen from the city (only twelve miles away) get over their fences as might be and go through their land shooting right and left (Sundays and week days alike) and on requesting the intruders to move off, to be met with abuse. This is the whole story in a nutshell.

Now in regard to the "market hunting" and "nest of grouse snarers." I have been in business here for fourteen years, and with an intimate knowledge of most of the sportsmen within fifteen miles, I can recall but one person (and he not a resident of Reading) who ever made a business of snaring for the market, and he only for one fall when he was out of employment, and the only other snaring there may have been has been done by the farmers or their children for a few birds for their own use, so you can see by my statement it is not a very large "nest." If you should ever be fortunate enough to come to Reading, you will find as good a class of gentleman gunners as you would find anywhere, with good dogs and guns, and no country louts who make a trade of bird snaring. As for bird protection, we are as solicitous about it as any one, but we concede to the farmer his right to the bird on his own land, where we go at his pleasure. As for myself and most intimate friends, we believe in a close season from the first day of January on all kinds of game, and do not favor any extension of time to shoot ducks in the spring, as was done a year ago, giving to gunners fifteen more days time to shoot them in when they need to be protected. We do not like to see the Wilson snipe and five or six other of our best game birds protected by placing them with birds of prey, as was done in a game bill passed three or four years since through the influence of the person from whom you probably received your information about the Reading boys; but from the word "go" we believe in strict game protection, always conceding gracefully the right of the farmer to take game on his own land in his own chosen way during the open season, and in this way avoiding any friction between farmers and sportsmen. PHARMACIST.

[No reference was made to the sportsmen of Reading. The farmer's "right" to snare game is not a "right" beyond the sphere of legislative control, no more than is his "right" to net trout. The permission to snare was restored in the interest of professional snarers and of the Boston dealers in snared game. It is barely possible that the FOREST AND STREAM'S information is quite as full and accurate as that of "Pharmacist."]

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

THE CUSK.

Editor Forest and Stream:

Your correspondent "Black Spot" asks for the experience of others as to the edible qualities of the "cusk" or "eel pout" (*Lota maculosa*). My experience with this fish commenced in the month of March, 1844, at the Sault Ste. Marie, Michigan. The navigation of the river did not open that year with Lake Huron below until the latter part of May, consequently the inhabitants were driven to short rations in winter, stored provisions, and were obliged to subsist largely on such fishes as the adjoining waters supplied. Even the few horses and cows of the place were taking their daily allowance of fish and birch browse, the store of hay having also quite given out. On the table of our host it was fish, fried and boiled and broiled, morning, noon and night, day after day, with a short accompaniment of potatoes and bread. A more constant accompaniment and one new to us was an overloaded dish of what was considered a great delicacy, the fried livers of the eel pout, a tid-bit I did not care to indulge in, owing to my antipathy for this "disgusting looking creature," remarking always on its being offered me, "While fish was good enough, those that wanted 'loche' livers, as the fish was called by the Antoines at the Sault, were welcome, not any of it on my plate."

Every evening about dusk some one would go down to the ice on the river and pull out a dozen or more set lines with as many 10 to 15lb. "loche," "ling" and "eel pouts" hooked at the baited end. Knock them on the head, extract the livers, which were put carefully in a basket, while the loathsome-looking "pouts" were loaded on a dog sled to be taken, as I remarked, "for cattle provisions." "Oh, no, mon ami," replied the fisherman, "part go there, some go to the house likewise; these are the kind of whitefish you likes so well every day since you come here. You see the whitefish, you suppose, are not caught now. See the rapids and the middle of the river. See the ice. Catch no white—poisson blanc, little or big truite, long as the ice goes over there. Break the canoe through every time. Ice run now six week or more, will run, maybe, a month or more, too. If you stay here and want fresh fish, may be you eat 'loche,' white and herring all the time, two, three, four times a day, jes as good as seal whitefish, so you don't know him."

Well, to tell the truth, I was a little weakened after hearing this disclosure; but I ate "loche" that evening for supper and daily afterward until the catch for real "poisson blanc" set in. Even then, possibly, I partook of one fish as often as the other. I will not say that the "loche" of the Sault equals the whitefish of that locality, as the latter is considered the most superior of its kind; but this I will say, this "loche" from the cold waters of the North is a most excellent fish for the table. Its fat liver, which I have often eaten since, I prefer to that of the overfed, stuffed goose of Strasburg, which is so much sought after.

But the "loche," like all other fishes, as many know, must vary in food qualities according to its general surroundings and season. The "loche" from Lake Erie does not rank in fine flavor and firmness of flesh above the catfish of the Mississippi Valley, neither does our whitefish (*C. albus*) in this point equal those of deeper, clearer and colder waters; it is often so fat, oily and soft as to be hardly fit for food, and those who have only eaten the fish from this locality consider it very inferior fish; and more, we have heard many declare it to be a "worthless fish."

In Sir John Franklin's first overland Arctic expedition this *Lota maculosa* was met with in all lakes and rivers tributary to Hudson's Bay and the Arctic Ocean. Dr. Richardson, who accompanied him as a surgeon and naturalist, mentions this fish as excellent food, the livers especially. The late Wm. Mittleberger, of this city, once twenty years a factor in the Hudson's Bay Fur Company, often interested me in relating his experience in that lonely and little-known region. One day while watching the hauling of a seine, a burbot, as he called it, was thrown out with some other worthless fishes. He remarked as he examined it, "This fish is quite abundant on the Great Slave Lake, Peace and Athabaska rivers, and is considered there one of the best of fishes, and how is it that it was considered worthless here?" Since then I have learned that in Montana it is eagerly sought after, its liver and roe being considered a delicacy. Even to Alaska it is known as an excellent food fish and weighs 40 to 50lbs.

It has often been a wonder to me why this fish is so generally condemned, it certainly is quite as attractive on close acquaintance as any of its salt water relations, the Gadidæ, such as the cod and haddock, compared with eels and catfish it is a perfect beauty.

Let the Ichthyoplagous Club explain.

DR. E. STERLING.

CLEVELAND, O.

Editor Forest and Stream:

Cusk are plentiful in the St. John River near Fredericton. The usual time for the commencement of fishing is at that period of the year when the river begins to freeze; they are also taken during the winter through the ice. They are said to be of the finest quality when taken in the autumn before they have spawned. The fish and roe, which is very large, are fried in butter; as they are thus served up at the Queen Hotel in this city, they are very highly prized by the Fredericton Blue Noses. Whether such food would be agreeable to the dainty palates of New York aristocrats is doubtful. Cusk are also plentiful in the lakes on the left hand branch of Green River, one of the tributaries of the St. John; the immature fry being a favorite food of the Green River trout which, when gorged with them, will pay but little heed to the angler's wiles. The cusk is also found in many other lakes in New Brunswick. EDWARD JACK.

FREDERICTON, New Brunswick.

MEMORIES THAT DO NOT FADE.—I.

EVERY sportsman who has grown gray in the cause finds still clinging to his memory fond recollections of incidents and events connected with his early experiences with the rod and gun, which, unlike "footprints on the sands of time," do not grow dim or vanish. Wherever his lot may be cast, or whatever his calling in the busy scenes of life, there will be intervals when these incidents in his early sporting career will come uppermost in his mind with all the vivid freshness of the long-gone days in which they occurred, and he lives over again some of the pleasantest incidents of his early life.

Most of such incidents may seem trivial to the general reader, but I fancy will awaken an interest in the breasts of those who began early in life to gather that enjoyment which can be found in no other way; and there may also be an interest, and possibly some grains of instruction, to those who are just beginning to learn the ways of the imperial, wary and gamy denizens of the forest and stream.

It was my fortune to be permitted to begin early in this interesting pursuit, and though bereft of a father's care and guidance when quite young, a kind and indulgent mother aided my strong and natural desires in this direction much more than the average mothers are wont to do. She evidently took a sensible view of the matter, for she did not allow me to run wild in this direction, but kept me under due restraint; and though often assisting me in the care of my gun and fishing tackle, the former of which she always kept in her own room when not in use, I was never allowed to go out without due caution to beware of accidents and a promise exacted from me to return by a stated time. And I kept my promise faithfully, partly out of dutifulness and partly, no doubt, because I knew a failure on my part would endanger the frequency of my little outings.

The first silk line of which I was ever the proud possessor my mother made for me, twisting it on the old spinning wheel from sewing silk, and though my joy and pride were exceedingly large over it, they were of short duration, for while fishing in the river a few days after it was given to me, a fish took it away, breaking the tip of my rod, and as I had no reel I saw my beautiful silk line vanish from my sight, but not forever. I have often wished it had been so, for the next day I went down to the river where some men were fishing with a seine, and I saw them take out of their net a splendid pickerel with my hook and silk line still fast to its mouth. I told them it was my line and how I had lost it, but they neither gave me the line or fish. Perhaps it was fortunate for me that my physical powers were not as great as my boyish indignation and wrath, for if they had been I should certainly have recovered that line or made things very lively for those unjust fishermen. I have never ceased to despise the man who refused to give me my silk line, though this may be wrong in me, for he has long since gone to his reward.

In the gratitude I now feel for the kindness of my mother who so cheerfully aided me in my early efforts to win these gentle pleasures, may I not be indulged in asking, if it would not be better if more mothers and fathers would in like manner guide, direct and instruct their boys who evince a love for these sports instead of striving to smother or obliterate an instinct which, if properly encouraged, will afford pleasures rational, manly and lifelong? A.

JUNE 24, 1887.

THE TOURNAMENT.

Editor Forest and Stream:

I've been thinking over the tournament and venture some suggestions for criticism:

Should there not be a limit to size of line used in single-hand fly-rod casting, and to the weight of rod?

I would put the entrance fee in each contest down to fifty cents or a dollar anyhow.

Contestants should be classed the way trotting horses are. Thus, for single-handed over head fly-rod casting I would suggest classes as follows: Sixty feet and under, 70ft., 80ft., 85ft., 90ft. No man with a record to be eligible below his class save in a free-for-all. If a good lot of prizes were put in the lower classes we would have a big entry. The judges should have discretion to cut the time down to five minutes; and then give the first three or five a further period of five minutes. Distance only to count in these contests, but special contests for delicacy and accuracy being had.

Rule 2 should be done away with or else strictly enforced.

What do you say, folk, specially about the classing, and if so name your classes for each sort of casting.

GRAYDON JOHNSTON.

[It is time now to make a class for winners of first prizes in the amateur classes. Under the present rules they are forced to stay out or to go in with the experts. It is also time to do away with the rule prohibiting men engaged in the fishing tackle business from entering amateur classes. This rule was forced upon the Association after the first contest in Central Park, because men who test rods in a factory came down and swept the amateur classes, and it was necessary to provide against an occurrence of this. Perhaps if memberships could not be obtained on the ground it would be well. This practice encourages mug-hunting to a great extent. We agree with Mr. Johnston that classes should be made according to the previous records, but do not think that rods and lines should be too severely restricted, because one object of the tournaments is to develop the tools which can do the best work. His other suggestions are well worth the consideration of the Association.]

TROUTING IN NORTH CAROLINA.

DURING the past three years my attention has been attracted in various ways to the climate and year-around healthfulness of western North Carolina. Last October an article written by E. A. Gatchell, M.D., and published in the *New York Medical Record*, fell under my notice and that settled it. Nov. 5 I packed up my grip, bade good-bye to wife and family, and went to Asheville, N.C. My objective was Highlands. I made the acquaintance of Dr. Gatchell and his partner, Dr. Hargan, both of whom are gentlemen of high standing in their profession, and they gave me much valuable information and assistance. I crossed the Balsam Range to Webster, and went thence by stage twenty-one miles to Franklin. Highlands is but nine miles from the latter place; however, I went no further. After a few days sojourn I returned to Asheville, made more inquiries, enjoyed the delicious, invigorating air, the clear sky and the wonderful mountain scenery. I mentally pledged myself the pleasure of a longer stay in this section at some future time to participate in some of the delights of forest and stream, and also to give this climate an opportunity to cure the abominable catarrhal and laryngeal affection which had caused me so much pain and money for several years. The memory of this three weeks' trip gave me food for sober reflection during the long, dreary and sunless days of the Northern winter. In due course of time May came, and I made up my mind to go to Asheville, spend three or four months, study its summer climate, breathe the fresh, pure mountain air, put myself under the direction and care of a good physician, and enjoy all I could. I came and am still here.

Naturally I very soon instituted queries regarding fishing opportunities, for how could one brought up and trained on the famous Caledonia Creek, restrain his propensities when in the neighborhood of a trout stream?

I discovered that the streams in the immediate vicinity of Asheville were devoid of my favorite fish, but by retiring from this vain world to the mountain fastnesses, one could find an abundance of trout.

One day a young gentleman—patient of the Doctor's—came into the office and reported having spent three days on a mountain stream and brought home 270 trout. Said I: "You are sure they were 'speckled trout'?" He looked offended and said he thought he knew trout. I felt afraid I had at last come into the august presence of a veritable "trout hog" and I mildly asked, "How large was the largest one?" "About 12in. long." "And the smallest?" "Six inches." Well, I looked at Dr. H., who, by the way, is an enthusiastic sportsman, but had never seen, much less caught, a trout, and he looked at me. "We must go a-fishing," said I. "We certainly must," he replied.

Canvassing the subject we found that in the headwaters of the Pigeon River good trout fishing could be had. The Doctor had some patients in Waynesville, who needed attention, and we planned to start early Thursday morning, consult with the afflicted until after dinner, then drive sixteen and one-half miles over the mountains to the east fork of the Pigeon River and seek shelter with one Jim Osborne.

The air was warm and the town sleepy. We had a platform-spring wagon, two good horses, and a colored Jehu to hold the reins. There were four of us, Dr. H., his son Guy and a young friend, "Doc" N., and the subscriber. We started at 1 P. M. in good spirits and with the assurance of all that we should have plenty of trout. Such roads, such climbing, such forest-crowned mountains, such views of peak and valley, such rugged slopes and rich bottom and cove lands! I had never traveled such rough, tortuous lanes before. However, I confess my utter inability to give an adequate description of the varied scenery through which we passed. Had I the pen of a ready writer like "Nessmuk" or the chronicler of "Uncle Lisha" and "Sam Lovel," what pen pictures I could portray. He who anticipates riding to his headquarters in a parlor car and casting the dainty fly from a luxuriously cushioned boat with fish tank inclosed, and a polite, skillful oarsman to relieve him of all unnecessary labor, need not apply. Such men know not the exultation from overcoming difficulties in pursuit of this favorite pastime. It has graciously been ordered that keenest enjoyments and grandest successes shall be the legitimate outcome of obstacles surmounted and sharpest struggles. I do not remember how many times we forded the Pigeon, but it seems to me it was about twenty.

Our journey was one long emphatic exclamation point. At 5:30 we drew in sight of Jim Osborne's house, beyond which it was impossible to go a mile with a wagon. For the last three miles of our journey the sound of the roaring stream smote our ears continually, and my fingers itched to test every good pool and riff which came in sight.

We came unannounced, and consequently found things unprepared. Mrs. O. said that she did not keep boarders, but she "reckoned" we could stay. Tumbling our grips into a square room uncarpeted and unfurnished except for two beds, a bureau and a sewing machine, we rapidly assumed our fishing toggery and prepared for the contest. I had to furnish experience for the party. The three "tenderfeet" went together to that portion of the stream directly in front of the house, while I went up stream about a quarter of a mile. Ugh! how cold the water is even through my wading boots. How swift the current. No casting from the bank here: too much laurel, rhododendron and other stuff. After a time a few small trout rise and are deposited in my creel. The water is deeper than I thought, and so clear. I come to a bend, and just below is a most inviting pool, shady, cool, still and deep. I cannot reach it just as I wish, try as I may. However, one good one is hooked and landed safely. How handsome he is! Working along slowly and carefully, occasionally picking up a trout, until dark, I finally become aware of some one fishing just below me around a rock and log dam. Soon he comes in sight, wading in the water minus rubbers and fishing with a short willowy tip of an ordinary cane. I say "good evening." "Howdy" comes in reply. "How far is it to Jim Osborne's?" "About a quarter you way. I reckon I'm the man you'r lookin' for." I introduce myself, and after a few moments spent in watching him we take a short cut to the road and then cross lots to the house. My "tenderfoot" friends are seated on the wide porch awaiting my return. I was quite disgusted to learn that they had beaten me badly, having a score of about forty, while I, who prided myself on my ability, had about ten. They all used bait.

Entering our sleeping room I found a stranger, seemingly quite at home, enjoying the blazing fire in the huge fireplace. He was introduced as Mr. Kimball, of Boston; coming from Savannah a week previous, shaking with chills and fever, he had retired to this mountain region, since which time he had not suffered from fever, chill or cold, although wading in the water every day.

Our supper consisted of trout, bacon, inevitable corn bread, coffee and milk. When supper was ended we all gathered around the fireplace and indulged in fish talk, while incense from the fragrant weed filled the room. Plans for the morrow were freely discussed. Jim O. could not accompany us, being obliged to attend assessor's meeting down the river, much to his disappointment. Kimball and I agreed to go up the stream four miles to the junction of Pigeon and Shining creeks and fish down to the house. (Kimball is very deaf and persists in calling it "Chinese Creek." Jim shouts "Shining Creek, Mr. Kimball." "Yes, yes," with a nod, "Chinese Creek," whereat Jim laughs.)

We take an early start. The rising sun illumines the tips of the mountains with molten gold, while our way leads us through laurel and rhododendron thickets, interspersed with giant hemlocks (spruce pine here) sycamores, oaks and birches. The stream roars and dashes on our left, and the grass and bushes are wet with the heavy dew. Involuntarily I stop to admire the seething water, the laurel blossoms, the opening buds of the rhododendron, the flaming mountain pink; to measure a mammoth hemlock, which by my rod measures 5ft. in diameter and towers without a limb for 60ft. The forest-covered mountains rose on either side at an angle of 50 degrees, and the stream rushed down an incline of two feet to the rod at a 2:40 gait. I wondered how I could ever withstand that current. We follow the sharp curves and tumbling rapids for nearly four miles, when Kimball announces that in his opinion we had gone far enough and will be sufficiently weary by the time we reach home. I concur.

Now I am an ardent fly-fisherman, and dislike the use of any other bait. We both put on flies. I cast and cast and stumble and slide and stagger and catch a few trout, when K. comes to me with several good ones and puts them in my basket. He wades without the slightest attempt at keeping dry. An old pair of pants and broken shoes suffice him. At eleven o'clock we are tired and hungry, and as the trout do not rise well we conclude to rest, eat and smoke awhile. We sit on a huge boulder and examine our lunch. Soda biscuit (soggy), fried trout and bacon. Well, I eat the trout, nibble a piece of bacon, take one bite of the biscuit, groan and reach down for a drink of the ice cold water. If I had eaten all the biscuit I would have had the grim satisfaction of knowing there was a solid accident policy in the safe at home. One good purpose the biscuit might serve, viz., as ballast. We produce our pipes and proceed to talk fish, travels, art, and of the ever present scenery. Having come so far as this to catch trout, I conclude, as did "Piseco," that I must while in Rome do as the Romans do if I wish to save my reputation; and noticing Kimball slipping on bait I follow suit. This on, the queen as stretcher seems to suit, and I gather in the trout. Out of one pool I take five, the heaviest ¾lb. and the smallest about ¼lb. See Kimball standing on that great flat rock which obstructs the middle of the river. He fishes the pool below and the rapids on either side, then concludes to cross to that tail race. He must jump to that dome-shaped rock about halfway across and a foot under the rushing water, and then leap to the gravelly shore. The water below is about 10ft. deep, that on the right and above is about 4ft. and going like a quarter horse. He pauses a moment and then jumps. That rock was slippery, and he slid with a splash into the shallower water with full pockets. I lean against a rock and laugh. The roaring flood and his deaf ears defend his sensibilities, and he does not look backward. "Let him that standeth take heed lest he fall." My turn soon comes, when I slip and fill my boots. That was the longest and most wearisome four-mile journey I ever tramped. The basket grew heavier every hour, my arm grew tired, my ankles were bruised and my boots weighed a ton. But we had over fifty good trout. Kimball was disappointed. A few days previous he had caught 8lbs. alone over the same ground. But trout are a "precarious" fish.

At the house we found "Doc" N., who had been feeling badly all day and took no interest in fish or fishing. After a time he wandered up to Strawberry Hill and returned with a handful of strawberry stems and the luscious fruit hanging from them. K. and I eagerly devour them. "Doc" said he had had all he wanted. Dr. H. and Guy soon returned with about twenty-five fish and the whole catch are readily cleaned and we await supper. Jim Osborne returning from the "listing place" concludes he will see what he can do in the "aidge of the evenin'." I give him some flies and he departs.

Before supper is announced he walks in with eleven. More trout, fried bacon, soda biscuit, hot corn bread, coffee and milk. More fish talk, hunting talk, anecdote and smoke. Jim says there is an abundance of bears in the mountains. When he kills a mutton on the mountain the great gray wolves come prowling around for fresh meat. Deer are not plenty but can be shot. But turkeys, ruffed grouse, quail, fox and gray squirrels "till you can't rest." Meanwhile "Doc" has retired and Guy follows suit. Soon we all turn in, Kimball in a trundle bed very near the boys' bed, Dr. H. and I in the other bed in the opposite corner.

The morning found us too sore and lame to attempt any fishing before our team should come for us. We must reach home that night, as the following day was the Sabbath. Doc stated his ability and readiness to go fishing. The rest, even to Kimball, demurred. We packed up and waited for the wagon. Fearing our team would be late in reaching us and delay us over the Sabbath in Waynesville we decided to walk down the road and meet the wagon and so save what distance we could. Jim furnished a horse, and tying our grips together they were slung across the saddle and Guy was seated on top to direct affairs. Jim Osborne accompanied us to the listing place. We bade good-bye to Kimball with regret. I fancy our coming was a pleasurable break in the monotony of his daily round of fishing, eating and sleeping. Two miles down the road we met our conveyance, transferring our baggage and bidding Jim good-bye we are soon seated and ordered Jehu to drive on "right smart."

Dr. H. and Guy both being silent an unusually long time I was informed by Doc in a half malicious manner that the Doctor had been trying to smoke some freshly cut plug and after burning half a pipeful he concluded he didn't "enjoy smoking this morning, nohow." Guy sat with Jehu, Doc and I on the middle seat, while the Doctor, who weighs 200lbs. endeavored to make active those heavy rear springs. He couldn't accomplish it. It was very amusing to see him brace himself for each anticipated shock, only to be bounced around like a pea on a hot griddle.

We enjoyed the fishing, the scenery and each incident of the trip. Our total catch reached 150 trout. Surely it is not all of fishing to fish, else the pleasure of pulling fed fish from one's private pond should be the acme of sport. No, the rushing water, the rocks, the trees, the flowers, the birds, the floating clouds, the clear sky, the wealth of foliage, the lofty mountains and the solitude even—each and every one contributes its share to the full measure of the angler's pleasure on a fishing trip.

There are several streams in a radius of fifty miles of Asheville where good fishing may be had at the right time, according to reliable information. On the headwaters of the romantic Swaunawoa, on the Ivy, the Richland, the Catalouche and the east and west forks of the Pigeon.

Space fails me in which to mention the beauties of this mountain region for the tourist and health-seeker. The malarious, the asthmatic, the sufferer from catarrh or pulmonary affections, the rheumatic, the "played-out" business or professional man, and even the healthy sight-seer should come and behold and enjoy for himself.

P. P. Staunton.

MY FIRST TROUT.

I FREQUENTLY see an account of the first deer or bear somebody killed, but I do not remember reading of anybody's first trout; so I am going to tell how I made my first capture in that line. I warn you fly-fishers to shut your eyes and ears to this, for it was all done with bait. It was a long time ago and I had never heard of rods nor anything connected with them except the hook and line; but of course this will be no excuse to the fly man. If it will be any satisfaction to him, know there that I now use nothing but the finest tied flies and a reel that you can hear sing, when I am so lucky as to hook anything heavy enough to make it sing, above the roar of the rapids. And my heart is made sore by scoffs and fears of the small boy who sits in judgment and, when I make a "fly" cast that don't cause Father Izaak to turn in his grave, offers to bet me that I can't do it again, or when I deliberately reel the lord of the pool in and the rod don't break as he predicted, and I am so reckless as to call his attention to the fact, he vulgarly turns up his nose and says anything would hold that little thing, and expresses surprise that from its small size it was able to bite at all. These things all go to make up the fly man's troubles, but I bear it patiently. But to that trout. It was caught long, long ago in a certain river where I expect to catch a good many more.

In the fall of the year the salmon are on their spawning beds and the sea trout or salmon trout follow them up to eat their eggs and later to spawn themselves before going back to salt water. During this season we who "loved the gentle art" were in high glee, but suffered one very disagreeable drawback; that was, that to insure a good catch we had to be at the river by daybreak, and, as we lived a mile distant, this forced us to leave our beds at a most uncomfortable hour. At this time I had seen but seven sunny summers sandwiched in between as many winters, and my horror of this early hour of rising would have done justice to a person of more mature years; but I generally managed to be on hand.

There was one favorite place known as the "big log," where the water had made quite a hole around the mass of roots and drift at one end, where I could generally be found trying to beguile the minnow out from his retreat with a small bunch of salmon or trout roe on a No. 2 hook fastened to a cotton line, attached in turn to a clumsy willow pole. The log had something about it that struck my fancy that I could never account for, unless that it was so slippery that it was almost impossible to stand on it. I would get up on it and balance back and forth until steady, then make a cast, and then be out of balance again, and see-saw around with my bait part of the time in the water, with the minnows madly chasing it, and then up in the air dangling in front of my nose. Finally I would get settled again and some thoughtless minnow would be reckless enough to take hold, and then, with a jerk and splash, I would be struggling up to my neck in the water, for I never succeeded in maintaining my place on the log after a vigorous jerk. The next thing was to creep off to the fire and try to dry myself and get worms, and declare for the hundredth time that I never would come fishing again. This scene was gone through almost every morning, until once on a time a big trout took up his quarters under the old log.

I came down as usual, clambered up on the log and went through the usual contortions in getting position, threw in bait, and was standing there cold and sleepy, when presto! jerk! splash! snap! and the water boiled and foamed around me, for I had fallen in, as usual, and a monstrous trout came to the top and flurried and jumped and threw the spray like a young Niagara. The "pole" had snapped at the first vigorous jerk, but luckily the line had been too long, and I had given it a turn around the tip and tied it back near my hand, so the fish was not loose. He took a run out into the swift water, and when the current struck him almost dragged me out, and I really think I would have held on if it had been a whale. He next took a turn up stream, and by that time I had begun to get my senses back, and started for shore pulling and tugging with all my might. Finally he floated into the dead water, lying on his side and showing his bright red markings, that to me looked prettier than if it had been pure gold. I pulled him ashore and raised a whoop that brought the other boys who did not know but what I had managed to get out in deep water and was drowned. There he lay gasping away his life, and as for me, I was the high hook of the season. He was 22in. long, and as fat as butter. And wasn't he a beauty with his glistening sides throwing off their shining colors. A section of the rainbow would have paled by his side, had I been the judge. And those spots, how they did shine out like stars in the sky. Surely the trout had never been taken out of water that was his peer.

After all the boys had taken a look and reluctantly admitted him to be the prize catch, I proceeded to dress him,

thinking all the while what a show I would make when I carried him home.

But, alas! pride had a fall. There was a band of hogs hanging around there, which lived on the salmon we speared to get spawn for bait, and if we were so thoughtless as to leave any fish lying in their reach, with one swallow they would put them where they would do the most good—to the hog. Dressing my fish I laid it down on a piece of board and was warming myself by the fire, when I was aroused by somebody shouting, "Run! run! the old sow has got your fish." I lost no time getting there, but, alas, it was too late. She had eaten all but the tail, and she grabbed even that and made off into the willows, and that was the last I ever saw of my fish. There is a crowning joy in every life and why not a crowning sorrow. I passed through both mine that morning.

I declared war against that hog right there, and ever after, no matter how well the minnows were biting or how comfortable the fire felt, I always had time to "heave rocks" at her just as long as I could see a bush shake.

I had cut the length of that trout on the big log, and whenever the boys thought they had a big one, I would march them up and have them measure it, and if it did not come up to the standard—and none of them ever did—I lost all interest in that one.

A few years ago I re-visited the old fishing place and found that a freshet had carried the big log off, thus blotting out all the record of my first trout. RED FIN.

UMPQUA FERRY, Oregon.

AMERICAN ANGLING LITERATURE.

THE history of angling literature in America is not difficult to trace for one who has clasped hands with those who were sponsors at its christening, and has had the good fortune to know personally almost every author of note since the era of angling books began; but to do full justice to each one, and to apportion to each the part he has borne, and the good he has done, is a difficult task, likely to become invidious. There are many exceedingly valuable contributors to the general fund of information in the several departments of ichthyology, who do not appear as authors, and there are comparatively few authors who write on the basis of their own personal observations and experience, trusting rather to the statements of accepted authorities to insure accuracy to their publications, and give them the requisite backbone. My preference would be not to laud the popular author so much as to designate such as have been able to contribute anything at all to the sum total of knowledge, and to an intelligent comprehension of the fishes of the country. There was a time when a printed volume was the emanation or expression of a mind which was master of its subject, and its opinions were entitled to respect as those of one speaking by authority, and not as the scribes; but, nowadays, well—as Joel Penman pertinently remarks, "Any fule kin rite a buke!"

There is no end to the literature of angling. One is amazed at its redundancy. Every one who goes a-fishing must needs tell of it in the sporting papers, if not in more pretentious publications. Their manifold collective utterance are like the chattering of blackbirds, joyful but vapid; yet they include a fair proportion of monographs and random field notes, which in the aggregate form an exceedingly valuable compendium of ichthyological research. Much of this class of materials has already been collated and compiled by the collaborateurs of the Smithsonian Institution into several illustrated quarto volumes entitled "Fisheries Industries of the United States." The full statistics of the past having been brought down to date and the work thoroughly systematized, it will be prosecuted to the end of time, as long as fish swim and Congressional appropriations can been voted for collection and printing. The steps progressive toward the ultimate accomplishment may be partially outlined in the brief synopsis which follows:

In earliest Colonial times, the reports sent to the home governments from New England, Virginia and Florida included a fair description or enumeration of the ichthyofauna of the Atlantic and Gulf coasts; and as the population gradually spread toward the Ohio River and the Great Lakes, interest was continually kept alive by the multiplying forms which were discovered. Angling was sometimes practiced by gentlemen of leisure, as we discover from a musty little volume printed in Philadelphia in 1830, and most interesting it is, too—which gives the "Memoirs of the Schuylkill Fishing Club" from 1732 to 1830. Such a diary, extending over a period of nearly one hundred years, must be without a parallel in any land. The subsequent occupation and development of the country opened out an immense and abounding field for the angler and his inseparable associates, the commercial fisherman and the naturalist—a fact which Englishmen, who are always foremost in such matters, were not slow to discover and avail themselves of. British officers stationed in the provinces were able to enjoy exclusively the delight of the Canadian salmon streams for half a century at least before the unsophisticated settlers or their neighbors in the States were even aware of their existence. Quietly they tossed the "Kippurns." or what-not, into the sequestered pools of a primitive wilderness, and were not envied or disturbed, because, forsooth, their sports were not appreciated or understood. This anomaly of tastes and pastimes can be explained. Up to forty years ago Americans were too busy to while away time in fishing. They had not accumulated the "piles" which now make millionaires as plenty as blackberries; indeed, they hardly knew a salmon or trout by sight. If they wanted sport they naturally turned to hunting. The gun and the chase were incidental to their every day associations, and employment of subduing the forest and driving pioneer stakes. And so it happened in respect to the primitive literature of this new country that many topical books appeared on the dog, gun and saddle, bear hunting, trapping, buffalo running, Indian fighting and the like, but none at all on angling.

Once in a while a contemplative author like Thoreau, sauntering by the river side, or Willis, from "Under a Bridge," or Prime in "Owl Creek Cabin Letters," or Ik Marvel, wrapt in "Reveries," would lead us unsuspectingly into secluded by-paths of the forests, discanting piously upon the silvery denizens of the brooks in a fashion to prompt an occasional vacation rambler to go a-fishing. But these new men (*novi homines*) in the days of their novitiate never aspired to higher game than the "trout in speckled pride." The way in which they held him up to tender recognition might make a sentimental person wish to fondle, but never to skin and eat him. Prime, good master, was adolescent then and callow, but he was a born angler, well versed in the mysteries of the brooks; and, as soon as ever his heart was hardened and he ceased to regard the beautiful things as pets, he began to write bravely of kidnapping them from their fluvial homes and "playing them scientifically," and so has continued to write for forty years, though he has never risen to the higher plane of the salmon. I suppose that the undisputed pioneer of American angling literature, pure and undefiled, is Charles Lanman, who came as one crying in the wilderness, as early as 1848, when he printed (in London) his "Adventures of a Salmon Angler in Canada." The same book was issued contemporaneously in America as a "Tour of the Saguenay." His subsequent wanderings by lake and river were woven into a double octavo volume of most entertaining sketches, under the title of "Adventures in the Wilds of America," printed in 1856. He has no peer among his countrymen. Surely it was no kid-glove excursion to go salmon fishing here before the era of railroads, clubs, culexifuge, and all that, though the chap who daintily airs his latter day experience seems as much of a "feller" as the man who took it in the rough before the lad was born. No doubt the memory of the Rev. John Todd has passed away with his corporeal taking off, yet he was a companion of Audubon, and wrote "Long Lake" in 1850, a volume which embodied the first oracular utterances from the Adirondack Woods. And there was the Rev. Dr. Bethune, who edited a volume of Walton in 1840, or thereabouts; he knew the intricacies of the Maine forests and the haunts of the mysterious landlocked salmon for forty years before the scientists determined what it was. It seems but yesterday since I knew them all—indeed, Lanman and Prime are still living and hearty.

Although I write of pastime, I would not detract one iota from the meed of praise which belongs to those progressive men in the early decades of the present century, who blazed a warpath into the fallow field of New World icthyc science. There were Lewis and Clark, partners in exploration beyond the Rockies, who discovered the mountain trout and whitefish in 1809; Rafinesque, whose synoptical report of the "Fishes of the Ohio River and its Tributaries," printed in 1820, was the first American publication in the interest of ichthyology; Dr. Kirtland, who followed with his "Fishes of the Ohio," in 1828; Professor Edward Hitchcock, on "Massachusetts Fishes," in 1835; Storer, on the "Ichthyology of Massachusetts," in 1839; Agassiz, on the "Embryology of the Salmon," in 1842; De Kay, on "Fishes of New York," admirably illustrated with plates, in 1842; Storer, on "Fishes of North America," in 1846, an ambitious, but really comprehensive work; and, finally, a general treatise on "Fishculture," by Theodatus Garlick, in 1848. These admirable text books furnished a sufficient ground work for intelligent prosecution of the study, and no doubt stimulated the pursuit of angling, for thenceforward angling books appeared in gradually increasing numbers, the field broadening as the area of the country extended. English publications which had hereto served as the angler's *vade mecum* began to be discarded, or they were revamped and adapted to what gradually came to be discovered as American wants and American ideas. Such were Smith's "Observations on Angling," printed in 1833; the "American Angler's Guide," printed in 1846; Bethune's "Walton," in 1848; and Frank Forrester's "Fish and Fishing," in 1849. The first strictly indigenous native American book was John G. Browne's "Angler's Guide," which appeared in 1849. It marked a new era. But Browne was only a poor tackle maker, without classical education or social position, and how should he be expected to know anything? The critics rated him unmercifully. Nevertheless his was a very complete and trustworthy guide to salt and fresh water fishing for the time and well illustrated. Yet we are surprised to note its deficiencies. There is not a word about Canadian salmon, or grayling or striped bass, or the fifty other principal kinds of fish which afford sport now. Fly-fishing itself was then a new art. Up to 1845 it was scarcely known and little practiced. Americans never knew how to fish for salmon until 1850. Lanman was the only angler among them who had been initiated, and he was not proficient. A meager twelve lines on page 80 is all that Frank Forrester devotes to salmon in America and Forrester was thought to be an advanced writer. But he taught the natives English only, and we should still have been calling our pickerel a jack, and our trout fario, and our reel a winch, and our waterproof a mackintosh had we stuck strictly to the letter of his instructions; nay, we might have been fishing yet for barbel, tench and bream, which do not exist in our waters at all.

I have said that Englishmen were foremost to discover the unusual attractions of our virgin salmon streams. So also they were the first to divulge them to the world in books. One by one those who had fished began to reveal the secrets of the primeval penetralia, into which they had ventured years before. "Chiploquorgan," by Capt. Dashwood, and "Forest Life in Acadia," by Capt. Hardy, both British officers, printed in 1858, are incomparable sketches of scenes which no hearthrug knight of the quill would dare attempt to portray. "L'Acadie," a London book, printed in 1849, is a delightful idyl of the Canadian woods. Latrobe's "Rambles in North America" (1835), contains something about fishing. Though of material essentially American, these books were English in sentiment and emotion. They lack the *amour propre* of one who "treads his native heath." Long we have waited for such a book, but I doubt if it has ever yet been written.—*Charles Hallock in London Field.*

CARP ON THE FLY.—St. Paul, Minn., June 22.—Can you inform me how the German carp can be taken with a hook and line? There are a number of lakes in this State where they are quite numerous, but no one has been able as yet to take them out. Any information you can publish in your paper will be read with great pleasure by the many readers of it here.—E. S. P. [Carp have been taken with light fly tackle. In our issue of Aug. 19, 1886, "Big Sandy" reported successful fly-fishing for carp in Kentucky with fluttering flies, colors not given. They can also be taken with grasshoppers, bread crumbs, etc.]

LAKE HOPATCONG.—The fishing in this New Jersey lake has greatly improved with the past five or six years, largely owing to plentifnl plantings of fish. Our correspondent "Jacobstaff" was there last week and had some good sport taking black bass, pickerel and perch. One of the bass weighed over 4lbs.

BIG TROUT.

Editor Forest and Stream:

Referring to the several weights of monster trout on record and authenticated, as shown by your columns, the largest of which appear to belong to the Rangeley waters, I beg to state that I have a memorandum of a trout taken in 1871, which reads as follows:

"July, 1872.—Henry D. LaRonde, Nepigon House, Lake Nepigon speckled trout by balance weighed 12lbs."

I got Mr. LaRonde, who is the factor of the Hudson's Bay Company's port at Nepigon Lake, to write this statement and vouch for its truth in presence of several witnesses. My impression is that the fish was taken at the mouth of the Agawa River, which empties into the lake. So far as I know and have seen, the trout of Rangeley waters do not compare with those of the Nepigon for beauty, whatever they may do for weight. I remember very well when the first lot of trout was brought from Rangeley by Mr. Allerton, some twenty years ago; it may be longer. They were spread out on a waterproof blanket in his rubber store, near the corner of Broadway and Fulton streets. They were a gross-looking lot, quite immense and unprecedented for size, and very red in the belly, distended with spawn and protuberant. I looked them over in company with Genio C. Scott. These were October trout.

Rangeley fish taken in June are shapely, but those caught in October are impressive only for their size and ugliness. Nepigon trout being taken in July are at their best for comeliness, and it seems to me they are at all times the brighter and more attractive fish of the two, clipper built, with a cleaner run, as your yachting editor would say. The Nepigon water is by far the colder of the two, and I think the more transparent.

Mr. Page's big fish made a wonderful excitement at the time of its capture and exhibition, which has hardly subsided yet. There are incredulous people who will not even now accept the testimony of their own eyes as to its being a simon pure brook trout. They view it, in its case, "as through a glass darkly," and remain unconvinced. I do not see why this specimen should not head the record until some larger and better one establishes its precedence by actual presence in *propria persona*, either alive or skinned and mounted. In 1873 Mr. Colin Campbell, now of 42 Wall street, exhibited a dozen 5 to 8lb. trout at the tackle shop of Andrew Clerke & Co., in Maiden Lane, which he brought from Nepigon River in good order, their average weight being altogether above that of Allerton's Rangeley Lake collection. There are certain localities on the Nepigon where heavy fish run, just as there are at the Rangeley Lakes, and my belief is that they attain a size fully as enormous in the one as in the other. It would be easy in these days of Rex Magnus and other antiseptics to ship specimens from long distances, and science might be served by a very little effort on the part of those whom chance puts into the possession of phenomenal fish. CHARLES HALLOCK.

Editor Forest and Stream:

Referring to the size of trout caught in the Adirondacks in your issue of June 23, the weights 5¼ and 5½lbs. are given as the heaviest weights actually caught. In July, 1881, I saw a trout caught under the slide of the "old saw mill" on the Oswegatchie River that weighed 5lbs. 13oz. by three different scales. The fish had not ceased flopping when we reached the spot, and we took his weight before he had time to lose much. The fish was caught by Mr. Mills, afterward keeper of the State dam at Cranberry Lake, and by him sold for $2 to Mr. James Smith, of Hermon, who with George Sawyer, my guide, can substantiate this statement. Had there been any way to send him to Syracuse I should have sent him to Uncle Rube Wood, who had caught two very large ones in the same spot two years before. A. AMES HOWLETT.

SYRACUSE, N. Y.

TROUT IN MAINE.

Editor Forest and Stream:

Please find inclosed score of brook trout (*S. fontinalis*) for three days in June, 1887, at Kineo, Moosehead Lake, Me., which may be of interest to your readers:

June 14—Saved 8; total weight, 16¼lbs.; largest, 4¾lbs.; next largest, 3¾lbs.

June 17—Saved 6; total weight, 10½lbs.; largest, 3lbs., and next in size, 2¾lbs.

June 18—Saved 7; total weight, 9¾lbs.; largest, 2¾lbs.

The above is a score of the three best days' fishing done by the undersigned. All the fish were taken with the fly, casting with an 8oz. 10½ft. Leonard rod. A cast of three flies was used—silver-doctor, grizzly-king and scarlet-ibis, the ibis being the hand fly. The grizzly-king proved the most killing. Flies tied on Nos. 5 and 6 sproat hooks. Much of my success, as also that of the past four seasons, is due to my faithful Indian guide and friend, Thomas Dana. N. A. PLUMMER.

Last evening at Quimby Pond, five miles from Rangeley, Col. John B. Marble, proprietor of Rangeley Lake House, and Capt. Robert Irvine of Galveston, Texas, with Geo. Thrasher as guide, caught with rod and fly sixty-eight trout that weighed 40lbs., between the hours of eight in the evening and twelve midnight. It was a bright moonlight evening. GEO. H. HAYNES.

PHILLIPS, Me., July 1.

JACK PARSONS, an old fisherman on Lake Bomoseen, Vermont, is responsible for the following story: While fishing one day he had an old brown stone jug that he was very fond of in the boat, and when taking a nip it fell overboard. A long time he mourned its loss and would fish for hours on the spot where it had sunk. Some years afterward, while anchored on the ground and as usual fishing, he had a bite and pulled up twice, but did not catch the fish; the third time he hooked it, and, as he expressed it, thought he had the bottom of the lake on his line, but at length managed to pull up the line, and, behold, it was his jug, but with a fish inside. When young the fish had been attracted by the whisky in the jug, entered the mouth, and lived on the spirit until it was too large to get out. Three times he had dropped his line in the mouth of the jug, catching the fish the last time. Some of the liquor still left he poured out and drank, and then taking the jug on shore he made a fire, cooked the fish in its own juice and whisky flavor, and ate it with a corkscrew.—S.

EXPERIENCE WITH TACKLE.

Editor Forest and Stream:

Seeing in a former issue an article on reels, I have taken the liberty to write you on a subject which has long been in my mind, and which I am afraid would never be satisfactorily determined were it not possible to get other people's opinion.

I have thought many times, both while reading and fishing, why do not more anglers use the automatic reel. I have seen articles on various kinds of reels, but no one has anything to say either for or against the automatic. Perhaps the best way to call out the different opinions is to relate my experience with it.

When getting an outfit last spring, I got a reel with both click and drag, and after using it once or twice came to the conclusion that I did not like it, and having seen something of the automatic, I decided to change the one I had for one of the latter kind. When it came it seemed so heavy and cumbersome that I was prejudiced against it, but gave it a trial as soon as possible. The place selected was a small pond where the fish were not large, but were very plenty, and sometimes gave very good sport.

After having anchored the raft I proceeded to test the whole rig. The rod was a light lancewood 10ft. long, the line 45yds. enameled fly line, the flies cowdung and stone fly; but after getting the rig strung up I was so disappointed with it that I was about ready to give up and go home, the whole thing was so heavy and cumbersome; but my friend persuaded me to give it a fair trial.

I can not cast very well at any time, but the first cast I made there took my companion's hat out into the pond, at which he made a few eloquent remarks relative to my style of casting; after this, nerved by the stinging sarcasm and forcible expressions which my friend used, I succeeded in doing better and a last got the hang of the thing. The weight was so great and so much below the hand that it seemed very unhandy at first, but after a while I found I could do better than ever, and after casting about half an hour, I had a rise and struck a trout that would weigh about half a pound. I raised the brake and the spring was so strong that it brought the fish to the raft so quickly that he came near making his escape by being entangled in the logs.

I had two or three rises, and soon found that if I wanted any fun fishing I must uncoil the spring, as the reel was doing all the fishing. After some experiments I got the tension just right and then had some fine sport. All to be done after the fish was hooked was to keep the brake raised and the reel took all care of it. If he chose to run he could have all the line he could unwind; if he tried to sulk, there was that steady strain on him, and no matter how he might tear around he could not get any slack, but could be brought to net at any time.

After catching about 20lbs. we came home, both very much pleased with the reel. Since that time I have used it on both quick and dead water, and found it to work splendidly in every respect.

Last June I took it to the Rangeley Lakes, and although the fishing then (about the 20th) was not good, I had some fine sport both at Middle and Upper Dams. While fishing one morning on the boom walk at Middle Dam, I struck a fine trout, and to test both the rod and reel, I gave the fish the line and let him have a good start. He made for the gate, and seeing that he was going through I gave him the butt. As I did so I thought, "Good-bye, old rod," but to my surprise the rod did not snap but stood the strain perfectly. The trout had got down the sluice as far as the gate when he began to feel the spring in the reel and in the rod. He stopped, and I could feel the line quiver as he strove to gain his ground, or rather water; but opposing forces were too much for him, and little by little he came to the top, and at last broke water and came skipping back almost into the landing net. The current was so strong that I could not hold him with one hand, and he got started again; but after a few moments he gave up and was drawn into the landing net, as handsome a fish as ever came into the air. For fully twenty-five minutes that trout, aided by the swift current, was struggling against the rod and reel and at last had to give up, and all the time I had not aided the reel, but was determined it should be a test case between the fish and current on one side and the rod and reel on the other.

One morning a guide named Will Sargent came up to camp and told Capt. Farrar and others that he had hooked a very large trout above the dam; it was, he thought, the largest one he had ever seen. He was standing on the boom walk and was not very far from the gate. The fish started to go down the sluice and Sargent tried to stop him, but his line broke and away the fish went, taking a number of feet of line with him.

The next morning I went down on the apron of the dam, and putting on a minnow, cast into the little eddy, by the side of the sluice. The bait had not been in the water more than a minute when a very large trout took it and started for white water, and quicker than it takes to tell it he had nearly every inch of line out and I was holding the butt of the rod with both hands, while the tip was nearly in the water. The strain was tremendous, and it did not seem as if the fish could hold it long, and I knew I could not. But at last, when my arms were nearly pulled out of my shoulders and it did not seem as if I could hold on another minute, the line began to wind up and I knew that he was as tired as I was and was coming in. After he left the white water and struck the eddy I could see him, and I give you my word he did come, but not too quick for the reel, for when he was lying in the still water near the bank the line was all in and not a foot of slack out and there had not been any at any time.

I was alone, but there were two gentlemen across the stream whose attention I tried to attract, but the water made so much noise and the spray was so thick that all attempts were failures. I tried to get the net under him alone, but could not reach him, and there was no way to reach the shore except to go back upon the dam and around the end, so I had nothing to do but to wait for him to make a move. I did not have long to wait. Soon he began to move, and move he did. I thought I had seen fish when they seemed to have urgent business in some other place, but this one had more business than "a man on the town;" he was in three or four different places at once, and I was so excited that I could not have done anything to help capture him; but there was no need of it, for the reel was doing all that there was to be done. Back and forth, up and down the pool he ran, trying to get slack enough to snap the line, but not a foot did he get, for the reel had the line wound up as soon as the fish was done with it. It was a tremendous fight, such a one as I never thought possible for a trout to make, and I have caught them for the last twenty years. He seemed determined to get away. Sometimes he would throw himself out of the water, then down to the bottom he would go; and then, as if he had thought of something new, would start for the foot of the pool, only to be turned and brought back, contesting every inch of the ground.

At last the line came in rapidly, and I knew something was the matter, the rod straightened out and the reel burned as it took up the line, and I knew it was all over. The fish was gone, the fun was over. I had lost my golden opportunity of getting one of the big Rangeley trout. My vacation was spoiled, and I was going home as soon as I could. That was the way I felt as I took my rod apart, and in fact all that day. It seemed as though I could never fish any more, I had lost my good luck and it was no use trying.

Upon examination of the line I found that the hook had pulled out of the snell, which was a double one, having been turned around the hook, cork-screw fashion. This same thing has happened to me several times, and always when I have had large fish on, and I have come to the conclusion that dealers can not be too careful how the hooks are snelled.

From the time the trout took the bait until the line came back was nearly an hour, and all this time the reel had kept the line wound up in good order so that there was not a foot of slack nor a kink, nor anything to trouble or bother me; and a one-armed man, could he have held the rod, would have had as good a chance of securing the fish as I did. CHAS. D. CHASE.

RIGHTS OF POND OWNERS.

THE right of pond owners to take fish from their ponds in the close season has come up in Indiana. Mr. W. C. Harmon writes to Mr. Enos B. Reed, fish commissioner of Indiana, as follows: "Sir: As you are the fish commissioner of the State, I have a few questions to ask in regard to the fish law, and which I hope you will be kind enough to answer. First—Has the State legal power over private property that overflows and leaves fish in ponds and sluices on their land? Can the owners of such lands take seines and nets and catch the fish that remain in said ponds and sluices without violating the State law? Please state what streams and tributaries in the 'Pocket' the fish law reaches?" To this the commissioner replies: "An owner or occupant of lands most assuredly has the right to control them, and if the State streams overflow, and fish get into private ponds, the fish are lost to those streams and become to all intents and purposes the property of the owners of the ponds, who have the right to do what they please with them—appropriate them to their own use or give them away to whomsoever they please. A man has the right to fish in his own waters in any way he chooses. The fish laws are applicable to all public streams of the State—lakes included. Send a two-cent stamp for the codified fish laws of the State. Address State Fish Commissioner, Indianapolis, Ind."

If Mr. Reed be correct in his interpretation of the law, there must be in the statute some provision expressly conferring such a right, or providing that it be not taken away. It has been repeatedly decided in the courts elsewhere, as in New York, that the State does have control over private waters. In the famous Phelps-Racey case it was settled that the owner of a private trout pond could not lawfully take trout from the pond in the close season.

On a farm near Pennellville, New York, are three beautiful lakes, in which the boys have done their fishing for years. The lakes always swarmed with fish of the common kind. Five years since a city gentleman purchased the farm on which the lakes are located, posted notices forbidding fishing, and proceeded to stock the lakes with bass. We understand that the State did the stocking, and as some four years have passed since the fish were put in, the lakes now afford the finest fishing in the county, judging by the strings carried by some of the city friends of the owner. If the State stocked the waters can we be prevented from catching the fish, although it is impossible to reach the waters without trespassing, as they are surrounded by his land? What would the damages amount to if we were caught fishing in these waters, providing it could be proven no damage was done but the catching of the fish? PENNELLVILLIAN.

[The law on the subject is as follows, Chap, 243, Sec. 16, Laws 1885: "Any person who shall knowingly trespass upon inclosed or cultivated land, for the purpose of shooting or hunting any game protected by this act, or shall take any fish from private ponds or private streams not stocked in whole or in part by the State, or after public notice has been given by the owner or occupant thereof, or person, association or corporation hiring or leasing the exclusive right to shoot or hunt thereon or fish therein from the owner or occupant, as provided in the following section, shall be liable to such owner or occupant, or "person, association or corporation," in addition to the actual damages sustained, exemplary damages to an amount not exceeding twenty-five nor less than fifteen dollars."]

HATCHING THE WALL-EYED PIKE.

BY JAMES NEVIN.

[Read before the American Fisheries Society.]

THE eggs of the wall-eyed pike cause more trouble while undergoing the process of hatching, than those of any other of our better class of fish, owing to their great adhesiveness. If not attended to properly before being placed in the hatching jars they will stick together in bunches and float off through the outlet from the jar, and should screens be used to prevent this, they will be blocked up and the eggs carried off with the overflow. In our Milwaukee hatchery we have been raising pike fry for the last three seasons, and after trying various plans to counteract this evil, I have found the following to answer most satisfactorily.

As soon as impregnated the eggs are placed in tubs or some such vessels, and kept in constant motion by gently stirring until they have become hard, usually about five hours after being taken from the fish. They are then placed on cotton flannel trays and shipped in boxes in the same manner as whitefish eggs. As soon as they are received at the hatchery they are put into tubs, each tub to be not more than three parts full of eggs; they are then gently stirred with the hand until thoroughly loosened or separated. Immediately alongside should be a screen about three inches deep and with holes just large enough to allow the egg to pass through. This screen fits into a tub of clean water and the eggs are dipped into it, and by gently shaking the screen they all pass through. By this means we know that each egg is separated from those surrounding it. I then take some of the sediment from the bottoms of the supply tanks and mix thoroughly with the eggs. A certain amount of this sediment adheres to the egg and prevents the "bunching" when placed in the jars. After carefully following this plan the eggs can be placed in the jars, and if given a sufficient current of water to keep them moving very gently there will be no danger of them floating off; nor do they require continual watching for the first forty-eight hours as in the old method.

They take from fifteen to thirty-five days to hatch, according to the temperature of the water, the colder the water the longer the time required. When the fry are seven or eight days old the little fellows will begin eating one another, and hundreds of them can be seen swimming in the tanks, each with a fish in his mouth that seems as large as himself. A small percentage of loss can be put down to this cause. We usually ship 50,000 in a twelve-gallon can, and find it necessary to use ice to keep the temperature of the water sufficiently low for them to stand the journey.

If 50 per cent. of the eggs can be hatched it can be considered very fair success. My opinion is that the general average is lower, although one case that came under my notice very much exceeded this. In the instance I refer to there were two small shipping boxes of eggs sent to a hatchery and fully 75 per cent. were dead before leaving the spawning grounds, and the man who took the eggs told me that the rest of them died when put in the jars, and there were no more pike eggs sent to that hatchery that season; yet, on reading the annual report for the same season's operations at that hatchery, I saw that ten millions of wall-eyed pike fry had been distributed! Men claim that they can hatch 50, 75 and even 90 per cent. of the eggs of certain fish; but here is a case that calls for special attention—several hundred per cent. from dead eggs. Why each egg, even if dead, must have brought forth twins, or triplets, at least. I think it would be a capital idea for all of us that are engaged in pike culture to get our eggs from that locality for the future, and we should work hard to get very stringent laws passed protecting the locality, so that such a very prolific and peculiar class of fish should not be killed or destroyed.

There is no doubt that such deception as this injuriously affects the science of fishculture. The people of the country on reading or hearing of certain waters being stocked with thousands or millions of fry, as the case may be, naturally look for some beneficial result in the near future, and when no such result shows itself they are inclined to say that artificial propagation of fish is very much over-estimated, nor can we blame them.

During the season just passed we secured for our Milwaukee hatchery about 30,000,000 wall-eyed pike eggs, estimating them at 120,000 to the quart measure, and though as fine a looking lot of eggs as one could wish to see I do not expect to have more than 10,000,000 fry to distribute. These 10,000,000 will fill about one hundred of the applications we have on file, leaving nearly another hundred to be left over until next year.

The best breeding grounds in Wisconsin for this fish are Green Bay, and Fox River emptying into it. Last winter our Legislature passed a law preventing the killing, buying, selling or having in possession any wall-eyed pike from these waters weighing less than 1½lbs. A similar law protecting our whitefish in Lakes Michigan and Superior, and their bays, was passed, and I have no doubt that a very few years will prove the wisdom of these laws, as the fish will be enabled to reach an age and size that will make them useful as breeders and valuable as commercial fish. The main trouble hitherto has been that our lake fish have been caught when weighing a pound, and even less, consequently they had no opportunity of being reproducers of their kind and brought such a low price per pound that a fisherman could hardly make more than living expenses.

In conclusion I will give a brief summary of the fry that have been turned out and the number of applications filled in 1887 up to the present time, by the Wisconsin Fish Commission:

	No. of applications filled.	No. of fry planted.
Brook trout	212	2,980,000
Mountain trout	119	1,350,000
Mackinaw, or lake trout	...	500,000
Whitefish	...	31,500,000
Wall-eyed pike	67	8,800,000
Total	398	45,080,000

MADISON, Wis.

THE NEW HAMPSHIRE COMMISSION.

WE have the report of the Fish and Game Commissioner, of New Hampshire, giving the work done by them for the year ending May 31, 1887. The fish distribution in 1886 consisted largely of landlocked salmon and brook trout, which observation and experience has shown to be the best adapted to the waters of the State.

The work of the Commission for the past few years has returned very favorable and encouraging results. Protection in the breeding, or close seasons, in addition to largely increased number of fry planted, have done much to restock many waters nearly barren. Over 600,000 brook trout were distributed last year.

The establishment at Plymouth is in good condition, and the new plan in taking the trout eggs adopted by the superintendent, has resulted in a large saving of eggs. So far they have never been troubled with fungus, which in some places is so fatal to the young. The wanton destruction of small landlocked salmon in Hebron River, compelled the Commissioners to close that stream to all kinds of fishing for three years. That river contains the finest spawning grounds for these fish in the State, and it is from there that the supply of eggs is expected to be obtained.

The report of Col. Elliot B. Hodge, superintendent of the State hatching houses at Plymouth and Sunapee Lake, naturally gives a detailed account of the work. Six hundred thousand salmon were hatched and planted in the Penigewasset River in May at various points from one to twenty miles above Livermore Falls.

The number of young fish and eggs in the hatcheries for distribution in the spring of 1887 is as follows:

Penobscot salmon	500,000
Brook trout	600,000
Landlocked salmon	157,000
Lochleven trout, from Scotland	30,000
Saibling, from Germany	3,000
California trout	10,000
Brown trout, from Germany	5,000
Total	1,305,000

The question of the species to which the newly found trout in Sunapee Lake belongs is touched upon, and the Commis-

sioners think that it is an indigenous fish and not the result of a small plant of blueback trout from Maine, made in 1879.

It is recommended that an appropriation for a branch hatchery on Lake Winnepesaukee and for repairs and enlargement at Sunapee and Plymouth be made.

FIXTURES.

DOG SHOWS.

Sept. 1 to 3.—Inaugural Dog Show of the Pacific Kennel Club, at San Francisco, Cal. J. E. Watson, Secretary, 516 Sacramento street, San Francisco, Cal.

Sept. 7 and 8.—Second Show of the Fox-Terrier Club, Newport, R. I. Entries close Aug. 24. F. Hoey, Sec., Long Branch, N. J.

Sept. 12 to 17.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary.

Sept. 20 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. R. D. Whitehead, Manager.

Oct. 12 and 13.—Stafford Kennel Club Show, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Sept. 6.—Manitoba Field Trials Club Field Trials. Derby entries will close July 1; all-aged entries Aug. 1. Secretary, Hubert Galt, Winnipeg, Manitoba.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5123.**

THE DOG FOR BIG GAME.

IN passing all our canine families in review it is sometimes very difficult to adapt a use for the majority, although there might be a flourish to commence with, say, the bulldog. We might have read about it or imagined it, that this old English breed was useful to add in pluck and stamina to degenerated sorts. Then it might be well to consider who has tried it for the last quarter of a century, and the mind is not impressed with a sense of what is useful when attention is turned to mastiffs, St. Bernards, Great Danes, Newfoundlands, or even bloodhounds. Highly ornamental they are, it must be admitted, and grand companions, but for practical use what can be said of them? There is a great deal of sport for Englishmen in all climes, and every year fresh fields open up for the rifle and shotgun in distant shores; but with small exceptions very little work is found for dogs, and for big game nothing that belongs to our recognized valuable sorts have as yet been requisitioned. Every sort of hunting that depends on the nose is best performed by the foxhound, excepting, of course, working for feather, when the pointer or setter is the requirement all over the world. But a great many sportsmen to my knowledge have puzzled over the question of what would be the best dogs for India or Africa to pull down the largest species of deer and antelope, or to attack any of the feline tribe below the status of the lion and tiger. I have been interrogated a great many times on this subject, and have discussed the mastiff in believing him to be too slow for any sort of attack on a lively, active animal even if brought to close quarters. But how could a mastiff be got into action? as he could not travel fast enough to get there. A bloodhound would hang on a line far too long to be of much use even with deer in a jungle country; and the deerhound or the largest-sized greyhound is not powerful enough for elk or some of the other big deer tribes, and not fierce enough to tackle big beasts of a carnivorous nature. It is a puzzle altogether, as what is wanted is the weight and power of the mastiff combined with the speed of the greyhound and the nose and aptitude for order of the foxhound. If any one could breed such an ideal sort of animal as I am drawing a sportsman could start on the trail of any beast, run him to his lair by nose, stop his dog or the pack if the position was too strong, or run down by view if the occasion offered.

I thought a good deal about the Great Dane when that breed became popular in England, but several conversations with those more conversant with the breed than I am gave me but a poor idea of their scenting powers, and suggested also that when once roused to tackle anything there would be no getting them off. In fact, that in their disposition to go in for attack and hold they are bull-terriers on a big scale. Now, there is no greater nuisance than a bull-terrier in mimic sort of warfare, such as with badger or fox, as they are always attacking at the wrong moment, and in their excitement will often worry their comrades. They are the exact counterparts of a foxhound, as in full chase this hound can be stopped, and they can be so steadied that in running right into their quarry they can, when in numbers or singly, be checked instantaneously. This is one very important quality to be observed, and one it might be very difficult to secure in a Great Dane or any dog akin to him. The deerhound is more manageable, and from that source there is something important to be gained besides pace and activity, but nothing in nose. The lurcher teaches us the greatest lessons in these crosses—as the most killing poacher's dog is the cross between the greyhound and setter. In this combination is nose, pace, and an aptitude to be trained to hand, and there is nothing radical about the greyhound that would make him an impossibility to train in any way. By this means, therefore, two sorts that might fairly amalgamate are brought together, and a result for a purpose is obtained. I am rather dubious about the Great Dane and deerhound without other elements in the composition, but for real service something should be tried, as I will now explain.

During the last six years several Englishmen and Americans have settled under the Canadian Government on prairie lands that stretched away for many miles from the foot of the Rocky Mountains. There have been two millions and a half of acres let out in ranches during the last six years, and there are now more than sixty settlements or ranche farms in these districts. The mountains which divide this country from British Columbia are well stocked with deer of various kinds, and in what may be called bigger game still for the sportsman's rifle, bear and wolf. I have had a journey related to me very lately by one who walked over these mountains, and the wolves were in packs around him, kept off only by the fires he made during one particular night that was very perilous. These wolves come down and bother the settlers, not as yet in packs, but one now and again by himself harboring in the timber tracts or woods that are maintained for fuel and building materials, and coming out to pounce on a straggling colt or a calf that may offer him an opportunity. A ranche owner who has lived out there five years, and who is going out there again next month, assures me that these wolves would show splendid sport if the right sort of dog could be devised to run them. There are two sorts of wolves, he says—the bigger and the lesser—and the latter sort, he quite believes, might be bowled over by a brace of large-sized greyhounds; but the big ones are another matter altogether, and he considers, and I expect rightly, too, that one would beat a pack of foxhounds from any ranche in a straight line to the mountains. This would be from fifteen to twenty-five miles on an average, but a wolf travels very fast in a swinging sort of gait, and he never tires. Hounds running on his line, therefore, would be very likely beaten, excepting they were almost upon his back at start. My informant says that what they want is a very fast, stout hound, that would put his nose down if wanted, but one that could be lifted without any trouble, as a wolf is very quick in leaving his lair, and might be two miles off, though in view on open prairie, and then the plan would be to race to him on horses, to get the hounds in view. That stage reached, the hounds should be nearly as even in their stride as a brace of greyhounds, as the wolf always turns round and snaps as he runs, or would boldly attack a single hound and do the latter no end of damage; but four big, powerful hounds should bowl him over like a rabbit, and pin him before he could do much harm. It is considered that there should be four hounds at least for this business, but two couples would be still better. And now will any reader of the *Gazette* do more than I can do in giving this ranche owner—or, I may say, all the ranche owners—the correct advice as to how such hounds as are required should be bred?

It is really a trial test for the Irish Wolfhound Club. Can that body bring out the genuine article for the requirement? I do not feel quite sure of the cross that has been already tried between the Great Dane and the deerhound for reasons I have given above; but still it might be tried, as certainly there are qualities in the Great Dane that might befit him as an opponent for the wolf. Personally I am rather inclined toward raising up the old-fashioned stag hound from the foxhound source, and, at any rate, I think the foxhound element must be introduced. I am assured that, provided the required hound could be found, there would be a great demand for his services throughout all the ranche districts, as, besides wolves, deer come down from the mountains and settle on the farms at most times of the year, and would show great sport before powerful hounds. I will undertake to introduce my informant to any one who feels interested in this subject, and I should very much like to see some good spring from it, or from our large canine breeds, as at present their want of practical use is a great slur upon their characters.—*"Leatherhead" in Kennel Gazette.*

HOUNDS AND THEIR ATROCITIES.

MEN, as a rule, adore hounds: certainly a fox hunter. But the woman that likes them is hard to be found, and few there be that tolerate them even.

From my earliest infancy I have always heard the call "Shut the door or the hounds will get in." There is nothing they will not eat and nothing they will not dare to get it. They were continually plundering, even with all the care to shut them out. To steal seems to be an instinct with them. Even when they are well taken care of they will steal every chance they get. Stolen things are always sweeter to them, it seems. What I am going to tell will sound like a fable, certainly great exaggeration; but it is all honest fact.

I have often known them to scratch ash cakes out of the fire and eat them—seen them do it myself. Several times they took pieces of meat out of the boiling pot and carried them off—sometimes out of the pot hanging over an open fire on an old-fashioned crane, and sometimes out of the boilers on the stove. We have a puppy now that gets up on the stove and takes off the cooking bread. How they do them I cannot imagine, but they do all these things. Many and many a jar of milk have they destroyed, and several times when the mouths of the jars were small they got their heads hung, and, not being able to get them out, smashed the jars to pieces, but went around for several days with a collar of jar around their necks. Once one of them put his head in the coffee pot, and this being tin, could not break it, and could not get it out, so went around banging and banging in vain. Some one saw him and cut it off.

One summer, when we had no ice, I found that the bottom of my flower pit was very cool, and kept the butter and milk nicely, so we put it there, and all went well till one day one of the hounds, Rollo by name, a famous, or rather infamous rogue, nosed it out, and actually broke several panes of glass, went down and ate it up, regardless of my feelings in having my flowers smashed up, as well as butter and milk gone. We thought we'd not be conquered by a hound, so sunk a box, put a chain on it and tied it down with a leather string and moved my flowers back out of his way should he go down again. He did so, and gnawed at the leather string till he untied it, and again butter and milk disappeared. We were still unconquered though, and this time, in addition to fastening the box more securely, we put a tremendous rock on it to weight it down. Due as the night came he went down, and I know not but that he would finally have taken the rock off had not my brother heard the bump bump of his moving the rock, and at once suspected the cause and crept there and caught him in the act, and gave him such a severe whipping that it was long and merry before he tried it again. We had never known before which hound it was. This same wretch took a whole ham out of a safe which I kept in the porch in the summer time, and which was locked. He caught the door in his teeth and shook it backward and forward till he opened it. It had been very dry for some time and the door had shrunk and I had not noticed it. I would not have known how he got it open had I not seen him after this trying to open it again. When that same dog was a puppy he ate up a young brood of fourteen turkeys at one meal. Several severe whippings broke him of turkey eating, but to the day of his departure from us he was always stealing, and in a way to surprise us. All hounds are thievish, but he was the worst I ever saw. They would go all around my flower garden hunting for a loose paling, and when they found one off they would rip it and then go in and make their beds among my flowers. This was in the summer time, when they wanted a cool and soft bed at the same time.

They would often get in the hen houses, and there would be no eggs left when they left you may be sure. I have had them to destroy five or six settings of hens' eggs at one time, and they just ready to hatch, too. Sometimes they would scratch a hole underneath and go in, and sometimes rip off a loose plank. You can't always be thinking of hounds, even though you know them well, they seem to be always ready to take advantage of any forgetfulness on your part.

These are only a few instances of their atrocities, samples of which I have endured all my life, and am afraid will for the rest of it.

Now I have told of how mean they are, I must tell of the sagacity of one and how he saved me from being torn to pieces perhaps, certainly badly hurt. I was on a visit to one of my little cousins, and had on one of her dresses, when my father came for me accompanied by his pack of twelve hounds. I started across the yard never thinking of the dogs attacking me, for they were used to me and I to them, but the pack came dashing at me, Lizzie and Alp in the lead, and they unusually large hounds. My father was almost paralyzed with horror when he saw the attack, and these two large and fierce dogs in the lead, but what was his delight and astonishment to see Alp jump up and catch Lizzie by the back of the neck and pull her off just as she was springing on me. He of all the pack recognized me in spite of the dress my cousin had been wearing. I was too young to recollect how I fell, I only recollect their rushing at me and Alp's noble conduct, and my father's screaming and running toward me. This same dog at hog-killing time would not allow one of the negro men, who was very thievish, go near a hog by himself. He just followed this man Henry around, and if he dared to touch a hog, unless some one else was by, he would show his teeth and growl at him so that he was afraid and let go the hog. This dog was one in a thousand though you may say, for I never knew another like him.

Fox hunting is a healthful and delightful amusement to those that like it, and it is all very well for those to keep hounds who can afford it and who will keep the dogs in kennels as they do in England and at the North, too, now, I have heard. But it certainly is very trying to the ladies of a household to have to be ever on the watch to keep out the hounds. A gentleman told me once that on one occasion when he returned home, after a visit of some weeks, he was surprised to see his dogs looking so well and thanked his wife for taking such good care of them, and she then confessed that she had given them arsenic hoping to kill them, but they would not die. He told her that that was the best thing she could have done for them. I could not and would not poison them, though, under any circumstances—pests though they are. N. C.

DOGS IN STUD.

Editor Forest and Stream:

Owners of stud dogs who do not advertise have no idea of the many stud fees they lose by not having their dogs in the kennel columns of sportsmen's journals.

Some dogs are not placed before the public because there are better ones in stud. This is a mistake; our country is large, and the average breeder will send his bitch to the nearest stud dog he knows of.

Within a week two gentlemen have borrowed my FOREST AND STREAM to get addresses of dogs at stud. One a Yorkshire terrier man, the other an owner of a Great Dane. The former found one advertisement, but the distance was too great to send his bitch; the latter found no Great Danes in the stud at all.

It has always been a wonder to me why the *American Kennel Register* has not been patronized more freely by owners of dogs in stud. It is *the* breeders' journal; they all scan its contents carefully and file it for future reference. A stud-dog directory there would reach the very men who would want this information, the rates are cheap, and I found it brought me more fees than any other journal. Strange as it may appear to some, there are gentlemen who do not take weekly kennel papers, subscribing for the *American Kennel Register* alone.

The advantage of registering dogs in the *American Kennel Register* is too well known among breeders for me to write of it. It is a guarantee of the honesty of the breeders, and the majority of purchasers now insist that the dogs they buy be registered in this responsible and reliable paper.

It is great pleasure to us breeders who are most interested in the *American Kennel Register* to see it holding its own without any apparent effort, while the "kill 'em quick" organ is rapidly nearing its end, in spite of the reiterated assertion that it is published in the interests of the dog.

VICTOR M. HALDEMAN.

AMERICAN KENNEL CLUB METHODS.

Editor Forest and Stream:

"Wacouta," in his commendable article on "The Pewter Medal Frauds," says: "It might be interesting to know who were the many who went to Mr. Elben and asked that they be given medals instead of money."

I was one of the men who expressed my preference for a medal; but when I saw them exhibited in the show case, it required but a hasty glance to cause me to change my mind, and take the "100 cents on the dollar."

It is my opinion that the present president of the A. K. C. is as great an impediment to the success of the club as was Major Taylor, and unless an impartial man is soon put into the presidential chair the club will certainly go to pieces.

The A. K. C. since it organization has been run by a clique of "friends," abusing the proxy business, a few have controlled the majority. Of course, it was Mr. Drake's "friendship for Mr. Munhall" that led him to open the Beaufort—Patti M. case, and their dislike to Mr. Mason was sufficient reason for certain men to vent their spleen upon him.

As apparently there are few honorable men interested in dogs, would it not be well to swear delegates to, and officers of, the A. K. C.? While the FOREST AND STREAM is the exponent of all that is just and right, we can still hope it may yet be able to cleanse this Augeas stable of the kennel world. VICTOR M. HALDEMAN.

FISHING DOGS.—J. N. McConnell of Crawfordsville, Ind., is the owner of a dog that he values very highly. It is a full-blooded Scotch shepherd, about one year old. It seems to understand every word that is spoken to it. Among its many accomplishments is that of being an expert fisherman. The dog will take a position in a drift in a small stream running near Mr. McConnell's house, and by making a racket will scare the fish out into the water where he can see them. Then, diving suddenly, he will bring a fish up in his mouth. This operation he will repeat until he catches as many as he wants. Spectators on the bank in no wise embarrass him in his piscatorial pursuit. The dog is very fond of the fish, and eats all that he catches. That is the only objection to the whole proceedings, as his owner thinks that he could supply his table with fresh fish all the year round if the dog could only be taught to retrieve, and he will give him a few lessons in that art. So says the *Cincinnati Enquirer*, and commenting on it a correspondent writes: There is a water spaniel at Minnetonka Lake, owned by Mr. Whital we believe, which catches frogs *at infinitum* along the shores of the lake. If they jump into the water it makes no difference, he will catch them all the same. If they get beyond his depth, he dives; and if once he gets on the track of one, he never leaves him until he has him in his mouth. He can get you all the bass and pickerel bait you want.

THE ST. PAUL SHOW.—St. Paul and Minnesota Kennel Club, St. Paul, Minn., June 27.—*Editor Forest and Stream:* We beg to inform you that we have engaged Mr. Chas. Weil, the Secretary of the Michigan Kennel Club as Superintendent for our coming bench show, which fact should assure exhibitors that they and their exhibits will be properly taken care of, when coming out here. We have also secured one of the best halls in the city and shall be ready to mail our premium lists, which we try to make as liberal as possible, on or about July 10. Our entries close Sept. 1.—ST. PAUL AND MINNESOTA KENNEL CLUB (W. G. Whitehead, Sec'y).

FOX-TERRIER SHOW.—The second annual bench show of the Fox-terrier Club will be held at Newport, R. I., Sept. 7 and 8. Entries will close Aug. 24. The secretary's address is F. Hoey, Long Branch, N. J.

DOGS AND MUSIC.—Will the editor or some reader of the FOREST AND STREAM give a reason why a dog howls so piteously when a harmonica is played or a dinner bell rung? —D. S. W. (Portland, Ind.).

DOGS IN THE CITY.—Brooklyn, N. Y., July 1.—I have just finished reading your editorial "Dogs in the City," and I must say that I feel strongly with the mayor's correspondent. I am the proud possessor of three of the "best dogs in the world," that I value on the average at $150 apiece. For these dogs I pay the city $6.30 per year. When I take them out of doors at all, in preference to muzzling them I take them coupled together upon a cash. Yet it was only the other day that a dog catcher was only persuaded not to detach two of my dogs (licensed and leashed according to law, from the leash held by me) by a sound drubbing from the heavy stick I had in my hand; while on the other side of the street, lying in the gutter in front of a livery stable in full view of the catcher, lay three curs, never licensed, nor muzzled nor tied, but which roam the streets at large and have perfect immunity from the catchers. In my immediate neighborhood are eight or ten cur dogs that never are licensed and yet year by year go scot free. My dog catcher friend threatened to make me pay dearly for the bloody knuckles I gave him; but as I never allow the dogs on the street except on the above conditions, and always carry my stick, I have not heard from him yet. I only wish he'd try coming into my kennels to take them, for there's a red Irish dog there that I think would do him.—ELK.

MR. KIRK AS A SPANIEL JUDGE.—In the communication headed "Non-Sporting Spaniels," page 497 of last week's issue, a correspondent said, "I did not exhibit my dogs. * * * I was told they could not win under Mr. Kirk, especially if there were any dogs from Canada on exhibition." In justice to ourselves we explain that such an insinuation against Mr. Kirk was permitted to appear by inadvertence only. In the absence of the editor of that department, Mr. Osborne's communication was not read with the care it would have received under ordinary circumstances. Mr. James Watson writes: *Editor Forest and Stream:* It is so contrary to the long established custom of FOREST AND STREAM to allow such a sentence as that to appear in its columns that I know it must have slipped in without notice. I further know from an experience of years the great amount of care necessary on the part of an editor to eliminate such remarks and others of a like nature, and I bespeak for you Mr Kirk's forgiveness.

LUCIFER.—Mr. August Belmont, Jr.'s fox-terrier Lucifer, which was sent to the Jubilee show of the English Kennel Club, took first and special for best in open class. Mr. Belmont's dogs have won a number of prizes at other shows in England. Mr. Fred Hoey's Valet also came in for a first. Mr. Peshall's trade-dollar Jimmie is yet to be heard from.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Baffler. By G. H. Nixon, Leesburg, Va., for lemon and white pointer dog, whelped July 2, 1886, by Joker, Jr. (Beaufort—Nymph) out of Lady Mac (Faust—Gertrude).

Obo III. By E. F. Starkey, Fitchburg, Mass., for black cocker spaniel dog, whelped Feb. 26, 1887, by Obo II. (A.K.R. 432) out of Phonsie (A.K.R. 1482).

Gun Gladstone, Daisy Bright, Queen Esther and Belle of Dixie. By F. Pitzer, Washington, D. C., for white, black and tan Llewellin setter dog and two white, black and tan and one black, white and tan bitches, whelped April 25, 1887, by Gun (Gladstone—May B.) out of Lady Bright (Pink—Aida).

Elcho Kennels. By A. B. Truman, San Francisco, Cal., for his kennels of Irish setters, pointers and Irish water spaniels.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Apollonia—Otho. The Hospice Kennels' (Arlington, N. J.) St. Bernard bitch Apollonia (A.K.R. 4418) to their Otho (A.K.R. 483), June 18.

Laone—Hector. The Hospice Kennels' (Arlington, N. J.) St. Bernard bitch Laone (A.K.R. 2416) to their Otho (A.K.R. 4425), June 18.

Babbie—Black Prince. Mr. Sievert's (New York) spaniel bitch Bobbie to A. C. Wilmerding's black Prince (Benedict—Madcap), June 12.

Lady Mac—Bob White. G. H. Nixon's (Leesburg, Va.) pointer bitch Lady Mac (Faust—Gertrude) to his Bob White (Joker, Jr.—Gussie), June 26.

Gypsey—King Bruce. H. Forbes's (West Haven, Conn.) collie bitch Gypsey (Major—Belle) to Associated Fanciers' King Bruce (Loafer—Renda), April 1.

Flossie—Speculation. F. M. Shelley's (Sheridan, N. Y.) beagle bitch Flossie (Bross's Prince—Krueger's Maida) to his Speculation (Ringwood—Fannie), July 2.

Blossom—Little Swell. W. B. James's (Philadelphia, Pa.) fox-terrier bitch Blossom (Crisp—Vic) to E. Lever's Little Swell (Spice—Relish), May 31.

Gaudy—Little Swell. Richard Gibson's (Delaware, Ont.) fox-terrier bitch Gaudy (Brag—Tricks) to E. Lever's Little Swell (Spice—Relish), May 26.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Bene. Dr. J. S. Niven's (London, Ont.) cocker spaniel bitch Bene (Bob III.—Black Bess), June 14, six (four dogs), by American Cocker Kennels' Doc (Young Obo—Rose Obo); solid black.

Millie Q. Ad. J. Klofanda's (Eau Claire, Wis.) setter bitch Millie Q. (A.K.R. 3047), June 21, twelve (seven dogs), by F. H. Graham's Duke G. (Moon's Duke—Gem of Tennessee); eleven orange belton; one blue belton dog since dead.

Bessie. H. W. Windram's (Boston, Mass.) Clumber spaniel bitch Bessie (Jockey—Romp), June 11, two (one dog), by Mercer & Hill's Johnny (Ben—Joan).

Bessie. W. O. Partridge's (Arlington Heights, Mass.) cocker spaniel bitch Bessie (Obo II.—Critic), June 18, seven (four dogs), by J. P. Willey's Dandy W. (Black Pete—Miss Obo II.).

Madge. C. Peck's (New York) pointer bitch Madge (Jimmy—Lucille), June 22, eight (four dogs), by Naso Kennels' Nick of Naso (Naso II.—Pettigo).

Constance. F. B. Zimmer's (Springfield, Mass.) beagle bitch Constance (A.K.R. 2912), June 27, nine (four dogs), by his Blue Cap II. (A.K.R. 4008).

Gypsey. Henry Forbes's (West Haven, Conn.) collie bitch Gypsey (Major, A.K.R. 1550—Belle), June 2, seven (three dogs), by Associated Fanciers' King Bruce (Loafer—Renda).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Primi. Black cocker spaniel dog, whelped July 19, 1886, by Tip out of Flurrey, by E. F. Starkey, Fitchburg, Mass., to H. G. Murse, same place.

Grover. Black cocker spaniel dog, whelped Jan. 29, 1887, by Tip out of Flurrey, by E. F. Starkey, Fitchburg, Mass., to Tom Gray, same place.

Zip. Black cocker spaniel dog, whelped Jan. 29, 1887, by Tip out of Flurrey, by E. F. Starkey, Fitchburg, Mass., to Myron Dayman, same place.

Miss. Red Irish setter bitch, whelped June 30, 1884, by Glencho out of Biddy, by Dr. A. McCollom, New York, to Hugh Carr, Paterson, N. J.

Pride of Loudoun. Liver and white pointer dog, whelped April 4, 1887, by Jacksnipe out of Fussie, by G. H. Nixon, Leesburg, Va., to A. W. Burnett, Charleston, W. Va.

Donald Dhu. Black spaniel dog, age not given, by Obo II. out of Miss Nauce, by A. C. Wilmerding, New York, to B. A. Haggin, same place.

Dash. Black cocker spaniel dog, whelped Jan. 29, 1887, by Tip out of Flurrey, by E. F. Starkey, Fitchburg, Mass., to Frank Brown, same place.

Bravo and Honor. Fawn, black points, mastiff dog, whelped May 4, 1887, by Boss (A.K.R. 2218) out of Lillie (A.K.R. 2381), by F. B. Zimmer, Springfield, Mass., to Aug. G. Loweree, Chihuahua, Mexico.

Jacksnipe—Gussie whelp. Liver and white pointer dog, whelped April 4, 1887, by G. H. Nixon, Leesburg, Va., to C. A. Grant, Middleburg, Va.

Vicious and Valor. Black and tan terrier dogs, whelped May 28, 1887, by Vortigern out of Fortune, by E. Lever, Philadelphia, Pa., to Fred Wilson, same place.

Lord George—Safety whelps. Black and tan terrier dog and bitch, whelped May 14, 1887, by E. Lever, Philadelphia, Pa., to A. W. Smith, Buffalo, N. Y.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

SYMPTOMS.—On the 20th inst. my dog apparently enjoyed first-class health. He was one of those bounding, unusually active, determined spaniels; always ready for a meal. The following morning (21st) he was totally blind, but otherwise unchanged. In the afternoon he barked considerably, lost appetite, general twitching set in, suffered partial deafness, emitted frothy saliva and breathing became labored. Next morning his entire left side was paralyzed, tongue red, foaming had ceased; but blindness, deafness and twitchings were as before. He continued thus, steadily growing weaker until his death in the evening. There was not any cough, fever, thirst, discharge from nose or eyes. He vomited but once, and then shortly before his death, consisting of a few pieces of apple and fat wholly undigested although in his stomach forty-eight hours. Stools and urine were natural. I might add that his staple food was Spratts dog biscuits. He also got scraps from table, but no meat. Ans. Symptoms of cerebral hemorrhage, apoplexy or bursting of a blood vessel at base of brain.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

CREEDMOOR, July 4.—The matches of the National Rifle Association were well attended, the weather was fine, but a strong 6 o'clock fish-tail wind was very trying to the competitors who, however, made good scores. Maj. Edward Duffy, of the 69th Regiment, was the Executive officer for the day. Following are the best scores, the marked * being the winners in the match:

	200yds.	500yds.	T'l.
*F T Cooke, Co. I, 23d Regiment.	22	23	45
*W Lawson, Co B, 12th Regiment	22	23	45
*C L Levieu, Co G, 22d Regiment	22	23	45
*M B Flynt, Co K, 13th Regiment	22	23	45
*G W Lotz, Co G, 13th Regiment	23	22	45
*H G Morris, Co G, 13th Regiment	24	21	45
*F L Holmes, Co I, 23d Regiment	20	24	44
*J D Foot, Co F, 7th Regiment	21	23	44
E V Howard, Co I, 23d Regiment	21	23	44
*J S Shepherd, Co D, 23d Regiment	22	22	44
G S Scott, Jr., Co A, 23d Regiment	22	22	44
E Lockley, Co E, 12th Regiment	19	24	43
T A Bartley, Co H, 7th Regiment	20	23	43
G A Lane, Co A, 13th Regiment	22	21	43
E F M Wendelstadt, Co C, 23d Regiment	23	20	43
G H Frazer, Co G, 47th Regiment	18	24	42
H B Thomson, Co C, 7th Regiment	19	23	42
A McDougall, Co C, 7th Regiment	20	22	42
E F Young, Co C, 7th Regiment	21	21	42
W F Townsend, Co I, 23d Regiment	22	20	42

The next matches will be on July 16 and 30, and on Aug. 6, 13 and 27, commencing on the three first dates at 6:45 A. M.

SAN FRANCISCO, June 26.—The range at Shell Mound this forenoon was taken up by a party of private marksmen. Following is the score:

	500yds.	200yds.
Carson	5554445545—46	5444444444—41
Waltham	5333554545—44	4555545445—46
C Johnson	5455444555—46	5555445545—47
P Robertson	5455444545—45	4444454445—42
Capt E Klein	5544553445—44	5544454445—44
C Meyers	2833455454—38	4454444555—44
Ruddock	5535553325—15	4455535444—43
A H Brod	3345514455—42	5444444453—41

A match was shot during the afternoon between the teams of A. Johnson and P. E. Robertson. Following is the score:

Johnson Team.

	200yds.	500yds.
A Johnson	5455445545—46	3404424454—34
J E Klein	5454554544—45	5445454455—45
P E Carson	5455445545—45	5555455455—46
A J Ruddick	5445454544—44	5454455151—43

Robertson Team.

P E Robertson	5455445555—47	5445445545—45
C F Waltham	3445314544—40	5455555555—49
C Meyer	3444315444—39	4254514554—42
A H Brod	5444554544—43	5554444455—45

At the conclusion of the regular match E. G. Martin and S. Leavitt decided their respective merits in a short pool match at 200yds. It was the first time that either man had used the military rifle. Following is the score:

E G Martin. 4454434535—41 S Leavitt. 3444323445—35

LYNN, Mass., July 2.—Some excellent shooting was done at the Indian Hill rifle range, this afternoon, although the heat was intense. Among other features was a team shoot, standard target, 10 shots each man, between Captain J. W. Gerry's five and Captain M. W. Howard's team. The score resulted as follows:

Gerry's Team.

J W Gerry	4	4	6	4	3	3	2	5	9	0—35
R B Edes	4	8	7	6	5	5	5	9	8	6—68
A Ballou	10	2	7	6	5	6	8	5	8	5—62
W Webber	7	5	5	3	3	3	3	7	4	3—43
T A Bacheller	4	2	8	5	3	6	2	5	2	4—41—249

Howard's Team.

M W Howard	4	8	10	6	8	7	6	3	6	9—67
W C Oler	3	6	4	10	2	9	5	7	6	7—59
F H Tuckson	2	6	2	4	4	4	3	6	10	6—47
I M Chase	0	4	3	7	4	4	2	2	4	2—32
E F Bacheller										—44—249

As this tied the score between the two teams they shot off and in doing so it resulted as follows:

J W Gerry	5	M W Howard	2
W Webber	5	W C Oler	3
T A Bacheller	7	F H Tuckson	4
A Ballou	2	E F Bacheller	7
R B Edes	8—27	L W Chase	10—26

Other 200yds. scores stood:

Johnston, Jr., mil	8	10	4	6	7	9	9	8	4	6—71
A Ballou	9	7	8	6	10	8	6	5	8	—74
M W Howard	7	2	5	9	10	5	10	10	5	5—65
E Barnes	9	5	6	5	6	3	8	4	9	5—63
F Murray, mil	2	5	1	9	5	9	6	4	3	8—57
J W Chase, mil	7	10	7	7	8	3	7	4	4	4—54
E F Bacheller	10	10	3	3	3	3	3	8	3	8—54

BOSTON, July 2.—A large party of riflemen visited the range at Walnut Hill to-day, but the extreme heat prevented much practice, and only a few present completed scores. The new matches are open for practice. They are the same as those which have just closed, with the exception of slight changes in handicap allowance:

Rest Match, 200yds.

D L Chase	3	11	12	11	10	11	11	12	12	12	—110
	10	10	9	11	12	11	10	12	9	9	—103
S Wilder	11	12	10	11	11	9	12	11	11	10	—108
	10	9	9	11	12	9	11	11	10	12	—104
H Joseph	9	9	9	12	12	12	10	12	10	10	—105
	11	9	10	11	12	9	11	10	10	12	—105
M Willard	10	9	9	6	12	8	8	5	11	9	— 87
	9	8	10	8	9	9	9	8	9	8	— 87
W H Oler	9	11	6	8	8	8	11	9	8	7	— 85
	9	7	6	6	10	10	11	10	11	4	— 83

WORCESTER, Mass., July 2.—There was a 75-bird contest at the grounds of the Worcester Sportsmen's Club this week. The birds, clay-pigeons, were thrown from open traps, the results were as follows:

W S Perry	4445545544454—66	E F Swan	2224443441332—40
M D Gillman	3155534444444533—59	L Robinson	3333323335342w —36
G W Russell	1245533335354454—58	Tolmon	4332222434 1w —30
H W Webber	4324543333221—45	Franklin	0141323222222w —24
W L Davis	4432122234234434—43		

AMERICAN RIFLES ABROAD.—Messrs. T. T. Cartright, of Springfield, Mass., and J. A. Higgins, of Pittsburgh, Pa., sailed on the Furnessia last Tuesday. They will represent the Bullard rifle in Europe, shooting at Wimbledon, Geneva, and elsewhere. We hope to have some notes from Mr. Cartright.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE DECORATION DAY TROPHY.

THE competition on Decoration Day for the FOREST AND STREAM DECORATION DAY TROPHY resulted in four classes of ties. Four teams tied (three of which were allowed) for the TROPHY, five teams for the first-money prize, four teams for the second-money prize, four for the third, and three (two allowed) for fourth. The tie for the last prize was divided, the others were shot off on July 2 and July 4, under the original conditions, namely: Trap set to throw targets at least 45yds. from trap; 5 targets thrown straightaway, 5 at a right angle to the right and 5 at a right angle to the left; 10-bores at 18yds., 12-bores at 16yds. from trap; gun held below the armpit until shooter calls pull; use of both barrels allowed; bird broken in air before falling to the ground; charge not in excess of 1¼oz. shot. There were no restrictions as to order of shooting targets thrown in the several directions; but the record must be entered under the proper head as here given: Hits with second barrel are designated by figure 2. The scores are as follows:

TIES ON 45 FOR THE TROPHY.

DELHI GUN CLUB, Cleves, O., July 2.—American target and trap:

	Straight-Bore.	away.	Right.	Left.	Total.
A B Whitlock	10	11111	11111	11111	—15
W C Harrell	12	11111	11111	11111	—15
C W McFee	10	11111	11111	11111	—15—45

Scorer, James Carlin; judges, R. C. Flowers and W. C. Hughes, M.D.

WEST END GUN CLUB, Long Branch, N. J., July 2:

W D Campbell	12	11111	11011	11111	—14
E E Taber	12	11211	11101	12111	—14
Will Price	12	11111	11111	11111	—15—43

Scorer, Charles Lewis; referee, Clarence S. Wakely; Philip Daly, Jr., Stacy Pitcher, Charles Morris.

KNOXVILLE GUN CLUB [Special to Forest and Stream.]—Knoxville, Tenn., July 5.—Total score 45.—J. W. SLOCUM.

TIES ON 44 FOR FIRST MONEY.

FOUNTAIN GUN CLUB, Norwalk, Conn., July 2.—Blue rock target and trap:

G F Hendrie	10	11111	11212	11111	—15
Chas Williams	10	11111	12111	11111	—15
Geo Ferris	10	11111	21221	11111	—15—45

Scorer, F. E. Lockwood; referee, G. N. Finch; John H. Aiken.

BALTIMORE GUN CLUB, Baltimore, Md., July 2.—Ligowsky target and trap:

C S Wertsner	10	11111	12112	11121	—15
Wm R Fieles	12	11211	12121	12111	—15
E O Hall	10	11111	12111	11111	—15—45

Scorer, Edward L. Coulson; referee, W. E. Buckbee; Geo. F. Pilson.

WEST END GUN CLUB, Long Branch, N. J., July 2:

D B Bearmod	12	11111	11111	11122	—15
E W Price	10	11111	11021	11122	—14
Geo Cubberley	10	11111	21212	11111	—15—44

Scorer, Charles Lewis; referee, Clarence S. Wakely; Philip Daly, Jr., Stacy Pitcher, Charles Morris.

MCDOUGALL GUN CLUB [Special to Forest and Stream.]—Parkersburg, W. Va., July 5.—Score Parkersburg Gun Club team 45.—JOHN T. ADAIR.

The Wichita, Kan., scores have not come to hand.

TIES ON 43 FOR SECOND MONEY.

SOLOMON CITY GUN CLUB, Solomon City, Kan., July 2. Blue rock target and trap:

P Crooks	12	11111	11111	12112	—15
C Dewey	12	11111	11111	12111	—15
T J Edworthy	10	11111	21211	11111	—15—45

Scorer, Wm. C. Silvy; judge, Thomas Robertson; referee, John Kraenchi; R. A. Sullivan.

KALAMAZOO SHOOTING CLUB, Kalamazoo, Mich. Blue rock target and trap:

Ben O Bush	10	21111	11111	11111	—15
Henry Warnf	10	11111	11111	11121	—15
Peter Appeldoorn	10	12112	11121	12211	—15—45

Scorer, J. De Kam; referee, John Herson; A. M. Ransom, M.D., president K. S. C., James Bellinger.

WEST END GUN CLUB, Long Branch, N. J., July 2:

J Van Dyke	10	11111	11111	11111	—15
John Price	12	11121	11211	11111	—15
Al Cubberley	10	11121	02102	11111	—13—43

Scorer, Charles Lewis; referee, Clarence S. Wakely; Philip Daly, Jr., Stacy Pitcher, Chas. Morris.

WHITE CITY GUN CLUB, White City, Kas., July 2.—Ligowsky clay pigeon and trap:

E E Baer	10	11111	11111	21111	—15
F M Hyman	10	11111	12111	12111	—15
Chas Baer	12	11111	11111	11111	—15—45

Scorer, J. E. Merritt; referee, E. A. Brush; F. H. Greenwalt.

TIES ON 42 FOR THIRD MONEY.

The Wingohocking Gun Club, of Germantown, Pa., and the Smith and Wesson Gun Club, of Chicopee, Mass., divided third money, which was 20 per cent. or $31.80.

A special correspondent writes of the shooting of the West End Gun Club:

The West End Gun Club, of Long Branch, N. J., shot off their ties for the FOREST AND STREAM Decoration Day Trophy on their summer grounds at Pleasure Bay, on 2d inst., and it proved a very creditable affair for the club. This comparatively new club having tied other clubs for the three first prizes, we were anxious to meet face to face such skillful disciples of the trigger and were not disappointed in our personal acquaintance. We found them, from their President Morris down, not only first-class shots but a square lot of sportsmen from heel-plate to muzzle. Some of them, like Justice W. D. Campbell, Taber and Will Price are live bird shots of considerable local reputation. Will Price has grassed his 38 birds straight, and Campbell nearly as many without a break, and others are not far behind.

Upon arriving on the ground, which was a pasture lot on the north branch of the Shrewsbury River, some three-fourths mile from the hotel, we found a tent pitched, traps arranged and everything ready for a few hours of solid sport. But alas "the scheme of mice and men"—you know the rest. One of the traps becoming weakened would throw the crockery but about 30 or 35yds., while the new one got from Von Lengerke for the occasion would send the disks 50yds. or more. But the latter required the longest clay, a limited number of which only were on the grounds. As the boys wanted a fair thing and nothing else, a delay occurred after the ninth round and a member was despatched to town for a fresh supply of birds with a tongue. When they arrived other delays occurred, more or less annoying, enough to throw off any shooter at all inclined to be nervous. The shooting under the circumstances we consider more than creditable. A total of 130 out of 135 is very good. It was an honest and closely fought contest. The men stand erect at the score, holding their gun in a graceful and easy manner well below the armpit, and shoot with care and deliberation. Some shoot quicker than others, and again if they miss with the first are pretty sure with the second.

That the club was somewhat disappointed in the first team all agree. They expected to equal their Decoration Day shoot and make a clean 45. But Campbell felt too sure and one of his saucers escaped without a scratch, as did one of Tabers of same team. [The scores appear in their regular order above.]

Where all did so well it seems invidious to made any distinction, but we cannot refrain from speaking in praise of the bearing and the shooting of the Prices. They seem to be natural-born shots. E. H. Price, proprietor of Pleasure Bay Hotel, is one of those old-time pigeon shooters of the days of Jack Taylor, Wm. King, Bill Seeds, Miles Johnson and Uncle Billy Hughes. He has not yet forgot his cunning at the trap, and has brought up his three boys ("chips of the old block") in the ways of their father in deliberation and adroitness at the score. The old man wants to challenge the world as "a family affair," father and three sons to shoot any other father and three sons for $1,000 a side, a clam roast or the birds and beer. All those who know the old man, and he isn't so very old either, believe he means what he says. Clarence S. Wakely (not Makely as your paper had it) makes a good referee. He has a keen eye and his decisions are prompt and correct. It is but justice to say that no less than three of the birds scored as killed by the second barrel were really broken with the first, but the shooters, either not hearing the decision of the referee in time or in their anxiety to make sure, got in their second; and as long as it was used it was scored as by the second. It does not change the result of the score, but looks a little better on paper to have more 1s than 2s. The West End

Club, if they don't get some of the prizes, at least deserve them. We understand that they have twice defeated the South Side Gun Club, the crack clay-pigeon club of the State, once by only one bird in 400 shot at; another time by two birds, showing how closely these clubs are matched. We met a couple of the members of the South Side Club. They own up, say the West Enders are good fellows and "heap big" shots, but that they have been practicing some more lately and want another trial. The West Enders are ready for them or, they say, for any club at the crockery in the United States. JACOBSTAFF.

THE DAYTON SHOOT.

DAYTON, O., June 24.—Many shooters arrived from Cincinnati at 9 o'clock this morning to participate in the opening match of the two days' trap shooting tournament at the Fair Grounds here, there being also crack shots from Kenton, Columbus, Springfield, Greenville, Red Lion, St. John, Miamitown and Covington, Ky.

The traps for artificial birds, 18yds. rise, and 5 traps for live pigeons, 30yds. rise, were set on the lawn in the center of the race track, with tents for judges, secretaries, reporters, shooters, etc. Shooting commenced promptly at 10:30, J. D. Winston, of Covington, Ky., and George E. Fryer, of Dayton, judges; Charles Wendt, of Kenton, referee; Charles Hanitch, score-keeper.

First Match—Ten single blue rock, entrance $3, 17 entries. Score: Taylor 8, Cole 9, Winston 8, Heikes 9, Wilson 8, McClellan 5, Bandle 10, Hill 9, Teipel, 8, Wadell 6, Nose 10, Hutchins 6, McCartney 8, Goldrick 5, Lefever 5, McFee 6.

First money divided between Bandle and Nose; second money, Heikes won in the shoot off; third money Winston won in the shoot off.

Second Match—Six singles and 3 pairs American clay birds, $2 entrance, 14 entries: Bandle, 6 singles and 6 doubles; McFee, 6 singles and 5 doubles, divided first money; Taylor, 5 singles and 5 doubles; Nose, 4 singles and 6 doubles; Heikes, 6 singles and 4 doubles, divided second money; Winston, 5 singles and 4 doubles; Teipel, 6 singles and 3 doubles; Hill, 5 singles and 4 doubles, third money divided; Wilson 7, Cole 6, Lefever 6, Goldrick 5, Slover 4, Wadell 3.

Third Match—The third match was intensely exciting; 5 live pigeons, $5 entrance, 21 participants, 5 ground traps so concealed in the clover that they could not be seen by the shooters, 30yds. rise, Hurlingham rules, 80yds. boundary:

Bandle	11111—5	Hill	11001—3
Heikes	11101—4	Winston	10110—3
Wilson	11111—5	McCartney	11111—5
Goldrick	10111—4	McClellan	01011—3
Lefever	01011—3	Peck	11111—5
Teipel	11111—5	Sander	11111—5
McFee	11111—5	Wheelen	11101—4
Nose	11101—4	Sheets	01101—3

In the shoot-off for first money, 3 birds each, Peck missed his second; Bandle, Wilson, Teipel, McFee, McCartney and Sanders broke 3 each and divided. Heikes, Goldrick, Nose and Wheeler divided second money. In the shoot-off for third money, 3 birds each, Hill missed his first, McClellan his second, Winston his third. Lefever and Sheets each broke 3 straight and divided.

A special match was made for 7 single blue rocks, $1 entrance, 14 entries: Winston 7, McFee 7, Teipel 7, Hill 7, Peck 7, Wilson 6, Bandle 6, Cole 6, Nose 5, McCartney 5, Wendt 5, Heikes 4, McClellan 4, Goldrick 4. McFee, Peck and Hill divided first money, Wilson, Cole and Bandle divided second, Nose and Wendt divided third.

Fourth Match.—Five live pigeons, $5 entrance, same conditions as previous matches, 18 entries:

Bandle	10011—3	Taylor	01111—4
Heikes	11111—5	Peck	11111—5
Wilson	11110—4	Puterbaumh	01110—3
Teipel	11111—5	Sauder	11111—5
Lefever	01011—3	Hutchins	01001—3
Nose	11111—5	Cole	11101—4
Ackerman	01111—4	Hill	11111—5
McCartney	00111—3		

In the shoot off Heikes missed his first bird, Nose his second, Teipel, Peck, Sanders and Hill each killed two and divided first money. Wilson, Ackerman, Taylor and Cole divided second. Bandle, Lefever, McCartney, Puterbaumh and Hutchins divided third.

In the closing match, 5 singles and 5 pairs of American clay birds, $5 entrance, there were thirteen participants:

Teipel	1111011111111011—13	Puterbaumh	1101101001111100— 9
Winston	1110111010111111—13	Nose	0101111010101110— 9
Bandle	1111111010010111—12	Hill	1111101111111010—12
Heikes	1101111110100l—11	Smith	1010100111010111— 9
McFee	1110101111110010—11	Taylor	1111110101111011—12
Ackerman	0110010101010111— 8	Wilson	0011111111111110—12

Teipel and Wilson divided first money, Bandle, Hill, Taylor and Wilson second, Heikes and McFee third.

June 25.—Shooters assembled at the Fair Grounds to participate in the sport of the second day of the trap-shooting tournament at an early hour, and began practice with superb weather and everything in fine shape for a hotly contested finish. Three clay-bird matches were shot in the morning and a number of specials. A great crowd of people assembled to witness the live pigeon shoot and the Heikes-Bandle match.

Awards of the cash prizes, 50, 30 and 20 per cent. to the three highest per cents made during the tournament, were announced by Scorekeeper Hanitch as follows: Bandle, first money, per cent. 64-71; Hill, second money, per cent. 59-71; Teipel, third money, per cent. 58-71. Other per cents. were as follows: Nose 56-71, Heikes 56-71, Wilson 55-71, Taylor 52-71, Cole 45-71.

The live-bird shoot was 7 pigeons, $5 entrance, 24 entries, Hurling rules; H. B. Robinson, of the *American Sportsman*, referee:

Taylor	1101110—5	Whealen	1101110—5
Cole	1110101—5	Peck	1101111—6
Heikes	0011100—3	Wense	1001001—3
Wilson	1111101—6	Goldrick	1111011—7
Bandle	1111111—7	McCartney	1111001—5
Hill	1011011—5	Whetstone	1011111—6
Teipel	1011001—4	Stroble	1111111—7
Nose	1111101—6	Ackerman	1011101—5
McFee	1001101—4	Houchins	1110001—4
Le Fever	0101101—4	McClellan	1111111—7
Murphy	1110111—6	Nicholas	1001111—6
Sander	0111111—6	Hanitch	1011100—4

First money was divided by Bandle, Goldrick and McClellan; second by Wilson, Nose, Murphy, Sander, Peck, Whetstone and Nichols; third by Taylor, Cole, Hill, Whealen, McCartney and Ackerman.

The closing match of the tournament, the match between Rolla Heikes, of Dayton, and Al Bandle, of Cincinnati, was the big event that attracted an intensely interested audience, and was not on the programme. Conditions were fifty singles and twenty-five pairs blue rocks, five traps, 18yds. rise, $160 a side, National Association rules. Heikes chose Scott McDonald as judge, Bandle selected John Whetsone, of Cincinnati. These two judges agreed upon E. C. Kolter, of Wapakoneta, as referee; Chas. Hanitch, score-keeper. Bandle won first at the score by the toss.

Bandle's first bird was given to him from trap 4, and his score was as follows:

Bandle's singles..1111111111111111111111111111111111101111110011111—46

Neither Heikes nor Bandle could get down to their regular work, although both were cool and used good judgment in every emergency of the contest. The doubles were sprung from traps 1 and 2, left outgoing and straightaway. Both shooters used ten-gauge guns, Heikes an L. C. Smith and Bandle a Parker, shells loaded heavily. Bandle offers to shoot Heikes the same race he shot and bet him $200 to $150 to shoot in Cincinnati, or even money on neutral grounds. Hill, of Aurora, will shoot Heikes three matches for $100 in each, same race as the match to-day, one match to be shot in Dayton, one in Cincinnati, and a toss for a place to shoot the third match.

SOLOMON CITY, Kan., June 23.—Shoot at blue rocks and Peorias, 21yds. rise, by the Solomon Gun Club:

C Dewar	111111111110110w —13
E Crooks	111111111111111000110w —16
T J Edworthy	111111111111111111111000—22

WINCHENDON, Mass., July 1.—Members of the Winchendon Gun Club at their regular meet this week for trap shooting made the following totals out of a possible 10: A. H. Felch 10, F. E. Mann 8, H. J. Lawrence 8, Dr. J. G. Henry 7, J. Sutherland 7, F. F. Hopgood 6, A. D. Lawrence 6, H. M. Eaton 6, P. S. Davis 5.

GERMANTOWN, July 2.—The Wingohocking Gun Club met today at 12 o'clock and took the handsome four-horse coach driven by Mr. Samuel Ladley with his team of spanking bays and drove over to Conshohocken, the home of our genial friends the Matsunk Gun Club, where we had a very pleasant match, although we were beaten. After the match we were taken to headquarters and entertained by the club and their lady friends. After partaking of a bountiful supper we had a very pleasant drive down the romantic Wissahickon by moonlight, arriving at home about eleven o'clock after an afternoon and evening that would please the heart of any shooter. We missed the services of Wm. Greenwood very much.

H. T.

BOSTON, June 29.—The merchandise and Macomber target badge matches, beside sweepstake matches, were shot at Walnut Hill to-day. The first two matches will be continued on July 13 and 27, Aug. 10 and 24, Sept. 7 and 21, Oct. 5 and 19, Nov. 2, 16 and 30, Dec. 14 and 28. The opening yesterday was very successful, there being a good attendance of shooters and excellent scoring. Sweepstake matches.—1. Five clay-pigeons—Nichols first, Hunt second. 2. Five clay-pigeons—Hunt first, Nichols second. 3. Five Macomber birds—Nichols first, Hunt second. 4. Three pairs Macombers—Nichols first, Hunt second. 5. Six bats—Hunt first, Nichols second. 6. Six bats—Nichols first, Snow second. 7. Five clay-pigeons—Nichols first, Snow second. 8. Five clay birds—Snow first, Nichols second. 9. Five Macomber birds—Snow first, Hunt and Nichols second. 10. Five clay birds—Nichols first, Wilson second, Hunt third. 11. Five clay-pigeons—Snow first, Wilson second. 12. Three pairs clay birds—Warren first, Nichols second. 13. Five birds—Snow first, Wilson second.

Macomber badge match, 10 single and 5 pairs Macomber birds:

Warren	1110101111—8	10	11	11	00 11—7—15
Snow	1110001110—6	01	01	11	10 11—7—13
Wilson	0101100110—5	11	11	10	01 00—6—11
Nichols	1111110011—8	01	00	00	10 00—2—10
Healy	1000000100—2	00	00	10	11 01—4— 6

Merchandise match, 10 single and 5 pairs bats:

Nichols	1111101011—9	11	11	11	10 01—8—16
Warren	1111111011—9	10	10	10	11 01—6—15
Snow	1110111011—8	00	11	11	10 01—6—14
Wilson	1010111111—8	11	11	11	10 10—8—16
Healey	0100010011—4	01	00	10	11 01—5— 9

16. Five clay birds—Nichols first, Warren second. 17. Five clay birds—Snow first, Wilson second. Miss and out match—Nichols won.

SAN FRANCISCO, June 26.—The Alameda County Sportsman's Club held its fourth monthly shoot to-day at Bird's Point, Alameda. Very few members were represented on the grounds when the shooting commenced. The day was exceedingly disagreeable, a cold sharp wind blowing across the traps during the afternoon. In the club shoot only three members faced the traps, notwithstanding that the club has a membership of fifty. At the end of the season's shoot trophies will be awarded to the shooters making the highest aggregate scores during the season. The following is the order of to-days shooting, the figure 2 representing where the second barrel was brought into requisition. Club shoot:

Slade (31)	2212111100111—10	Adams (30)	0100021122 3— 8
Mayhew (31)	2300110222?1— 9		

First sweepstake, $2.50 entrance, at 6 birds:

Slade (30)	210111—4	Smada (30)	100101—3
Pixley (30)	210012—4		

Pixley won on the shoot-off. Second sweepstake, 6 birds, $2.50 entrance:

Slade (31)	12010w	Smada (31)	20111w
Pixley (31)	111121—6	Kartan (30)	11210w

Third sweepstake, same conditions:

Slade (31)	121020—4	Smada (31)	022002—3
Pixley (31)	211012—5		

NEW YORK, July 2.—Washington Heights Gun Club on club grounds, One Hundred and Sixty-ninth street and Twelfth avenue. Thermometer registered 90° in shade, which may account in a measure for poor scores made. E. H. Fox shot 16-gauge Ellis hammerless. Match at 15 blue rocks and clays, 2 traps, 18yds. rise, club rules, club badge prizes:

E H Fox	0000110111101111— 9	V Eitch	0101000101010110— 6
W Keppler	0000101101111011— 8	C Parsons	0001001000000000— 2
G Snooks	1110101101101111—11	C Pryer	0001010009101001— 5
C Davidson	0101100000111000— 5	E Roe	0101101101111000— 8

Mr. Snooks having won the badge twice previously it now becomes his property. Other winners of this badge were Mr. Davidson and Mr. Roe, once each. We can report our club in a very flourishing condition with a rapidly increasing membership, and the members one and all taking great interest in the club shoots. —HAMMERLESS.

LISTON, Dakota, June 28.—Liston Gun Club's regular monthly shoot, match at bluerocks, 4 singles and 3 pair, 16yds. bounds:

On account of a storm ties were not shot off.—W. S. P.

GENTLEMEN who desire a stylish, comfortable, well-made shoe, unequalled for wear, should get the W. L. Douglas $3 Seamless Shoe. This shoe now has the upper cut in one piece, thus doing away with the old-style seams at each side, making it much neater in appearance and more comfortable to the foot. No other $3 advertised shoe in the world has this improvement, nor is any other made of as good material. But no expense has been or will be spared to make every possible improvement in the manufacture of this shoe, and those who wear them testify that it is just what it claims to be, "the best $3 shoe in the world."—*Adv.*

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

A STERN CHASE.

AWAY off in the northwest a thunder gust was gathering. The far off mountains purpled by distance were melting and blending into the black horizon. In the east the sky was bright and blue, and the sun shone down ardently on the river and the forest. Off in the west bright fleecy atoms of vapor were flying swiftly before the wind. Billowy masses of shifting white and yellow clouds obscured the sky, opening at intervals and disclosing like a turquoise set in pearls, a little patch of pale blue. And back behind the horizon, enveloping mountain and forest in a dark dusky shroud, lay the oncoming storm, gathering within its black threatening folds forked lightning and drenching torrents of rain. The farmers that afternoon, as they glanced up from their work and saw the darkening sky, laughed for joy, and leaving their uncut grain they hurried, with thankful hearts, out of the field and down the lane to the farmhouse, for no rain had fallen for weeks and the wells and springs were dry and the grass was parched, and the crops well nigh consumed with heat.

But we three canoeists, as we floated carelessly and idly down the river in the noonday glare, shielded by broad hats, and making merry over iced lemonade—for at a fabulous price we had purchased a lump of ice at a country inn—did not trouble our thoughts with the drought-stricken farmers and the dry, parched country. For was there not enough to carry us home, and plenty to spare besides for drinking and bathing? So when the first advanced courier of the storm, a puffy white cloud, hid the sun and threw a shadow on the earth, we looked up first with indignation and then with fear as we saw the darkness behind us. That much abused and elastic sophism, "the greatest good to the greatest number," did not reconcile itself to our views in this instance, and we were selfish enough to wish with all our hearts that the storm would pass harmlessly over us or else change its mind and recede to the west.

But it did nothing of the sort, and as it grew darker and the air became oppressively hot and still with that shuddering calm that always precedes a storm, we hastily dragged out our shelter coats and began to look about for a place of refuge. Half a mile below the river narrowed, and then made a sudden and abrupt turn.

"Grab your paddles," cried Forster, "we must get around the bend before the storm comes." It was very near now, and a sharp breeze was rifling the water, rapidly increasing in strength until, like magic, white caps sprang up, and the trees on shore bent and quivered from root to stem in the fierce gale. But we paddled lustily, scudding before the wind, cleaving the waves and throwing them to right and left in billowy curves that rose and fell and subsided harmlessly in our foamy wake. Then a few pattering drops of rain fell. The wind dropped, the rolling whitecaps gave way to short, choppy waves, and down came a crashing, drenching torrent, that rattled savagely on our stretched canvas, and then quickly ceased as we dashed through a course of rapids, made a sharp curve, and ran in under a sheltering cliff that stood far out in the air, and against which the storm struck and glanced, and in baffled fury raged with redoubled violence further out on the river.

"Look out there, will yez? Don't be afther runnin' into my line."

We dropped our paddles and looked upon the rocky ledge which rose sheer above the water three or four feet. Three individuals were seated on the edge, dangling their legs in the air and watching with evident enjoyment three fishing lines that hung into the water and rose and fell with every wave.

They belonged to the genus tramp we saw at a glance, and no older specimens ever trod a turnpike. Two of them were full-bearded, muscular fellows, with ruffian written on every line of their faces. Their attire was worn and faded, and looked to have been gathered in from divers places of the earth. The third was a curiosity. His face was smooth and a large mustache completely hid his mouth. He was attired in a pair of pants cut off at the knees, and he wore no stockings. A greasy black dress coat was pulled on over a red flannel shirt, and a much dilapidated plug hat rested on his head.

We hesitated a moment, casting a glance out on the river where the rain was falling so thickly as to almost conceal the opposite shore. That settled it; so we ran into a break in the ledge and climbed out on the rocks. The man with the plug came forward at once.

"Gentlemen," he said, "h'allow me to welcome you. I presume you are like h'ourselves, traveling sportsmen. On yonder rock you will see our autographs, which we 'ave just finished inscribing. Let that serve as an introduction."

We followed the direction of his hand and saw on the side of the cliff rudely daubed in red chalk:

"Birmingham Pete."
"Boston Jake."
"Sibletown Mike."

"To me," he continued, "belongs the honor of the first name. I'm a Hinglishman, and am traveling with a view to writing my impressions of America. My companions are merely traveling for sport, and 'aving chartered a boat, we are making a trip down the Susquehanna. Now, gentlemen, may I ask you for some tobacco?" We handed our pouch to this illustrious tramp, who carefully filled a blackened clay pipe and then passed it on to his companions. "I prefer Shag or Bird's H'eye, gentlemen, but this will do. You see that I forget constantly that I ham in America. Now Mike, produce the bait, and the gentlemen shall join us in fishing." It was raining yet, so we accepted the situation and eagerly prepared our rods. The bass bit freely and we caught a good many. The Irishman had good luck, and landed a fine three-pounder, pulling him hand over hand, and then with a dexterous twist, hauling him out on the ledge. Then the rain stopped and the sun came out. The fish stopped biting, so we concluded to start.

"We'll show yez a campin' place right below here," said Mike, "Why don't yez stop there? Shure an we'd be deloighted to spend the night wid yez, but we have a pressin' engagement tin miles down the river."

We much preferred to be in the rear of such a party as this, so we concluded to camp if there was a suitable place. We embarked together, and less than a quarter of a mile below we reached a grassy spot, shaded by huge oak trees and bisected by a spring that poured down from the mountains. It was a beautiful place, so we landed and ran up our tent. The "tourists" continued on down, bidding us an effusive farewell, and in their haste entirely forgetting to return our tobacco pouch, a box of hooks and a curiously carved brierwood of Foster's that Boston Jake had taken a fancy to. With a feeling of relief we saw them round the bend, Birmingham Pete still waving his hat frantically in the air, while Sibletown Mike, who appeared to be a novice at rowing, pulled lustily at the oars. Tourists of this class were scarce along the river. They were not the most desirable company and we devoutly hoped we had seen the last of them. They had evidently stolen the boat some place, for it was in good condition and newly painted.

The sun was getting low, so we got supper, and after fishing awhile with good success we turned in, first lifting our canoes carefully out on the bank and placing them in a semi-circle around the front of our tent. Early hours seem to come naturally on a canoe trip and we fell asleep at once.

I have an indistinct recollection of waking in the night and seeing Morton standing up in the dim light and peering out through a crevice in the tent. "He thought he heard a noise outside," he said. Then I fell asleep again. I woke up suddenly some time after that with a feeling of alarm. I glanced round the tent. There was Forster on the right and Morton on the left, both sound asleep. But why was the tent door open and one flap thrown back? and what was that?—a dark figure just inside the tent. "Help! help," I shouted. The figure rose with a bound, aimed a savage blow at me and sprang outside the tent. The boys leaped up at once, just as the ropes, cut on one side, gave way, and the tent fell in with a crash, entangling us in its heavy folds. We crawled out and rose to our feet in time to see a plug hat disappear over the slope to the river. We followed closely in pursuit, but when we reached the water Birmingham Pete and his fellow tourists were some distance out from shore, and the oars were striking the water with a very rapid movement. We went back and made an inspection. Our canoes were all right fortunately, but Forster's paddle was gone and all our fishing rods and a small valise containing a pistol, cartridges and other necessary trifles. "This won't do," said Morton, wrathfully, "pack up at once and we'll catch them yet."

We hastily carried the canoes to the water, and stowed away all our things. Morton took Forster in his canoe and towed the empty one behind.

It was near morning and the east was already faintly streaked with gray when we embarked and started down the river. We kept a close watch on both sides, fearing they might have landed.

Finally it grew lighter and soon the sun rose over the mountains, and like the breath of a Sirocco the cool atmosphere suddenly became hot and sultry. The long stretch of water before us danced and glimmered and fairly blinded us with the rays of heat that quivered in the air.

Toward noon we shot round a curve and saw far below us the unfinished piers of the Wyalusing bridge, standing gaunt and solitary between the thickly wooded shores. And we saw something else, too, for there, just passing under the shadow of the central pier was a boat, and even at that distance we could see that it was heavily freighted. Our chase was nearly ended, and

with energy we bent to our paddles. We hung closely to one shore, hoping to gain on them without being seen, and we did actually gain half a mile this way. Then fortune favored, and we reached a chain of islands which ran for some distance. The boat had gone to the left, and as soon as it disappeared round the point we shot into the channel on the right and paddled harder than ever.

We ran on for nearly a mile, and finally the end of the last island came in view. At the same time the current had increased, we saw a line of white foam below us, and the dull ominous roar of the rapids rang in our ears. The point of the island was but a few yards above the rapids, and was covered with overhanging trees. We ran our canoes in under these, and peering out through the branches we saw the "tourists" floating down stream.

They believed themselves perfectly secure, for the oars hung idly in the water, and grouped around a hastily improvised table —the middle seat—sat the trio deep in a game of poker. They were nearly opposite now and close to shore.

"Pass that 'ere Mike," said Birmingham Pete, "I take the ——."

"Stop, you villains," shouted Morton, thrusting aside the screen of branches, "pass over that stolen property."

That card party came to a sudden end. The Englishman fell back in the stern, Mike, first scooping the contents of the pot into his pocket, grabbed the oars and pulled savagely away from us. But Morton was already within a couple of yards and we were close behind. At that moment we struck the rapids and plunged in among the hidden rocks.

The boat grounded savagely on a sharp ledge and came to a full stop; Morton's canoe struck the end, and, swinging round, plunged on down backward just as Birmingham Pete, aiming a savage blow at him, overbalanced himself and fell in, followed in a moment by Morton himself, whose canoe struck sideways and tilted over.

Another moment and we were through the rapids and Morton was swimming to shore, while his canoe floated on down and was caught uninjured. As we all landed, the "Englishman," dripping wet, crawled out on shore and threw a sorrowful glance out on the river on which his glossy plug hat was dancing among the waves and finally sank out of sight. "Just my blasted luck," he muttered.

Just then the clattering of hoofs in the rear startled us, and, as we looked round, two men on horseback galloped down the road. In an instant they dismounted and had the "Englishman" by the collar. "Let me go! Let me go!" he cried. They shook him until his teeth chattered.

"Where is our boat? You villain, we had a long chase, but we've got our hands on you now."

"Pete" wilted at once. "There's your boat," he cried, "go and get it."

They turned their attention to Mike and his friend, who had now succeeded in getting clear, and were moving on down the river. The glittering barrel of a pistol had a marvelous effect, and they meekly steered in shore. Their captors procured a wagon, and after our property had been restored to us, the three tourists, with their hands ignominiously tied behind them, were driven off to the county seat, only a couple of miles away, where prison cells awaited them. They parted from us effusively, and Sibletown Mike requested us to inform his friends down in Dauphin county that "he'd be out afore Christmas for shure." The rattle of the wheels died out on the dusty road, and disembarking, we started off on our interrupted journey.

Long after Christmas, when the spring buds opened and the trees were all in blossom, I met Mike one morning under very different circumstances. He was breaking stone in the public square in company with a gang of tramps, under the watchful eye of a sturdy policeman. He knew me at once. "Shure an' I'm glad to see yez; I only got six months an' Oive been out sense New Years. Pete, did you say? O, the dirty spalteen. He swore as how we stole the boat an' enticed him into it, an' shure an didn't they let him clane off. But be jabers I'll lay for him an'——

"Get to work there. Be quick about it too."

The stern voice of the guard broke off our colloquy and I left Mike alone with his hammer and his reflections.

W. MURRAY GRAYDON.

CRUISES ABOUT LAKE CHAMPLAIN.

WHEREVER the A. C. A. meets it is generally the custom for those who are acquainted with the neighboring cruising grounds to give the fraternity the benefit of their knowledge. Acting on this precedent, the writer would venture the observation that at no time since the organization of the association has a spot for the annual encampment been selected that has offered such a wide range of waters, both in variety and extent, combining all that makes canoeing pleasant, as the site which has this year been chosen. Lake Champlain and its sister, Lake George, are already familiar to the canoeist and need no description; but the vast wild region to the west, covered with virgin forests, teeming with trout, alive with deer, and studded with almost numberless small lakes, connected by navigable rivers, has been as yet, strange as it may seem, comparatively little frequented by the average canoeist. Perhaps it is the swift water, the occasional necessity of a portage, joined with the fact that the modern canoe is usually decked and built for sailing and wide expanses of water rather than for rapids and small rivers and lakes, that the charm of leaving the ordinary routes has not sufficiently presented itself to the canoeist to induce him to explore the Adirondacks.

The writer last summer, in company with a friend, paddled through Blue Mountain, Raquette, North, Long, Big and Little Tupper and Rock lakes, besides descending the Racket River. He can truthfully say that if a country was ever made to order for a canoe, that one was. The region above described is within forty or fifty miles of Lake Champlain, and is best reached by the Adirondack R. R. north from Saratoga to North Creek, thence thirty miles by stage to Blue Mountain Lake. He can get into the Saranac district from the Racket River by means of a two-mile carry, and can find egress by the Saranac and St. Regis chain of lakes and a newly-constructed railroad to Plattsburg, seven miles from the proposed camp. Why not give the Adirondacks a trial since they are right in the way of those wishing to visit the meet?

Another fine and easy trip is to start at Rock Lake, seven miles from Blue Mountain Lake, follow the Rock River nine miles to where it enters the Upper Hudson, down the Hudson to North Creek, a short portage of two miles to the Schroon River and down the Schroon River thirty miles until within seven miles of Lake George, up which lake and Lake Champlain a steamer will carry the canoeist direct to the A. C. A. camp. This trip would, under ordinary circumstances, occupy about two weeks. The writer has a 16ft. double Peterborough open canoe, tent and camping equipment at Blue Mountain Lake, with which he intends to take the journey last described, and is willing to take a companion who has the time and who is not afraid of roughing it.

305 FAYETTE STREET, Peoria, Ill. R. K. WING.

QUAKER CITY C. C. REGATTA.—Philadelphia, June 28.—*Editor Forest and Stream:* The annual regatta of the Q. C. C. C. took place on June 19, the winners being as follows: Class III., paddling, Vixen. A. A. Jackson, first; Caprice, E. H. Barten, second; four starters. Standing paddling, Malta, J. A. Barten, first; others not finishing, three starters. Tandem paddling, Malta, Jackson and Barten, first; Flash, F. Geiger and E. H. Barten, second; Scamp, Munchen and Golze, third, five starters. Class B, sailing, Malta, J. A. Barten, first; Caprice, E. H. Barten, second; four starters. Caprice sailed a pretty close race with Malta, her performance being largely due to her flat sails, which are all aft of the mast, the mainsail of 50ft. having five battens; all the battens and spars are of the same length. The silver champion badge, won by Malta, is open to all comers.—S.

WATERPROOFING CLOTHING.—A correspondent asks for a method of waterproofing a hunting suit. The Belgian War Department has for some time been engaged in experiments with liquid alumina for waterproofing uniforms and clothing, and it has been proved that the following mixture allows the perspiration to pass off readily, and in no way injures the color or material of the fabric; but in order to be done economically and effectually, it must be conducted on a large scale: Solutions of equal parts of alum and acetate of lead are made in separate vessels and then mixed, when sulphate of lead will be thrown down, leaving acetate of alumina in solution, which is then decanted. The articles to be waterproofed are soaked in this solution and dried in the air without wringing.

CALLA SHASTA MEET.—The Springfield and Hartford canoeists spent their holiday in camping and racing at Calla Shasta, the races being held on July 4. Dr. H. E. Rice, in the Cid, won the single paddling race, and also with Emil Knappe, the tandem paddling, both using the Narka. Mr. Geo. M. Barney won the limited sailing race in Pecowsic, with Blanche second, and Hornet and Cid following out of 8 starters. Mr. F. A. Nickerson won the upset race and also the prize for canoe gymnastics. Pecowsic again won in the unlimited sailing race, with Nickerson second in Ghost, and Knappe third in Le Cid. Mr. Nickerson also won the standing paddling race.

PASSAIC RIVER MEET.—A very successful meet was held on the Passaic River from Saturday until Monday, but full reports have not yet been received.

THE ORION ROWING AND ATHLETIC ASSOCIATION is an organization dating back to 1872, when it sprang into life through the push of Major Jack Kase, Dr. Levering and others as the Orion Rowing Association. In 1875 it joined issues with the Hudson Athletic Club, making one of the strongest clubs in the State, comprising on its roll some of the best of the young citizens of Jersey City and the county of Hudson. It has been growing in strength and popularity until now it has between 90 and 100 members on its roster. It has a neat and commodious club house on the Hackensack River, two two-oared barges, two four-oared barges, and several single sculls or shells, as you choose to call them, and an ample and well-furnished athletic room on Newark avenue, opposite the Court House. Under the auspices of one of its most popular members, genial, rollicking Frank Hill, and Captain Brook, a very successful regatta was held on the Hackensack some two weeks since. On the 3d inst. a crew rowed around Staten Island for a flyer for their trip in their new four-oared barge, the Orion, to Troy on the 5th inst. This will be their first long row as a crew. It will be a row of about 170 miles, and they will visit other clubs on their route. They will start from their boat house on the Hackensack early in the morning, rowing down the river to Newark Bay, through the Kill von Kull, around Bergen Point, and then to the pier of the Troy boat. Taking the boat up, they expect to row back. The boys expect to have a good time, though they calculate on some hard work some of the time. The crew will consist of Frank Stone, John Colwell, Lew Reed, Brit Kitchen, Charlie Strong and Geo. Reed.—JACOBSTAFF.

SOMETHING ABOUT STEWARDS.

A GROUP of yachting men were sitting, lazily smoking, on the piazza of the Great Brewster Yacht Club House one evening, waiting to see the colors come down when the sunset gun should be fired on the Commodore's yacht. There were Commodore Ward of the Black Prince, Warren of the Sea King, Hale of the Lady Jane and Wetmore of the Roysterer, besides a number of small-boat owners.

"By the way," said Hale, looking at his schooner, "I've got a sad experience in store for me."

"What's up?" all asked with more or less sympathizing interest.

"Oh! Another new steward," he answered dolefully. "Each one is a revelation of some new phase of human depravity. I am wondering what this man will disclose." The truth was, that the Lady Jane was only 40ft. on her waterline, and her accommodations were so limited that Hale had hard times finding men who would cook there, even with extra high wages.

"What was the trouble with the last man?" asked the Commodore.

"His commissions were excessive," answered Hale demurely, "Jones & Son, that I deal with for supplies, said he demanded ten per cent. of all bills, and I discharged him."

"That was a great mistake," said Warren, "when you know just where a steward's fault is you can know how to get even with him; but now you'll have to begin to watch again. I had a man on the Sea King last year that I thought was going to prove just right; in fact, I kept him all summer and then gave him a rousing recommendation when I got ready to put the boat up. He left me the day before I began to dismantle, pretending that some one of his family was very sick, and what do you think he did but go straight into Boston and get a large order of goods from every store that I ever traded at, and had them all delivered at a certain hour at the boat landing; and then he got a job wagon and took the whole load somewhere. I never could find where it went, but he got into me about a hundred dollars. He told the storemen all around that we were 'stocking up' to go Down East."

"That was rough," said Wetmore, "the rascal I've got now plays this on me: Each time he goes to market he gets a couple dozen extra of eggs that he trades at the barroom for a good drink on his way back. In keeping the account, though, and when we come to settle, I shall have the price of several hundred dozen, less or more, of eggs to deduct from his pay."

"Eggs!" said the Commodore, "I caught my steward one day trading a quarter of spring lamb at forty cents a pound for a drink of whisky."

"And what did you do about it?" asked Wetmore.

"I couldn't do anything at the time. The man had me at his mercy for I had friends aboard for a trip, and of course couldn't discharge him then; but I did as soon as we got back. After all, I got the worst of it," added the Commodore, laughing at the reminiscence, "for I paid him up and left him to be set ashore by one of the men. Before he went he stirred coal ashes into the flour barrel, so that we had to throw all the flour away; emptied the pepper and spices into the sugar bucket, put salt into the coffee, broke every egg on board, poured kerosene into the pickle jar and wound up by coming into our staterooms and strewing a handful of mustard between our sheets. 'Twas a good thing for him that I never could find where he went to."

"After such a row as that 'simple drunks,' as the court would call them," said Hale, whose yachting experience was brief, "must seem very unobjectionable. But drinking is one thing I won't put up with. I must have a sober man to work for me."

"Then I guess you intend to live on air," said Wetmore. "When I first had a yacht I stood out for sober men, but I found I might as well insist on getting along without fogs. They all drink just the same when they get a chance."

"That's about so," assented the Commodore. "I had a man once on the Black Prince that brought a little framed pledge and hung it up in the galley, and I was just green enough to think he meant it. Indeed, he hadn't been on board a week, when he came back from shore one evening raving drunk, and was so noisy that I ordered a man to set him ashore again. He refused to go, grabbed the boat hook and made a rush for me. My revolver was carefully packed away, unloaded, in the bottom of my locker, so that didn't do me much good. My sailing master seized the man's arm and he at once turned, threw down the boathook, pulled out his knife, and before any one could prevent him, gave the master's hand a bad cut. By that time a seaman and I had come to the rescue, and we simply pitched the fellow overboard into the water."

"Wasn't you afraid he'd drown?" asked Hale.

"I was a good deal more afraid he wouldn't," said the Commodore. "We lowered a boat and he scrambled into it. The wetting brought him too, a little, and when he got ashore—we were in Gloucester that night—I couldn't find a policeman right away, and the fellow slipped out of sight in the dark, and we never heard of him again. I made my master a handsome present for his injury and hunted up a new steward."

"Well, you have had hard luck," continued Wetmore. "I once had two men get to fighting in the forecastle. One had a marlin spike and the other a hammer, but before they had either of them hurt the other seriously the steward ran in from the galley and threw a handful of pepper right into their faces. Well, the fight ended, of course, I discharged the men and the steward left too, because he said they would manage to get even with him and he must get out of their way, so I had to make him a present to pay him for his interference and then get a new crew. Wouldn't it be fine if we didn't have to eat at all? If we could just fill our water tanks and start for a cruise!"

"I thought you were going to say fill our demijohns and start," said a catboat man who had been a silent member of the group. "Now you see, if you couldn't afford a bigger boat than I can, you wouldn't be plagued with stewards. A light purse brings some compensation after all. Since I'm my own steward, I've no one to find fault with. An alcohol lamp and a can-opener make my galley furnishings complete."

"You're too modest," said Wetmore, retaliatingly. "You've overlooked your corkscrew." Every one laughed at this sally, and then he went on to say, "Warren, what made you get rid of your steward in Portland last year? You know you wouldn't tell at the time."

"Well, that was too much," said Warren. "Do you remember that cross-eyed Irishman I had then? He was just about my size and as impudent a fellow as you ever met, but smart and capable too. I sent the Sea King ahead to Portland to wait for me till I could get away for an eastern cruise, and that villain used to put on my fleet captain's uniform and go ashore and swell around pretending to be me, and I actually met him on the wharf myself in that rig. He even had on a pair of eye-glasses, and was so far 'set up' when I saw him that he was sitting down on a pile of dry fish to recuperate. Now you know why I didn't use my uniform the last end of the season, but I felt too cheap to tell before. To add to the scrape, the fellow had been in a bar room, where he had sat down on a sheet of sticky fly-paper before he had taken his repose on the fish pile, and you may imagine the consequences. As for my coat, he had leaned up against some freshly tarred ropes some where, and that was all in a mess. I tell you I was the maddest man in Portland when I saw him. I just snaked him on to his feet, and the way that coat came off wasn't slow. I was so mad that I gave it a fling over the wharf into the sea, as I supposed, but it really fell into a boat, and a few minutes later I saw a man rowing off for dear life with his prize before any one might claim it and get it back. I dare say the coat does duty on the Grand Banks on some fisherman's back. I was still scolding and shaking the tipsy fellow, and, as usual, a small crowd of boys and men had gathered around, when a happy idea took me. I told the crowd that anybody might have the pants that would get them off, for they were mine. A first-class row was well under way, and the crowd were pulling and hauling the wretch round in grand style, when a policeman appeared and sort of settled things. I found I could not appear against the man in court without delaying my cruise, and so I didn't have the policeman arrest him, but told the fellow to stay there till I should send his belongings off to him from the yacht. I didn't owe him anything, for I had paid him a week's advance wages when he left Boston, but he felt pretty humble, I tell you. One boy had run off with the suspenders, and both my back pants pockets were torn down a foot or less in the scuffle. A darky was parading round with the eye glasses on, and the dirtiest boy you ever saw had mounted my naval cap. I wanted to give the fellow a good kicking, but the policeman persuaded—in fact, you might say coerced—me not to. So I finally telegraphed to Boston for a new steward and then went on board. By good luck a new man was sent down on the night train, and so that little episode didn't delay me long, but the captain kept a sharp look out all night for fear the man might come out and do us some harm."

"What harm could he do?" asked Hale, whose ideas were rapidly broadening as to steward possibility.

"Oh, he might have come aboard slyly and stolen something. I know a man who cut an anchor cable just out of spite, and so the vessel drifted until the first thing that any one noticed she was stuck in a mud bank, and the tide went out and left her there, so that the party on board had to wait till flood tide to get off. The time wasn't the worst part either, for when the flats were dry they smell horribly in the hot sun, and the people on board were nearly perished for a breath of sweet air. This happened in Salem Harbor, and I dare say you have smelt the flats that catch the refuse from the tanneries. Some of the party were sick for weeks after, it was like being poisoned."

"I begin to think," said Hale, "that the best way to do would be to enlist a steward, as they do in the navy, and have a code of discipline that could be enforced."

"Then they don't get rid of trouble." put in a hitherto silent listener. "A cousin of mine, a commander in the North Atlantic Squadron, told me that they had frequently to punish their stewards, and that they made more trouble than all their men besides."

"I've heard enough for one time," said Hale, rising to whistle his call for his tender. "Your yarns beat mine, though I thought I'd had a hard time. All these stewards you tell about have been vicious men. I had a *non-compos* man once that was about as bad to deal with. He hadn't the first idea of how much or in what proportion to buy things. He laid in forty dozen eggs in Boston to take Down East, where eggs are fresh and cheap. He actually bought a whole half-barrel of pig's feet at one time, and you know that my galley is so small that I buy flour in a paper bag. He'd buy a gallon of milk when the ice chest was empty, and all sorts of like things. What he cooked was well enough, but his buying was beyond all belief. I threatened one day to make him eat all the wasted things; but he answered serenely that nothing was wasted, for if things didn't keep he just threw them overboard. So to save myself from bankruptcy I had to get rid of him. But my boat is coming and I must go. Good-bye."

"Good-bye!" said the Commodore, and the little company all rose to disperse, for it was getting dark and the anchor lights were shining brightly from the fleet in harbor. "Tell us your new steward's failing when you find it out, will you?"

"All right, I will," answered Hale.

"I don't believe you'll tell us any new trick," said Wetmore, laughing at his recollections, "I haven't begun to disclose my experience with stewards yet."

"Nor I," added Warren, "another time I'll tell you more. Good-bye." G. E. REISE.

A CENTERBOARD IN BRITISH WATERS.—The centerboard cutter Murre, lately described in the FOREST AND STREAM, designed by Captain Bayly, of Exmouth, has been tried and has proved quite speedy, as well as very convenient. She lately arrived at her future home, creating a decided sensation. The *Exeter Post* says: "The ancient and historical borough of Lyme Regis has been long famed for the fossils found in its neighborhood, and from its blue lias come the finest specimens in the British Museum. It would appear, however, that this fossil characteristic of Lyme is not solely confined to the geological formation of its soil, but is largely developed also in its inhabitants, or at least that portion of them who follow the briny, as was amusingly illustrated by their various remarks on the Murre when she arrived at the port of her destination on Monday last. Her clipper bow, as she rounded the Cobb, first raised their bile, and came in for a whole volume of wholesome abuse, but when by the ebbing of the tide she was left dry, and the economy of her entire underwater body became apparent to the nautical critic, the adverse feeling reached its climax, and the forcible adjectives that flew about were quite worthy of a Tanner or a Healy and fully up to the standard of Mr. Gladstone's following in the House of Commons. Her cutaway forefoot; the mysterious and wonderful apparatus inside by which she could draw 9ft. of water when afloat, though then squatting like a duck punt; the wide iron keel and, above all, her sitting upright upon the ground without any support from legs or shores, created a feeling of antagonism in the minds of the ancient mariners of Lyme, which vented itself in observations indicative of abhorrence and disgust. Familiarity may in time ameliorate these feelings, but at present the Murre is regarded not only as a monstrosity but as a sort of "Frankenstein," a creation positively diabolical, as something against nature, and a direct flying in the face of a Divine Providence."

LAUNCH OF THE VOLUNTEER.—On June 30 the new steel yacht building for Gen. Paine by Pusey & Jones, of Wilmington, was launched in the presence of Mr. Burgess and a large number of spectators. She was taken in tow on Saturday by the tug Ocean King, and started for Boston, arriving at 2 A. M. on July 5. Lawley & Son will rig her.

THE SCOTCH CUTTER "THISTLE."

THE RECORD AGAIN.

Editor Forest and Stream:

After the Puritan-Genesta races of 1885, a correspondent, "C. P. K.," went on record with the assertion that if ever Galatea or her type caught Puritan or her type in a gale and a sea, Galatea would make a show of the Puritan centerboarders. Since then a good deal of evidence on this point has come in, which is worth summarizing:

1. In a 70-mile beat to windward in a gale of wind and "chalk-pit sea," centerboard Thetis beat cutter Stranger out of sight.

2. In as strong a whole sail breeze as the boats wanted and an ugly jump of a sea, centerboard schooner Sachem ran away from cutter schooner Miranda in the heavy windward work, and not only was she faster but the drier and more comfortable.

3. Centerboard Titania, new, with rough bottom and stretching sails, took a 12-mile bout out of cutter Bedouin, crack of her kind and in fine condition, in a beat in a strong wind and jumping sea, outside Sandy Hook, and easily disposed of her. What Titania at the end of the season, when in condition, might do in a beat to windward with Bedouin can easily be inferred.

4. Mayflower, with a wind at times reaching 30 miles an hour, and a very ugly sea, beat Galatea 13 minutes in 36 miles. Galatea's owner is reported as saying that neither his cutter nor any of her kind has any business with Mayflower in any weather.

5. Little centerboard Shadow faced little cutter Shona, crack of her class, at Marblehead, with topmasts housed, and beat the cutter 14 minutes in 24 miles.

Something has split in C. P. K.'s theory of the "cringle blow and the chalk-pit sea." D. W. BROWN.

NEW YORK, June 24.

[Our correspondent's assumption of a gale and heavy sea is not justified by the facts in several of the instances quoted, while in the most important ones the yachts have not been reefed, as the expression "cringle blow" indicates. Thetis and Stranger represent opposite extremes in that while the centerboard is notoriously slow in moderate weather, the cutter has only performed well in the lightest winds and smooth water, being designed and sparred for such work. The mere fact of her being a cutter does not insure the conclusion that she is a heavy weather boat, while her opponent thus far has done nothing unless in the race referred to, being repeatedly beaten by Stranger in light weather. As to Sachem and Miranda, although the latter was beaten in the only race sailed, she was fitted out and manned in a way that showed more valor than discretion on the part of her friends. Whether or no she can beat Sachem in such weather, it is certain that this trial was most unfair to the old boat. Neither the Seawanhaka race of Bedouin and Titania nor the E. Y. C. race between Mayflower and Galatea were sailed under the conditions mentioned by D. W. B., a short steep sea and a reefing breeze, but in comparatively long seas and under working topsails. In the last instance mentioned the conditions were more nearly realized, but the evidence all goes to show that in the heaviest weather, at the start, before the reefs were shaken out and in the roughest water inshore, Shona led Shadow, the latter passing her afterward as sea and wind decreased. We do not consider Shona any match for Shadow in size or power, but as proved in the first of this race and again last September, there are some conditions under which the smaller boat is the faster. From a racing standpoint it is of little importance what a yacht will do in a "cringle blow and chalkpit sea," as these conditions are seldom met in racing here, and when they are, as in the Brenton's reef race of Genesta and Dauntless and the Seawanhaka C. Y. C. race of '84, when Oriva beat Gracie to windward all other sloops going back, the sloop and compromise are seldom there to try.]

CUTTER WEATHER.

Editor Forest and Stream:

As a fitting comment on the recent remarks in your columns of certain sanguine, if illogical, cutter friends, allow me to state that yesterday, at Marblehead, a race was sailed in cutter weather (so called), and that the result won a decided, unquestionable and easy victory of every sloop over every cutter, and a conclusive showing of the superiority of bilge, beam and centerboard over dead weight, keel, and unnecessary displacement.

We hear a vast deal of talk about the value of the cutter's keel, but I believe that neither Galatea nor Genesta have any keel worth mentioning. They would probably hang on better if they were provided with at least some substitute for what they can never beat—namely, the centerboard.

Some day we will probably learn that the Scotch keel sloop Thistle has a keel, also that her midship section is pretty fairly copied from that of Mayflower.

Oh, by the way, can fifteen-year-old Shadow beat Shona in a blow and a seaway? THOMAS CLAPHAM.

ROSLYN, L. I., June 24.

[We must decline to accept Mr. Clapham's term "cutter weather" until it is defined more clearly, as at present it means nothing. The weather of the race was yachting weather of the right sort, nothing less nor more. There was no drifting, but there was as much wind and sea as most racing men care for; certainly not enough to favor Galatea at the expense of Mayflower. The "unquestionable and easy victory of every sloop" sounds well, but it comes down to the fact that in the great race of the year in Eastern waters one real sloop, and one whose claim to that name rests only on the possession of a board, were all that faced the cutters at the line. It is all very well for these two that went in, but how about the score or more of real sloops that judiciously kept out? It is true that none of the cutters have such marked lead keels as Mr. Clapham puts under his flat-floored sharpies; but Bedouin, Madge, Clara and Oriva have never found any trouble in leading the way to windward, and the larger cutters have more clearly defined keels than some of these, though, as we have shown, deprived of the full advantages of a proportionate draft to that of the smaller craft. As to Shadow and Shona, it was considered quite a performance once for Shadow to share the honors with ten-tonner Madge, but now five-tonner Shona is expected to sail evenly with her. That she can more than do so in some weathers was shown last September, but it is too much to expect her to make up for the great disparity in size and power except under favorable conditions. However, she suffers just now from entering two races where the chances were against her, from mere love of sport; instead of pursuing the course now in favor with all of the old sloops, of saving a beating by having a pressing engagement elsewhere on race days. Boston boasts a big fleet of boats of 30 to 35ft., but only Shadow seems to be anxious to try powers with the wee cutter they all affect to despise. If Mr. Clapham is right in his theory as to cutters not "hanging on," it may be to his advantage to bring his new weather grip to the notice of the owners of Galatea and Thistle.]

MONTGOMERY SAILING CLUB, SEVENTH REGATTA, JULY 3.—Courses: Schuylkill River, from Norristown to Indian Creek and return; distance, 5 miles. Weather clear and hot. Wind fresh, southwest. Current ½ mile per hour:

	Length.	Start.	Finish.	Elapsed.	Cor'd.
Priscilla, E. Stanley.....	15.00	9 00 00	10 29 51	1 29 51	1 28 05

Ino, Wm. Sullivan.....	15.00	9 00 00	10 52 07	1 52 07	1 48 42

Winner first prize, champion pennant, Priscilla. Protest filed against Flying Eagle for picking up one member of her crew after crossing the line at the start. Judges—A. B. Parker and Samuel H. Pickering.

Championship regatta, July 4. Course, Norristown to Indian Creek and return, distance 5 miles. Weather clear. Wind fresh, southwest. Current, half mile per hour:

	Length.	Start.	Finish.	Elapsed.	Cor'd.
Gracie, E. A. Leopold.....	12.00	9 00 00	10 35 43	1 35 43	1 26 07
Priscilla, E. Stanley.....	15.00	9 00 00	10 29 26	1 29 26	1 27 40
Ino, Wm. Sullivan.....	15.00	9 00 00	10 32 30	1 32 30	1 29 05
Little Tycoon, L. Palmer....	16.00	9 00 00	10 29 32	1 30 32	1 29 32
E. C. Potts, Parker Bros....	15.00	9 00 00	10 31 45	1 31 45	1 29 59
Igidious, Wm. Rochell.....	15.00	9 00 00	10 31 38	1 31 38	1 31 05

The time made in this race is better than has been made in either of the previous seven races held by the club this season. Winner first prize, championship pennant, Gracie. The Gracie carried 85ft. of sail in main, mizen and jib. Her beam is 34in., and she is fitted with a single weather grip to starboard. The Ino, a ducker, carried 18yds. of sail. The other boats are tuckups, and carried from 27 to 30yds. of sail. Judge, Elwood Wanner.

TORONTO Y. C. CRUISE TO NIAGARA.—The fleet of the Toronto Y. C. sailed on July 1 to Fort Niagara, and on Saturday a race was sailed off the latter place. The newly imported cutter Cyprus sailed very well, but mistook a mark and went far out of her course. Aileen finally won, with Cygnet second and Escape third. The fleet included Oriole, Aileen, Cygnet, Cyprus, Rivet, Whistlewing, Condor, Escape, Molly, Yolande, Maida, Mischief, Tramp, Orient, Guinevere, and the steam yachts Vivid and Rosamond. A hop was given in honor of the yachtsmen at night, and on July 3 the fleet sailed home.

LORNA—NAHLI.—This match was sailed on July 2, ten miles to windward and return, the course being from Sands Point around Fort Schuyler Buoy, two rounds. Nahli parted her throat halliards and withdrew, Lorna sailing one round and taking the race.

NEW ROCHELLE Y. C. FIRST ANNUAL REGATTA, JULY 2.

WITH a large membership and a fine new club house the New Rochelle Y. C. has opened its third year by a most successful regatta, and in the future there will be two events nearly together, as the Larchmont Club, only a few miles distant, has long held July 4 as its date. With such inducements there are sure to be large entries, as yachts from all the Sound ports will come in greater numbers each year; and as all sizes are provided for, these events, if properly managed, may fairly divide the interest with the older clubs, whose races come a little earlier on New York Bay. Certainly this year the fleet was larger in these two Sound regattas than in those of last month, and, though many of the boats were smaller, the interest was as well sustained throughout, even though none of the first-class racers were present. Saturday was clear and warm, with a brisk S.W. wind and smooth water. The courses sailed were nearly the same as the regular ones of the Larchmont Y. C., to Execution, Matinnicock and Captain's Island for the large yachts, and home from Matinnicock for the others. The start was made at 11:15, most of the yachts crossing on port tack. The first leg, to Execution, was a beat, then a reach to Matinnicock, a run to Captain's Island and a beat to Execution, coming home free. The full times are:

CLASS B—SCHOONERS, 75FT. AND OVER ON WATERLINE.

	Start.	Finish.	Elapsed.	Corrected.
Leona	11 17 00	3 15 05	3 58 05	3 49 50

Narrioch	11 14 58	3 35 00	4 20 02	4 19 11
Sadie	11 14 40	Time not taken.		

In class B Leona wins by 2m. 20s., in class D Shamrock wins by 13m. 29s., and Fanita in class I. B by 8m. 11s. In class II. A Rival beats Santapogue 17s., Elephant beats Volusia in class II. B by 1m. 8s. Arab wins in class III. A by 1m. 2s. and Gleam in class III. B by 19m. 36s. Dolphin, in class IV., had no competitor. Ada wins in class VII. by 7m. 36s., Terrapin in class VIII. by 6s., and Onward had a walkover in class I., B. In this, the first race she has sailed since her recent alteration, Thistle carried away her topmast. The regatta committee included Messrs. Theodore P. Jenkins, John S. Nicholas and Henry D. Phelps.

LARCHMONT Y. C. ANNUAL REGATTA, JULY 4.

THE Larchmont Y. C. was in luck this year for once, as July 4 turned out a regatta day of the finest sort, clear, warm but not sultry for the season, with a fine breeze all day, enough for the big schooners and not too much for the small fry, though the latter carried reefs and had all they wanted. The arrangements, with the single exception of a long delay at the start, were exceedingly good, and as the entry list was large the race made a sight well worth seeing. The classes were practically the same as proposed by the FOREST AND STREAM, the class limits in some being different by a foot or so, but the principle of small class divisions was well carried out, the result being a fleet of 46 yachts. The entry list included 75, but many did not start, though in few cases for a good reason. Thistle lost her topmast on Saturday, Anaconda had to replace her new mast, which had sprung, and was still on the ways, and Pappoose failed to arrive from New London. Besides these were a lot which might well have entered, but which did not do so. When a regatta committee does so much as in the present case, even to providing wind, the least that every owner in the club who has a fairly fast boat can do is to aid them by starting and making a race. Hanging out for fear of being beaten may be one way of saving a boat's reputation, but it is a poor one, and it is far more satisfactory in the end to go in and take an occasional beating with the chance of winning.

The courses were: For Classes A, B, D and E—Start between two stakeboats anchored south of Hen and Chickens Reef off Larchmont Harbor, around red and black horizontal buoy at west end of Execution Reef, passing same on port, thence around black buoy off Center Island Reef, passing same on port, thence around stakeboat ¼ mile south of Captain's Island Lighthouse, passing same on port, thence around buoy at Execution Reef, passing on starboard, thence to line. Distance 27 nautical miles. For Classes C, F, G, 1 and 2 from same line around buoy at Execution Reef, thence around buoy off Matinnicock Point, thence around stakeboat off Captain's Island Lighthouse, thence around buoy off Execution Reef to line. Distance 21 nautical miles. For Classes 3, 4, 6, 7, 8, 9, 10, 11, around buoy at Execution Reef, around buoy off Matinnicock Point, around all spar and barrel buoys on Hen and Chickens Reef, passing same on port, around Execution Reef, keeping it on starboard and outside of all three spar buoys on reef and around red and black horizontal buoy at west end of reef, passing same on starboard, to line. Distance 16 nautical miles. For Class 5 around buoy at Execution Reef, around buoy off Matinnicock Point, around buoy at Execution Reef, keeping outside of all three buoys on Execution Reef, to line. Distance 14 nautical miles.

The tide was just ebbing and a brisk S.S.W. wind was blowing when the preparatory gun was fired at 11:45, followed by the start at 11:50. Cinderella had been cleverly hove too for some time at the south end of the line, and with the gun she filled on port tack and led the fleet across, all going over on port tack. The little ones suffered from the blanketing of the schooners, but still a very fair start was effected. The order was: Cinderella, Plover, Elephant, Comet, Ariadne, Southern Cross, Magic, Adelaide, Fanita, Gevalia, Rival, Crocodile, Amanda, Schemer, Santapogue, Troubadour, Hildegarde, Lotus, Sirena, Speranza, Olive N., Volusia, Gleam, Devil's Own, Beatrice, Leona, Ilderan, Carrie, Shamrock, Titania, Maida, Fairy, Nora, Nymph, Curlew, Aida, Narrioch, Vixen, Cythera, Arab, Volusia, Brenda, Rajah, Orienta, Terrapin, La Perichole and Adele.

Cinderella worked out to windward for the turn at Execution Buoy, all carrying working topsails. Shamrock and Titania were well astern at the start, the former luffing out at the line and taking the better berth. Titania held on but Shamrock made a short leg to windward, and then all began to break tacks until the Sound was covered with racers large and small. Cinderella rounded first, setting balloon jibtopsail for the reach along the shore, then came Hildegarde, Shamrock and Titania, the latter blanketed by the schooner Comet. The fleet went along toward Matinnicock at a very good pace, Shamrock leading Titania, but Cinderella and Hildegarde keeping ahead of the pair until the time came for the smaller two to jibe and set spinakers for Captain's Island. The puffs came freely over the hills and finally lifted the foretopmast out of Troubadour, while Comet lost foretopmast and jibboom. The large yachts held on to Center Island but were not timed there. Titania had picked up Shamrock and when near the markboat at Captain's Island they were nearly even, but in rounding Shamrock gained a slight advantage, taking the better position. The times at this mark were:

Cinderella	1 19 45	Leona	1 39 44
Hildegarde	1 20 43	Ariadne	1 40 27
Gevalia	1 27 08	Santapogue	1 42 18
Fanita	1 29 03	Shamrock	1 47 32
Lotus	1 34 24	Titania	1 48 06
Rival	1 35 07	Troubadour	1 49 09
Adelaide	1 35 23	Magic	1 52 15
Schemer	1 36 56	Speranza	1 56 32
Crocodile	1 37 06		

Hildegarde gained on Cinderella off the wind, but on the long beat to Execution the latter held her better in spite of 9ft. less length. Cinderella seemed to point closer and held a good lead. The battle royal of the day, however, was on this leg between Shamrock and Titania. The latter had already made up a large loss and was nearly even at Captain's Island. As they continued on port tack she fell astern, but seemed to hold to windward better. At 2:20 Shamrock, ahead but to leeward, went on starboard tack and came for Titania's bows. It was evident that the latter could not clear, so she was forced to tack also, going about just at the right moment, so close under Shamrock's bow that the wind from her mainsail seemed thrown into Shamrock's sails, setting the headsails aback. With this impulse Titania shot ahead while Shamrock lost a little, enabling the leeward boat to get from under her and to escape a blanketing. Once clear, Titania continued to gain both ahead and to windward, until she had a safe lead.

As the fleet worked closer in shore the puffs came heavier, until Titania heeled well down and Shamrock took in jibtopsail and partly clewed down her working topsail. After a time she set it but soon lowered again as she only lost ground. At Execution all set spinakers and came home flying, the courses being so adjusted as to laugh that the fleet finished well together. At the last Hildegarde came up with Cinderella and beat her by 29sec., but the latter entered Hildegarde's class at a length of 55ft., her real length being 52ft. In consequence of few starters several classes were abandoned, Cythera going in with the schooners. Fairy capsized off Matinnicock and lost her bags, coming home under jib. Volusia fouled a markboat in starting, but made a new start and sailed the course. The full times were:

CLASS A—SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Magic	11 52 50	3 50 10	3 57 20	3 52 57

NEW JERSEY Y. C.—The annual regatta of this club has been postponed until fall.

BOSTON CITY REGATTA, JULY 4.

THE annual city regatta was sailed at Boston on July 4 in a strong southwest wind. The arrangements were well carried out by the committee, Alderman John H. Lee (chairman), Aldermen Bromwich, McLaughlin, Sullivan, and Councilmen Leary, Clark, McKenna and Powers. The judges were Mr. M. J. Kiley (chairman), William Morris, Charles F. Loring, Lyman H. Bigelow and P. J. Kennedy, and the affair was a great success. The summary is as follows:

SECOND CLASS CENTERBOARDS—27FT. AND LESS THAN 40FT.

	Length.	Actual.	Corrected.
Shadow, John Bryant	33.06	2 04 54	1 30 41
Magic, E. C. Neil	30.02	2 16 31	1 39 17
Violet, H. J. McKee	33.00	2 14 47	1 40 03
Mabel, — Donkin	33 06	2 23 55	1 49 42

SECOND CLASS KEELS—27FT. AND LESS THAN 40FT.

Hilda, C. P. Curtis	30.06	2 20 56	1 43 24
Prince Karl, E. L. Williams	28.06	2 23 49	1 43 50
Breeze, C. E. Paget	29.00	2 27 59	1 48 39
Levana, C. H. Andrews	28.06	2 29 30	1 49 31
Lizzie B. Daly, Daly Bros	27.00	2 27 47	1 45 47
Carmen, B. S. M. Tower	29.02	2 35 15	1 56 08
Æolus, Jacob Rood	27.00	2 39 50	1 57 50
Zaidee, — Wright	25.10	2 34 49	1 51 11

THIRD CLASS CENTERBOARDS—23FT. AND LESS THAN 27FT.

Sea Bird, C. L. Joy	22.00	1 50 48	1 15 11
Black Cloud, A. Brown	22.10	1 50 51	1 16 16
Nereid, C. F. Coby	20.01	1 55 10	1 16 53
Erin, J. Cavanagh	26.04	1 50 15	1 19 35
Posy, R. G. Hunt	21.07	1 55 47	1 19 35
Tyrant, S. Elwell	20.06	1 54 45	1 21 33
N. and S., F. P. Horton	25.09	2 05 10	1 31 54

THIRD CLASS KEELS—23FT. AND LESS THAN 27FT.

Ione, J. S. Poyen	24.03	1 39 29	1 06 34
Banneret, J. F. Brown	23.09	1 43 09	1 09 40
Kitty, Tarbell & Adams	22.08	1 49 22	1 14 34
Venture, W. E. Cherrington	23.00	1 54 30	1 20 07
Halcyon, J. R. Hooper	21.03	1 57 50	1 21 11
Optic, G. S. Hutchinson	26.05	1 54 00	1 23 25
Nydia, D. Moreland	22.01	1 59 21	1 23 49
Quimper, H. S. Wheeler	26.10	1 54 05	1 23 55
Scandia, C. Anderson	22.05	2 09 45	1 34 38

FOURTH CLASS CENTERBOARDS, 18FT. AND LESS THAN 20FT.

Mabel, F. L. Dunne	19.04	1 28 48	0 57 16
Tartar, J. B. Forsyth	19.05	1 29 23	0 58 08
Em Ell Eye, P. M. Bond	19.03	1 29 54	0 58 16
Jewell, W. Sherriffs	18.09	1 36 48	1 03 32
Coyotte, W. Abbott	19.11	1 34 30	1 03 41
Myrtle, R. C. Poor	18.06	1 40 22	1 07 46
Heron, E. Cunningham, Jr	19.00	1 43 14	1 11 18
Trouble, J. Mason	19.00	1 46 24	1 14 28
Spray, C. F. White	18.05	1 48 10	1 15 28

FOURTH CLASS KEELS, 18FT. AND LESS THAN 20FT.

Vesper, R. M. Benner	18.05	1 32 09	0 59 27
Zetta, Fowler & Warren	18.05	1 33 52	1 01 10
Meteor, W. H. Cutter	18.05	1 49 06	1 13 34

Twilight, —Hideout	18.01	1 51 25	1 18 17
Vidette, F. F. Burke	18.08	1 54 40	1 22 08
G. L. Babb, J. W. Adams	18.06	1 56 18	1 23 42
Inez, Woodridge Bros	18.06	1 56 28	1 23 52
Annie, C. H. Cousins	18.09	1 56 18	1 24 02
Annie May, Pratt & Johnson	19.10	1 56 27	1 25 32

FIFTH CLASS CENTERBOARDS—ALL LESS THAN 18FT.

Wildfire, H. A. Keith	17.03	1 36 21	1 02 03
Mirage, G. E. Jordan	16.11	1 39 27	1 04 40
Rocket, H. M. Faxon	15.09	1 41 34	1 04 58
Zoe, W. A. McField	17.07	1 39 07	1 05 18
Mamie, H. T. Bowers	17.00	1 40 50	1 06 10
Victor, Hildreth & Freeman	16.03	1 42 10	1 06 22
Nonpareil, E. Lanning	16.03	1 48 10	1 12 22
Helen, E. Hodges	17.06	1 46 24	1 12 28
Parole, J. J. Bowers	17.10	1 46 00	1 12 32
Una, Captain Ahern	15.00	2 07 35	1 29 44

The winners are: Second class centerboards—First, Shadow, $40; second, Magic, $25. Second class keels—First, Hilda, $40; second, Prince Karl, $25. Third class centerboards—First, Sea Bird, $40; second, Black Cloud, $25; third, Nereid, $15; fourth, Posy or Erin, $10 (undecided). Third class keels—First, Ione, $40; second, Banneret, $25; third, Kitty, $15; fourth, Venture, $10. Fourth class centerboards—First, Mabel, $20; second, Tartar, $15; third, Em-Ell-Eye, $10; fourth, Jewel, $5. Fourth class keels—First, Vesper, $20; second, Zetta, $15; third, Meteor, $10; fourth, Hard Times, $5. Fifth class centerboards—First, Wildfire, $20; second, Mirage, $15; third, Rocket, $10; fourth, Zoe, $5.

HULL Y. C.—A regatta was sailed on July 2 in a strong S.W. wind, the summary being as follows. Shadow did not start as she had no competitor.

SECOND CLASS—CENTERBOARDS.

Rocket, H. M. Faxon	16.02	1 28 30	2 01 33

PLEON Y. C.—A club by this name has lately been established by the boys of Marblehead, Mass., the limit of size for yachts being 18ft. sailing length. The first regatta was sailed on June 29 in a strong south wind, the times being:

FIRST CLASS.

	Length.	Actual.	Corrected.
Reba, Palmer and Poole	12.09	43 31	40 42

SECOND CLASS—KEELS.

Monarch, W. O. Taylor	11.08	49 20	45 41
Clyde, H. W. Perry	11.09	Carried away mast.	

SECOND CLASS—CENTERBOARDS.

Snail, A. G. Wood	14.08	52 55	51 31
Laura, F. A. Poole	13.06	57 33	55 33
Mole, G. W. Walker	14.11	Carried away sprit.	

The officers are, Com., A. G. Wood; Vice-Com., H. W. Perry; Sec. and Meas., F. L. Rhodes; Treas., W. I. Palmer; Regatta Committee, Com. and Sec., ex-officiis, and Howard Whitcomb; Membership Committee, Vice-Com. and Treas., ex-officiis, and Edgar Pierce. The next race will be on July 13.

BEVERLY Y. C.—The Beverly Y. C. sailed a regatta on July 2 off Monument Beach, the summary being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Surprise, J. M. Codman	27.03	2 01 18	1 50 45
Climax, E. C. Stetson	30.05	1 58 13	1 50 55
Quisset, R. B. Hiller	29.06	1 59 12	1 50 57
Mollie, J. Hill	27.00	2 02 39	1 51 50
Syringe, C. C. Hanly	28.04	2 02 21	1 52 57
Aurora, J. C. Crosby	28.06	2 03 34	1 54 10
Angora, Henry Norton	28.07	2 07 49	1 58 40
Mattie, J. M. Stockton	28.08	Withdrawn.	

SECOND CLASS.

Wildcat, S. P. Hill	26.04	2 00 22	1 48 49
Mist, F. W. Sergeant	26.08	2 00 48	1 49 37
Elinor, J. Parkinson	26.07	Withdrawn.	

Judges—H. Elliot Cabot, W. Lloyd Jeffries.

SANDY BAY Y. C, FIRST CHAMPIONSHIP REGATTA, June 29.—Club course, repeated for first and second class, once round for third class. Distance 6 miles. Weather fine. Wind S., fresh. Tide ebb:

FIRST CLASS.

	Length.	Start.	Finish.	Elapsed.	Cor.
Trudette, Haskins	21.11	Walk over.			

SECOND CLASS.

Petrel, H. H. Paul	22.00	Walk over.			

THIRD CLASS.

Lochiel, Cameron	19.00	2 20 01	3 22 10	1 02 09	1 02 09
Albion, Gott	16.00	2 20 00	3 30 00	1 10 00	1 08 30
Inez, Herne	16.06	2 20 32	3 33 05	1 12 33	1 11 10

Lochiel and Albion won in Class 3. Regatta Committee: Geo. A. Lowe, H. H. Paul, Frank N. Griffin, Geo. M. McClain. Judges: J. R. Pringle, H. Thurston, J. Leman.

CHANGES OF OWNERSHIP.—Rena, schooner, has been sol by Sir Roderick Cameron to Handren & Robbins for $5,500.... Beth, cutter, has been sold to Mr. Eaton, of Beverly, by W. M. Jameson, who has bought the keel cat Musquito....Carmita, cutter, has been sold by C. H. Foster to C. S. Eaton; her iron keel will be replaced by a lead one of 2,000lbs....Sagitta, sloop, has been sold by H. C. Ward to A. B. Claflin....Wigwam, sloop, has been sold to Chas. Macre by R. G. Remsen....Fedalma, steam yacht, has been sold by E. M. Brown to John Stetson.

THE CRUISE OF THE ALVA.—On July 2 the steam yacht Alva sailed from Staten Island on a long cruise, having on board her owner, Wm. K. Vanderbilt, with his wife and family and a party of friends. It is stated now that a cruise around the world is not contemplated, but that after a visit to England and Scotland the party will join the yacht in the Mediterranean for a winter's cruise there, returning in the spring.

AN OPEN CHALLENGE.—Frank E. Brown, of Annisquam, owner of the sloop White Swan, has challenged all boats under 30ft. over all, to a sweepstake race from Squam light around the Isles of Shoals and return, the start being made at 9 o'clock A. M., July 9; entrance fee $5. The entries thus far are, Petrel, Howard Paul; Wona, Charles E. Cunningham; Trudette, ex-Commodore L. M. Haskins.

AMERICUS—CRUISER.—These open boats sailed on July 2, over a course of ten miles to windward and return, off Bridgeport for $250, per side, Americus winning by 11m. 4s. Messrs. Augustin Munroe, of Larchmont, and A. H. Davis, of Bridgeport, were the judges.

MAYFLOWER.—Gen. Paine has finally sold Mayflower to Mr. E. D. Morgan, of New York, subject to no conditions, but it is certain that she will be raced for the rest of the season, including the trial and if necessary the Cup races.

THISTLE AND IREX.—These boats have sailed three more races since last week, Thistle winning all, but the reports are very meagre. The wind seems to have been light and fluky.

CORINTHIAN Y. C.—San Francisco.—The C.Y. C. of San Francisco sailed their annual regatta on June 18, Sirely winning in second class and Spray in first.

OPEN BOAT RACING.—On June 30 a match was sailed off the Columbia Y. C. house between the catboats Mystic and Daisy, the former wiuning by 5m. 40s.

EASTERN Y. C.—The cruise of the E.Y.C. will begin to-day from Marblehead, the destination probably being Bar Harbor.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

S. M. H., Boston.—You probably can get the trout for stocking purposes from W. L. Gilbert, Plymouth, Mass.

J. E. K., Hartford, Conn.—Will you please inform me to what size or length rattlesnakes grow and about what length they average? Ans. The rattlesnake (*Crotalus horridus*) is usually less than 4ft. in length. Sometimes specimens are taken much longer.

H. K. C., Clyde, N. Y.—1. Will you please give me the address of Capt. A. H. Bogardus and Dr. Carver? 2. Also the address of any one you may know who manufactures brass row locks? Ans. 1. Dr. Carver, care H. C. Squires, 178 Broadway, N. Y.; Capt. Bogardus, care Adam Forepough's Show, Erastina, Staten Island, N. Y. The Captain is shooting there. 2. The oarlocks may be ordered from L. W. Ferdinand, 260 Federal street, Boston, Mass.

E. N. F.—Does a pedigreed bitch lose that pedigree if by a misshap she be bred to a mongrel? And are the pups from that bitch in future years if sired by a pedigreed dog entitled to a pedigree? Ans. 1. Pedigree means the line of ancestry; a bitch cannot lose her pedigree; whatever happens to her, her sire and dam, and grandsire and granddam, etc., are the same. 2. The produce of a pedigreed bitch by a pedigreed dog will of course have a pedigree.

R. H., West Torrington, Ct.—Are the scarlet tanager and cardinal grosbeak the same bird? If different please describe both as to color? Ans. The cardinal and the scarlet tanager are entirely different birds, the former belongs to the *Fringillidæ* or Finch family, and the latter to the *Tanagridæ* or Tanager family. They are different in habits and in appearance. The cardinal is red vermilion, with large bill, and very noticeable crest on head, a jet black mark on face extending down on throat. The female is reddish mixed with ashy. The male scarlet tanager is a smaller bird, bright scarlet except wings and tail which are black; no crest on head. Female yellowish and olive green above, bright below, no black anywhere.

SINCE ladies have been accustomed to use Glenn's Sulphur Soap in their toilet their personal attractions have been multiplied, and it is seldom they are seen disfigured with blotches and pimples, or rough or coarse skins. Sold by all druggists. HILL'S HAIR AND WHISKER DYE, black and brown, 50 cents.—*Adv.*

SKYLARKS ON LONG ISLAND.—In the year 1852 some Brooklyn gentlemen (among them the present writer) assembled at the Brooklyn Institute, at one of the regular meetings of the Natural History Society, to consider the best means to rid the city of the insect pests then devastating the shade and ornamental trees. A committee, appointed to report on the subject, decided to import a lot of European birds, and the following were selected: Sparrows, blackbirds, skylarks, siskins, woodlarks, goldfinches, bulfinches, thrushes and robins. A sum of money was subscribed, and the late Mr. Perry, then secretary of Greenwood Cemetery, gave an additional hundred dollars toward the expenses. The writer, being about to sail for England, was appointed a committee of one to superintend the selection of the birds there. On his arrival in Liverpool he communicated with Mr. Thomas Woodcook, a great lover of birds, then at Manchester, and the draft and list of birds were forwarded to him for their purchase. He promptly fulfilled the task, and the birds were soon on their way to New York in charge of an officer of the steamer. They arrived safely and were housed in the tower of the building at the old entrance to Greenwood. They did not seem to thrive there, so they were removed to the house of the late Mr. John Hooper of Bergen street, Brooklyn, who cared for them till spring. The sparrows were then let loose in the city, and half of the skylarks on Gen. Johnson's farm at the Wallabout and the other half at Flatlands. The rest of the birds were taken to Greenwood in cages and hung up in the trees. They were all supplied with food and the doors of the cages left open so that they could come or depart at pleasure, and a trusty person was engaged to watch the birds so that none should molest them. This plan was successful, as the birds roosted at night in the cages, going out in the daytime, and continued thus for about fourteen days. The blackbirds, goldfinches, thrushes, siskins, etc., soon disappeared from view, but the skylarks now seen at Flatlands are no doubt descendants of the birds then liberated, as their nests have frequently been found, showing they have become acclimated to our severe winters, which evidently destroyed the other birds. The above were the first birds imported into the United States for the purposes of colonization that I am aware of.—*Nicolas Pike in Evening Post.*

Mr. J. A. French keeps a hotel at Andover, Me., which is well known to visitors of the Androsocoggin lakes by the shortest route. Mr. French is a noted fox hunter. His score last winter was 26, chiefly killed with the gun. He is a keen shot with the rifle, as is also his son Tom, 19 years of age. A few days ago a farmer living a mile below French's Hotel, in Andover, found that an old bear had killed a couple of lambs from his flock of sheep. Mr. French advised the careful housing of the balance of the flock, but requested that the dead lambs be suffered to remain where bruin had put an end to their existence by a single stroke of his paw. Mr. French says that he calculated that about the second night the old bear would return to finish his repast. Accordingly, on the second night, French and Tom took their rifles and quietly stole away from home. About 10 o'clock they were on the ground near the dead lambs. They came to ambush 30 yards away and calmly waited for the moon to rise. By the time that luminary was well up in the sky an enormous black object was seen coming down the mountain. "There he is," whispered French. "I see him!" answered Tom. "You give the word!" By this time Tom's gun rested on the top of the fence, but French's gun was at his shoulder, without a rest. The old bear rather slowly and cautiously approached. At this moment another bear, up in the mountain, only a short distance away, gave that dismal scream that generally unnerves the night bear hunter, but not so French and Tom. They were eyeing their game with all their might, trying to draw a close bead on him by the moonlight. He stopped and turned his head in their direction. He had scented them or seen them, and the next bound would have given the hunters only a running shot, or perhaps no shot at all. But they were too quick for him. Both rifles rang out. The bear gave one leap backward and fell dead. French had shot him through the head and Tom through the spinal chord, just forward of the shoulder, both fatal shots. Both guns had spoken so near together that French asked Tom why he did not fire. The hunters went back to the hotel happy at their exploit. And so short a time had they been absent that their neighbors could hardly believe that they had really shot the bear, till the enormous carcass, nearly nine feet in length, was dragged into the village by willing hands.—*Boston Herald, June 13.*

The Fluttering Fly.
PATENTED MAY 4, 1886.

THE FLUTTERING FLY. Patented May 4th, 1886.

With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fishing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are:

1st—The wonderfully life-like and fluttering motion this fly has when moved on the water.

2d—The fish is almost certain to be hooked if it touches the fly.

3d—Any of the present favorite combinations of color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style.

4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that flies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies.

We take this means of notifying dealers and fly-tyers that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure such people that the same old course will be pursued by this firm.

We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentlemen into our advertisements.

Scientific American: "When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish."

Forest and Stream: " * * * more like a natural insect than the old patterns whose wings close when being drawn through the water. * * * Great merit lies in its superior hooking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly."

American Angler: "There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than by color or form. * * * This fly will certainly, when drawn against the current or over a placid pool, *seam* the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * * We are told that few fish are lost by those who use this fly. We do not doubt it.'

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO. 39 Park Row.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the large sale of this magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, steering apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

LIST OF PLATES.

I. The Sloop Yacht Schemer.
II. The Nuckel.
III. The Windward.

"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

FOREST AND STREAM PUBLISHING COMPANY,
39 Park Row, New York.
LONDON: DAVIES & Co., 1 Finch Lane.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages Price $1.00

NEW YORK: FOREST AND STREAM PUBLISHING Co., 39 Park Row.
LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

Forest Runes.

—BY—

Adirondack Preserve Association.

The Association was incorporated last year, having for its object the encouragement of social recreation, and of boating, fishing, lawful sports and the preservation of game and forests. The club house is situated in Essex Co., close to Mink, Thumb, Beaver, Loon and Moose Lakes, and is to be kept open the entire year so that members can take advantage of any portion of the fishing and hunting season, winter or summer. Photographs of the lakes and principal points of interest can be seen at the office of the Association. The membership is limited and the initiation fee $100. Applications for membership may be made to J. G. CASE, Secretary,
178 Broadway, New York.

We are short of these issues, and would be obliged if any of our readers having one or all of these numbers that they do not want will send to Forest and Stream Pub. Co., 39 Park Row, New York City. mar26,tf

For Sale.

GREEN RIVER.—THE SUBSCRIBER OFfers for sale a ten years' Government lease of the exclusive right to fish in about 50 miles of the main Green River in the Province of New Brunswick, Canada. It is thus named from the purity of its waters. One day by rail from Fredericton will place the sportsman at its mouth, where men and canoes can be had; it is navigable for these and light boats to its sources; it runs through picturesque forests, and is probably the best river for trout in Eastern America. Full information given on application to the subscriber. Reference is given by permission to J. H. PHAIR, Esq., Fishery Commissioner for New Brunswick, EDWARD JACK, Fredericton, New Brunswick, Canada.

THE ATTENTION OF SPORTSMEN IS called to a most desirable tract in Essex County for hunting and fishing; eight hours from New York City; 12,000 acres in one parcel, or can be divided; Hudson and Indian Rivers unite on the tract, which has also three large trout ponds (½ mile to 1¼ miles long); deer and winged game; land well wooded with hard timber. Offered at extraordinary bargain.

ANSWERS TO CORRESPONDENTS.

MR. PARKER'S DEER.

THE criticism in these columns last week on the alleged killing of a deer in the Adirondacks in June by A. M. Parker, of Putnam, Conn., is met by the rejoinder from Mr. Parker that his story was only made up, and he did not kill the deer at all. Our criticisms were expressly conditioned on the presumption that Mr. Parker's account of what he had done was "a true bill." We are quite willing to accept his present statement that he did not kill the deer, which in the *Patriot* he said he killed; and that he did not violate the law, which in the *Patriot* he alleged he had violated.

This, however, does not fully relieve him of the odium attaching to those paragraphs of his letter to the Putnam paper. "A law-abiding citizen" who boasts that he has committed a misdemeanor may save himself from jail by swearing that his boast was a lie, but he cannot reconcile the boast with good citizenship; nor can a camper who brags that he has killed a deer out of season make good his claim to holding sportsmanlike sentiments by confessing that his brag was only a piece of "woodland romance." It is the duty of a good citizen not only to obey the law, but to encourage obedience in others as well; in like manner a sportsman—a member of the class which profits by wise game laws—is bound strictly to conform to them himself, and to treat them with such decent respect as shall encourage obedience to them by the community in which he dwells.

No right-minded sportsman can deliberately treat the deer or grouse or bass or trout law as a farce, even in his home paper. If by reason of his ability to write an entertaining letter from the woods, as in this instance, he has an opportunity to discuss game protection at all, it should be to commend it to his readers as worthy of their support and co-operation. His own deeds, profession and standard of morality in this should be above reproach.

We do not believe Mr. Parker to be so morally obtuse that after considering this point he will not fully agree with us in it; and the FOREST AND STREAM will quote with pleasure from the Putnam *Patriot* any statement Mr. Parker may there make to explain to its readers that his story of deer killing and law breaking was manufactured, as well as to demonstrate to them his regard for game laws of the States he visits for a summer outing.

ETHICS AND EXPERIENCE.

THERE appears to be a perennial and unfading interest in the discussion of that branch of angling ethics which has to do with the use of worm, grasshopper, bug or grub, when the trout refuse those styles of lure which originate in the glass showcases of tackle shops. Our angling columns have of late recorded the experience of several correspondents, some of whom have always been unreclaimed devotees of the worm, and others only recent backsliders from the ranks of fly-fishermen.

Perhaps the subject is one that will never be wholly set at rest. Fishing is fishing, and there is fun in it for the man at the big end of the rod, no matter whether it be a fly or a worm at the other end. This, more than anything else, is to be said in praise of angling, that its charms and rewards are not to be monopolized by the adherents of any one particular code of ethics. He enjoys it who hauls by main strength on a hand-line the drum from the deep sea; and so does the holier than thou angler whose highest felicity is found in casting his fly of correct color, with rod of correct weight, correct twist of wrist, and correct curve and distance and splash, and crossing of the arms upon the breast and rolling up of the eye, after the manner of the Pharisee. One fisherman enjoys catching fish and telling how many he caught and how big they were; another acts the pantomime of casting and tells how scrupulously careful he was not to violate a single precept of his fly-fisher's Koran.

Perhaps the ideal angler will be found somewhere between these two extremes. But after all each one to his taste, so he takes the good things bountiful nature affords, uses them with reason and moderation, and with it all clears his brain and expands his lungs and hardens his muscles. In these days, when the mercury is up among the 90s, blessed is he who can go fishing at all.

SNAP SHOTS.

DOGS imported for breeding purposes are admitted free of duty, as are other animals. Oath is required of the importer as to the purpose of the importation. This oath has been frequently violated, and in some instances glaring frauds have been perpetrated. It has been shown that of the eleven thousand horses imported from Canada last year, all of which came in free of duty, on this oath, the great majority were brought in for the purpose of sale only. On the Rio Grande border herds of sheep are fraudulently admitted in the same way, only to be shorn. It will be remembered that Barnum secured the free admission of Jumbo by such an oath, and we never knew that there was any ground for questioning his good faith in doing so. The Treasury Department has intimated that in future the law will be enforced more stringently than it has been, but the importation of dogs will probably not be affected thereby.

The New York law relating to exclusive hunting and fishing privileges in territory set apart as a private preserve, and making trespassers liable in exemplary damages, has in the past extended such privileges only to the owners or lessees of the lands. At the last session of the Legislature this law was amended by extending its operation also to individuals and societies leasing the exclusive hunting and fishing rights only, but not leasing the land. As the custom of securing exclusive sporting rights on land and water is extending, such protection has been found essential. This amendment originated with the Brooklyn Gun Club, whose members having leased the shooting rights on a number of contiguous farms on Long Island and having stocked the lands with quail, found themselves, as lessees of sporting privileges only, unable to protect their game from trespassers. To secure such an amendment might appear a simple matter, but when the bill had passed one branch of the Legislature and was taken into the other, it was amended so as to exclude Long Island from its provisions, by an enterprising member who saw his chance to make a dicker on it, and the bill coming from Long Island could not be made to apply to Long Island until this dickering politician had agreed with its promoter to support some of his own little bills. That is the way game legislation is juggled at Albany every year.

A live deer is a valuable piece of wild flesh; a dead deer is worth but a trifle as venison. Sportsmen's guides recognize this principle, and when they can manage it—and they generally have no difficulty in doing so—they will keep the deer alive as long as possible and just out of the way of the sportsman. As long as the would-be deer slayer's courage does not ooze out nor his ambition tire, they will keep him in pursuit of that deer; and then, it may be after all, save it for the next man. If by untoward accident the guide's "party" actually kills the deer after all, it is not at all beyond the bound of possibility that the guide who goes into the brush to find the game may report it lost, then return to the place the next day, secure the antlers and sell them to his next "party" to exhibit as a trophy of prowess. This explains the mystery of how A, who is a fairly good shot, goes home from the North Woods with no tangible evidences of his skill; while B, whom all his friends know to be an arrant duffer with firearms, has a fine pair of antlers to prove that he covered himself with glory. It explains also how the thrifty guide manages to get paid twice over for a dead deer.

Through private advices from the Yellowstone National Park it is learned that on the night of July 4 the coach running from Gardiner, Montana, to the Mammoth Hot Springs, in the Yellowstone Park, was "held up" by two masked men, who are said to have obtained from the passengers the magnificent sum of $16.50. It is not thought that the robbers were the old time road agents of early days, but very commonplace "pilgrims," ordinary highway robbers in fact, and it is hoped that before long they may be arrested. This occurrence only lends emphasis to the oft-repeated calls for a form of government for the Yellowstone Park, a call to which Congress has for years refused to respond. We are not informed as to who were passengers on the coach which was robbed, but we earnestly hope that a part of this $16.50 came out of the pocket of some member of the next House of Representatives. If this should be the case, the advocates of a Park bill would be likely to have one more strong friend in the next Congress.

The remarks of our correspondent "Special" on the stream-strippers who clean out New England waters are eminently sensible and to the point. Hotel men in all the more frequented summer resorts patronized by sportsmen are coming to a recognition of the wisdom of preserving the natural attractions which brings patrons to the hotel. It has taken a long time for the average landlord to see this, and perhaps he does not see it yet; but yet there are many hotel men who are wise enough to encourage decency in this respect, if not for its own sake, at least for the sake of their own tills. There are still to be found those who provide a compost heap for the superfluous fish caught by their guests, as at some of the west coast hotels of Florida, but in New England and the West a wiser rule prevails.

In his paper on American angling writers in the London *Field*, copied in our columns last week, Mr. Charles Hallock wrote: "I suppose that the undisputed pioneer of American angling literature, pure and simple, is Charles Lanman, who came as one crying in the wilderness as early as 1848." From that time to the present Mr. Lanman has added sketches and volumes to our angling literature, and in these latter years the spring gushes forth not a whit less pure and sparkling than of yore. The paper on "Pioneer Fishing," from Mr. Lanman's pen, in another column, is from one of his forthcoming books, and will have added interest by reason of Mr. Hallock's reference to him.

A Colorado correspondent, whose statements are entitled to great respect, tells us that since the passage of the law forbidding the marketing of game and fish a change has been wrought in the attitude of men who formerly made a business of hunting and fishing for the market. They see the wisdom of the law and indorse it. If such a change could be wrought all through the West the question of game protection would be in large measure settled.

Michigan has a new law forbidding deer hounding. The subject has been agitated for a number of years, the proposed law being opposed each year by the Michigan Sportsmen's Association. Dr. F. M. Wilcox, of Rochester, Mich., was one of the most earnest advocates of the measure.

PIONEER FISHING.

THE leading varieties of fish associated with my sporting experiences correspond in number with the Muses of antiquity, and I am confident that the tuneful nine were never more affectionately remembered by the Greeks than I remember the flowing waters associated with my earlier years. Of course the big fish, or "whoppers," which I have captured are not to be ignored in my memories of forest and stream; but many of the pleasantest places where my line has fallen are associated with my earliest exploits. Until I had attained my sixth year the pin hook and the small rock bass of the River Raisin afforded me all the sport that I could then appreciate; but it was not long after that important era before I had expended a few pennies for regular "hooks of steel" and had captured my first black bass. That event took place under an old mill, where, when the big wheel was at rest, the fish had a habit of hiding themselves, as they thought, under a submerged timber, and where they were wont to delight my eyes as they floated in the amber-like waters. It was on Saturday; I was alone, my pole was of hickory, neatly trimmed, and after putting two or three worms upon my hook, I seated myself in a convenient corner of the shadowy mill and threw out my bait. The troubles I had experienced the day before in trying to straighten out the hard words of my spelling book were all forgotten, and just as I was watching a conflict of authority between a wren and a swallow over my head I felt a severe tug at my line and found that I had actually hooked a large bass. The fellow sprang out of the water, scooted about in a frantic manner, then burrowed his way among some jagged sticks, as if very angry with me and the whole world; and on finding that he could not move out of his hiding place. I plunged into the water, waded to the spot where the fish was hidden, caught him by the gills, dragged him out and carried him to a grassy spot near the old mill and sat down to contemplate my prize and then the magnitude of my victory. The weight of this fish in reality was probably not over 2lbs., but to my eyes he seemed perfectly enormous, and the wonder was with me why I was not dragged down to the bottom of the pool under the mill, and how I should manage to carry such a huge creature to my home. This feat was duly accomplished, however; nor did I omit to see that my prize was properly cooked, and, when upon the table, that it was judiciously divided between the various members of the family. And when, on the following Monday, I heard the boys at school descanting upon my exploit, my vanity was excessive, and I felt that I was a boy of mark in spite of my inability a few days before to spell the proper noun Syracuse.

From that time fishing for black bass became a decided hobby with me, and I have since taken them with worm and minnow and fly, in the Upper Mississippi and St. Lawrence rivers, Lake Champlain and Lake George, in many of the tributaries of Lake Michigan, in the streams of Florida, and along the entire valley of the Potomac, my biggest haul in a single day having been made on the St. Joseph River, when I captured about fifty specimens in one afternoon; and my largest, weighing nearly 7lbs., having been born in Lake George.

It was also in the waters of my native Michigan, at the mouth of the river Raisin, that I captured my first muscalonge. I was then in my teens and was fishing from my canoe in the vicinity of a sylvan island, not far from La Plaisance Bay. My companion was a good old Pottowattamie Indian, and it was, doubtless, to his experience and judgment that I was indebted for my success. My bait consisted of live minnows, and it was after I had caught a large pickerel, or pike-perch, as the books properly designate them, that I hooked something which I thought was a sturgeon, but which proved to be a muscalonge. The fellow swept backward and forward under the canoe as if preparing himself for a dinner of man meat, and before he could be secured he had dragged our canoe a goodly distance in the direction of Lake Erie. The weight of that fish I never knew, but as I remember him, he was at least 3ft. in length and as savage in appearance as an alligator. The place where this fish was taken was only a short distance from the bark camp of my Indian friend, and on his motion—made by the hand—we paddled for the camp, and while the sun was setting we enjoyed a decided feast, composed, principally, of the pickerel we had captured. It was almost 9 o'clock before I reached home on that eventful day, and the scolding onslaught made upon me by my parents for having been gone so long was only the prelude to their astonishment on seeing my stupendous muscalonge. My subsequent exploits with this fish occurred in the river St. Lawrence and Lake Champlain.

As time progressed and I was toiling as a merchant's clerk in New York city, my vacations were all spent at Norwich, Conn., where my parents then resided. I had read "Izaak Walton," and also heard something of a very old man living in Voluntown, near Norwich, who was reputed to be a noted fisherman. I was now the owner of a Conroy rod, a trout basket and a book of flies, and, equipped with these, on a bright April day, started on horseback for Voluntown, a region inhabited chiefly by charcoal burners, and noted at the time for its wild and rocky hills and miniature trout streams. I found the old fisherman's home, was kindly received, and in a short time was piloted by him to a half level region through which a small brook, with many turnings, was hurrying on its way to the Quinnebaug, near Jewett City. On producing my book of flies the old fisherman expressed his surprise and told me to drop such nonsensical things and to cover my hook with worms.

I obeyed orders and started down the little stream with my guide following slowly in the rear. At the very first bend of the brook I picked out my first trout, weighing about 4oz., and I met with similar success at almost every turn of the stream for the distance of half a mile, the average weight of the fish proving to be about half a pound. They seemed to me the most beautiful creatures I had ever seen. My enjoyment of this purely Waltonian sport, barring the worms, was simply exquisite, and yet it seemed to me that my venerable companion was quite as happy and enthusiastic as his pupil. Of course, as the afternoon was waning I was invited to his home, saw his wife and children, had a good talk about the fish to be found in other streams, enjoyed a bowl of bread and milk, gave the old man half of my supply of money, and mounting my steed, like the solitary horseman of the novelist, returned to the banks of the Thames. In due time I made several additional visits to the wilds of Voluntown, which I have elsewhere chronicled, catching many trout, and watching with interest the labors of the charcoal burners and making many friends among them, until the time arrived for me to return to my employment at the mouth of the Hudson. In May of the following year, I was permitted to revisit the trout streams of Voluntown; but my old friend was not there to greet me with his cheerful words; he was gone, and so also were all the trout in the neighboring streams, as if they did not care to remain where the voice of their friend could never more be heard. And years afterward, whenever it was my privilege to catch trout with the fly, among the White, Green, Alleghany and Carolina mountains, in the region of Lake Superior and the wilds of Canada and New Brunswick, I never failed to recall with rarest pleasure my experiences among the hills of Voluntown.

The heaviest common trout I ever caught—weighing 4lbs.—and the largest I ever saw, weighing 7lbs., were taken in New Brunswick; the greatest number I ever caught in one day was among the Catskill Mountains—140, but they were little bits of things, and it required about forty to satisfy the hunger of the laborious fisherman. My most exciting sport for trout took place at the Sault Ste. Marie, where I fished from a canoe managed by a Chippeway Indian; and I have long claimed that I am the citizen of Washington who first caught trout in Difficult Run, within sixteen miles of the metropolis.

Taken as a whole, I look upon my trouting days as among the happiest of my life. Indeed, it has seemed to me that the trout is associated with the scenery of the United States to a greater extent than any other variety of fish; first and always, with our wood-covered hills and mountains, with wild and spectral waterfalls, with the loveliest of rivers, brooks and lakes, with charming valleys inhabited by a happy yeomanry, with the continuous woods and their feathered tribes, with free and independent rambles and the kindly hospitality in pleasant farm homes and isolated cabins, with the sunshine and shower which do so much to nurture our love of the grand and beautiful in nature, and more than all, with the riverside philosophy of dear old Izaak Walton.

For deep-water fishing I have never had any special aptitude, and hence my exploits among the salmon trout of the Great Lakes, and the smaller lakes of New England and Canada, have been limited. When in season they are all admirable for the table, but their sporting qualities are not as enlivening as the melodies of Thomas Moore, but more in keeping with the sombre story of Homer, as translated by Alexander Pope. The Greek poet and the American salmon trout are splendid subjects to talk about, but life is short, and I, for one, beg to be excused. Let the procession move on.

The next specimen of my pioneer friends that I would mention is the perch—the yellow perch. He was a stalwart fellow of half a pound and a native of Gardiner's Lake, in New London county, Connecticut. I formed his acquaintance while attending school in Norwich, and he was associated with one of the most frolicsome summer days of my boyhood. A party of us had gone over to the lake in a wagon from Norwich. We were splendidly supplied with bread and butter, cakes, pies, lemons and sugar; we had secured the best boat on the lake, and the calmness of the waters as we paddled to and fro, or anchored where the fish were plentiful, was only equalled by the quiet which surrounded the sylvan homes on the neighboring hills. And it was in one of these country homes, not far removed from the hills of Gardiner's Lake, that Donald G. Mitchell lived for several years on a farm, and where he imbibed those impressions which helped him to write at least two of his most delightful books. The drives in going to and returning from the lake aforesaid were delightful in the extreme, and I was recently rejoiced to learn that the scenery of the old time has not yet been blasted by the influences of greed and civilization. But I cannot let the yellow perch of Gardiner's Lake pass out of my mind without recalling the beauty of those which I have since captured in a hundred New England ponds and other waters; nor without mentioning the cousin of my yellow friend, known as the white perch. I have fished for them in many regions, but nowhere have I ever found them so abundant as in the Potomac, where even the great men who make our laws are sometimes tempted to wet a line for them, by way of recreation.

But I should not omit in this connection an allusion to another small fish, viz.: the dace, or as they call it in the valley of the Potomac, the fall fish. My first capture of this beautiful and good fish took place in Rock Creek, along whose charming banks I used to wander of an afternoon in the olden times. I sometimes caught them with the fly, but generally with the live grasshopper; and my very first fish was taken in a pool near what was known as Adam's mill, whereby hangs an interesting fact. This old grist-mill, less than two miles from the White House, was once the property of John Quincy Adams, but I do not know whether it was built by him or not. When he was President he used to visit this romantic spot to recreate, after the toils of his official position. The contrast between the Executive Mansion and the old mill was certainly very great, but I have no doubt that the rural retreat on Rock Creek with its beautiful foliage, bright flowers, sweet country sounds and sparkling waters, gave the good man more real happiness than he could possibly obtain from the excitements of society. I know not that he ever condescended to cast a line on his little domain, nor has it ever transpired as to the number of barrels of flour he used to dispose of in a single year. The last time that I threw a grasshopper for dace in Rock Creek was during the rebellion in 1862. I was trying my luck in the shadow of Adams's mill on a pleasant afternoon, when a regiment of cavalry came winding down one of the hills near by for the purpose of watering their horses, which duty they accomplished in the very pool where I was "waiting for a bite." That my disgust was supreme can be well imagined, and I never afterward sought for recreation or peace of mind in the vale of Rock Creek.

The next fish that I would mention is the striped bass or rockfish of the Southern States. My first capture of this favorite occurred at Watch Hill, in Rhode Island. That event took place when the lighthouse on the point and the tavern on the hill were the only habitations to be seen in the vicinity of the surf. I was the guest of good old Captain Nash, who, after keeping me up until a late hour with his fish and sailor stories, roused me out of bed about 4 o'clock on a September morning and piloted me to the boulders surrounding the lighthouse on three sides. We fished with hand lines, using a squid inside of an eel skin, and threw our bait into the surf. My first prize was a silvery and plump creature weighing about 5lbs. On one of the mornings during my stay with Captain Nash I took about twenty of these fish, and have been a devoted friend of the tribe during all the intervening years. These fish were also taken from a boat in those old days, and I remember seeing a 60-pound specimen that was captured by a local fisherman in the immediate vicinity of the lighthouse; and in the waters north of Fisher's Island I once had the pleasure of killing a 40-pounder from a boat, but with a salmon rod and reel. It is the Potomac, however, just above Washington, which lives in my memory as the best ground I have ever known for striped bass or rockfish fishing. It was there, at the Little Falls, that I played the cicerone for Daniel Webster and Sir John F. Crampton, and where, under the tutelage of Joseph Paine, the fisherman king of the Potomac, I have taken fish with the fly and bait almost by the ton. But the civilized seines of the Lower Potomac, often measuring miles in length, and the enterprise of the United States Fish Commission have changed all that, and the rockfish have almost entirely disappeared; and the fishing cockneys of the metropolis who annually assault the nesting places of the black bass in the early spring are doing their best to annihilate that admirable fish in the waters of the Potomac, to which it was originally transported from the Ohio.

Coming now to the blackfish or tautoug, I must confine my recollections within a limited area along the Atlantic coast, say from Long Island Sound to Massachusetts Bay. A reef, one or two miles off the Watch Hill Light, had the honor of introducing me to the blackfish. When well cooked they excel almost every other salt water fish, and because of their scarcity, stupidity and disagreeable appearance may justly boast of a kind of aristocracy, peculiar to themselves. Could the great National Fish Commission secure some of their spawn and deposit it in the waters of the Sandwich Islands, I have no doubt that this fish might become common all along the shores of the Atlantic, from Key West to Wood's Holl or Gloucester, where the summers are so delightful for people worn down by official toil. I have always looked upon Marshfield as the northern limit for tautoug fishing, and it was there that I caught them when Mr. Webster was my companion.

But now the October breezes are beginning to blow, and I would take my reader to the blue waters of Block Island, where the bluefish reigns in his glory. Sixty boats, each with a single sail, were passing to and fro, and in them from 120 to 180 men were trolling with the squid, and all of them as busy as bees. In that crowd of fishermen I was the only one who had never been there before, but my right to that privilege was established by the fact that I had taken, with many others, one bluefish weighing 14lbs., when, by my enthusiastic conduct, I might justly have been called a wild man. And as a result of that day's sporting, it may safely be stated that I have ever since been a lover of Block Island, have revisited it on many occasions, and published a history of the domain and its people, who were a thousand fold more interesting in the old days than they are in these later times when flying the banners of modern civilization. But the grandeur of the cliffs and the splendor of the surf, which have given the island its fame, remain unchanged, and, it is to be hoped, will be perennial in their influence upon the pilgrims who annually visit the island in search of health and freedom from the cares of busy life.

And now the flowers of summer are beginning to fill the air with their fragrance, and those who have experienced the joys of salmon fishing in Northern waters are becoming restless and sighing to be off with their rods and reels and artificial flies. It was after I had been reading William Scrope's superb book on the salmon that I started upon my first foray after the king of the finny tribes. My first stream was the Esquemain, on the north shore of the St. Lawrence, to which I was piloted by William Price, of Quebec, son of the lumber king of Canada, bearing the same name. It was a lovely morning in June, and after many preliminaries I found myself on a rock, overlooking a pool which seemed alive with fish. I tossed my first fly over the golden waters and fancied that I had hooked a rock, for away went my line into the air, as I gave a savage pull. One, two, three and even four similar trials followed in quick succession, but every one resulting in the loss of a fly. Then the thought occurred to me that I was making a fool of myself by my undue excitement, and so I attempted a more gentle style of fishing, which resulted in my hooking and holding a large salmon. I played him as best I could, when he treated me with marked contempt and bolted out of the pool and started for the St. Lawrence. Afraid that he would rob me of my entire line I plunged into the stream and followed him as best I could. The route of travel was very rough and continued for a quarter of a mile, and when the strength of my victim was fairly spent, my friend Price was on hand with a gaff, and my first salmon passed into the history of angling with all the honors of his race. His weight proved to be about 12lbs., and his beauty like the crescent moon, or any other object in nature which language cannot fully describe. It was on this stream, moreover, that William Price captured his first salmon, and with him I subsequently caught salmon in the Ste. Marguerite, a tributary of the Saguenay, and where, many years afterward, he assisted the Prince of Wales in securing his first fish—with the fly—in American waters. My own exploit took place in 1847, and until about the year 1863 I visited Canada and New Brunswick almost every year, and since that period the Restigouche, the St. John, the Aroostook, the Metapedia, the Nepisiguit, the Mirimichi, the Rivière du Loup, the Jacques Cartier, as well as the Escumain and Ste. Marguerite have been the scenes of many of my most delightful dreams. But like those dreams, the superb realities of my experiences as a fisherman for salmon can never return; and, alas! with them have departed many of my old friends with whom I have thrown the fly and bivouacked in the wilderness.

The expenses attending salmon fishing are a decided drawback; indeed, I have never had the courage to

estimate the actual cost of the salmon that I captured in the waters of Canada and New Brunswick; and I must confess that when in Quebec, during the Rebellion, I found a Washington dollar worth only about thirty cents in coin, I began to contrast the joys of salmon fishing with the question of ways and means. And the blight that was thrown upon salmon fishing by the troubles of the war have since been perpetuated by the advent upon Canadian streams of certain sprigs of the English aristocracy with the traditional bad manners and supremely selfish instincts.

As "pioneer fishing" is the title of this essay, it seems quite appropriate that I should devote a paragraph to the pioneer custom of spearing fish. For recreation, the custom cannot be defended, and yet I must confess that I have frequently tried my hand with a three-pronged scimiter. My first exploits in this line took place on the river Raisin when I was a boy, when the game consisted of mullet, pickerel and sturgeon, and while the fish were running up stream in the spring, and their passage was obstructed by the mill dams. And it was there, moreover, where a sturgeon did his best to deprive me of my life by pulling me into the roaring stream. When once spearing pike in the Upper Mississippi with Chippewa Indians, I saw a large fish captured, which, when opened, was found to contain a blacksnake about three feet long. On that day I lost my appetite for a pike steak. While traveling down the Upper Tennessee, many years ago, one of the natives tempted me on a torch light expedition after salmon. I knew the man had never seen a real salmon, so I went for the purpose of testing the correctness of the name he used. We had some luck, and the fish proved to be the pike-perch or pickerel, whereby the folly was illustrated of calling things, and especially fish, by improper names. And yet I know that the genuine salmon has often been taken with the spear. I never had the heart to commit that sacrilege, but I have seen the Indians spearing salmon by torchlight from their canoes in many of the streams of Canada and New Brunswick. The sport was picturesque, of course, but very heathenish.

In former years, when the black bass of Lake George were large and had not been frightened out of existence by the fashionable villas on the surrounding shores, it was quite common for the natives to spear them by torchlight. They did it in the spring when the fish were on their spawning beds and entirely unfit to eat, and I have never been able to find words to describe the rascality of that kind of fishing. And it was, perhaps, because I had a "finger in that pie" that I subsequently had the following experience: I had gone with a companion, one autumn evening, from Norwich, in Connecticut, to Preston Pond, for the purpose of spearing pike by torchlight. Our conveyance was a wagon drawn by one horse, and on reaching the pond we secured a suitable boat, packed in it our traps, and as we supposed, carefully fixed our horse in the corner of a lot near by. We were excited, fished far into the night, caught many fish, and when tired out went ashore to prepare for our return home. At first we could not find our wagon nor the horse, but after a while we did find the vehicle, but the fills were broken and the whole concern very much of a wreck. We then rooted out the horse out of some bushes, when we found that his harness was all torn into fragments; and there we were, with our horse quite as wretched as ourselves, far from home, hungry as bears, and in a quandary that can hardly be imagined. The only thing connected with our equipage that was not broken was the horse's neck, and as he seemed ready for any change of circumstances, my friend and I mounted upon his back, and in that predicament returned to Norwich. I never visited Preston Pond a second time excepting for the purpose of saving what I could from the wreck, which had resulted from the grossest carelessness in the tie up of our horse and wagon.

CHARLES LANMAN.

Natural History.

ON THE TONGUE IN THE HUMMING-BIRD.

BY R. W. SHUFELDT, C.M.Z.S., ETC.

THERE still seem to be two opinions in vogue relative to the structure of the tongue in the hummingbirds. In his second edition to the "Key to North American Birds," Professor Elliott Coues tells us that "The tongue is in effect a double-barreled tube, supposed to be used to suck the sweets of flowers" (p. 458); while that painstaking anatomist, for whom I have always entertained a great admiration, W. MacGillivray, writes in the fourth volume of Audubon's "Birds of America" in referring to the same subject, that "The tongue, properly so called, moves in a sheath, as in the woodpeckers; its length is 10 twelfths. When it is protruded, the part beyond this at the base appears fleshy, being covered with the membrane of the mouth forming the sheath, but the rest of its extent is horny, and presents the appearance of two cylinders united, with a deep groove above and another beneath, for the length of 3 twelfths, beyond which they become flattened, concave above, thin-edged and lacerated externally, thick-edged internally, and, although lying parallel and in contact, capable of being separated. This part, being moistened by the fluid of the slender salivary glands, and capable of being alternately exserted and retracted, thus forms an instrument for the prehension of small insects, similar in so far to that of the woodpeckers, although presenting a different modification in its horny extremity, which is more elongated and less rigid. All observers who have written on the tongue of the hummingbirds, have represented it as composed of two cylindrical tubes, and the prevalent notion has been that the bird sucks the nectar of flowers by means of these tubes. But both ideas are incorrect. There are, it is true, two cylindrical tubes, but they gradually taper away toward the point, and instead of being pervious form two sheaths for the two terminal parts or shafts of the glosso-hyal portion of the tongue, which run nearly to the tip, while there is appended to them externally a very thin-fringed or denticular plate of horny substance. The bird obviously cannot suck, but it may thrust the tip of the tongue into a fluid, and by drawing it back may thus procure a portion. It is, however, more properly an organ for the prehension of small insects, for which it is obviously well adapted, and being exsertible to a great extent enable the bird to reach at minute objects deep in the tubes and nectaries of flowers. That a hummingbird may for a time subsist on sugar and water, or any other saccharine fluid, is probable enough; but it is essentially an insect-hunter, and not a honey-sucker" (pp. 197 and 198).

During the past year the writer has made a large number of dissections upon a great many species of hummingbirds, both adult specimens and embryos; and the object of the present paper is to present his own view upon the structure of their tongues, which has been the outcome of those investigations.

It has proved to be my good fortune to fully confirm the researches in this direction made by MacGillivray, whose very lucid account of them I have just quoted; and I must dissent from Professor Coues's opinion, as I could never believe that the tongue of a hummingbird is such an "extraordinary structure" as he still seems to take it to be.

In examining into the real facts in the case the writer would advise the investigator to proceed in the following manner. Having secured a fresh adult specimen of any of our hummers, and placed it in alcohol for an hour or so, in order to sufficiently harden the tissues for our dissection, carefully skin the head. First a word, however, to those who may not be quite familiar with the bony structure of a bird's tongue. To make this clear, all one has to do is to take the tongue, say of a chicken, and that by carefully removing the jaw, and taking not only that part which shows in the mouth, but those delicate prolongations which extend backward from it, and curl somewhat up behind the skull. These latter and the mid-portions will be found to be covered with muscle and other structures, all of which must be carefully peeled off with a penknife. Then we have the bony parts only left, or the *hyoid arches*, which will be found to consist of the following separate parts, as shown in my drawing of them:

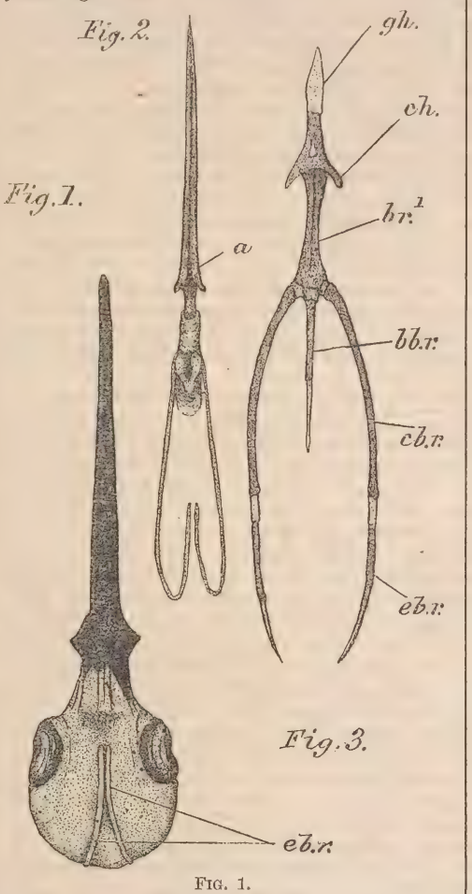

FIG. 1.

Upper view of the head of the broad-tailed hummingbird (*T. platycercus*) after the skin has been removed; *eb. r*, the epibranchials. (x 3).

FIG. 2.

Upper view of the tongue or *hyoidean apparatus* of the same bird, immediately after removing it; *a* the point where the incision is to be made to expose the glosso-hyals (x 2).

FIG. 3.

Upper view of the tongue-bones of a chicken; somewhat enlarged, *gh*, glosso-hyal; *ch*, ceratohyal; *br*.1, first basibranchial; *bb. r*, second basibranchial; *cb. r*, cerato-branchials; and *eb. r*, epibranchials.

First we find the bone and its cartilaginous tip (*gh*), which were within the horny part of the tongue in the mouth; then a medium bony rod, in two pieces, with a posterior or hinder cartilaginous tip (*br*.1 and *bb. r*.). In some birds these pieces are united into one, while in others the hinder piece is absent. Now we have two limbs jutting out, one on either side, as shown in Fig. 3; when spoken of together these are the *thyro-hyals*, and are the parts which curl up behind the skull, and are so wonderfully prolonged in most woodpeckers, and in our hummingbirds. (See Fig. 2).

To return then to our specimen from which we have removed the skin, (Fig. 1), we have no trouble in finding at once the *epibranchials* (*eb. r*) on top of the head. By the use of a sharp knife these can easily be lifted from their position, and finally with a little care the entire tongue removed from the head, when it will appear as I have drawn it in Figure 2. We next bring to our aid a lens of some considerable power, and after having examined our specimen, and carefully compared it with MacGillivray's account, which I quoted above, we may insert the delicate point of our dissecting knife at *a* in the figure, when by a gentle motion and a little well-directed force, the horny part of the tongue is easily split clear to its tip. Now our lens at once shows us that the cylinder (the right one in the figure) although hollow, is *completely filled* by the cartilaginous rod of the *glosso-hyal*, and is in reality *not hollow* at all.

In closing I would like to say that it must be evident to all that not a single structural character in the entire head of this hummingbird agrees in any way with the corresponding characters in the head of a swift, with which latter birds they, the hummers, have heretofore been associated in the same Order in classification.

FORT WINGATE, New Mex., June 26.

CHEEWINK.

CORALVILLE, Iowa, June 26.—*Editor Forest and Stream:* I inclose you a bit of excellent poetry. It was contributed to the *Independent* by S. B. McManus, of Lima, Indiana, and is as follows:

The catbird sets on the willer lim'
As is bendin' over the run ter drink,
And yapps what I recken es seems ter him,
A wonderful gallus song—*chee-wink.*
Et haint' no meanin' es I can make out—
Et may be Lating er elsewise Greek;
But he sets there a-singin' his tune like he mought
Hev a dozen pianers inside of his cheek.

But the brook likes the tune, an' goes laffin' a laff
Right under it, heartier, leastwise so I think,
An et keeps up a kind of a banterin' chaff.
Fer ter hearten the singin,' *chee-wink, chee-wink!*
En the blue Johnny-jump-ups (they allus mind me
Of my little gal's eyes so lovin' an' sweet)
They smiles like a human when they hears on the tree
The catbird a-fillin' the air complete.

And the cowslips they grin 'n' git yellerer yet,
Like es ef they was blushin' a new-fangled blush,
When they seen the "cheewink," in the willers rain-wet,
Er hoppin' about in the dead elder brush,
En the sweet-William tops all a bendin' with blows,
Nod back'ards 'n' for'ards a-keepin' of time
To the chirk little tune as it mellerly flows
Out inter the air like a short-meter'd rhyme.

I hoe an' I listen 'n' listen 'n' hoe;
That bird in the willer a-pipin' away
Makes my worries go fast, an' my pleasures go slow,
'N' the sun ter shine clear on the cloudiest day.
Et's a mighty small thing, I suppose, for ter make
A man ter feel happy, folks most like may think,
But fer me ter be cheerful, et don't allus take
More'n the catbird a-singin' *chee-wink, chee-wink!*

Now isn't that just splendid? But what a pity he doesn't take FOREST AND STREAM, so that he might have been a little better versed in natural history, and not have spoiled it all by confounding the catbird with the "cheewink." I sat down on reading it and wrote the author that I thought it a pity his fine poetry should be spoiled by so palpable an error; and he sent a reply which I inclose:

"*Warsaw Daily Times*, Warsaw, Ind., June 18, 1887.—Mrs. Violet S. Williams: Mr. McManus handed me your letter to answer. I certainly think you are mistaken in regard to the catbird out here in Hoosierdom; that bird says *cheewink* as plainly as the whippoorwill. I am pleased, however, to know that you are pleased with our poet, and it may possibly be your good fortune some day to listen to him, as he contemplates going on the lecture platform. He is spending a few days in our city. I am, most respectfully, your obedient servant, QUINCY A. HOSSLER."

Now will you please say if the catbirds of Hoosierdom or any other locality were ever known to hollow *chee-wink?* VIOLET S. WILLIAMS.

[Although we have seen the catbird from the Atlantic Coast to the Rocky Mountains, we have certainly never heard it utter the call *cheewink*. The cheewink of the Missouri River Valley and Rocky Mountain foothills does, however, utter the characteristic catbird "mew." The apparent mistake of the poet should be explained in some way.]

ROBINS FEED THEIR YOUNG IN CAGES.—Cold Spring Harbor, July 7.—*Editor Forest and Stream:* A short time ago my terrier picked up a young robin which had fallen from the nest, and as it seemed to be uninjured by the dog, I took it down to the fish hatchery and put it in a bird cage. It was about ready to fly, and therefore too old to accept a man as its natural nurse, and declined all overtures of food. Knowing that it would starve under these circumstances, I thought of trying to see if the old birds would feed it. All of my men were of the opinion that the old ones would poison it, a theory I had heard from boyhood; and to test it, the cage was placed in a lilac bush near where the bird was found, and the old ones fed it regularly for a week. It grew strong and fat, and thinking that I had carried the experiment far enough, and that the old ones would soon abandon it, I opened the door at night and in the morning it was gone. Both the parent birds fed the young robin, and one or both of them could be seen at the cage or about it almost every day. As the consumption of worms by the young robin is vastly greater than any one would imagine who has never attempted to raise any, it is probable that in the alleged case of poisoning of the young, they might have died from starvation. Who knows that old birds poison their young when confined in cages? and what poisons do they use?—FRED MATHER.

NEW MEXICAN SQUIRRELS.—With reference to his article on New Mexican squirrels, which recently appeared in FOREST AND STREAM, Dr. Shufeldt desires us to say for him that for the moment the prairie dog (*Cynomys columbianus*), which occurs all over this region, slipped his mind as a representative squirrel of the Fort Wingate fauna. Its name should at least have been mentioned, even if its far better known habits rendered unnecessary the more extended description bestowed upon the other three species mentioned in his list.

ALBINO HEDGEHOG.—Boston, July 10.—In regard to communication from Mr. C. F. Richardson, in issue of July 7, I have a stuffed specimen of a perfect albino hedgehog, captured some years since in Stoddard, a small town in southwest New Hampshire. It was the first one I had seen, but on referring the subject to Prof. Agassiz, he informed me that they were not as rare as I had supposed, and stated that specimens existed in all our museums.—E. M. MESSENGER.

Game Bag and Gun.

Address all communications to the Forest and Stream Pub. Co.

A TRIP OF THE GUN CLUB.

THE Gun Club had determined to have another hunt. Riley and I had so decided and as Riley and I constituted the Gun Club that settled it. Riley and I had been hunting on several different times for short periods of a day or two only, but we determined to make an effort worthy of the club. The appellation of the Gun Club had been born of sarcasm and nourished on ridicule from some of our particular friends, on a memorable occasion when we went on a wild duck chase for a couple of days, and left two-thirds of the ammunition at home, each having a sublime faith that the other had brought it. So when we returned we had to accept the gibes of our friends and listen to Mac discourse in his most facetious vein on the late "exploit of the Gun Club, so called, gentlemen, because in hunting they prefer a club to a gun."

The name given in derision was adopted as a badge of honor, as in many other historical cases, though we did harbor secret and painful recollections of an alleged ranch where we intended a stop, and which we found to be a deserted "dug-out," half full of snow; of two long days of snow and rain and wind and overflowed flats, and no ducks; and of an intervening night of intimate association on the dirty floor of a contracted shanty with a soldier, a Mexican sheepherder, a half-breed Indian horse-breaker, and a ruffianly cowboy whose hirsute presentment and characteristic conversation were equally lurid; and where our nerves were soothed by a spasmodic nocturne by a quartette of cats that varied the performance by charging over, and fighting on, our beds and eliciting sulphurous remarks from the "cow puncher." But this time we were to make a business of it for about ten days.

After careful inquiries from ranchmen, hunters, cowboys and all sorts and conditions of men endowed with all degrees of knowledge and lack thereof—mostly lack—we concluded to make our hunt on Big Pine Mountain, lying some sixty miles off to the southward, in hopes of deer and elk, and possibly bear and mountain sheep. Right here we may as well drop bruin and the bighorn as they do not enter further into this history. It was mid-October and we had a right to expect good weather and the game at its best. On the morning of the 15th the four-mule team we had procured, with its sheeted wagon, pulled up in front of the door and received its load of forage, a large tent, mess box properly provided with various edibles; not forgetting the various available canned goods, cooking utensils, canvas wrapped rolls of bedding, and the score of odds and ends of personal equipment deemed desirable. O'Donnell drove and Moran, the cook, lending his moral support on the front seat, the wagon rolled away. Riley and I soon followed *à cheval*, each provided with a California saddle, lariat, repeating rifle and filled ammunition belt.

My horse was a little black broncho about as big as an exaggerated dog, and I felt somewhat ashamed to impose my weight on him—moderate though it was. However, I thought he would get me down the country and I could get another horse at some ranch to do the really hard work. Later I had more respect for that little equine cub. I failed to get another horse, and he put in about ten days of as hard work as I ever expect to demand of any quadruped, and at the end of a push of fifty miles over a broken country on the last day he seemed in about as good spirits as the day we started, except that he didn't try to run and buck.

We soon left the little town out of sight and pursued our southern route by a fair road among broken and precipitous hills at first, and then across a broad and broken valley to Quaking Asp Mountain, up the steep sides of which we scrambled with considerable difficulty and loss of breath. This road was evidently surveyed mostly with a plumb line. An hour of hard work and we were across the bare summit, when a short, gradual descent brought us to water in a little creek bordered with willows, where we halted at about noon, watered the animals, unsaddled the horses, and proceeded to investigate the subject of lunch. After a rest of nearly an hour we pushed on southward over a high plateau, the view, a vast sea of barren hills, broken into all shapes; a dozen or more miles away the cañons of Green River, and nearly a hundred miles beyond the snow-clad slopes of the Uintah Mountains, looming up clear and distinct in this rarified atmosphere.

About mid-afternoon we ran into a band of antelope and fired a few shots at them on the run, but bullets have a great faculty of going over, under or between, and we failed to knock one over, and having a long march to make, wasted no time pursuing them.

Our destination was Barney's Ranch, in the mouth of a cañon locally known as "The Gap," and leaving the team to follow the road, Riley and I pursued our way across country over high and broken barren hills. We stirred up a few rabbits which we scorned to notice, had an impromptu circus with the broncho about crossing a deep washout, which he finally jumped in a wild leap, that seemed to indicate that some intimate connection existed in his equine logic between the depth of the hole and the height necessary to jump to clear it, and finally reached the ranch, after a forty-mile ride, just before dark, and an hour ahead of the wagon. We were hospitably received by a half dozen cowboys and hunters, and passed the evening after supper sitting about the big stone hearth before a blazing fire, listening to the talk and chaff of our entertainers.

Any one who lays himself open to being joked in that branch of social life is pretty sure to reap his reward. Raphael, a tall, dark Mexican herder, while riding the range one day, had found a half-grown bear cub and roped it (a tenderfoot would say he lassoed it), and taking a turn of the lariat about the pommel, he started his horse off at a lively gait; but the cub squealed and his mother came on deck and made the fun so lively that Raphael had to let go and pay strict attention to getting out of the neighborhood, leaving a $15 raw hide lariat as the price of his amusement, though his friends seemed to derive the bulk of the fun from the episode.

Then Barney had to take it, too. Barney is an old frontiersman and somewhat given to romancing. He came in one day claiming to have shot two yearling bears, and sure enough he had their hides. But there was a hiatus in the evidence; there was no bullet hole in either, and soon after it was discovered that the two bears had been gnawing at a carcass poisoned for wolves, and Barney had found them dead and did not have the presence of mind to shoot a hole in each to support his story. So, as philosophically as possible, Barney had to endure considerable chaff.

Up and on again the next morning through a deep cañon for some miles, and then out on the "Cherokee trail" to the southeast. We stopped for luncheon at a crossing of a small creek, with willow thickets lining its banks, and there found a round-up wagon belonging to a cattle outfit, returning to the ranch after driving through to the railroad with a "bunch of steers." The driver was a typical Western cowboy and hunter, thoroughly conversant with all the country for scores of miles around. We asked him about the chances for game on Big Pine Mountain, and incidentally about bears; the dangers of bear hunting were touched upon and brought from him about as good a piece of practical advice as I have recently heard: "Now when you tackle a bear," said he, "aim at his ear when you can get him on the side. If you hit him anywhere around that he's your meat, and if you miss him he'll hear the bullet zip and he'll run away. You don't want to wound no bear; you can give 'em a mortal shot and then they'll like as not run three or four hundred yards and chaw you up before they die."

In this country, where bears are spoken of, it should be borne in mind that, unless otherwise specified, the cinnamon is usually meant, and he is in savagery second only to his noted first cousin, the grizzly of the Sierras. One frequently hears, when bear hunting is mentioned, and from hunters and frontiersmen of long experience, the sententious remark that betokens the reputation that bruin has: "Well, I ain't lost no bar."

We reached Scrivner's ranch, at the foot of the eastern slope of Big Pine Mountain and about twenty-five miles from the Gap, at 2 P. M. There was no one at home but the cat; but Western hospitality does not lock its doors, and as we knew the proprietor we raided the milk room, helped ourselves to all we wished to drink and carried away a small kegful with us. This is a typical ranch; the dwelling is in the shape of an L, built of logs in one low-coiled story and with pole and earthen roof. As the proprietor, unlike most ranchmen, had a wife—and a very pleasant one, too—a sitting room and bedroom, cosily furnished, carpeted and papered, formed one branch of the L, while storerooms, kitchen and a room for the ranch hands formed the other. Wagon and tool sheds and stables, with extensive corrals, comprised the other buildings. The surroundings were not over attractive, as high, bare hills hemmed it in and the sage brush and greasewood crowded hard on the front door yard. Some people would think it lonely and isolated to live sixty-five miles from the nearest post office and telegraph station, and one's nearest neighbor eight and ten miles away; but Mr. S. did not regard it in that light; it was cattle range he needed, not sociability, and he was seriously thinking of emigrating to some locality "where it wa'n't settled so blame thick."

From the ranch to the place where we intended to camp was a steady pull for some six miles up the mountain. We reached the neighborhood of the top late in the afternoon, and, finding a small stream in a scattered grove of quaking aspens on the side of the mountain some distance below the crest, we pulled in and established our camp, pitching one tent and squaring up the wagon to accommodate the cook and teamster. The mules were quickly unharnessed and picketed out, congratulating each other the while on the completion of their day's work with subdued snuffling brays in a minor key, inspired largely by faith in oats to come. Just before the camping ground was selected, Riley had left the road and gone off around a neighboring knob in hope of getting a deer or antelope, as we had recently seen two of the latter; and while we were arranging the camp a bunch of deer stood on the slope a half mile away and regarded our intrusion with curiosity. Supper was ready and darkness falling, but Riley did not appear; his experience had been limited, and he was not used to "rustling" for himself on a strange mountain on a cold night, and I was getting decidedly uneasy. Another half hour passed and it was now night, but still no Riley; and all hands, including two visitors who had come over with us from Barney's, were turned out and set to gathering brush and packing it up the steep sides of a bare knob near by, on the crest of which a big fire was built and we commenced firing our rifles. After a while a distant shot was heard; and, much to our relief, some twenty minutes later Riley put in an appearance.

He had gone around the camp and was headed directly away from it and about a mile distant when our signals caught his attention. Well, we soothed ourselves with a ration from the keg (the reader will remember that we had put milk in a keg), and spreading down our blankets were soon dreaming of the elk and deer to fall on the morrow. Morning came and with it a storm, half of rain and half of snow, but we were not to be dismayed by a little weather, and all started out only to come straggling back again one by one through the afternoon, wet and almost frozen; and not a shot had any one fired. That night the drizzle turned to snow in good earnest, and a foot of it covered the ground the next morning. Again we started out; one or two flying glimpses of deer were had, but no one had a shot all that day. It was so cold that one's fingers were in a half frozen condition, and the snow so deep that our horses could get through the timber only with the greatest difficulty. That night there prevailed in the tent an atmosphere of disgust and wet clothing, and a disposition to make explosive remarks of a deprecatory nature regarding the game, the weather and the luck.

Hope returned with the dawn and we were soon at it again. After an hour's hard work scrambling in and out of gullies, over fallen trees and through deep snow drifts, my pony was plodding across an open space or top of the mountain, where I discovered a fresh trail—elk and no mistake. There it was, not an hour old, a track as big as a two-year-old steer's, and I at once put after him, hoping to overhaul him while feeding or resting. The trail led into the dense pine woods, and I soon had to abandon my horse. I could doubtless have ridden him through, but he made too much noise, and if a shot offered it was desirable to be afoot. Tying the pony to a tree by a rather loose knot in the stiff and frozen lariat, I resumed the trail, following its windings back and forth through dense pine groves, and across wide, wind-swept openings deep with snow, until I finally came out on the southern crest of the mountain. Before me and two miles away rose Diamond Mountain, well within the State of Colorado, its western base crowding hard upon the Utah line. Beneath my feet was visible the trail which, after a few turns and twists of indecision, led straight for the valley. There was no doubt about it; he had crossed to the other mountain. In a disgusted frame of mind I followed. I wanted my horse now but he was two or three miles behind, and there was no time to go back. So down I went, sticking to the trail, occasionally baffled when it crossed bare, rocky ground, across the valley and creek, and then up the foot slopes of Diamond, veering off to the east and keeping an ascending spiral; crossing coulées and gullies all filled with snow; through dense brush thickets, and as I got higher and higher through windfalls of fire-killed pines lying over each other in all direction; falling into holes concealed by the snow, but still hopeful and every moment watching the woods and thickets in front.

But the sun was long past the meridian and I was gradually getting discouraged, and finally on the south side of the Diamond, miles from where I had started, I gave up the chase, after a six-hours' steady struggle. It was now after 3 o'clock and I ruefully turned back to seek shelter for the night at Butterworth's ranch, which lay at the head of the valley behind me. The back tramp was no easy one through the snow and windfalls, but I reached the ranch just before dark and was welcomed with all hospitality by Mr. B. and his attractive wife. After a hot supper and a pleasant evening I retired, more than ever convinced of a fact frequently noticed, that any one who goes hunting and really hunts had better not anticipate any *dolce far niente* kind of a picnic. If he does a wreck of expectations is in store for him.

Early the next morning along came Riley leading my horse, which had staid all day in the woods where I left him, and finally getting tired of it, had loosened his lariat and made a bee line for camp. All hands there became stampeded, thinking some accident had occurred or that the horse had broken away when I was trying to pack some game on him, and so the signal fire and discharge of rifles was repeated for my benefit while I was comfortably ensconced in the ranch.

That day, however, the others had better luck; our visitors got into a runway and killed four deer and Riley had killed two. I congratulated him, but he didn't appear to be very enthusiastic and finally said: "Well, I'd have been a perfect chump if I hadn't killed them; they just hung around and watched me get a defective cartridge out of my gun and gave me fair shots at both of them, and of course I got them."

From Butterworth's we started on another day of hard hunting and no finding until late in the afternoon, when I was returning to camp along the mountain crest when I thought I heard a rustling in the neighboring brush, different from that caused by the high wind; and going in I found the fresh tracks of a half dozen deer leading into a bunch of timber about a half mile long and from one to four hundred yards wide. With something tolerably sure to work on at last I pushed up the mountain across the wind until well free of the timber and then followed it down, and coming in on the leeward side, fastened my horse and worked cautiously into the brush and woods, and not in vain, for after working in about a quarter of a mile a mule deer jumped up in front of me, about 100yds., and after making two or three bounds stopped to look at me. I was waiting for this, and taking careful aim at the shoulder, I fired. The doe made a few wild bounds, falling and scrambling up again until death overtook it about 50yds. from where it stood when hit. The bullet had gone through the base of the neck just in front of the shoulders.

I went on a few paces and there, not more than 30yds. away, stood a young buck, held by curiosity, with one foot in the air ready to fly. I brought up rifle again, and taking deliberate aim, pulled the trigger. The cap failed to explode, and before I could try again, *cervus* was in full sail through the brush. To say that I was disgusted mildly expresses it, but I went ahead, failing, however, to get another shot, and in a half hour returned to my horse and brought him up to my game, which I had bled and drawn before leaving. The doe was soon across the saddle and secured by a few turns of the lariat; I started for camp, and reaching there just before dark, hung my deer up by the heels with the half dozen others.

The next day O'Donnell and I started out together, and in less than half a mile from camp crossed some fresh elk tracks, which we followed a short distance, and scared four elk out of a bunch of brush in a hollow before us. They trotted up the opposite slope for a short distance and then turned to look at us. It was a sight to bring joy to any hunter. A big bull with magnificent spreading antlers, a cow, and two half grown calves, the latter about the size of a six months old colt, composed the band. There they stood, in plain view, and about five hundred yards away, calmly looking at us. To fire or not was the question. If we could only be sure of the distance over the deceptive glare of the rolling snow a hit at that range would not be difficult, but if we missed they would be frightened and there would be no telling when or where they would stop. We therefore concluded to try and get under cover and quietly work up on them to close quarters. My eyes had been pretty well strained the previous day by the glare on the snow, and the overpowering brilliance of the sun reflected into my face soon made them very uncomfortable, and it was only in the shade of the timber that I could see at all without the greatest difficulty.

Leaving our horses soon after entering the woods, we followed the trail of the elk on foot, but they had evidently taken alarm, and it was only after a toilsome chase of between two or three miles that we overtook them feeding in the brush.

I was nearly snow blind and the scalding water ran from my eyes every time I tried to look ahead, but there was no help for it then. O'Donnell espied the game and we approached as closely as we dared, and aiming at the spot of fur I could see between the trees, we both fired. O'Donnell was fortunate enough to bring down one of the calves, but my shot went wild, as did the other three elk, and I saw the last of the much coveted antlers. We pursued their trail for nearly a mile further, but with no result, and fearing if I went on my eyes might fail me entirely, I turned back and sorrowfully gave it up. It was now snowing and our tracks rapidly becoming obliterated, so that I made all haste possible back to my horse and

brought him up to the game, which was soon drawn and quartered and packed.

Then the return march for camp commenced. It was getting late in the afternoon and the storm increased rapidly and soon became a regular blizzard, rendering our return a very hard piece of work; but by keeping careful note of landmarks it was finally accomplished. That night, wet and worn out, the wind howling without, our tent presented a dispirited appearance, and we finally unanimously voted the war a failure, and the mandate was uttered to break camp the following morning and start back.

Our visitors had gone two days before; they did not appreciate nature's moods and left for either milder climes or more shelter. On the following morning a negative was obtained of our game, and immediately after down came the tent; bedding, mess-box and all our traps were bundled into the wagon with the seven deer and one elk, and the procession was soon moving down the mountain to Mr. Scrivner's ranch, where we stopped that afternoon and all night. Riley and I were in the saddle at 7 A. M. the next day and headed for home, leaving the wagon to come in two days by the road. We cut straight across regardless of trails, scrambling down rocky hills and up again, through cañons and across sage-covered, bleak and barren hills. We ran into a band of antelope, but we were not hunting and had no way of carrying meat if we did kill it, so they scurried away unharmed. Riley looked after them longingly, and I think really regretted missing such a good chance for shooting nearly as much as our hard and comparatively fruitless week's work.

At about 10 A. M. Riley left me to call on a ranchman living some miles out of our way, and did not get in till the following day. I pushed on and ran into a thick snow storm on Quaking Asp Mountain that delayed me somewhat in finding the road; and finally dismounted at home in time for a 5 o'clock dinner after a ride of something over fifty miles. Late the following evening the wagon arrived, and so ended the second trip of the Gun Club, chiefly signalized by a plethora of hard work and a paucity of result. L. D. G.

WYOMING.

IN THE CHEROKEE STRIP.—IV.

WHEN Jack went up the river after his deer he took with him one shepherd dog, a greyhound and the staghound. As he was returning with the load of wood, these three dogs struck a trail in the grass near the river, and began to run it. (It is a mistake to think greyhounds will not run a trail. They often do, even the best hunting greyhounds. There was not a greyhound on the ranch which would not run scent, and the staghound was an excellent trailer.)

The dogs followed on down the bank, and presently the yelp of the shepherd attracted Jack's attention to an exciting race which was going on out on a sand bar, in plain sight. A long, slim, black creature was about a hundred yards ahead of the dogs, and it kept there, too. Jack knew it was an otter. The dogs chased it off the bar into a swamp, and here the creature played with them, now in, now out o' the water, until it discouraged them, and finally took refuge in a big pool of water, some fifty yards long and eight or ten feet deep, which formed the home of all the otters in that region during very cold weather.

This pool was nothing less than a series of mighty springs, and never froze in any weather. Jack had often seen otters here, but the wary creatures never gave him a chance for a shot. He knew they were in here now, and determined to make a campaign against them in the morning.

In the morning, therefore, Jack waited till the sun came up and shone warmly, as fortunately it did on this, the third day of our stay; then, without saying anything to anybody, he slipped up along the river, taking his own particular hunting dog, a bobtailed shepherd, and a hound or two. Arrived near the pool he kept the dogs back—an easy matter when wished—and crawling up a little sand ridge, peered through a net of wild grapevines. He was not ten yards from the pool, and there, right below him, were some otters—not one or two, but eight full-grown otters—lying on the edge of the ice, basking in the sun, and each with its nose up, sniffing at a danger they all knew was near. You may know Jack was an accomplished still-hunter. He tells the rest of the story thus:

"I saw one ole feller a little ways back from the water with his head right to me, and says I, ole feller, I'll jest shoot your eye out fer you; so I drawed down fine on him an' let her go. Every otter but that'n jest give a flip an' was gone like lightnin', an' all the dogs jumped into the water after 'em. But I shore got Mr. Otter, an' I hit him right plum in the eye, too."

The game-rack began to assume variety. An otter was something we had never dreamed of seeing.

We at once set out a couple of steel traps near the pool, but though we one morning found a mangled toe in one trap, where an otter had pulled the trap out of the shallow water—not deep enough to drown him—and gnawed off his own foot, we did not capture one; and the warm weather coming on they scattered from the pool and we saw no more of them.

The weather was now warm enough for a deer hunt with the dogs, and accordingly we started out for the open country—five of us in all—with nine of the best greyhounds, the staghound and a sprinkling of shepherd dogs. Mr. Allison took Jim and Terry, leaving Mike at home. The old fellow begged to go, but he was too lame. Jim limped badly. Terry seemed in good form. The puppies were all in high spirits. These puppies are all out of Mr. D. R. Streeter's big fawn dog Prince, a noted game dog, and a very large and powerful one. The puppies are large, strong and gritty; one of the litter, Joe, was larger than any of Mr. Allison's dogs, though not a year old. He will be a grand dog, and will crowd his sire hard as a game killer. The big greyhounds are the sort for ranch use, such as can kill coyotes and wolves, or pull down a deer. The little Eastern rabbit dogs, though very fine and very swift, would be worthless on a hunt like this.

Striking an interminable little cowboy trot—for the regular gait of the cowboy is not a gallop, but a short, choppy little trot, kept up if need be all day long—we rode out across the sand hills, and emerging from the timbered country, struck into the open section known as the "flats," consisting of long draws or sloughs, low grass-covered hills, and an occasional stretch of level land, covered closely with buffalo grass.

We rode for an hour or two across this country without sighting a deer, though we saw plenty of fresh signs. At length we struck the trail of five deer while riding across our own back trail, and as we knew they had crossed less than half an hour before, we determined to follow them. Jack and Red rode rapidly along, following the trail, which our slower eyes often lost altogether, until at length we came down into a little slough, where the ground was moister. Here the dogs all began to trail very rapidly, and strung out at once in a long line, the staghound far in the lead, with head up and running fast. The only thing that staghound could do was to trail a deer, and he was good at that. Next to him ran the blue pup—a very good one—and then the others, all perfectly silent. The foxhounds, of course, were not taken along on this hunt. The pace of the hounds increased we urged our horses after at full run. The pack was actually running away from us, with not a deer in sight anywhere! We topped a little hill. The dogs were stretching across a flat at full speed. "There they go!" called some one. And sure enough, there were five white good-bye signals hopping, bobbing and drifting along, fully half a mile ahead of the hounds.

It takes a good hound to catch a deer. No hound can do it every time, nor can any two or three, or any pack do it every time, even when the start is only two three hundred yards, and even when the ground is not covered with timber. A deer knows a thing or two, and let the hounds once lose sight of him behind a hill or in the tall grass and he will gain so much by the instant the hounds lose that he will get clear off before the dogs can be sighted again. There was little hope in this case, that with so poor a start and in so rough a country the dogs could come up with the game; but as they were off we followed, Mr. Allison and Red taking the line of the dogs, while Ricker, Jack and I held off to the right in hopes of seeing a part of the chase—or rather one of the chases—for the bunch had divided and we could see one deer by itself, evidently followed by one or more dogs.

There are all sorts of sport. There are men who shoot mud pigeons and enjoy it. To catch a sunfish is sport; to kill a cottontail is sport. I have shot rats with a .22 rifle and enjoyed the fun. To stop a partridge, to make a double on mallards, to break a Canada goose all up, to stalk a deer, to kill a buffalo, to kill a bear—all this is sport, and each seems better at the time than anything else could be. But it hasn't the bigness, it hasn't the intensity, it hasn't the enduring power of the stern excitement known in the wild brush across the prairie, after the swift runners with a swift runner under you, with your eyes on ahead, and the rhythmic whirr of the wind singing in your ears in unison with the lift and fall of your horse's shoulders. It is steeple chasing with a deer hunt thrown in. What matter if the ground be full of soft spots and gopher holes—there are so many gopher holes between you and the chase. So long as your horse is up, it is all right. Coursing jack rabbits is fine sport; coursing deer is a grand sport—a sport fit for kings and princes, and one which few kings or princes or proved sportsmen have a chance to enjoy. In it the young hunter grows reckless, the old hunter forgets his experiences, and both unite in a perfect disregard of all earth outside the little strip ahead. The very horses love it. You couldn't hold old John after the hounds had started. Even our town horses showed themselves game, and after that first run were always eager for the next.

But we were distanced; the start had been too much for us. As if by magic both chases swept away, and the sandy hills stood up around us, barren and silent. Dismounting, we loosened the cinches, allowed our horses to breathe a bit, and then walked slowly on. We had no idea which way our other two companions had gone, but headed in toward camp, after a time striking and following the trail of a deer which we supposed was the one we had seen run to the right.

"Hello! Here's the dog's trail, too!" called out Jack. And there we could see them both, now closely parallel, now blending together. The leaps of both animals were astonishing. "He's shore been crowdin' her," said Jack.

Presently we met a hound coming along the back trail. It was Terry, and he had evidently had a hard run. We tried to induce him to follow us down the trail, but he had had enough of it, and presently started off on his own hook to find the other dogs.

Terry had run this deer, which we took to be a doe, alone; and what he did with her we never could find out. He was not bloody, and we did not think he had killed his game. Yet as far as we could follow the trail there were his tracks right in those of the doe; and we followed the trail much further than it seemed possible for him to go and return in the time he was absent. We lost the trail on some hard ground. While we were searching for it we jumped a doe not three hundred yards from us; but we thought it hardly possible that this was the same deer, as the dog appeared to have been too close to allow her to lie down in the high grass and let him run on by. We left this unsolved mystery and started for camp. As we neared the gate in the wire fence of the 21 pasture, we heard a shot faint in the distance, and saw the forms of our two companions dimly outlined on the crest of a hill, far to the east. We knew the shot was the signal for calling in the dogs, and rode on in, knowing that the hunt was over, though ignorant of what success our friends had had.

At supper that night it transpired that the day had been a blank one, so far as the deer were concerned. Mr. Allison and Red had followed the main body of the hounds after their bunch of deer and had ridden hard for over two miles, the dogs staying wonderfully for puppies; but their fate had been the same as ours—the deer had shaken off their pursuers and escaped among the rough and broken sandhills of the T5 range. We told Mr. Allison he ought to recant a little about the infallibility of his hounds. Of course, he explained just how it was.

Another sudden change of weather now occurred, and after supper it came on to rain. By night it was raining and sleeting in an impartial sort of way, and the darkness soon became so thick you could cut off a piece and chew it. We got restless sitting about the camp, although by rights our ride of nearly thirty miles ought to have satisfied us for one day. Some one said something about its being a good night for coons to run, and some one else issued a challenge for a hunt; so—though it seemed to me, and perhaps to others, that any sane coon would hunt the very longest and deepest hole he could find on that particular kind of a night—we threw on our "slickers," loosed the two foxhounds, and calling up thirty or forty other dogs which were lying around loose, started for the marsh lying near the otter pool.

We splashed along at the foot of the river bank, now in, now out of the countless little spring branches which run out of the bluff, and getting wetter and quieter every minute. The big pool looked mighty black and lonesome and the trees overhead creaked their icy limbs dismally. The foxhounds nosed about industriously, the young dog Drum showing his great disposition to "rustle" all over the country. Drum seemed always to think that when we put him to hunting something had to be found. We never once had long to wait for his call after we put him in. He was an obliging little fellow. Indeed, I suspect that sometimes just to accommodate us he used to "let on" a little, when he hadn't any trail at all to speak of. If the theory about the sanity of the raccoon race on such a night be true, then I shouldn't wonder if Drum lied a little, just to keep our spirits up. He gave a few little preliminary whines and then away he went in the dark, singing "wow wow woo-oo-oow." He fooled us, but he didn't fool old Buck. The latter would not open and would not run, but said plainly:

"That young pup is only joking about that. He hasn't got any trail. Come on, let's go home."

We splashed and waded and crashed along for awhile, and then as Drum came back wagging his tail and looking up at us with a semi-wink in the corner of his eye we took Buck's advice and went home. E. HOUGH.

In No. 2 of the "Cherokee Strip" articles, for "From Viking dogs down" read "Viking days down." Please correct. Do you want some cowboy to kill me?—E. HOUGH.

NEW HAMPSHIRE GAME INTERESTS.

IN their annual report the New Hampshire Fish and Game Commissioners recommend the adoption of an amendment to the game law so that the possession of snared grouse or quail shall be illegal. Of the public interest in game protection they say:

"The law passed by the Legislature in 1885 prohibiting the exportation of game birds out of the State has worked well and done a great deal of good. It has put an end to much of the illegal snaring of the ruffed grouse or partridge, and has been the means of keeping our local markets well supplied with this excellent bird. The only thing now needed to entirely put an end to snaring is an amendment to the law making it illegal to have snared birds in possession.

"The good that has been accomplished by the enforcement of the game laws is shown by the rapid increase of deer in the northern and central portions of the State. And during the past summer they have been frequently seen in Plymouth, Rumney, Ashland and many other towns where none have been seen before for many years. If the parties who kill deer during the deep snows of winter would only let them alone for a few years they would become numerous enough to afford fine sport in the fall and early winter.

"Hon. Luther Hayes, of Milton, who was appointed Commissioner in 1876 and served in that capacity for the past ten years, has done an efficient and successful work for the State. His successor is the Hon. John H. Kimball, of Marlborough, appointed August, 1886.

"There is a marked interest throughout the State for a more efficient enforcement of the fish and game laws. A circular was issued and sent to all of the town clerks in the State, early in March, calling their attention to the law, and requesting the election of fish and game wardens from their towns. The Commissioners are highly gratified at the result. More than 325 fish and game wardens have been elected and qualified, and have been furnished with the laws relating thereto. Scattered as they are all through the State, they will be of great advantage in the enforcement of the laws and protection of fish and game."

MR. PARKER'S DEER.

PUTNAM, Conn., July 11.—*Editor Forest and Stream:* The old adage that "fair play is a jewel" and that there are always two sides to a question you are doubtless well aware of, and it certainly is but "fair play" on your part to publish the facts concerning the charges contained in your issue of the 7th inst.

I confess that to a certain extent I am to blame in writing the article which you copied from a Connecticut paper, and which you have taken for granted as being *bona fide*, but I think you will acknowledge the injustice of your denunciations, when you are made aware that the "deer story" was one of those visionary "that reminds me" stories, so often rehearsed around the camp-fire, and to relate which in my letter was too great a temptation to be resisted.

The paper it was written for was not a sportsman's journal and the letters published in it were written solely to pass away the time, as thousands of others are, and were well spiced with imaginary incidents which never transpired.

I would simply say, not to take up too much of your space, providing you see fit to use this, that my guide and self were there; the deer were there; but there was no rifle nor any sort of a firearm to our knowledge within five miles of the lake where we were, and even if there had been no amount of so-called glory would have tempted me to break the law of the State of New York. You are perfectly right in your abhorrence of June deer shooting, but do not hurl all the vengeance of a wrathful Jupiter on our devoted head until you know both sides of the story.

You can take my word for this statement or not, just as you choose, as I am under no obligations to accept, or even ask for, clemency from either man or newspaper; but as a law-abiding citizen, and a member, although perchance an unworthy one, of the noble profession of sportsmen, I ask the withdrawal of your charges, as they are founded but on the ideas of a woodland romance, and existed only in the idle scribbling of a vacation hour.

A. M. PARKER.

NEW ENGLAND GAME LAWS are summarized on a card for gratuitous distribution by Messrs. Wm. R. Shaefer & Son, of 61 Elm street, Boston.

PORCUPINE HUNTING.

THE many able correspondents of the FOREST AND STREAM have given us very interesting accounts of the capture of nearly everything that wears fin, fur or feather, except the porcupine.

Our party had been in camp some days on Squaw Point in Ganannoque Lake, where we had gone in pursuit of ducks. We found them quite plenty, but provokingly difficult to get, for the margin of the lake was filled with brush, stumps and dead treetops. This was caused by the dam at Marble Rock setting the water back over an extensive tract of forest. As the trees died, or were cut for timber when the lake was frozen, the tops and large limbs were left as they fell, thus causing a barrier impenetrable by our boats. Every bird that fell in there, dead or crippled, was lost to us, for not knowing the condition of things before visiting the lake, we took no dogs with us for retrieving.

Tiring of this unsatisfactory sport, I said to my boatman—James W Green—who has rowed me for many successive years, "Jim, I have heard that porcupines are to be found in the woods around here, and as I never killed, nor even saw a live one, what say you to a porcupine hunt to-day?" "If we go to Lost Bay I guess we can have all the shooting we shall care for at that kind of game," was the reply. That settled it and soon we were under way.

The day proved one of the loveliest of the year, one of those October days when life is a luxury, when air, water, mountain and wood all blend harmoniously to form a perfect day. Although nearly a score of years have passed, the impressions of that particular day remain fresh in memory, so that I regard it as the "red-letter day" of all my many outings. The lake shores were bold and of peculiar form and color, the water clear and blue, with a vegetable growth at the bottom that, as we passed over it, gave one a conception of how forests must appear to the baloonist as he passes them in mid air. Although our objective point included a run of several miles, everything had been so delightful that before I was aware of it Jim said, "We are now in Lost Bay, and which way would you go to get out of it?" After looking for an opening in all directions I was compelled to say, "I give it up, you will have to settle that question when the time comes for us to leave."

Finding a suitable landing place, we hauled our boat up on the shore and at once commenced our uphill tramp, keeping a short distance apart and on the lookout for the game we were in pursuit of.

We had not proceeded far when, high up in a hemlock tree, I discovered an animal new to me; but whether a young cub, fisher or wildcat was not certain, as it lay close on a nearly horizontal limb. But my guide at once decided it to be a porcupine. Raising my rifle and sighting for a dead shot, I touched the trigger; a report followed, but the game neither fell nor moved. This surprised me, for the rifle had ever been my favorite arm, so that I considered myself something of an expert with it, having at the target placed the second ball in the hole made by the first. But it was a porcupine, not a wooden target, that I was trying the rifle on now. Soon a second ball followed the first, but with precisely the same result. Surprise now turned to wonder. What could it mean? A glance at the sights and through the barrel showed everything in order. I rubbed my eyebrows, but the old story of a certain insect there was not repeated in my case. A third ball was sent; still with no apparent result. After the fourth I thought I saw a slight shrug of the back, but no change of position. The fifth, sixth and seventh followed rapidly, Jim in the mean time laughing at my skill in rifle shooting.

But the end had now come. The animal made an effort to crawl up the limb, when its entrails dropped out and he fell nearly off the limb, but held on by one foot for a little, then fell to the ground, a mangled and disgusting mass of quills, blood and entrails. An examination showed that every bullet had passed through the body, leaving fourteen holes in the pelt. This stopped Jim's jibes as to my shooting ability.

As no use could be made of this specimen we climbed the hill still higher, and soon another was found in a tree, far above us. After my experience with the first I decided to try the shotgun on this one, although it was loaded with No. 5 shot. A single discharge brought it down dead, rolled up like a ball, and it continued to roll down the hill, the leaves adhering to its quills, so that it looked more like a bundle of leaves than any animal form, as it came near us in its down grade rotation. Why such difference in the tenacity of life in the two animals?

Having had all the experience in porcupine shooting that I cared for, and having a fair specimen, we took to the boat and started leisurely for camp, which we reached about dark, well pleased with the day's adventure. My guide skinned the animal for me to take home; but it fell a prey to the Clayton rats and never filled the place it was intended for. J. H. D.

GUN AND GAME IN GERMANY.

GERMANY has the most stringent game laws of all the civilized states in the world; or, which fits the case more properly, the existing game laws are better enforced and better observed here than anywhere else. The natural consequence is that game is comparatively plenty in this thickly-settled state.

Within one or two hours' ride by railroad from Berlin may be found hunting grounds with red deer, roe, hares, partridges, ducks, snipe, etc. Hubertusstock is in close proximity to Berlin, and there the lover of game may see at any time from one hundred to four hundred red deer in one herd. Hubertusstock is the favored hunting ground of the German Court family. The aged Emperor still regularly attends the *Hofjagd* (court hunting) every November, when in two days from two to three hundred red deer—mostly stags—are killed. During the remainder of the year no gunner, nobleman or peasant, is allowed to enter these grounds. A large number of wardens protect the grounds and game against all intruders and especially against game sneakers.

The government forests throughout Germany are only hunted by the profes ional forester. They are never rented nor leased for hunting purposes to private citizens. The forester is not allowed to kill more than a fixed number of red deer, fallow deer and roe every season. This number varies and is kept in accordance with the total number of game of each species of each particular district into which the government forests are divided. It is due to this rule in connection with the game laws that game is kept at about the same number, and that particularly the red deer has not long since become extinct in Europe.

Before a person can enjoy the sport of hunting he is required to procure a hunting permit, the price of which is only seventy-five cents in Prussia, but in some German States as high as $7. This hunting permit, however, does not carry with it for the holder any more right than the privilege of carrying a gun, at least not for the majority of the gunners. Only those who own more than 300 acres of land in one tract are permitted to practice hunting on their own grounds without any further restriction and permission than the hunting permit. The great bulk of hunters must lease a hunting district—*Jagd Revier*—from some village or town. Such a district is generally from 1,000 to 6,000 acres in size, and the price paid for it runs from $50 to $1,000, the average price being about $150 annually.

The principal game of most of the private hunting grounds consists of hares, partridges and ducks, although many of them also have a small number of red deer and doe. The average battue of game killed annually on a hunting ground, for which say $125 are paid, is about 100 to 150 hares, 100 to 250 partridges, a small number of ducks and snipe and from 6 to 10 roe and a few red deer. Partridges can be shot from the end of August to November, hares from Sept. 15 to Jan. 1, ducks from July 1 to March 1, male roe from May 1 to Feb. 28, female roe from Oct. 15 to Dec. 15, and male red deer from July 1 to Jan. 1, and female red deer the same as female roe; rabbits can be hunted the entire year.

Every government forester is a game warden and also every police officer. A roe or female red deer killed out of season means for the offender a fine of $10 to $150 or imprisonment and frequently in additon the withdrawal of the hunting permit for a number of years.

The only persons in Germany who ignore the game laws are those whose passion for hunting is greater than their respect for laws in general—the game sneakers. The game sneakers can always be found where bigger game is plenty. They are, as a rule, a desperate class of men, at all times prepared, if they can, "to get the drop" on the officer when detected trespassing equipped for hunting on foreign hunting grounds. Quite a number of government and private foresters are killed every season by game sneakers. Imprisonment seldom reforms a professional game sneaker, as a rule it makes him only more careful in his illegitimate pursuits. A person once convicted for game sneaking will not for a long time enjoy the privilege of carrying a hunting permit. In fact, hunting permits are withheld from every person of ill-repute. Only persons of good morals and acquainted with the handling of a gun can obtain without difficulty a hunting permit, which also serves as a permit for carrying deadly weapons. Persons under age are in no case permitted to carry a gun.

The most popular gauge for guns in this country is the 16, a 10-gauge is a curiosity and few use the 12-gauge. Of late the 3-barrel gun, or, as it is called in this country, the triplet, is quite the fashion. Such a gun is indeed well adapted for this part of the world, where, while searching for partridges one may suddenly approach a roe buck.

Most of the hunters here as elsewhere are business men. They can not afford to enjoy their sport on week days, and thus spend their Sundays mostly on their hunting grounds. The laws here do not prohibit hunting on the Sabbath, except that during church hours—from 9 to 11 A. M.—the reports of guns must cease. Owing to this fact this class of hunters are called Sunday hunters—*Sonntags Jäger*—a term which implies imperfection or a stage of amateurism. Berlin alone counts thousands of this class of hunters within its walls.

The German railroads offer many accommodations to hunters. During the hunting season proper—September to January—every train has its compartment for hunters, where dogs are permittted to ride with their masters, and from which ordinary passengers are excluded. Of late the railroads sell dog return tickets, thus enabling hunters to jump on the train homeward bound immediately before its departure. The fares for dogs are about one-third of the regular passenger rates. Only hunting dogs are allowed to ride in passenger cars, and only for these dogs are return tickets issued.

In my next I shall, with your permission, dwell upon the different ways of hunting in this part of the world, which show a great difference from the American hunting style. ARNIM TENNER.

BERLIN, S., June 7, 1887.

ADJUSTABLE GUN STOCKS.—Solomon City, Kas., July 7. Have I not read in FOREST AND STREAM about a patent adjustable gun stock, or did I dream of it or see it in my travels abroad? I have not seen it in this country, nor do I know of any in use. Have they ever been introduced to the American knights of the trigger? Would not such pay every shooter to have say one that could be adjusted from a 2in. drop to 4½in.? Then a gun with such a stock would fit any sportsman. I think the thing should be brought into use by some of our leading gunmakers. I would like to hear from some of the older sportsmen on this subject, and especially some of the manufacturers of guns, both the trap-shooter and those who take vacation in game seasons are the principals interested in it.—GUN STOCK.

COLORADO.—Hot Sulphur Springs, June 20.—The season is unusually dry and warm. Grouse made a good hatch and are plentiful. A man driving in horses the other day saw a herd of seven deer within three-quarters of a mile of this place. I have not heard of a single violation of law in the killing of deer or other large game this season. Old hunters and fishermen who have formerly followed hunting for market, so far as I have talked with them all commend the more stringent protection now in force.

AROOSTOOK COUNTY, Me., June 30.—Deer and caribou are plentiful, and I think on the increase. Grouse wintered well and the dry weather this spring is favorable for the young. Bears are not plenty as common. No reports of catches have come to hand.—SPRING POLE.

BOUNTIFUL CLACKAMAS.—Since last September in Clackamas county, Oregon, there have been captured and killed 184 wolves and coyotes, 495 wildcats, 18 cougars and panthers, 27 bears, and upon which bounty has been paid.

HUNTING RIFLES.

Editor Forest and Stream:

Having read with interest the numerous articles on this subject in your columns, and being a user of the weapon for hunting game both large and small, I will venture to give my ideas of what the average hunter in this section wants. The rifles in use by hunters here are most of them of small caliber and light powder charge, viz., .38-40, .44-40, Winchester and Colt, very good and effective at short range, but with too much curve for the varying distances which we have to shoot over, one shot being at perhaps 60yds. and the next across a bay or pond at from 150 to 300yds. Now, we want a gun that we can shoot up to 250yds. without change of sights and shoot close enough to hit deer, caribou and all large game. We want more powder charge and a lighter ball, either express or solid, as light a gun as consistent with the increased recoil, and a patched bullet so constructed that the cartridge can be carried in a belt without injury to the patch. When we can get such a gun the days of the repeater will be over with me. We ought to have a rifle that we are not obliged to hold over or under the game at the distances before mentioned. The secret of the great accuracy of the old muzzleloader lies in a nutshell—heavy powder charge and light bullet. But who wants to go back to the old muzzleloader again?

I have been using a .45-60 Winchester with very good success, but would like a flatter trajectory than it gives, for it is difficult to judge distances correctly in the woods here, and a deer will not always wait for you to measure the distance and elevate your sight; and if you hold over or under it is guess work. If you guess right, good, if wrong you are out your game. It may be slightly hit, to wander away to die a lingering death and do no one any good; better far to have made a clean miss. I hope the rifle makers will turn their attention more toward the hunting rifle, and bring out a gun that will fill the wants of the hunters of northern Maine. With such a weapon and a set of Lyman sights a man may be reasonably sure of getting his meat.

The Lyman sights are the best I have ever used, and I have had experience with most all ordinary kinds. I have no hesitation in recommending them for quick work and in uncertain light.

SMYRNA, Me. SPRING POLE.

Editor Forest and Stream:

The article in FOREST AND STREAM of June 30 relating to rifles and bullets, like some previous articles, contained many useful hints to hunters of large game. But for those following the chase in the Eastern States quite a percentage will be found that would object to the weight of a Sharps rifle weighing 10 or 11lbs., preferring a gun that ranged in weight from 8 to 8½lbs., and at the same time carried an effective charge of powder and lead. But as nearly all of our breechloading guns—unless of very small caliber—exceed this weight as they come from the factory, ordered otherwise or not, how are we to overcome this defect? Last year I ordered a .38-45-190 Bullard magazine breechloading rifle, 26in. barrel, and weighing 8lbs. 9oz., cut on a uniform twist, one turn in 20in. It answered well enough for killing squirrels, but after trial last October upon the leaves for deer, it proved a failure, so much so that I decided to take it to a gunsmith and have it altered over into a .40-60-190 and cut on a twist of one turn in 10in. This change could be made by taking a .40-70 Ballard shell and cutting it down to the required length to hold the powder and lead, and still work in the magazine and carrier block. It has been doubted by some as intimated in previous numbers of this journal, whether any good results would come out of the tinkering of any breechloader after it came from the factory. That would depend entirely upon how good the gun was in the outset, and what change could be and was made afterward. For instance, as my gun came from the shop I was shooting 4 2-10grs. of lead to 1gr. of powder. As altered I use 3.16grs. of lead to 1gr. of powder. This gives me a much flatter trajectory, a ball larger in size and thrown with more speed and twist, cutting a much larger hole for blood to flow and giving the animal more of a shock. The recoil is slight even with shells loaded with Curtis & Harvey No. 6, and the penetration—with balls tempered one to twenty—is good for any game east of the plains. CAP LOCK.

ON THE MACEDONY.

I GOT a note one morning from an old fisherman and friend of mine: "Captain, come over into Macedonia and help us," and how I went and how I helped him this story will set forth.

Among the famous streams of Litchfield county, Connecticut, Macedony stands first and foremost. How many fishermen have waded up and down it, how many tons of trout its waters have yielded, how many nets and corn baskets have been lugged through its sparkling waters, no one can remember. Go view it now and see the ravages of the bushwhacker and charcoal man. Do you mean seriously to say, Captain, that this is a trout stream? Certes I do; and what a famous one it must have been to withstand so bravely the merciless slaughter of its occupants. Preserve it, guard it well, put on the law, and see that the law be carried out, and old Macedony is like the old copper kettle, "the harder 'tis rubbed the brighter 'twill shine." Not many streams, if any, have yielded me more fun and positive enjoyment, and a sense of duty and pleasure to a dear old friend prompts me to give some account of it. It is a fine, clear, sparkling stream, fed by living waters and running into the Housatonic. Near the pretty village of Kent, northward up in the Schagitoke hills, west of the river several miles up, it heads and so comes tumbling and leaping down to its mouth by the river. I am going to try once more my "old bamboo" down through the meadows at the lower end of the stream, for I believe patience there may yet do wonders.

The stream is endeared to me by fond recollection, for I there made a convert of a fly man, and convinced him so thoroughly of the "error of his ways" as to win his lasting friendship. It came about thus: I had met the ingenious youth on "Old Macedony" one pleasant summer day when I was loitering down stream, and, as he was rigged out in gorgeous array and with an elegant rod "and fixin's," had had "a multiplicity of talk" with him and had accepted his invitation to join him in a down-stream fish. "What luck, sir?" "None at all. These fish do not seem to be educated up to the fly." "No," I replied, pulling out a fine fish under his very nose with an ignoble worm. "You are right, sir. Try some of my worms." What an indignant look he gave me; with what well-bred contempt did he refuse my well-meant offer! Fancy giving a man who smokes Henry Clays a penny cigar and you have my friend's expression to a dot. Away went his fly, first under a bush, then on top, then into a tree, then off altogether, and I didn't blame the poor insect for flying away to a land of rest; he needed it sorely. I pursued "the even tenor of my way," and brought out fish after fish under the eye of my indignant friend, until at last, taking pity on his forlorn condition, I said to him with a tone that was childlike and bland, "Youth from New York, have you come up here to fish or to merely go through the motions? Are you going to enlighten the 'Nutmeggers' as to how to fish this stream?" "What shall I do to escape going home troutless? Show me the way." And I did; and that young fellow followed my advice and took many goodly fish, and if he should mayhap read

this, let him laugh heartily at that pleasant June morning and the lesson I taught him, and go and do likewise.

On another sunny day I was on the stream with a man who wanted to borrow some flies from me. I always "go heeled" and my red-ibis was at his disposal. We had an amusing race down stream where, the stream being wider and broader, my friend had some sort of a chance. So we struck in and waded down, he one side of the stream and I the other, and we had no end of fun. Away would go the fly, down soft as a snowflake on the ripple; if the trout would rise, well and good, and if not I would try my hand; and so *vice versa;* sometimes one would succeed, sometimes the other, sometimes both. We kept this up, until after going down stream some distance, we came to a fence running right across the brook with alders on either side. My friend made a dexterous cast just over the rails, when in an instant he felt a strike and called out, "Captain, I have a whale." What a commotion—flutter, splash and dash and crash. Hold him, play him, steady; give him the butt. Snap! away goes the tip, short off. Hold on to your rod. Over the fence dashes Charley, and lo and behold there was a duck, a tame one. It had grabbed his red-ibis, gobbled it up and was raising merry Cain with rod and line. He seized that unfortunate fowl by one leg, and with vigorous language and a rapid twirl put it out of that creature's power forever to seize any more flies. That finished our amicable contest. Not long after this, shamed into it, in fact, the law was put on "Old Macedony," and the famous stream had, or was supposed to have, a rest.

It was at the expiration of the time, or very nearly so, that I got word to "come over into Macedony and help us." Jack drove over to see me after writing, and I said: "Help you to what? How! When! Where! The law is on the stream; we shall be caught and lugged off ignominiously to jail, every mother's son of us. Wait a while." Under a wide-spreading willow, in sight of the Housatonic, close by a rippling, bubbling trout stream, on the grass together, "Jack said: "Come, now, don't go off half cocked; listen, and I will a tale unfold. Let us reason together. Did you see in the paper the other day that the editor of a certain Bridgeport paper had a very fine mess of trout sent him?" "I did see that." "Friend of my early days, do you know Pipe Chamberlain caught those fish?" I did not. "Well," said Jack, "I happen to know from information received that that is the truth, and those fish were caught in Macedony." Pipe was the sheriff of the county and as well-known as any man in the Nutmeg State; a big-hearted, broad-shouldered fellow, as full of fun as an egg is of meat, and a great chum of mine. "The old scaramouch; why, Jack, I tried to pump him the other day and he was as dumb as an oyster; innocence personified. Didn't know a trout from a shiner, hadn't been fishing he couldn't tell when. I made up my mind he was basely deceiving me, and I told him so, and he only laughed the louder." "Well, Captain, I have got posted up, and you are going to emigrate from here very soon; and if you want a little sport say the word and we will go." And go we did.

Though there was a law on the stream, there was more than this; there was a law for outsiders, and a law unto themselves for the dwellers close by; when they wanted trout they caught them, but more than one man had been ordered off on short notice. I have had in my mind's eye an unhappy "Johnny Crapeaud" who chanced my way to fish, got up as only the native of Gaul can get himself up, "Solomon in all his glory" nowhere, who was captured and led ignominiously into camp by "Old Burt," as he explained to me, for pure fun, with "sacreés" and shrugs innumerable and fearful rollings of the letter r, and lamentations. This victim of misplaced confidence was despoiled of his rod, line and fish, and was consoled by being told "he had been let off cheap," and so "with rage in his heart and fire in his eye," he was started due west toward the setting sun; he brought up, mayhap, in Dover or Poughkeepsie, but never again was he seen on "Old Macedony."

Jack had made the startling discovery that the law was up three days before the popular supposition. On this hint of the town clerk he spoke and we acted. So off in the cool of the morning we drove up for Kent. Where can you find a lovelier drive than along the Housatonic? And what a salmon river that would make. Following up the winding river past Cat Rock, by Ten-Mile Run, by Balls Bridge and its falls, we drove on to our destination.

However, as we wanted the whole thing kept quiet, we had sent word to an old hunter to keep his weather eye open, and, as an extra precaution, we had provided ourselves with a bottle filled with the most villainous stuff that could be concocted in Kent: as I knew very well my friend and myself never touched such stuff, and, as he handled it so tenderly, I made up my mind Jack knew his investment would turn out profitably, a result which showed how level-headed my chum was. We pulled up after an hour's drive at the old hunter's wigwam, put up the horse, and told Burt to come along and see the fun. The patrolman of the stream, who lived near by, was cautiously interviewed, and the bottle containing the finest old rye given him. The look on Jack's face as he handed the old toper this as a present from the Captain would have done credit to Burton. Then, telling the old fellow to keep mum and with very serious doubts in my mind as to whether we should ever see him again, we set out for a walk up the stream. Burt whistled for Dorcas, one of Sam Scranton's famous breed of dogs, and took his gun and we our tackle, and so we started.

After going up about a mile we struck in and went to work. The most of these mountain streams come down through the ravines and hills, dashing and splashing over rocks and waterfalls, their banks fringed with alders, so that fly-fishing is one of the lost arts here. It's no joke to work your way through. Patience becomes a great virtue here. I set to work, and I own up for once I struck oil. Such fishing I never had in Litchfield county, nor ever expect to have again. The stream was full of fine fish, the day warm and lowery, with a light south wind; just the day for fishing. Burt had double fun; he could watch us taking them out as fast as we could throw in, and every now and then up would go a woodcock which he was too good a sportsman to wish to kill. "Plenty of time for them later, Captain; wait till the fall weather comes; that's the time to shoot these birds." And he was right.

Once we heard the noise of the wheels from a rapidly approaching wagon. Charge! Down goes the well trained setter, down goes Burt and then the Captain and Jack followed suit: three of us hugged dear old mother earth, but my friend was wading in the stream and could not get ashore in time, and—trump of a boy that he was—down he went in the water. Flat he laid himself on his neck with just the tip end of his nose and mouth out, not a sound nor a motion, while not more than 20ft. away on the high road old Tom Stone, who made it his business to patrol the road, was peering through the bushes and evidently looking out for trespassers. As for me the sight of the heroic exertions my companion was making in the cause of fishing prompted me to come to his rescue and I was on the point of betraying my hiding place, when Burt walked out into full view with his dog and gun. "Halloo, Tom!" "How are you, old man? 'Pears to me I heard some one fishing here." "Oh, no, I guess not. You heard me. I was just giving my dog a little exercise." "Seen any one 'round here, Burt?" "No." So the old fellow finally drove off. Talk of Venus rising from the sea, you should have seen Jack. "Captain, I'm most drowned and frozen stiff." We started him off on a run and kept him moving, and in the course of fifteen minutes he was himself again.

Then the fun grew fast and furious. Every time we threw our lines in the trout would go for the bait and in half an hour's fishing we had all we wanted. Jack and myself both believed in moderation, we came for a fish and we got what we came for; we came for rest and recreation, and the lovely scenery and the sunshine, and blue sky and breath of the balmy posies. All of this was a positive delight to us, we could have caught pounds and pounds of big trout. We caught between us, that memorable day in about 3 hours' fishing, some 54 trout, many of them fine fish that would "go all the way across the basket." Then we walked back to Burt's house, had a good lunch, a good drink of cider, found the old man of whom we spoke still alive, which was an inexpressible relief to me, and started for home.

Half way home we met the irrepressible Pipe. "Boys, you have been fishing?" "We have." "Fishing in the Macedony?" "Oh no, Sheriff, the law is not off till the 14th and this is only the 13th." "I know better; I know when the time's up." "Old man," I said to him, sternly, "didn't you fish this stream before? Own up!" "Well, once, and only once." "And you sent your unlawful gains down to Bridgeport." "I did, Captain." "Very well, sir, the next time we pass your house you shall give us a glass of your best cider, and we will give you forgiveness." "I will do so! good-bye, good-bye."

We never saw Pipe again. He sleeps his last sleep close by the streams he loved to fish. Since then I have once revisited Macedony, and once partially fished down its waters, but it was not as of old. I did not get 54 nor 40, the last time. A few fish but many remembrances.

CAPT. CLAYTON.

ETHICS AND EXPERIENCE.

HOT SULPHUR SPRINGS, Colorado, June 26, 1887.—I am not a late convert, redeemed at last when in "the sere and yellow leaf" like "Pisco" and "C. D. C.," from the artificial-fly-or-nothing to worms "and sich" for bait. It must be they never fished-for-meat-or-went-to-sleep-hungry in their earlier years. Ravenous hunger would have impelled them to conceal the too apparently deceptive combination of tinsel and feathers under a real live grasshopper or a wriggling worm long, long ago, if they had been dependent solely upon the result of their angling for something to eat. For me, when I go a-fishing I go for fish. True, "it is not all of fishing to fish." There are a thousand other pleasures attendant. The freedom from care, the beauties of nature in myriad forms, singing birds, frisky, chattering squirrels, rippling waters, heavenly breezes, rustling leaves, buzzing in—but why get over the edge.

As I said before I go for fish. Having tramped afoot or straddled a bronco over four or five miles to the fishing water, only to discover that the "speckled beauties" do not care for a glittering, skittering fraud to-day, but want something more substantial, I try to oblige them. I do not reel up my line, put away my flies and retrace my profitless journey, now seeming eight or ten miles of sage plain, rocky hillside or hot, dusty road, empty-handed and only to be laughed at. That is, I don't do these particular things if I can find minnows, grasshoppers, dobsons or something else that the trout want. Thirty-five years ago, when I first caught trout in the streams of the "Great American Desert," our faith and hope and main reliance, at times, were centered and concentrated in the Egyptian locust and the Mormon cricket. With those we could get trout. There are conditions of the water when the fly is useless. There are days, and hours of other days, when fish will not touch the fly. Why, then, should sportsmen insist and persist that the fly is the only lure that may be used? Some insist that anything else is unmanly, a deception upon the innocent, unsuspecting fish. Out upon such balderdash. What more outrageous, barefaced deception is there than the artificial trout fly itself? It makes no pretense to being anything else. If the fish is taken at all it is by a deception, and it is a fatal deception to the victim. What matters to it whether that deception is one concealed by substance or if it is a fraud in fact as well as in its concealment? Is the latter any more manly? Does it give the fish any more chance for its life? Hardly so much, as results show. In point of fact the artificial lure is more fatal in effect than a natural one. This kind of Pharisaical preaching is near akin to that other which says that no bird should be shot except upon the wing. What nonsense. Who makes the big bag of birds but the wing shot? Who takes the big creel of trout but the fly-rodsman? Fortunately the latter cannot do it every day, nor in all waters, if he sticks to his creed. It is these extra skillful sportsmen who exterminate game from the land and the same who sneeringly designate all others who lack their peculiar skill as "pot-hunters." A "pot-hunter" may be, and he generally is, a very expert with the double cylinders at birds on the wing, requiring a pair of retrievers to gather them in and an assistant to load and hand up his guns. A "trout-hog" may handle a five or six ounce split bamboo never so deftly and drop his gray-miller and black-ant upon the water gently as snow flakes, luring the fingerling trout so skillfully by a counterfeit and landing them so quickly by his skill that they do not have to be removed from the hook, but drop off themselves on the bank of the brook. They all count, though it may require a magnifying glass to see them. I heard one of these gentry boast that he once caught from a stream that he could step across at any point and dropped them from his fly-hook on the other bank without touching one of them with his hands, over four hundred little trout. Yet we are told that men who can do these things are the only genuine, simon-pure, original-Jacobs sportsmen, the only ones who give the birds or the fish a "living chance." Would it not be more just to designate as sportsmen those who kill what they shoot and land what they hook, ending the life of either in a speedy and humane way and who know enough to quit killing when they have acquired a fair and reasonable supply? But this may all be considered as scolding and we had better drop the subject.

I came over here the first of the month to enjoy a little fishing in June. Our laws now permit fishing with rod and line, but not otherwise, all the year. They also prohibit fishing for market, or the sale of fish caught from the public streams. Formerly fishing was forbidden from Jan. 1 to July 1. Usually it is almost impossible to catch trout earlier than July 1, but this year is exceptional, the seasons being nearly a month earlier than usual. Well, when I came over from Denver, the streams were yet high and roily, with a strong flavor of snow in the water, and more or less grass land and willow land covered. However, the water was falling, and in the larger streams a few fish could be taken, but only with minnows. The fly was entirely useless. We have no angle worms in Colorado, except in Denver, where they were transplanted about twenty years ago, and have since spread all over the city. I never caught a trout with an angle worm, but I don't call another man a horse thief because he did. In the absence of other bait, many use grubs or muck worms and wood worms, but I have never resorted to either.

On the 10th of June the trout flies, May flies, willow flies, helgramites or dobsons, appeared in the winged forms in the lower end of the park, and on the 11th, at this place and above, but they extended, as I am told, up to only about 8,000ft. above sea level. They were very plentiful and gorgeous in wings and coloring. With these for bait the fishing became at once first-rate. The flies lasted five days; that is, they were not plentiful in the lower end of the park after the 15th, nor in the upper part after the 16th. Occasional stragglers can since be found, but not enough to rely upon. Immediately following their disappearance the trout began taking the artificial fly, but were choice in their selection. A little ashen-gray miller next appeared along the streams, hovering over the water, and when the wind blew, thickly sprinkled its surface. The fish feed ravenously upon these, but they are not very filling and a reasonable sportsman can easily catch all the trout he wants with any modest appearing neutral tinted fly, even where the millers are most plentiful. The fish are vigorous and fat, and average large in size for these streams, the ordinary catch ranging from 6 to 20oz., with a majority of them from 10 to 14oz. I have hooked but three fish to throw back into the stream—under 7in. My fishing so far has been confined to Grand River, two miles up on both sides, and four miles down on one side. More fish can be taken in the smaller streams, but this is good enough.

There is one fact in connection with fishing in the Rocky Mountain country that seems never to be taken into account. I allude to the almost total exemption from annoyance by insects. A large share of the details for outfitting a party for a fishing excursion in most countries is devoted to the methods and appliances for circumventing insect pests, and for neutralizing the effect of their bites and stings. Innumerable lotions, emulsions and ointments are provided. Elaborate nets and protectors are carried along. And they appear, from all accounts, to be fully necessary. The daily journal in the woods is usually about half made up of particulars of fights with the big fish that finally got away in daytime, and the other half of how they doped themselves and each other with coal-tar and turpentine and other condiments, and smudged the mosquitoes, black flies, punkies, etc., at night. The party is generally flanked right and left and whipped all along the line, on land and water, day and night. I reach this conclusion from evidence of their historians who publish their testimony in FOREST AND STREAM. Have had no experience. Now in this country we have no such unpleasant experiences. There are no black flies, punkies, sand flies or buffalo gnats. There is a short mosquito season, seldom lasting more than two or three weeks, in either the latter part of June and the first part of July, or else wholly in the earlier part of July, during which that insect may be found somewhat annoying at certain hours of the day or in certain places. But they always disappear when the sun goes down. None are seen, felt or heard during the night. Along many of the streams there are no mosquitoes at all at any time. It is only where there is shelter of willows, or tall grass, or sloughs of dead water, that they are annoying. Throughout the latter part of the summer and all of the autumn there are no insect pests at all. W. N. B.

BETTER FISHING IN THE UPPER HUDSON.—Mr. A. N. Cheney thinks the Upper Hudson is a far better stream for fish than it was a few years ago. The paper mills no longer use such quantities of bleaching material as formerly, and consequently a smaller quantity of lime passes into the river. New processes in paper making have superseded the old methods, which polluted the water to a great extent. His attention was called to this fact, that lately some black bass have been taken at the foot of Glens Falls, opposite the great paper mill there, which is said to be the largest in the world. It was a common thing to take them there some years ago, but of late years they had abandoned the place. The superintendent of this mill says that soda ash is no longer used in bleaching, and that but a small quantity of lime is required in their processes, and that what is true of his mill is also true of all paper mills on the river.

SALMON IN THE HUDSON.—State Game Protector Mathew Kennedy, of Hudson, furnishes the following list of salmon taken in the Hudson River this season. One fish of 8lbs. at Kingston Point, by John Mahoney; one of 18lbs. at Port Ewing, by Al. Munson; one of 14½lbs. at Tivoli, by Christopher Coon & Co., and one by himself at Hudson of 17lbs. We have recorded the latter fish before, and it was taken before the passage of the law forbidding their capture in nets, but we have not the dates of the other captures. They were probably taken during the shad season, and before the new law went into effect.

SALMON AND TROUT.

SALMON fishing in New Brunswick waters has not yet been much of a success this year, that is if we are to judge by the reports. Several parties from Boston have tried them, but even where costly leases are presumed to protect the fishing till the lessee arrives, there are no fish or very few fish. Two gentlemen from this city—they would not want their names mentioned—took up the line of march, or rather took the line of railroad, to a salmon preserve the other day. They were supplied with all that modern invention could provide for a successful trip, but they have returned empty-handed. They are not pleased with New Brunswick salmon waters this year. They have both had great luck on former occasions, but now they declare that there is a scarcity of fish. Black flies! Don't mention them in the hearing of either of these two sportsmen for a year to come, no more than you would mention one of the occasions of great suffering that may have been a part of their lives. They were "perfectly dreadful!" The outfit of the sportsmen contained some of the best fly preventives known to the woods fisherman of the day, but all to no purpose, or at least to no purpose after the compound had been exposed to the rays of the sun or the scorching of the parched atmosphere for a few moments. Then the flies were ready to live upon what the inventor druggist had designed for their destruction. When fresh and pungent the swarms of blood-thirsty insects were turned back for a moment, but soon they worked through the wall of aroma, and once the most venturesome of the throng had drawn blood the rest came on like a pack of hungry wolves. These gentlemen say that the only respectable feature about the black fly is that "he retires at nightfall, while his brother in deviltry, the mosquito, carouses all night." The accounts of salmon fishing in the Penobscot, at Bangor, are still good. The number of smaller fish being taken is large.

The brook stripper is abroad. Accounts of 200 and even up to 500 to the catch are far too common. When will the day of such foolish and unmanly slaughter, such wicked waste of what might be reasonable sport if allowed to mature, be done? The cheap writer in the country papers, the country editor who hangs out his porringer for whatever the lover of cheap notoriety may drop in; both are to blame in a measure for this deplorable destruction of fingerling trout. They chronicle the big catch of little fish, but carefully leave out the little part of the item. They make the catcher out a brave and an expert with rod and line, when rather he ought to be ashamed of his deed. But the scribbler usually eats the fish—or a part of them—and what can be expected of a man of little caliber with a lot of baby trout in his stomach? But the spirit of protection is on the move, and legislation in Maine will in due time be asked to stay this destruction of nursery stock. It begins to be understood that these brooks and streams are the nurseries where the little trout seek safety from the larger fish till they are better grown, and that to take a fingerling is to kill what would be a great fish, but perhaps in deeper waters, if left alone. Those who have given the subject the most study are on record as believing that to protect the smaller fish in their growing places is one of the true secrets of successful fish propagation. Again, the landlords and guides in some of the trouting sections of the northern New England States are becoming greatly dissatisfied with this brook stripping, especially if it be done by those they term "the natives." They mean the inhabitants of their own and adjoining towns; and it is by such fishermen that the worst of the brook stripping is done. They alone have the patience—the hardihood—to travel through brier and tangle and up the bed of the rocky stream for miles, simply for the sake of the little trout. The city sportsman—the vacationist—is apt to tire on the first mile, and the flies are too much for him by the end of the second. These "natives" leave the landlord no money. Said one of them to me the other day, "I am sick of this brook stripping by the men and boys of —— and the other tows below here. They come with their own teams driving in over our road, which it has cost us so much labor and money to build. They bring all that they have while in the woods, both for themselves and their horses, and the result is that we never get a dollar out of them. They camp on the stream and they stay till they have taken every trout. They catch them by every means that they know of, be it fair or foul. They will even stoop to dynamite cartridges in a pool where there are a few trout left, too shy to take the hook. They strip the brook till there is nothing left for the reasonable sportsman who comes later and pays us for board and teams, and is satisfied with a few large trout taken on the fly. I am sick of such work. We need a law that shall limit the number of trout that a man can take to 25 or 50. Then the fishermen will try for the larger ones, and will put back the smaller ones. The next time you write for the FOREST AND STREAM write something that will make a man ashamed of taking hundreds of little brook trout, just for the name of it."

The following item is from a daily paper of yesterday:

"Two hundred trout in two hours is the record of an Elm House boarder on a late trip to a brook in the woods just west of Madrid. They were small, but toothsome, and fairly offset Chicadee's two suckers a day which was mentioned as an index of our piscatorial attractions. Since then a string of pickerel has come to our frying-pan, and they were even sweeter than the little trout."

This is from an occasional correspondent, and it is evident from the reading of the item what was uppermost on the mind of the writer. Truly toothsomeness and the fryingpan are mighty elements. The pen! the sword! Both bow to the frying-pan. But "piscatorial attractions" even can soon be dissolved in a frying-pan.

The latest reports from the Maine trout regions speak of another rise in the waters, and consequently good fishing. It appears that recent rains have raised the streams in eastern Maine, as well as some of the lakes, and that this has brought good fishing. It is remarked by nearly every sportsman who has lately returned, that the season on trout has held out most remarkably. This is also true of salmon in the Penobscot. There are also reports of big catches of trout in locations where the sportsmen have almost ceased to frequent, for the reason that the idea had got out that the streams were exhausted. The fishing in some of the ponds in Somerset county, more notably Pleasant Ridge Ponds and Carrying Place Pond, has been better this year than for a long time. It is thought that the higher water has had something to do with the better sport. There has been good fishing at the outlet of Moosehead Lake, and for a short distance down the Kennebec. The Moose River region is being more thoroughly visited by sportsmen than usual this year, and there are reports of some fine catches of trout at Moxie, both at the falls and on the stream. These catches of trout are many of them larger than they should be. They come within the scope of the brook stripping, which has come to be such a shame in many sections in Maine. The Rangeley region is now pretty thoroughly populated with summer tourists and vacationists, and it is the grand object of some of the local and county papers in that part of the State to keep up the idea that there is good fishing even in July and August, or when the mercury is running from 90 to 100 in the shade. Well, let the tourists and vacationists have all the fishing there is when the weather is as hot as it was last week, they will the sooner tire of such things, and the field will be all the more clear for the real sportsman, who is willing to go to the lake and stream at the time when the fish do bite, instead of when it is fashionable to take a vacation.

There are reports of several catches of landlocked salmon with the fly this season. It has always been a question with sportsmen, as they all well know, as to whether the landlocked salmon was ever to be much of a success as a fish to rise to the fly. Fish Commissioner Henry O. Stanley has given the subject a good deal of attention, being an excellent fly-fisherman himself, and also tying with his own hands some of the best trout and salmon flies in use. He has caught landlocked salmon on the fly in Weld Pond and other waters, but at the same time he has had but little success in that method of fishing in the Sebago waters, where the landlocked salmon is found naturally—that is, where there is no record of the sea salmon having been put in, from which the original landlocked salmon sprung. But now comes Mr. R. C. Stanley with the report that he took six landlocked salmon in Sebec Lake last week, all with the fly. The united weight of these fish was 27lbs. Mr. Stanley says that he had nearly all of his success with the brown-hackle.

SPECIAL.

ANGLING LITERATURE OF AMERICA.—II.

IN 1850 the indefatigable Storer, of Massachusetts, wrote up the "Fishes of Nova Scotia and Labrador." Dr. Gilpin, Matthew Jones, of Halifax, N. S., and Rev. M. Harvey, of Newfoundland, were also industrious pamphleteers. In 1852 Girard published his "Fresh Water Fishes of North America." In 1855 the ichthyology of the Northwest was fairly covered by Dr. Suckley, U. S. A., in the "Pacific Railroad Reports." Moses Parley printed his "Fisheries of New Brunswick" in 1862. In the same year Holbrook's ambitious work on the "Fishes of South Carolina" appeared—a large quarto, with colored portraits of the fishes described. The civil war broke out before the work was finished, and the subsequent death of the author precluded its continuance. In 1866 Lord's "Naturalist in British Columbia" was published. Other books, of more or less interest to the angler, appeared from time to time, but none of special value. Nothing like a comprehensive manual was published until 1864, when Roosevelt's "Game Fish of the North" came out. That was during the year of the first lease of a Canadian salmon river, the Nepissiguit, and the book made special reference to that famous stream in its chapter on salmon fishing, itself a new revelation to the fraternity of fishermen. How to fish for salmon, and the implements to be used, and a description of the sport, had never been presented before. The volume was a godsend to anglers, for it included the technology of angling, fly-fishing, tackle-making, entomology, fishculture, camping out, etc. It described new devices, new methods and new fields of sport, which had come into use during the sixteen years that had intervened since the enterprising Browne had prepared his "Angler's Guide." Moreover, it introduced new species of fishes, not previously regarded for sport, and identified others which had been in doubt. The whole subject was in chaos at that time, scientifically considered. Experts had not even quite determined whether a brook trout and a samlet (parr) were the same, or that brook trout were not, in fact, immature salmon. The world has moved since then.

In 1865, the year following, Roosevelt put out a supplementary book, entitled "Superior Fishing," relating chiefly to the fishes of the Great Lakes, and touching the lately mooted subject of fish protection. The two books together covered the common brook trout, the sea trout, the salmon, landlocked salmon, the coregoni group, the common carp, the mascalonge, pickerel, and great northern pike (now known as the Mississippi mascalonge, in distinction from the mascalonge of the St. Lawrence system), the two then scarcely recognized varieties of black bass, the rock bass, yellow perch, pike perch or wall-eye, the great lake trout (namaycush), lake trout, and siscowet, all of them fresh-water fish; and the bluefish, striped bass, Spanish mackerel, and snapping mackerel (which has since been identified as a young bluefish), all salt-water fish—twenty-one varieties all told. The same year "Uncle" Thad Norris produced his "American Angler's Book," a magnificent illustrated octavo of 700 pages (distinctively American, and no mistaking its type), of the same general character and scope as Mr. Roosevelt's dual publication, and including descriptions of some fifty varieties of fishes, of which sixteen were salt-water forms; but with the disadvantage of being not always accurate. The author was somewhat "mixed" in his ichthyology, and liable to describe without having seen. His carelessness in these respects drew upon himself the gentle reprehension of certain professional Canadians, which he had the good sense to receive graciously, and print in an appendix to later editions. For the most part, however, the book can be relied on, and is serviceable. In 1869, Genio C. Scott, an expert in trout and striped bass fishing, printed a copiously illustrated octavo volume, entitled "Fishing in American Waters," which is open to the same objections as Norris's book, only more so. He devoted large space to salt-water fish, with many of which he was well acquainted, and would have made a first-class book had he not prospected beyond his depth. By this time, too, science had made considerable progress, so that his errors became the more glaring. The praiseworthy quality about Roosevelt is that he seldom makes mistakes.

The same year Mr. Allerton described the monster trout of Maine, which have been caught of 18lbs. weight, in a very creditable book with the rather general title of "Brook Trout Fishing." There were other readable books of the generic type, some of them having high literary merit (Dawson's "Pleasures of Angling" being one of them, and Dr. Updegraff's "Bodinco" another), but whose specific value consisted in the acquaintance they made with new resorts, such as the Adirondacks (Headley, 1856), the White Mountains (Prime, 1867), the Delaware Waters (Krider, 1853) the Blue Ridge of Virginia (Strother, 1856), the Magog District of Canada (1867), the Upper Mississippi (Oliver Gibbs, 1869), and Carolina Sports (Elliott). Bertram's "Harvest of the Sea" (1866) was valuable to naturalists, containing much new information about Florida fishes. By the close of the decade fishculture attracted increased attention, and we therefore note sundry books on that subject, to wit: "Artificial Fish Breeding," by Fry (1866); "Fish Culture for Shad, Salmon, etc." (1868); "Directions for Raising Trout" (Stone, 1868), "Domesticated Trout" (1872), by the same author, and "Trout Culture," by Slack (1872). Perhaps a full bibliography of American books to the date last named will assist the collector and interest the reader, in spite of the partial recapitulation, and I therefore venture to interpolate it here as a sort of relay house on our historical tour. I claim it as the most perfect list yet printed:

BIBLIOGRAPHY OF AMERICAN ANGLING LITERATURE.

Rafinesque—Ohio River and tributaries	1820
Fishes of Ohio, Kirtland	1828
Memoirs of Schuylkill Fishing Club from 1732 to 1820	1830
Observations on Angling, Smith	1833
Massachusetts Fishes, Hitchcock	1835
Rambles in North America, Latiobe	1835
Ichthyology of Massachusetts, Storer	1839
Embryology of the Salmon, Agassiz	1842
Fishes of New York, De Kay	1842
American Anglers' Guide (English)	1846
Fishes of North America, Storer	1846
Walton—Bethune	1848
Fishculture, Garlick	1848
Adventures of an Angler in Canada; Tour of the Saguenay, Lanman	1848
Owl Creek Cabin Letters, Prime	1848
L'Acadie (London)	1849
Fish and Fishing, Forrester	1849
American Anglers' Guide, J. J. Browne	1849
American Sportsman, Lewis	1850
Fisher's Manual for the United States	1850
Long Lake, Todd	1850
Wild Hook and Line, Forrester	1851
Fresh-Water Fishes of North America, Girard	1852
Old House by the River, Prime	1853
Sporting Anecdotes, Klapp-Krider	1853
Blackwater Chronicle, Strother	1853
Hills, Lakes and Streams, Hammond	1854
Pacific R. R. Reports, Suckley	1855
Wet Days at Edgewood, G. K. Marvel	1855
Virginia Illustrated, Strother	1856
Adirondacks, Headley	1856
Frank Forester's Manual	1857
Hudson Bay, or Every-day Life in the Wilds of North America	1858
St. Lawrence and its Tributaries, Hattle	1859
Carolina Sports, Elliott	1859
Salmon Fishing in Canada, Hamilton	1860
Fisheries of New Brunswick, Perley	1862
Fishes of South Carolina, Holbrook	1862
Game Fish of the North, Roosevelt	1864
Arcadia (Northern New York)	1864
American Angler's Book, Norris	1865
Shooting and Fishing, Revoil	1865
Superior Fishing, Roosevelt	1865
Naturalist in British Columbia, Lord	1866
Artificial Fish Breeding, Fry	1866
Later Years' Fishing, Prime	1867
Magog District	1867
Hints to Anglers, Bell	1868
Random Casts	1868
Adirondacks, Murray	1868
Directions for Raising Trout, Stone	1868
Lake Pepin Fish Chowder, Gibbs	1869
Brook Trout Fishing, Allerton	1869
Fishing in American Waters, Scott	1869
Forest Life in Acadie, Hardy	1869
Chiploquorgan, Dashwood	1871
Trout Culture, Slack	1872
Domesticated Trout, Stone	1873

Hallock's "Fishing Tourist" appeared in 1873. It was chiefly a record of personal observation and travel, which covered all the trout and salmon waters of the continent, including the Pacific coast. It introduced the Michigan grayling, which thenceforward became such a popular game fish that it was well nigh exterminated in the course of the succeeding ten years. In 1877 the same author, being editor of FOREST AND STREAM at the time, printed the "Sportsman's Gazetteer," a volume of 900 pages, which became at once the standard reference book of American sportsmen. It was strictly an encyclopedia. It described and classified some three hundred varieties of salt and fresh-water fishes, giving their local names and synonyms, the first attempt ever made in a popular work. It included also a copious glossary of sporting terms, and a complete directory to all the sporting localities in each State, Territory and Canadian Province, by townships and counties, even to far-off Alaska—a region whose ichthyology has since been treated at length by the same author in "Our New Alaska." The "Sportsman's Gazetteer" made the first classification of Pacific coast fishes, the same having been revised and verified by Professor Gill, whose scientific work plays such important part in advanced ichthyology. In 1878 Professor Jordan issued his "Manual of Vertebrates," a comprehensive and much needed work, fully up to the times. Ferguson's "Fishes of Maryland," and the annual reports of the thirty or more State fish commissioners, formed important accessions to the rapidly accumulating knowledge on fish subjects. Henshall's "Book of the Black Bass" (1881) was a special monography of great value. "Sport with Gun and Rod" (1883) is deserving of mention as an elegant collocation of sketches which combine vivid style with practical information. In the technology of angling four books have appeared during the past three years, which are quite thorough and comprehensive, and altogether indispensable to the practical angler. "Fishing with the Fly" (Orvis-Cheney, 1886) is illustrated with colored lithographs of salmon, bass, and trout flies, in no less than 143 popular and approved patterns. "Fly Rod and Tackle" (Wells, 1885) is a thoroughly American book of instruction, covering the entire field of angling mechanics in a masterful way, with drawings, diagrams, and demonstrations of perfunctory problems. The author is somewhat theoretical, and consequently dogmatic and arbitrary, a disposition which is made especially manifest in his more pretentious but less reliable book "The American Salmon Angler." Old anglers accept as much of it as they can approve and quietly reject the balance. A more thorough paced book, as a horseman might term it, is Keene's "Fishing Tackle" (1886). The author is an Englishman, resident in the United States, but equally at home in both countries, and altogether dispassionate and unprejudiced. He seems to have the happy faculty of a wise discrimination and judicious selection, rejecting whatever is bad in this or the other, and striving to combine, hold fast, and recommend that which is good. "Fly-Fishing and Fly-Making'

(1887), by the same author, is a sensible book, which will suit the anglers of the old school. It indorses tried and approved methods, and is cautious of innovations. One very remarkable production, most creditable to its compiler, and certainly falling within the scope of legitimate angling literature, is the latest catalogue issued by Messrs. Abbey & Imbrie, of New York, which contains some 1,500 illustrations, covering the entire range of angling outfits. Such an inimitable pictorial exposition is most useful in objective instruction and ought to be catalogued in every angling library.—*Charles Hallock, in London Field.*

THE SLIDING LOOP.

Editor Forest and Stream:

I am firmly convinced that a fair trial will prove all that I claim for this arrangement. The short space of time required to change a cast of flies, also the fact that when the gut gets worn at the head of the fly, it can be cut above the worn place and another loop tied in, will greatly recommend it to every fly-fisher. My first attempts at using the sliding loop (or slip noose) were not very successful. It did not work well for the simple reason that the head of the fly was not the proper shape. I did not find it out until some time afterward, but laid the trouble to every cause but the right one; that trouble disposed of the loop has always stood by me in actual use. I have used it in all my fishing with only the end knot; the knot close to loop fastening blocks any tendency to loosen up and should always be used. A fair trial will convince the most stubborn angler of its advantages over the old-time methods.

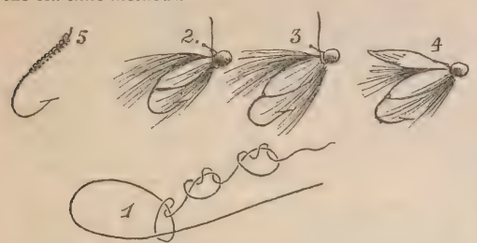

Fig. 1 shows manner of tying the loop and knots. Fig. 2 shows loop in position with knots drawn tight. Place a finger on the fastening and pull upward on the leader; it will then settle into place as in Fig. 3. To unfasten pull on the knotted end. The drawings give the proper shape and size of the head of the fly in proportion to the body. Avoid tying head of fly as in Fig. 4. A fly of this description will answer tolerably well if strong waxed thread is wound over wrapping until large enough to give a good hold. Fig. 5 represents a hook slightly turned up at the end, with waxed thread wound on up to the head, in the usual manner of wrapping, omitting gut in all cases. A hook slightly knobbed, or as in Fig. 5, is the proper thing to use to give this arrangement a fair trial. A straight hook can be made to answer the purpose, provided the angler is careful enough to tie in everything in the strongest possible manner, with four or five half-hitches, is a very good way of finishing off or fastening on.

Where extra strength is required, wind strong waxed thread around hook in the usual manner of wrapping, finishing off opposite the point, leaving about 6in. over. Now tie in two or three pieces separately close up to where you finished off, leaving the same length over; bring them together and wind toward the head, tying in each strand separately and close up in finishing. For bait-fishing wind waxed thread back of projection (see Fig. 5) to form a cushion to keep the gut away from the head of the hook; wax your thread well with shoemaker's wax, and rub some warm wax over the wrapping and fastenings; if the weather is cold do your work near the fire.

Now I leave you to your own devices, or rather mine.

ARTIST.

RAHWAY, N. J.

NOTES FROM ALASKA.

THE waters of southeastern Alaska are quite well stocked with fish. Among others there are codfish, flounders, herring, halibut, red and dog salmon and salmon trout. The codfish, flounders, halibut and salmon trout are taken with the line, and sometimes a fine salmon may be taken by trolling with a silver spoon. Usually, however, salmon and herring are taken in nets.

Without doubt the Northwest Trading Co. take more herring at Killisnoo, on Admiralty Island, than any other establishment in Alaska. Hundreds of tons of the fish are caught during every month of the season, and thousands of barrels of oil produced therefrom are shipped back to the States, where it is often sold under quite a different name from that which its origin makes proper.

The herring run in such dense schools that with no other implement than a stick, through which several nails are driven with a backward slant and the points sharpened, an Indian may take two or three at every dip and fill his canoe in a very short time.

These Indians make a great deal of fish oil in rather a novel manner. A large wood fire is made into which they cast many stones. They prop one of their wrought wooden canoes securely on the ground and pour some water into it. When the stones have become very hot they pitch them into the canoe. Then they put several bushels of fish in also, and allow the mass to stew. By and by the oil will rise to the surface of the water. It is then skimmed off and deposited in tight wooden boxes, which the Indians very ingeniously make. It is then stored away for future use to make their dried berries and hard tack more palatable.

Halibut grow to immense size in these waters. The Indians frequently catch them with hooks of their own manufacture. They dry vast quantities of halibut and salmon upon frames or racks in the sun or overhead in their one-story wooden houses, where the circling smoke of the fire in the center is sure to reach them. These dried fish may be called their staple article of food, for it is often all they have to eat. But both the taste and smell of Indian dried fish are enough to nauseate the stomachs of most white men, though they are somewhat preferable to starvation.

A gentleman related substantially the following incident in the writer's hearing: Himself and his brother-in-law, who was a young Indian boy of perhaps ten years, set out to fish for halibut. Each had a canoe to himself and had soon made the necessary preparations for securing their prizes. Very soon the boy had a bite, but instead of catching the fish he was caught in quite a predicament. It seems the line was secured to one of the canoe's braces, and the halibut feeling the hook, and being large enough to "make way for liberty," was not disposed to be taken captive tamely; so off he swam, drawing the canoe at such a lively rate that Mr. G. had grave fears for the safety of the lad. They went in the opposite direction from him, and he began to pull in his line that he might try to overtake them. But he found a large fish was attached to his own hook, so he quickly cut the line and paddled in pursuit. There is little probability that he would have overtaken the canoe had not the courser turned sharply round and taken a back track. Mr. G. then managed to get hold of the canoe, and together they worked the canoe toward shore. Some Indians appeared on the scene with poles and assisted in dispatching the marine monster. His weight must have been three or four hundred pounds.

The red salmon are deep sea fish and migrate to the inlets, entering the rivers and penetrating far inland in order to deposit their spawn. They come in almost incredible numbers every spring. Several canneries preserve great quantities of them fresh, and at the fisheries they are packed in barrels with salt. They are then shipped to the Columbia River, and the packages marked as Columbia River salmon, whence they are sent far and wide.

The Indians spear the salmon, oftimes seeing only the ripple made by the fish on the surface of the water until a huge salmon of 50 or 60 pounds weight is brought struggling to the surface and deposited in the canoe. But the whites catch them in nets. J. P. WHITE.

JUNEAU, Alaska.

THE TOURNAMENT.—*Editor Forest and Stream:* On returning to the city and reading up fishing matters, my attention was attracted to the Levison-Prichard affair, as published in your issues of June 9 and 30. As a member of the Rod and Reel Association who has taken a great interest in its welfare, I regret that such an affair occurred, but rejoice that you had the courage to expose and condemn it. From the letter of Prichard, June 30, it is evident that he has been bought off by Mr. Levison, who gave him the rod back after the publication of your article, and, therefore, he is practically as deep in the mud as Levison. In your editorial comment on Prichard's letter you say: "The Association should add to its organization a governing committee to take cognizance of such matters and provide a remedy for them." You will find such a remedy in the constitution, which provides for the expulsion of members guilty of ungentlemanly conduct at tournaments; and if the Association values its existence it should not suffer this case to pass. The feeling among those I have talked with is unanimous on this subject, and has been intensified since the publication of Prichard's letter, which was easily seen to be the product of a "deal."—HARLEM MERE.

NETTING IN THE MOHAWK.—William H. Burnett, Deputy Sheriff of Albany and Warren counties, N. Y., writes under date of June 29 to Mr. A. N. Cheney, Vice-President of the Eastern New York Fish and Game Protective Association, that he has arrested George De Voe, John Todd, John Bulsom and Charles Stevens, of Schenectady county, for violation of the law in catching fish at the fishway in the Mohawk River. They all plead guilty and were fined ten dollars each, or ten days in jail. These cases were disposed of since June 26. He also arrested John Clute for the same offense on June 16, who plead guilty and was fined five dollars. All these cases were tried before a justice of the peace in the town of Niskayuna. Mr. Burnett found seven nets on the bank of the Mohawk at the fishway, which had been used in the illegal capture of fish at the fishway, making fourteen nets taken by him in Schenectady county. He also had three Polanders arrested for netting in Saunders Lake. Two of them were fined five dollars each, and the other one, who owned the nets, was fined twenty-five dollars before a justice of the peace in Glenville. He tells Mr. Cheney that there are more cases to follow, as soon as he can get time to bring them up.

HUDSON WATERS.—Sirmount, Hudson, N. Y., July 9.—I have been having some big fishing here. Mr. I. W. Hankes invited me to spend the Fourth at his country seat and one of the objects of interest was a fish pond he has just stocked out of the Hudson. The fisherman got some live bait and some one suggested to try the pond. I put a fly-rod together, hooked on a minnow and after a few minutes' dibbling handed over to Mr. J. W. Haaren. Inside two minutes a small-mouth of about a pound had taken hold and it is an open question whether the fisher or the fish was the more astonished. The ladies were all present and the variety of advice which was vouchsafed was awful. Finally his bass-ship was lifted out, admired, unhooked and put back again for another season. I have tried all around Hudson with no great success. Pulver's seems a very handsome trout stream, and big striped bass are reported from Walden. We were two days at Lake Copake, where Mr. Lyon has a well-fitted fishing hotel with first-rate boats. I got five big-mouths skittering with a bogus mouse and rock bass by the peck.—GRAY JOHN.

BLUEFISH IN GREAT SOUTH BAY.—Great numbers of bluefish are now being taken along the south shore of Long Island, and are more plentiful in the Great South Bay than in several years. The bay is filled with boats from all the ports, and they are meeting with great success. There are no menhaden to be had, and the anglers are using the small minnows known as mumichogs, or "mummies," for bait and for chumming. These latter are deficient in oil, and therefore are not as good for chum as the menhaden, but are the only available bait. The bluefish, though plenty, are not in as good condition as usual, probably from the absence of their favorite food.

THE CUSK.—Will Dr. Sterling, as a supplement to his interesting article, kindly tell us through the columns of FOREST AND STREAM the proper way to cook the livers of the "eel pout." Am glad to know this fish has its friends. —BLACKSPOT.

CONNECTICUT SALMON.—Hartford, Conn., July 5.—It will perhaps interest the readers of the FOREST AND STREAM to know that a salmon weighing 16lbs. was taken in the Farmington River, a tributary of the Connecticut, at Windsor, just below the Poquonnock Dam, on July 4, 1887. This is the second one that has been taken this season, the first one weighed about 8lbs.—D. W. H.

THE FISHERIES OF JAPAN.

BY K. ITO.

[Before the American Fisheries Society.]

GENTLEMEN, my intention in being present at this meeting is simply to benefit myself by gathering the crumbs that fall from your table, and not to benefit you by any talk, as I am not at all prepared to make any remarks; but at the same time I am very much interested in this society. I have heard and read so much about it while in my own country that it gives me great pleasure to be able to be present at this meeting, my great interest in which has prompted me to make the bold attempt of addressing you in a tongue with which I am not familiar.

Fish constitute the chief article of food in Japan and the fishing industries are necessarily the most important pursuit of the Japanese. It gives employment to 1,654,178 men and yields $35,000,000. The peculiar features of the country afford every kind of fishing, and a great many varieties of the marine animals and plants are collected and utilized. It is not possible, however, without some previous preparation, for me to enumerate them or to give any account of the methods used for catching and curing them. I will, therefore, limit my subject to the fisheries of northern Japan, or Hokkaido, with which I am more familiar. Hokkaido, more familiarly known to you under the name of Yesso, is one of the islands constituting the Japanese Empire, and is situated between 40 deg. 21 min. and 45 deg. 30 min. north latitude. It covers an area of about 319,000 square miles. The fisheries industry is the oldest and most important of the island. I will give a brief description of some of the principal fisheries of the Hokkaido.

First in the order of importance are the spring herring fisheries. The spring herring (*Clupea harengus*) approaches the western coast of the island in tremendous groups in the spring and early summer, and fishing is carried on from the first part of April to the last of June. The implements used for the capture of this fish are of two kinds—the gill-net and the moored trap-net. The fish caught are gutted and the bones and head taken off and dried upon scaffoldings. They are then made into bundles and sent to the southern part of Japan for food, while the roes, which are left, are dried on the flake or pickled and used for food. The head bones and gills, left after making the boneless herring, are also dried and utilized as fertilizers. But since the introduction of traps, about thirty years ago, and also the introduction of the pocket attachment after that, the catch became so enormous that every fish caught could not be utilized in the old way, and so the guano and oil industries were inaugurated. This industry has grown from year to year and at present is the most important of the fisheries of the Hokkaido. At present the total amount of the dried scraps manufactured reaches the enormous quantity of ninety thousand tons.

Next in importance is the salmon fishery. Our salmon belongs to the same genus as the Pacific coast salmon. There are two principal species of salmon, namely, the spring salmon (*Oncorhynchus perryi*) and the fall salmon (*Oncorhynchus haberi*). The spring salmon ascend the waters for the purpose of spawning in the months of May and June, and the fall salmon in the late fall months. The fall run is the more numerous of the two, but inferior in flavor.

The methods used in the capture of this fish are several, but the principal kinds of nets used are the drag-seines, traps and gill-nets in the seas, while only the drag-seines are used in the rivers. Some of the chief salmon rivers in the island can still compare with any salmon rivers in this country. The most important river for salmon is Ishikari, emptying into Strogonof Bay on the western coast. Curing in salt used to be the only way of preparing the salmon for market, but about eight years ago the Government employed Mr. Treat, of Eastport, Me., to introduce the method of canning the fish, and the new industry is growing constantly, and some of the articles are now sent to France. About three years ago a gentleman commenced a smoking business there and this we hope will soon become one of the principal industries in the salmon fisheries.

Now, I will make a few remarks on the cod fisheries. The cod are most abundant in the winter and early spring. The fishing ground at present is limited more to the in-shore, being from five to twenty-five miles from the shore and in water of 100 or 200 fathoms. The gear used for capture is the trawl exclusively, the construction of which is on the same principle as the trawls used in the New England fisheries of this country. The vessel used in this work is very small. It is an open, flat bottomed boat, about 36ft. in length, and is furnished with a single mast and one large clumsy rectangular sail. The most common method of treating the cod is to take off the head and bones and dry them very hard, like the Norwegian stockfish. The second way is to split and thoroughly cure them with salt. Still, some of the fish of the early catch are just gutted, slightly cured and sent away for more immediate consumption.

Another important fishery is the iwashi (*Clupea melanosticta*), a kind of herring, that comes into the open sandy beach of the eastern coast in the months of June and July. Their schools are not so large as those of the spring herring, and are sometimes mixed with "seven dots" (*Etrumeus micropus*) and also with the young of the spring herring. The principal contrivance for the capture of this species is the drag seine. The fish are all made into scrap and oil.

Next I will mention the trepang fisheries. Trepangs, or sea-cucumbers, occur in the sandy bottom of the sea all along the coast, and are gathered by the use of a dredge. The fish caught are gutted and boiled in a decoction of mugglewolts or artemesia, and are then spread on a sort of cleat with bamboo bottom, and dried for exportation to the Chinese market.

Another fish for the Chinese market and of great importance is the awabi. The awabi is a gigantic gasteropod, which is known on the Pacific coast of this country as "abalone." It is speared from an open boat just like the dories used by the New England cod fishermen, in water from two to four and a half fathoms deep. The fishermen formerly used cod oil in order to look into the bottom of this deep water, but water glass is now almost universally used for this purpose. About five years ago some adventurous fisherman introduced the diving apparatus, but in consequence of its injurious effect upon the propagation of the shellfish it was finally prohibited by legislation. The fresh product of this fish is separated from the shell, cooked, slightly smoked and dried, and then sent to the Chinese market.

Next comes the squid. The squid, which has its run in the fall, lives in big schools and is caught with the jig. It is split open, pressed and dried and sent over to China.

Another product of the sea I would like to mention is the

kombu. The kombu is a kind of algæ belonging to the species of *Laminaria*. They occur in great abundance all along the coast, but the best kind is obtained on the north-eastern coast, where the cold current comes down from the north. They are taken from the rock upon which they grow by the use of the wooden hook; they are then dried on the sandy beach, made into bundles and exported to China.

Now let me say a few words in reference to the fishermen on the island. They are divided into three classes: First, outfitters; second, fishery proprietors, and third, employees. Outfitters are those who furnish the fishing gears, or capital or food supply to the fishermen who cannot fit out themselves; the fishery proprietors are those who own the fishing vessels, fish houses and all fishing gears, and the employes are those employed by the fishery proprietors for the prosecution of the fisheries. Some of the fishing is done on shares, like the cod fishery of this country, while others are part in shares and part in wages, and in some cases certain parts of the entire catch are given to the gang of employes, besides regular wages.

The fishermen of my country are a most open-hearted and frank set of people, and are sometimes superstitious. Among the fishery proprietors there are a great many well educated, intelligent and progressive men. They have formed associations there for the purpose of preventing the manufacture of inferior articles and to adjust any disputes arising between fishermen. They have a fishery society there under the name of Hokusui Kyokwai, for the promotion and improvement of the fisheries. They publish monthly reports and distribute among the fishermen important and useful information in regard to the fisheries. They also publish the translated account of valuable information from this country. I think it will be of some interest to you to know that the recent number of a publication which I have received contains a translation of the paper read before the Fishery Convention in London, by one of your prominent members, Prof. Goode. This society holds fairs for competing in the kind of articles manufactured by the different fishermen.

Now I will say a few words in regard to the measures adopted by the Government for the promotion of the fisheries on the island. Under this head there are only a few laws for the protection of salmon. The principal feature of the legislation protecting salmon is that no stationary apparatus is allowed in the river, and the only kind of net allowed is the drag seine. The next feature is that all nets must be taken out of the water from sunset to sunrise, that is every night they must cease fishing. The next prominent feature is that fishing of any kind is prohibited in the spawning tributaries, and during the spawning season the Government appoints fish wardens to protect the fisheries from the poachers. In addition to this legislation in regard to salmon, there is also a law, which I have already mentioned, against the use of diving apparatus for the capture of the awabis.

Next, let me refer to the measures adopted for encouraging the fishermen. The Government has a fund which is loaned to the fishermen when they meet a bad season, and when they cannot borrow the capital to furnish their outfit. The Government also exempts for certain length of time from the fishery tax all those fishermen who open new fishing grounds or who make new fishing establishments wherever it is impossible for making them without the expenditure of large sums of money.

Lastly, let me just touch on the legislation for regulating the fisheries. Under this head I may mention the method which has been adopted by the Government to govern all fishing grounds. In every fishing locality the position of all traps and seines is located on a map and this map is filed in the county offices for the reference of fishermen, so that when they have any quarrel in regard to the position of nets it can be settled very easily. Under this head comes the regulation for inspecting the manufacture of "kombu." The manufacture of "kombu" lately became inferior, and to check this evil the Government has made a regulation requiring that all kinds of kombu must be inspected and branded before it is exported, just as the mackerel are branded in this country.

Now, before I finish my remarks, let me read a few statistics concerning the fisheries of the island, which I prepared some time ago for the United States Fish Commission Bulletin:

NUMBER OF PERSONS, BOATS, SEINES AND NETS ENGAGED IN THE FISHERIES OF HOKKAIDO IN 1884.

	Hakodate district.	Sapporo district.	Nemuro district.	Total.
Fisheries proprietors	3,218	3,324	1,338	7,880
Employed hands	17,440	33,630	14,703	65,773
Boats	15,100	16,800	3,473	35,373
Seines	496	267	326	1,089
Trap-nets	953	1,828	335	3,008
Gill-nets	150,820	33,365	65	184,250
Miscellaneous nets	6,406	40	65	6,511

VALUE OF THE PRINCIPAL FISHERY PRODUCTS OF HOKKAIDO IN 1884.

Fishery.	Hakodate district.	Sapporo district.	Nemuro district.	Total.
	Yens.*	Yens.	Yens.	Yens.
Herring	1,412,762	2,023,883	108,003	3,544,648
Fall salmon	31,389	221,993	281,874	535,856
Spring salmon	1,528	5,617	118,675	125,820
Cod	16,396	85,048	712	102,156
Iwashi	116,577	15,434	1,640	133,651
Trepang	5,661	23,210	14,623	43,494
Ear-shell	26,818	95,123	.....	121,941
Squid	35,250	2,817	.....	38,067
Kombu	49,993	189,811	164,440	404,244
Sea-otter	.....	.....	3,150	3,150
Oyster	.....	.....	13,413	13,413
Total	1,696,974	2,662,936	706,530	5,066,440

*One yen equals about 80 cents.

I will remark here, however, that the figures just given are rather smaller than the average on account of the poor catch and the low prices during the year; but I think they will give an idea of the amount of the fish caught on the island.

THE MISSOURI FISH COMMISSION.—The Governor has appointed Mr. H. C. West to be a Fish Commissioner in place of Dr. I. G. W. Steadman, resigned. Mr. West's address is Box 699, St. Louis.

AMONG THE NORTHERN LAKES of Wisconsin, Minnesota and Iowa are hundreds of delightful places where one can pass the summer months in quiet rest and enjoyment, and return home at the end of the heated term completely rejuvenated. Each recurring season brings to Oconomowoc, Waukesha, Beaver Dam, Frontenac, Okoboji, Minnetonka, White Bear, and innumerable other charming localities with romantic names, thousands of our best people whose winter homes are on either side of Mason and Dixon's line. Elegance and comfort at a moderate cost can be readily obtained. A list of summer homes with all necessary information pertaining thereto is being distributed by the Chicago, Milwaukee & St. Paul Railway, and will be sent free upon application by letter to A. V. H. Carpenter, General Passenger Agent, Milwaukee, Wis.—Adv.

FIXTURES.

DOG SHOWS.

Sept. 7 and 8.—Second Show of the Fox-Terrier Club, Newport, R. I. Entries close Aug. 28. F. Hoey, Sec., Long Branch, N. J.

Sept. 13 to 16.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary; Chas. Weil, Superintendent.

Sept. 20 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. R. D. Whitehead, Manager.

Oct. 12 and 13.—Stafford Kennel Club Show, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Sept. 6.—Manitoba Field Trials Club Field Trials. Derby entries will close July 1; all-aged entries Aug. 1. Secretary, Hubert Galt, Winnipeg, Manitoba.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5123.**

AMERICAN KENNEL CLUB METHODS.

Editor Forest and Stream:

There is one trifling error in "Wacouta's" letter of June 30, which calls for a reply from me, and that is his statement that I "ruled that there would be no objection to Mr. Munhall's appointing Mr. Hanna as sub-proxy." I never had occasion to rule on the subject. When one of those gentlemen informed me that it was proposed to transfer the proxy, I did exactly what "Wacouta" does in his letter, viz., told them that the transfer of a proxy from one to the other was a question of authority only, and a matter between the club giving the proxy and the gentlemen in question, and none of my business—I may now add, none of "Wacouta's" business, too. As he justly says, "The one who appointed Mr. Munhall was the one to be consulted."

I also take issue with "Wacouta" on his statement that Mr. Vredenburgh was not entitled to vote at the December meeting. In my judgment he was. To quote "Wacouta" once more, "There is no reason for discussion on that point, though lots of people may be of contrary opinion."

ELLIOT SMITH.

NEW YORK, July 7.

Editor Forest and Stream:

Mr. Wade, of course, hits us all around. He agrees with me as against Mr. Peshall on the subject of A. K. C. having original jurisdiction when appealed to directly. The arguments are too many and too strong to leave any doubt as to the correctness of this position. As to the old Sans Souci "opinion," it is evidently pulled in by the ears to draw me out. What rendered President Smith's opinion so famous, Mr. Wade and not I says it was so, was that he led up to a decision in favor of the appellant and then gave a verdict against him. The verdict was correct, the argument was all wrong. What does Mr. Wade think of the A. K. C. now that it has reversed Mr. Smith's decision and forbidden a club disqualifying for bad conduct at another member's show? No one can say that the way of the transgressor is hard in dogdom, for every possible loophole is made for the evasion of just punishment.

Mr. Wade objects to my saying a dog should not be disqualified for incorrect description. His argument is too weak to call for extended response. The rule is perfectly plain and well understood by exhibitors, as will be seen by examination of the various catalogues. I had drawn attention to cases in which the rule had not been complied with at Newark, and with your permission will state the results of further examinations. The Rhode Island Club's inaugural show might be excused for a good many errors on the score of youth and inexperience; but Mr. Seabury needs nothing of the kind. He prepared an admirable catalogue; true there were but 323 dogs entered, but it is not number but method that is the question before the house.

The first note I have is a query against No. 9, Belle, whose date of birth is given as May 20, 1878, and she is entered as "pedigree unknown." I merely make the suggestion that it is strange the one fact is known and not the other.

38. Prince, greyhound, is imperfectly described.

39. Don Quixote, greyhound, date of birth given and no pedigree.

40. Royce, greyhound, breeder's name omitted.

59. Cæsar, Great Dane, breeder's name omitted.

60. Juno, Great Dane, breeder's name omitted. In these two cases I find by reference to other catalogues that the breeder is unknown.

62. Charles Ross, pointer, no pedigree. The name would suggest that all such particulars had been lost.

65. Capt. Fred. "On account of point in pedigree being in controversy, not given." It is evident that Mr. Sperry knows how to enter a dog properly under the rules.

70a. Rosaline, pointer, "Ben—Daisy. Not for sale," is all that is given. Mr. Phelan, who made that entry, knows the requirements and that that was not a proper entry.

86. Polly, pointer, date of birth omitted.

97. Zip Coon, English setter, entered by T. M. Aldrich, manager. It is possible that printers' punctuation is accountable for what reads as if Mr. Aldrich was only acting for the real owner. This also applies to No. 100, Canut.

117. Jim, English setter, pedigree omitted.

137. Nora, Gordon setter, pedigree, etc. omitted. In the Pittsburgh catalogue she is entered, "Whelping, etc., unknown.

139. Dan, Gordon setter, date of birth and breeder both given, but no pedigree.

149. Rose, Gordon setter, "whelped June, 1885." No further particulars given. At Pittsburgh she is catalogued "Whelped September, 1885. Breeder, etc., unknown."

155. Blarney, Irish setter. Breeder and dam's names omitted.

175 and 176. This was a litter of puppies, half in the dog class and the others in the bitch class. Two prizes were awarded in each class. It is wrong to let more than one puppy compete from a litter for each fee paid.

227. Spot, beagle puppy, date of birth and breeder given, but no pedigree.

228 to 230. Zip, Zeb Vance, Wade Hampton, foxhounds, pedigrees omitted.

244. Marguerite, fox-terrier. Pedigree has been mangled by the printer.

246. Gretchen, fox-terrier, whelped June 14, 1886. Pedigree, Bacchanal—Marguerite. In 251, Mephisto, brother to Gretchen, the pedigree appears, "Hempstead Joe or Bacchanal—Marguerite."

262. Rose, bull-terrier. Pedigree and breeder omitted.

266. Topsy Venn, bull-terrier, date of birth given, but no breeder or pedigree.

271. King, bull-terrier, breeder, owner. No pedigree given.

283. Tiny, Yorkshire terrier. Whelped Dec. 25, 1885. No breeder or pedigree.

291. Tom Ball, bulldog. No pedigree given.

There are one or two other cases not included above, in which the presumption is very clear that the error was not on the part of the exhibitor. It should be borne in mind that the bringing to light of errors and omissions of this kind will, I feel assured, prompt officials to be more careful hereafter and see that their catalogues are complete. There is one which is almost perfect, and it will doubtless surprise others as much as it did me when I come to its discussion.

JAS. WATSON.

Editor Forest and Stream:

The A. K. C. is certainly getting some wholesome advice and profitable censure just now. Mr. Watson, "Wacouta" and Mr. Haldeman have been showing up its shortcomings in no tender style; you, with your usual dignified way of doing it, have been reading them the riot act; all very proper. But let us all remember that there is such a thing as too much strong medicine. (Three pills, each 2grs. strychnine, per day, for instance, which appears to have finished the A. K. C. fugleman). There is good material in the A. K. C.; do not censure in such terms as to drive them out. Remember how infinitely worse the A. K. C. was in the days of construction, hole-in-the-wall meetings of "dearly beloved Roger and I," appointment of a defendant to try his own case, "standard" committees to suit certain setters, etc., etc. Pitch into the blunders the A. K. C. makes, but recognize that about a majority mean right, and will do right when they see they have done wrong. Remember that, with the exception of Cleveland, the clubs that voted so wrong on the late tumble act, were pretty much dead and rotten; Hartford didn't vote, and was simply misrepresented by a proxy; St. Paul and Detroit were new at the business, and St. Paul has nobly redeemed its error. Don't blame the A. K. C. for the miserable, rotten toadying it gets. "Wacouta" has clearly defined what a national club must be to stand well in the estimation of the dog public, and instead of trying to break the present club down, try to strengthen the hands of the right-minded men in it. Again I say, what it wants is backbone, and after they have enjoyed the fun of killing one knave, they will be so captivated by the amusement that they will trail one as keenly as a hound does a rotten herring.

Suppose the A. K. C. goes down under the load of ridicule it has brought on itself, what is to take its place? Ah! if you were a mastiff man, not in the "ring," you would have forebodings of a "clique club." You might remember to have heard of a club being organized on a letter setting forth that —— was to be president, —— was to be secretary, etc. If a collie man, you may have smelt a very ancient mouse. Do you not think there might be an "American" kennel club organized on the principles of "you tickle me, I'll tickle you"? The A. K. C. was intended to be used for this purpose, it was used for personal and private ends, but the stalwart common sense and love of square dealings of the American dog public set the pretty schemes at naught, and the conspirators got a very black eye. We don't want to go over all this again.

The stud book whim is a passing fancy of the hour, and the A. K. C. will soon tire of its rag baby (if indeed it now has anything to do with it) and will come to devote itself to its proper business of regulating dog affairs. That it can do this the public course of Messrs. Peshall, Grosvenor, Child, Seabury, Collins, Drake, Osborne, Smith, Donner, etc., shows, and some day they will get rid of the infernal "good nature" that has so often defeated their own real wishes, Speed the day, say I. W. WADE.

HULTON, Pa., July 8.

BEAGLES FOR WORK AND SHOW.

Editor Forest and Stream:

I have often scanned the kennel department of your valued paper, hoping to find therein some article upon the beagle with special reference to the question of bench and field work, but so far with little success. There are undoubtedly many readers of the FOREST AND STREAM who would with the writer be interested in having the question discussed in all its lights, the breeding of beagles for bench and field work. My experience has been limited with beagles, and at the same time a surprise in many ways. My first purchase, two years ago, was made without the slightest knowledge or regard of the established laws governing beagles for the bench. She was of Granby stock, and I took for granted that all other considerations were of minor notice. I found soon after that I had a beagle that was, to use a common phrase, "boycotted" from the bench, being 17in. in height. It afforded some amusement to other members of our club, but my satisfaction came from another direction. I had the pleasure of making one of a party that passed a week in the brush with our beagles, and in our party were five beagles that were bench winners—indeed one a champion.

Our first day's run brought a verdict, confirmed by each succeeding day's work, that a bench winner was not necessarily a field winner, and my surprise was about as great as was my satisfaction to find I did possess a prize winner after all. I supposed, as was natural, that a beagle covered with honors and glory from competition on the bench would as easily carry off the honors in the brush as upon the bench.

The more I looked into the matter and watched the working of the dogs I found that there was a limit to endurance even in a beagle, and it came to the smaller dogs first. I gradually became convinced that a dog 13in. in height must find it a severe trial to work all day against one of 17in and built out in proportion. After so long a trial the smaller dog has got to resort to nerve force for assistance.

I found the smaller dogs were no faster or quicker in locating and I at once concluded that in restricting the beagle down to 15in. in height we were robbing it of just those qualities most essential, their power of activity and endurance.

If this is the experience of all others I am surprised that a size has not been attained whereby we can reach the greatest amount of work with the beagle. I am convinced that for rabbit work no foxhound can do the work of the beagle at its best size for field work.

I have often wondered why we can not have field trials for beagles as well as for other game dogs. It would surely demonstrate their qualities in the brush, and at same time result in radically changing the present laws governing size of beagles for the bench.

The present laws cannot but compel others than myself to breed their beagles for the field rather than bench when such an apparent advantage is obtained in size. H. H.

SPANIEL SPECIAL AT DETROIT.—*Editor Forest and Stream:* At the last show of the Michigan Kennel Club a special prize was awarded by mistake to my champion Little Red Rover. It should have gone to Mr. Charlesworth's Dandy, Rover not being eligible to compete, as he is a champion dog and the prize was offered for open class only.—CHAS. M. NELLES (Brant Cocker Kennels, Brantford, Ont., June 2).

THE ENGLISH KENNEL CLUB'S SHOW.

THE twenty-ninth dog show of the Kennel Club was held June 28 to July 1. We are indebted to the *London Field* for the following report. A full list of awards will be found in the *American Kennel Register:*

The visit of the Kennel Club to the beautiful grounds of the Ranelagh Club, near Barnes, for their summer show of 1887, will possibly prove historical, because it resulted in the finest exhibition of dogs ever brought together. 1750 animals were shown, but they covered 2012 entries, as in the case of some puppies, and in contesting for the team prizes, individual dogs competed in more than one class. Thus we cannot call this show the largest of its kind ever held, for that at Islington Agricultural Hall, in 1863, included over two thousand dogs, none of which were entered in more than one class. But in quality the one of which we write stands right out without a rival, for in the earlier exhibitions a vast amount of rubbish was sent for competition by exhibitors who had still to learn what sort of an animal was likely to be successful on the show bench. We are more advanced now, and the general public knows pretty nearly as well the merits of a dog as the specialist did twenty years since. The committee of the Kennel Club have taken extra pains to make the gathering a success, and, being well assisted by the various dog clubs and private individuals, a list of prizes was offered of unusual value, and, to give an international tone to the affair, exhibitors resident out of the British Isles were allowed to make entries free of charge. The latter induced competitors from America, Canada, and elsewhere to send representatives.

Of the general excellence of the show we have already spoken, and, taking the various classes separately, the setters may be pronounced the best ever brought together by the Kennel Club, and reminding us much of the great quality always seen in these sporting divisions at Curzon Hall, Birmingham. Pointers were, on the whole, an average; spaniels came up better than was once expected; retrievers were quite satisfactory, the wavy variety especially so; St. Bernards still prove themselves the fashionable big dog, the 120 exhibits thereof being a fine show in themselves. Great Danes were ahead of the mastiffs both in numbers and quality, and, strange though it may appear, Irish wolfhounds outnumbered the more elegant and graceful Scotch deerhounds. Bloodhounds only proved fair classes. The eighty bulldogs benched were indicative of the fact that this ancient British dog is by no means on the wane; and the smooth fox-terriers, to the number of 160, caused more criticisms than any other group in the tents. Dachshunde were again numerically strong, but by no means elegant, and the various varieties of terriers—English, Irish, Scotch, Welch, *et hoc genus omne*—winked and blinked amid the straw, dreaming, perhaps, of drawing badgers and killing otters and rats, creatures which their grand parents had often come across, but themselves never. The pug classes, and those for toys, both terriers and spaniels, were fairly well filled; but more interest centered round the griffons from France and Germany (not to be confounded with the fabled animal, in part an eagle, and in part a lion), the tailless schipperkes from the canal boats of Holland, and the extremely handsome eastern greyhounds of varied strains. The bloodhounds, an extremely small collection, caused by no means great interest in their competition.

The mastiffs, as many expected would be the case, were a poor lot throughout, and Mr. Wynn's judgment was criticised, and not always in the most favorable manner. Beaufort was shown very fat, but otherwise in capital form, and beat Victor Hugo, reserve, Montgomery, second prize, and Ilford Chancellor in the challenge class. All these dogs are well known, and ninety-nine breeders out of a hundred would call Montgomery the worst of the lot, and we think so. Victor Hugo looked well, but he does not show sufficiently the bulldog type of head to please the judge. Cambrian Princess, in her division, had no opponent; and in the open dog class Wodan, a fairly nice dog, a bit flat in ribs and slack in the loins, was first. Alfgar, a cleanly-made dog, light in bone and poor in head, but smart and attractive in the ring, was second, and Lionel, an excellent brindled specimen, rather small, perhaps, was third—this dog should have been second, for in addition to his properties all round being uniformly good, he was an excellent mover; but of this more anon. Ormond had but hc., Mr. Hutchin's immense brindled dog Admiral fourth, while Hotspur, second to no dog in the division, was vhc.—his excellences and deficiencies we have repeatedly written of lately. In bitches, Princess Ida, a well-known face, scored, with Gerda, a middling bitch, second, her face and muzzle being anything but tip-top; but her body, legs and feet are fair, and she moved nicely—very well, thought the judge, who gave her the special prize for the "best-moving mastiff among the prize winners; she walked badly, galloped fairly, but Lionel was far ahead of her in both respects, while Victor Hugo, as not having won a prize, did not compete. Frigga was the third prize bitch, but the best in the whole class was Ilolda, who had hc.; both these have lately won prizes. The puppies were only so-so, the best by far being the brindled dog Constable, who, though at present a little plain in head, is well-formed, level and evenly made, standing on excellent legs and feet; and should he make up in head, will probably be our best dog of his color. Wodan and Frigga were placed over Victor Hugo and Princess Ida in the brace prize. The chief cups went to Beaufort and Cambrian Princess, and the remainder of the awards followed pretty much those already made.

St. Bernards were an exceptionally fine lot, but there were few new animals of note likely to make a mark in the future, excepting such as have already been shown. Plinlimmon was, as usual, at the head of all, looking as well as ever, and bigger, for on the judging day he scaled 217lbs. The challenge bitches, too, require little comment, but in open dogs we were introduced for the first time to Baron Cardiff, a fifteen-months-old puppy, by Plinlimmon—Donna Bayard; he is not so big as his sire, and never will be, but with a trifle more coat and a rather better expression he would be about perfect; he is a splendidly made dog, stands straight in front, and we never saw a big dog move nearly so well in his hocks and hindquarters; his color and markings, too, are good; he won easily in his class, and later on achieved a greater triumph when he beat the smooth dog Guide in the class for novices. The latter we commented upon at the St. Bernard Club's show, and he has not altered since then; his head is absolutely fine in expression and shape, but he is too straight in his stifles and hindquarters, which natually makes him move stiltily. After Cardiff we should have been inclined to place Duke of Marlboro' third, for Duke of Wellington is not improving, and was not in such bright bloom as his opponent, nor is he so good in expression and body, though more active looking. Valour was absent, and of the remainder, the immense orange and white Ben Lomond was the best. Hermit II., a dog of similar color, but smaller and plainer in head, took vhc. All the winning bitches are old faces, excepting Lady Ruby, third prize—a nice one in most particulars, but not so good in head, shape and expression as those placed over her. Baron Cardiff, being under 18mos. old, was able to compete in the puppy class, which he, of course, won, a kennel companion, Burns, a dog possessing considerable style and character, but peculiarly dark in his head markings, being second. In the other divisions for puppies and novices, a number of fair second class animals were behind the winner, the chief of which have already been mentioned. The smooth St. Bernards were, as a rule, poor, the winner, of course, excepted. Nike, in the bitch class, had the reserve, and she is going off instead of improving, and was not shown in good condition.

One of the greatest attractions in this large show lay in the number of foreign dogs of several varieties, some of them possibly not hitherto seen in this country. The first class of this kind was for foreign wolfhounds or greyhounds; but of the six entries only two came forward, and they were of quite opposite types—an equal prize was awarded to each. Paul, a so-called Russian wolfhound, is a big fawn-colored dog, with a long shaggy coat, but bearing more the appearance of a bob-tailed collie with a greyhound's tail than anything else. Drourhook, placed on a equality with him, is a fair Russian or Siberian greyhound, a dog by no means uncommon in this country, a remarkably fine specimen of which strain was shown at Norwich the other day. For other foreign hounds there was a better entry, but unfortunately a couple of handsome Afghan hounds were severely handicapped, one having accidentally lost the whole of his tail and the other being lame—both are dark fawn in color, have long pendulous ears, covered with extremely fine, but long hair of a rather lighter hue than the body color, and their ribs are also covered with a coating of a similar kind; the tail of the one which had not lost it was extremely fine and carried with a rather graceful curl. The shape of the body and head of these animals is like that of a greyhound, but they are smaller. The first prize went to Koff, an ordinary Russian greyhound that has previously won at our shows. Then we had a great collection of German pointers, great strong dogs, with immense bone, of the type of our pointers, but coarser throughout. In color they varied from liver to liver and white and ticked of different shades; and in almost, if not all instances, they have their tails docked. The latter gives them the appearance of the old Spanish pointer in Stubb's well-known picture and which is so charmingly engraved by Woodlet. We fancy these dogs will not be likely to popularize themselves in this country. The German boarhounds are much the same as those we have in this country, but not so good. By far the most interesting foreign dogs were the griffons, but unfortunately of the seven entered, but three were present. Baron Coppen's Medoc is an extremely handsome animal of a peculiar liver and white ticked color, with a broken-haired coat as hard as pin wire and close and weather-resisting too. In appearance he is what one would expect to find in a cross between an otter hound and pointer, the head leaning toward the latter type, the body and coat to the former. Two others in the class were liver in color, soft and silky in their jackets, favoring in appearance the old Welsh drover's dog, but a little smaller. The schipperkes we have often mentioned lately—little black dogs, born without tails, some 10lbs. in weight or so, and having much the appearance of the black Pomeranians with little coat. They are bred by the boatmen in Holland and elsewhere, and besides bearing a reputation for fidelity, are said to be excellent hands at killing rats.

The challenge class for black Newfoundland dogs was a strong one, and Lord Nelson, in nice condition, beat Joe Sadler and Black Prince—still, we do not consider Mr. Nicholls's champion so good a dog as he was two years ago. The other challenge classes call for no comment, nor did the open for black dogs, where Hanlon won rightly, but Bismarck, second prize, was a mistake, for he is neither good in coat nor type, nor has he size to recommend him; Admiral Seymour and Waterman were about as good as anything in the class after the actual winnor. The bitches were remarkably good—perhaps the best group of the variety we have yet seen. Lady M., the winner, excels in coat, style and character; she moves well, and is a strong bitch with powerful loins. Princess Nell, much of the same stamp, perhaps not quite so good in front, was second, and although entered in the catalogue as pedigree unknown, she shows abundance of quality, and must have come from good stock. Lady Tramp, third prize, is a small bitch, and we did not quite like her head, and her ears, too, might be improved. Stella II. had an extra fourth prize awarded—a roomy, good bitch, with extra bone, but a rather bad mover in her hindquarters. Baroness, with the reserve, is another good sort, and, taken altogether, there was not much to choose between these five, and perhaps another judge would have placed the last first. The Landseers, or black and white, do not appear to make much headway, and after the first prize winners their quality was most moderate, the second prize bitch Psyche especially so, and there was nothing of great repute among the puppies.

Great Danes mustered in great force, but, with one or two exceptions, all the best animals have repeatedly been criticised here. In the challenge class, a very strong one, the winner, Vendetta, was also pronounced the best Dane in the show, the fawn, Cedric the Saxon, and the immense Cid Campeador having to lower their colors to her, and we hear little complaint at the decision; the bitch is every bit as neat as Cedric, and possesses better feet, but, of, course, is not so big. Paramount appears to be a favorite, and, his legginess notwithstanding, was placed first; his head is very good indeed, and possibly he will improve in body. A new dog, Silver King, was third, a big black-spotted fellow, who appears to be good all round, not so showy as the winner, but better made up in body, his hindquarters and stifles are not such as they ought to be for perfection, and he appears higher behind than in front. An enormous light fawn-colored hound was second; he is built on similar lines to the winner, and a litter brother of his, more massive, was fourth—two remarkably fine puppies, which will take a considerable amount of beating when matured. Ortrud, the handsome marbled bitch, won in her class, with Clara, well known, second. Arishman, third prize, is a bit heavier in head than we like, and so we preferred the fourth prize winner, Ina. This is a remarkably clean-lipped brindled and white bitch, a little small, and not perfect on her forelegs. The bitch Flora Queen, of Wurtemberg, took the reserve. A second prize was over a big-eared bitch called Duchess, who might have had a chance of winning in a mastiff class. The Great Danes, open to residents in Germany, was so poor that but one prize was given in the two classes. The Irish wolfhounds were present in strong force, but there was really nothing of particular merit that had not hitherto appeared on the benches, nor is there yet any appearance of any great distinctness of type, some still being smooth, others rough with soft coats, while some have shaggy jackets of good hard hair; and the third prize bitch is by the Dane Cedric the Saxon, from the deerhound bitch Lufra.

Deerhounds were poor classes, and in open dogs we did not like Ossian, who took first prize; he lacks character, is light in bone, has bad eyes and a soft jacket. Ben Bolt should have won, with Buscar next and Jock third; the respective merits of these hounds are well known. Princess Marjorie, the winning bitch, is a red-fawn in color, is very typical in every way, but soft in coat; her ears and head are exceptionally neat. Old Morna has grown quite curly in her jacket, and we failed to find in what respects Blue Belle and Duchess II. beat the Warwick winner Brora. The greyhounds need no special mention. Though Lord Horncastle was marked "absent" in the catalogue, a dog very much like him was benched under his name on Wednesday. The winning bitch, New Girl, is a coarse one, and though powerful and muscular behind, is not so good, from a show bench point of view, as either Second Sight or Counterpane.

Mr. Norrish had his hands full when he came to judge the pointers, and at the outset let it be stated that all Mr. Lloyd's entries were "not for competition," and those from the Graphic Kennels, New York, were not present. The latter was certainly a disappointment, for rumor has borne on her tongue statements to the effect that our American cousins have some better pointers than ourselves. The challenge class for dogs any weight was a foregone conclusion for Naso of Upton, who, though he might be improved in his hindquarters, is so much better in front and neater throughout that he easily beat Don Pedro and Sussex Don II.; and Pardon we liked best all around of the champion bitches, M. Mulard's Beau Ideal being an absentee. Some took exception to the feet of the dog Banker, who won in the open large-sized class; and here he might be improved, for they are thick and well-padded; in other respects he is a lovely dog, exceedingly neat at his shoulders and neck; big and strong in bone, without being coarse; he certainly was our selection. Cornish Don never looked better; still, he can only beat the winner in head, and Don's feet, though close, are not thick enough; he took second, the two occupying an exactly similar position to that of Warwick. Kent Shot, a dog with a good front and capital legs and feet, but a trifle plain all through, was third. Bowman is a coarse, big dog, with bad shoulders. Marcoline we rather liked, a dog bred in Hanover, and remarkably neat and level all through, excellent in shoulders, and straight in front, with a nice and smart carriage of stern; he has a peculiar appearance in front of the eyes, but this alone should not have kept him out of the honors list. Such good dogs as Polites, Gladsome, and Milton Ponto had to rest contented with cards of honor. Cornish Belle, the winner in the bitch class, is neat, with an extremely pretty head, good bone, and a smart, showy mover. Molton Broom, the Warwick winner, quite the good bitch we said she was when she won there, was second, with a nice old sort, minus the sight of one eye, Climax, third. The latter was dull in the ring, and only her character took her so near the top of the class. Molly Colroy, a Hamburg bitch, had vhc; she was not in show form at all, but with great bone, and certainly, properly mated, should prove of great use to our Continental friends, but her day for the show bench is over. The small-sized dog class was another most equal one, and here a Belgian bitch scored a third prize. This was Luck of Prene, by Naso of Kippen, who, shown in better bloom and condition, might have stood higher; she possesses a fair head, is level topped, has strong, muscular loins, good bone, without being coarse, and moves well. Monk of Upton, who won, is a little plain in head and a bit gay in his carriage of stern, still a nice dog; Bang of Kippen is a smart, good mover, a little faulty behind, and his eyes are a shade or two too light in color. Rex of Milton and Chandos were about as good as anything in this class, which, as we have already hinted, was more remarkable for evenness than extraordinary excellence in any individual. In the corresponding bitch class some three or four were of great quality, and Milliner is one of the neatest bitches Mr. Sam Price has shown for some time; she carries her head well up and her stern nicely down, moves freely, and possesses good strong bone, a nice head and prettily hung ears. Rex of Milton is rather small, almost white, and pretty and neat. The well-known Blossom came second, and Isabel, also a winner previously, third; the latter stood rather wide at times, and her place might have been taken by the orange and white bitch Aldin Rose, who, however, seemed a little off bloom in the ring; still she is a rare nice one, and has been in the prize money in equally as good classes as this before to-day. Eros, too, is a nice bitch. Naso of Upton was pronounced the best pointer in the show; Mr. Bryan, mostly by the aid of Banker and Molton Broom, won the team prize; and Naso of Upton, as he has done before and can do again, beat Gladsome, Polites and others in the class for field trial winners.

[CONCLUSION NEXT WEEK.]

THE AMERICAN MASTIFF CLUB.

THE annual meeting of the American Mastiff Club was held Wednesday, June 8, at 17 Broad street, New York. The old board of officers was unanimously elected for the ensuing year. Following is the report of the secretary:

On the 23d of June, 1886, the American Mastiff Club was founded. Before the completion of the first year of its existence the club has forty-four members, and has secured for itself an acknowledged position among kindred organizations in this country.

It was a fortunate thing for the development of the American Mastiff Club that already in the mother country the Old English Mastiff Club had for several years existed. The American club may justly be regarded as an offshoot of the older organization, and whatever success has attended the history of our club during the last year must be largely ascribed to the hearty good will shown by the parent club. It is no small satisfaction to the American club to know that several of the best-known members of the Old English Mastiff Club have joined our organization as active members.

During the past year seven meetings of the Executive Committee have been held.

A challenge cup for the best American-bred mastiff has been offered by the president of the club. Besides this, two challenge cups for the best mastiff dog and bitch respectively have been offered by the club, and mastiff sweepstakes have been competed for by members of the club. The challenge cup for the best American-bred mastiff was competed for and won at the Westminster Kennel Club show by Winlawn Kennels' Homer. The challenge cup for the best mastiff dog was competed for and won at the same show by E. H. Moore's Minting. The challenge cup for the best mastiff bitch at the same show was won by H. B. Cromwell's The Lady Clare. The sweepstakes were won, first by E. H. Moore's Duchess and second by C. R. Allen's Boss's Zulu, at the Boston show. Silver medals were awarded at the same shows where competition for the cups was held. The report of the treasurer shows a balance on hand of $55.36.

RICHARD H. DERBY, Secretary.

WEIGHT OF A MASTIFF LITTER.—*Editor Forest and Stream:* In your issue of June 16 you have a communication from Mr. Orton Gifford, of Dakota, giving weight of his five mastiff pups at six weeks of age. In the East we have large dogs as well as large pups and large litters. My bitch Boss's Minnie whelped on the 25th of last month fifteen pups; at birth their combined weight was near 30lbs. From their present appearance I think the weight of either five will equal his when of the same age. He gives the weight of his five pups 75¼lbs., a record he need not be at all ashamed of. My bitch Bess (A.K.R. 2217), litter sister to Boss, whelped on Feb. 20 one bitch and four dogs; at one week old they weighed 17½lbs., at three weeks 43⅜lbs., at six weeks they weighed 85½lbs., 10lbs. more than his did at the same age. They are now owned by E. H. Shirk, Jr., Tipton, Ind.; J. W. Alsop, Middletown, Conn.; J. O. Low, Castle Hill, Newport, R. I.; Wm. Dyer, Portland, Me. When last heard from any one of them were heavier than the dogs of Mr. Amidon he quotes. The fifth one is not for sale.—J. L. WINCHELL (Fair Haven, Vt., June 22).

VACCINATION FOR DISTEMPER.—*The Journal of Comparative Medicine and Surgery* translates from a foreign veterinary journal the following notes: The analogy of the cutaneous eruptions in distemper in dogs, with those of variola, was noticed by Jenner, and suggested to him the idea of vaccinating dogs to preserve them from the distemper. "It appears," he says, "that dogs are very susceptible to vaccination by inoculation, and that it produces in them all of the symptoms of distemper which is common to them, but in a foreign form, from which they do not die. They are, moreover, protected from future attacks. Out of forty-three puppies vaccinated with success none died. All were immune from contagion." Wasbot found that distemper was inoculable, and verified the analogy with variola, but found they could contract the disease later. Dupuis, of Brussels, has just made a complete report on the subject. His experiments were made by scarification with vaccine

matter, prepared at the vaccine establishment of the Cruegh hem School. In all dogs, young or old, whether they had had the distemper or not, the inoculation succeeded, the pustules were well formed on the eighth or ninth day, desiccation commenced the eleventh or twelfth; in all, reinoculation was without effect, proving that the subject possessed immunity against vaccinia. Inoculation in the veins, or by hypodermic injection, in all cases conferred immunity without producing an eruption. The vaccination has in no case proved preservative against the distemper. The work of Dupuis establishes: 1. That vaccinia is transmissible to the dog, and that a first inoculation protects the dog from the effects of a second. 2. Vaccination does not protect the dog from distemper, and that distemper does not protect from vaccinia.

KENNEL NOTES.

Notes must be sent on the prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Bessie. By L. N. Edwards, Oxford, Mc., for blue mottled and tan foxhound bitch, whelped May 24, 1887, by Boxer (Gip—Nell) out of Sis (A.K.R. 4728).

Smoke and Jumbo II. By L. N. Edwards, Oxford, Me., for blue mottled and tan foxhound dogs, whelped May 24, 1887, by Boxer (Gip—Nell) out of Sis (A.K.R. 4728).

Sport, Joker, Dime and Nell. By L. N. Edwards, Oxford, Me., for red, lemon and white foxhounds, three dogs and one bitch, whelped May 24, 1887, by Boxer (Gip—Nell) out of Sally.

Bracket II. By Floyd Vail, Jersey City, N. J., for liver and white pointer dog, whelped April 26, 1887, by Bracket (Graphic, A.K.R. 2411—Bloomo) out of Lady Snow (A.K.R. 3651).

Donald C. By E. G. Clarke, Rochester, N. Y., for fawn mastiff dog, whelped May 7, 1887, by Debonair (Crown Prince—Idalia) out of Cleopatra (Don—Nana).

Huntress and Miss Black Pete. By H. D. Brown, Waterbury, Vt., for black cocker spaniel bitches, whelped April 19, 1887, by Black Pete (Obo, Jr.—Phonsie) out of Althea (A.K.R. 842).

Kaffey. By Geo. W. Dixon, Worcester, Mass., for silver fawn pug bitch, whelped May 15, 1887, by Tuck (Comedy—Booth's Lady) out of Toodles (A.K.R. 2147).

Bitts. By Geo. W. Dixon, Worcester, Mass., for fawn, black markings, pug dog, whelped June 15, 1887, by Tuck (Comedy—Booth's Lady) out of Toodles (A.K.R. 2147).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Alice—Sachem. W. T. Payne's (Kingston, Pa.) pointer bitch Alice (Clifford—Lady Belle) to J. H. Phelan's Sachem (Beaufort—Yuba), May 21.

Sweet Brier—Don. W. T. Payne's (Kingston, Pa.) pointer bitch Sweet Brier (Pete—Belle) to Mr. Stoddart's Don (Donald—Nympher), June 15.

Neva B.—Dan. W. H. Beede's (Lynn, Mass.) English setter bitch Neva B. (Pride of Dixie—Fairy Belle) to F. L. Sanford's Dan (Cid—Floye), June 30.

Maple Grove Goldine—Trojan. Maple Grove Kennels' (Badin, St. Louis, Mo.) pug bitch Maple Grove Goldine (A.K.R. 5070) to their Trojan (A.K.R. 4899), June 27.

Toodles—Tuck. Geo. W. Dixon's (Worcester, Mass.) pug bitch Toodles (A.K.R. 2147) to C. H. Amsden's Tuck (Comedy—Booth's Lady), March 15.

Italie—Goldie. Chas. J. Tanner's (Topeka, Kan.) Italian greyhound bitch Italie (A.K.R. 4354) to his Goldie (A.K.R. 4353), July 6.

Folderol—Royal Albert. J. B. Clarke's English settor bitch Folderol (Foreman—Grace B.) to Blackstone Kennels' Royal Albert (Sir Allister—Novelty), June 29.

Fortuna—Royal Albert. B. A. Gage's (Pawtucket, R. I.) English setter bitch Fortuna (Foreman—Grace B.) to Blackstone Kennels' Royal Albert (Sir Allister—Novelty), July 3.

Vida—Cameron's Racket. P. M. Carman's (Wrightsville, Pa.) beagle bitch Vida (Ringwood—Belle) to A. C. Krueger's Cameron's Racket (A.K.R. 4010), July 4.

Drumlin Isle—Bruce of the Fylde. Kilmarnock Collie Kennels' (Braintree, Mass.) collie bitch Drumlin Isle (Mac—Rosa) to their Bruce of the Fylde (Marcus—Lucy), June 29.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

DEATHS.

King Philip. Gordon setter dog, whelped June 15, 1886 (A.K.R. 5102), owned by Stephen O. Meader, Saylesville, R. I., from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

R. C. N., Ravenswood.—A fox-terrier 6mos. old shows symptoms of worms, and occasionally vomits his food. Otherwise in the best of health. Ans. Purge thoroughly with castor oil, teaspoonful, and repeat if necessary. Give only milk for three days. After the purge give 30grs. of powdered areca nut, made into a large pill with lard and purge again in three hours.

T. C. M., Easton, Md.—Our dogs are all getting sore ears, caused by the dog flies' incessant attentions. What is good to put on them? Do you ever give a dog more than five drops Fowler's solution? Ans. If the inside part of the ear is affected, use the following:

℞	Bromo-chloral	3i
	Tr. opii	3i
	Aq. q.s. ad	3ii

Mix. Sig. Drop in ear night and morning.

Externally use the following:

℞	Unguent. zinc oxid	3ii
	Iodoformis	grs. xxx

Mix. Sig. External.

The usual dose of Fowler's solution for adult dogs is four or five drops night and morning. It should be discontinued after three weeks, as it has a cumulative effect.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

WORCESTER, Mass., July 7.—At the regular meet of the Worcester Rifle Association, at their new range this week, they found much trouble by reason of a strong wind. The work of each man in detail was as follows:

Sporting Rifle, 200yds. Off-hand.

A C White	9	7	8	8	7	10	10	9	9	8	—85
Thomas	7	10	6	9	9	8	7	8	7	10	—81
	8	7	7	4	8	9	10	7	6	8	—74—155
Rice	5	6	6	8	7	5	4	5	8	6	68
	6	7	7	7	7	7	0	5	7	6	—59—127
Fuller	8	7	7	10	4	5	5	6	6	6	—64
Titus	7	5	5	8	2	4	4	5	2	3	—45

Military Match, 200yds. Off-hand.

Morgan	4554544455—45	4434445544—41—86
Shumway	5444455444—43	4435434445—40—83

Jefferson	0024453503—26	

HAVERHILL, MASS., RIFLE CLUB.—200yds., off hand, standard target, record match, July 2:

Tuck	10	8	7	9	10	7	9	7	10	6	—83
Johnson	8	10	6	9	7	6	7	10	10	7	—80
Edgerly	8	7	8	10	7	7	6	8	9	8	—78
Palmer	8	7	10	8	7	7	7	7	3	7	—76

July 4, the range was open all day and below may be found the best scores:

Tuck	10	10	10	8	9	9	9	5	10	10—90
Johnson	10	8	8	9	8	7	8	9	9	8—84
Busfield	9	8	9	10	9	5	9	6	9	7—81
Palmer	6	10	6	9	8	7	7	9	10	8—80
J. F. Brown	7	7	6	10	8	10	6	10	7	8—79
Edgerly	8	8	6	7	8	8	10	7	8	7—77
Merrill	6	7	7	5	7	8	6	8	5	7—66
C. Brown	7	4	8	4	7	6	7	4	5	9—61

The club has had a handicap prize match running since April 1, closing July 4, the conditions being the best 3 scores of 10 shots each to count, handicap allowance added:

H Tuck, 1st prize	87	86	90—264 —264
Johnson, 2d prize	85	85	85—255+ 3—258
Busfield, 3d prize	81	85	81—247— 9—256
Edgerly, 4th prize	81	81	82—244+ 9—253
J F Brown, 5th prize	83	79	79—241—12—253
Jackson, 6th prize	67	65	66—198+48—246

July 9, 200yds., off-hand, standard target:

Busfield	6	7	10	9	9	9	8	9	10	6—83
Tuck	8	7	7	9	8	8	9	9	8	9—82
Johnson	5	9	9	9	9	6	7	8	10	10—82
Edgerly	6	9	9	8	9	8	7	10	8	7—79
F Merrill	4	6	7	6	4	6	5	8	6	9—66

J. P. M. GREEN, Sec.

BROOKLYN, N. Y., July 9.—Progress Rifle Club versus the Humboldt Shuetzen Corps, of Brooklyn; Schleich's gallery; 150ft., 25-ring target; measure of full target, 19in. divided into ⅜in. bullseye, counting 22, 23, 24, 25; measure bullseye 2⅛in.; highest possible ten shots 250 points:

Progress Rifle Club.

C W Horney	19	19	17	20	20	24	25	20	25	19—208
John Schermer	24	25	22	23	23	19	17	17	24	24—218
R Abesser	17	20	24	19	23	22	23	20	21	23—212
C Geiger	18	21	15	22	21	19	25	20	11	18—190
Chas Schenner	24	21	21	24	22	24	18	23	20	19—216
A Hoffman	23	24	18	18	20	22	18	24	22	19—208—1252

Humboldt Shuetzen Corps.

Becker	23	17	17	24	21	22	17	23	25	—211
Koerner	17	12	11	15	17	19	17	14	17	25—164
Kleinbube	19	16	18	15	21	15	17	19	21	17—178
Knister	19	17	15	12	16	21	22	16	18	19—175
Klingelhoeffor	22	25	20	14	19	23	25	22	21	19—209
Kerler	22	17	21	19	22	14	22	22	19	21—199—1136

The above is a true report. Scorer for Progress, S. Gozyr; scorer for Humboldt, Anton Kupffer; Captain for Progress, A. Hofmann; Captain for Humboldt, George Kleinbul; I. R. P. for Progress, B. M. Abesser; I. R. P. for Humboldt, Geo. Klingelhoefer.

LEOMINSTER, Mass., July 7.—At the meet this week of the Leominster Rifle Club there was a strong wind which troubled some. Two teams were made up and shot as follows:

First Team.		Second Team.	
E M Rockwell	71 71 77—219	G W Foster	77 66 77—220
G F Prevear	78 73 68—219	C A Joslin	66 68 73—207
J W Elwell	64 72 76—212	A J Rugg	60 66 68—194
W H Wood	64 56 58—178	F A Whitney	62 56 75—193
J Symonds	57 58 56—171	H Lawrence	55 63 65—183
H Prevear	45 61 59—165	C Foster	49 42 65—155
Thompson	32 30 30— 92	Thompson	30 32 30— 92
	1256		1242

THOMASTON, Conn., July 9.—Only three members of the club were present at our shoot this P. M. Clouds and sunshine with a strong and somewhat gusty 9 o'clock wind, 200yds., off-hand, Standard target. Subjoined are the scores:

F Whitlock	10	10	9	8	7	8	5	4	7	9	—77
G C Canfield	8	10	8	6	5	9	9	8	4	8	—75
Fred A Perkins	8	7	6	6	4	5	6	6	6	9	—63

BOSTON, July 9.—The attendance at the range at Walnut Hill to-day was large, and several good scores were completed. Appended are the scores:

Decimal off-hand match, 200yds.—W. O. Burnite 87, W. Charles 80, Darmody (mil.) 78, H. W. Pope 75.

Rest match, 200yds.—D. L. Chase 115, J. Francis 114, S. Wilder 110, W. H. Oler 108.

50yds. match—W. Charles (mil.) 50, C. W. Hodgdon 48, Parker (mil.) 45, F. Carter (mil.) 42.

Pistol match, 30yds.—W. W. Bennett 86, F. Bennett 82, H. Cracow 77, R. Dadman 76.

FITCHBURG, Mass., July 8.—At the meet at the river street range of the Fitchburg Rifle and Gun Club this week, there were 13 events, as follows: Six blue rocks, all angles, Putnam and Cummings first, Dean second, G. R. and H. I. Wallace third. Six clay pigeons, all angles—Putnam first, Cuumings second, G. R. Wallace third. Walk-around, 5 birds—Putnam first, Cummings and H. I. Wallace second, G. R. Wallace third. Six clay-pigeons, straightaway—Cummings first, Putnam and Haines second, H. I. and G. R. Wallace third. Six blue rocks—Putnam first, Burbank and Foss second. Six clay pigeons, all angles—Putnam first, Cummings second, Same, Burbank first, Wallace second, Foss third. Five clay-pigeons, all angles—Putnam first, Cross second, Burbank third. Five blue rocks—Putnam first, Burbank second, Cummings third. Same, Putnam first, Burbank and Roby second, Foss third. Three pair blue rocks and clay pigeons—Burbank and Cummings first, Wallace and Putnam second. Three pairs—Putnam first, Cummings second, Burbank third. Seven blue rocks, straightaway—Putnam and Baker first, Foss second, Cummings and Burbank third.

LYNN, July 9.—There was a good attendance at the rifle shoot at Indian Hill, Wynna, this afternoon. All of the conditions were favorable. Private Walter H. Merrit, 2d Cadets, M. V. M., who has already made a 24 on his score for a gold medal, made a 24 and a 23. He has but one more 23 to make to fill his score and win the medal. The latter is an elegant affair. The total scores were: Private Walter H. Merritt, Company B, 2d Cadets, 112; Sergt. I. W. Chase, Company D, 8th, 79; Corp. A. H. Sisan, D, 8th, 78; Private R. B. Dawson, A, 1st, 57; Sergt. A. T. Hilliker, D, 8th, 38. Record match—E. F. Bachelier 161, William P. Webber 154.

MILFORD, Mass., July 8.—At the recent meet of members of Company M, 6th Regiment, M. V. M., at their range, George McLaughlin was added to the list of third class marksmen, which makes 17 in the company, and J. F. Barrett was promoted from the third to the second class. The totals of their practice at this meet were as follows: G. A. Moore 22, J. F. Wilcox 20, R. C. Hussey 18, G. E. Thayer 15, P. Z. Whiting 13, W. E. Knight 22, W. Annette 19, T. P. Keane 17, G. Kelley 14, W. Tongas 13, J. F. Barrett 20, F. Clark 18, G. M. Laughlin 17, T. Berrell.

WINCHENDON, Mass., July 7.—The Winchendon Gun Club went out to the range yesterday to shoot clay-pigeons; out of a possible 10 birds the following were broken: A. H. Felch 10, H. M. Eaton 8, F. E. Mann 7, J. Sutherland 7, H. J. Lawrence 6, O. Lawrence 6, F. F. Hapgood 6, T. S. Davis 6, C. T. Houghton 5, L. F. Earle 4.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

DECORATION DAY TROPHY.

FOLLOWING are the detailed scores of the Knoxville, Parkersburg and Wichita clubs tie shoots:

KNOXVILLE GUN CLUB, Knoxville, Tenn., July 4.—Cleveland target and trap:

	Bore.	Straight-away.	Right.	Left.	Total.
John M Ross	10	11111	11111	11111	—15
T C Eldridge	10	11111	11111	21111	—15
C M Woodbury	10	11112	11111	11111	—15—45

Scorer, J. W Slocum; referee, R. Saxton, Jr.; J. E. Campbell.

PARKERSBURG GUN CLUB, Parkersburg, W. Va., July 4.—Blue rock target and trap:

L Stephens	10	11111	11211	21121—15
A W West	10	11111	12111	12111—15
C E Verges	12	11211	22122	11121—15—45

Scorer, Albert F. Lane; referee, A. Charnock; W. Ruberry.

FOREST CITY GUN CLUB, Wichita, Kan.—Blue rock target and trap:

Wm Stancer	10	11111	11111	11111—15
W C Williams	10	11111	11111	11111—15
Chas Johnson	10	11111	11111	11122—15

Scorer, E. T. Brown; referee, W. A. Merrill; John Merrill.

THE MIDDLESEX GUN CLUB had an extra day at their grounds at Dunellen, N. J., on the 4th. There was a good attendance. The scores of C. Smith, Eames and Forrest were particularly good, as the birds were the best I have seen for many a day; they were all strong flyers, and many fell dead out of bounds. "The Mayor of B. B." officiated as referee in his usual satisfactory manner. Ties divided. First sweep, 10 bats thrown from traps at all angles:

Eames	1111101001—7	Forrest	1100001011—5
S G Smith	0001111111—7	P Martin	0111000010—4
Ellis	1010100010—4	Clark	0011010011—5
S Martin	0001010111—5		

Four live birds, handicap rise:

S G Smith (30)	1000—1	Robby (27)	0000—0
Forrest (30)	0100—1	P Martin (30)	0001—1
Clark (30)	2011—3	Dickens (30)	0000—0
Eames (30)	1211—4	S Martin (29)	0211—3
Ellis (29)	0100—1		

Four live birds, handicap rise:

S G Smith	1022—2	Robby	2012—3
Forrest	0022—2	P Martin	0001—1
Clark	1011—3	Dickens	0001—1
Eames	1112—4	S Martin	0021—2
Ellis	0000—0	Heminway	1010—2

Four live birds, handicap rise:

S G Smith	2002—2	Eames	1111—4
Ellis	0000—0	Clark	1101—3
S Martin	0020—1	Capt Matton	1010—2
Heminway	2101—3	Robby	2000—1
Forrest	1020—2	Warden	0091—1

Four live birds, handicap rise:

S G Smith	2201—3	Clark	2111—4
Ellis	0000—0	Warden	1011—3
S Martin	0011—2	Apgar	2110—2
Hemniway	2112—4	P Martin	1110—3
Forrest	0200—1	Keller	0110—2
Eames	1111—4		

Four live birds, handicap rise:

S C Smith	0220—2	Heminway	0121—3
Forest	1211—4	Ellis	0020—1
Eames	1220—2	D Terry	1101—3
S Martin	0010—2	Warden	1020—2
Apgar	2112—3	Keller	1122—4

Four live birds, handicap rise:

S G Smith	2002—2	Warden	0111—3
Forrest	1011—3	Williams	1211—4
Eames	1211—4	Keller	0211—3
Heminway	1201—3	D Terry	1101—3
Ellis	0000—0	C Smith	1111—4

Ten bats, thrown from 2 traps at 5 angles:

S G Smith	1010010011—5	P Martin	0110100101—5
Forrest	0100101010—4	Eames	1111111111—10
C Smith	1001010011—5	S Martin	0111110110—7
Williams	0000111101—5	Matton	0010100010—3
Keller	1010111001—6	Heminway	1111011110—8
Ellis	0111011001—7	W Squires	1111111111—10
Wheeler	0001000111—4	D Terry	0111111100—7
Apgar	1011010100—5		

Eames first, Heminway second, S. Martin third.

Three pair live birds, 21yds. rise; ties miss and out, 1 pair, 26yds. rise:

S G Smith	111111—6	Williams	111000—3
C Smith	111011—5	Ellis	001111—4
Forrest	110111—5	D Terry	001101—3
Eames	111001—4	Keller	011111—5

Ties: C. Smith 1; S. G. Smith first, Forrest second, Eames and Ellis third.

Four live birds, handicap rise:

Eames	1012—3	Robby	2012—3
Ellis	0200—1	Forrest	2220—3
Heminway	2121—4	Keller	0111—3
S Martin	0010—1	D Terry	1212—4
C Smith	1211—4	Worden	1000—1
S G Smith	2011—3		

Ties on 4, miss and out: Heminway and Smith 1 each and divided, Terry 0. Ties on 3: Eames and S. G. Smith 6, Forrest 7, Robby 4, Keller 2. Worden third.

WORCESTER, Mass., July 7.—At the regular meet this week of the Worcester Sportsmen's Club, at Coal Mine Brook Range, there was the regular prize shoot. The classification score, 10 B., blackbirds; 10 B. R., blue rocks, and 10 C., clay-pigeons. The results of the several scores in detail were as follows:

Class A.	Classification. B.	B.R.	C.	Prize Score.
W S Perry	10	9	8—27	1111111—7
A R Bowdish	8	10	8—26	1110111—6
M D Gilman	7	9	10—26	0111011—5
E Welch	7	6	8—21	1110110—5
C A Parker	6	7	6—19	0111110—5
F Stone	8	9	8—25	1010100—3
E F Snow	8	5	6—19	01010w.
Class B.				
A B Franklin	6	6	2—14	1101110—5
L R Hudson	5	6	6—17	1110101—5
Dr Quimby	6	5	3—14	1111000—5
A L Gilman	6	6	4—16	0110110—4
E S Knowles	7	3	4—14	0110010—3
L E Divoll	6	8	2—16	1001100—3
J B Garland	5	5	6—16	0011000—2
H Colvin	6	5	2—13	0010100—2
S S Kilburn	6	5	2—13	0100010—2

In Class A, Perry took first prize of $7.50, Bowdish second of $4.50, and Gilman the third of $3. In Class B, Franklin and Hudson divided the first prize of $5, Gilman took second of $3, and Knowles and Divoll divded the third prize of $2.

BRISTOL, Tenn., July 7.—Bristol Gun Club with a part of Knoxville Gun Club. Match at Knoxville blackbirds. All matches at 18yds. rise and 45yds. boundary, shot under National Gun Association rules, four prizes:

Winston	0011110102—5	Woodbury	1111111111—9
Eldridge	1101011000—5	Rhea	1111011111—9
King	1111100010—6	McNeil	1110010004
Ross	1111111101—8	Lewis	1111111007
Sparger	1110011013—6		

Woodbury first, Ross and Rhea divided second, Lewis third, Sparger fourth.

Match at 5 pair doubles, Cleveland targets:

Ross	11 11 10 11 11—9	Woodbury	11 11 10 10 10—7
Dickey	11 11 01 01 11—8	Rhea	11 11 10 11 11—9
Eldridge	11 10 10 11 11—8	Sparger	11 01 11 11 10—8
King	00 00 11 10 01—4	Winston	11 11 11 01 01—8
McNeil	11 11 11 11 01—9	Lewis	11 11 11 11 01—9

Ties on 9 for first at 2 pair double birds, 18yds.:

Ross	11 10—3	Rhea	11 11—4
McNeil	11 01—3	Lewis	00 00—0

Ties on 8 for second at 4 double birds, 18yds.:

Dickey	11 01—3	Sparger	00 00—0
Eldridge	11 11—4	Winston	11 11—4

Winston and Eldridge divide.

Third match, Cleveland target and trap:

Ross	111111—6	McNail	111100—4
Dickey	111101—5	Franklin	111010—4
Eldridge	001111—4	Woodbury	111000—3
Winston	100111—4	Rhea	111111—6
King	011111—5	Sparger	111110—5
Pepper	111111—6	Lewis	111101—5

Ties on 6 for first at single birds, 18yds: Ross 2, Pepper 0, Rhea 1. Ties on 5 for second at single birds, 18yds.: Dickey 5, King 4, Sparger 3, Lewis 2. Ties on 4 for third at single birds, 18yds.: Winston 4, rest missed.

Fourth match, Cleveland target and trap:

Dickey	1110101100—6	McNail	1100101000—4
Ross	1101011101—7	Rhea	1111110111—9
Winston	1001100001—4	Woodbury	1111110000—6
Franklin	1000000110—3	King	1110001001—5
Eldridge	0110101111—7	Sparger	0111011110—7

Ross second, Woodbury, third.

Match at Cleveland target:

Ross	1111111111—8	Franklin	11010100—4
McNeil	1101110—5	Lewis	10110111—6
Eldridge	11000111—5	Mort	00000110—2
Woodbury	00110110—4	Miles	11011000—4
Rhea	11111101—7	King	11110000—4
Dickey	01111111—7	Sparger	01011110—5

Ross wins first; Dickey and Rhea divide second, Lewis third, Eldridge fourth.

Second Day: First match at Cleveland target and trap:

Ross	1011111—6	Eldridge	1111111—7
Dickey	1001111—5	McNeil	0011100—3
Woodbury	1111010—5	King	1111010—5
Winston	0111101—5	Rhea	1011111—6

Rhea and Ross divide second, Dickey wins third, McNeil fourth.

Cleveland target and trap:

Ross	111011111—8	King	101001111—6
McNeil	111010000—4	Winston	111111010—7
Eldridge	111011011—8	Rhea	111110111—8
Woodbury	000011110—4	Dickey	110011110—7

Ross wins first on tie.

Four pair double Cleveland target and trap:

Ross	10 11 11 10—6	King	11 10 10 11—6
McNeil	01 11 10 11—6	Winston	11 11 01 00—5
Eldridge	01 10 11 11—6	Dickey	10 11 11 11—7
Woodbury	11 11 11 00—6	Sparger	10 11 11 11—7
Rhea	11 10 11 01—6	Lewis	11 11 11 11—8

Lewis first, Dickey and Sparger second, Ross third, Winston fourth.

On the regular matches Rhea broke 73 birds out of 83, Ross 70 out of 83. Rhea gets the special club prize, a handsome gun case. Ross gets second special prize, cartridge belt, Eldridge third special prize, bag of shot.

WHITE CITY, Kan., July 2.—In shooting off tie for third prize of your Decoration Day Trophy match, the boys were all in good trim and had a lovely day to shoot. Had the 30th of May been as nice our team would have been in for the Trophy. I inclose scores of some sweepstakes shooting done in the afternoon. the FOREST AND STREAM shooting being done in the morning, before the heat of the day. The blackbirds and live birds are new targets for our club, this being the first time we have ever used blackbirds on our own grounds, while with three exceptions the live birds were faced by the greenest of green shooters at that kind of target. First shoot, 10 Peoria blackbirds, 18yds. rise:

E Baer	1101111110—8	Brush	1110010011—5
Hyman	0111111111—9	Weirich	0111010011—6
C Baer	1001011111—7	Merritt	1110100110—6
Green Walt	1111100011—7	Bangler	0111010010—5

Ties, C. Baer 101110—4 Greenwalt 101010—3. Hyman first, E. Baer second, C. Baer third.

Second shoot, 5 clay-pigeons, 18yds. rise:

E Baer	11111—5	Brush	01100—2
Hyman	11111—5	Weirich	11111—5
C Baer	01111—4	Merrill	11011—4
Greenwalt	11001—3	Bangler	11100—3

Ties, E. Bear 0. Hyman 1111111111—9. Weirich 111111110—8. Hyman first, Merritt second, Greenwalt third.

Ten Peoria blackbirds, 18yds. rise:

E Baer	1111111110—9	Brash	1111001010— 6
Hyman	1101011000—5	Weirich	0110000111— 5
C Baer	1011011000—5	Merritt	1111111111—10
Greenwalt	1111110101—8	Bangler	0111010010— 5

Merritt first, E. Baer second, Greenwalt third.

Five live birds, 30yds. rise, both barrels:

E Baer	21111—5	Brush	10200—2
Hyman	11011—4	Weirich	00100—1
C Baer	11110—4	Merritt	02101—3
Greenwalt	12210—4	Bangler	12001—3

E. Baer first, Hyman and Greenwalt second, C. Baer third.

THE FOUNTAIN GUN CLUB.—The monthly shoot of the Fountain Gun Club took place amid heavy showers of rain. Nevertheless the gunning was fairly good considering the shifting light of the rain-cloud background. The birds were strong, most of them springing from the traps like Fourth of July rockets. Last Monday electric traps were tried, but owing to weak batteries and bad insulation were not a success, and were abandoned for the usual traps. The following were the events:

Club handicap, 7 birds, both barrels, 3 cash prizes:

L Davenport (28)	1110111—6	G Eddy (30)	1101111—6
W Shields (30)	1111111—7	M A Stewart (26)	0111110—5
C S Kendall (27)	0100011—3	H P Donnelly (23)	0110111—5
H McLaughlin (26)	1111111—7	C W Jones (30)	1111101—6
G L Edwards (23)	0111111—6	H Kearney (28)	1101101—5
J E Lake (23)	1111111—7		

In shooting off ties, W. Shields won first prize, Davenport and Jones divided second and Kearney took third.

Club sweepstake, 25yds. rise, 3 birds, both barrels. Three cash prizes:

L Davenport	111—3	H McLaughlin	101—2
M A Stewart	111—3	H P Donnelly	010—1
W Shields	111—3	J E Lake	111—3
G Eddy	111—3	C W Jones	010—1
C S Kendall	100—1		

In this event Davenport gained first prize in the shoot off, Jones second and McLaughlin third.

GERMANTOWN, July 5.—I went on the afternoon of the 4th to Frankford, which is the Twenty-third Ward of Philadelphia, to visit the North End Gun Club, which was to have a grand shooting match at clay pigeons; and they had made great preparations for having a good afternoon's sport, having plenty of eatables on hand, also about sixteen special prizes for the shooters. But I was very much disappointed on arriving on their grounds to find that Mayor Fitler had ordered them not to shoot or they would all be arrested, as he had given orders that no fireworks or firearms of any kind were to be fired off in the city limits on the Fourth of July. I tell you, it is getting to be very hard on shooters in Philadelphia, what with the Society for the Prevention of Cruelty to Animals stopping pigeon matches, and now the Mayor stopping clay-bird shooting on the Fourth. I saw Dr. Carver since his eyes have got all right, and he says the accident was caused by the rim of a shell splitting and allowing the powder to blow out. He was making a hip shot at the time, and had his eyes right over the breech of the gun. It was not the fault of the gun, as published in some of the papers, as it might happen with any make of gun.—HARRY THURMAN.

KINGSTON, N. Y., GUN CLUB.—Shoot, July 4, 20 Macombers, 18yds.:

Short	0111011111011001010—12
Hoveland	1111110101101101001—13
Decker	011 011 101001000111—12
Van Buren	00100101010010000111— 8
D. C. Overbaugh	1001000100 w.

HAMILTON, Ont., July 4.—The regular quarterly shoot of the Wild Fowler's Gun Club came off to-day on Dyne's grounds on Burlington Beech, at 25 blackbirds:

T Stephens	0011111111111111111111011—22
J Smith	1101111111111011111101011—21
S Hipkins	0111111111011111011001—20
Hunt	1010111011111111101111041—20
Morris	0111101111111111111011110—20
Hunter	1111101111011111710011001—19
Bowron	1601011111011111110101011—18
Brant	1601011101111101101111011—18
Pett	0011111110103111101101011—17
A Smyth	0101111101101110101011110—16
Geo Smyth	6011000011100000111111111—14
Booker	1000001111001111000100110—12

Stephens first, Smith second, ties divided. Second match:

Pelt	01011—3	Hunter	11110—4
A Smyth	11011—4	Hunt	01111—4
J Smyth	11100—3	Stephens	01100—2
Brant	10110—3	Morris	11110—4
Bowron	11111—5		

Ties for second, miss and out, Morris 2, Hunter and Hunt tied on 2 and again on 3 and divided.

CHATHAM, N. Y., July 4.—Chatham Gun Club match against Wilbor Gun Club, of Chatham Centre; 20 glass balls each, whirl trap, 20yds. rise; shot under FOREST AND STREAM rules, no prizes:

Chatham.

G J Spengler	11101101001111100001—13

SAN FRANCISCO, July 3.—The California Wing Club shot their fourth medal shoot at San Bruno to-day. Burlingham rules governed the event. Fay was first at the score, but made a bad showing, scoring only 7, but his birds were hard. Haas also shot worse than usually. De Vaull missed his second and then made a run of nine straight. Slade killed his first nine and then flopped, missing his last three clean. Liddle, one of the old-time shots, scored 10 and tied de Vaull for first prize. Day scored 11, the highest figure of the day, including a run of 9, but being a non-member, shot only for honor and glory, taking no profit. The third medal was won by Slade with 9. Liddle and de Vaull shot off their ties at 4 birds each, according to Hoyle, when de Vaull played second fiddle to the veteran, missing his first, while Liddle grassed a straight four. A sweepstake was then disposed of, eight members putting up $2.50 each to make a pool, the money being divided into pots of $10, $7.50 and $2.50 respectively. The shoot was supposed to be at 12 birds each, but at the last round it was found there were not enough pigeons to go around, and therefore the three ties, Haas, Liddle and Day, alone shot at their 12 birds. Haas and Day again tied, each killing, and so divided first and second money. Liddle made a miss and had to content himself with third place. Horace Briggs was judge, and Rice, trapper. There was a fair audience including a few ladies. The weather was favorable for shooting, though the wind was occasionally strong. Following are the scores:

Club shoot, 12 birds, 80yds. boundary:

Fay (30)	011110110001— 7	Culver (30)	011011010101— 7
Haas (28)	011101011110— 8	Liddle (30)	111101101111—10
De Vaull (30)	101111111110—10	Bogart (26)	010101101111— 8
Slade (30)	111111111000— 9	Day (30)	110111111111—11
Osgood (28)	110111000110— 7	Shaff (28)	110111011011— 9

Twelve-bird handicap, 80yds. boundary, $2.50 entrance.

Fay (30)	111110101111— 9	Osgood (28)	101111010110— 8
Haas (28)	111111111101—11	Liddle (30)	111111101110—10
De Vaull (30)	011110110110— 8	Day (30)	111111111011—11
Slade (30)	101111110 w — 7	Shaff (28)	101100110110— 7

INDIANAPOLIS, Ind., July 9.—Match between Mr. Winston, of Covington, Ky., and Mr. Beck, of this city, for $100 a side, 100 bluerocks each, half singles and half doubles, 5 traps. Mr. Winston shot a No. 12 Scott, and Mr. Beck a No. 10 Greener gun:

Winston.

RICHMOND.

MERIDEN, Conn., July 7.—As the members of the Parker Gun Club held several shoots for prizes before the list was complete, I now send the official scores and list of prizes. The first prize is a Parker gun made to order. Other prizes consist of a silver ice pitcher, bronze table lamp, silver fruit dish, vase lamp, hunting suit, pair of trousers, lady's gold lace pin, comb and brush, box of cigars, also a prize for the one who shoots the most holes in the air, most likely a leather medal gotten up in "the highest style of the art." There will be 11 shoots, winner of first prize to have highest average; 25 American clay-pigeons, 18yds. The largest number broke handicaps the shooter or shooters back 3yds., and 24yds. the limit:

First shoot, May 23: H. Venter 13, I. L. Baker 17, H. E. Burgess 13, Ed. Avery 17, A. Stokes 21, E. Goodrich 10, C. Johnson 10, Ed. Soper 17, G. A. Strong 8, E. B. Booth 10, A. H. Merriman 16, O. C. Burgess 16, D. C. Pease 14, J. Phœnix 13, Ed. Birdsey 14, F. Brown 20, L. J. Gaines 10, C. P. Bradley 9, J. F. Ives 17, J. A. Thomas 13.

Second shoot, June 8: F. Brown 10, Ed. Soper 13, C. Johnson 9, A. H. Merriman 17, Ed. Avery 14, G. A. Strong 9, I. L. Baker 15, A. Stokes 17, E. Goodrich 7, O. C. Burgess 17, D. C. Pease 14, G. F. Ives 18, Eli Booth 13, C. P. Bradley 9, H. E. Burgess 12, Kinnie 8, F. Stevenson 8, G. H. Wilcox 11, D. C. Burrows 8, Dr. E. W. Smith 10, Amos Ives 20, C. S. Howard 4, C. P. Morse 8, J. A. Thomas 13, L. J. Gaines 14, H. C. Venter 7.

Third shoot, June 25: Ed. Soper 10, E. Goodrich 4, J. Brogden 13, Eli Booth 9, C. P. Bradley 17, Ed. Avery 18, C. Johnson 12, Amos Ives 14, O. C. Burgess 15, G. A. Strong 12, I. L. Baker 12, A. Stokes 16, Ed. Birdsey 17, G. H. Hill 9, D. C. Pease 9, F. Brown 20, D. C. Burrows 12, C. S. Howard 9, W. B. Hall 8, Geo. Savage 6, L. J. Gaines 16, A. H. Merriman 15.

Fourth shoot: C. P. Bradley 11, D. C. Burrows 11, Geo. E. Savage 10, Ed. Avery 20, Amos Ives 16, F. Brown 17, C. Johnson 15, G. H. Hills 8, I. L. Baker 21, A. H. Merriman 14, J. A. Thomas 10, Kinsey 11, C. P. Morse 7.—SILVER CITY.

SAN FRANCISCO, July 3.—The match between John Kerrigan and Peter Walsh was shot at Birds Point this afternoon. The match, originally arranged for fifty birds, was reduced to twenty-five by consent of both parties. The weather was all that could be wished for, the wind being very light. Walsh came to the score first, with a 10-bore gun, at 30yds. rise. He killed his first bird on a single barrel. Kerrigan faced the traps under the same conditions, and scored No. 1 on his second barrel. Walsh was evidently in shooting humor; he had a clean score up to No. 13, with only four second-barrel shot. Kerrigan shot very well, but six of his birds died out of bounds and one over time. Out of a score of eight lost birds only one escaped without injury. After luncheon Walsh broke his score on the fourteenth, and repeated it on an easy No. 15. Kerrigan scored lost birds on Nos. 15, 18, 19, 24 and 25. Every bird dropped outside except No. 25, the only bird that got away. After missing No. 20 Walsh killed five straight, and won the match by a score of 21 to 17. Kerrigan's shells were decidedly imperfect. Appended is the score, the figure 2 denoting the use of the second barrel:

Walsh	1112111121120021100111—21
Kerrigan	2101101101111100111001—17

LONG ISLAND CLUBS.—The long talked of match between the Glenmore Rod and Gun and the Coney Island Rod and Gun clubs, the two most prominent shooting organizations on Long Island, took place on July 8 at Dexter Park, L. I. The match was originally made for 15 men a side, but so many of the respective clubs were present that the limit was extended to 22, to shoot from the 25yds. mark. The shooting was much above the average. On the Coney Island side C. W. Edwards, Dr. Shield, C. Wise, A. Williams, Capt. Crammer, A. Schwartz, C. F. Russel, J. E. Lake and L. Davenport each killed 7 straight. On the other side E. H. Madison, H. Borkman, G. W. Forbell and C. Bass did the same. Out of 308 birds shot at only 63 escaped, a remarkable event in an interclub shoot. The Coney Island Club was the favorite from the start and odds of $50 to $20 were laid that they would win by 20 birds. The score is as follows: Coney Island Club—Killed 127, missed 27; Glenmore Club 118, missed 36.

BROOKLYN, July 9.—A pigeon-shooting match took place today at Woodlawn, L. I., between members of the Brooklyn Riding Club. Mr. Kirboe was the winner with a score of 8 killed out of 10 shot at, Mr. Miller coming next with 7. The traps were sprung by electricity. The following is the score. Referee, H. Blattmacher:

Kirboe	1101101111—8	Webber	0010100110—4
Bush	0011010101—5	Speisser	1011011001—6
Miller	1011011101—7	Leib	0010011101—5

NEWARK, N. J., July 4.—The East Side Gun Club shot glass balls to the following extent: Out of 25 balls Chas. Walter broke 22, Philip Schilling 21, Philip Schork 20, John Schilling 20, Frank Sona 18, C. Ramsberger 15, A. Martin 14....The Elizabeth Gun Club shot a sparrow match, 12 birds each, 21yds. rise, and followed it with a clay-pigeon match at 20 birds each. The shooting was excellent throughout, and R. S. Williams killed all of his sparrows, while the others killed 10 and 11 each....The Fifteenth Avenue Trap Shooting Club, at 20yds., made the following score on Peoria blackbirds, shooting at 25 birds each: P. Trautuetter killed 24, J. Weber 24, W. Drastal 22, A. Krauss 21, G. Deissler 21, E. Jaquin 21, C. Russel 19, L. Spann 19, F. Pippert 17, L. Schilling 17, T. Weber 17, M. Bauer 13, P. Derzbacher 12, J. Gerst 11, W. Heller 9, J. Senecaro 6.

WELLINGTON, July 9.—To-day has been ladies' day at the Wellington range, there being nearly as many of the fair sex present as shooters. The winners were: Six pigeons, Gerry; 6 blackbirds, DeRochemont and Gerry; 6 macombers, Brown; 8 pair blackbirds, De Rochmont; 6 pigeons, Warren and Brown; 6 blackbirds, Stone and Gerry; 6 macombers, Warren and Gerry; 6 pigeons, straightaway, Brown; 6 blue rocks, Brown; 6 pigeons, Warren; 6 blackbirds, McCoy; 6 pigeons, Nichols; 6 blackbirds, Brown; 6 blue rocks, straightaway, Warren; 6 pigeons, Warren.

NEW YORK CITY, May 18, 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it,* not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. CUSHER.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

A. C. A.

FOR membership apply to the Secretary, W. M. Carter, Trenton, N. J. Required age, 18 years or over. Application to be accompanied with $3 and recommendation of an active member. Sec'y A. C. A. Central Div., E. W. Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y W. C. A., J. O. Shiras, Cincinnati, O.

CALLA SHASTA CAMP, JULY 4.

THE weather was fine, a good south wind blowing through the entire meet, and a happier lot of canoeists seldom came together, they numbered about 75 with 28 canoes, among which were the following: Paul Butler and Mr. Nichols, of Lowell; Dr. and Mrs. Parmele, Messrs. Davidson and Hubbard, of Hartford; Messrs. French and Gilfillan, of Northampton; Mr. Bennett, New York; and from the Springfield C. C., Messrs. E. H. and G. M. Barney, Shedd, Nickerson, Knappe, Walker, McKnight, Russel S. and F. D. Foot, Marsh, Bowles, Patterson, Read, Cooley, Safford, Ireland and Dr H. E. Rice.

The committee in charge were Messrs. Nickerson, G. M. Barney and Knappe. On account of scarcity of water, Mr. Jones, of Hartford, did not reach here in time to take part in the races. The races were as follows:

1. Single paddling, 1 mile, 3 entries:

Le Cid, H. E. Rice	14 45
Hornet, C. H. McKnight	15 52
Ella C., F. D. Walker	15 53

2. Tandem paddling, 1 mile, 2 entries:

Narka, Rice and Knappe	7 52
Hornet, McKnight and Davidson	8 53

3. Limited sailing, (75ft. area), 3 miles, 8 entries:

Pecowsic, G. M. Barney	35 30
Blanche, Paul Butler	35 59
Hornet, C. H. McKnight	37 50
Le Cid, E. C. Knappe	38 07
F. D., F. D. Nichols	38 20
Narka, H. E. Rice	Time not taken.
Ella C., A. C. Patterson	Did not finish.
Northampton, F. French	Did not finish.

4. Upset race, 300yds., 2 entries:

Ella C., F. A. Nickerson	8 10
Hornet, C. H. McKnight	8 45

5. Canoe gymnastics, 2 entries:

F. A. Nickerson and C. H. McKnight being the only entries, Mr. Nickerson did some very pleasing feats, winning very easily.

6. Open sailing, 3 miles, 7 entries, gale blowing:

Pecowsic, G. M. Barney	35 20
Ghost, F. A. Nickerson	10 45
Le Cid, E. C. Knappe	47 10
Hornet, C. H. McKnight	Capsized.
Blanche, Paul Butler	Capsized but finished 1 10 00
Ella C., A. C. Patterson	Cap ized.
Northampton, F. French	Capsized.

7. Standing paddling, 300yds., 2 entries:

Ghost, F. A. Nickerson	3 12
Hornet, C. H. McKnight	3 24

The sailing of Pecowsic was remarkable, the heavier the wind blew the more she seemed to fly, taking the lead at the start she seemed to leave the others out of the race.

Ghost (Vesper model) acted bravely in the heavy wind, carrying more sail than Pecowsic.

The capsizing of Blanche was due to shoal water, her centerboard striking ground.

Le Cid and Hamlet (Joyner) acted bravely through the heavy wind, carrying more sail than necessary.

The wind blew a regular gale throughout the race and the above race could be compared with the Stony Lake meet of the A. C. A. when so many capsized.

The meals were served in the open air by Farmer Lester, and seldom did canoeists enjoy a meal more than there.

After selecting prizes the canoeists started home, many being towed up by Mr. Barney's launch, others taking train from Longmeadow, which is just across the river. E. C. K.

MOHICAN C. C.—We have received a copy of the constitution and by-laws of the Mohican C. C., a very neat little pamphlet in a blue cover, with the club device in gold. The club now numbers forty-four active members, with twenty-seven canoes.

VESPER BOAT CLUB.—The annual regatta of this club was held on June 23 at Lowell, Mass., two tandem canoe races, junior and senior, being on the programme.

THE NEW CONSTITUTION OF THE A. C. A.

THE following report and the accompanying constitution and by-laws have been submitted to Com. Wilkin by the Committee on Revision. Besides the changes mentioned in the report the basis of representation has been changed from one member of the Executive Committee for each 100 members of a Division, instead of for each 30 members present at the Division meet. The changes in the dues and in the proportions paid by the Divisions to the general association should remove the objections formerly made and largely increase the membership:

To R. J. Wilkin, Commodore:

Your committee have carefully considered the matters referred to them by resolution of the Executive Committee, and have studied the recent changes in the constitution, together with such others as have been considered advisable, and now beg to report unanimously in favor of the accompanying constitution, which will explain itself. Although the changes seem to be numerous, nothing has been done which was not absolutely necessary for consistent working. The work of your committee may be divided under two heads: First, the arrangement in perfected form of the amendments already adopted. Second, the introduction of new amendments. Among the latter the chief is that reducing the subscription to the old rate of $1. Reliable estimates and the experience of the Divisions, and of this year's committee on A. C. A. camp and of the W. C. A. show conclusively that the amount is ample; and a large increase of membership will, without doubt, immediately follow. Besides which the acceptance by the Western Canoe Association of the invitation to join the A. C. A. apparently will be more practicable if the change be made. Other amendments arrange for the collection of dues and admission of new members by Division officers, and the contribution by Division of 30 per cent. toward the general fund; this proportion is recommended after careful inquiry, it is assumed that a more economical administration by honorary officers will reduce expenses considerably and that most of the camp requisites will be self-supporting instead of expenses to the A. C. A. Provision has been made for regular rotation of commodore and camp in the different Divisions, also for representation of clubs on nominating committee, also for duties of officers and committees hitherto very loosely defined.

This has been done in the most conservative spirit, an endeavor to embody the prevalent opinion of the Association as ascertained by correspondence with every Division. All of which is respectfully submitted.

ROBERT W. GIBSON.
EDWARD W. BROWN.
GEORGE L. PARMELE.

Constitution and By-Laws, as amended up to date, including the changes passed at Executive Committee meeting in New York, Feb. 12, 1887, and recommendations of sub-committee appointed at that time:

CONSTITUTION.

ARTICLE I.

This Association shall be called the American Canoe Association, and be comprised in such geograpical divisions as may be deemed advisable by the Executive Committee.

ARTICLE II.

Its object shall be to unite all amateur canoeists for purposes of pleasure, health or explorations, by means of meetings for business, camping, paddling, sailing and racing, and by keeping logs of voyages, records of waterways and routes, details, drawings and dimensions of boats, and collections of maps, charts and books.

ARTICLE III.

Any gentleman over the age of 18 years may become a member of this Association whose application for membership has been announced for fourteen (14) days in one of the official organs of the Association by the Division Purser, and approved as provided in Constitution, but only canoe owners in good standing are active members and are entitled to vote at any meeting of the Association or of their respective Divisions.

ARTICLE IV.

Honorary members may be elected by a unanimous vote of the Executive Committee. Practical canoeists only are eligible. The honorary membership list shall be revised every two years by the Executive Committee.

ARTICLE V.

The officers of this Association shall be a Commodore and a Secretary-Treasurer, and for each Division a Vice-Commodore, a Rear-Commodore and a Purser.

The Commodore and Secretary-Treasurer shall be elected by the Executive Committee at the A. C. A. Camp, or at some subsequent meeting of that Committee, and they shall hold office for one year from the first day of the following November or until their successors are elected.

The Commodore shall be elected from each Division in turn, and the next annual meet of the Division to which the Commodore belongs shall be merged in the A. C. A. Meet.

In the event of one or more of the Division Officers being chosen to fill these positions, the vacancies so caused shall be filled from the same Division to which the officers vacating the position belonged, by the members of the Executive Committee, and the said vacating officers may vote on this and other questions on their Division Committee until their successors are selected.

In the event of the office of Commodore becoming vacant by any cause, the same shall be filled for the unexpired term by the ranking senior officer of the Division from which the Commodore was elected.

The Vice and Rear-Commodores and Pursers shall be elected by the members of their respective Divisions at the Annual Division Meet, or at the General Annual Meet of the Association, or as otherwise provided herein, and shall hold office for one year or until their successors are elected.

Regular nominations for Division Officers shall be made by a committee of active members, each club having six A. C. A. members being allowed one representative, and clubs having twelve A. C. A. members being allowed two representatives. Any twelve members not belonging to represented clubs may have one representative on committee.

All officers shall be elected by ballot.

ARTICLE VI.

In each Division exceeding 100 members, there shall be elected one member for each hundred or fraction thereof beyond the first one hundred, and these members with the officers of the Division shall be the Executive Committee of such Division. The officers of the Association with the Executive Committees of the several Divisions shall constitute the Executive Committee of the Association. They shall have the general government of the Association, and power to fill vacancies until the next annual meeting of the Divisions. They shall hold a meeting at the A. C. A. Camp to elect the Commodore and Secretary-Treasurer, and to determine the locality for the next A. C. A. Camp, and shall hold the annual Committee meeting in November at such time and place as shall be specified by the Commodore-elect. At all meetings of the Executive Committee seven members and deputies shall constitute a quorum, and when in the opinion of the Commodore a special meeting is not necessary, all questions may be voted upon by letter to the Commodore. A member of the Committee may appoint by letter another member in good standing of his own Division as deputy to vote for him in his absence at any meeting of the Committee, but no person to have more than one vote.

ARTICLE VII.

It shall be the duty of the Commodore to preside at the annual meetings of the Association and Executive Committee, to attend the A. C. A. camp, and to make all preliminary arrangements for the same, to examine and certify for payment all bills presented to the Treasurer, to arrange dates of the Division meets according to Article III. of the By-Laws, to visit, if practicable, each of the Division meets during the year, and to see that all rules and regulations are properly enforced, to pass on qualification of names whenever published for membership in the official organs. The Commodore-elect shall, within thirty days of his election, appoint a Regatta Committee of three members for the annual camp of the A. C. A., and a Committee on Camp Site and Arrangements of two members, with power to add to their number.

ARTICLE VIII.

The Vice-Commodores shall organize and preside over the annual meets of their respective Divisions, and within thirty (30) days after their election appoint a Regatta Committee of three (3) active members for their Divisions. In the absence of the Vice-Commodores the Rear-Commodores will act in their stead. Those officers in whose Division a meet is held take precedence as to rank.

ARTICLE IX.

It shall be the duty of the Secretary-Treasurer to keep a record of the proceedings of the Association and of the Executive Committee; to keep a correct roll of members; to report to Division Pursers any applications for membership; to print each year the "Association Book;" to receive all moneys due the Association Treasury from the Divisions or elsewhere; to pay all bills approved by the Commodore, and to make an annual report of finances.

Pursers shall receive and expend for their Division meets and other necessary expenses, subject to the approval of the Vice-Commodores of their Divisions, the money due from the members. They shall also forward to the A. C. A. Secretary-Treasurer within four weeks after the Annual Camp of the A. C. A. a list of members and canoes of their Divisions, and the amount due from the Division to the A. C. A. Treasury. Pursers shall receive applications for membership in their respective Divisions, and cause same to be announced in one of the official organs, after which, if not objected to within fourteen days, and if approved by the Vice-Commodore, he shall notify the candidate of his admission. The Commodore may prevent the admission of any person by his formal objection—objections from other members shall be passed upon by the Vice-Commodore.

ARTICLE X.

A quorum for the transaction of business at the annual meets of the Association, or of the Divisions, shall consist of twenty (20) members.

ARTICLE XI.

This Constitution may be amended at any meeting of the Executive Committee, provided the amendment receive the votes of at least two-thirds of said Committee, and have been published in general terms in the official organ of the A. C. A. at least two weeks before being voted upon.

BY-LAWS.

ARTICLE I.

Application for membership shall be made to the Division Pursers and shall be accompanied by the recommendation of an active member and by the sum of two dollars, one dollar as entrance fee and one dollar as dues for the current year, to be refunded in case of the non-election of the applicant. Purser shall forward names of applicants to Vice-Commodore.

The dues of members elected after Sept. 1 of any year shall be credited from the following January. Each subsequent annual payment shall be one dollar and shall be payable before April 1. If not paid the Purser shall notify the members in arrears; and if at the end of one month more the dues are still unpaid the membership shall be forfeited and the member's name stricken from the roll, except in the case of absence from the country or other sufficient reason.

The entrance fee and dues shall be received by Pursers, 70 per cent. for the Division and 30 per cent. for A. C. A. Treasury.

ARTICLE II.

No assessment shall be levied for any purpose whatever.

ARTICLE III.

There shall be an Annual Meeting and Camp of the Association, and if practical of each Division, for business, camping and racing, the date and places to be subject to the approval of the Commodore. Division Annual Meets shall, if possible, be held before the A. C. A. Camp, and so as not to interfere with one another.

ARTICLE IV.

The Association signal shall be a pointed burgee, the breadth being two-thirds the length—the size for canoes being 12x18in.—the field red with a longitudinal white stripe one-fifth the width, bearing the letters A. C. A. in red.

ARTICLE V.

The officers' flags shall be swallow-tailed pennants 12x18in., that of the Commodore shall be of blue, on which shall be displayed in white a pair of crossed paddles, with the letters A. C. A. in the upper three corners and a star in the lower one; that of the Vice-Commodore to be of red with the same device in white; that of the Rear-Commodore to be of white with the same device in red, and that of the Secretary-Treasurer to be of white with the letters A. C. A., supported by a quill, in blue; that of the Purser to be of white with the same device in red.

ARTICLE VI.

Each canoe may carry a distinguishing signal, rectangular in shape, 12x18in. The Association signal shall be carried at the peak of the mainsail, the officer's or private signal immediately below it; national and club signals at discretion.

ARTICLE VII.

The Secretary shall publish, after each annual meeting of the Executive Committee, "The Association Book," containing the Constitution, By-Laws and Sailing Regulations, lists of officers, members and their canoes, and shall send a copy to each member.

ARTICLE VIII.

When the same name has been given to two or more canoes, the one first entered on the list of the Association shall be regarded as the original owner. The others shall be designated by bracketed numbers, [1], [2], etc., in the order of entry. Cases of doubt as to priority of entry shall be decided by the Secretary.

ARTICLE IX.

It shall be the duty of each Regatta Committee to prepare and publish, not later than June 1, an order of races for their respective regattas; to superintend the laying out and buoying of courses; to provide the prizes; to appoint judges, starters and time-keepers, and to decide all protests. They shall post the course and conditions of each race in some prominent place, at least one hour before the race is called; and shall have entire control of the races at their respective meetings, except that at the A. C. A. meet the Division Committee shall act as local sub-committee.

ARTICLE X.

The uniform of the officers of the A. C. A. shall be o blue, with the letters A. C. A. embroidered in gold on the collar. The Commodore shall wear three rows of gold lace on each sleeve, the Vice-Commodore two, the Rear-Commodore one. The use of uniforms shall be at the discretion of each officer.

ARTICLE XI.

Each member will send to one of the official organs a list of such cruises as he may have made upon completion of the cruises; noting especially the condition of such water as he may have cruised on, rapids, dams, shoals, good and bad camp grounds, and all items of value to other canoeists.

ARTICLE XII.

Any member who is guilty of ungentlemanly conduct, or of racing for money, shall be liable and may be expelled by a unanimous vote of the Executive Committee at any of its meetings, but fourteen days' notice shall have been given to the person it proposes to expel. Any canoeist who shall, after this date, Nov. 7, 1885, race for money, shall be considered a professional, and shall be ineligible for membership in the A. C. A.

ARTICLE XIII.

No changes shall be made in the classification, measurement or sailing regulations unless sanctioned by the Executive Committee.

ARTICLE XIV.

These By-Laws may be amended by the vote of a majority of the Executive Committee of the Association, excepting Article II., which can be altered only by a unanimous vote of the Association.

THE WESTERN MEET.

MR. ORANGE FRAZER'S article in June 30th issue has caused a broad ripple of merriment to o'erspread several hundred Western canoeists' faces. The old tried and true member of the A. C. A. has fallen asleep, and, like Rip Van Winkle, awakens to find many changes, of which he will learn as the years roll by.

Can it be possible that a cancer living in Ohio is not aware of the Western Canoe Association, just entering its third year? And yet Mr. Frazer totally ignores the large meet that is to be held this month "right in his back yard," and implores the A. C. A. to hold her next camp "as far west as Michigan," because it would be of such great benefit to the Association and Western members.

O, Orange Frazer, I weep for you! It was the A. C. A. who ignored the little band of thirteen that applied for recognition as a Western Division in her first season, July, 1885, and it is the few old tried and true A. C. A.'s who break forth now and then lamenting the long and narrow path to Bow Arrow Point, totally failing to remember the first circular issued in the West: "Believing there are many members of the A. C. A. and unattached canoeists in the West who are unable to attend the Association meets in the East, we wish to call attention to the forming of the Western A. C. A.," etc.

The W. C. A. has formally asked to be made the Western Division, and we truly trust the deed will be done in August, and that the A. C. A. 1888 meet will be held under such supervision, "as far west as Ohio," any way.

Don't fritter away your rest over the trials of "the man in New Jersey," but "take your canoe under your arm" and step into "your own front yard" to find "many old, familiar faces round the camp-fire" ready to give you a hearty welcome.

W. C. A. No. 76.

W. C. A. MEET, JULY 18-31.

THE programme for the third annual meet at Ballast Island, which begins next Monday, is as follows:

No. 1.—9:30 A. M.—Grand opening, sailing, 3 miles, open to all canoes, no limit to ballast or rig.
No. 2.—Sailing, Class B, 3 miles, no limit to ballast or rig.
No. 3.—Sailing, Class A, 3 miles, no limit to ballast or rig.
No. 4.—Paddling, Class II., 1 mile.
No. 5.—Paddling, Class III., ½ mile.
No. 6.—Paddling, Class I., 1 mile.
No. 7.—All classes, 3 miles; sail first ½ mile, paddle second, sail third, paddle fourth, sail fifth, paddle sixth.
No. 8.—Double paddling race, two men, Class IV., ½ mile.
No. 9—Upset race, Classes I. and A, 300ft.
No. 10.—Sailing, all canoes, ½ miles, open to novices only.
No. 11.—Paddling, Class IV., ½ mile.
No. 12.—Sailing for Gardner Challenge Cup, no limit to ballast or rig, 6 miles. The cup is now held by C. J. Bousfield, Bay City, Mich.
No. 13.—Sailing upset race, all classes, upset, all sail spread. No special appliances allowed, open cockpit.
No. 14.—Hurry-scurry race, open to all canoes, run 100yds., swim to canoe and paddle 200yds.
No. 15.—Sailing, all classes, no ballast, 3 miles.
No. 16.—Hand paddling, 100ft.
No. 17.—Tournament.

All the races will be made during the first week. The time for each race will be fixed by the Regatta Committee, and will be duly announced. The races will be governed by the American Canoe Association rules. The course will be around an equilateral triangle of one-half mile sides. Monday, July 18, will be given to the formation of camp; Tuesday, July 19, review of the fleet, after which general cruising and visiting among canoers; Wednesday, July 20, beginning of the races. Fireworks on Thursday night. The Canoe Hop will take place at Wehrle's on Friday night, July 22.

The second week will be given to general cruising and visiting the neighboring islands. The time for holding the annual business meeting will be announced at the meet.

The regatta committee includes William Ford, Sandusky, O.; Harry Gardner, Cleveland, O.; C. J. Bousfield, Bay City, Mich.; Lane Lockwood, Sandusky, O. The general regulations are as follows:

1. A member of the executive committee will be appointed daily by the commodore to act as officer of the day.
2. The occupants of each tent are expected to put their tent and the surrounding space in order by 9 A. M. each day.
3. No visitors will be allowed in camp before 10 A. M.

It is left to each canoer to see that the above rules are carried out.

A branch post office will be established at headquarters. Mail should be addressed to Canoe Camp, Ballast Island, via Put-in-Bay, Ohio.

Tents will be pitched to the liking of each individual or club, under the supervision of the Superintendent of Camps.

Invitations to the canoe hop will be restricted to the canoers and their immediate friends. The number of invitations will, of necessity, be limited, and it is especially requested that all who expect to attend will procure tickets from the Secretary on or before noon of the day of the ball.

Meals can be obtained at the hotel by those who do not desire to cook in camp.

Ballast Island can be reached by daily boats from Cleveland, Sandusky, Toledo and Detroit.

Camp supplies can be obtained at Put-in-Bay at moderate prices.

Canoes will be carried free of cost on the steamers, provided owners are with them.

Headquarters, Commodore's tent.
Assembly Room, Ballast Island Club dining room.
Secretary's office at headquarters.

Camp opens next Saturday. A number of distinguished visitors are expected. Among them comes Vaux, Gibson, Com. Wilkin, Com. Blow from California, Will McKendrick and Leys from Toronto, F. D. Shiras from Iowa, and Mr. Rushton. Com. Ellard will bring his old oaken canoe Kelpie. He has a new rig and the canoe fixed up for the occasion. The Stillwater C. C., of Dayton, O., will be there a dozen strong and with their own cook. The Jabberwocks will also be on hand with their own cook.

Phil Wackerhagen, of the Mohicans, sends his regards and regrets his inability to gather in more prize flags on account of business engagements in Albany. He also says: "Was mighty glad to see that young Stewart in his Pecowsic cleaned out those old mug-winners. How sick it must make them!"

The Sandusky C. C. had a regatta on the Fourth. Five starters—five upsets; that's all.

The W. C. A. Year Book is just out and contains a good deal of information. A few mistakes are noticed. No. 123 should be Alfred H. Rice, and 130 Thomas S. Gates. It is much regretted that the map of the Lake Erie Islands was not in the book. The greatest omission of all was leaving out the name of that prince of canoeists, C. B. Vaux, 133. The only excuse is that the book was printed in a distant city and the time too short to permit of proof reading by the editor. But C. B. V. is one of us all the same. The following are the latest names of members: Chas. L. Rist, 131; Rollin DeWeese, 132, and Geo. S. Schaeffer, 134, all of the Stillwater C. C., Dayton, O.

The Wabash C. C., of Terre Haute, Ind., expect to join in a body. Their membership is ten at present. The vote on the question of the W. C. A. becoming the Western Division of the A. C. A. will be taken at the meet.

THE PASSAIC RIVER MEET.

THERE was a large attendance of canoeists from Paterson and Newark at the Passaic River meet at Dundee Lake on July 2-4, but the only ones from below Newark were half a dozen from Bayonne and one from Bergen Point. No New York canoeists were present, and Com. Wilkin, who was cruising in Newark Bay with the Brooklyn C. C., got no nearer than Bayonne. The meet was a very pleasant one, the only drawback being the mosquitoes, which were present in such numbers that sleeping was impossible. The programme of races was successfully carried out on Monday, the events being as follows:

Sailing Race.—Class A.—E. Stern (Essex), 1st; Charles Blumdell (Paterson), 2d; E. Pennington (Paterson), 3d; C. J. Kirker (Paterson), 4th.

Sailing Race.—Class B.—George Cox (Essex), 1st; Charles Cooke (Paterson), 2d; Linn Palmer (Ianthe), 3d; H. S. Farmer (Ianthe), J. L. Douglas, Jr., (Ianthe), Geo. Douglas (Ianthe), O. F. Coe (Hudson River), withdrawn.

Paddling Race.—Class A.—E. Stern (Essex), 1st; L. B. Palmer (Ianthe), 2d; F. L. Hatch (Ianthe), 3d; George Cox (Essex).

Sailing Race, Class B, Amateur.—George Douglas (Ianthe), first; J. L. Douglas, Jr. (Ianthe), second; Dr. O. F. Coe (Hudson River), third; William Burling (Ianthe).

Novice Sailing Race.—Charles Cooke, Paterson, first; W. Burling, Ianthe, second.

Consolation Sailing Race.—J. L. Douglas, Ianthe, first; Charles Cook, Paterson, second; W. H. Hillier, Essex; O. F. Coe, Hudson River, and Lyn Palmer, Ianthe, capsized.

Tandem Paddling Race.—O. F. Coe and C. J. Parkman, Hudson River, first; G. A. Magie and F. McLees, Rutherford, second; J. Pierson and W. Burling, Ianthe, third; E. Stern and W. Walker, Essex; W. Scott and George Scott, Essex.

Class A Paddling Race.—W. H. Walker, Essex, first; W. Burling, Ianthe, second.

Quarter Mile Swimming Race.—Wm. Walker, Essex, first; E. Pennington, Paterson, second; Frank Kirker, Paterson, third; G. A. Magie, Rutherford; D. W. Bain, Rutherford.

Upset Race.—50yds. run, 50yds. swim, 50yds. paddling, upset, and paddle around buoy, J. Levi, Paterson, first; E. Pennington, Paterson, second; E. Stern, Essex, third.

Standing Paddling.—G. P. Douglass, Ianthe, first; George Cox, Essex, second.

Mr. Frank Kirker won the prize for the best flapjack. A number of handsome prizes were presented. The judge of the races was Dr. Graves, of the New York C. C. As far as the Passaic River was concerned the meet was a great success, but the location was so badly chosen that canoeists from about New York could not reach it. The few who tried it from Bayonne were 8 hours in covering the 18 miles, and encountered many obstacles and some very difficult carries, the return trip taking as long. There is no reason why this meet should not be a fixture each year, but it must be held in a central locality, the Newark canoeists coming down river and the New York going up, and all carries and dams must be avoided.

A. C. A. PRIZE FLAGS.—PROTEST.—New York, July 11, 1887.—To each and every member of the A. C. A. who have promised a flag to the regatta committee: Please take notice that your promise of a prize flag for the Bow Arrow Point meet not having been kept and performed by you, the said promise has been publicly and solemnly protested for non-fulfillment. In *testimonium veritatis*.—JOHN DOE, Notary Public.

A. C. A. NUMBERS AND SAILING EMBLEMS.

Editor Forest and Stream:

The regatta committee begs leave to call the attention of the sailers of the A. C. A. to the fact that the executive committee has amended the 4th rule of the sailing regulations by empowering the regatta committee "to dispense with so much of this rule as requires the carrying of numbers on sails in cases where individuals have private emblems on their sails of such size and character as, in the opinion of the regatta committee, will enable the judge to distinguish the canoes as readily as if the numbers were carried."

If any considerable number of sailors conclude to adopt private emblems, it is quite probable that if they make their choice without regard to what may have previously been adopted by others, some of the emblems will be so like others as to occasion confusion. With this in view, the regatta committee, under the discretionary power given it by the amended regulation, requests that any member intending to discard his number and carry a private emblem instead, will, in advance, submit a sketch and description of his proposed emblem to the regatta committee for its approval. The committee will not approve any emblem which is so like any other emblem previously approved as to occasion confusion; nor will the committee approve any emblems except such as are sufficiently large to be easily distinguished at a distance.

No member will be allowed to take part in a sailing race who does not carry either his A. C. A. number as provided in the 4th rule, or a private emblem which shall have been previously approved by the regatta committee. HENRY STANTON,
Chairman Regatta Committee.

NEW YORK, June 11.

[While this new regulation may meet with favor from some who prefer the circus poster style of decoration, it is a step in the wrong direction, as nothing is as neat and shipshape as a clean, white sail with the red number, and the latter is readily distinguished, while the emblems must be confusing at any distance. While some of these are amusing, the plain sail is in far better taste, and it only should receive official recognition from the Association.

TRANSPORTATION TO BOW-ARROW POINT.

Editor Forest and Stream:

The Brooklyn C. C. has made a very desirable arrangement for the transportation of its canoes and camp effects to Bow-Arrow Point, the advantages of which we shall be glad to share with any canoeists who may wish to avail themselves of them.

Captain M. Knowlton, of the canal boat C. W. Woodford, will take canoes, together with tents and baggage direct to Plattsburgh and the A. C. A. camp (or to any intermediate point) at $1.50 per boat, tents, baggage, etc., free.

We have arranged with Capt. Knowlton to tow to our club house at Bay Ridge on Saturday afternoon, Aug. 6, to take on board our canoes. We shall be glad to extend the courtesies of our house and to be of any assistance we can to canoeists who may desire to ship their boats from this point.

On Sunday, Aug. 7, and on Monday, Aug. 8, the C. W. Woodford will be at the canal boat piers on the East River, beside South Ferry, New York, and will take on board any canoes or baggage intended for the A. C. A. camp. She will leave New York, Monday, P. M., Aug. 8, by tow, arriving at Albany Wednesday morning Aug. 10. Fort Edward, Thursday, Aug. 11, Plattsburgh and Bow-Arrow Point Aug. 13. Canoeists desiring to cruise through Lake George should have their canoes marked Fort Edward. Canoes may also be landed at points on Lake Champlain should owners so desire.

Capt. Knowlton has been highly recommended to us as a reliable and careful man. The advantage of having canoes taken direct to Bow-Arrow Point without re-shipment will at once commend itself to canoeists.

Any further information will be cheerfully furnished by our Purser, Mr. M. V. Brokaw, 92 William street, New York, or by the undersigned, at 19 John street, New York.

J. F. NEWMAN, Com. Brooklyn C. C.

NEW YORK, July 11.

"THE OLD CANOE."

CHICAGO, July 5.—*Editor Forest and Stream:* Being an appreciative reader of your most excellent paper and believing you will be pleased to learn something of the authorship of the beautiful poem "The Old Canoe," which I noticed in your issue of May 19 last, I take the liberty of inclosing you herewith what the New York *Graphic* had to say in the matter in one of its weekly issues during the summer, I think, of 1874. I quote *verbatim* from the paper:

"As questions of disputed literary authorship seem to have a tireless zest for the popular mind, there may be some entertainment for the general reader in a devotion of our Solitaire column this week to at least two such questions which relate to poems that have been given there. There, for instance, are the much discussed lines on 'The Old Canoe,' concerning which several friendly correspondents have addressed us. M. T. Hardy, of Mobile, pleasantly known as adding many choice fugitive brilliants to our collection, says: 'I have the 'Old Canoe,' published in your seventh number, as by Emily Rebecca Page, in my portfolio, with the name of General Albert Pike as author. Am I positively wrong?'

"Another communicant, Mr. W. F. Fox, of Davenport, Ia., after remarking incidentally that 'Isle of Beauty, Fare Thee Well,' much disputed of late, was written by Thomas H. Bailey and published as his in the 'Musical Odeon' in 1846, says of 'The Old Canoe': 'I have in a scrap-book a copy of this poem, the authorship of which is attributed to Albert Pike, formerly of Little Rock, Ark., but now a prominent attorney of Washington, D. C. Mr. Pike has long been known as a poet and author, and several years ago he published 'The Old Canoe' as his production, which he would not do were he not the real author. Have you considered Mr. Pike's claim to the poem? I would very much like to hear further from you in this matter through the columns of the *Weekly Graphic*. If now in error will only be too glad to be correctly informed.'

"Several other literary collectors write to the same effect; yet the claim of the late Miss Page to the authorship must remain the stronger until Mr. Pike himself asserts his superior property. The poem had been wholly out of print for many years, when in August last the present writer, who had found it published anonymously at least a dozen years before in an obscure and short-lived Southern paper, reprinted it with a question as to the authorship, in a social and literary department long conducted by him in the New York *World*. The poem, as taken from the Southern paper, was very defective in versification and was corrected, and even amended by whole lines in the aforesaid reprint. The corrected version is the very one sent to us anew by our Iowa friend as Mr. Pike's.

"From the *World* the lines were copied by a multitude of newspapers, several of which, without explanation, credited Mr. Pike with the authorship—possibly because they had been spoken of as coming from an Arkansas journal, but presently Mrs. Elizabeth Akers Allen, herself a poet of established reputation, author of 'Rock me to Sleep, Mother,' and other charming verses, wrote as follows on the subject to the *World* editor: 'Sir—In the *World* a few Sundays ago, I noticed the poem of 'The Old Canoe,' and recognizing in it an old acquaintance, I am tempted to state the facts regarding its authorship. The author of the poem was Miss Emily Rebecca Page, of Bradford, Vt. It must have been written nearly, if not quite, twenty years ago. Miss Page was born, I think, in 1832—certainly within a year of that time. She died in Chelsea, Mass., in 1859 or 1860. For the last three years of her life she was, I believe, copy-holder in the office of Ballou's publications. The poem in question was probably her best, and was quite popular at one time. Mr. B. P. Shillaber, of Boston, was for some years a personal friend of hers, and could say much more regarding her than I can do, as I never saw her after her school days. From an extended notice of her, written by Mr. Shillaber after her death, I quote the following: "The poem that won her the widest celebrity was 'The Old Canoe.' It was extensively copied in this country, and in Europe was deemed worthy of illustration in a French publication, wherein it was attributed to Eliza Cook." Miss Page was quite ambitious and appreciation was very sweet to her; so, though I suppose it makes small difference to her now, I make this little statement in her behalf. Even people who write verses should have their due after they are dead. I remain, very respectfully, Elizabeth Akers Allen, Greenville, Hudson County, N. J., Sept. 5.'

"Other apparently competent authorities wrote in similar assertion to the same journal. And so the case rests. There may be an error on either side of the controversy. Such other verses by Miss Page as we have seen are far inferior to 'The Old Canoe,' and the latter is certainly more masculine than feminine in sound; yet the argument for the lady's authorship is not to be easily combatted."

Finding the authorship of Albert Pike denied I took occasion to write him, asking if he were the author of the poem "The Old Canoe," to which he replied, as per copy of letter herewith:

"ALEXANDRIA, Va., May 20, 1874.—W. F. Fox, Esq. My Dear Sir: I have been from time to time disclaiming the authorship of 'The Old Canoe" for ten or more years. Last summer I sent to the New York *World* an express disclaimer, having seen in that paper that the authorship of the poem was supposed to be claimed by me. I shall by to-day's mail send disclaimer to the *Graphic*. I did not write the poem, nor even add a word to it, or change it, or try to amend it. I suppose it was attributed to me because it was published once in the *Little Rock Gazette*. Certainly I never thought of setting up any claim to it. Very truly yours, ALBERT PIKE."

Mr. Pike's letter settles the question, so far as his claim to authorship is concerned. He distinctly states he did not write the poem. It was certainly not written by Eliza Cook, although strange as it may seem, it has been accredited to her, though not to be found, nor referred to, in her published volume of poems. I think it fair to conclude upon the evidence of Mrs. Elizabeth Akers Allen, and of Mr. B. P. Shillaber, that the authorship of the poem should be conceded to Miss Page, as, since Mr. Pike's denial of having written it, Miss Page's claims seem to stand uncontested.

If not intruding too much upon your space, for me, I should be pleased to have you print the statement of facts I give you, which may be appreciated by many of your readers who may admire the poem and who would be gratified to know who wrote it.

W. F. FOX.

CANVAS CANOE BUILDING.

FOR amateur mechanics who are fairly good workmen and at the same time fond of boats, the construction of a first-class cedar canoe is a most interesting task, testing well the skill and ingenuity of a mechanic. There are many, however, who care nothing for the mechanical work, but who wish to build a canoe for the sake of having one and who look on the time spent with hammer and saw as so much wasted. For those unskilled in the use of tools or who do not care to expend time and money in the construction of a wooden boat, canvas offers an excellent substitute, as a very good canoe can be built in a few days and at a nominal expense. The many articles on canvas canoe building that have appeared in the last few years all take for granted the possession of some mechanical training and a knowledge of the use of tools. There are many, however, to whom this class of instruction is useless, as they do not understand the terms used and have not the time to master them. To meet the wants of these novices the Forest and Stream Pub. Co. has just issued a most useful little book, "Canvas Canoes and How to Build Them," by Mr. Parker B. Field, of Boston, an amateur builder. The directions are as plain and explicit as possible for the construction of a canoe 13ft. 6in.×27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next.

THE LORNE AMATEUR AQUATIC CLUB, of Halifax, N. S., are the fortunate possessors of one of the finest boat houses to be found on the continent. It is beautifully situated on the shores of Halifax Harbor near the "Narrows," and can be reached by the horse cars from the center of the city in about twenty minutes. The buildings were originally erected by the Royal Halifax Yacht Squadron for their own accommodation, but that organization finally broke up and the property was disposed of at sheriff's sale. It remained idle for a number of years and had fallen into a rather bad state of decay when the Lorne Club secured a lease on favorable terms and commenced a work of reformation which is now well advanced, and when completed will give the members of the club quarters of which they will have every reason to feel proud. On the water front there is a good-sized boat house with flat roof. On either side a pier extends out into the water with landing steps. Moored alongside the south pier is a floating bath with a number of dressing rooms. Just back of the north pier is a building formerly a bowling alley, but now used for storing scull boats and boats of a similar character. South of this and overlooking the boat house is the club house, a two-story wooden building with pitch roof and basement, in which there is ample accommodation for the club, janitor's family, and storing masts, sails, oars and the numerous other articles which the members of such a club collect around them. On the side of this building facing the harbor are two substantial verandahs from which a magnificent view of the harbor is had, and which form one of the pleasantest lounging places imaginable on summer afternoons and evenings. Much of the success of the club is due to the co-operation of Dr. Charles Cogswell, of London, G. B., formerly of Halifax, whose name has for many years been associated with aquatic sports in his native city.

THE NORTHERN DIVISION MEET.—The Northern Division meet, which takes place from Aug. 1 to 12, already promises to be very successful. Our genial Vice-Commodore, Col. Harry Rodgers, has made arrangements with the Grand Trunk Railway for single fare for the round trip, canoes and kits free. The steamer Norsman, from Charlotte, the port of Rochester, to Point Hope, has agreed to carry members for the round trip for $2, canoes and kits free; for any other information regarding transport address I. D. Collins, Peterboro, Ont., who will be pleased to furnish it. The camp will be at the same place as the '83 A. C. A. meet, at Stony Lake. The islands in the neighborhood are in much better shape for campers than they were at that date, and are minus the centipedes which caused so much consternation to many of the uninitiated; they have all disappeared. The fish have improved the passing hours by growing larger and more hungry for silver in the shape of spoon baits, and no doubt many a "lunge" will make a savory breakfast for the hungry canoeist. The racing promises to be specially good in the paddling line. It is not known whether Johnson will be present, but Brockville will send some of her cracks, also Ottawa and Kingston, while Peterboro, Lindsay and Bobcaygeon will send all their old veterans and many new ones, and the man who gets first place in the races will have to hump himself and have a pretty slippery canoe. In sailing, the Toronto, Hamilton, Kingston, Brockville and Ottawa clubs will hunt for the decked flags, while Galt, Peterboro, etc., will look after the open canoe races. It is expected that several of the Western Division will be present on their way to the A. C. A., also Commodore Wilkin and several members from among the border clubs who can make it convenient to be present. To all who come we promise a rattling, jolly good time, such as true canoeists enjoy.—MAC.

NEW YORK C. C. REGATTA.—The difficulty of finding wind and tide suitable for canoe sailing on the Upper Bay has led to a change of programme for the regatta of the New York C. C. on Saturday, postponed from June 25. On that date the two main sailing races were started first, with a strong tide and little wind, all the boats finally being recalled. This so disarranged the programme that the other events were postponed. On Saturday next an interesting series of paddling races will be first started, with sailing races later if there is wind. The programme is as follows, the first race being called at 3 P. M.: Paddling, Classes 2 and 4; tandem paddling; burlesque paddling race; sailing race, inside course, 3 classes, seniors, novices and unclassified boats; standing paddling race; hand paddling race; gymnastics. The races are open to members of all other canoe clubs.

CANOEING IN CHICAGO.—The Chicago Navy, organized last year, held its first regatta on Calumet Lake, at Pullman. The Navy includes the following boat and canoe clubs: Farragut, Delaware, Pullman, Evanston, Tippy-Canoe, Iroquois, Hyde Park, Ogden, Quintard, Union, Douglas and Catlin. Its officers are: G. A. McClellan, Com.; J. M. Price, Vice-Com.; E. W. Crain, Ensign; L. J. Marks, Sec. and Treas. The canoe races included two single paddling races, a tandem and an upset. In the first, A. W. Kitchen won in 11.37, with W. M. Dunham 12.09 and H. B. Cook 12.29. In the second race R. P. McCune beat B. W. Wood. In the tandem, Messrs. Kitchen and Dunbar beat A. B. and N. Cook. The upset race was won by Dunham.

A NEW HALIFAX CLUB.—Last season a number of interesting skiff and canoe races were held on the Northwest Arm, the picturesque sheet of water adjacent to the city of Halifax, N. S. One of the the results is the formation this season of the "Sailing Skiff and Canoe Club of Halifax," with the following programme of events yet to come off, July 16, 30, Aug. 13, 20, Sept. 10, 24. The officers are W. S. Clouston, Capt.; J. C. C. Almon, Sec.-Treas., and W. S. Clouston, J. C. C. Almon, G. C. Hart, and A. W. F. Moren, Committee on Management. The club numbers 22 members with fourteen skiffs and canoes.

A. C. A. MEMBERSHIP.—Trenton, N. J., July 11.—*Editor Forest and Stream:* The applications for membership to date are: Wm. T. Hilton, Chas. D. Robinson, Chas. S. Williams, Harry A. Marvel, Newburgh, N. Y.; Geo. C. Clark, Edward Prime, New York city; Jas. R. Gilfillan, Northampton, Mass.—WM. M. CARTER, Secretary.

SINCE ladies have been accustomed to use Glenn's Sulphur Soap in their toilet their personal attractions have been multiplied, and it is seldom they are seen disfigured with blotches and pimples, or rough or coarse skins. Sold by all druggists. HILL'S HAIR AND WHISKER DYE, black and brown, 50 cents.—*Adv.*

THE CAPSIZE OF THE MYSTERY.

LESS than a year ago we spoke in strong terms against the criminal carelessness that crowds trusting and ignorant women and children into boats of the most dangerous description and commanded by reckless and incompetent men. The capsize of the centerboard schooner Sarah Craig, to which we then alluded, seemed to surpass most similar cases, both in the loss of life and in the display of ignorance and recklessness by the leaders of the party; but the disaster of Sunday last at Ruffle Bar unfortunately exceeds it in both respects.

Without going into the painful details that fill pages of every daily paper, it is enough to recount the leading facts. An organization known as the Crescent Y. C. held a picnic on Ruffle Bar, an island in Jamaica Bay, about 3 miles from Canarsie and just opposite Barren Island. Two "yachts," the Mystery and Christina, shoal draft centerboard sloops, with the large rigs common to the locality, the former handled by "Captain" David Hendrickson and the latter by "Commodore" Williamson, of the Crescent Y. C., carried over a number of persons, chiefly women and young children, from Canarsie to Ruffle Bar in the morning. Plenty of beer was carried, too, and the picnickers indulged all day.

At sunset all prepared to return, but as the Christina was leaking four men and twelve women went in her, the remaining women and children, to the number of 35, being packed in the cabin and about the decks of the Mystery, a boat 40ft. long over all and 15ft. beam. In charge of this load was the captain, who was partly intoxicated, his son, 9 years old, and a youth who was not a sailor. The wind was strong and puffy from southwest, and the mainsail was double-reefed. The boat started away, followed by the Christina, and as the latter came nearer Captain Hendrickson started to shake out the reefs. The women protested as the wind was still heavy, but the captain paid no attention to them. Whole sail was made and the yacht was again under way. A puff struck and heeled her, the passengers as far as possible crowding to windward, when she came about, at once capsizing. Many of the children were crowded in the cabin and could not escape, while those on deck were thrown into the water.

Moored at the Barren Island wharf near by was the coal schooner Reaper, the colored cook, Andrew Robinson, being on deck. He at once jumped into the yawlboat and rowed to the wreck, where he picked up nine or ten women and children, his boat being loaded to the gunwale. By this time the tug Deane, which had been some distance off, had rounded the bar and come up, taking Robinson's load on board. Another young man, August Lutz, employed on Barren Island, took a bateau and also came to the rescue, saving several. The other yacht, in command of the brave "Commodore," was not far away at the time of the disaster, and might have saved nearly all, but instead of crowding up to the wreck the mainsail was lowered and the anchor dropped by her crew when a hundred yards or more away. Two men on board her plunged in and swam to the Mystery, each succeeding in rescuing his wife. The boats stayed by the wreck until nothing more could be done, and then the Deane took the survivors and several dead to Canarsie.

On Monday the Mystery was found floating by the Barren Island wharf, with mast carried away, and was towed to Canarsie, where ten bodies were taken from her. The cabin and cockpit was full of bottles and kegs. The total number drowned will amount to nearly 25, nearly all children, as but 13 are reported saved, while there were about 40 on board.

The causes of the disaster are plainly seen, and the warning stands clear to all. The boat was a shoal draft, light displacement, centerboard craft, with the usual sand ballast and a big rig, a near relative of the Sarah J. Craig; both being of the type that abounds about the south shore of Long Island. She was overcrowded with persons who were absolutely helpless in any emergency; she was commanded by a reckless and irresponsible man, under the influence of liquor, and with no one to aid him but a child and an ignorant young landsman. Under these conditions and in a dangerous breeze the boat was racing with another.

The immediate responsibility for the murder of so many rests with the captain who perished with them. In a lesser degree it rests also will the husbands and fathers, the protectors of the victims, who through carelessness or ignorance imperilled the lives of those who trusted in them. There are others, however, who are responsible for these occurrences which shock the community with such frightful regularity, the men who encourage, who build and who use such craft as the Mystery, the Craig and the Sophia. Only last summer we wrote of these men and their boats in the following words:

"Perhaps the most blame in the whole matter attaches to those who, while fully competent to judge, have persistently championed the cause of the wide, beamy, "seaworthy" centerboard boat, and who for ends of their own have opposed the reforms now so general in the direction of depth and less beam. To their false teachings is due much of the ignorance and misapprehension of nature's laws which has kept in use for pleasure purposes these floating coffins. The shoal draft, beamy centerboard boat is a necessity in America; with our shoal harbors and streams commerce is only possible by their aid. They have a function in our domestic economy; and so has a powder mill or a dynamite factory. In their proper place when used for inland commerce and manned by professional crews accustomed to them, who know and undertake the risks as a matter of business, as a man works in a powder mill, they fill a legitimate purpose. Sometimes the one capsizes, sometimes the other blows up. Neither can well be dispensed with and no one thinks of condemning them. The trouble arises when they are diverted from their proper purpose; in which case, to carry out the parallel, the person who takes a party who are utterly ignorant of any danger afloat in such a death-trap as the wide, shoal, badly-ballasted yacht or boat, is as directly answerable for the consequences as though he had taken them for a pleasant picnic to the vicinity of a powder mill or under the roof of a dynamite factory."

In each of the three cases the same parties are found, the reckless ones who, for purposes of gain, hire out dangerous craft; the ignorant and careless men who charter such boats for others who depend upon them; and the trusting women and children who form the great bulk of the victims. In such localities as the Great South and Jamaica bays the shoal centerboard boat is a necessity, but unless manned exclusively by experts the present class of boat is utterly unfit for use. For carrying pleasure parties of landsmen, women and children, the boat, though of shoal draft necessarily, should be of safe model, with ballast so secured that it cannot shift to leeward, as in the Mohawk, Mystery and Craig, and with only a moderate sail plan, whether sloop or cat-rigged. She should be in the hands of a competent sailor who should have absolute control, with sufficient aid to enable him to reef or to help in some emergency. The boat should not be crowded beyond her capacity, the guests should obey the captain and keep their places quietly and no liquor should be allowed on board. Under these conditions a reasonable amount of safety is assured, but the violation of any one of them is apt to result in disaster and death.

In the locality in question the evils of the favorite type are specially marked, these boats abound, and rum and recklessness are found aboard of them. Capsizes are of weekly occurence, but a mere drowning from a centerboard boat is too common to attract notice, and it requires such a wholesale murder as the present to call public attention to the evil. On Decoration Day a similar capsize occurred, a party of men and women being thrown into the water, but as it was only 3ft. deep, no lives were lost.

It is extremely improbable that this disaster will have any greater effect on the ordinary bayman and longshore sailor than that of last summer, or that any improvement in model, rig or methods will result, but there are others who can and should profit by such warnings. The landsmen to whom are intrusted the lives of ignorant and confiding women and children, are directly responsible for any results which follow when they allow their charges to enter a boat without being sure that the conditions we have given above are all complied with. If through ignorance they are not competent to judge, the only safe course is to stay ashore.

RACING IN BUFFALO.

BUFFALO Y. C., open regatta, July 4.—Course from stone lighthouse at entrance to Buffalo Creek, thence to buoy off Jersey street, leaving it on starboard, thence to buoy off Carolina street, leaving it on starboard, thence to buoy three miles southwest of red light on north end of Government breakwater, leaving it on port, thence to south end of breakwater, leaving it on port hand, thence to start. Distance 10 miles. Weather clear at the start, squally at finish. Wind at start S.W., squalls from S.E.:

	Length.	Start.	Finish.	Elapsed.	Cor'd.
Alarm, slp., Buffalo	31.03	2 31 40	6 21 50	3 49 50	3 43 05
Ripple, slp., Buffalo	35.06	2 31 40			
E. B. Jewett, schr., Buffalo	33.05	2 31 20			
Sylvia, cutter, Buffalo	35.00	2 30 40			
Emma, yawl, Buffalo	31.03	2 30 00	6 31 45	4 01 45	3 55 00
May Belle, schr., Buffalo	35.04	2 31 00			
Molly, cutter, Hamilton, Ont.	30.00	3 31 15	6 29 13	3 57 58	3 50 28
Corsair, schr., Erie, Pa.	31.00	2 30 40			
Susy, schr., Buffalo	36.01	2 32 45			
Verve, cutter, Toronto, Ont.	41.09	2 30 15			
Alice Enright, slp., Toledo, O.	39.09	3 32 15	6 21 25	3 49 10	3 49 10
Coquette, slp., Hamilton	33.09	2 33 15			

Alarm wins first prize in Class 1, Alice Enright in Class 2, Molly in Class 3, and Emma in Class 4.

The race was started with the wind blowing about 2 to 3 miles, which continued until the boats had traveled about 2½ miles of the course, from then until about 5:45 it was nothing but a drifting match, with the Enright far in the lead, at that time a very severe rain and wind squall came up which made a very exciting finish. Regatta Committee, H. D. Williams, Geo. G. Smythe and D. P. Dobbins; judges, E. F. Bishop and G. M. Stowe; referee, D. P. Dobbins.

The finishing time of the other boats was not taken on account of the squall, which drove the steam yacht inside.

June 15.—Regular inside course of the B. Y. C. Distance 14 miles; weather clear; wind southwest, 6 to 10 miles, unsteady:

Alarm	2 21 30	4 00 29	1 38 59	
Sylvia	2 21 35	4 10 50	1 49 50	
Emma	2 21 45	4 46 00	2 24 15	
Jewett	2 22 30	4 29 00	2 06 30	
May Belle	2 23 15	Not taken.		

First prize, Alarm; second prize, Sylvia; third prize, Jewett. Regatta Committe, A. S. Chisholm, L. G. Northrup and W. C. Cowles. Judges, Wm. M. Hawkins, E. F. Bishop. W. F. Nursy, referee.

RHODE ISLAND Y. C.

THE first regatta of the new Rhode Island Y. C. was successfully sailed on July 11. The prizes were the Low, Flint and Anderson cups; one in each class, to be won three times before becoming the property of the winner. Courses, classes A and B, from off club house, Pawtuxet, to and around stakeboat off Papasquash Point and return. Distance, 20 miles. Weather, heavy lower sail breeze with occasional light showers. Wind, northwest. Tide, high, 11:10 P. M.:

CLASS A—SLOOPS 30FT. AND OVER.

	Length.	Start.	Finish.	Elapsed.	Cor.
Peri, F. P. Sands[2]	38.06	12 51 56	4 13 10	3 21 14	3 18 06
Mabel F. Swift, C. Anthony[4]	40.09	12 54 06	4 16 05	3 22 05	3 21 37
Mignon, C. G. Bloomer[2]	35.09	12 55 00	4 29 10	3 34 10	3 27 30
Alice, G. H. Slade[1]	41.02	12 53 10	4 43 15	.. .. ..	3 50 05
Jennie, R. B. Banister[1]	30.06	12 54 32	5 13 46	4 19 14	4 04 36
Kelpie, C. F. James[1]	30.09	12 55 00	Carried away topmast		
Witch, James Lawless[2]		Did not start.			

CLASS B—CATS 24FT. AND UNDER 30FT.

Luciphene, H. B. Chace[1]	25.03	12 57 35	4 44 50	3 47 15	3 39 59
Rowena, J. W. Sayle[1]	28.11	12 56 31	4 40 33	.. .. ..	3 44 02
Windward, T. H. Jenckes[4]	24.01	12 58 30	5 14 02	4 15 32	4 05 40
Nancy Lee, J. G. Warren[1]	28.02	12 59 55	5 14 46	4 14 51	4 13 27

CLASS B—SLOOPS 24FT. AND UNDER 30FT.

Mascot, O. E. Collins[2]	26.07	12 56 39	4 55 10	3 58 40	3 54 10
Frolic, E. P. Butte, Jr.[1]	26.11	12 59 25	5 14 15	4 14 50	4 11 00

CLASS C—CATS UNDER 24FT.

Vision, H. D. Salisbury[1]	18.05	1 01 05	2 53 45	1 52 20	1 48 53
Moya, B. J. Potter[2]	17.00	1 02 12	3 03 35	1 01 23	1 55 09
Dowell, Wm. Pawtuxon[1]	20.11	1 01 06	Sprung main boom.		
Jay See, J. C. Padgett[2]	20.04	1 03 50	Withdrawn.		
Glimpse, Orray Taft[2]	17.11	1 04 00	Swamped.		

Note—[1] Providence; [2] Pawtuxet; [3] Newport; [4] Fall River; [5] Bristol; [6] Riverside Y. C.

Regatta Committee—E. Howard Wright, chairman; R. H. Carvel, M.D., Frank P. Eddy, Chas. I. Manchester, Elisha S. Arnold. Judges—Ditto.

GREENWICH Y. C. ANNUAL REGATTA, JULY 9.

THE Greenwich Y. C. has lately established itself on Tweed Island, opposite the Indian Harbor Hotel, at Greenwich, Conn., and on Saturday last the annual regatta was held in Indian Harbor, the courses being: For cabin sloops, from a mark off club house around Matinnicock buoy, thence around Hog Island buoy, off entrance to Oyster Bay, and back to start, 20 miles; and for catboats, from same start around buoy off west end of Captain's Island, past mark boat a mile southeast of Captain's Island, thence to buoy off Old Greenwich Point, and back to start, 7½ miles, to be sailed over twice.

The starters were: First class cabin sloops—Alcedo, Com. W. A. Hamilton, 34ft. 9in.; Volusia, John W. Williams, 32ft. 4in. Second class cabin sloops—Nellie, Capt. Alexander Williams, 26ft. First class open cats—Orienta, George I. Seney, Jr., 20ft. 10in.; Zelda, Edward Selleck, 19ft. 6in. Second class open cats—Terrapin, John Jacobs, 18ft. 6in.; Telephone, George D. Tyson, 17ft. 6in.; Triangle, W. Edwards, 16ft.

The wind was light from the south and the tide was running up during the race. The full times were:

FIRST CLASS CABIN SLOOPS—OVER 33FT.

	Start.	Finish.	Elapsed.	Corrected.
Alcedo	12 24 09	3 51 11	3 27 02	3 27 02
Volusia	11 24 41	3 56 34	3 31 53	3 27 34

SECOND CLASS CABIN SLOOPS.

Nellie	12 23 20	4 08 10	3 44 50	3 44 50

FIRST CLASS CAT-RIGGED—OVER 20FT.

Orienta	12 30 27	4 00 09	3 29 42	3 29 42
Zelda	12 24 19	4 05 49	3 41 30	3 38 35

SECOND CLASS CAT-RIGGED—UNDER 20FT.

Terrapin	12 24 49	4 20 36	3 55 47	3 55 47
Telephone	12 23 07	4 11 11	3 48 04	3 46 49
Triangle	12 26 47	Not timed.		

In first class Alcedo beats Volusia 1m. 18½s. Nellie had a sailover. Orienta beats Zelda 8m. 53s., and Telephone beats Terrapin 8m. 58s.

Another regatta will be sailed on Aug. 2. Mr. W. H. Lee will give a cup costing $150 for first class, and Com. Hamilton one costing $50 for second class. On July 30 the club house will be formally opened with a clambake.

COLUMBIA Y. C. REGATTA, JULY 9.

THE postponed regatta of the Columbia Y. C. was successfully sailed on July 9 over a triangular course on the Hudson, in front of the club house. The times were:

CLASS B—CABIN YACHTS.

	Start.	Finish.	Elapsed.	Corrected.
Julian	1 47 37	4 35 01	2 47 24	2 47 24

CLASS D—OPEN YACHTS.

Henry Gray	1 56 19	4 14 36	2 18 17	2 18 17
Mischief	1 56 30	4 15 49	2 19 19	2 19 19
Martha Munn	1 56 11	4 14 34	2 18 23	2 16 01½

CLASS D.

Columbia	2 07 45	4 24 52	2 17 07	2 17 07
Mystic	2 07 05	4 27 22	2 20 17	2 16 46⅞

CLASS E.

Defiance	1 57 14	4 25 58	2 28 44	2 28 44
Daisy	1 57 34	4 22 26	2 24 52	2 24 52
Hy. Fisher	1 57 27	4 26 02	2 28 38	2 27 33

The winners are Julia in Class B, Martha Munn in Class C, beating Henry Gray 2m. 15⅔s.; Mystic in Class D, beating Columbia 20⅔s., and in Class E, Daisy beating Henry Fisher 2m. 4½s.

The judges were Com. A. J. Prime, of the Yonkers Y. C., and Henry Andrus of the Manhattan Y. C.; Mr. Geo. E. Gartland, New Jersey Y. C., and Mr. Stephen Simonson.

BANNERET AND IONE.—The owner of the keel sloop Banneret has issued the following challenge through the Boston *Globe*: "In the city of Boston open regatta July 4 the Banneret lost the first prize for the first time in seven consecutive years, being defeated by the Ione. Feeling that the race was lost, not by being outsailed, but as the result of several unfortunate mishaps, I take this opportunity to challenge the owner of the Ione to sail the race again for a cup of a value of not less than the July 4 prize. If preferable, I will make the match over an outside course to windward and return under the same rules, and if Banneret is defeated will pay the racing expenses of the Ione. I will sail either with professional or corinthian crews.—J. F. BROWN, owner keel sloop Banneret (Boston, July 9, 1887).

TITANIA—SHAMROCK MATCH, JULY 7.

THE close racing between the two new boats of the year, Shamrock and Titania, in the spring regattas, has created a great deal of interest in the match made between them over a month since. The conditions were that the race should be from Sandy Hook Lightship fifteen miles to windward or leeward and return, for $500 a side. On July 7, the day set, both were taken by the Luckenbach and towed to the start, arriving about 10:30. The wind was south, a good breeze, and there was some sea left after the bad weather of the previous days, but not enough to trouble the boats. The tug took her place to the eastward of the Lightship, and at 10:55 blew the preparatory whistle. Both yachts were under lower sail and working topsails, with spinaker booms on deck. There was some sharp manœuvering at the line, in which Titania came out ahead, going over at 11:05:35 on port tack, while Shamrock, to leeward of her, barely cleared the Lightship, crossing at 11:06:17. The pair stood inshore, running up small jibtopsails, Shamrock outfooting her rival. The wind held moderate and steady, with no puffs, but at 11:40 Shamrock's topmast, a new one, went at the hounds. The topsail was kept on her, and she held her course until 12:05, when below Seabright, where she went on starboard tack. Titania followed suit. The latter also took in jibtopsail, but was gaining all the time, although Shamrock was doing wonderfully well, considering her crippled condition. At 12:54 Shamrock went on port tack, and Titania followed, but the white yacht at once paid off and started for the Hook, lowering her mainsail and taking in two reefs as she did so. Her mast had also sprung at the hounds and she was unable to continue the race. The press tug which was following the race at once took her in tow, while Titania continued and sailed over the course, winning the stakes. The mishap was due to the lower mast, which was of white pine. It buckled and so sprung the topmast. Both will be replaced by Oregon pine, the new mast being 2ft. shorter.

HALIFAX JUBILEE REGATTA, AUG. 16-18.

MR. F. C. SUMICHRAST, an old correspondent, and one of the sailing committee of the Royal Nova Scotia Yacht Squadron, has lately been in New York, after a visit to Boston, in the interests of the coming regatta at Halifax. The date has been finally settled, Aug. 16 to 18, as the most convenient time for the New York and Boston fleet, as July is taken up with several club cruises. The leading events thus far settled after these cruises are: Aug. 3, start of N. Y. Y. C. cruise; Aug. 6, Goelet cups, at Newport; Aug. 12 (about), Eastern Y. C. regatta, Marblehead. This latter event will bring the combined fleet to Marblehead, and if no postponement is necessary the yachts will be ready to sail on Aug. 13 for Halifax, a distance of 400 miles. At that season clear, fair weather and strong S.W. winds are the rule, and the fleet should cover the distance in time for the first day's racing, the 16th. The trial races at New York are not likely to take place before the first week in September, so there will be time to get back for them, and to stop at Bar Harbor for the regatta of Aug. 25. The full programme of the regatta has not been completed, but the races will be under the rules of the New York Y. C., and there will be good prizes, while yachtsmen may be sure of a hearty welcome. The R. N. S. Y. S. is desirous of having a large fleet from the United States, and will make every effort to entertain the visitors suitably, so all may be sure of a pleasant cruise. There promises now to be plenty of racing from the beginning of the New York cruise, and those who start will certainly want to go to Marblehead, and from there to Halifax.

THE LOSS OF THE WAVE.

THE centerboard yacht Wave is well-known to New York yachtsmen, as she attained some prominence from the races with Madge in 1881. She has been owned for some time by Stephen Cooper of New York, who on Saturday last started in her on a cruise to Nantucket in company with three friends, C. A. Jones, H. F. Terhune and A. F. Denyse. When off New Haven on Sunday afternoon a heavy squall struck the yacht, heeling her so that the oil stove in the galley was capsized and exploded, setting fire to the yacht. Among the stores was a keg of powder, and out of consideration for it the crew quickly jumped into the gig and cast off, Mr. Jones wanting to secure some money and narrowly escaping. By the time they were well clear the powder exploded, blowing the deck off. The party in the boat had a hard time, partly swamped and drifting about in the squall, but after three hours they were picked up by the schooner Lydia Chestine, and landed in New Haven. They hired a tug and hunted up the wreck, which was burned to the water. On their return to New Haven they were each obliged to purchase a complete outfit of clothing. A considerable sum of money and the watches and other valuables were left behind in the hurry. The Wave was built in 1878 by Gorman for John Dimon, and was afterward owned by Dr. Barron.

UNIFORM RACING RULES.

THE disqualifying of Titania in the Larchmont regatta furnishes a strong instance of the faulty condition of racing rules. The general regulation as to crews is one man to every 5ft. of length on deck, but in the L. Y. C. it is one for 5ft. of corrected length. The difference was overlooked by Titania's owner and too many men were carried, the result being that the race was lost. It is immaterial whether the allowance be based on one length or the other, but it is most important that the rule be the same in all clubs. Rules are necessary evils which may be made lighter by having them as few and simple as possible, so that the same thing is done in the same way in every club. Yachtsmen are beginning to realize the importance of these matters and the time has come for a general agreement among the leading clubs. Of course this cannot be done just now, but it should be attended to in the winter, before another season begins.

EMPIRE Y. C. 11TH ANNUAL REGATTA.—On July 11, the 11th annual regatta of the Empire Y. C. was sailed, the course for all but Class G being around the Gangway Buoy, this class turning Throgg's Neck Buoy. The wind was strong northwest all day. Tip Top carried away her jib, Sophia Emma her gaff, and Growler was run down by the steamer Sylvan Dell, her crew jumping aboard the steamer but afterward continuing the race. The times were:

CLASS A—CABIN BOATS OVER 32FT.

	Start.	Finish.	Elapsed.	Corrected.
Emma and Alice	12 10 00	3 36 15	3 26 15	3 15 15
Louise	12 00 30	3 37 00	3 25 30	3 25 30

CLASS B—CABIN BOATS UNDER 32FT.

H. W. Beecher	12 06 00	3 20 00	3 14 00	3 12 00
Katie Louisa	12 09 15	3 36 00	3 26 45	3 25 40
Rappahannock	12 06 15	Not timed.		
Sorceress	12 10 15	Not timed.		

CLASS D—JIB AND MAINSAIL OPEN BOATS UNDER 26FT.

Sophia Emma	12 01 00	3 50 30	3 49 30	3 49 30
Tip Top	12 03 00	Did not finish.		
Gipsey	12 01 30	Not timed.		

CLASS E—CATBOATS OVER 24FT.

Jessie	12 03 11	3 31 30	3 28 19	3 21 39
Dan O'Brien	12 05 49	3 44 30	3 38 31	3 38 41

CLASS G—CATBOATS UNDER 20FT.

Happy Thought	11 52 15	3 02 00	3 09 45	3 07 45
M. McCarthy	11 50 00	3 01 30	3 11 30	3 11 30
Growler	11 51 00	3 24 55	3 33 55	3 33 55
Jessie A.	11 52 00	3 31 50	3 39 30	3 39 00

EDGEWATER Y. C. ANNUAL SPRING REGATTA, JULY 4.—Course—Start from Dunedin round buoy 1½ miles north, thence south to buoy 2¾ miles and back to Dunedin, 1 mile; first and second classes twice around, third and fourth once. Distance 4½ miles. Wind fresh S.W.

FIRST CLASS.

	Length.	Start.	Finish.	Elapsed.	Cor'd.
Wanda, A. R. Douglas	24.09	2 01 30	3 52 00	1 50 30	1 47 12

SECOND CLASS.

Waterwitch, T. A. Currie	19.11	2 04 00	3 48 00	1 44 00	1 41 18
Minnie, I. M. Baggett	18.06	2 04 15	Did not finish.		

THIRD CLASS.

Fairfield, D. R. McCracken	16.00	2 05 45	3 10 00	1 04 15	1 02 36
Evadne, Bayly	13.09		Did not finish.		

FOURTH CLASS.

Ruby, Geo. Douglas	13.03	2 09 15	3 12 00	1 02 45	52 20
Lotta, Leftwich	13.09	2 12 15	3 18 00	1 05 45	1 01 51
Tino, Brown	17.03	2 09 00	3 16 45	1 07 45	1 07 09
Ida, Alderman	12.06	Did not finish.			
Bo-Peep, Hunter	13.10	Did not finish.			

Winners: Class 1, Wanda. Class 2, Waterwitch. Class 3, Fairfield. Class 4, Ruby first, Lotta second, Tino third. Wanda had to come to anchor to clear topsail rigging. Several boats arrived too late to enter, but sailed over the course. Regatta Committee, T. A. Currie, A. R. Douglas, W. H. Brown. Judges, I. G. Snedecor, James Barnes, C. M. Perry.

PILGRIM.—Dr. Winslow has sold his cutter Pilgrim to a Philadelphia yachtsman, who will use her about Mount Desert.

MONATIQUOT Y. C., THIRD CLUB REGATTA, JULY 6.—Inside courses; first and second classes, 8 miles; third class, 6 miles. Weather, fair. Wind, southeast; heavy. Tide, high water at start:

FIRST CLASS SLOOPS—CENTERBOARDS.

	Length.	Start.	Finish.	Elapsed.	Cor'd.
Posy, R. G. Hunt	22.03	12 15 55	1 06 10	0 51 15	0 37 07

FIRST CLASS SLOOPS—KEELS.

Alice, A. W. Blanchard	24.00	12 15 00	1 10 00	0 55 00	0 41 43

SECOND CLASS.

Diadem, L. Hayward	18.02	11 27 20	1 03 40	1 36 20	1 03 18
Maud, C. J. Lincoln	19.02	11 25 44	Did not finish.		

THIRD CLASS.

Flora Lee, E. B. Glover	17.05	11 48 49	1 17 47	1 28 58	1 03 25
Nifti, E. F. Linton	17.01	11 48 44	Did not finish.		

The winners were Posy, Diadem and Flora Lee. The first class was started after the other classes, and, owing to the state of tide (ebb) sailed over the course but once; hence their time is for four miles. Regatta Committee—F. D. Bagley, G. H. Bicknell, R. G. Hunt, C. G. Sheppard, C. F. Colby, A. W. Blanchard. Judges—T. D. Bagley, G. H. Bicknell, T. P. Willey.

HYDE PARK BOAT CLUB REGATTA.—The Hyde Park Boat Club, of Chicago, sailed a regatta on July 5, over a course from off Fifty-first street, southward around Hyde Park Water Works crib off Sixty-eighth street; northeasterly around south spar buoy; westerly and crossing starting line, leaving everything to port. Distance 7½ miles. The wind was from southeast, puffy and squally, with smooth water. The times were:

SLOOPS.

Pastime, H. B. Cook	1 18 00	Lillie, A. D. Reid	1 20 51
Lemo, C. L. Palmer	1 10 44	Menantic, D. M. Lord	1 27 28
Blank, W. H. V. Rosing	1 12 18		

CATS.

Atlantis, Archie Bouton	1 01 10	Guenn, Edward Nolan	1 26 59
Cathie, F. L. Douglas	1 16 01	Andrews, W. S. Peck	1 27 49

SCHOONERS.

H. G., Harry Griswold	1 07 38	F., Edward L. Frasher	1 19 22
Hypatia, B.P. Hinman, Jr.	1 14 12	Marie, Chas. A. Bixby	1 30 44

The prizes were, for sloops, a silver cup, won by Pastime; cats, a compass, Atlantis; and schooners, a pair of sidelights, H. G.

BOSTON Y. C. REGATTA, JULY 3.—Course from club house, City Point, round Harding's, Egg Rock and home, course 1, distance 25 miles. Weather, fair. Wind, west, whole sail breeze. Tide high about 12 M.

	Length.	Start.	Finish.	Elapsed.	Cor.
Undine	51.10	10 56 00	2 31 00	3 35 00	3 19 05
Shadow	34.10	10 36 00	2 44 30	4 08 30	3 09 50

Only Undine and Shadow started in the sloop class, the schooners not starting as Adrienne declined a sailover. Shadow won easily in spite of the difference in size, being well inside of her allowance. As she before held one leg for the cup, she holds it permanently. Judges: Thos. Dean, E. Denton, Coolidge Barnard.

FORTUNA'S CRUISE.—The runs of Fortuna on her voyage from Marblehead to Queenstown were as follows:

Date.	Lat.	Long.	Distance.	Wind.
June 4	42.09	67.46	135	N. to N.E. by E.
5	41.51	66.18	82	N.E.
6	41.20	64.41	71	N.E. by E. to S.S.W.
7	41.00	60.36	192	S.W. to N. W.
8	40.51	55.26	234	N.N.E.
9	41.21	53.00	165	N. by E. to W.S.W.
10	41.28	48.41	195	W.S.W. to E.
11	41.56	46.00	141	E. to N.E.
12	42.10	42.56	137	N.E. to E.
13	41.58	41.10	79	N.E. to E.
14	43.47	37.58	168	S.E. to E. by W.
15	46.10	33.01	266	S.W. by W.
16	47.27	29.47	160	S.W. by W. to N.E.
17	47.50	28.41	70	N.E.
18	47.14	28.15	25	N.E. to E.
19	47.27	27.27	43	E. by S., with calm.
20	47.32	25.32	87	E., light.
21	48.53	24.32	93	E., light.
22	49.58	23.28	76	E. to E.S.E.
23	51.19	20.35	147	S.E. by E.
24	52.18	18.24	101	E.
25	52.00	16.18	83	E. to N.E.
26	52.03	14.42	61	E. to N.N.W.
27	57.23	9.40	180	
28	Passed Fastnet Light 1:20:10 P. M., making the run in 23 days, 20 hours, 10 minutes. At 10:30 passed Kinsale. Anchored at Queenstown at 6 A. M.			

The total distance sailed was 3,060 miles. On June 5, the second day out, when near George's Bank, she was hove to for 14 hours under single-reefed foresail, and again on June 16, 17, 18, she was hove to in a N.E. gale for 45 hours in the three days. The course sailed was that laid out by Capt. Newcomb when he started. Fortuna is now with the racing fleet, having shipped her racing rig at Greenock.

ATLANTIC Y. C. CRUISE.—The cruise of the A. Y. C. this year promises to be of unusual interest, as a large fleet will start and prizes will be given for the best average runs as well as for a special race from New London to Shelter Island, the amounts being: Best average—Classes A, B, C and D, value $50; E, F, G, $40; H, I, J, $30. Special race—Schooners, Class B, value $100; sloops, Class D, $100; E, $80; F, $70; G, $60; H, $50; I, $45; J, $40. An informal start will be made at 9 A. M. on July 16, from New Rochelle for the rendezvous at Black Rock, Conn., at 6 P. M. On Sunday service will be held on a yacht hereafter designated. At 10:30 A. M. a gun will be fired from the flagship, when "service signal" will be hoisted on the yacht on which service will be held at 11 o'clock. Captains will have their gigs at the disposal of the fleet captain, in case of need, to convey shore guests to the service. The programme for the cruise is on Monday, to New London (off city); Tuesday, to Shelter Island (Deering's Harbor); Wednesday, to Stonington; Thursday, to Newton; Friday, to New Bedford; Saturday, as may be determined. There will be two divisions of the fleet during the cruise. Classes A, B, C, D, E, F and G, comprising the first, and all other classes the second division, and the signals for starting will be as follows: First gun from flagship, to prepare sail; ten minutes later, second gun from flagship, for second division to start; fifteen minutes later, third gun from flagship, for the first division to start. The first yacht arriving at the destined port will take its own time of arrival and that of the other yachts of the fleet (selecting a point for turning or crossing that will be equitable and fair to all), and report to the Commodore. Rowing races for yachts' boats will probably be held during the cruise.

THISTLE.—In the Mudhook regatta of June 29, in which Thistle beat Irex by 14m., the former was steered by Mr. G. L. Watson. Up to date Thistle has won 13 races. She will now ship her cruising rig for the passage across. The following resolutions were presented to Capt. Barr on his arrival at Liverpool by Capt. J. Freear, of the steamer Harkaway: "To the captain, officers and crew of the yacht Thistle: Liverpool, June, 1887. We, the undersigned, survivors of the crew of the steamship Harkaway of London, which foundered off the Smalls on the morning of the 20th of May, 1887, beg respectfully to offer you our heartfelt thanks for the timely and gallant rescue which you effected when we were in a most dangerous and exhausted condition, having been nearly ten hours in the lifeboat full of water, and the sea breaking continually over us. We also wish to express ourselves in the warmest possible terms of admiration for the able and seamanlike manner in which your vessel was handled under most trying circumstances, the wind being still blowing a gale from the west northwest, with a very heavy cross sea, and also for the very kind treatment which we received from all on board from the time we were rescued until we were landed at Cowes, two days later. Wishing you Godspeed in all your undertakings, and a prosperous career in your magnificent yacht Thistle, we remain, yours sincerely, J. FREEAR, Master; RICHARD SMITH, Mate; STEPHEN ROBERGE, A. B. S."

INTER-LAKE Y. A. REGATTA, JULY 18-31.—The work begun at Ballast Island two years ago is already bearing good fruit and the meet of yachtsmen and canoeists at the same place next week will be the largest gathering of the kind yet held in the West. The programme of the yacht races and other events is as follows: July 18, Monday, rendezvous at Put-In-Bay; 19, review of fleet; 20, races, first and third class; 21, ladies' day, cruise to Kelley Island; 22, races for fourth and fifth classes; 23-24, cruising and visiting, 25, races for Second Class; 27, race from Gibraltar Island around West Sister Island, open to all with time allowance; 28, ladies' day, cruise; 29, special cup race, club course, first and second classes. Sunday, July 30, will be the last day of the meet. The regatta committee includes Messrs. W. Scott Robinson, C. Y. A.; M. A. Quinn, O. Y. C.; C. L. Dean, M. Y. C.; J. W. Hepburn, T. Y. C., and G. H. Beebe, P. B. Y. A. The programmes of the meet are ornamented with a beautifully executed etching of a sloop yacht.

BEVERLY Y. C.—117th and 118th Regattas. The 117th regatta of the Beverley Y. C. was sailed on July 4 off Monument Beach, Surprise winning in first and Mist in second class. On July 9 the 118th regatta was sailed at Marblehead, Beetle winning in first, Sprite in second, Holden in third, and Dolphin in fourth class.

CRUISER.—Mr. Alley's challenge, lately published in the FOREST AND STREAM, resulted in three matches, one on June 18 at Larchmont, 7 miles to windward against the Punch, cat rig, 20ft. The breeze was fresh N.E., the course to Captain's Island, Cruiser winning by three minutes. The next race, on June 25, was against the Orienta, 21ft. 9in., cat-rigged, to Gangway Buoy and back, two rounds. Orienta started four minutes ahead, and sailed off before the light northerly breeze about as fast as Cruiser, rounding the outer mark about four minutes ahead. In beating back the Cruiser gained the four minutes, and as Orienta was standing for the home mark on port tack she fouled Cruiser, the judges awarding the race to the latter. Each race was for a $50 cup. The third match, July 2, off Bridgeport, for $250 per side, was won by Americus.

STEAM LAUNCHES.—Bowdish & Co., Skaneateles, N. Y., are building a 19ft.x4ft. 6in. steam launch for a gentleman of Denver, Col., and a 25ft.x5ft steam launch for a gentleman of New London, Conn. Both of these launches have oil-burning engines. The 25ft. launch is to have cedar planking, oak frame, copper and brass fastenings, mahogany decks, fancy wood finish in cockpit, and all metal fittings are to be polished and nickle plated. All of the wood work is to be bright except the planking outside below the guard rail, which will be painted white. Alonzo Springstead, of Geneva, N. Y., is building for Messrs. Allen & Grime, of Skaneateles, N. Y., a steam yacht 70ft. long by 11ft. 4in. beam, from lines furnished by Bowdish & Co. This yacht is designed for speed and will have powerful machinery.

THE VOGELSANG PROPELLER.—This new propeller, which was first built and tried by the inventor at the Washington Navy Yard, has been tested in Prussia with excellent results, the gain in one case, a torpedo boat, being reported as 5 knots, or from 21 to 26 knots. The leading feature of the invention is the grouping of two or more blades, spaced at unequal intervals on one side of the hub, the other side being either plain, provided with a counterbalance weight, or with a single blade opposite the group, no two blades in any case being diametrically opposite. It is claimed that by this arrangement all the blades work in more solid water than if equally spaced. The invention will be tested on a large scale on one of the North German Lloyd steamers.

TITANIA—SHAMROCK.—The protest of Mr. Maxwell against Titania for carrying too large a crew was considered by the Regatta Committee, on July 6, at Larchmont. Mr. Iselin admitted carrying 16 men in place of 15, believing the rule to be one for every 5ft. of deck length, whereas in the Larchmont Club it is one for every 5ft. of corrected length. On his own admission the rule was not complied with, and the boat was consequently ruled out. Mr. Maxwell has declined to accept the prize and it will be sailed for in the fall regatta. Hildegarde wins in her class, beating Cinderella by 47s.

HULL Y. C. CRUISE.—On July 9 the cruise of the Hull Y. C. commenced, the fleet sailing at 10:30 and arriving at 1 P. M. at Marblehead, sailing from there for Portland. The fleet comprises the following yachts: Schooner Silvie, Com. C. V. Whitten; steam yacht Eugenia, Vice-Com. Harry C. Converse; sloop Carmen, Fleet Captain, B. L. M. Tower; steam yacht Annie C., Fred Pope; schooner Widgeon, A. S. Wattles, and Arethusa, H. M. Savage; sloops, Aglaia (Davis), Hera (Howes), Nimbus (Souther), Echo (Burrill), Ione (Poyen).

VOLUNTEER.—The joiners are busy inside of Volunteer and much of the inside work is already completed. The arrangement will be similar to Mayflower but the finish will be in varnished pine, trimmed with mahogany. The sails are ready, and by Saturday all will be ready for a trial trip. The yacht will be sailed every day to stretch her canvas, and will be docked at Lockwood's by the last of the month, preparatory to the Goelet Cup race.

E. Y. C. CRUISE.—On July 7 the E. Y. C. fleet sailed from Marblehead for the Isle of Shoals, the fleet including Gitana, Mohican, Ambassadress, Adrienne, Galatea, Stranger and Wanderer.

MAYFLOWER.—At 2 A.M. on July 9 Mayflower left Boston for New York in charge of Captain H. C. Craven, formerly of the schooners Idler, Resolute, Halcyon and Sappho, the sloop Regina and the cutters Vindex and Muriel. Captain Craven will at once ship a racing crew and will race the yacht for Mr. E. D. Morgan, her new owner. She arrived at Bay Ridge Tuesday afternoon, her crew returning to Boston.

A WRECK IN GRAVESEND BAY.—The sloop Cloud, Newark Y. C., was wrecked near Bath on July 6, dragging anchor at night and going ashore and proving a total loss. Her crew were rescued by persons on the beach, assisted by the Coast Survey schooner Ready.

GREAT HEAD Y. C., LADIES' DAY.—The Great Head Y. C. fleet turned out on July 5 in the evening for a sail, each yacht carrying a party of ladies. After the sail an entertainment was given at the club house.

ALVA, steam yacht, W. K. Vanderbilt, arrived at Queenstown on July 22, 9 days 12 hours from Sandy Hook. On July 4 to 7 a heavy W.S.W. gale prevailed, and on the latter date she lost foretopmast.

CLUB BOOKS.—We are indebted to the secretaries of the Seawanhaka, Hull, Portland, South Boston, Corinthian (Marblehead) and Royal Nova Scotia Y. C. for copies of club books for 1887.

SIPPICAN Y. C.—A club by this name was lately organized at Marion, Mass., with the following officers: Com., J. E. De Kay; Vice-Com., J. A. Whiting; Sec. and Treas., F. L. Luce.

AMERICAN Y. C.—The second regatta of the series was sailed on July 9, the winners being White Cloud first prize, Teaser second, Budge third and Freak fourth.

QUINCY Y. C. OPEN REGATTA, JULY 9.—Winners, first class keels, Echo; centerboard, Good Luck; second class, Diadem; third class, Victor.

COHASSET Y. C.—The first race of this club was sailed on July 4 in a strong S.W. wind. Ethelinda won in first class and Madden in second.

SANDY BAY Y. C.—Regatta, July 9. Atalanta won the Harwood Cup and Petrel took second prize. In second class Alpine was first.

NONPARIELLE, yawl, lately purchased by Mr. S. B. Pomeroy, arrived off Staten Island on July 6 thirty-four days out from Southampton.

ZIGEUNER.—On July 9 Lawley & Son launched the cutter building for Mr. Agassiz. She is 42ft. l.w.l., 12ft. 9in. beam, and 8ft. draft.

GREAT HEAD Y. C.—July 9, First Championship Regatta. Winners: First class, Etta May; second, Em Ell Eye; third, Flirt.

COSETTE, steam yacht, late Marina, has been sold by C. F. Chickering to T. J. Montgomery, of New York.

LUCILLE No. 2, steam yacht, has been sold by Herreshoff Bros. to G. W. Wright, of Duxbury, Mass.

MADGE, cutter, has been purchased by Mr. Harry Trevor, of Yonkers, and is now fitting out at Nyack.

THISTLE, sloop, has hauled out at Mumm's for more lead on keel and will also shorten mast 4ft.

SHEERWATER.—The new steel steamer for Mr. J. M. Forbes is nearly ready for a trial trip.

PERMELIA, steam yacht, has been sold by J. M. Forbes to J. W. Winchester, of New York.

INTREPID, schr., Mr. Lloyd Phœnix, arrived at Havre on July 9.

COLUMBIA, schr., is at Poillon's for a new keel.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

F. A.—Brant Lake will be the better of the two for black bas fishing.

BUNKER HILL.—The Maine law restricts number of fish you can bring away and number of moose and deer you can shoot. Write to E. M. Stilwell, Bangor, Me.

OLD COLONY CLUB, Plymouth.—We know of no precedent covering such a case, but the most equitable manner of dealing with it is to order the two leading boats to sail off the tie. The question of third boat is already settled, and a re-sail by the first two will settle the question of first and second prize.

JOHN P. LOVELL'S IMPROVEMENTS.

The improvements lately made in the already extensive establishment of the John P. Lovell Arms Company will make this store one of the most attractive in the city. As now arranged, the store has large frontages on Washington and Brattle streets and Cornhill, and consists of two buildings connected with each other at each story by wide doorways. The rear building is the one that has been so thoroughly changed that it might with almost entire truth be said to have been reconstructed from top to bottom.

The basement has been enlarged and extended several feet beneath the Cornhill sidewalk. On the Brattle street side an entire glass front has been inserted and an attractive entrance made, so that people may enter this room, which is devoted to the retail sale of fishing tackle, sporting and base ball goods, directly from the street. On the floor above is a room that is flooded with light, both ends being composed almost entirely of glass. This is the retail gun room, and around its walls are fowling pieces of almost every description. Directly over this is the wholesale department. A part of this story is devoted to the Springfield bicycle and bicycle sundries, of which this house makes a specialty.

The several stories are connected by a large elevator of an improved kind, which is very smooth running.

Besides their Boston store the company has a large factory in Worcester, in which are employed 400 men, and where they manufacture some of their well-known fire-arms. In addition to their many different patterns of revolvers, they are busily engaged in producing a new hammerless self-cocking revolver, which is entirely new, and which will possess many improvements not found in any other as yet in the market.

They make a specialty of manufacturing Bean's patent police equipments, which are the latest and most improved goods in use.

The great superiority of these equipments over the old kind consists in their lightness and strength. They have already been adopted by most of the leading cities in the United States, including Boston, New York, Philadelphia and Washington; also by the government for use in the United States navy. Besides handling these sporting and other goods, the company is New England agent for Reach's base ball goods.

Also sole agent for the United States for the Hunt's patent life-saving gun and projectile, which are now on exhibition in the window at No. 147 Washington street. All interested in navigation should examine them. The small gun is especially adapted to the use of vessels, and none should be without one.—*Boston Globe, July 2.*

WRITE UPTHEGROVE & MCLELLAN, Valparaiso, Ind., for new catalogue of sportsmen's and civil engineers' wear.—*Adv.*

The Fluttering Fly.
PATENTED MAY 4, 1886.

THE FLUTTERING FLY.
Patented May 4th, 1886.

With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fishing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are:

1st—The wonderfully life-like and fluttering motion this fly has when moved on the water.

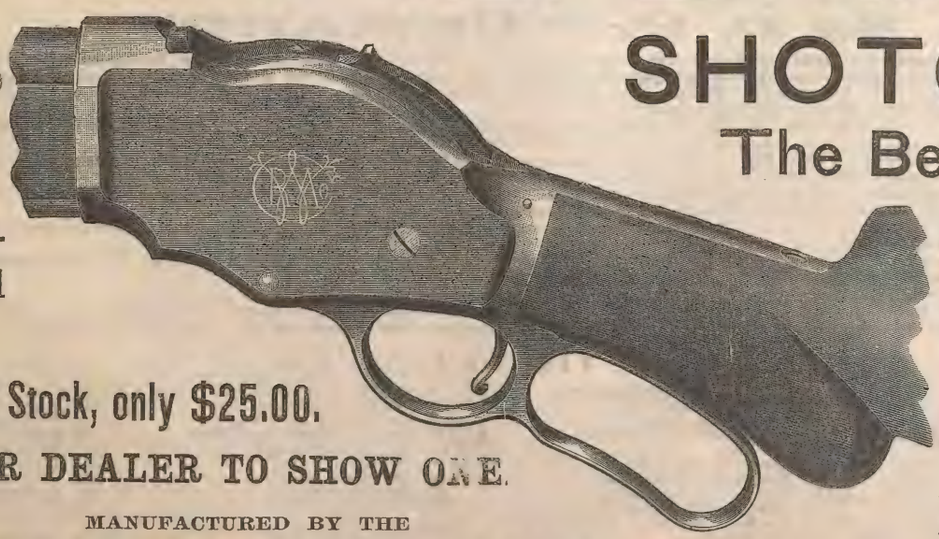
2d—The fish is almost certain to be hooked if it touches the fly.

3d—Any of the present favorite combinations of color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style.

4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that flies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies.

We take this means of notifying dealers and fly-tyers that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure such people that the same old course will be pursued by this firm.

We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentlemen into our advertisements.



Scientific American: "When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish."

Forest and Stream: " * * * more like a natural insect than the old patterns whose wings close when being drawn through the water. * * * Great merit lies in its superior hooking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly."

American Angler: "There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than by color or form. * * * This fly will certainly, when drawn against the current or over a placid pool, *seam* the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * * We are told that few fish are lost by those who use this fly. We do not doubt it.'

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the large sale of this magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, steering apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

YACHTS, BOATS AND CANOES,

WITH SPECIAL CHAPTERS ON MODEL YACHTS AND SINGLEHANDED SAILING.

BY

C. STANSFELD-HICKS.

AUTHOR OF "OUR BOYS, AND WHAT TO DO WITH THEM.

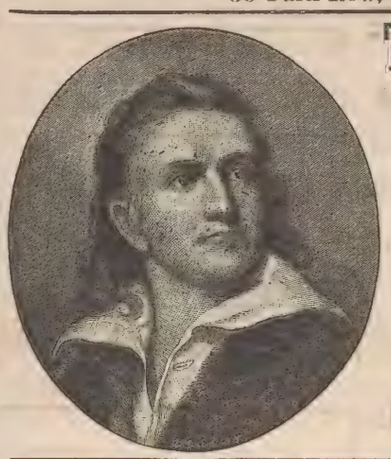
NUMEROUS ILLUSTRATIONS AND DIAGRAMS, AND

WORKING DRAWINGS OF MODEL YACHTS AND VARIOUS SMALL CRAFT SUITABLE FOR AMATEURS.

Designing, Model Making, Drawing; Model Yachts, their Design and Construction; Lead Keels; Sails and Principles of Model Yacht Sailing; Spars, Rigging and Fittings for Model Yachts; Model Yacht Sailing and Racing; Sails for Boats and Canoes; Reefing Gear; Practical Building; Steam and Manual Power Canoes; Canoes, Kayak, Proa, Birch, Pram, Corragh, Coracle, Junk, Sampan; Construction of Rob Roy Canoe; Canadian Birch and Canvas Canoes; Sharpies, Building and Rigging; Canterboards; Descriptions of Designs; Singlehanded Sailing; Rob Roy, Procyon, Kate, Silver Cloud, Undine, Viper, Titwillow; Interior Plans, Rigging and Sailing, Cooking, etc. Displacement Sheet and Calculations.

DESIGNS:

Model Yachts.—Defiance, Isolde, Bonny Jean, and 10-tonner with sail plan.
Canoes.—Birch, Mersey Paddling Canoe, L'Hirondelle, Sailing Canoe.
Sailing Boats and Yachts.—Dabchick, Wideawake, Myosotis, Una, Singlehander by C. P Clayton, Puffin, 3-ton Racer, 3-ton Cruiser, 24ft. Auxilliary (steam and sail) fishing boat.



This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood.

Large crown 8vo., 380 pages and 16 large folding plates.

Price, Postpaid, $3.50.

"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

FOREST AND STREAM PUBLISHING COMPANY,
39 Park Row, New York.
LONDON: DAVIES & Co., 1 Finch Lane.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING Co., 39 Park Row.
LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

Forest Runes.

—BY—

GEO. W. SEARS.

("NESSMUK.")

Large octavo, 208 pages, printed on heavy paper, bound in cloth, gold lettering, with a portrait of the author. Price, $1.50.

FOR SALE BY ALL BOOK DEALERS.

Adirondack Preserve Association.

The Association was incorporated last year, having for its object the encouragement of social recreation, and of boating, fishing, lawful sports and the preservation of game and forests. The club house is situated in Essex Co., close to Mink, Thumb, Beaver, Loon and Moose Lakes, and is to be kept open the entire year so that members can take advantage of any portion of the fishing and hunting season, winter or summer. Photographs of the lakes and principal points of interest can be seen at the office of the Association. The membership is limited and the initiation fee $100. Applications for membership may be made to J. G. CASE, Secretary,
178 Broadway, New York.

GREEN RIVER.—THE SUBSCRIBER OFfers for sale a ten years' Government lease of the exclusive right to fish in about 30 miles of the main Green River in the Province of New Brunswick, Canada. It is thus named from the purity of its waters. One day by rail from Fredericton will place the sportsman at its mouth, where men and canoes can be had; it is navigable for these and light boats to its sources; it runs through picturesque forests, and is probably the best river for trout in Eastern America. Full information given on application to the subscriber. Reference is given by permission to J. H. PHAIR, Esq., Fishery Commissioner for New Brunswick. EDWARD JACK, Fredericton, New Brunswick, Canada.

THE ATTENTION OF SPORTSMEN IS called to a most desirable tract in Essex County for hunting and fishing; eight hours from New York City; 12,000 acres in one parcel, or can be divided; Hudson and Indian Rivers unite on the tract, which has also three large trout ponds (½ mile to 1½ miles long); deer and winged game; land well wooded with hard timber. Offered at extraordinary bargain.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price. $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

CARELESSNESS ON THE RANGE.

THE Pascoe-Robbins episode of June 11 on Creedmoor range and the subsequent proceedings with reference to it seem to have a little more than passing significance. According to the reading of the rules made in that case there is little more than the common law relief left to victims of careless marksmen on the range; and it appears that while a man who may for the sake of a temporary gain in securing a cheap medal falsify a score shall be disqualified permanently, a man who through criminal carelessness puts the lives of his fellow riflemen and the spectators in jeopardy may simply be invited to leave the grounds and lose any chance he might have had of winning in the particular match then in progress.

The details of the Pascoe case are very simple. On the afternoon of June 11, during an all-comers' match at the range, Second Lieut. Pascoe of the Second Battery, N. G. S. N. Y., a man who has been familiar with rifle practice on the range for a decade or more, was gathering up the rifles at the firing point. He took up one, and without examining its condition, tried the trigger pull by cocking and snapping the piece. It was loaded, and a bullet went spinning up the range away from the firing point and found lodgment in the ground close to the feet of a brother officer. Gen. Robbins, who was the executive officer in charge of the competition, came up in angry mood, and having discovered who it was that fired the shot, proceeded to give the offender a severe tongue lashing in a very unmilitary fashion.

Charges and counter charges have followed. The Lieutenant explained that he had had indeed picked up a rifle which "had been carelessly left loaded and that it was accidentally discharged"; but he wished the General disciplined in some fashion because of the wordy drubbing he had administered. The executive officer simply called the attention of the directors to the incident; and then when hearing was had, it was very promptly decided that with the word wrangle the Board had nothing to do, nor singularly enough with the shooting incident either, since the rules did not provide except the most mild of punishment for the offense of which the Lieutenant had been guilty.

It is upon this last point that the significance of the whole affair turns, for it would seem to be the fact that the most reckless handling of firearms is only to be met with the mildest of rebukes. There are two rules which bear on the offense in question and they are really duplicates. The first provides that—

"Any person discharging a rifle or snapping a cap within the inclosure, except in accordance with the regulations for shooting, may, at the discretion of the executive officer, be required to leave the ground."

The other is very similar and says:

"Any competitor discharging his rifle accidentally, either by his own want of care or by reason of any defect in the rifle, may be disqualified from further competition in the match at the discretion of the executive officer."

Could anything be more mild, more thoughtful for the feelings and considerate for the rights of the careless ones? They may be invited to leave the ground, and having taken a beer may return for ought on the rule to the contrary, and then they may be cut off from further competition in the match, a very mild reminder of wrong doing, especially as in this case the match was over and it was during the gathering up of the weapons that the bit of criminal carelessness was enacted.

Creedmoor has had a wonderful run of good luck. Sharp-eyed officers and the general good shooting ability of those going to the range have prevented a fatality; but according to the revelation made in this case, it is rather in spite of bad rules than because of good ones. There should be a wide discretion lodged with the Board of Directors to make an example of a man who is so careless as to send a bullet whizzing he knows not where. "I didn't know" should be rather an aggravation than a palliation of the offense, and the sooner the National Rifle Association regulations are made to conform to this very excellent rule of punishing criminal carelessness as a crime, the better for all concerned.

THE LOYALHANNA.

THE Loyalhanna River, of Pennsylvania, is just now in a suitable condition of filth and corruption to point a moral. There is less water in it than at any time within several years, and all the nastiness which the dwellers along its banks see fit to dump and drain into it just stays there to putrify and poison water and air. Vitriol from paper mills, spent liquor from tannery vats, sewage from towns, and sundry other ingredients compose a liquid medium in which the fish indigenous to the originally pure waters of the Loyalhanna do not thrive. Suckers, perch, and catfish, together with the bass which were put into the stream by the State Fish Commission, have perished, and are piled up along the shores, screens and tail-races for miles, where they threaten a pestilence on a large scale. The inhabitants are said not to relish the evil which has come upon them in this day of reckoning; but they who dance must pay the piper, they who dig pits for themselves must fall therein, and they who convert a stream of pure water into a sewer and transform a blessing of bounteous nature into a conduit of filth must expect some time to have their nostrils filled with the stench thereof. And the beauty of it all is that in spite of this lesson the Loyalhanna folks will go right on draining their tanneries and paper mills and sewers into the stream, and making all ready for another pestilence, whenever the clouds of heaven again refuse to purify the river. That is human nature, the world over.

THE CATSKILL PARK.

FOREST COMMISSIONER TOWNSEND COX is now in Ulster county with a committee invited to aid him, to select a site for one of the State parks provided for by the Legislature. It is thought that the most suitable district to begin operations is one lying partly in the town of Denning and partly in Hardenburg. A park of one hundred acres will be fenced in with wire netting, and in this inclosure will be placed a number of deer. This is the first step toward restocking the Catskills with a species of game once abundant there. In early times deer hunting was an amply rewarded pursuit in that magnificent range of mountains, but the dogging exterminated the stock and the deer have been as scarce as the wolves of which the garrulous, gray-haired village grandfathers tell wonderful stories. The deer put out by the Forest Commission will be in charge of a game keeper and as local sentiment favors the new undertaking, it is possible that the game may escape death at the hands of poachers. The preserve is also to be stocked with wild turkeys, hares and ruffed grouse (there are "patridges" there now). Acting on the suggestion of Dr. Henry C. Piffard, of this city, the Commissioners will put out a number of guinea fowl, which they are advised will quickly revert to a wild state and take care of themselves.

The law passed at the last session of the Legislature providing for the Catskill preserve, is as follows:

SECTION 1. The Forest Commission is hereby authorized and directed to set apart tracts of land not exceeding three in number of such size as they may deem proper, belonging to the State in the Catskill region, now constituting a part of the Forest Preserve, for the purpose of breeding of deer and wild game.

§2. Said Forest Commission may establish all proper rules for the protection of said land and game therein.

§3. Said Commissioners are authorized to purchase and turn out upon such land such deer or other game as they may think proper.

§4. No game shall be killed or pursued, trapped or in any way destroyed within the limits of said lands so set apart for a period of five years.

§5. The sum of five thousand dollars is hereby appropriated to be paid by the Comptroller, at such time and such amount as the Commissioners may desire for the purposes of this act, and the Commission is authorized to receive private subscriptions and expend the same for such purposes.

§6. This act shall take effect immediately.

The appropriation of $5,000 will not go a great way, but once a beginning is made the undertaking will be supported by public and private enterprise. The deer which are to be put out have been presented by gentlemen who are interested. The people of Kingston and Catskill Mountain hotel and railroad managers are expected to support the Commission with liberal subscriptions. The results of restocking the depleted trout streams have amply demonstrated that money wisely expended to enhance the sporting attractions of the region is invested where it will yield profitable returns. State lands in Ulster county comprise 43,000 acres, and in Sullivan county 3,000.

SNAP SHOTS.

IF THE reports concerning the new French arm, the Lebel rifle, are true, there is to be a revolution in rifle shooting, for the powers claimed for it are far beyond those of any firearm now in use. The gun as described is smaller than the ordinary military arms, has a small bore, shoots a steel bullet, sharply pointed at one end and revolving at the rate of a thousand revolutions in a second, and capable of going through an eight-inch brick wall at 500yds. The gun is a repeater, and the ammunition is so light that a soldier can carry 220 rounds in place of the regulation 116 rounds of old-style cartridges. The powder is an entirely new compound which, when fired, has neither smoke nor recoil. The Lebel gun is said to be as effective at a mile as at ten paces, and if it is ever to be used for hunting purposes all the long-distance yarns of sportsmen will have to be revised and rewritten to suit the times.

From the detailed report of the National Park stage robbery, given in another column, it appears that the highwaymen were amateurs nerved by the Dutch courage which comes from copious libations of Gardiner's rotten whisky. The scene of the attack was just within the Park limits, and for that matter it might just as well have been outside the Park altogether. The robbers were of a very mild type, and the least display of spunk by the passengers would have thrown them into a panic. There is not the remotest probability that anything of this nature will occur again, for the night stages from Gardiner are now escorted by a detachment of soldiers.

Gen. Richard Rowett, of Carlinville, Ill., died suddenly in Chicago, July 13. Gen. Rowett was distinguished for his services in the war, and was widely known as a breeder of fine stock, his attention having been given specially to horses. He was also a successful breeder of dogs, and was the originator of the celebrated "Rowett strain" of beagles.

Mr. Edmund Orgill sailed on the City of Rome yesterday to spend a few weeks in England and on the Continent. He will visit some of the kennels of Great Britain but holds to the faith that it is unnecessary to leave the United States to find good dogs.

MY TRIP TO THE ADIRONDACKS.

NOT feeling quite up to the mark, and thinking that perhaps a few days among the mountains and along the tumbling streams would set me straight, I packed up my pipe and tobacco, together with my rod and a change of clothing, and made a break for the woods. Leaving Springfield, Mass., at 8:15 P. M., June 24, by the Connecticut River Road, I found myself in the early morning at St. Albans, Vt. After breakfast and nearly an hour's wait I took the train for Malone, where I arrived at 9:45, and at once proceeded to skirmish for a team, or rather a man who said he owned the best team in the State skirmished for me. A trifle bewildered by the very brilliant manner in which he tumbled, a step at a time, from twelve dollars and road expenses down to five and find himself for the 25 miles to Meacham Lake, I left him and sought other conveyance. Finding just what I wanted at the stable of Mr. Shields, a start was made for the lake. My driver, China, was apparently an ordinary lad of some thirteen or fourteen summers, but I am now well convinced that more than this number of decades must have passed since his first trout, to use his own expressive words, was "snatched bald-headed" from its native element. It has ever been deep mystery to me where Murray obtained the facts for his book, but the matter is now clear, China undoubtedly coached him through the woods.

Our road for a number of miles wound along the banks of the beautiful Salmon River. A more trouty (big ones, too) looking stream is not often seen, formerly large fish abounded in almost every one of its most inviting pools. but now, alas! its glory has departed. China has depopulated the once prolific waters and the angler's paradise is "a little further on." It was worth my journey to hear him catch trout. Not a ripple of its creamy rapids, not a foot of its still reaches but had paid tribute to the preternatural skill of China; no diminutive fingerlings ever disgraced his creel, leviathans that the mere telling of made my finger-ends tingle came from the bright waters at his bidding in such numbers that our gallant steed but just managed to stagger along with the prodigious load, and when China, doubtless encouraged by sundry well-timed exclamation points, "snatched" from under the shadow of a big rock five or six busters, the discouraged old gray incontinently stopped and refused to budge an inch until I bade China throw overboard at least one-half of his catch, when we resumed our journey. This ended our fishing, not another cast would China essay, somehow he appeared to have lost his grip, and with the exception of a deprecatory glance at me out of the corner of his eye he made no sign.

Fifteen miles from Malone we stopped for refreshment at Ayre's Hotel. The table was spread with a capital-looking dinner. The fried trout I know were good; the other viands I did not sample, but have no doubt that they were excellent. About four miles from Ayres's we entered the woods, which continued without a break until we arrived at the lake. The guide books pronounce Meacham Lake one of the finest sheets of water to be found in the entire region, with scenery and landscape unsurpassed for primitive wildness and quiet beauty. A lovelier spot I have never seen, and memory will long retain grateful remembrance of the restful hours enjoyed while idly floating upon the bosom of the bright waters or lazily reclining under the spreading balsams, fanned by gentle breezes that came from the mountain tops with "healing on their wings." The hotel is composed of several buildings very pleasantly situated on the north shore of the lake, with accommodations for some forty or fifty guests. From the opening of the season, May 1, to about the middle of June, the house is filled with guests who come to enjoy the fishing. Early in July the house again fills up, and remains so until the close of the season. The proprietor, Mr. A. R. Fuller, appears to know how to run a hotel, as nearly all of his guests are old friends who come each year with ever-increasing confidence in the ability of their host to provide for their wants. For many years Mr. Fuller has been a successful fishculturist, and each spring he has turned into Lake Meacham and adjacent waters many thousand fry of both trout and lakers, as they are called. In consequence of this wise forethought the fishing here is said, by those who have had ample opportunity to judge, to be the best to be found at any hotel in the woods. The lake and the streams that empty into it, as well as the outlet, appear to be full of fish, and it is the pride and boast of the house that plenty of trout are served to the guests at every meal.

Trout, however, are not the only attraction at Lake Meacham, there is an abundance of deer in the adjacent forests, no less than forty-three having been killed by guests at the hotel last season. The guides appear to be a woodsy lot and have the reputation of being well up in all that pertains to their calling. Bear are also occasionally found, some five or six being killed last year. On June 28, Geo. Selkirk, one of the guides, invited me to go with him to his bear trap, a short distance from the south end of the lake, but it was very hot and I did not feel able to tramp through the woods after a very uncertain bear. This was a blunder on my part, as he found his bear and brought him in. He also saw another one getting away and cut loose at him three times with his Winchester but failed to bring him to bag. Thinking that the last one was too badly scared to return to the locality George did not go to set his trap again until the next day, when he found that bruin had been there during the night and carried off all his bait. This episode taught me a valuable lesson, and I shall go with him next time, as I could not bear another disappointment like this.

One afternoon during my stay I stood upon a rock at the mouth of the brook that empties into the lake not a stone's throw from the hotel, and caught nearly a hundred trout; my cast was made up with a red-ibis, a black-gnat and a brown-hackle. Twice in succession I landed three at a cast; none of them were large but many of them were of fair size. When I arrived at the hotel only two guests were present, Professor Newberry, of Cornell, and his brother. They had been baiting some buoys in the lake and also in Clear Pond, a beautiful sheet of water some half mile from the hotel, noted for the transparency of its waters and the enormous size of its trout, many having been caught weighing in the neighborhood of 5 pounds each. The Messrs. Newbury captured one that weighed 2 pounds and 7 ounces, and in Meacham they caught three lakers, the largest about 4½ pounds. Accepting their very kind invitation to join them in fishing the buoy in the lake, we were soon at the spot, and with tingling nerves I hooked on a minnow and made my first essay for a laker.

Ah! those lakers. Reader, have you ever felt the electric thrill, half ecstacy, half fear, caused by the impetuous, irresistible rush and strike of a 15lb. laker with nothing between you and bliss supreme or dark despair save a slender line and 7oz. rod? Have you felt the resistless pull that doubled the pliant rod and almost snapped your heart strings? Have you watched with wide open eyes the fast disappearing line from the whirring reel that would run out in spite of well pulled oars? Have you held on like grim death when the line was all out until, just before it broke, the fearful strain slackened and your hopes, almost crushed, again cheered you on and your heart resumed its pulsations? Have you deftly managed each frantic rush of the monster, and inch by inch fought for your line as only a desperate man can fight until captor and captive were utterly exhausted, and the cruel gaff fast in the side of your victim laid him quivering at your feet? If you have done this, shake. I fully intended to accomplish it, but had never a strike.

On July 6 Mr. C. C. Clark, of New York, caught by deep trolling a laker that weighed 8lbs, with a 7½oz. rod. His wife was in the boat, and, judging from their story, they had more than eight-fifteenths of the fun that I anticipated. Since my return I have received a letter from Mr. Fuller, dated July 12, a portion of which I append:

"Since you left the guests of the house have done lots of deep trolling, catching many salmon trout, many of them weighing over 6lbs., the largest one up to date 10lbs.—one of 8lbs. and one of 8¾lbs. to-day—and, as usual, one of exactly 27lbs. 8oz. was lost to-day, after having him in a landing net. You know, those large ones always get away. Mr. Geo. S. Hier has so far made the largest catches—ten fish in one day—he uses not a silver hook, but a copper line, which gives him telegraphic connection between the fish and his hand and enables him to yank at the right time. Mr. Clark caught quite a number while here, but did not have just the right kind of tackle, though I think he got about as much fun out of it as any one. He used a 7½oz. rod and a very fine line, finer than most fishermen use as a casting line for brook trout. He is one of the kind of fishermen who thoroughly enjoys fishing. I was very sorry you and Newbury got away before the fun really began. Newbury worked hard enough to start it and he ought to have had his share."

Not meeting with success at the buoys, I took a guide and trolled nearly all the next forenoon, but, alas, the result was the same, and I gave it up in disgust and tried the flies, but the day was too bright and only an occasional straggler came to basket. After lunch we tried the inlet and succeeded in coaxing a few out of the very attractive looking water. Rounding a point, I cast my flies just under an overhanging bush and slowly drew them toward me. "There was a silvery gleam just beneath the surface of the dark waters, and instinctively I struck." The guide apparently did not know how to manage the canoe, as it gave a lurch to starboard, and there was nothing left for me but to counteract the erratic motion of the cranky bark by surging upon the fish, which was fairly hooked. This master-stroke I accomplished with more of success than usually attends efforts of this nature, and the frail craft at once righted. I have ever been an ardent student of nature and am moderately credulous when reading or listening to the tales of travelers. I had read of flying fish and to a certain extent accepted the statement for fact. Here I stopped; fish that climbed trees I took no stock in, indeed I went so far as to discard all statements that I did not know to be true when made by writers who advanced such preposterous theories. Right here I wish to humbly beg pardon of those now-believed-to-be veracious raconteurs and to state that I fully believe their tales to be "ower true." I am also constrained to add that I have no doubt that with a good squirrel dog, properly trained, rare sport could be had in bringing to basket these redoubtable arboreal beauties. The reason for my sudden conversion lies in the fact that just as I accomplished the aforesaid master-stroke a fish rose from the surface of the water some thirty feet beyond us, and flying straight over our heads, lit in the top of a cedar full that distance behind us. "That was a daisy," said the guide. "No," said I, "that was a trout;" and sure enough, when we backed ashore and the guide shinned up the tree, he found that, as usual in matters of this kind, I was correct. The weight of our capture I cannot state, as we had no scales that would record more than 4lbs., and they gave us no indication of his avordupois. I therefore leave this to the imagination of the reader, only suggesting that perhaps the oft told tales of the many worthy disciples of the venerated Izaak, who have whipped those prolific waters and furnished for the delectation of their less fortunate brethren glowing accounts of the size of the denizens sporting therein, may be of assistance to them in forming an estimate. After this episode we returned to the lake, and as the shadows lengthened we had better luck, taking home over forty fish of good size.

Days of rare sport and restful enjoyment succeeded, passing all too quickly, until it was time to reel up and start for home. The Northern Adirondack Railroad is now open to Paul Smith's station, some eleven miles from Lake Meacham, making much the easiest route to the St. Regis and Saranac waters, with three trains each way daily and though sleepers to New York. I had intended to take this route home, but young Mr. Newbury was going to Lake Placid and urged me to accompany him. I needed but little persuasion, as I wished to see more of the beautiful country that I had obtained but a glimpse of. Regretfully leaving the beautiful spot at 10 o'clock on Thursday morning in a private conveyance, we drove along the lake over a capital road, that with its line of telegraph posts that extended to Fuller's, looked anything but a wild woods trail.

Arriving at Paul Smith's in time for an early dinner, my first disappointment or rather two of them came to me. In the first place I learned to my disgust that the world renowned Paul Smith was not Paul at all but Apollos A. Then we had no trout for dinner, and my feelings overcame my appetite and I was unhappy. After dinner I looked up Apollos, and a half hour's chat with him set me straight again. He is truly a son of the forest, and I do not wonder at the popularity of his house. I have promised that when he comes to New York I will take him down to Dorlan's and treat him to a trout dinner.

The journey to Lake Placid was simply delightful. We arrived there in time for an hour on the beautiful lake, where we saw grand old Whiteface put on his night cap of fleecy clouds, and heard him lovingly echo back the weird notes of the evening song of the hermit thrush. The scenery at Lake Placid is grand and awe-inspiring, but somehow I did not feel at home. As some one has aptly said, "A mortal feels very small in the presence of grandeur like this."

The next forenoon was devoted to fishing, or rather we made fishing an excuse for becoming better acquainted with the beauties of this very appropriately named gem of the wilderness. Calmly gliding over the still water, occasionally lazily making a cast, we dreamily passed the hours drinking in with eager delight each new beauty of shimmering water, darksome forest and rock-crowned peak. Truly, "it is not all of fishing to fish," indeed I have faint recollection of the number and size of our catch. I only remember the wondrous beauty of the lovely lake and its majestic surroundings and that we forgot to bring to the house the few fish we did catch. Leaving Lake Placid on Saturday morning on the regular stage for Westport we passed through the historical town of North Elba, and as we came within sight of the grave of the "hero martyr," passengers and driver, six of us, attempted to sing:

"John Brown's body lies mold'ring in the grave."

What the others thought of the performance I know not. I was very forcibly impressed with the opinion that if the grand soul that is ever marching on had not got out of hearing, its pace would most assuredly be greatly accelerated if not entirely broken up. Passing through the narrow and rugged defile along the shore of Edmund's Pond, then down a long and steep incline to the beautiful valley of Keene, we halted for dinner; then up and down the mountains to Elizabethtown. We tarried until the stage was ready for Westport, where I took the train at 9:15, and at 6 o'clock on Sunday morning was home again with renewed health and vigor. Blended in sweet confusion and indelibly engraved upon memory's tablet is the wondrous wildwood picture, "a thing of beauty, a joy forever."

SHADOW.

DOMESTICATING RUFFED GROUSE.

Editor Forest and Stream:

My second ruffed grouse hen began sitting on the 4th of June last. She had previously laid five additional eggs in the new nest which she had made on being transferred, making ten in all, while the first hen had laid thirteen. It has always been stated that the male grouse takes no interest in the process of incubation and the rearing of the family. But this spring my male bird went several times into the nest on the day the second hen began sitting, and spent some time in it, as though he was about to undertake the work of incubation himself. The hen apparently did not relish the interference, whereupon I removed the male bird from the coop, and she promptly entered the nest and remained there during the afternoon and night.

An examination of the earlier sitting of eggs after a few days foreshadowed what was afterward fully established, that the eggs of the first hen were all barren, while those of the second hen were all fertile. I am not prepared to believe that this goes toward establishing the theory that the grouse it monogamous, and that the male bird having mated with one hen refused to mate with the other. The first hen apparently is a bird only a year old this spring, while the second is probably three years of age or older. The younger hen began laying within twelve days after she had first been placed in the coop with the male bird, and it is possible that her eggs had so far matured as to render their impregnation unlikely, if not impossible. Both last year and this the male birds were from a locality further north than that from which the hens were obtained, and their mating seasons consequently a little later. All these conditions are to be taken into account in drawing any conclusions as to the habits of the grouse in this respect.

The second hen showed no signs of restlessness or uneasiness during her entire time of incubation. But on the afternoon of the eighth day I found the first hen in a high state of exciment, created by some unknown cause, rushing about the coop, beating against its sides with her bill, and evidently having forgotten all about her eggs. The trouble was possibly caused by a pet game rooster which occasionally perched on the coop, and which had been rather noisier than usual that day. But the hen quieted down in less than an hour, and thereafter had no trouble.

The twenty-first day of the first incubation was completed at noon on the 15th day of June. That afternoon the eggs were found to be "pipped," as the poultry raisers would say, and everything promised fairly. But the next morning the chicks still tarried, and I began to be apprehensive. The next morning, the twenty-third day, I called in a poultry expert, and we both felt satisfied that the eggs had become so dry, owing to their situation, that the outer membrane had not softened down enough, and remained so tough that the chicks could not break through it. They were moistened several time at intervals with tepid water, and I hoped to save those developing later. But unfortunately the help came too late, and only one chick succeeded in extricating himself from the shell on the night of the twenty-fourth day. He lived and flourished for some twenty-four hours after hatching, but his mother most unluckily stepped on him on his first excursion from the nest, and as he was still feeble from his long struggle he did not survive. [Certainly one and possibly two of the eggs in this nest were laid by the second hen after the first had begun setting. This will readily account for what would otherwise seem a strange difference in the time of hatching.]

Subsequent examination showed that the last two of

the chicks that died in the shell had lived in their narrow prison at least a full day beyond the time when they should have been set free. This was evident from the fact that not only had the yolk been entirely absorbed into the body of the chick, but a portion of it, in each case, had been digested and passed off in feces, which were found in the bottom of the shell. When the hen found these chicks unable to extricate themselves, she went to work and carefully removed all the shell from the upper half of each egg, picking it off in pieces scarcely larger than the flattened head of a pin. But when this was done the tough membrane contracted about the little innocent, gripping him like a vise and crushing out his life before it had fairly begun. I am thoroughly convinced that at the time I last saw these two chicks alive they could have been saved by delicately cutting apart the membrane so that they could struggle out into the world. And these two, with the one that did hatch, would have been three, etc., etc.

This difficulty of the "drying up" of the eggs of game birds in "assisted" hatching is one that is liable to occur. My own theory is that the eggs of the grouse and quail being disproportionately small for the size of these birds (Nature's provision to aid their concealment), are relatively deficient in their watery part, and hence if the evaporation resulting from the incubating process is not properly made up by the reabsorption of surrounding moisture, the membrane about the chick adheres to it, and being unnaturally strong cannot be broken. At least two cases have come under my observation where gentlemen who had attempted to hatch quail found that the chicks had perished in this way, and thereupon decided that it was not possible. Having a hen quail sitting in my coops three years ago, I was so afraid of a similar miscarriage that I was in the habit of turning the lawn hose on the nest every day or two. As a consequence it was kept so damp and cool that the eggs were twenty-three days in hatching, but of the entire twelve every single one brought out a chick.

The grouse nest of which I write, however, was in a bunch of oak leaves on the ground, and being in a comparatively shady place seemed not to need any artificial moistening. But it had a southeast exposure where the sun shone warm during the greater part of the forenoon, and the coop was partly roofed over so that the rain could not fall on the ground about the nest. It was too dry.

Speaking of handling and examining the eggs, I did more or less of this from the time that the first hen began laying (always very carefully, of course), and I could not see that it made any difference with the birds in their laying or sitting, or in the hatching of the eggs. The second hen was so tame that after she began sitting she would allow me to take the eggs from under her without leaving the nest, and both of them would carefully replace in the nest with their bills an egg laid down before them, very much indeed after the manner of the common hen.

But the first hen manifested an intelligence during the hatching of her eggs which was most remarkable, and which would seem to partake more of reason than of mere instinct. The first chick that failed to hatch was removed by the hen as soon as it died to the limit of the coop furthest from the nest. The next day another dead chick was removed in the same way and to the same place. How the removal was effected I am unable to say, but the coop was locked and no other bird or animal but the sitting hen had access to it. Yet the two last chicks that died in the shell after or about the time that the live chick was hatched were not carried from the nest at all. The hen was apparently unwilling to leave the nest for such purpose the instant there were any living chicks to care for. Can anything more nearly approach human intelligence than this, and not be human?

After they had fairly "settled down to business," the grouse hens proved the most faithful and persistent of sitters. Yet they were equally regular in leaving the nest about the same hour each day for their feed of whole Indian corn, with which they were liberally supplied, remaining away from the egg never more than twelve or fifteen minutes. When the first hen had finished all the fertile eggs, having no chicks to care for, she still adhered to the nest which held a few barren eggs. For the purpose of testing her "staying qualities," I allowed her to remain, and when she was finally broken up, she had been sitting continuously for thirty-six days. The second hen was on her nest for twenty-eight days continuously. It is probable that they would both have been sitting up to this time, but that they were forcibly removed to the adjoining coop, and shut out from the nests. After a lapse of eighteen hours, they were readmitted to the nests and at once resumed their places as usual. In the course of the day they were again removed and after being shut out for twenty-four hours, again admitted to the nests. The same result followed in each case, although in the meantime all the eggs had been removed. They were finally shut out altogether.

But there still remain the fertile eggs under the second hen to be accounted for. Their story is soon told. By some mishap this hen managed to break one of her eggs in the nest after she had been sitting some ten days. The remaining eggs were carefully cleaned as soon as the mischief was discovered, but for that or some other reason the development of the embryo stopped, and the partly formed chicks died. The hen remained on these eggs four full weeks, but when the shells were broken at the end of that time it was evident that the chicks had never come anywhere near maturity.

This then is the result of my second year's experiments looking to the domestication of the ruffed grouse. It would seem as though they have demonstrated conclusively that the breeding of these grouse in confinement is not only possible, but practicable, and that so far as tried they adapt themselves with most readiness to the changed conditions resulting from captivity. And while all attempts at rearing grouse chicks under foster mothers appear to have failed, I am reasonably sure that chicks hatched under a tamed hen of their own species would at once take their cue from her and become easily accustomed to confinement and the sight of man. As for myself, I am not altogether unconsolable, having actually hatched a live grouse chick under a grouse hen, and from eggs fertilized and laid in captivity. Another year I shall hope to go on with my efforts, should nothing interfere.

I cannot close this report (which is written for the purpose of aiding any one who may follow up these attempts) without acknowledging my obligations to Mr. George R. Wright, of Wilkesbarre, Pa., (to whom I am indebted for birds) to Mr. C. H. Ames of Boston, Mr. Eugene Powers of Cortland, N. Y., Mr. J. L. Davison of Lockport, N. Y., Judge E. D. Potter and Mr. W. O. Dakin of Toledo, the editor of FOREST AND STREAM, and other gentlemen who have taken a lively interest in these undertakings.

Fifteen or twenty years from now the ruffed grouse will come to occupy very much the same place in this country as does the English pheasant in Great Britain—a semi-domesticated bird. When that time comes the magnificent *Bonasa umbellus* will be less of a stranger.

TOLEDO, O., July 12. J. B. BATTELLE.

AN EXAMPLE OF OPHIDIAN SENILITY.

THE death of a large snake (*Python seba*, of West Africa) in the London Reptilium lately afforded in its gradual decay of powers some interesting physiological features. It must have been at least thirty years old when it died, having been an inmate of the gardens twenty-three years, and being—so far as could be judged from its size when brought there—seven or eight years old at that time. When in its prime it measured 18ft. in length and was then a very handsome serpent, the pride of the collection. Latterly it was scarcely more than 14ft. long, having gradually shrunken during the last three or four years. In this shrinking of the form, as well as several other phases of natural decay, there was much similarity between the infirmities of the snake and those of human beings on the approach of old age. And they were such as could not fail to excite the sympathy of the observer. As far as one could venture to designate its chief affliction one would say that it was rheumatism, and to every appearance "the rheumatics" are an ophidian as well as a human malady. But fortunately we do not suffer to such an extent, and even if we had them from top to toe they could scarcely be so inconvenient as the python's 18ft. of rheumatism, or say even 14ft. or 15ft. *Python seba* has, according to Duméril, 357 vertebræ, of which 71 (beginning at the third as far as the tail) support a pair of movable ribs, one pair to each vertebræ; and as the ribs act as legs in crawling and are elaborately articulated with the complex spine by muscles still more complicated, the sufferings of a rheumatic constricting snake must be very severe indeed.

As much as three years before its death the keeper observed a difficulty and awkwardness in grasping its prey. The vertebral column, once so pliant, so swift in coiling, deft as ready hands, dexterous as fingers, and always equal to the occasion, became stiff and unmanageable. With difficulty it dragged its slow length along and drew itself into inadequate loops. Ten or twelve years ago I used to watch this snake at the feeding hour, and then realized the truth of what an old writer, Boget, said of the marvellous adaptation of a constrictor's coils to meet any emergency. With incredible swiftness it proved "its whole body a hand" in bringing two or more loops of it as two or more hands, to hold, press down, or arrange the outspread wings or limbs of the bird or animal it was swallowing. And all this without the aid of sight, the snake never so much as turning its eyes in the way of observing what was required, but by a sense of touch alone making its coils or loops serve the purpose of limbs and tactile organs.

When a constricting snake is hungry for food it will within six minutes seize with its mouth, coil, kill and swallow its prey. But our aged python with its poor stiff spine could no longer achieve this and had to be assisted. The keeper would get the prey into easy position and even present it to the mouth of the snake, holding it there until grasped. The old python, as if conscious that its coils were ineffective, would sometimes have recourse to the wall when the doomed animal happened to be close enough, and tried to kill it by force of pressure; an example of adapting means to an end practiced systematically by another snake, also a constrictor, which from an injury to its jaws could not seize and hold its prey in the ordinary manner. Our *Python seba*, unless assisted, would be hours fumbling over its dinner, painful alike to the victim whose life would otherwise have been swiftly destroyed, and trying to the feeder, who, as the keeper remarked, made as much fuss over a duck as if it had been a large-sized quadruped. And when at last the prey was killed and ready for swallowing, the keeper would patiently hold it to the mouth of the imbecile, who in addition to its other infirmities, suffered from sore gums, that required frequent washings with lotions and so forth. It also breathed with difficulty, and was probably asthmatic.

The incapable spinal column with its attendant pain was by no means the only feature of ophidian senility. Another affliction was the loss of its teeth; and this is worthy of note in ophidian biographies, since snakes are supposed to renew their teeth throughout life. As a rule this is true, but the clause, so long as they are in health, must be added. In the present case our python had for a long while ceased to renew them. The keeper in washing its mouth had observed they were becoming fewer and fewer, and a post-mortem examination revealed the fact that at the time of its death not one was left in either of the jaws nor on the palate of all the six rows of teeth. As it had no means therefore of holding and retaining its prey when in the mouth—the recurved teeth which would have served this purpose being all gone, and having difficulty in breathing and in swallowing, and with a diseased mouth besides, we can imagine that to partake of a meal must have been a very painful operation to this old snake. Indeed, we may reasonably conclude, that uncared for and unassisted, its death would have occurred much sooner. "And why not let it die?" it may be argued. "Only a snake, after all." Well, that python was an old inhabitant and a favorite, and had been a heroine in her time, affording to students of ophidian habits a great deal of practical information. A large python is worth a good deal of money, too. After attaining any size it is valued at so much per foot, like some other choice commodity. One pound or five dollars a foot, is an average price paid for such snakes, and at which rate there are now some at the gardens worth at least $125 each.

Serpents are supposed to be very long lived; and inasmuch as they sleep away more than half their existence, and are, moreover, always in a recumbent position, one which must be far less fatiguing than to stand erect, it seems reasonable that they should attain a great age, but authentic information on this point is difficult to procure. In her natural habitat our particular python might have escaped the maladies of civilization, asthma, rheumatism, gum boils and cramp; but as a set off to this she had now the advantage of skilled nursing and medical attendance, with carefully chosen diet. When a duck became too much for a meal a pigeon was offered her, and latterly even a small guinea pig was swallowed with difficulty. There seemed to be a contraction of the throat, and it was observed that the ribs, formerly so obedient to the will of the snake, now ceased to expand, the anterior ones especially, so that the entrance to the gullet was choked.

One more phase of this rather painful ophidian diagnosis must be mentioned as of interest, and which exhibited that marvellous adaptation of the breathing apparatus which enables a snake while gorged to bring forward the trachea beyond the mouth. Often do the larger snakes, if any length of time in swallowing some unusually bulky prey, advance the windpipe toward the mouth and even protrude it, if a fresh supply of air is required, but for a few minutes only. I have seen this frequently occur at feeding time; because, although a serpent can remain a long while without drawing a fresh breath, it does become necessary to do so occasionally while feeding. Among the many remarkable volitionary powers with which serpents are endowed, as if to compensate them for the absence of limbs—as, for example, the volitional action of the ribs; the ability to withdraw the delicate tongue within a sheath over which a valve closes it in safely from injury; the volitional action of a viperine fang, etc.—this ability to draw forward or to retract the trachea is surely one of the chief. And when so protruded beyond the mouth, you can observe that it opens and closes at will, otherwise there would be danger of dust or any small insect causing irritation and even danger. You may observe the aperture expand or contract, and even the feathers or fur of an animal in the snake's jaws stirred by the breath of the snake while the trachea is in contact with it. In the case of our aged invalid, in consequence of its difficulty of breathing, and indeed of performing any of its natural functions, the windpipe would hang from the mouth an hour or two at a time while the snake was making such painful efforts to swallow its food. The entrance to the windpipe is not back in the throat, as in most creatures, but forward in the mouth, lying immediately over the tongue sheath: and, like the tongue, can be safely inclosed when not in use. This *Python seba* once, in taking a prolonged yawn while close to the glass front of its cage, enabled me to examine all these interior arrangements at my leisure. In several other ways she afforded me valuable information, and I, in concluding this little obituary notice, only trust that my obligations to my old ophidian friend have not caused me to be very wearisome to my readers.

CATHERINE C. HOPLEY.

Postscript, May 30.—Just as I am winding up my dismal narrative of the deceased python, FOREST AND STREAM of May 12 is to hand with "Coahoma's" too flattering allusion to myself and his puzzle in naming the blacksnake found on the banks of the Mississippi. With so many able herpetologists in America I feel diffident in offering an opinion and particularly with such scant data to guide one. If it had no teeth on the palate it was a venomous snake. The absence of palate teeth may, I think, be taken as a safe guide in this respect. Many of the *Heterodons* have crimson tints in their colorings, though not clearly defined reds, but five feet is rather long for a *Heterodon*, though the form, "stout and with a short tail," would agree, and the brilliant coloring might be in consequence of a recent desquamation. I would suggest that when any rare or unknown species of snake is found it might be desirable to send it at once to the authorities of the National Museum at Washington, packed in a bottle or jar of alcohol, safely sealed and protected, and let it be accompanied by a clear account of its capture, if near or in water, or on dry soil, etc., etc. Better still not to kill it, but pack it in a box with moss and address it to H. C. Yarrow, M.D., Washington, D. C.

C. C. H.

SNAKE FASCINATION.

Editor Forest and Stream:

We have all heard that snakes sometimes charm birds and little animals; that is, that they will fix their deadly gaze upon them and so fascinate them with terror that the little creatures will lose all control of their muscles and so fall an easy prey. Whether this notion exists in the North or not I cannot say, but in the South it is or was general. I learned it from the negro slaves on my father's plantation in North Carolina, and when I was a little fellow I had a mortal dread of all snakes, lest they should charm me. But as the years passed by and no such incident befell me, and never seeing a snake charm a bird or animal, I concluded it was a negro superstition or fancy, devoid of fact. So I continued to think till a few days ago, when a farmer friend of mine, living four miles south of Abilene, told me what he had lately witnessed. He said he was riding along on a prairie and saw a prairie dog within a few feet of him, which refused to scamper to his hole, as prairie dogs usually do when approached by man; on the contrary, he sat as if transfixed to the spot, though making a constant nervous, shuddering motion, as if anxious to get away. My friend thought this was strange, and while considering the spectacle he presently saw a large rattlesnake coiled up under some bushes, his head uplifted, about 6 or 7ft. from the dog, staring steadily upon him. This, said he, is a case of charming. He then rode almost upon the prairie dog, which still heeded him not, but looked steadily upon the snake. He dismounted, took the dog by the head and thrust him off, when the snake, which had up to that moment remained quiet, immediately swelled with rage and began sounding his rattles. The prairie dog for some time seemed benumbed, hardly capable of motion, but grew better and finally got into his hole. My friend then killed the rattler. Now, was this a case of charming? If not, what was it? My friend who told me this is named John Irving McClure, a farmer, well-known to me, a good and truthful man. I now give it up that snakes do indeed charm, or so paralyze birds and little animals with terror, when they can catch their eye, that they become helpless and motionless, almost as good as dead. What say the scientists?

And to one who is familiar with the eyes of rattlesnakes it does not seem unreasonable that they should have such power. If you will examine the eye of one even when he is cold in death, you will perceive that it has an extremely malignant and terrible expression. When he is alive and excited I know of nothing in all nature of so

dreadful appearance as the eye of the rattlesnake. It is enough to strike not only birds and little animals but men with nightmare. I have on several occasions examined them closely with strong glasses, and feel with all force what I state, and I will tell you that there are few men on the face of the earth who can look upon an angered rattlesnake through a good glass—bringing him apparently within a foot or two of the eye—and stand it more than a moment. N. A. T.

ABILENE, Tex., July 12.

THE ENGLISH SKYLARK ON LONG ISLAND, N. Y.—Led by an article by Mr. Geo. A. Dennison (in New York *Evening Post* of July 6) in company with Mr. E. D. Bellows, of Jersey City, in the neighborhood of the Cemetery of the Holy Cross, Flatbush, L. I., at 7:20 P. M., July 15, 1887, I listened to the characteristic flight song of one of this species. The bird began singing at about 30ft. from the ground and continued its song to a very high altitude and until in its gradual descent it reached about the same height, when it sank like a plummet to the ground.—L. S. FOSTER (New York, July 15).

Game Bag and Gun.

THE GARDINER STAGE ROBBERS.

GARDINER, Mont., July 10.—*Editor Forest and Stream:* About 11 P. M. on the 4th of July, the train being late, one of the Park Association stages was stopped by two or three men, the passengers made to get out, and were robbed of their pocketbooks at the muzzle of a pistol. The point at which this outrage was committed was about a mile from this town and the same distance inside the limits of the Park. Only one of the robbers was seen by the passengers. He had a handkerchief tied around the lower part of his face; and at the point where the stage was stopped, the timber being thick and the road narrow, the darkness and the fright of the passengers prevented any accurate survey of his person. It was agreed that he was a man past middle age, of medium height, dressed in grayish clothes, with his trousers tucked into his boots. He appeared to be a novice at the business, was very nervous and frightened, took what was given him without searching the passengers or asking for more, and was in a great hurry.

There were three gentlemen and four ladies in the stage, which was the last one to leave here; the baggage wagon being some distance in the rear. Two of the ladies remained in the stage and were not molested.

The whole amount secured by the bold highwayman was sixteen dollars. No watches or jewelry were taken. Some of the passengers had with them large amounts, but were wise enough not to hand them over. One who had $250 in his pocketbook gave up his card case instead. No positive clue has as yet been discovered looking to the detection of the robbers, although efforts to that end are still being actively prosecuted. The town of Gardiner had been filled with a rough crowd, who were gambling and drinking through the whole day, and it is believed that the robbery was the work of amateurs who had got their courage up to the sticking point by the use of large quantities of Gardiner whisky.

Gardiner is outside of the jurisdiction of the Park, and is destitute of all means for the preservation of law and order, besides being the resort of all the hard and worthless cases in the country. This incident has no reference whatever to the police condition of the Park, and yet without doubt it will, by prejudiced parties, be made to appear that it was due to the inefficiency of the military. Captain Harris has worked hard for the past two months to keep the Park clear of tramps and adventurers, and it is in as good condition as ever before. Hereafter it is believed, an escort will be sent with the stages which go in after night. This will effectually prevent any further trouble. ALEXIS.

IN THE CHEROKEE STRIP.—V.

THE morning after the sleet was cold, and the ground in such condition that it would have ruined a greyhound's feet to run. We therefore cast about for amusements in camp. Ricker made a few sketches and I exposed a few dry plates for views about the place. This was my first serious attempt at amateur photography. Generally speaking, photography and hunting don't go together very well. The result proved that I had pretty fair success, however, as I brought back some forty very decent negatives. As we had no way to develop the negatives, it was necessary to keep the sensitive plates in absolute darkness, the least ray of white light being fatal to them. Our efforts at improvising a dark closet were various. Sometimes we crawled under a bunk and hung blankets down over the edges; sometimes we went into an old tumble-down dugout, and got behind a pile of boxes; at last we hit upon the expedient of making a tent of some wagon bows covered with buffalo hides, blankets and wagon covers. We found this dark enough, but the ruby lantern made the little hole almost insupportably hot.

At about noon we were visited by a neighboring ranchman or two, and with these came down young Hildreth, ex-cook on the 21. Hildreth hunted a great deal while at this ranch, and killed a great deal of game. He told us himself how he killed a mountain lion (or panther, I don't know the difference, and I don't believe anybody else does) not long before he left the camp. He was hunting deer in one of the dense swamps below the camp, and came upon a fresh deer bed, yet warm. In this was plainly to be seen the footprints of the lion, left there after the deer had vacated the premises. The trail of the lion followed the trail of the deer, and Hildreth followed the trail of both. All at once the lion sprang up out of the tall grass, not ten feet away, then stopped and looked around over his shoulder. Hildreth was badly "rattled" and missed on his first shot, though he could nearly poke the creature with his gun. At the second shot he hit it in the flank; and to follow his description, thereat it gave a scream which could be heard for about ten miles, and jumped at least forty feet above the top of the grass. It lit upon its feet apparently uninjured by the fall from such a height, and then stood up on its hind legs, facing him and seemingly looking for him. Hildreth shot the animal eight times, crossing four balls through the heart and lungs before it succumbed. The weapon used was a Winchester .38. I would prefer my woodpecker gun, the .45-90.

The panther is invested with a halo of romance, handed down by the daily newspapers—which must be entertaining—from the days when men shot little round bullets out of muzzleloading rifles and got chewed up by a mad feline before the panther had time to die, or the man had time to load. The panther is not dangerous, and I wish the Sunday dailies would quit telling those horrible stories about California lions, mountain lions, panthers *et id genus idem*. They are mostly horrible lies, and not excusable, especially on Sundays. Last spring Mr. Kirkpatrick was out with one of the ranch boys mending fence. They had two shepherd dogs with them, and these two shepherd dogs treed a panther in a little tree. The panther was 8ft. long, and the tree was about 6in. through. The boys walked up to the tree and shot the panther seven times with a Colt's revolver. The big coward held on like a squirrel, and never fell out until it was as dead as Julius Cæsar or Oliver Cromwell or Napoleon Bonaparte. Why didn't it jump down and clean out the outfit? Again, last New Year, on the west of the Eagle Chief Pool, two boys, the oldest of whom was fourteen years, killed a full-grown panther with an old muzzleloading shotgun, loaded with duck shot. They trailed Mr. Dreadful in the soft snow, and having never read any big dailies, shot him twice. Off ran Mr. Dreadful, and the two boys went back to the wagon for more bird shot. Then they trailed the "infuriated beast" into a brush pile, and filled his cowardly yellow hide so full of little holes that it looked like a sieve. He "fell dead at their feet." Why didn't he carry a couple of those boys off to his lair in some lonesome mountain fortress? These are true stories of the Cherokee Strip, all of them. They therefore will not do for the Sunday dailies. Sure, the panther is little thought of for a fighter in that region. I never read a real big panther lie but I think of Ko-Ko's story of the execution in the "Mikado."

I believe my partner, Mr. Ricker, is the most religiously conscientious sportsman now alive in this Western country. Once convince him that it is the duty of a sportsman to do so, or so, and he will do it or die. He has not died yet, but I would have more peace if he would. A part of his creed is that a sportsman should waste no time in camp. He improves each little shining hour—and some which are not so shining. Accordingly, nothing would do but that another try must be made for the deer; and I wasn't going to stay at home and let him go out alone, and maybe kill a deer when I didn't. Anyhow, I laughed him out of taking his scatter-gun—told him it was his duty to take his .45-90 (he also had one). When convinced of that he yielded. It was late when we got among the black jacks north of the camp, and separated for the day. We did not much expect to jump a deer, as at that time of day they were usually out on the flats, eight or ten miles away. They came that distance in the evening, fed among the black jacks, and went out again in the morning. This was their habit while we were there.

However, I followed a tolerably fresh trail that I found, and stuck to it until I began to think I should start them. At one place the trail crossed a tight wire fence. The deer had crawled under the fence. I should not like to crawl through the same space myself. At last the trail began to get crooked, and stand around in warm corners under the sand hills.

"Sit still, my heart," said I, "something is going to happen!"

I grasped my trusty woodpecker gun and groaned as I asked myself for the thousandth time why on earth the Winchester people put such beastly, miserable, straight, impossible stocks on their rifles. I tried to get a shotgun stock of a certain prominent gun house of St. Louis, but one of their men wrote me that the "new model Winchester did not have any hole in the stock for a cleaning rod." That fellow had a great head! If it had not been for the courtesy of one of their traveling men in getting my gun to me so quickly, I should have exploded wide open when I got that word about the "hole in the stock."

I just throw in that incident about the cleaning rod to make this story seem natural. A fellow is always thinking of something else when a deer jumps. I don't know what I was thinking about, but I presume it must have been about that unknown genius who attended to my order for a "shotgun stock." At any rate, I wasn't ready when the old buck said "Pull!" and they all pulled.

They were pulling out pretty fast when I got to the top of the little ridge, and saw them bouncing over the little basin below. Four big ghostly white creatures, very large, and apparently very warm, for they fanned themselves vigorously as they ran.

The sharp lower corner of the rifle stock just happened to catch me high up in the shoulder. Accordingly, I just happened to hit the buck at the first shot. The ball of the .45-90 went clean through him, and has since been found over in North Carolina, by my "esteemed friend," Col. James Henry Goshweiler. I found the buck myself a little later on.

When I fired the buck stopped fanning himself and made visible complaint. Turning upon the other three deer—two does and a yearling—which had run much further to the left, I fired three more shots, rapidly and with great precision, at an angle of about 45° in the air, keeping my eye steadily fixed upon a point about half way between the two sights of my gun. The does fanned themselves on over the hill.

It is wrong to kill does. Upon their safety depends the preservation of the race.

I ran on across the hill and satisfied myself that the does were preserved all right. Then I bethought me of the buck. Taking his trail I soon found I had not far to go, and before long I saw him standing hunched up in a little draw, about 200yds. ahead of me. He gave a few stupid little jumps and hunched up again. I stooped and ran rapidly 30 or 40yds. nearer; then, fearing he might make off, I fired and melted his legs on the spot.

I found that the first ball had ranged too far back. The second broke his neck. E. HOUGH.

TEXAS.—El Paso, July 14.—I am glad to say that through the efforts of Col. Baylor, representative from this district, El Paso county has again been placed under the game law. However, our game law is such a miserable apology and the pot-hunter and old-fogy element is yet so strong that we might about as well not have a law. But having a law we hope for better by and by.—G.P.R.

THE BIG BUCK OF CHETKO.

FOLLOWING the coast of California to the northward from Crescent City, the boundary line of Oregon is soon reached and a few miles beyond is the mouth of the Chetko River. This is a beautiful little stream of clear, cold water, abounding in trout and formerly visited by salmon in large quantities, many being taken by the Indians, who some years ago were in the habit of frequenting the banks of the river in considerable numbers during the run of fish.

The coast line here is somewhat irregular, forming a small bight, where a few vessels may find comfortable quarters, sheltered from the strong northwest wind, which in summer sweeps along the shore with sufficient force to make a protected anchorage at times desirable; and though not of sufficient size nor sufficiently secure to be denominated a harbor, Chetko Bay is in point of picturesque scenery perhaps equal to any part of the coast between the Golden Gate and the Columbia River.

Happening several years ago to be traveling up the coast, and circumstances rendering a delay of some four or five days at Chetko necessary, I proposed to my friend and traveling companion, Stanton, to take a run ashore of a day or so in order to stretch our legs, and, if possible, get a shot or two at the deer, which we supposed would probably be found in that region. Entering the mouth of the river in one of the ship's boats, after barely escaping a capsize in the surf on the bar, we landed on the north bank and immediately set off. Our course took us along a level plateau extending in a westerly direction from the coast range of mountains two to three miles to the ocean, where it terminated in a bluff some 50ft. or more in height, and to the northward indefinitely, its surface being broken occasionally by the course of a small stream traversing the plain on its way from the mountains to the sea, or by a solitary butte, which, rising abruptly from the flat surface, and covered with a thick growth of sage brush and scrub oak, afforded a pleasant relief to the otherwise monotonous landscape.

Our start was made in the early morning, our intention being to hunt leisurely along during the day, and at night find shelter at a house said to be some ten miles up the coast, where we were told a warm welcome would await us, which we afterward found to be the case. The day at first was clear, but it was not long before a thick fog was blown in from the sea, rendering it difficult for us to find our way along the trail upon which we had set out.

After making our way for a couple of miles, we found ourselves approaching a butte about 40ft. high and situated on the edge of the bluff, the trail winding around its base on the inshore side and passing between it and a clump of similar hills, distant a mile inland, as we afterward ascertained, when the fog lifted. While endeavoring to make out the outlines of the hill which loomed up indistinctly, my attention was arrested by a head, surmounted by a huge pair of horns, apparently near the summit, and turning with deliberation and dignity from side to side, in a manner indicating that its owner was upon the alert and ready to seek a more secure position upon the slightest sign of the approach of an enemy.

"Stanton," I whispered, "do you see that? It looks big enough to be an elk!

"It is not an elk, but an almighty big buck," he replied, "and I don't see how we are going to shoot him from here, as he must be 200yds. away, and if we attempt to climb the hill we cannot get through the brush without his hearing us, and then he will be off in no time."

After consulting a little, we determined that our only chance was to shoot from where we were, so we both pulled up and fired at the word, aiming for the head, which, as before stated, was the only part visible. Our shots produced no impression, apparently, the old fellow continuing to move his head slowly around, without stirring from his tracks. Stanton then drew up to shoot again, while I decided that I would not fire, but await the result of Stanton's shot, which this time proved effective. He fired, lowered his rifle, and we then distinctly heard the sound of the bullet as it struck him, and giving a bleat like a sheep, he came tumbling down the hillside directly toward us. When about two-thirds of the way down he stopped, gathered himself up, and ran off to the left, around the side of the butte, whereupon we immediately legged it around the base, thinking that perhaps we would get another shot before reaching the edge of the bluff. We were right, for after going but a little way we saw the old fellow standing in a clump of brush, broadside to us. Now, never having shot a deer, nor even having shot at one until that morning, I naturally felt disposed to have a hand in the affair, and no "buck ague" interfering, to my surprise, although I had it afterward upon another occasion, with a steady sight behind the shoulder I let drive and had the satisfaction of seeing the old gentleman drop in his tracks. It did not take long for us to reach him and for some time we stood over him admiring his size and beauty. He was indeed an enormous fellow. I will not pretend to give any idea of his size and weight, suffice it to say that he had the largest horns, the largest hoofs and appeared by far the largest deer that has ever come under my observation, and although an old hand at deer hunting, Stanton fully agreed with me that this was something beyond even his experience.

"Well, Stanton," I said, "we've got him, isn't he a splendid big buck, shall I cut his throat?" "No," he answered, "he is not hurt mortally, don't you see he is breathing regularly? he is probably only stunned; I thought I saw a piece of his horn fly off when you fired, and if you attempt to cut his throat he may do you some harm with his forefeet; you had better shoot him in the head." Whereupon I walked round to where I could get a fair shot between the eyes, carelessly pointed my rifle and fired. To my astonishment the deer suddenly sprang to his feet, whirled round and set off at full speed down the side of the butte, and before either of us could bring our guns to bear was out of sight in the brush.

I stood for a moment too much surprised to move or speak, and then said, "Well, I suppose we will find him not far off." "No," said Stanton, the chances are that we will never see that deer again." And we never did. We followed his trail by the blood for about a quarter of a mile, when we lost all traces of it in an open spot.

Thus I lost my first deer, and although I have since killed many of his kind, I have never seen his equal, and expect I never will. Upon each of the rare occasions when I have since met my companion of that day he has not failed to speak with regret of the big buck which came so near to being our game. CHETKO.

ERIE, Pa.

GAME IN PRUSSIA.

[Translated from the *Weser Zeitung* for the FOREST AND STREAM by Chas. L. Schember.]

AS long ago as 1874 a commission sitting in Berlin had under consideration, in a plan for collecting general statistics of German forests, the value of the proceeds of hunting. Since then have been published from different sources several more or less complete lists and tables, and lately an attempt has been made in the monarchy of Prussia to obtain a statement of the distribution of the various kinds of game and their abundance in different parts of the country, which would be made use of for administrative and legislative purposes. This was accomplished by statistical reports, based on counting cards, and comprising the period from April 1, 1885, to March 31, 1886. The reports were made according to certain regulations in every community or estate-district. The cards were required to be filled out by the presidents of the communities or estate authorities, under the supervision and control of the *Landräthe*, aided by the lessees of the hunting privileges. The material thus obtained was then tested and worked up in the Royal Statistical Bureau.

Although the lessees were not obliged by law to give the desired information, it was nevertheless furnished willingly in almost every instance, and the result of these statistics is—for Prussia at least—an approximately correct statement of the game shot during the above named period. The result deviates somewhat from the truth for three reasons: First—No account has been taken of the game shot by poachers. Second—No reports could be obtained from thirty-eight communities and estates, and third (not to mention possible errors)—Lower estimates by a number of lessees than the actual results of the hunt, they fearing the raising of their rent.

The tabulated statements lately published by the Royal Statistical Bureau show—notwithstanding the unavoidable incompleteness in the material furnished—a result more than double that of all former estimates. With certain kinds of game, especially hares and partridges, the result seems to exceed that of former years because it is asserted that the year 1885-86 was especially favorable for the increase of this game. There were shot or trapped, during this period, of the more important kinds of game and fowl:

RETURNS FOR 1885-86.

Game.	*Fowl.*
14,460 red deer.	378 mountain cocks.
8,543 fallow deer.	6,016 birch fowl.
108,602 roes.	2,209 hazel fowl.
9,019 black game (wild boars).	2,521,195 partridges.
2,367,927 hares.	102,836 quail.
314,009 rabbits.	139,568 pheasants.
84,301 foxes.	818 bustards.
5,051 badgers.	40,819 woodcock.
4,092 otters.	277 wild swans.
606 wildcats.	3,400 wild geese.
5,475 pine martens.	269,765 wild ducks.
5,312 rock martens.	51,991 snipe.
27,578 fitchets.	1,277,177 field-fares.
23,578 weasels.	15,888 herons.
592 seals.	119,694 birds of prey.

Among the birds of prey are mentioned 158 stone, screech and golden eagles; 34 sea, fish and river eagles; 190 horned and 349 other owls; the remainder consisting of falcons, hawks, kites, buzzards, etc., and no doubt including crows and magpies, which are considered obnoxious in hunting. The same is true of wildcats and horned owls, among which were included—as proved by further correspondence—a number of domestic cats become wild, and other owls.

Of the rarer game there were shot: One ure-ox in Upper Silesia (raised in the Zoological Garden); 9 elk in East Prussia; 4 wolves, (1 in East Prussia, 1 in Brandenburg, and 2 in Rhineland); also 17 beaver in the Elbe and tributaries, in the province of Saxony.

FURRED GAME.

Considering the distribution of game in the whole territory, including that not shot over, and those parts from which no information could be obtained, each 100 square kilometers averaged 4.15 red deer, 2.45 fallow deer, 31.17 roes, 2.59 black game, 679.79 hare.

Of red deer, the provinces of Brandenburg, Saxony and Silesia yielded 11.11, 7.75 and 6.92 respectively.

Fallow deer: Hohenzollern, 9.19; Schleswig-Holstein, 8.69; Brandenburg, 7.67.

Roes: Silesia, 61.11; Hesse-Nassau, 58.31; Brandenburg, 40.25.

Black game: Rhineland, 6.57; Hesse-Nassau, 5.77; Brandenburg, 5.08.

Hares: Silesia, 1819.90; Saxony, 1650.71; Rhineland, 778.34.

FEATHERED GAME.

The average in the whole territory for 100 square kilometers was 723.79 partridges, 29.52 quail, 40.07 pheasants, 11.74 woodcock, 14.50 snipe, 77.45 wild ducks.

The largest number of partridges killed for 100 square kilometer were: Silesia, 1835.11; Saxony, 1301.68; Posen, 1009.68.

Pheasants: Silesia, 252.93; Saxony, 26.55; Brandenburg, 26.37.

Woodcock: Schleswig-Holstein, 28.99; Westphalia, 26.10; Rheinland, 14.43.

Wild ducks: Schleswig-Holstein, 217.03; Pomerania, 119.98; Brandenburg, 108.31.

Field-fares: Hanover, 720.10; Rheinland, 539.45; Westphalia, 472.53.

Aggregating the value of the entire amount of game shot from April 1, 1885, to March 31, 1886, the prices fixed in the official game schedules for the several districts have been used as the basis of calculation, as follows: For red deer, the average value of smaller deer, forked and old deer; for fallow deer that of a small deer, spike and old deer; for black game that of a 2 or 3-year-old pig; for roes that of a buck and doe. The value of a rabbit has been put at 0.50 mark (12 cents), the skin of a fox at 4 marks (96 cents), otter 12 marks, wildcat 4 marks, pine marten 12 marks, rock marten 10 marks, fitchet 2 marks, quail and field-fares at 0.30 mark and 0.15 mark respectively. Computing, then, the value of the game for the year, we find a total of nearly twelve million marks, to which sum the furred game contributes nine and the feathered three millions—a surprising result in view of the fact that the last official estimate in 1881-2 ("The Condition of the Prussian Forests," by Hagen-Donner,) put the value of the yearly game supply at 5,772,000 marks, and adding the value of the skins, 6,700,000 marks. The sum of twelve million marks would no doubt be considerably larger were the receipts from all the items connected with the hunting privileges taken into consideration, as explained in the work by Dimitz, "The Hunt in Austria," for Cislithania.

OPEN SEASONS FOR GAME.

Arkansas.

Deer, Sept. 1 to Feb. 1; wild turkey, Sept. 1 to May 1; pinnated grouse (prairie chicken), Sept. 1 to Feb. 1; quail (Virginia partridge), Oct. 1 to March 1.

Colorado.

Elk, deer, buffalo, antelope, mountain sheep, Sept. 15 to Jan. 1; partridge, pheasant, pinnated grouse (prairie hen), Oct. 1 to Nov. 15; quail and wild turkey protected at all seasons.

Connecticut.

Woodcock, quail, gray squirrel, ruffed grouse (partridge), Oct. 1 to Jan. 1.

Maine.

Moose, deer, caribou, Oct. 1 to Jan. 1; wildfowl, Sept. 1 to May 1; shore birds, Aug. 1 to May 1; quail, Oct. 1 to Dec. 1; woodcock, ruffed grouse, partridge, Sept. 1 to Dec. 1.

Massachusetts.

Woodcock, Aug. 1 to Jan. 1; ruffed grouse (partridge), Oct. 1 to Jan. 1; quail, Oct. 15 to Jan. 1; wild ducks, Sept. 1 to April 15; plover, snipe, sandpiper, so-called shore, marsh or beach birds, July 15 to May 1; wild pigeon, gull, tern, Oct. 1 to May 1; gray squirrel, hare, rabbit, Sept. 1 to March 1; deer not to be killed at any time.

Minnesota.

Woodcock, July 4 to Oct. 31. Pinnated grouse (prairie hen), sharp-tailed grouse, Aug. 15 to Sept. 30. Quail (partridge), Sept. 1 to Nov. 30. Ruffed grouse (pheasant), Sept. 1 to Nov. 30. Wildfowl, Sept. 16 to Dec. 31. Deer, moose, elk, month of November.

New Hampshire.

Moose, deer, caribou, Sept. 1 to Dec. 1. Gray squirrel, Sept. to Jan. 1. Wildfowl, Aug. 1 to Feb. 1. Woodcock, quail, ruffed grouse, partridge, Sept. 1 to Jan. 1.

New York.

Deer, Aug. 15 to Nov. 1. Dogging season, Sept. 1 to Oct. 5. Dogging not allowed in St. Lawrence and Delaware counties. Hare, rabbit, Nov. 1 to Feb. 1. Black and gray squirrels, Aug. 1 to Feb. 1. Wildfowl, Sept. 1 to May 1 (Long Island waters, Oct. 1 to May 1; Chautauqua county, Sept. 1 to Feb. 1). Quail, Nov. 1 to Jan. 1 (in Niagara county not before 1889). Woodcock, Aug. 1 to Jan. 1 (in Oneida, Delaware, Dutchess and Columbia [?] counties, Sept. 1 to Jan. 1). Ruffed grouse (partridge), Sept. 1 to Jan. 1 (in Queens and Suffolk counties, Nov. 1 to Jan. 1; in Niagara county protected to 1889). Spruce grouse, Canada partridge, Nov. 1 to Jan. 1. Shore birds, July 10 to Jan. 1.

Ohio.

Quail, pinnated grouse (prairie chicken), Nov. 10 to Jan. 1; wild turkey, Nov. 1 to Jan. 14; ruffed grouse (pheasant), blue-winged teal, Sept. 1 to Dec. 31; wild duck, Aug. 31 to April 9. (In waters of Lake Erie and its estuaries wildfowl cannot be killed on Sunday, Monday or Tuesday of any week between Sept. 1 and April 1.) Woodcock, July 4 to Dec. 31; turtle dove, Aug. 1 to Dec. 31, squirrel, June 1 to Jan. 1; rabbit, Oct. 1 to Jan. 31; deer, Oct. 15 to Nov. 20.

Rhode Island.

Rabbit, hare, gray squirrel, Sept. 1 to Feb. 1; shore birds, Aug. 1 to April 1; dusky, black, wood, summer ducks, blue, green-winged teal, Sept. 1 to March 1; ruffed grouse, partridge, woodcock, Sept. 1 to Jan. 1; quail, Oct. 1 to Jan. 1.

Vermont.

Deer not to be killed at any time; wildfowl, Sept. 1 to May 1; woodduck, Sept. 1 to Feb. 1; ruffed grouse, partridge, Sept. 1 to Feb. 1; woodcock, Aug. 15 to Feb. 1.

Wisconsin.

Woodcock, July 10 to Dec. 1; quail, partridge, pheasant, ruffed grouse, pinnated grouse (prairie hen), sharp-tailed grouse, snipe, plover, wildfowl, Sept. 1 to Dec. 1; deer, Oct. 1 to Nov. 10.

S. HEDDING FITCH, a Yonkers (N. Y.) lawyer, was out in a boat on Little Tupper Lake, in the Adirondacks, one evening recently, catching minnows for the next day's fishing. His repeating rifle lay in the boat. Stopping at a log, Mr. Fitch stepped out upon it and after netting some fish stepped back into the boat. His doing so in some way disturbed the rifle and exploded it. The bullet entered his thigh, fracturing his thigh bone, and came out at the knee, fracturing the knee joint. Mr. Fitch's sufferings for the next three days were terrible. His guide did what he could to stop the bleeding and then carried him to their camp. The nearest place where help might be obtained was Pliny Robins's house, eight miles away, and the nearest telegraph station was Saranac Inn, forty miles beyond Robins's. At daylight the next morning the guide left Mr. Fitch alone and made his way over a difficult trail to Pliny Robins's for help. Mr. Robins was away and there was only one man available to go to Saranac Inn. This man hastened on and telegraphed to Dr. Trudeau. The party which had left Mr. Fitch the day before he was shot and were on their way home to this city, received word of the accident, turned immediately about and reached their wounded comrade at 11 o'clock Thursday morning. That night they moved him to Pliny Robins's, and by Friday at midnight they had him at the Saranac Lake House, sixty miles from his camp. The next morning his physician, Dr. W. H. Sherman, of Yonkers, and the other doctors who had been summoned performed an operation on his leg. Reports from the wounded man to-day are to the effect that he is improving.

THE AUBURN CLUB MEANS BUSINESS.—Auburn, N. Y., July 18, 1887.—*Editor Forest and Stream:* Christopher Peterson, residing on the shore of Owasco Lake, Cayuga County, having been caught spearing fish and criminally convicted and fined for that offense by members of the Fish Protective Association of Auburn, N. Y., the said Peterson being at the time a member in good standing of the Auburn Gun Club, has been expelled therefrom. We wish this placed before the public, and especially before the gun clubs of this State belonging to the State Association for the Protection of Game and Fish. Requesting them to follow up the work begun, and make examples of any and all persons in their districts who can be found guilty of evading the laws of the State in the protection of game and fish.—GEO. B. WRIGHT, JR., Secretary Auburn Gun Club; also, Corresponding Secretary State Association.

SOUTH PRESQUE ISLE, Me., July 12.—Small birds, such as woodpeckers, robins, blackbirds, jays, etc., are very abundant. Huge cranes are to be seen daily feeding in Arnold Brook. Yesterday as I stood near Quaggy Joe Lake, of which the brook is the outlet, four wood-ducks left the lake and flew just overhead. To-day, sitting on a mossy log in the thick woods, I noted several ruffed grouse and chicks which were very tame. Several deer and caribou have been seen lately. Uncle John Sprague, the bear hunter of this region, has trapped two bears since last Friday. Some animal in three visits to our hen house has carried off (1) a sitting hen and 14 eggs, (2) ten chickens, (3) eighteen chickens, some of them half grown. Last night he stole the bait from a steel trap. As the lake is a resort for ducks and geese during the fall migrations I am looking cheerfully forward to September and October and anticipate fine sport with my shotgun.—W. H. W.

MICHIGAN DEER LAW.

AN Act to amend section one of Act number one hundred and twenty-four, session laws eighteen hundred and sixty-nine, entitled "An Act to revise and consolidate the several acts relating to the protection of game and for the better preservation of elk, deer, birds and wild fowl," approved April third, eighteen hundred and sixty-nine, and all subsequent amendments of said section, the same being section two thousand one hundred and ninety-eight, Howell's Annotated Statutes.

SEC. 1. The people of the State of Michigan enact: That section one of an act number one hundred and twenty-four, session laws of eighteen hundred and sixty-nine, entitled "An Act to revise and consolidate the several acts relating to the protection of game, and for the better preservation of elk, deer, birds and wild fowl," approved April third, eighteen hundred and sixty-nine, and all subsequent amendments of said section, being compiler's section two thousand one hundred and ninety-eight, Howell's Annotated Statutes, be and the same is hereby amended so as to read as follows:

§ 2198, Section 1. No person or persons shall pursue, or hunt, or kill any deer in this State save only from the first day of November to the first of December in each year. Provided, That in the Upper Peninsula deer may be killed between the first days of October and the fifteenth day of November only, in each year; or kill at any time any deer when it is in its red coat, or any fawn when it is in its spotted coat, and the having in his possession the skin of such deer or fawn shall be *prima facie* of such illegal killing. No person shall at any time kill or capture any deer in the water of any of the streams, ponds or lakes within the jurisdiction of this State, or kill or capture any deer by means of any pit, pitfall or trap, nor shall he make use of any artificial light in hunting such deer. No person shall make use of a dog in hunting, pursuing or killing deer within the boundaries of this State, and any dog pursuing or killing a deer or following upon the track of a deer is hereby declared to be a public nuisance, and may be killed by any person where so seen, and the owner of such dog shall have no recourse at law against the person so killing such dog. No person shall kill or destroy by any means whatever, or attempt to take or destroy any wild turkey at any time, except in the months of October, November and December of each year, or kill or destroy by any means whatever any woodcock, or any partridge, or ruffed grouse, or any wild duck, wild goose, or other wild water-fowl, or snipe, save only from the first day of September in each year to the first day of January next following. The taking, carrying or sending by any means whatever, into or through any county of this State, or any of the game or animals which have been killed or captured contrary to the provisions of this section, or the hide of such animals, shall be illegal and is declared to be an offense against the provisions of this act in any county in or through which such game, animals or hides may be taken, and such offense may be punished as provided in section six of this act hereby amended.

This act is ordered to take immediate effect.

Approved June 25, 1887.

Camp-Fire Flickerings.

"That reminds me."

220.

"THAT reminds me" is the preface of so many good things that one never hears this expression without naturally expecting to hear "something drop" very soon thereafter.

It is the magic key that unlocks chests where deeds of forty or fifty years ago have slept calmly and peacefully through the changing seasons. That dear old period "when boys were not what boys are nowadays." Those happy days when puncheon floors "were good enough for me to cut a pigeon wing on," and when the honored guest would have been assigned to a "front parlor on the ground floor." And then again it introduces such an aggregation of events of yesterday and to-day that one could only expect to find a parallel case in the attractions to be found in the greatest show on earth. Tales, too, of almost invisible texture, yet tales, you know; happenings as strong and vigorous as young goats; and stories, if not as old as the ark, were there or thereabout, when the historical voyage was ended. Yet all of these things have entertained many a camp-fire; they have lessened the toil of many a tiresome portage, and if they were not angels in disguise, have on many occasions at least discharged the good office as if they were. Certain tales I listened to not very long ago at a social gathering of congenial sports impressed me very forcibly with the idea that however much men may be affected by the decaying touch of time, physically, there is a singular friend, one of the mental organization from like influences.

Some of us had barely reached thirty, and while others of the party had doubled that period of life, I must add with much pride, that the younger members acquitted themselves in a very creditable manner, but finally succumbed to the experience and wisdom of age. It would be needless for me to detail the occurrences of that evening. Your space would not allow it and my time is too limited. There were, however, tales of land and sea; stories by men who had followed in the footsteps of their fathers as they blazed trails through the unbroken forest of Ohio. The years sent back to the informal loan association, the leafy temples that once shaded our hills and with them, the attendant scenes; songs from the faraway Susquehanna; feats of the keelboat-man along the Ohio; panoramic views of the Mississippi; a bird's eye view of the "Cresent City," down the vista of fifty years, and events that marked the coming tribe, that now ranks third among the hosts that are encamped around the tabernacle of the Republic. But I digress. An Irish gentleman, who feared nothing but the "beauty of women and the jollity of wine," as he himself declared, had made the rash statement that salmon sometimes grew to be 8ft. long in Ireland. He of course admitted afterward that he could afford to fall a foot or two, but as a farewell shot, was willing to swear that they were that long when he was a boy. He couldn't answer for the present, but for the past he was a living witness.

When he had finished, the Doctor turned smilingly toward him and raid: "Tom, that reminds me of an incident of my boyhood days. It is not a fish story in fact,

but figuratively speaking, it might be taken as such. When young I was very fond of foxhounds, and consequently had many chases. In those days I was not hampered with aches and pains as I am now. No, indeed. I was a lively chap, and as limber as an eel. One morning in December, I took the dogs and started away to the flats for a chase. In the big swale, or what are now known as the Horse Meadows, I turned them loose. I don't think the pack drove the woods ten rods before they jumped the fox and away they went; I tell you the music was grand. It was so inspiring that, when an hour later the pack broke cover at Green's clearing, I laid off my surplus rags and joined the procession. There wasn't any dead march accompaniments, either. It was more like marching to the tune of 'We'll all drink stone-blind when Johnny comes marching home,' etc. It was vigorous. I roared a few times to encourage the dogs, but soon found there was a limit to my wind supply and no reserve to draw from. Nature was wise in the attainment granted me, I suppose. I was not proud that I could run like a hound, but if I could have bayed like one, I might have succumbed to pride. Men have their weaknesses.

"They out-footed me the first mile, but after that I began to catch my second wind, and being irritated by the many saplings and briers I met, I spurted, as those aquatic fellows call it, and showed what a man could do when spurred on by ambition. I ran in good form, but didn't get in any better humor. In fact, the longer I ran the hotter I got. I began to realize that among the unwilling spirits the animal was gradually coming to the front. The air was full of strange whispers as we whirled by. Once I even imagined I heard John's wife offering to bet on the old dog in ticking pants. This galled me, but my tongue was silent, though my heart resented the insult. If my wind and the horn holds outs, guard well thy walls, oh Jericho, thought I, as soon afterward I discovered there were but three of us in the race any more; the fox, myself and 'another hound.' If the fire of my blazing eyes did not paralyze, if my burning breath did'nt scorch that trailing brush it was not my fault. Ten minutes later I reached forth my hand and the prize was mine. The resolution of man out-stripped feet winged with fear and trained by instinct to seek safety in flight. My feet marched to the music of my wind, and I caught him on the dead level. Such experience rarely comes but once in a lifetime, that was forty years ago, Tom."

There was not very much said when the Doctor finished his story, only that a man who knew a great deal about salmon thought there must have been some kind of an epidemic raging among the fox family when that race came off. It had its effect, however, for the Squire faced the music and went at it.

"Doc, that reminds me of one of my ventures in farming. It was, I think, probably the first year I was married. The fact is, that I had a reputation for neglecting business in those days. I grew out of it at last, but it was a pretty hard rub between the gun and the plow for several years. That spring I put out a crop of corn in the Buckhorn bottoms, but the weather got so wet that I let the field go and paid no more attention to it. Of course, the place soon overran with weeds and was the most desolate spot in the country. I felt mean every time I passed that field. It was in a measure gratifying, it is true, for me to know that it furnished themes for many of those domestic symphonies that my wife could render with such semi-heroic effect. I then experienced my first 'May festival' season. There was something so ecstatic, so exquisite in those entertainments, that even my uneducated ear began to 'catch on,' and by the time the summer was half gone I had mastered the score and could tell by watching the shadow of the baton just where the orchestra was playing. I felt that it was far better to be an appreciative audience on the occasion of these concerts than a demonstrator of connubial felicity several volumes in advance of my studies. I was a hero, because I was the historical character in all the legends; villain, because the virtues of Job sheltered me from a tongue as remorseless as the hand of Sancho Panza when he did penance in five hundred lashes. But the season came on, and if I felt a little older, if I felt a trifle meaner every time I passed that field, no one was the wiser.

"Success needs no herald, and I was too brave to tell the world of a failure. But the knowledge of one wore on me. My wife was the bell buoy that constantly dinned it into my ears. One day I went out and looked on the swaying acreage of weeds and thought, oh, misery how bountiful thy vintage! As I stood pouring out my lamentations one of my dogs ran a ground hog into the field. I followed and was simply appalled, for there growing from cornstalks, not half as high as the weeds, were ears of corn as long as my arm. My wife said it was not a discovery that grew out of virture, therefore I deserved no praise. That afternoon I dug out seven ground hogs from under one stump and the next week gathered my crop. It went sixty bushels to the acre. Men that owned land in this section forty-five or fifty years ago, had a bonanza."

"Go on, Mr. Lavering, go on. No one must feel under any constraint here this evening. That reminds me of some farm work I once did myself. Not that there is any similarity in the incidents, but it simply calls to mind experience I had almost forgotten. One season old Sam Manning and myself made arrangements for a trip up to the 'big woods.' I had a patch of land up there I wanted to look after. Between business, hunting and fishing we expected to spend about two months. A few days before the time set to go Sam sent word to me that I would have to give him a lift on the harvest, or he could not be ready on time. Sam was a good hunter, but a powerful lazy farmer, and I knew had already wasted a week on ten acres of wheat. If I started away without him the wheat would never be cut, I reasoned, for he will not be an hour behind you. So the next morning I went over to Manning's, and, as a matter of course, found them all in bed. I loafed around a while, and then strolled down to the field. The wheat stood well, and, to pass the time, I concluded to cut one round before breakfast. Well, I made the grand circle and the voice of the horn was still silent. There were about three acres in the patch, and, while it angered me to think of the slothfulness of some people, I started in again. A dozen rounds and the mellow notes of the horn still slumbered. I was mad all over then. Jacob, I said to myself, you must wrestle with this field; and I smote her hip and thigh. The sun was just peeping through the treetops when I cut the last swath. Even this did not lessen my wrath. In the next field was about an acre and a half of red brush and laurel. It grew thick, like the hair on a dog's back, and was a menace to my tireless arms. The sight of it added fuel to my anger, and, jumping into it, I never stopped until that thicket lay in winrows as high as the fence. Just as I finished the voice of the horn got loose. But I scorned the hospitality that came after the laborer had won the golden medal and become a hero. Honest sympathy is often distrusted because of its late coming. That was the summer before I crossed the plains, and I went to California in '49.

"I am now sixty years of age, and twenty years of that time have been spent on the bench as Common Pleas Judge. Many of the occurrences of youth, when related in after years, are sometimes accepted as exaggerations, but if the truth is told, there have been episodes in the lives of all that seem more like estrays from the realm of romance than living children of the present or relics of the past. One should therefore be very careful not to pass judgment until all the evidence is in. I know myself that I experienced some things in my youth that have influenced my after life, notable among these was one that taught me never to discuss a subject in public until I had given it thorough study, never to ridicule any man's story until I was assured a chain of circumstances might not come in to substantiate everything that had been said. On a night a party of us went out coon hunting, but the weather proving unpropitious, we adjourned to meet at Hainsey's Crossing, where we sampled old Sol's app'ejack so often that the place grew too small for us. Like boys of the present day, we started out to "paint things red," and finally landed in the old log church that still stands down on Pine Creek. Everything went well until Bill Camp got to relating his experience and telling how he was called to exhort; that straw broke the camel's back. I rose from my seat, cleared my throat and was about to speak, when I heard the stentorian voice of my father cry out: 'Sit down, Sam, sit down, you are drunk.' Of course I was drunk, too drunk to be choked off in that manner and so I proceeded: 'Mr. Camp is mistaken about his call to exhort. I was out on Potter's Ridge the night he speaks of and can testify that it was nothing but a whippoorwill that called. I am not prompted by any selfish motive in making this statement, but think it a moral duty to free one from duties they consider burdensome, especially if the supposed obligations are assumed through a mistake.'

"I thought I had the old man, but that was another mistake, for popping up out of his seat, he exclaimed with much fervor, 'God bless you, Sammy, God bless you! This opens the way for an explanation I never could make before. But now here is a witness that heard the bird call. Twice I heard my name distinctly, and when I answered the bird came to me and I took a sealed package from its knapsack and in it was my call.'"

EXPERIENCE WITH TACKLE.

Editor Forest and Stream:

Perhaps it would be in order just now to say that the article which appeared over my signature in your issue of July 7 was written some four years ago and has only now made its way into the printer's hands, Since writing it my opinion in regard to reels has changed a number of times.

Since about the year 1865, at which time my parents moved here from Massachusetts, I have devoted more or less of my time to fishing for trout. I early learned the use of the fly-rod, and from the time I first begun to handle the reel until the present time I have never found a reel that was just as it ought to be. I have bought a number of reels and used a number of different kinds, and still have never found one that was all right. Perhaps it is my fault, but if there is anything that will cause an angler trouble and expense it is a poor reel.

I thought when I wrote the article referred to that I had found the thing I had long been looking for, and that henceforth I should have no trouble with slack line, broken tips, and accidents of that nature. When the next September came, and I had made preparation for a trip to the Connecticut Lakes, Parmacheene Lake and the Rangeleys, I did not think it necessary to provide myself with another reel, more especially as a good part of my way was to be through the woods, where all luggage must be carried on my back, and I well knew that every pound would grow to be a hundred before I had carried the pack ten miles. After spending a day or two at First Connecticut Lake, and another with Uncle Tom Chester at Second Lake, I went through woods to Parmacheene. I wish I could describe the days I spent on the headwaters of our noble river, or had the power to make you see the beauties of nature as I saw them in those perfect September days. There had been a frost in the lake region and the maples and birches had begun to take on those beautiful colors which nature is so lavish of in our Northern latitudes and which break up the one solid mass of green, and by contrast make the spruce and hemlock look almost black, and which nearly drive an artist crazy in trying to reproduce on canvas some of those various colors, from the silver green of the poplar through every combination of yellow, red and green of the maples and dark green of black timber. There was the pale blue sky, which seems so far away, and floating along near the horizon were masses of soft white clouds, whose outlines, as well as those of the mountains which rose pile after pile and peak upon peak in the background, were softened by a purple-blue haze which made the scene one of perfect beauty; and, as we sat in the boat and saw the whole mirrored in the waters of South Bay, we could not help thinking that, pretty as the picture was, it must have been more beautiful before man, with his improvements, had built dams and cut timber. We made a sketch of the lake and background in our sketch book, and stored away in memory the scence as it was. I know you will excuse me for diverging from the line on which I started, for, as an angler, you have perhaps, when fishing on some lovely sheet of water, had your mind called away from the contemplation of the chance of catching another fish to the beauty of the scene around you, and have been, for the time, entirely wrapped up in the contemplation of its loveliness.

The morning after our arrival at John Danforth's I put my tackle together and started out to try my luck at catching a five-pounder, but just then five-pound trout were a little scarce, so I had to content myself with some of about a pound weight. The reel worked all right for a time, but about noon I succeeded in hooking a fish much larger than any before, and then I noticed a little hitch in the internal arrangements of the mechanism. At first it would go all right, then it would seem inclined to dispute the rights of the line with the fish, but it would soon repent of being so hasty and make amends by giving him nearly all the line it had. But evidently that was not just right, for then it would sulk and refuse most decidedly either to take back the portion of the line that the fish had got through with or to give up any more. The state of my mind at that time could be easily imagined, but would be hard to describe. At last the reel got over its obstinacy and went along as well as ever, and I had begun to have hopes of being able to secure the fish, when as it made a desperate plunge and run for liberty, I felt something snap inside the reel, and then there was such a whirring noise that one would think an old-fashioned clock was getting ready to strike, and the reel was dead. To say that I was vexed would be to state it very mildly indeed. There was 50yds. of line out and a good fish on the end of it, and no prospects of being able to get it in in any kind of shape. My anxiety in regard to the fish was soon released by his going away somewhere and taking a good leader and three flies with him. I succeeded, after a time, in getting the line on the reel and started for camp, where I immediately began to take the reel apart and ascertain the extent of the damage. I found that the spring had become unhitched at one end, and after working on it all the afternoon succeeded in getting it back together again.

After that it went along quite well for two or three days, but I did not take any comfort with it, for I did not know how soon it would "baulk up" again. At last, one afternoon as we were beginning to fish, snap went the spring. It was broken and as a reel was of no use, but as an infernal invention for keeping a man from enjoying himself it was a decided success. I immediately returned to camp, and was expressing my opinion of the reel in quite decided terms, when an old gentleman who was present implied his readiness to deprive himself of a nice reel he had for a sufficient remuneration, an offer which I at once accepted.

The reel proved to be, when produced, a nice-looking multiplying reel, small but compact, and seemed as if it would do good work. The gentleman said he was going out and would have no further use for it, a statement which I could readily believe after I had used it a while. I thought I should not be able to do better, so I gave him a sum which he said was a little less than he paid for it, and fixed it on my rod. It seemed to work nicely and would take up the line quite fast, and I thought I had a "daisy;" but "the proof of the pudding is the eating thereof," and I found that the gifted inventor, who had got up that masterpiece of ingenuity, had so arranged it that the fish had all the advantage, and while it would handle a half-pound fish all right, it was almost impossible to reel in a trout of one and one-half pounds. It was very easy to see why the old gentleman had no further use for the reel. That evening John Danfoth succeeded in finding an old reel which he had thrown by, and with a little fixing with a wire and a nail or two, we succeeded in getting something that would stand, and after that my days were unclouded and the time passed so pleasantly that when my departure came it was with great reluctance that we took the Cupsuptic carry and bid good-by to Parmacheene.

The careful reader will perhaps have surmised before this that my opinion in regard to the "automatic reel" had changed, but for the benefit of those who have not already come to that conclusion, I will now state that, while the automatic is a good reel as long as it works well, it is so liable to get out of order and is so expensive to keep in repair (and if broken when in the woods it can not be mended) that I think I am justified in saying that it is a good reel not to have.

The automatic reel is not the only reel that the dealers try to sell which is more than useless; but it is not worth while to make a list of them, for every angler knows one or two and perhaps more. I think all will agree with me that a poor reel is the most vexatious thing a man can have, and if one is made that is perfect in every respect, the angler who is going to the waters where large trout are caught should have one, let its cost be what it may.

Mr. Henry P. Wells, in his "American Salmon Angler," describes in the chapter on reels an incident in which a poor reel played a very conspicuous part, and I think that every one can relate one instance at least where his reel has caused him more or less unhappiness.

This spring before going to Middle Dam I procured of a celebrated New York dealer a nice reel which he said was just the thing for a long line. I put it on my trolling rod and had not used it two days before it began to show signs of wearing out, and when I caught the trout weighing 6½ pounds, of the taking of which I wrote you some time ago, I had the reel on, but before I got the fish in the boat the reel was all worn out, and for the last five minutes I had had to hold my finger on the side to keep it from overrunning. Upon examination we found that the ratchet and pawl were both worn away so that there was no click. That evening the reel was thrown into the lake, to be fished out a short time after by a young man who did not know that by so doing he was placing himself in a position to break one or more of the Commandments in a manner which would be fearful to behold.

I have just got a new reel from another well-known dealer, and expect soon to find out what the timber is with that. C. D. C.

NORTHUMBERLAND, N. H., July 9.

PITCHFORKING SALMON.—Hartford, Conn., July 12.—I understand four salmon have been captured in the Farmington River, near this city. One of these noble fish was jigged by a frog hook, another speared with a pitchfork, while another was shot, the means by which the fourth one was slaughtered is not known to the writer, but probably clubbed to death. This State should be congratulated on its sportsmen (?) who kill woodcock out of season, and murder salmon with clubs, pitchforks, and rifles.—A. C. COLLINS.

SHARK AND PORPOISE.

NOT long ago, I tried to interest the readers of the FOREST AND STREAM with an account of a quiet stroll I took one June morning down the Aspeluc with hook and bait and line to entice from his native element a fish weighing not over half a pound; and as variety is the spice of life, I propose now to describe how with hook and line and bait on one occasion, and harpoon on another, I helped entice fish of very different weight out of their native element also—yanked them out and up on deck would be the literal truth, for stout arms and willing hearts were at work and shark and porpoise stood no chance whatever.

From my youth up I have associated with "all sorts and conditions of men," in all sorts of byways and highways. So it came about, as the old-fashioned story teller begins, "Once upon a time, when pigs were swine and turkeys chewed tobacco," I found myself far out at sea on board a clipper ship bound for where "with wind and sail Chinese drive their cany wagons light." I have embarked on some comical voyages at various periods of my life, but for out and out comedy, more fun to the square foot than I look for ever again, commend me to this one. Our captain was a thorough sailor, a pupil and an apt one of the famous Bob Waterman; irascible and zealous, he had suddenly been converted from the error of his ways, and like all new recruits, had set himself to the herculean task of converting passengers and crew to his persuasion, willy-nilly. All denominations were on board, and when you reflect how these long sea voyages try the best of tempers, how sorely they chafe and strain us, how necessarily slow must be the process of conversion of these "Innocents Abroad," you will see that our worthy old seahorse had a "hard road to travel," a hard nut to crack. Working out his ship's course was mere child's play to the sum he was trying to do. For my part I say frankly I took no stock in this enterprise at all. Miles away from home, the voice of the great Creator was daily speaking to me through winds and waves and the boundless ocean I so dearly loved with an effect that mocked at man's feeble efforts. They that go down in ships to the sea and occupy their business in great waters know this to be the truth. Here we were all in one boat, though. Prayers morning and evening, and business so conducted as to make it an act of charity for a man to smile.

We had been fanning along through the doldrums and were approaching the Equator. I had not allowed the time to hang heavily on my hands; always brought up not to be idle, I had become very much interested in a youthful fellow passenger, tall, thin slabsided, and the "greenest" subject I ever encountered. What mysterious dispensation of Providence ever started this man out among the quick-witted Chinese I never inquired. We christened him 'Jibboom," which in name and form he resembled. He was eternally asking the most curious questions, and on board ship to a mind thirsting for information there is always a good chance for reward. We were on deck of a sunny morning when he began: How were the sails mended? Generally by the captain's wife; owners can not afford a seamstress on board. Why were the gulls called bonitas? Naturally enough; they pick up the chicken bones the steward throws overboard. Did the flying fish have feathers? Oh, very soft and downy ones, they do; brilliant plumage like the humming bird. Alight on the ship? Very often. No, they don't sing; they hum along. What was to be done with such a receptive subject? It had been a great trouble to explain to him how Napolean Bonaparte had crossed the Alps in an open boat; how Mahomet captured Rome; how Julius Cæsar swam the Bosphorus with Helen of Troy on his back; and that the English were called Anglo Saxons because they were such great anglers; but when one day I slipped on deck and sprained my ankle, and my unsuspecting friend came to my rescue, bandaged my foot and treated me so kindly, I felt a wave of remorse break over me; I felt how little I deserved this treatment; and recognizing his kindly heart, I made him all the amends in my power, and I never took advantage of his innocence after that, nor allowed others to if I could help it. I am right glad to say this, for he died not long after we reached Hong Kong.

Forenoon watch, four bells had struck, and many were at church, when suddenly there came a cry of sharks! sharks! No row at a camp meeting ever more quickly broke up a congregation. Every pew almost was in an instant vacated. Prayers could be had daily; sharks were a novelty. I had left my friend "Jibboom" and gone forward on the topgallant forecastle, watching with great interest two sharks just by our bow, with their faithful friends the pilot fish; and some of the men had rigged a chain and hook to the studding sail gear at the foreyard, baited it with a good-sized piece of salt junk, and lowered it to the shark, which seized hold of it and swallowed it in a twinkling, when presto, change! two dozen stout arms ran him up and over the bulwark on deck; and then the fun began. It didn't seem to amuse him very much, but how we fed him on "belaying pin soup," capstan bars, belaying pins, anything to hit him with; and all hands at him tooth and nail. It did not take long to convert that fellow, I tell you, we beat the captain hollow, and changed him instantly from a shark to a jelly fish. How we did thump and belabor him, to be sure, every man had his whack of shark; and "last scene of all," we cut off his tail and hove him overboard amid the cheers of his exultant captors. Down went the tempting bait, the same process was gone through, and up came No. 2. It was a bad day for sharks. The second one was subject to the same heroic treatment as No. 1 had had; if anything more so. But the Captain, by this time thoroughly aroused (I wouldn't have had his temper for his ship), and furious at the want of decorum and taste of his parishioners, ran forward and ordered the remaining shark to be thrown overboard. So over he went. We were anything but a pacific crew on the Pacific Ocean. However, should the "Old Salt" happen by any chance to read this, which I very much doubt, I hope it may relieve his excited feelings, as well as interest him, to know that on that Sunday morning "he got left out in the cold"—we didn't lose our shark. Not much. Tom had passed a running bowline through the shark's nose and secured him, and when the fish was thrown overboard, "and peace with dove-like wings brooded o'er us," that shark was quietly hauled on board, his skull, jaws, and backbone cut out and distributed for trophies. No. 1 was about 6ft. long, No. 2 about 8ft. I was very much interested in the curious formation of the shark's skull; when skinned and scraped it looked very much like the cast of the bust of a woman.

Hardly had this episode passed away when we sighted three or four canoes coming out to us from Lord North's Island. This was a break in the monotony of the voyage, as good as a shark. Soon the canoes came alongside, full of the queerest people imaginable, black as the ace of spades, with bracelets of reeds round their arms, beads and shells strung round their necks, naked save a sash round their waist, their canoes loaded with shells and fruit, tortoise shells, grasslines, etc. Some of the creatures were by no means so bad looking, with fine large black eyes and gentle countenances. Soon all hands were busily engaged in trading, and I am bound to confess I don't think we got very far ahead of these children of nature. I traded off three old knives of hoop iron for helmet shells, and a seidlitz powder with another; he swallowed paper and all but made an awful face. Old bottles, nails, razors, scraps were in great demand. No one was allowed on board save the chief. This illustrious stranger was taken in and done for by the captain, who curtailed the services on this occasion for the benefit of his royal highness. An old worthless musket worth about $3 was handed over to his serene mightiness with great pomp and ceremony in exchange for a bird of paradise, worth probably $50, which I saw long afterward ornamenting the head of the captain's wife at a ball at Hong Kong. His gracious majesty was also made the joyful recipient of an old stove pipe hat, a dungaree shirt and trousers and some few yards of ribbon. So he was led to the gangway with all the "pride and pomp and circumstance" of ceremony imaginable, and went down into his canoe full of smiles and honors. At a signal from him away went the natives, while we gave the royal sovereign three rousing cheers at parting.

Not many day afterward, we struck a school of porpoises, as we were bowling along with the northeast trade winds. How easily and gracefully they sped along right in front of our clipper. No trouble for those fellows to "storm along my stormy." Here was a chance not to be neglected. Jack, persistent grumbler that he is, would rather eat porpoise. He don't hanker after shark when he can get "sea hog." So Allen Hay, a Cape Cod man and a royal sailor, armed himself with a harpoon, this time "the old man" not objecting since he too was longing for the flesh pots of Egypt. Hay went out by the dolphin striker, and watching his chance drove his harpoon well into a porpoise, and we brought him up on deck as quickly as we had the shark. He weighed a great deal more than any of my trout; and what a godsend to us fresh meat was just then. To us, satiated with high living, tired for once of pork and plum duff, washed down with copious libations of S'wankey, *i. e.*, vinegar and sugar and water, this sea hog, as Jack calls him, came welcome as the "first breath of spring." "Our doctor" was "no slouch" of a cook and we lived high off of porpoise while it lasted. Jack likes good victuals, and here they were. Morning, noon and night we pegged away at him. We feasted off of him, fried and roasted and fricaseed. I've tried all sorts of delicacies and have eaten almost everything edible, fish, flesh, and fowl; but I can shut my eyes, and even now almost fancy I can taste that porpoise.

CAPT. CLAYTON.

BROOK TROUT IN GEORGIA.

HAVING often heard of brook trout in the mountains of Georgia and North Carolina, I lately made a trip over the North Georgia R. R. to Murphy, in North Carolina, to look for them. But as under certain conditions *Salmo fontinalis* assumes the brilliant variety of the colors of the rainbow, so it also resembles the rainbow in the quality of escaping from its pursuers.

Murphy is a sleepy-looking mountain village, about as old as Chicago, but containing only a few hundred people. It lies in the fork of two tributaries of the Tennessee, the Hiawassee and the Valley rivers; clear, swift streams tumbling over ledges of rock and whirling in deep pools in a very trout-bearing manner, but their only fish are black bass (here called trout), perch, catfish, and some of the sucker family, as I am informed, the rivers being at the time of my visit too high for fishing with any prospect of success. I employed my two days in riding about the country, and climbing an accessible mountain.

From a delightful boarding house near the village, kept by Professor Beal, one has a view of ranges of mountains from 500 to 5,000ft. high. The Blue Ridge in Georgia, and the Great Smoky Mountains of Tennessee and North Carolina shut in the horizon. These are covered with a heavy forest, and are filled with minerals; gold, copper, iron, manganese, mica, talc and marble are some of the most important—no coal, these mountains being too old for that, or any traces of organic life, as I learn from Professor Beal, who is a skilled geologist and has a fine cabinet of minerals. Indeed, he claims that these mountains are the oldest in America, probably in the world.

In the forest are to be be found a few bears, panthers and deer; plenty of turkeys, ruffed grouse, quail, rabbits and squirrels. The river bottoms afford rich natural pastures for cattle and sheep, and bring good crops of corn, oats and wheat.

Professor Beal, who has lived in this region more than thirty years and knows its fauna and flora as well as its minerals, tells me that in some of its streams on the west side the mountain brook trout are to be found, small, but numerous. When he wants a mess he sends an Indian into the wilderness, who brings him back a hundred small trout for a dollar.

The Snowbird Creek, sixteen miles from Murphy in the woods, contains these fish; also one thirty miles away, the Nantahala, has larger ones, and on it there is a tavern where the angler can stay. These prospects seemed too distant and uncertain to suit one whose days of tramping the woods and wading streams had long passed away.

The only adventure which befell me was on Mount Butler, one of the lower mountains, 600ft. high, where Professor Beal and I stumbled upon a pair of rattlesnakes basking in the sun on a ledge of rocks at the summit. These were killed and measured 3ft. long, with the thickness of a man's wrist, and had each five rattles and a button. They were the first that Mr. Beal had ever seen on the mountain, though he often ascended it with his friends, and they usually sat down on that ledge of rock, and after many years' residence in Georgia and Florida, I have never but once before met with a rattlesnake.

S. C. C.

MARIETTA, Georgia.

FRESHETS, TROUT AND BLACK-FLIES.

IT seems that the June freshet in the Maine trout regions was rather severe on camping parties, especially those who were dwellers in tents. The rain in the western part of the State began in the morning and continued falling in torrents till past 12 o'clock of the next day. The mountain streams were swollen to the highest freshet pitch, and all fishing was precluded. This naturally set the campers thinking about home, and the rule was "go home." But in this direction all was not smooth sailing, for there were rocks on the bottom of the swollen streams which had to be forded—in one case the water even flowing over a buckboard, with the horses swimming. A party of four, said to belong in South Paris, Maine, two prominent citizens of the town with their wives, are said to have been caught by the storm, as they were encamped at the Narrows, Richardson Lake. They bore the rain like martyrs, but everything was drenched through. They gave up in disgust, and started for home. They have camped on the same spot for a couple of seasons, during their trouting trips, but they are sick of a tent, and have applied for a lot to erect a permanent camp.

But if these drenched sojourners in all the Maine woods had but staid a day or two longer they would have been rewarded for all their wetting. The weather came out warm and the streams soon fell to a reasonable pitch and "of all the fishing!" as one enthusiastic gentleman remarked, who was fortunate enough to have been in the woods when the rain was over. "The fishing was simply wonderful! Big ones, too! We caught them by the wholesale." Another party which reached the fishing ground at the pond in the river, just below the Middle Dam, soon after the rain was over, tells big stories about the fish caught. The trout rose to the fly—large ones—and even landlocked salmon, several of them were added to their creels. This shows that the landlocked salmon plant ng that has been in the river below the Middle Dam has not been in vain. Capt. Farrar planted a large number in that river two or three years ago. The landlockers caught were small, indicating that they may have come from that planting. There are chances, it is true, that they may have come from the lakes above or even below, but it is easier and more reasonable to imagine that they are the fish planted in the river.

The Union Waterpower Co. has worked the gates at the Upper Dam and at the Middle Dam this season. The gates were first put up at the Middle Dam early in June, and the Upper and the Lower Richardson lakes were drawn down 9ft.—the lowest since the last flowage was put on. The gates at the same time were closed at the Upper Dam, and a great change took place in the location of trout fishing at that point. In one instance great trout were left in a pool just below the mill at the Upper Dam, and some of them were taken. Those who saw them were much surprised at their size and the way they lay quiet on the bottom, very much the same as the same fish on the spawning beds. Above the dam, also, there was a wonder in the fishing line. A great many trout were taken on the fly in the still water just above the closed gates. The fish seemed to be disturbed by something, and it is suggested that they desired to pass down the river into the lake or the rapid waters of the river below the dam. Father O'Brien, the well-known Catholic priest of Cambridge, Mass., was there. The trout were first seen on Sunday, but the reverend father waited till the Sabbath of his church had closed, and then he went for the trout. On this occasion, as well as many others, he made a big haul. He is an enthusiast at trout fishing, and he has made trips to this celebrated trouting place annually for several years.

It is reported that the "pestiferous black-fly" has been more numerous and more troublesome to the seeker for trout and waters cool than ever before. They have bitten without mercy. But now comes a new theory concerning them. The guides, some of them, say that the black-fly hides in the cedars and other evergreens only. The theory is to cut and burn all the evergreen trees around your camp and thus escape the black-flies. I do not care to vouch for the success of this plan, but perhaps it would be safe enough, for to cut all the evergreen trees around one's camp and burn them out of the way would be something of a job, besides exciting the ire of the lumberman. But the black-flies are said to have been followed by midges, and the poor camper has had a hard time of it. The driver of a buckboard over one of the lake roads in eastern Maine is said to have hit upon a plan. He makes a smudge in an iron kettle, sets it a going and coolly places it between his legs on his team. In this way he is not welcomed by the flies. In short, they despise him.

SPECIAL.

ON GREEN RIVER.—On July 6 the writer, accompanied by two friends, ascended Green River, a large stream of clear, cold water free from rocks, about ten rods wide, which empties into the St. John near the northern terminus of the New Brunswick Railway. The party was on the river three or four days. As the water was high the trout were scattered all over it, having deserted the pools; sufficient were however taken from the canoes by two of the party to afford an ample supply of delicious fish to all at every meal. The river, which runs through a forest-covered country, is bounded by high, hard wood covered hills, and at its ordinary height is accessible by canoes to its sources. The canoe in which the writer was carried was propelled by an Acadian Frenchman and his son, a boy about fourteen years of age, who knew only a word or two of English, but who was remarkably bright. He seemed to think that our fishermen, with their long lines and curious flies, were not doing so good work as he thought they ought to do, or such as he could have done with his own hook, so as we ran our canoe ashore for a few moments he jumped out and taking a fork in one hand and his pole in the other, commenced turning over the stones with the pole as rapidly as possible, and suddenly darting down his fork into the water brought it up, a big-headed little fish with a very tapering tail impaled upon it. The fish was about two or three inches long. He wished us to try this as a bait, as it was the best he knew of. This fish was a small species of loche or cusk. The rising water had turned the stones over in many places, and the trout, which were wandering over the whole river, had such an ample supply of their favorite food that they disdained to seize the glittering fly which skipped so temptingly over the translucent water above their heads.—EDWARD JACK (Fredericton, New Brunswick, July 16).

THE BASS OF OTTER.

THERE are innumerable small lakes in the northern part of Frontenac county, Ontario, and none of them are more prolific than Otter Lake, about twenty-four miles north of Kingston.

What splendid expeditions we have made from our little village of S——, some eight miles nearer Kingston! What almost fabulous catches we have reported upon our return!

On one occasion five of us, two gentlemen and three ladies, made an exceptional catch, and not a bit fabulous. We started from home at 6:30 in the morning in a two-seated democrat, drawn by a strong team—for the rocky hills and valleys are something to be dreamed of. Our boats had been sent out the day before, as anything better than a leaky punt is a thing unknown in those regions. We had a glorious drive; lakes to the right of us, lakes to the left of us; from the tops of some of the hills lakes right beneath us, all fringed with tall maples, elms and beeches; high masses of granite, almost mountains; the outskirts of the Laurentian range, with an occasional clump of spruce or pine decorating their inclines.

Well, we got there, found our boats launched and ready for us, and dividing our party we embarked, Charlie and his sister in one boat, his wife, the doctor and myself in the other. Then commenced the adjusting of rods and leaders, screwing up of landing nets and prospecting for good fishing grounds. Of course, we girls threw the flies first. After skirmishing round a while, bringing in some baby bass which the doctor invited to return to their home and grow a bit, Charlie's wife gave a scream and her rod a bend which nearly brought it tip to reel; then the line began spinning out at a lightning speed. "First blood," shouted the doctor. "A log," said I, contemptuously.

The little wife was too much excited to do any more, so I came to her assistance, and reeling in as fast as possible thought I would soon bring her snag to light. In an unguarded moment I let the line loose, when zip! away went the line faster than I can say it, and it required all my knowledge of fly-fishing, aided by timely instructions from the doctor, to keep the rod from snapping (it is a little jewel, weight, 8oz.). This maneuver completely convinced me that it was no snag I had hold of, and after careful winding up and skillful use of the net by the doctor, I succeeded in landing a 5lb. large-mouth bass on the second fly, and a 2lb. one on the first. There must have been singular unanimity in their start to have sent the wheel round as they did. This was the best catch of the day, but when we got back to S—— at night after a beautiful moonlight drive, which was not the least enjoyable part of the day to those of us of an artistic turn, we reported a catch of 63lbs. of fish, weighed immediately after catching, and only two of these fish were other than black or green bass, and they were Otsegos. If any one thinks this too fishy, just ask the doctor.

FREYDA.

SYDENHAM, Ontario.

ANGLING LITERATURE OF AMERICA.

CONCLUDING his review of the angling writers of this country, Mr. Charles Hallock writes in the London *Field:* * * * An attempt to mention every writer of merit who has scratched his name with a fish-bone on the illusive sand would make one tired; yet there is an indefatigable collector, Professor G. Brown Goode, the well-known chief of the U. S. National Museum, who has been compiling a bibliography of American ichthyology for the past ten years (!), and although the product increases faster than he can garner, he hopes some day to corral the entire lot. His collocation will bring out prominently the names of noteworthy pioneers who are inseparable from early efforts, like Seth Green, Mather, Milner, Ainsworth, Hessel, Barnet Phillips, S. C. Clarke, Redding, Atkins, Brackett, Hudson and a host of others, as well as the busy and more enlightened systematic workers of the present day, like Bean, McDonald, Bendire, Earll, Ingersoll, Allen, True, *et al.* to the end of the long and distinguished list.

"Zoology of the Northwest" (1878), prepared by Lieut. Wheeler, is the title of the first of those ponderous volumes prepared under the auspices of the Government, and now being issued from year to year, which are to render the labor of the future reviewer a pleasing task. It is an illustrated quarto, covering ground in part which had been imperfectly investigated by Dr. Suckley in 1855. Gill's "Bibliography of Fishes" (1882), and his "Arrangement of Fishes" (1883) are scientifically important, and so is Jordan and Gilbert's "Synopsis of the Fishes of North America," which gives the nomenclature and descriptions of all known species of fishes north of the boundary between the United States and Mexico. It has a compass of 1018 pages, and describes 23 orders, 172 families, 487 genera, 1340 species, and over 2,000 varieties of American fishes. Justly collossal, it stands like a mighty monolith at the very vestibule of the majestic Temple of Ichthus which is gradually taking form and dimension through the combined efforts of trained artificers and master workmen operating under the skillful direction of U. S. Fish Commissioner Baird.

This book of Jordan's is illustrative of a new era. It forms a preliminary part of the great cumulative work which it foreshadows and may perpetuate, and of which such elaborations as Goode's "Fishing Industries of the United States," illustrated with hundreds of plates, and the pioneer merely of a forthcoming series, and the annual "Bulletins of the U. S. Fishery Commission," and Baird's "Pacific Railroad Reports" and the "Fishes of the Eastern Coast of the United States from Greenland to Georgia," already stand out in conspicuous proportions. Henceforth the philology of angling is relegated to the poets, of whom the venerable Isaac McLellan, now living, and still singing at the age of eighty-three, is almost the sole American representative. He and "Nessmuk" may chant their "Forest Runes" together in the porch of the Temple, and dillettante authors hang their garlands on the horns of its high altar, but science will henceforth be the reigning god, and all the ichthyc offerings be made to him alone. Knowledge is everything. No angler may catch a fish without a Latin name, and all the arts, appliances and methods of fishing will be contrived to that end. Nature and science will plod perpetually hand in hand over the classic boulevard, *pari passu,* trained to equal steps, while high upon the architrave, over the porch, appears in bold relief the cabalistic legend, alike suggestive of the impulse and incentive: *Pisces in hoc signo vinces.*

A continuation of the angling bibliography may here appropriately follow, concluding what has been begun:

In contemplating the varied brilliancy of the stars, I sometimes see a luminary cross the field of vision which is nearer and brighter than all the rest. It leaves a train of glory in its transit, which seems for the moment to eclipse all brightness, and while it blazes it excites the admiration of stolid gazers who are wont to regard the steadfast planets without emotion. Occasionally these asteroids occur in bewildering showers, so that all the firmament seems filled with scintillations of unwonted genius, and modest mortals hide their diminished heads. Then their light abruptly goes out, and the fixed white orbs gleam steadily as before. And so it is with books. The moral applies: Fame is a headstrong jade, and fickle.

BIG TROUT.

Editor Forest and Stream:

I notice in the last number of your paper (July 7) an article by Mr. Hallock upon the subject of big trout. In the summer of 1880 I had the pleasure of meeting Mr. Henri Le Ronde, the Hudson's Bay Company factor at Nepigon House, Lake Nepigon, and have since seen him. Mr. Le Ronde is an intelligent, high-minded man, and no one who knows him will ever have any doubt as to the correctness of any statement he would make.

In a series of papers commencing with the issue of Dec. 18, 1880, I gave your readers an account of the visit of several fishermen to Nepigon Lake and river, and there noted some information obtained from Mr. Henri Le Ronde, his brother Alexander, and some of the Indians about Nepigon House. By reference to these articles it will be seen that trout larger than 12lbs. have been taken in Lake Nepigon. The largest in 1878 was 9lbs. by the Hudson's Bay Company's scales at Nepigon House. A much larger one was taken two or three years before that, the weight being by the company's scales 17lbs. This fact was stated by both Henri and Alexander Le Ronde at the time of our visit to Nepigon House and in the presence of Rev. M. W. Reed (now of Denver, Col.) and my son. As to the fact I have no doubt, for I have no reason to doubt it other than that I have never seen so large a trout. These large trout were not intentionally taken, as I remarked in the papers referred to, but in nets with other fish for the winter's supply for the post, along in October, in sandy bays near there. I saw one of 4½lbs. taken in July with a silver minnow—not trolled, but gently moved by the drifting of the canoe—from close to the bottom in 60ft. of water, a half mile from shore. We were at the time deep-fishing by deep trolling for lake trout.

I believe Mr. Hallock is in error in thinking the trout mentioned to him was taken at the mouth of the Agawa River, as that is a river emptying into Lake Superior. The river was probably the Wabenoosh, which comes into Lake Nepigon some twelve miles north or northwest of Nepigon House.

The White Rapids of Nepigon River are noted for large trout. I think those of 7 to 8lbs. are not less common there than the same size in Rangeley Lakes, although I have taken none so large as that. I am not so certain about the 8lbs. as I am of the 7, but have reliable assurances to that effect. Mr. Campbell's display, mentioned by Mr. Hallock, would fix the 8-pound weight, however, for the river beyond dispute. If the judgment of a fisherman is "of any account," I might tell of much larger ones which carried away my tackle in the swift waters of the Nepigon; but later on I almost invariably became convinced that I over-estimated those that got away.

C. C. H.

FROM TROUT TO STRIPED BASS.—*Editor Forest and Stream:* I went on to Phenicia, N. Y., but the big Esopus Creek, was high and roily, so no fish. I went on and tried the two first brooks and got a heap of little ones, and a dozen legal fish, all on worms, though I tried several casts. The brooks are very small and a short stiff rod of about 8ft. is in order. They served me a lot of babies for breakfast. I went to Walden after striped bass but prospects were bad and so I returned to Hudson. On Saturday I went out to Wavecrest and tried for kingfish in Far Rockaway Bay. Fished about two hours at high water with shedder and got four, ranging four pounds and a half down to one-third that weight.—GRAY JOHN.

THE CUSK.

Editor Forest and Stream:

Apparently the opinions of FOREST AND STREAM readers differ as widely concerning the edible value of the bowfin as do those of people here, where there is a general prejudice against the bowfin, mudfish, cusk, lawyer, or whatever his name may be; but there are some who affirm that he is an excellent food fish, as there are some who will tell you that the ling is, and that there is no better fish in our waters than our fresh-water sheepshead. As to these two last, which I have tasted, their admirers can never convert me to their belief until I taste the fish cooked in some very different fashion from what I have ever seen them served, or I take with me to the feast more than ever before of the Spartan sauce. But I must confess so that great has been my repugnance to the bowfin that I never yet have tasted him. Yet, though his looks are undeniably against him, he is really no more repulsive in appearance than the ling, nor than the bullhead, which is certainly one of our best food fish, and I admit that my prejudice is unreasonable, as prejudices often are.

Perhaps it was inconsistent to make Antoine denounce the bowfin in such unmeasured fashion, for probably most of the bowfin eaters here are French Canadians, but it so happened that he did not like them, just as it happens that some Yankees do. It is said that some of the old settlers here used to salt down barrels of them in the latter part of summer, when great numbers can be caught by any one who cares to fish for them in the deadest of dead water, with stout tackle and a bit of skinned frog for bait.

If the feast of the Ichthyophagi (I'll bet I haven't spelled it right) occurred in that season, I could send them all the bowfins they would need for a thorough trial of their edible qualities, and have the question settled—if their judgment would settle it.

AWAHSOOSE.

FERRISBURGH, Vt.

THE PERCY SUMMER CLUB.—*Among the Clouds,* the Mt. Washington sky-top journal, of July 12, says: "A story has lately gone the rounds of the New Hampshire press of a fisherman who cast a line, to which he had attached five flies, and hooked four trout and a landlocked salmon. As his position was the top of a leaning cedar, he was so unfortunate as to lose the salmon, but he landed four trout, and at the very next cast secured another salmon weighing 4lbs. The scene of this exploit was Christine Lake, perhaps the most beautiful sheet of water in all the White Mountain region, although not very well known because its situation is to the north of the region frequented by tourists, and the lake has for many years been protected by proprietors who maintain here the most complete and thoroughly equipped fishing resort in the country. Visitors to the White Mountains are familiar with the Percy Peaks, two bare granite-topped cones, rising to the height of 3,400ft., a few miles north of the Pilot Range, which forms so attractive a feature of the landscape from the valley of the Connecticut at Lancaster. Christine Lake is situated in the shadow of these peaks and covers a surface of 300 acres. It is best approached by the Grand Trunk Railroad, the visitor leaving the train at Percy station, in the township of Stark, twenty miles north of the Alpine House, at Gorham. The Percy Summer Club is a corporation organized under the general laws of New Hampshire, and among its active members are the Hon. Ossian Ray, a leading lawyer and late member of Congress from the Granite State. The president of the club is Francis H. Leggett, Esq., of New York. S. H. Kauffmann, president of the Star Newspaper Company, of Washington, is also a member, and other gentlemen from northern New Hampshire and the city of New York make up the association. The club takes an active interest in local affairs, contributing toward the support of the church and public library of the inland town wherein it is situated, and being besides one of the most considerable taxpayers of the town, has the good will of its citizens to an unusual degree." Mr. Geo. P. Rowell, of advertising fame, is secretary of the club.

THE DIVA PAYS FOR THE TROUT.—Tannersville, N. Y., July 14.—Mme. Fursch-Madi, whose dulcet voice used to be the special property of the National Opera Company, until she began to use some of its falsetto notes in one of the periodical rows of that organization, has been a distinguished guest of our town for some weeks. She brought with her her husband, who occasionally sallies out in knickerbockers and velvet jacket with a nickel-plated reel and other appurtenances of a fisherman for trout. Yesterday, as he was engaged in an animated encounter with a native of one of our mountain streams, he was much gratified at the lively interest in his efforts manifested by a rural-looking party on the banks. The party permitted him to capture the trout and then captured the angler. He was a constable, the guardian and legal angel of the stream, which was under the protection of the law, the inhabitants of it belonging to the lord of the manor. The fisherman had disregarded the posted notices. The unlawful trout catcher in the Kaaterskills corresponds to the horse thief in the western communities. These disagreeable points were unfolded to the fisherman, and the culprit was led back to his wife, Mme. Fursch-Madi was aroused from her *dolce far niente* in her hammock and accompanied her husband to the place of justice. A messenger was dispatched for the magistrate, who was enjoying the afternoon slumber that follows a country dinner, supplemented by watermelon. This functionary arrayed himself with deliberate care in a linen duster, a palm-leaf fan and a pair of gold-rimmed spectacles and responded to the call of duty. After much deliberation the worthy justice fined the lady's husband $25. Mme. Fursch-Madi remonstrated in a lively recitative and her husband sang a solo of objurgations, but were not rewarded by any applause. The fine was fished out of Fursch-Madi's pocket and paid under the most solemn protest. Mme. Fursch-M di's husband has wound up his reel until he is better "posted" on the streams.—*Correspondence Star.*

SMALL CATCHES OF MENHADEN.—The menhaden fishing, upon which large numbers of persons in several of the eastern villages of Long Island depend for their living, is said to be a failure this season, the catches by the steamers being unusually small. The factories at Long Beach and Promised Land, where the fish is converted into oil and fertilizer, are running on short time. The loss will amount to over $100,000.

GOOD FISHING IN NEW HAMPSHIRE.—Sunapee Lake, N. H., July 11.—*Editor Forest and Stream:* The trout fishing here has been exceptionally fine this season, and it is said that more trout of 4lbs. and over have been taken in this lake than at any time in the Rangeley region. Col. A. J. Hobbs, of the Union Metallic Cartridge Company, has been up here for two or three weeks and found excellent sport; his largest fish was about 8lbs., but he took several of 4 and 5lbs., which are quite common. These fish are the new Sunapee "What is it," a discussion as to their species having gone on in your columns a short time ago. At this time of the year they are only taken with bait. Col. Hobbs also took a brook trout of 6lbs. during his fishing. Last spring a great many were taken with a fly, more than have been taken any year previous.—SUNAPEE.

BLUEFISHING IN GREAT SOUTH BAY.—The bluefishing is better than ever this week along the south shore of Long Island, but the menhaden are scarce and therefore chumming is not as remunerative as trolling with the squid. There is a rush of fishermen to all the villages on the South Bay and boats are at a premium. Large catches are reported and one man is said to have taken nearly 500 fish in five days. The prohibition of net fishing is credited with this state of things, but, whatever the cause, anglers are rejoicing. The towns on the bay can be reached by the Long Island Railroad in two hours, or less, and strangers in this city can easily look up the time tables of that road. Boats can be obtained at any of the ports on the south side.

RAINBOW TROUT FROM THE WILLOW.—Hudson, Wis., July 11.—June 24 H. C. Reed of this place caught from the Willow River six rainbow trout and two brook trout. The largest rainbow trout weighed 3¾lbs., the smallest 2lbs., and the two trout weighed ¾lb. each. A few days later L. G. Green took from the same stream two rainbow trout that weighed when dressed 3lbs. each. The rainbow trout were all planted within the last three years. So much for our State Fish Commission.—JAS. P. BALSOM.

JOLLY HUNTING AND FISHING CLUB.—At the annual election, which was held about the middle of June, the following officers were elected for the ensuing year: Jas. R. Watt, president; Humphrey Mount, vice-president; S. S. Hudepohl, secretary-treasurer; Samuel Atkinson, assistant secretary; Herman Pannier, camp sergeant. The other members of the club are: W. J. Siebert, L. E. Hanky, John B. Bailie, Thomas Watt and David Jones.—S. S. HUDEPOHL, Secretary (Creighton, Pa., July 13.)

A RARE VISITOR.—Perth Amboy, N. J., July 13.—A strange fish, supposed to be a white whale, was seen today in Raritan Bay off this town by several persons. It was about 30ft. long, and rose to the surface at intervals of about one minute.—J. L. K.

Fishculture.

NEW YORK OYSTER LAW.

THE following law relating to the oyster grounds of New York has been signed by the Governor and is recorded in Chapter 584, Laws of 1887:

SECTION 1. The Commissioner of Fisheries, appointed under Chapter 309. Laws of 1879, and his successor in office, shall be known as the Shell-Fish Commissioner, and shall finish and complete the survey now being made under his direction of all the lands under the waters of the State suitable for use for the planting and cultivation of shell-fish, and shall make a map thereof as heretofore provided. He shall finish and complete the survey now being made of all the beds of oysters of natural growth located in the waters of the State, and such beds of oysters of natural growth shall be set apart and preserved, and shall not be deemed to be included in the lands for which franchises are to be sold under the provisions of this act. Said commissioner shall ascertain the occupants of all lands claimed to be in the possession or occupation of any person or persons, and no grant of lands so occupied or possessed shall be made, except to the actual occupant or possessor thereof; provided said occupant or possessor, within one year from the passage of this act, shall make application for, and purchase the same.

SEC. 2. For the further purposes of this act, the Governor is hereby authorized to appoint an additional Commissioner of Fisheries, who shall be a man of experience in oyster culture, and who shall be a resident of Richmond, Queens, Kings or Suffolk counties.

SEC. 3. Immediately after the passage of this act the Commissioners of Fisheries shall meet at some place, to be designated by them, in the city of New York, for the purpose of making such rules and regulations as shall be deemed necessary as preliminary to hearing and granting applications for perpetual franchises for the purpose of shell-fish cultivation on the lands under the waters of this State, mentioned in section 1 of this act, suitable for planting and cultivation of shell-fish. After such rules and regulations shall have been agreed upon and formulated, the said Commissioners of Fisheries shall proceed to grant franchise for the purposes of shell-fish cultivation, as hereinafter provided. But no such franchise shall be granted until one month's notice of the application for a franchise or franchises shall have been given by posting in a conspicuous place, in the office of the Shell-Fish Commissioner, and in the office of the town clerk of the town nearest to the lands applied for.

SEC. 4. No grant shall be made to any person or persons who have not resided in this State at least one year preceding the date of application, and no grant shall be made to any person, firm or corporation in excess of two hundred and fifty acres, and no person, firm or corporation shall be allowed to hold, at any one time, more than two hundred and fifty acres.

SEC. 5. When the conditions precedent to the granting of franchises, mentioned in the foregoing sections, have been complied with, the Commissioners of Fisheries are hereby empowered, in the name and behalf of the people of the State of New York, to grant, by written instruments under their hands and seals, perpetual franchises for the purposes of shell-fish cultivation in the lands applied for under the waters of the State, for the consideration of not less than one dollar per acre if the lands are unoccupied or unused, and not less than twenty-five cents per acre if the lands are in present use and occupation, and the right to use and occupy said grounds for said purposes shall be and remain in the said grantee, his legal representatives or successors forever; provided only that the said grantee, his legal representatives or successors shall actually use and occupy the same for the purposes of shell-fish cultivation, and for no other purpose whatever. And the moneys received for the sale of such franchises shall be paid forthwith into the treasury of this State.

SEC. 6. The franchises thus granted shall be deemed to be personal property, and courts of law and of equity shall have power, authority and jurisdiction to determine and enforce the rights of persons, firms or corporations thereto as though such franchises were actually personal property owned and possessed by such persons, firms or corporations, and such franchises may be sold, transferred, assigned or conveyed the same as other personal property. Immediately after the receipt of the aforesaid instruments of conveyance, the grantee shall at once cause the grounds therein conveyed to be plainly marked out by stakes, buoys or monuments, which stakes, buoys or monuments shall be continued by said grantee, his legal representatives or successors.

SEC. 7 The said commissioners are hereby authorized to appoint and employ a clerk whose compensation shall not exceed fifteen hundred dollars per annum, which compensation and the necessary expenses for carrying out the provisions of this act shall be paid by the Treasurer upon the warrant of the Comptroller, to the order of the said commissioners, upon vouchers to be approved by the Comptroller. The said clerk shall give a bond, to be approved by the Comptroller, in the penal sum of five thousand dollars, for the faithful performance of his duties.

SEC. 8. The provisions of this act shall not be deemed to limit or interfere with the powers of the Commissioners of of the Land Office to grant to owners of uplands adjacent to such fisheries any of the lands under the waters of this State as is now provided by law. But in case any grant shall be made by the Commissioners of the Land Office of any land actually occupied and in use under the provisions of this act for the cultivation of shell-fish, such grant by said Commissioners of the Land Office shall be subject to the right of the occupant to occupy such grounds for two years thereafter for the cultivation and removal of the shell-fish there planted.

SEC. 9. This act shall not apply to nor be held to affect in any way lands under water owned, controlled or claimed under colonial patents or legislative grants by any town or towns, person or persons, in the counties of Suffolk, Queens, Kings and Richmond; lands under the waters of Gardiner's and Peconic bays, ceded by the State to the county of Suffolk, pursuant to chapter three hundred and eighty-five of the laws of eighteen hundred and eighty-five, lands under water in Jamaica Bay, lands in the jurisdiction of the towns of Hempstead and Jamaica or in the county of Westchester.

SEC. 10. The sum of three thousand dollars, or so much thereof as may be necessary, is hereby appropriated, payable by the Treasurer on the warrant of the Comptroller to the order of the said commissioners for carrying out the provisions of this act, upon vouchers to be approved by the Comptroller.

SEC. 11. This act shall take effect immediately.

THE MOHAWK FISHWAYS.—A correspondent has examined the fishways of the Schoharie and Mohawk rivers and reports them to be in perfect condition, although they were subjected during the past winter to the heaviest ice-floods known there for a number of years. Mike Crane, who is in charge of the work connected with the canal at Schenectady, says that during May he and numbers of others frequently observed bass, pike, suckers and other fish passing the fishway freely during the day time. The fishway at Schenectady has one fault—it is open—and evil-minded persons have thrown rocks and sticks into it, which have made obstructions which accumulate leaves and mud and are liable to clog the working of the fishway. When Col. McDonald visited it this summer he promised to remedy this by placing a heavy iron grating over the central opening, which will allow nothing but leaves, sand and mud to pass through and this will be swept out by the force of the current. We learn from Mr. Shanahan, Superintendent Public Works, that Col. McDonald has filed improved plans for the Troy dam and for the fishways in the western part of the State, which will obviate this difficulty entirely, by being covered over and thoroughly protected against damage by ice or flood, and that there is also provided an automatic means for discharging all sand and gravel that may enter with the water.

THE NEW YORK FISH COMMISSION.—Under the provisions of the new oyster law, published elsewhere, the Governor has appointed Mr. A. Sylvester Joline to be a Commissioner of Fisheries. Mr. Joline, although appointed under the oyster law, has the same powers and duties as the other Commissioners, and we think that the whole board are now oyster commissioners as well as Messrs. Blackford and Joline. Among the oystermen the appointment of Mr. Joline is regarded as a good one. The State now has five Fish Commissioners, namely: Hon. R. B. Roosevelt, Gen. R. U. Sherman, E. G. Blackford, W. H. Bowman and A. S. Joline. The address of the latter is Tottenville, Richmond county.

A TROUT PHOTOGRAPH.—New York, July 7.—*Editor Forest and Stream:* I send you a photograph which I took at the State Hatchery at Caledonia of the trout being fed. The old man throwing out the food is David, the first employe of the Commission and the one who struck the first pick into the ground to erect the buildings. As you will see, some of the fish are in the act of springing out of water to get the food, and the commotion they make at such times is fairly well reproduced. I thought you might like the print as a sort of memento, if it is only the work of an amateur.—R. B. ROOSEVELT.

A LARGE CARP.—A carp weighing 29lbs. lay on Mr. Blackford's slabs in Fulton Market last Monday. It was caught in the Potomac River.

BOOKS RECEIVED.

MAP OF THE ADIRONDACKS.—Mr. S. R. Stoddard, of Glens Falls, N. Y., has issued a new edition of his "Map of the Adirondacks," for 1887, showing the new railroad running into the Saranac region.

SHOOTING AND YACHTING IN THE MEDITERRANEAN.—Cruising yachtsmen will find much that is interesting and useful in the little book under the above title, lately published by W. H. Allen & Co., London. The author, Mr. A. G. Bagot, better known by his *nom de plume*, "Bagatelle," attached to many papers on sport, is a thorough yachtsman, familiar with all the routine of cruising, and in the present volume, a brief log of a shooting cruise along the coasts of the Mediterranean, he has gathered together much useful information concerning the leading localities, as well as the fitting out, provisioning and expenses of long cruises. In spite of the amount of practical information the book is by no means dry, but the writer has made a very interesting story of his cruise.

AMONG THE NORTHERN LAKES of Wisconsin, Minnesota and Iowa are hundreds of delightful places where one can pass the summer months in quiet rest and enjoyment, and return home at the end of the heated term completely rejuvenated. Each recurring season brings to Oconomowoc, Waukesha, Beaver Dam, Frontenac, Okoboji, Minnetonka, White Bear, and innumerable other charming localities with romantic names, thousands of our best people whose winter homes are on either side of Mason and Dixon's line. Elegance and comfort at a moderate cost can be readily obtained. A list of summer homes with all necessary information pertaining thereto is being distributed by the Chicago, Milwaukee & St. Paul Railway, and will be sent free upon application by letter to A. V. H. Carpenter, General Passenger Agent, Milwaukee, Wis.—*Adv.*

FIXTURES.

DOG SHOWS.

Sept. 7 and 8.—Second Show of the Fox-Terrier Club, Newport, R. I. Entries close Aug. 28. F. Hoey, Sec., Long Branch, N. J.

Sept. 13 to 16.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary; Chas. Weil, Superintendent.

Sept. 20 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. R. D. Whitehead, Manager.

Oct. 12 and 13.—Third Annual Show of the Stafford Kennel Club, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Sept. 6.—Manitoba Field Trials Club Field Trials. Derby entries will close July 1; all-aged entries Aug. 1. Secretary, Hubert Galt, Winnipeg, Manitoba.

Oct. 31.—First Annual Field Trials of the Indiana Kennel Club at Bicknel, Ind. Open to dogs owned in Indiana. P. T. Madison, Secretary, Lock Box 4, Indianapolis, Ind.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5206.**

AMERICAN KENNEL CLUB METHODS.

Editor Forest and Stream:

"Wacouta" is to be congratulated upon having elicited a denial of at least one of the allegations against the president of the A. K. C. As the latter has seen fit to deny one the fair assumption is that that is the only one to which he can make any reply. A little investigation of President Smith's answer to "Wacouta" cannot, however, result in anything but confirmation of the widespread opinion that he is perfectly incompetent to fill the position he now occupies in the A. K. C. In speaking of the transfer of the proxy held by Mr. Munhall to Mr. Hanna he says: "I told them that the transfer of a proxy from one to the other was a question of authority only, and a matter between the club giving the proxy and the gentlemen in question, and none of my business—I may now add, none of 'Wacouta's' business, too."

The wind-up of the sentence is a true Smithism, and reminds me of the riding of the high horse in the mastiff puppy correspondence in which Mr. Smith came to grief so ignominiously. Is the action of an officer of an association presumed to be national not a proper subject for criticism and discussion? I rather fancy Mr. Smith will be left in a minority of one in arrogating to himself such a freedom from question.

The position he takes is, however, entirely erroneous. The duties of a president include those of seeing that everything that is done is in proper parliamentary form, and to prevent the exercise of the privilege of membership or representation by any one not fully authorized to act. And I maintain that the transfer of a power to vote on a proxy is illegal. The customary form of a proxy is "to vote for me and in my name," and does not authorize its transfer to a third party. If we look into the standing of President Smith's Club in the Patti M.-Beaufort case we can hardly evade the conclusion that the defeat of Mr. Mason's side of the question was the object sought to be accomplished. At the December meeting the Westminster Club declined to vote on this question, and at the late meeting the club was again silent on the question. At the same time the president allowed the case to be reopened in a manner which must either be charged to collusion or discreditable ignorance.

The vote to reconsider was taken upon the motion of Mr. Vredenburgh, who was not entitled to the privilege of the floor at all. In his capacity as employe of the A. K. C. his duties are purely clerical, and he can exercise none of the rights of a delegate. At the December meeting of the A. K. C. he voted as the proxy representative of the Pittsburgh Club, and not as A. P. Vredenburgh. The vote was recorded as that of the Pittsburgh Club, and a motion to reconsider could only be made by the club he represented, and not by himself individually. The club was represented at the late meeting, and if Mr. Richards, who held the proxy, had offered the motion to reconsider, it would have been a legitimate one.

Taking this view of the case, I have declined to vote on the question of another reconsideration of the case. In my letter to the secretary I have explained my views as given above, and advised him that at the next meeting of the A. K. C. I shall upon the reading of the minutes move that as Mr. A. P. Vredenburgh was neither a delegate nor a proxy holder, he was not entitled to offer a motion, and that it be stricken from the minutes. I fail to see how any delegate can vote in the negative on that motion, and the whole case will then revert to its original position as decided at the December meeting.

Again quoting from President Smith's letter in reply to "Wacouta." "I also take issue with 'Wacouta,' in his statement that Mr. Vredenburgh was not entitled to vote at the December meeting. In my judgment he was." I quite agree with the president that he was, but that unfortunate official in his letter to the secretary authorizing him to submit Mr. Drake's resolution to reconsider, mis-quotes Article IV. as follows: "Officers of the American Kennel Club shall not be privileged to vote upon proxies before the executive committee unless regularly elected delegates from their clubs." He cannot even quote rules correctly, much less determine their meaning.

Again he says: "In the absence of any rule, such motion [Mr. Drake's] is in order." Considering that a motion to reconsider is perfectly legitimate if submitted in proper form, and that the rules of the A.K.C. provide for the decision of questions by mail vote, the assertion that there is an absence of any rule on the subject is but another instance of the blissful state of incompetence of the president.

And now a few words more pertinent to the caption of this letter. Mr. Drake's resolution bears date "St. Paul, June 13," and should have been in the hands of the secretary on June 15. President Smith's office is within five minutes' walk of the A. K. C. establishment, and he should have had it on the date of its reception by the secretary. The letter of the president to the secretary bears date July 2, an inexcusable delay of at least two weeks. The secretary cannot, even if he wishes to make such an excuse, allege absence of the president as the cause of the delay, for Mr. Child is vice-president and holds office for the purpose of performing the president's duties in the latter's absence. Allowing for holiday time the president's letter of July 2 should have been in the hands of the secretary on July 5, and on July 6 he dates his circular letter asking for votes on the q

submitted. That is the first straw of business-like method found in the whole transaction, but when it is found that the circular letters bearing date July 6 were not mailed until July 12, the business-like promptness of the secretary receives a severe setback. What in any office would have been accomplished in a week at the outside, dating from Mr. Drake's letter of June 13, occupied a whole month. That is a case of American Kennel Club methods worthy of the consideration of the delegates who are striving to get the thing in running order and to accomplish some good results.

The envelope, postmarked July 12, also contained a request to vote on the admission of the American Field Trials Club, the Pacific Kennel Club, and the National Poultry and Bench Association of Atlanta, Ga. As the A. K. C. old constitution under which the proposition is submitted, distinctly states that only clubs organized solely for the purpose of holding bench shows can be admitted, it will puzzle the two remaining members of the credentials committee to uphold their favorable report on the application of that club. Another instance of how the committee misuses its power is in the case of the Stafford Springs Club. I fear you will think I am not telling the truth when I say that the reason the committee declines to vote favorably on the Stafford Springs Club is because there are already two clubs from the State of Connecticut in the A. K. C. That decision ought to be awarded the entire bakery. Mr. Wade says "Pitch into the blunders the A. K. C. makes, but recognize that about a majority mean right." That is perfectly true, but how in the world are the majority to do right when they are befooled in this manner?

And now I am going to give Mr. Wade a little work, if he will undertake it. First of all I would call attention to what is doubtless a slip of my pen, when I am made to say in my letter published last week, "Mr. Wade objects to my saying a dog should *not* be disqualified for incorrect description." The word italicised should be struck out. As an evidence of my further statement that the rule governing the making of entries is perfectly plain and well understood by exhibitors, and which he controverts, I wish to call Mr. Wade's attention to the Pittsburgh catalogue. So far as the secretary's work on it is concerned, it is perfect—a model catalogue in every particular. I have gone through half of it without finding an error outside of a very few typographical ones and the misspelling of a few names, which, of course, cannot be avoided owing to bad writing and other well-known causes conversant to all who study pedigrees. Here we find again and again, "Breeder unknown," "Pedigree, etc., unknown," and no better evidence can be adduced in proof of my statement that the rule is perfectly plain and thoroughly understood, and that when not carried out the omissions should be dealt with by disqualification, as provided for in the A. K. C. rules. I even find that the club of unsavory reputation as to medals carried out the disqualification rule in the case of the St. Bernard, Duchess of Leeds, the only entry I have come across that is not catalogued properly. Let us give Pittsburgh credit for having produced the only thoroughly accurate catalogue, and for being the only club to disqualify for incorrect description. I said I would give Mr. Wade a task, and it is to find a mistake of incorrect description in the catalogue.

JAS. WATSON.

Editor Forest and Stream:

Mr. Wade, in his communication last week, leads your readers to suppose a majority of the A. K. C. "mean right." They can scarcely mean right when they do wrong. Gross favoritism is certainly not honorable.

It was hoped that the judges and lawmakers of dogdom would show some redeeming qualities, which would at least command our silence during their blundering struggle between self interest and equal justice to all.

Mr. Wade says the A. K. C. "was used for personal and private ends." How long ago, Mr. Wade, did they cease these sordid uses? When did "the stalwart common sense and love of square dealings of the American dog public set the pretty schemes at naught, and the conspirators got a very black eye?" My dear Mr. Wade, the great American dog public got a very black eye at the last meeting of the A. K. C. The "conspirators" have never for a moment let up on the rapid gait they are running the machine.

The idea of swearing delegates to the A. K. C. was not an idea of my own. A friend made the suggestion, "Why don't you swear the delegates and put the secretary-treasurer under bonds?"

It is no insinuation against an officer's character to place him under bonds. Treasurers of all corporations and societies give bonds, and why should a great exception be made with Mr. Vredenburgh? I know he is a "good fellow," but for all that the A. K. C. to command respect and confidence, must drop their goodfellowship and transact their business on strict business lines.

Let us proceed to business, gentlemen.

VICTOR M. HALDEMAN.

Editor Forest and Stream:

Noticing the reply of Mr. Elliot Smith to "Wacouta," in this week's FOREST AND STREAM, permit me to say that his statement as made is true. He was never called upon for such a ruling, the records of the A. K. C. will prove it. Meeting Mr. Hanna, "who is a member of our Association in good standing," unexpectedly in New York, I proposed to him that he act for Gen. Shattuc, whose proxy I held. I did ask President Smith, "before the meeting," if he thought there could be any objection to my transferring the Cincinnati proxy to Mr. Hanna. He replied that that was a matter which rested entirely with Gen. Shattuc and myself. I did transfer the proxy upon my own responsibility purely out of courtesy to Mr. Hanna, and am alone holden to Gen. Shattuc for my actions.

C. M. MUNHALL.

CLEVELAND, Ohio, July 15.

INDIANA FIELD TRIALS.

THE first annual field trials of the Indiana Kennel Club will be run at Bicknel, Knox county, Indiana, beginning Monday, October 31, 1887, open to all pointers and setters owned in Indiana.

Two stakes will be run. The Derby, open to all pointers and setters born after Jan. 1, 1886. Four purses: First prize, 50 per cent.; second prize, 25 per cent. and two equal thirds of 12½ per cent. each. Forfeit $5, and $5 additional to fill. Entries close Oct. 1.

An all age stake, open to all pointers and setters that have never won a first prize in an all age stake at any recognized field trial in America. Prizes and entrance same as the Derby. Entries close Oct. 1.

These trials are not given for the purpose of making money, but for the purpose of demonstrating by practical tests in the field the merit of individual dogs; to make such trials elevating and instructive, and to encourage legitimate sport with the dog and gun, that the gentlemen who favor these objects may be assured of honorable example and cordial fraternity. The officers and board of directors individually and collectively will undertake to see that the objects of the club are not defeated by the action of any one connected with the trials. Competent judges will be selected and the rules of the club will be impartially enforced and to the letter. The expenses of printing, postage, and one fence man will be deducted from the entrance money.

The club has secured ample grounds with plenty of quail, and we know of no reason why we may not predict a very successful trial. We solicit the co-operation and support of all who wish for the success of the club on the basis of honorable and fair dealing with all concerned.

For entry blanks and other information, address P. T. MADISON, Secretary, Lock Box 4, Indianapolis, Ind.

THE ENGLISH KENNEL CLUB'S SHOW.

[Concluded from page 539.]

ANOTHER fine lot proved the setters, especially the English variety, and it was not until after luncheon that Mr. Webber commenced his task. Sting had been sent out of the show by order of the veterinary inspector; but still he came into the ring for the challenge prize. Poor old chap; he was free enough from mange, but it is almost cruel to show him now. Count Howard, very smart and active, won, with his sire, Sir Alister, sadly out of show form, but still lively and smart, the reserve, an honor which the little Sir Tatton now better deserved; indeed, no one would have grumbled had he actually won outright. Four bitches were present in the challenge class, Bonnie Belle and Magic Lantern being absentees. Queen Elsie, though suckling puppies, won; a smart little bitch, very gay in carriage but light in bone. Pearl had the reserve; a better bitch, especially in loins and bone, but she looked stained in her coat, and Belle of Furness was quite out of jacket. Wild Rose, too, was not in good bloom; indeed, none of the challenge bitches were. The open dog class was an unusually showy one, and the awards there caused considerable surprise. The winner, Prince Pommery, is a great, big, coarse, blue and white, young dog, with great bone, a little out at his elbows; and, though his head is long, it is not a good type, and throughout he is a commoner, worth perhaps hc., certainly not more. Second to him came a dog of a different type, Blue Dash II., showy enough, but coarse in head, and not straight in front as he appeared in the ring on Tuesday. Third prize was Sir James, another big-boned, coarse-headed dog, but better in front, and with more style throughout than either of those placed over him, and the liver and white ticked dog Dashing Leven, with the reserve, is a better dog than any already named. Behind them were King Ned, who moved very badly, but was in nice form; he could not have been higher. Monk of Furness, a little thin in coat, but in beautiful form otherwise, and one of the four best English setters of to-day, was early sent out of the rig with hc.—he should have won easily; Condon, vhc., is a good-looking dog, like work, a little plain in head, but far better than the winner; so is Glencairn of Dalgoner. Winsome Dash is a neat puppy in every way, and later on took a prize in the more juvenile division. Sir Gilbert, Lord Tom and Prince Rupert were absentees, and Sir Julyan is not sufficiently straight in his jacket to win a prize when the competition is keen. The bitches were almost better than the dogs, and here Mr. Webber pleased the knowing ones better. Bashful Maiden, who appeared to fill the judge's eyes immediately she came into the ring, is a lovely bitch in every way, simply perfect in her head and expression, has a good coat for a puppy, excellent legs and feet; to be critical, one might say her stern is a shade long and her ears rather large, but no one could gainsay the justice of this win, and catalogued at £50, she speedily had more than one claimant after her, and they not all confined to Great Britain. Lune Belle, second to her, is a rather heavier and coarser bitch, a little masculine in head, and her we selected as the rightful winner in the puppy class at a show where she was not noticed. Then came a mistake, for the third prize winner, Gaudy of Kippen, is but a commoner in every way, excepting in color. Madam Rachel, a bitch in grand form, and with the best of legs and feet, and who hitherto bore an unbeaten certificate, took but the reserve; possibly, being better furnished than the winner, this last-named bitch should have won outright. Countess of Dalgoner, a fair bitch, is longish in back and generally a little coarse. The dog and bitch puppies were particularly even, with no great star among the lot, and generally the judge selected about the best for the honors. Mr. Duncan, with three puppies by Romany Rye—Truth, was particularly successful, and Mr. Cartmel and Mr. Moser showed a fair youngster or two; but space will not allow us to criticise these young ones *seriatim*. Mr. Webber was more at home with the Gordons, and his selections here were correct enough all through. Bang IV., who won under Mr. Cunningham at the last Palace show, still goes on well, and now separated Mr. Chapman's brace, Heather Don and Heather Grouse. The first-named had won at Darlington, but Grouse is but a puppy, a big one without being at all coarse, excellent in color and coat, and likely to become a champion if he does not go off. There were but half a dozen bitches, of which the best made are two puppies, both Mr. Chapman's.

Irish setters came up in better force, but they were by no means well judged, and it is rather a pity that Mr. Webber, who, we believe, does not claim to possess any particular knowledge of the variety, undertook so unthankful a task as to judge them. Derry II., who secured the championship, is a bad color, and in no one respect, excepting in activity, nearly so good a dog as Mountaineer, who, however, did not appear very gay in the ring; still, he can beat Derry going on two legs. Nellie was in the bitch class placed over Lallah Rookh, with which decision little fault was found, though the loser was the fresher and in the better bloom. The open dog class was a strong one, and a youngster, Shandon II., was given the pride of place. This is a nice dog in color, form and style, with capital legs and feet, and plenty of feather; he is a little coarse in skull, and does not possess so much character as some of the older dogs before whom he was placed. Ballingcarry, late Carlo, came second; a good stamp of dog, grown grizzled in muzzle, but a fair sort all round. Carrowdore was third; but that excellent dog Frisco, all round as good as anything in the class, did not get a card; yet he looked well, and not a word against his winning outright would have been heard. Pat VII., vhc., is, on the contrary, a moderate specimen in every way, and not to be put on the same degree of merit as Mangerton, Moonlighter, Drogheda and Lismore. Aveline was shown too fat, and she got second in bitches; a favorite she is with her owner. Nellie IX., who won, is again wrong in color and form, quite a moderate one, and how exhibitors are to know what to breed when she wins here, and Killaloe, who won at Birmingham and Warwick, and then pronounced an extra good bitch, now failed to obtain a card. Molleena, who has done some winning for Mr. Wilson in the north, had third honors. Aveline was awarded the special for dogs that had won a heat at a field trial, beating Wild Rose, and the catalogue was wrong when it stated this competition was confined to Irish setters. The award for the best team of all varieties of setters was next made, and proved a most interesting competition. On paper this looked like a win for either the Gordons of Mr. Chapman, which contained a first prize winner and a winner of third, or for the Laveracks of Mr. Potter, which included the winners in each champion class, second in open dogs and an hc. in the same class. However, Mr. Cockerton won with a team which included the first prize bitch in the open class, Bashful Maiden, Madam Rachel and Born a Flirt, vhc., Belle of Furness unnoticed, and the reserve dog, Dashing Leven. They were a grand lot, quite deserved the honor given them, and we believe the award was well received.

Then came the beagles, an extremely pretty group, which Mr. Cox judged well, though we would like to have seen Mrs. Mayhew's charming little rabbit beagle in the money, perfect little animals in her class are so rare. One or two of the hounds shown here are too low on the legs, and certainly exhibit a suspicion of basset strain. Owing to some misunderstanding in the Spaniel Club, there appeared a likelihood of this division proving a comparative failure, but such happily did not prove to be the case. The Irish watermen were in great force for them, the challenge class having three entries, and each individual in the open division really deserved a first prize. Of the Clumbers little need be said: Psycho continues fresh and well, and won the challenge class; a dog of nice color—Ralph, strong in bone and big and strong, being similarly successful in open dogs; his coat, too, is good, but his skull is either too big or he is too narrow in front of the eyes. Royal, second prize, is no more than a fair dog, but he is bigger than Cynic, hence we fancy the reason of his winning. Dash XX. and Noble X. have both nasty, light-colored eyes, but their bodies and coats are quite average, and their bone is good. The two leading bitches were placed just as they were at Birmingham last year. Mr. Woolland showed, as usual, a powerful team of Sussex spaniels, with which he gained some of the awards, Bridford Brida II., the winner in the open bitch class, being of special excellence in color, coat and other particulars. Solus won again in his division, but in the open one for dogs a new face to south country shows won. This was Glencairn, a great, big, strong-boned dog, long, low and powerful, with extraordinary coat and feather, but coarse and heavy in his head; Gipping Sam, mentioned by us previously, was second, with Newton Abbot Victor third, another dog that has done considerable winning in his time. The last named has the better ears and head, but his coat is finer than we like it; Pluto R. is another excellent spaniel, not so long in body or low as those already mentioned, but quite their equal in head; and Noble of Orley is also of exceptional quality. Dinah Waller, third prize, we liked best in the next class; her head, ears and expression being equal to anything seen among the spaniels here, and her bone and body, too, leave little to be improved upon. Staley Belle and Beverley Rhea, placed under her, have previously scored on the bench. The pretty tri-colored Fanciful should have beaten poor old Fop, who did not look nearly so fresh as when we saw him a fortnight ago. The variety class was mostly made up of black and tans, and the smaller one did not contain a single pure cocker, though the winners are charming little black spaniels, but little like the two Scott so prettily engraved from a drawing of Reinagle's about 1802. The puppies were fair, and Mr. Woolland was now beaten in teams by Mr. Bryden, who showed a particularly even lot. We fancy it was at Warwick the Beverley fancier was placed back because of the inequality of his representatives, but judging such classes is "a promiscuous piece of business," at least so one of the keepers said.

The summer season is a bad time at which to show collies, because they are then casting their coats, and a prize sheep dog without a mane and frill and "well-coated tail" is but a sorry spectacle after all. Still, the present show was a little ahead of previous summer ones. Vulcan is wonderfully full of a coat of good quality, still he carries his stern so gaily that he had no chance of beating the neat little Eclipse; and Ruthand did not compete for anything but a special. Later on Mr. Krehl's dog won the club trophy, we believe, though he is not honored with the award in the official prize list. Metchley Surprise then beat Peggy II., looking as charmingly handsome as ever, and they were followed by the dogs over two years old. Here Brighton won—a dog we have always had a good word for, and should on Tuesday have certainly given the great honor which went to Eclipse to this dog, who is far more like working in every way and equally handsome. Reality was out of coat; Charlatan and Paramount were second and third, but far away the second best dog in the class was K. T., a black and tan, who took but hc. His ears, expression and general style are capital, his coat full and profuse, hence his backward position was a matter of wonderment; Young Wolf excels in profuseness of coat; Leal, fourth prize, exquisitely handsome, is small though full of character, and her ears are perfect; Malcolm I. is a rare old sort. Bertha, looking fresh and fit had an easy win in bitches, and took the special as the best bitch in the show, an honor it was pleasing to see given there, for she has been some time in coming to the front; Lunesdale Lass, third prize, we liked better than the short-legged Sooty, who took second; and over Mrs. Mac a first card was placed, though she had not won it, nor ever will do; Sweet Lassie we always liked better than Sooty, and the best of the others are pretty well known. Metchley Wonder was absent from the two-year-old and under class, where Metchley Wolf won, as he had done at Warwick, and his coat has improved since then. Cœur de Lion, second prize, had an excellent body and good strong back, his expression is not so good as it might be, arising no doubt from his rather too full eyes. The Curate, in fuller coat than we have seen him, was fourth. The winner of third at Chelmsford again third, so readers will see this was by no means a good class; nor was the corresponding one for bitches any better, the judge not giving a single card of honor after he had placed the prizes. The smooths were just fair, the winner, a nice black and white dog with a superabundance of coat.

Basset hounds were good classes, and showed more uniformity than is generally seen. In the challenge one, Bourbon, as might have been expected, defeated Fino VI., and though the latter cannot boast of the quality Bourbon possesses, he seems to be improving. Chopette won over Pallas III. in bitches, but if quality is to score, taking also into consideration the condition of the winner, who appears to be suckling a litter of puppies, then this decision should have been reversed. Forester added fresh lustre to his fame by winning in open dog, and rightly. He is a big, fine hound, grand in body and true in front, and improving with age. Flora, own sister to Forester, won in bitches, a rare-bodied one, and good in ears, is not absolutely first-class in skull, she is fair and stands low. Her dam, Medore, who errs in the same direction, but more so, is still a grand bodied and boned bitch, and was placed on an equality with Chopette II., a low, long, and good-colored hound. Mr. Krehl carried off the team special, and divided with Mr. Stokes the cup given to the exhibitor showing the greatest number of bassets, their entries being just equal, and Bourbon and Bretonne were awarded the special for best couple of hounds hunted last season. Dachshunde were equally good in quality and uniform in type. Maximus carried off the challenge dog prize, Gil Blas being his most formidable opponent. In bitches, the lovely black and tan Lady had to give way to Cerise II., a true dachshund, and in a trifle the better condition, or matters would, no doubt, have been altered. Open dogs introduced us to the aspiring young black and tan Jackdaw, who literally carried all before him. A first glance at him impresses one with his great quality, and a close inspection proves his merit. He is nice in size, has a beautiful skull and set on of ear, is low without being crippled, and long without being unwieldy. He is not furnished, and at his age, if he was, it would be against him. Jupiter made a good second to him, a nice and well-formed red dog, with an excellent loin; and Belgian Hero, a good-shaped, sound-limbed dog, a trifle coarse, came third. Duckmanton Conrad is a lengthy black and tan, and has a long head, but rather square in shape. Sieger shows more quality in head, and being sound in front, with good feet and skin, might have superseded Conrad. Guinevere, a well-shaped red bitch, with good ears, loins and limbs, and a nice mover, beat Wagtail for the first time on record, and though the latter has the most quality in head, the decision was right. Scarsdale Jungfrau is a lengthy red bitch, with a long head, fair set on of ears, good loin and skin and fair bone; and she might have beaten Wagtail who, though pretty, is quite small enough, in view of the work these dogs are expected to perform. This bitch won in novices. Zulima is a fair hound, but not over good in loins, and Irrlicht, who, though not high class quite in head, is a low, long, well-formed liver of good size, who ought to have stood higher. The puppies were good, and the novices have all appeared in previous classes, and the specials were thus distributed: Jackdaw won the 50-guinea challenge cup, and Jupiter the one for the best dog in open classes, other than the winner of the larger trophy; Guinevere took the corresponding bitch special, and Jack-

daw and his dam Wagtail the brace cup; Maximus, with his family, carried off the stud dog, and Lady the brood bitch special. Irish terriers were fairly good classes. Bachelor represented challenge dogs, with Buster second; and Extreme Carelessness easily disposed of Norah Tatters in bitches. Neither St. George's owner himself nor other exhibitors were perhaps prepared for the honors which literally showered upon this dog. Still, upon a close scrutiny of his excellencies, there is little fault to be found. He is exceedingly well formed, and of good size; his neck, shoulders and front are nearly perfection, and he moves with great freedom and liberty; he has a long taking head, and small, perhaps too small eyes, which rob him of that intense character peculiar to the Irish terrier. Here Extreme Carelessness has the pull and a little in coat, but loses from him in shoulders. Mick McQuade is a very good coated dog, and well put together in body, but thick in skull, as well as narrow in face; Cruisk, third, has a good head and true expression, but is straight behind, and did not move well in the ring, and he was not in show condition, but no dog in the ring possessed greater character than he, and his coat is excellent. In bitches, Miss Rattle won, and, though quite big enough, she is a good stamp nevertheless; she was, however, very closely pressed by Miss Jummy, a beautiful-headed and straight-fronted bitch, who probably lost position a little by her pale color; better in this respect, she would have no superior in the show. Erin III. is weak in face and loin, but a nicely shaped and coated animal; and Whisky Slee, on the other hand, is good in body and has a nice head, but soft in coat. A lot of excellent puppies were likewise forward. St. George, besides winning the valuable produce stake of £26, followed by Mick M'Quade and Miss Rattle, took the specials for the best uncropped dog in open and puppy classes, best terrier in the show bred by exhibitor, and the 50 guineas cup, as well as the one for the best dog and bitch in the open and puppy classes in conjunction with Sea Shore. Extreme Carelessness got the cup for best bitch, Mick M'Quade took that for best exhibited by an Irish member of the club, Miss Rattle was awarded the one for the best uncropped bitch, Spital Gem won the special for best puppy bred by exhibitor, and, together with Spital Crack, the one for best brace of uncropped puppies; Mr. Hoare secured the team special, and there were money specials awarded to the second, third, and fourth best uncropped specimens in the open and puppy dog and bitch classes.

Pugs were a good class, but not well judged in some instances. Little Count beat Daniel in challenge dogs, and won the 20 guinea cup for the best pug in the show. This was perfectly right. Little Countess took precedence in bitches, and was the most compact, and showed most quality in the class; but Setset has a better skull and body, and, with black toenails instead of white, should have beaten Lady Clematis for second. Prince Tragedy won in open dogs. His leading features are his wonderfully large globular eyes; he has also neat ears, and is a good-bodied dog. He, too, has white toenails, and we thought Loris a better dog, take him all round, having more wrinkle, a better trace, and greater quality. Tang, third, is a long-faced and somewhat pig-jawed dog, and was well beaten by Sunlight, who, though not made up in body, is an infinitely better pug, and should have come third. In bitches, Ducie, second, might have won; she has a splendid eye, and is a good-bodied and compact pug of character. Pegg is small in eye, pinched in face, and has no wrinkle, but good in bone and body. Queen Rose is nice in quality, but shows age; Lady Crusoe is shallow in muzzle, but good in body and color. Royal Duke won clearly in dog puppies, and he is a compact, short-headed, and good-skulled little dog, with a nice tail and carriage. There was not much else in the class.

Fox-terriers were as numerous as ever, but there was a dearth of good young ones. The open smooth dog was the best division of the lot, we thought. Result of course won again, and took the challenge cup for the ninth time; there is nothing yet likely to make him vacate his position; and to Rachel went the great honor in the corresponding bitch class. Last week at Bury St. Edmunds we drew attention to the mistake made in placing Valet over Lucifer. The latter won now and Valet was fourth, a position he scarcely deserved, for his thin coat and whip tail are totally unlike those seen on other winners. Second place should have gone to Reckon, who looked well, a terrier without coarseness; though his bone is so excellent, he had vhc. only. Bachanal, with his bad mouth, was fifth, a nice little terrier, as we all know; Hunton Prince, late Syrup, second, and fit as a fiddle pin; Hunton Baffler, vhc., is an old-fashioned stamp, and, all white on his head instead of being marked, he would remind one much of old Tyrant; Professor, third prize, is a gay, smart terrier, big in ears rather, and not quite elegant at his shoulders; Embryo is rather leggy, but terrier-like, with a capital head; Barton Spicer, tan in markings, is a neat terrier in ears and body, and straight in front, he is, however, too bitch-like in head; Moonstone is another white terrier we have previously noticed. Radiance should, we fancy, have been placed over Ethel in the bitch class, at least so far as we could examine the two, for the later could not be persuaded to drop her ears, which are thick at the roots. Radiance is a good bitch in bone, coat, and form, a little lacking quality, which Ethel undoubtedly possesses in a greater degree; Dinah Do and Venilia are both too leggy and light; Wildfire, fifth prize, was dull and listless in the ring; Meersbrook Marvel, third prize, has been mentioned in our reports of some north country shows, and Verdict, an American bred bitch, is a better specimen than her sister Tiara. Some thought Verdict should have been higher, but though her legs, feet, and character are good, she is a little weak in jaw, and her jacket is not right; she might perhaps have been fourth, but no higher. New Forest Danger won in dog puppies; he is wonderfully terrier-like, but weak in head and generally toyish; while the second prize dog, Horton Trap, has a very long head, which is not at all the shape a terrier's should be, and so he scarcely deserved a card. A nice dog here, but quite big enough for his age, is Dandy Duke, all white, we presume placed back because of his oversized ears. Volador, likewise a fair puppy, is at present unfurnished, and he looks like growing too big, and has a commonish expression; Douglas Jester, showing more quality, is like an improving sort. In the remaining classes the awards, as given below, must suffice; and Mr. Clarke had little difficulty in winning the team prize. The wire-hairs were strong.

Coming so soon after the show of the Bulldog Club, we had nothing much more than we saw there, and Mr. Jackson got through his labors well. As an opening, he had to give his judgment in the challenge class between Grabber, Rustic King and British Monarch, the latter taking the great honor, which included the challenge cup. The first named was not in good form, and the others are of such distinct types that it must lay with the fancy of the judge which wins. Personally we are averse to the twisted nostrils of the Monarch family, and think Rustic King's big ears are not such a severe handicap. The latter, however, took the cup for the best bulldog in the show, bred by the exhibitor. In the challenge bitch class Queen Mab again won, and as Jennie Howlet was in bad form, and Wheel of Fortune in good, the latter took second honors. In the open dog class of the medium-sized the large-sized one did not attract more than two entries. All the winners are old faces, Roller (a brindled and white dog) has a fairly well-shaped head, but is not full enough in his cheeks, and rather leggy too; still he deserved a card—a far better dog than the long and down-faced Chelsea Grip. Nap is possibly the best headed dog in the class, but his narrow front kept him back. Horsa possesses a good skull and ears, a little pinched in muzzle, still a fair all-round dog. Rustic Model won in the bitch class, where again there was a repetition of previous awards; and so on in the smaller-sized divisions, where the winning dog Forceps was not looking so well as when at the Aquarium show. Harper, the winning puppy, is not deteriorating, and Hades appears to show improvement in head.

Como beat Trentham Dutch in the bull-terrier challenge class. In the open one for dogs and bitches over 30lbs., Margery Daw, a fair headed bitch, is a little long in loins, but might have been higher than he, had she been in better coat. Duchess III., second prize, is a useful sort, level and good, just a trifle lippy; Graceful has a good head, but bad legs; Topper, with the reserve, is lightish in eyes, a shade thick in jaw; legs, feet, and body fair; Harvester and King of Hearts are both well known, the latter a rare dog, shown in beautiful form, just a little wide in front, and too long in stern. In smaller class, Wild Violet carries her ears badly; Daisy Flower is a nice bitch, but a little out of condition. Principio won well enough, her fault being a little extra length in loins. The remainder in this class, like those in the smallest size division, were fairly good animals; but among the little ones there was nothing to compare with such as Nelson, Dick, Rebel, and others—15lb. gems of bygone days. The white English terriers were badly judged, Diamond Spark in eyes, head, legs, and feet, and form generally being the best. The winners here are all well known, as are most of the black and tan terriers, the latter mustering in good force, and apparently correctly judged throughout. Pearl, the winner, very rich in tan, fairly distinct in markings, and terrier-like in body. Jeanette won the Victoria prize for the first time of offering, this being value twenty guineas, to be competed for by uncropped specimens over 12 months old. Scotch terriers were numerically poor; but Dandie Dinmonts were quite fair, though not such good classes as were produced at the last Kennel Club show; the prizes in both divisions were satisfactorily placed, as was the case with the poodles and Pomeranians. The black variety of the former were particularly strong, but Lyris still keeps at their head.

The same old faces were to the fore in Bedlingtons, but we rather felt inclined to favor the Miner over the Bishop in the challenge class, who now is the better fronted dog of the two, although rather the larger. Newton Lad and Toothpick were well ahead in the open class, the former excelling, particularly in neck, head and shoulders, and in coat too. Toothpick is scarcely so good in hind quarters and stern as the winner, and Humbledon Buster's stern is bad, otherwise he is a fair all-round dog. Wansbeck Maid, the winning bitch, possesses a sweet head, but in front she is not what she might be; Bridget might fairly have been second instead of vhc., being good in head, front, body and coat, for Lady Colin, who took that honor, is plain all through; and Gipsy Queen, third prize, shows too much of the Dandie Dinmont type; Creole, reserve, is small and weak in muzzle. In the any other color than blue, Hotspur was fortunate in beating Humbledon Bruiser, who certainly scores in head and size; Grace Darling is too full in eyes, but excellent in ears, body, legs, and feet. A promising puppy is the liver-colored Jack Monkman, handicapped a bit by his age. With little exception the winning Skye terriers have already occupied similar positions, and the awards were quite correctly made by the Rev. T. Nolan. Strathern took the cup for the best Skye in the show. The Clydesdale terrier class, the first time such a one has been at a Kennel Club show, had but five entries, two being purely Skye terriers. The winner, Nelson, is a handsome silky-haired terrier, groomed like a little Yorkshire, with prick ears, and silvery blue in color; and the two best behind him are of similar stamp, but not so good in either coat or ears. This variety will best be recognized under their old name of Paisley terriers.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the July number of the *American Kennel Register:*

BULLDOGS.

5124. Crib III., W. Walker.
5125. Nino, W. C. McArthur.

COLLIES.

5126. Clyde LXXVIII., C. P. Mattocks.
5127. Fly X., C. P. Mattocks.
5128. Fly XIX., C. P. Mattocks.
5129. Gladstone, H. H. Benedict.
5130. Lady, C. P. Mattocks.
5131. Maggie IX., C. P. Mattocks.
5132. Maggie XVIII., C. P. Mattocks.
5133. Myra, W. V. Cranford.
5134. Quinnie, C. P. Mattocks.

MASTIFFS.

5135. Beech Grove Cleopatra, A. L. Dale.
5136. Commodore, J. R. Hand.
5137. Czar II., J. F. Rule.
5138. Cyclone, Minnehaha Kennels.
5139. Daniel Webster, G. Rice.
5140. Iola, Minnehaha Kennels.
5141. Jess, F. A. Stafford.
5142. June II., J. D. Bodman.
5143. Lulu II., R. Bird.
5144. Mary E., F. A. Howard.
5145. Minnehaha Duchess, Minnehaha Kennels.
5146. Minnehaha Madge, Otto Schultz.
5147. Minnehaha Pride, Minnehaha Kennels.
5148. Minnehaha Sultan, Minnehaha Kennels.
5149. Minnehaha Turk, Otto Schultz.
5150. Muncie Turk, C. T. Bartlett.
5151. Sphinx, B. W. Hunt
5152. Wacouta Baron, Wacouta Kennels.
5153. Wacouta Rose, Wacouta Kennels.

POINTERS.

5154. Gipsey Tell, Wm. N. Clark.
5155. Marguerite II., J. H. Day.
5156. Monty Tell, Jas. H. Paine.
5157. Pride of the Stubble, L. Gardner.
5158. Rumson Lilly, H. Johnson.
5160. Sage of Graystone, W. L. Gardner.
5159. Rushing Pilot, L. Goodhart.

PUGS.

5161. Jingo Sniffles, G. E. Peet.
5162. Lakme, Wm. Imas.
5163. Maple Grove Gem, Maple Grove Kennels.
5164. Snap, Geo. Kingoun.
5165. Trump, Chas. J. Tanner.

ST. BERNARDS—ROUGH-COATED.

5166. Alvier, Hospice Kennels.
5167. Chimborazo, G. H. Larned.
5168. Eiger, Hospice Kennels.
5169. Hadjar, Hospice Kennels.
5170. Lady Catherine, Ed. C. Johnson.
5171. Leda II., W. V. Carolin.
5172. Phœbe II., Rockingham Kennels.
5173. Sultan III., A. M. Cunningham.
5174. Tromba, Hospice Kennels.

SMOOTH-COATED.

5175. Kader, Hospice Kennels.
5176. Mark Anthony, Jas. Hicks.
5177. Montrose, Hospice Kennels.
5178. Reka, Hospice Kennels.
5179. Winchester, G. P. Wiggin.
5180. Wotan, Hospice Kennels.
5181. Yum-Yum, Jas. Hicks.

SETTERS—ENGLISH SETTERS.

5182. Grouse II., J. J. Mellus.
5183. Ivy, L. Gardner.
5184. Jet, Henry J. Thayer.

IRISH SETTERS.

5185. Dan, David Ousterhouse.
5186. Dude's Noreen, B. F. Kratzer and R. K. Norton.
5187. Glencho's Berkley, Charles C. Doty.
5188. Glencho's Edith, Charles C. Doty.
5189. Glencho's Grip, C. C. Doty.
5190. Glencho's Kerry Gow, C. C. Doty.
5191. Glencho's Nora, C. C. Doty.
5192. Glencho's Providence, C. C. Doty.
5193. Prince II., W. K. Patch.

SPANIELS—FIELD AND COCKER SPANIELS.

5194. Don III., Mrs. F. A. Thayer.
5195. Flossie, J. P. Willey.
5196. Frank Obo, G. W. Canterbury.
5197. Ligero, Horatio L. Sprague.
5198. Newton Abot Lord, E. M. Oldham.
5199. Pet, J. B. Daniels.

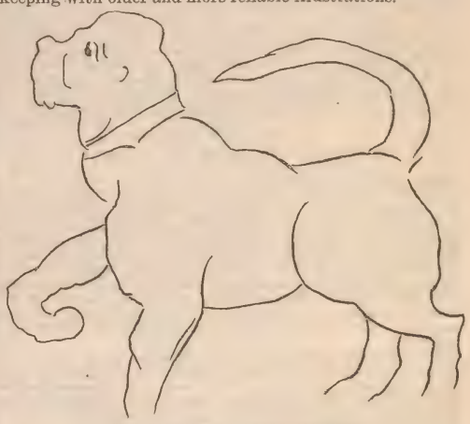
TERRIERS—BULL-TERRIERS.

5200. Ben Hur, F. W. Chase.

FOX-TERRIERS.

5201. Chester Minnie, Sam J. Parker.
5202. Domino, A. H. Morton.
5203. Maple Grove Duchess, R. L. Pate.
5204. Maple Grove Kate, R. L. Pate.
5205. Mt. Toby Sparkle, C. J. Bailey.

YORKSHIRE TERRIERS.



5206. Fearnaught, P. H. Coombs.

MASTIFF TYPE.

Editor Forest and Stream:

I was pleased to see the reproduction of the mastiff from Bingley, 1809, in your issue of June 2, and also to read the letter by "H." in the following issue, which letter is quite as valuable and interesting as the sketch from Bingley. "H." points out the true disposition of the mastiff incidentally, as well as the color, and his description reminds me forcibly of Dr. John Brown's description of the mastiff Rah (1824 about). I was very pleased to read "H.'s" unsolicitated testimony as to the greater proportionate shortness of head, in which respect I suspect the drawing in Bingley's to be decidedly faulty, and although this said drawing in Bingley's furnishes additional proof of the correctness of my delineation of the original type of the English mastiff, as laid down in my "History of the Mastiff," yet this sketch in Bingley, by an unknown artist and of an unknown specimen, is comparatively worthless compared with the engravings of Bewick and others I have mentioned.

I feel certain the more mastiff fanciers will take the trouble to investigate the subject carefully the more they will have to admit the correctness of the so-called bull and pug dog styles being the true and original type. Interesting as it always is to read letters like that of "H.," bearing testimony to the correctness of the type we may advocate, yet it must always be borne in mind that the specimens they saw may or may not have been even pure bred, and although their recollection may be vivid, yet one mastiff no more makes the type than one swallow makes the summer. What A, B or C may have seen respectively is of little importance to breeders and judges who have spent fifteen to twenty years or more in carefully gleaning historical information as to what the type was and should be. I for one have never advocated exactly such a type as shown by Bingley as the type we should cultivate for our show bench. Like Mr. H., I do not consider the head sufficiently short to be typical and in keeping with older and more reliable illustrations.

THE CATHEDRAL STALL MASTIFF.

With this I inclose a tracing you may care to reproduce, and when the antiquity of the carving from which it was taken is known, its roughness will be overlooked. I discovered it quite accidentally a short time since, on taking a clerical friend and visitor to inspect some ancient monument in a church close to this. The church had been repaired, the old material being cut down and used again; but fortunately the stalls in the chancel had never been touched, and on the head of one we discovered a large dog, plainly a mastiff; and I consider it furnishes a most satisfactory and interesting proof of the true type of our early English mastiffs. I may point out the short, deep muzzle, the pendulosity of the lips being distinctly marked, also the development of the dewlap. It shows a compact, muscular, active animal, with short, stout limbs, and a certain pug-like shortness of back, a point often conspicuous in the older illustrations; and it may be remembered that such authorities as the late G. W. Thompson preferred this compact build, not liking long backs (*vide* "History of the Mastiff," page 195). The stern, like most illustrations up to the commencement of this century, is carried over the back, approaching toward the carriage of that of the pug dog and Thibet mastiffs. My drawing, although rough, is exact, showing original size, as I carefully pressed the paper over the original so as to get an exact impression. The carving is very ancient, rotten with age and worm-eaten, and is judged by a party versed in such matters to be probably as old as the reign of Edward III., certainly before the battle of Agincourt.

FROM AN OLD ETCHING.

I also inclose a photo of a mastiff from an old etching published in 1792, picked up and presented to me a short time since by my esteemed friend, Mr. John Lyall. Both of these specimens are more interesting and show more of the true mastiff type than Bingley's.

M. B. WYNN.

THE ELMS, Rothley, England.

BEAGLES FOR BENCH AND FIELD.

LINDEN, Mass., July 15.—*Editor Forest and Stream:* Seeing in this week's paper an item on the beagle by "H. H.," I will give my experience for the past three years. He speaks in rather a discouraging way of the show winner and small stock. I have at present in my kennel eight beagles, all under the standard but two. They are all good workers except two, which have never had any chance, but which I am in hopes to have in good trim for running by September. My small dogs can go as long as the larger ones, but of course not quite as fast, though they will all stick from daylight till dark, and be all ready to go the next day if necessary. My best running dog is by champion Little Duke, out of an extra nice bitch, and he is only 14in. high.

I have been looking into this matter for several years, and have come to the conclusion that the show winners have been petted too much and not given a chance to do as well as they might do for fear of getting lost or hurt. There is no reason why a winning dog on the bench should not make a good dog in the field. I have now in my kennels two very nice bitches, one a show winner (May Belle II.) and the other never shown, but to be heard from next spring if she is alive. They will run a little while and then come in and follow to heel; they only appear to be lazy, and are doing much better than when I first took them out. I go out about three nights every week for about two hours. The way I do is to take a couple of good workers and go where I know I can start a rabbit, and take the green dogs along with me. I had been out three or four times before they would take any notice of the dogs that were driving, but I am beginning to feel quite encouraged about them now. A beagle can be trained to run when from six to seven months old if a little pains be taken with them. I have had quite a number of pups the past two years, and the way I do is to take them out with the old dogs after they get to be four or five months old, and they soon learn what is wanted of them.

I hope to see a little more in your columns in the future on the beagle; they are to my mind the finest little sporting dog of the day, for the New England States especially, as most every other kind of game is so scarce, but rabbits are quite abundant still. I would be glad to hear from others on this matter and what they consider the best dog for work, the undersize or oversize beagle. For my part I like the little dog best, only I want him to be able to last all day.

W. S. CLARK.

FOXHOUNDS AND STOCKADES.

Editor Forest and Stream:

"N. C." is amusing in her paper concerning foxhounds in the issue of July 7. I am fond of foxhounds, but!

The inference is probably unfair, but perhaps not altogether unnatural, that when the old gentleman went after his daughter with his pack of hounds unmuzzled, it was of no importance how many little girly they might absorb so long as the daughter remained unharmed. If I had been the father of the "little cousin" I would have taken the contract at extremely low figures to start that pack the first time they showed unmuzzled noses within the limits of my bailiwick.

The patience of "N. C." is commendable or not, just as you choose to look at it. She is, I take it, a Southern lady. Well, she and her friends of the feminine persuasion have in my opinion been "put upon" quite long enough by their chivalric hasbands and fathers, and it is high time that they begin to assert their rights.

Let them combine and quietly but firmly make known to the aforesaid husbands and fathers that if no better kennel system is attainable, a good stockade of logs, say fifty or sixty feet high, and placed not more than five-eighths of an inch apart, will restrain and keep from stealing or other depredations on the rights of the housewife the most thievish hound that ever bayed.

A few sheds inside will make the dogs comfortable, and the owner will know where to look for them when old Hercules reports "big bar tracks jes' down by the lower edge ob de co'n fiel'."

Instead of the hounds being permitted to select for themselves such delicacies as hams, butter and the like, the best of these may be chosen for their delectation, and poked through a wicket into the stockade, at the end of a long pole.

Therefore, let the ladies, as I have said, combine and insist upon the kennel or stockade system, or some modification thereof. As a motto for the society I would suggest "stockades or strychnine." KELPIE.

DOGS FOR BIG GAME.

Editor Forest and Stream:

In your issue of July 7 are some remarks by "Leatherhead," taken from the *Kennel Gazette*, upon a suitable breed of dogs for hunting big game. He desires speed, courage, strength and nose, and he can get just these qualities by breeding a dog half greyhound and half Great Dane to a foxhound bitch, the hounds to be from good hunting stock. I had some dogs a number of years ago bred from a foxhound bitch and a dog, a cross between a staghound and a German boarhoand, and they would trail anything, run a sight chase like a greyhound, and kill anything they came up with. They were famous bear dogs, doing their own trailing, and showing wonderful quickness and skill in their attack when the game was at bay. They always ran to kill and were ferocious in battle.

If "Leatherhead" will spend a few years in breeding such dogs he will have a pack that will trail, run down, and kill any game on this continent short of a grizzly bear.

PISCATAQUA.

PORTSMOUTH, N. H., July 18.

SAN FRANCISCO DOG SHOW.—The Pacific Kennel Club will give a dog show in San Francisco on April 5, 6, 7 and 8, 1888. An organization known as the California Kennel Bench Show and Field Trial Club is said to intend giving a show in August next, but from observations made here we conclude that it will not do so. The date selected by the Pacific Kennel Club was that best suited to local conditions. All, or nearly all, of Californian owners of sporting dogs use them. There is no class of benchers purely. The autumn and winter months are those in which field dogs are used, and few owners would suspend preparation of their dogs for the field simply to place them on the bench, as would be necessary if a show was held in October or November. In April all classes will be in good coat, and showing them will in no wise interfere with using them in coursing, deer hunting, or on birds. It is the wish of the Pacific Kennel Club to have a good entry from crack Eastern kennels, and some dogs are expected, but local demands must first be met.—*Breeder and Sportsman.*

SPANIELS FOR BENCH AND FIELD.—*Editor Forest and Stream:* In your issue of last week you have an effusion from a Mr. B. A. Osborne, which, if intended for a free advertisement for Mr. Fellows, may or may not be considered clever, but to a breeder of the recognized type of cockers as bred to-day it must be regarded as the veriest twaddle. We were not aware until this Solon came to the front that cockers were supposed to retrieve in water, much less to be expected to run deer. This wonderful pair he possesses may probably answer his purpose for this mixed kind of work, as we have seen many a mongrel do similar service. But we can imagine how this pair would look on the show bench; we think they would require to be labeled to enable the public to decide to what breed they belonged; this is our conclusion from similar experience of those who always have such wonderful dogs "at home." They don't often venture to show them, and for the credit of our shows it is well they do not. But there is a more contemptible feature about this letter, his insinuations that the judge discriminated in favor of Canadian dogs, should be promptly condemned by every respectable beeeder and exhibitor, for Mr. Kirk is known to be an honest, conscientious judge, and should be protected from such vile calumniations. Regarding Canadian dogs, we ask this man how it comes that at all the best shows for years, under all the best known and most competent judges Canadian dogs have secured a large proportion of the honors. We have before us a letter from Mr. Fellows, written a few months ago, in which he says, "Toronto has more good dogs to the square inch than any other city in America." This is true and it applies to Canada as well as the city of Toronto. We like the long, low, strong built little fellow, such as we breed here, and we think we can produce them of this style, that for endurance, pluck and work, day in and day out, will be more than a match for the long-legged specimens Mr. Osborne owns. Besides there is a class, known as field spaniels, that will allow a little more scope for size and weight to those whose fancy so directs, but for mercy's sake let them not be confounded nor condemn the one simply because the other is what is desired. To our mind the cocker and field spaniel are distinct classes, and we hope to see them bred as such. Such terms as crocodile, Dachs, weasel, double-action Skye-cross and similar silly expressions as applied to the princely cocker may to your correspondent seem very funny, but to the average reader are decidedly low, vulgar and nonsencial.—H. G. CHARLESWORTH (Toronto, Canada, July 9).

"JUDGE AND JURY" is the title of a new sporting paper which hails from Boston. It has a live kennel department, and will, we presume, represent the current opinion and thought of Hub dogdom. *Judge and Jury* starts out as if it meant business, and there is evidently a vast amount of go in it.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Baritone, Bass, Tenor, Alto, Soprano, Solo, Air, Blue Cap, Jr. and Zimmer's Blue Bell. By F. B. Zimmer, Springfield, Mass., for three white, black and tan beagle dogs and four bitches, and one white, black, tan and blue ticked beagle dog and bitch, whelped June 27, 1887, by Blue Cap II. (A.K.R. 4008) out of Constance (A.K.R. 2912).

Boot Black and Nigger Baby. By J. H. Winslow, Philadelphia, Pa., for black pointer dog and bitch, whelped Feb. 26, 1887, by Bronco (Pape's Sweep—his Nellie) out of Miss Nellie Y. (Meteor—Flirt).

Junie Obo. By W. L. Dearborn, Dorchester, Mass., for black cocker spaniel dog, whelped April 28, 1887, by Perrin's Shady (Obo II.—Darkie) out of Judy Obo (Obo II.—Daisy Zulu).

Naso of Maine. By Chas. H. Newell, Portland, Me., for black and white pointer dog, whelped May 10, 1887, by Naso of Kippen (Naso II.—champion Maggie) out of Dela (Bang Bang—Zanetta).

Tuthana. By C. Henry Stouffer, Philadelphia, Pa., for lemon and white pointer bitch, whelped March 12, 1886, by Guess (Start—Maud) out of Viola (Sensation—Guido's Lilly).

Matinee. By J. H. Winslow, Philadelphia, Pa., for lemon and white pointer bitch, whelped March 12, 1886, by Guess (Start—Maud) out of Viola (Sensation—Guido's Lilly).

Donnell. By Dr. Geo. H. Bailey, Portland, Me., for liver and white pointer bitch, whelped May 10, 1887, by Naso of Kippen (Naso II.—champion Maggie) out of Dela (Bang Bang—Zanetta).

Dido. By Chas. H. Newell, Portland, Me., for black and white pointer bitch, whelped May 10, 1887, by Naso of Kippen (Naso II.—champion Maggie) out of Dela (Bang Bang—Zanetta).

Tomahawk and Lou-Belle. By D. S. Gregory, New York, for lemon and white pointer dog and bitch, whelped January 25, by Tammany out of Lucia.

Ballet Girl. By J. H. Winslow, Philadelphia, Pa., for liver-colored spaniel bitch, whelped October, 1886, by Black Prince (A.K.R. 62) out of Fairy (Charley—Queen).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Van—Mainspring. Geo. H. Bailey's (Portland, Me.) pointer bitch Van to Jos. T. Perkins's Mainspring (Mike—Romp), June 22.

Lulu—Mainspring. Mr. Gilmore's (Brooklyn, N. Y.) pointer bitch Lulu (Jerome—Swan) to Jos. T. Perkins's Mainspring (Mike—Romp), June 23.

Rosa—Mainspring. J. P. Cartwright's (Augusta, Ga.) pointer bitch Rosa (Boon—Rena) to J. T. Perkins's Mainspring (Mike—Romp), May 17.

Ferry—Mainspring. T. R. Rivers's (Bridgeport, Conn.) pointer bitch Ferry (Tammany—Erie) to J. T. Perkins's Mainspring (Mike—Romp), July 9.

Clapham's Duchess—Ashmont Sam. Maple Grove Kennels' (St. Louis, Mo.) mastiff bitch Clapham's Duchess (A.K.R. 4870) to their Ashmont Sam (Hero II.—Ashmont Lady), July 14.

Sal—Beppo III. G. W. Amory's (Boston, Mass.) pointer bitch Sal (Dick—Ruby) to Graphic Kennels' Beppo III. (Priam—Mealley), June 7.

White Pink—Young Royal Prince. John Forrest's (Randolph, Mass.) bull-terrier bitch White Pink (Young Royal Prince—Princess Louise) to J. W. Newman's Young Royal Prince (Young Royal—Scarlet II.), May 30.

Daisey Royal—Royal Diamond. J. B. Rockwell's (Springfield, Mass.) bull-terrier bitch Daisey Royal (Young Royal Prince—Princess Louise) to J. W. Newman's Royal Diamond (Hornet II.—Lulu), June 17 and 19.

Heather Lass—Argus II. A. H. Aldrich's (Melrose, Mass.) Gordon setter Heather Lass (Jock—Gipsey) to Geo. E. Browne's Argus II. (champion Argus—Beauty), July 6.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Ladybird. Chestnut Hill Kennels' (Philadelphia, Pa.) smooth-coated collie bitch Ladybird (Sheila—Lady), June, eight (four dogs), by Dr. James's Earl Percy; all black, tan and white.

Clover. Clifton Kennels' (Jersey City, N. J.) pointer bitch Clover (King Bow—Dot), July 14, twelve (six dogs), by Graphic Kennels' Graphic.

Phyllis. Harry D. Brown's (Waterbury, Vt.) cocker spaniel bitch Phyllis (Obo II.—Darkie), July 12, five (three dogs), by J. P. Willy's Black Pete (Obo, Jr.—Phousie).

BESSIE.—*Editor Forest and Stream:* Mr. H. W. Windram's clumber spaniel bitch Bessie had seven pups by Johnny, not two, as stated in "Kennel Notes." Kindly correct.—F. H. F. MERCER.

Judy Obo. Geo. E. Browne's (Dedham, Mass.) cocker spaniel bitch Judy Obo (Obo II.—Daisy Zulu), April 28, six (five dogs), by F. H. Perrins's Shady (Obo II.—Darkie).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Boot Black and Nigger Baby. Black pointer dog and bitch whelped Feb. 26, 1887, by Bronco out of Miss Nellie Y, by W. W. Tucker, Waskom, Texas, to J. H. Winslow, Philadelphia, Pa.

Junie Obo. Black cocker spaniel dog, whelped April 28, 1887, by Shady out of Judy Obo, by Geo. E. Browne, Dedham, Mass., to W. L. Dearborn, Dorchester, Mass.

Young Royal Princess. White bull-terrier bitch, whelped March 15, 1887, by Young Royal Prince out of Nellie Bly, by J. W. Newman, Boston, Mass., to Phil H. Wheeler, Columbus, O.

Sentinel. Fawn, black points, mastiff dog, whelped May 4, 1887, by Boss (A.K.R. 2218) out of Lillie (A.K.R. 2981), by F. B. Zimmer, Springfield, Mass., to John W. Reily, Harrisburg, Pa.

Punch. Cocker spaniel dog, color, age and pedigree not given, by H. C. Brensdon, Boston, Mass., to J. F. Neil, same place.

IMPORTATIONS.

Ladybird. Smooth-coated black and tan collie bitch, whelped Jan. 25, 1885 (Shila—Lady), by Chestnut Hill Kennels, Philadelphia, Pa., from Messrs. J. & W. H. Charles, Warwick, England.

DEATHS.

Prince. Gordon setter dog, whelped Dec. 10, 1886 (Lang—Maud), owned by C. T. Brownell, New Bedford, Mass, July 14, from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

SUBSCRIBER, Boston, Mass., should follow advice given C. G. G.

C. G. G.—Is it necessary to use any means of reducing the size of a bitch's udder after having suckled her pups? I wish to use her in the field. What preparation is the best and how should it be applied? Ans. Give 5 drops of tincture of belladonna three times daily and rub belladonna ointment into the udders each day.

W. H. J., Argentine, Mich.—A pointer pup, male, 3 mos. old, has a breech at the navel; it protudes about as large as a small walnut. Will it grow up with age or will it need an operation? The pup seems to be in good health at present. Ans. Reduce the rupture and place a pad of lint doubled four or six times over it. This can be held in place by a broad band of adhesive plaster, long enough to overlap. Change whenever it becomes loose. If it is kept up for a few months it will not be likely to return.

J. T. W., Waterbury.—My cocker bitch has been affected with mange for some time. Her hair is all coming out and it is all off on her feet, neck and about her head; there is one sore between the eyes, a little back, about the size of a half dollar, that is scabbed over and matterates, also a bad scab on neck and on leg. She is lively when out for a run, but sleepy when inside. She eats well: bowels quite loose; she smells bad; she is 16mos. old and has been kept on a farm. I began treatment this morning by washing with carbolic soap and giving 5 drops Fowler's solution of arsenic. Ans. Continue the arsenic, giving 5 drops morning and evening. Get the following:

℞ Ung. diachylon
Ung. zinc oxid..... ää ʒi
Mix. Sig. External application each day.

RANGE AND GALLERY.

BOSTON, July 16.—A large company of riflemen were at the range to-day to shoot in the regular matches and the individual Bullard match. The wind was not favorable and the scores were poor during the early part of the day. Next Wednesday is rifle day again and the regular matches will be open. The best scores are as follows:

Decimal Off-hand Match' 200yds.

SAN FRANCISCO, July 10.—The San Francisco Schuetzen Club held its regular monthly medal shoot at Shell Mound range to-day. There was an unusually large crowd of marksmen who took part in the sport, and considering that a high wind prevailed all the afternoon the scores were well up. Philo Jacoby captured the medal in the first class, having scored 392 points. The trophy for the best marksman in the second class was won by John Horstman by 353. Henry Tietgen won in the third class shoot by a score of 344. Jacoby having won the medal in the first class three consecutive times it becomes his personal property.

Five members of the Independent Rifles held a match shoot at Shell Mound in the afternoon. The shooting was at a five-ring target, 200yds. range:

Capt Schmalholz	4344434534—38	George Miller	3534444344—37
Dr Chaigneau	3434434454—37	J R Pahl	4445434445—40
Sergeant Gaetjen	3432334444—34		

CREEDMOOR, July 16.—The fifth marksman's badge match was shot to-day. The attendance, owing to the intense heat, was small, but the weather was favorable for shooting and the scores were good. Gen. C. F. Robbins was the executive officer, assisted by Major H. C. Brown. Following are the winners of the match:

	200yds.	500yds.	Tl.
G S Scott, Jr, Co A, 23d Reg	23	23	46
C W Thorn, Co F, 7th Reg	24	22	46

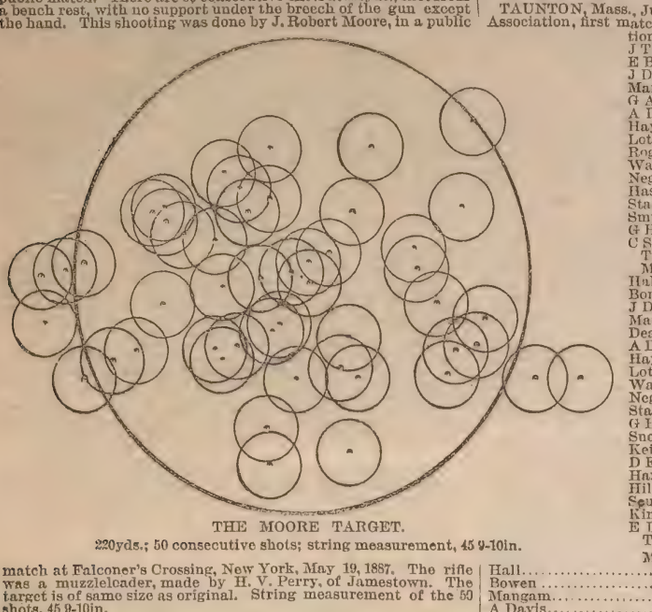
Merrill	5	8	5	5	10	9	5	3	6	7—63
E Brown	5	6	5	5	4	4	5	7	8	10—59



A new prize match was begun to-day, to run three months. Open to members only.

NEW ORLEANS, July 10.—The following is the result of the contest which took place to-day between the second teams of the Ecke vs. Arnoult, on the grounds of the latter. Distance 50yds., 2in. bullseyes, with .22-cal. rifle. After a spirited contest the Ecke team came out victorious. Possible points, 525; Ecke Team—C. C. Julier 285, O. E. Scott 269, E. H. McFall 282, J. Brewer 279, C. Heyl 256, L. Sporl 253; total 1,624. Arnoult Team—Schindler 268, P. Kilnair 286, F. Ahren 279, C. Ahren 274, M. Toefler 267, J. Smith 245; total 1,619.

WIMBLEDON, July 16.—In the shooting in the first stage for the Queen's prize at Wimbledon to-day, Dodds of the First Dumfries regiment and Gardiner of the First Cumberland regiment tied for the first prize. They subsequently shot off the tie, Gardiner winning the bronze medal by 14 points against 11 in three shots. The silver medal for the highest aggregate score in the second stage of the shooting for the Queen's prize was won by Hill of the Fifth Lanarkshire regiment.

MUZZLELOADERS AT THE SCORE.

THE diagram of target here given is pronounced by Maj. H. W. Merrill to be the finest ever made under like conditions in a public match. There are 50 consecutive shots at 220yds., shot from a bench rest, with no support under the breech of the gun except the hand. This shooting was done by J. Robert Moore, in a public

THE MOORE TARGET.

220yds.; 50 consecutive shots; string measurement, 45 9-10in.

match at Falconer's Crossing, New York, May 19, 1887. The rifle was a muzzleloader, made by H. V. Perry, of Jamestown. The target is of same size as original. String measurement of the 50 shots, 45 9-10in.

In this connection we give the detailed scores of the National Rifle Club meeting at Vernon, Vermont, May 25 and 26, 1887. The measurement of each string (10 shots, 40 rods) is given in inches, and eighths and sixteenths of an inch:

	1st.	2d.	3d.	4th.	5th.	Total.
Wm. Hayes, actual	15.3.1	17.6.1	16.4.0.	16.7.0	12.5.1—	79.2.1
Corrected	13 7.1	16.2.1	15.0.0	13.3.0	11.1.1—	71.6.1
J. R. Munroe, actual	20.5.0	20.7.0	18.2.1	19.4.1	22.7.0—	102.2.0
Corrected	17.5.0	17.7.0	15 2.1	16.4.1	19 7.0—	87.2.0
L. C. Cory	20.3.0	18.0.1	16.7.1	13.3.0	19.0.1—	85.0.1
L. Park	12.7.0	14.3.0	13.7.1	13.1.0	12.1.1—	66.4.0
Charles Henry	19.0.0	16.3.0	2 .2.0	15.1.1	16.3.1—	87.2.0
Daniel Cox	14.3.1	19.0.0	25.5 1	22.3.0	18.2.1—	100.4.1
H. W. Smith	14.0.0	9.4.0	13.1.0	14.3.0	14.1.1—	65.1.1
N. S. Brockway	7.0.7	10.6.0	8.5.0	12.3.1	13.6.1—	53.4.0
W. S. Lowe	12.3.0	11.0.1	8.6.1	6.6.1	8.7.0—	47.7.1

Mr. Lowe's score reduced to inches and decimals of an inch is as follows: 12.37, 11.06, 8.81, 6.81, and 8.89; total string, 47.95in.

William V. Lowe won the silver medal given for shortest string for 50-shot string, 47 15-16in. William Hayes used a Ballard-Schuetzen fitted with a band rifled by George Schaick, .33-cal. and lubricated bullet, and shot without cleaning. Shot from double rest; used peep and wind gauge sights; allowed 1¼in. per string. J. R. Munroe used a .38-cal. Ballard, No. 6½, peep and wind gauge sights; shot from shoulder, with muzzle rest only; allowed 3in. per string. H. W. Smith used a .38-cal. Ballard 1½lbs. rifle, telescopic sights, double rest. William V. Lowe shot a .33-cal. muzzleloader made by Horace Warner; telescopic sights and double rest. N. S. Brockway shot a .42-cal. of his own make. All the other guns were .38-cal. of N. S. Brockway's make, telescopic sights, double rest.

Editor Forest and Stream:

I see in your paper of the 14th inst. a letter from "Cap Lock," stating that he had a .38-45-190 Bullard rifle changed over to a .40-60-190. Will Mr. "Cap Lock" please inform us through your paper who the gunsmith is that did this job for him, and whether the improvement is a success in every particular? We have thought of having this done, but feared there was not a gunsmith in the country with sufficient skill to do this kind of job by hand and make a good gun in every respect. FLINT LOCK.

BRADFORD COUNTY RIFLE AND GUN CLUB.—For some time past our local riflemen and lovers of wing shooting have been agitating the formation of a county association. There are many experts in the county both with rifle and shotgun but because of lack of organization and opportunity they have had only an occasional chance to indulge their tastes in this direction or to try their skill. After consultation with some of the leading marksmen it was decided to effect an organization for the promotion and more general practice of this health-giving and fascinating sport. With this end in view about twenty-five representatives from Athens, Canton, Troy, LeRaysville and Towanda met in the office of John W. Mix, of this place, on Wednesday, the 20th ult. After considerable discussion it was decided to form an organization that would include shooting with both rifle and shotgun. There was some difference of opinion as to the practicability of such an organization—the principal objection being that the inclusion of the two kinds of shooting would operate against the successful practice of either. But there appearing to be quite a general interest among the sportsmen of the county in both trap-shooting and rifle practice it was deemed best to include all who could be interested in either kind of shooting. Membership fee $1, and the executive committee was instructed to solicit members and see that so far as was possible the co-operation of sportsmen throughout the county be secured. It is hoped that all who feel an interest in the matter will make it known at once by enrolling their names and giving such other encouragement and assistance as they can. It is desired that all parts of the county may be fully represented and to that end it is requested that all gun clubs and rifle teams already organized join the county organization also. It is hoped that the latter will include all the best gun men in the county as it is intended to select, after trial, one team from the riflemen and another from the trap shooters, to meet in friendly contest any team rash enough to accept their challenge. The officers are: President, John W. Mix, of Towanda; Secretary, A. C. Fanning, of Troy; Treasurer, L. P. Blackman, of LeRaysville. Executive Committee, LeRoy Coleman, LeRaysville; N. F. Walker, of Athens; J. M. Edson, of Towanda; C. E. Bullock, of Canton; and Dr. Gregory, of Troy.—*Towanda (Pa.) Reporter.*

DOVER, N. H., July 16.—The Cocheco Rifle Club shot off the Bullard rifle practice match No. 4 this afternoon. George H. Wentworth scored 402, Harry M. Wiggin 370, H. D. Horton 334, John D. McIntyre 309, O. B. Stevens, Jr. 289.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WASHINGTON, D. C., July 5.—Capital City Gun Club, match at American clays, 5 traps, shot under N. G. A. rules, club prizes:

Wagener	1111101101010111—12	Carter	1111100110101111—11
Cunningham	1111111111111111—15

Cunningham	1111111111—10	Mills	0011111000— 7

SECRETARY.

TRAP NAMES.—The New Orleans *Picayune* thinks that the reason some men who trap-shoot pigeons use false names at the traps is because they think trap-shooting cruel and do not wish to be known as taking part in it. The *Picayune* is mistaken.

TAUNTON, Mass., July 4.—Taunton Fish and Game Protective Association, first match at 7 blue rocks, 3 traps, 16yds. rise, National Gun Association rules, 3 prizes:

J T Hall	1111110—6
E Bowen	0011111—5
J Davis	1111101—6
Mangam	1000111—4
G A Deane	0101100—3
A Davis	0000011—2
Hayward	1010001—3
Lott	0010000—1
Rogers	0100001—2
Waterman	0101000—2
Negus	1111100—5
Haskins	0101001—3
Staples	1010011—4
Smith	1101001—5
G H Davis	0111000—3
C Snow	1101111—6

Ties divided.

Match at 7 blue rocks, 16yds. rise, 3 prizes:

Hall	0101001—3
Boner	1011001—4
J Davis	1011001—4
Mangam	1110001—4
Deane	0000001—1
A Davis	0110111—5
Hayward	0110010—3
Lott	0000100—2
Waterman	1110010—4
Negus	0111111—6
Staples	1001000—2
G H Davis	1111110—6
Snow	1111111—7
Keith	0110011—4
D Faber	1001001—3
Hardy	0001001—2
Hill	0000010—1
Scudder	0000101—2
King	0001010—2
E Leonard	1011011—5

Ties divided.

Match at 7 blue rocks:

Hall	1010111—5	G H Davis	1000111—4
Bowen	1011100—4	Snow	1110011—5
Mangam	0010101—3	Keith	0000011—2
A Davis	0101110—4	Scudder	1000011—3
Lott	0100110—3	Walker	1010100—3
Negus	0010111—4	E Leonard	1000101—3

On shoot off Negus and G. Davis divided second; Scudder won third.

Match at 7 bats, 3 Ligowsky clay pigeon traps:

Hall	1111111—7	E Bowen	1011011—5
Snow	1101111—6	Leonard	1100000—2
Smith	1001101—4	G H Davis	0111101—5
Hardy	0011011—4		

Match at 7 blue rock pigeons, 3 traps, 18yds. rise, three prizes: Mangam 2, Bowen 5, Fales 1, Leonard 5, Snow 5, J. Davis 0, Hall 5, Hayward 3, Scudder 5, Hardy 4, G. H. Davis 4, Smith 6, Walker 3. Tie for second won by Scudder.

Match at 5 pair blue rock pigeons, 15yds. rise, two prizes: Hall 7, Snow 8, Smith 4, Hardy 4, E. Bowen 6, E. Leonard 7, Scudder 7. Tie for second won by Leonard.

Match at 7 clay pigeons, Ligowsky clay-pigeon trap, 16yds. rise, three angles, three prizes: J. T. Hall 2, W. Rogers 2, A. Davis 2, Leonard 5, Hayward 3, Mangam 1, Hardy 3, C. Hill 6, E. Bowen 5, J. Davis 7, Scudder 4, Lott 4, Walker 3. Ties divided.

UNKNOWN GUN CLUB.—Regular monthly shoot at Dexter's Park, L. I. The shooting was good, only one barrel being allowed in the shoot for the club badge and money prizes, for which 18 members went to the traps. Sweepstakes:

H Knebel, Jr (23)	0101011—4	A Hass (23)	1011111—6
C Dettlefson (25)	1111110—6	W J Lee (23)	1100101—4
J Rathjen (24)	0111111—6	R Monsees (25)	0110111—5
C Gilman (23)	0111101—5	H Pope (24)	1101011—4
G Rankin (21)	1001111—5	H Vroome (24)	1111111—7
M Brown (25)	1111101—6	I Jones (25)	1001111—5
H Van Staden (23)	0111111—6	C Ring (21)	0011010—3
R Stillwell (22)	1010011—4	A Harnott (23)	1101011—5
J Boyle (21)	1110010—5	J Schroeder (25)	0111111—6

Ties for third prize: Gilman 0, Rankin 0, Boyle 2, Monsees 2, Harnott 1.

Sweepstakes, 25yds., 3 birds, ties: Dettlefson 5, Hass 2, Van Staden 0, Rathjen 3, Pope 4, Knebel, Jr. 1, Jones 1, Humphreys 2, Monsees 9, Brown 4. Referee and scorer, R. N. Stillwell.

SAN FRANCISCO, July 10.—The fourth medal shoot of the Golden Gate Gun Club took place to-day at McMahon's, or the "Cemetery" Station, in San Mateo county. Six members faced the traps—a poor showing for a club of two dozen members. The wind blew strong and the birds seemed hard to smash, and the scores were consequently small. In the first class Ashcroft, Lee and Munson broke 7 apiece. The tie was shot off at 5 pairs of doubles:

Ashcroft	0111110100000011—7	Munson	1110001101011000—7
Lee	0011100101010110—7	Schlueter	0000000001101001—3

Ties:

Ashcroft	11 11 01 11 10—8	Munson	11 10 10 10 10—6
Lee	00 01 01 01 01—4		

In the second class only two appeared, Foley and Louis, the latter of whom won the medal with a score far in advance of the "first class" shooters:

Foley	1000000101001— 5	Louis	0110101011111110—10

Lee carried off the honor and glory as well as the best part of the pool in a sweepstake at 10 Peoria blackbirds, in which 5 shooters contributed $2.50 each:

Ashcroft	0001100101—4	Lee	1110111110—8
Louis	0101101000—4	Munson	1111000110—6
Schlueter	0010111101—6		

On Saturday next the Lincoln Gun Club shoot clay birds at Alameda, and on the same day Kerrigan and Walsh shoot their return match for $100 a side at Birds Point, the latter event being a 50-bird.

SAN FRANCISCO, July 9.—The Eureka Gun Club met at Bird's Point to-day to compete for the club prizes, which go to the best three aggregate scores of the season. In view of this fact the ties were not shot off. The club percentage was a trifle under 73 per cent. The figure 2 signifies use of both barrels. The club score was as follows:

Black	112220010012— 8	Davis	012212021000— 7
Haskell	120002210112— 8	Schwerein	120121011111—10
Goodall	002201222022— 8	Kellogg	221220110222—10
Chapin	210001102011— 7	Sanborn	200211201011— 8
Mayhew	212120011121—10	Golcher	211111210121—11
Adams	220211221111—11		

BOSTON, July 13.—Shooting for the Macomber badge occurred at the Walnut Hill range to-day. Mr. H. C. Warner won the badge for the second time. In the merchandise match, Smith won in Class A, Snow, Nichols and Swift in Class B, Stanton in Class C, Warren in Class D, Hall and Jewell in Class G, Tuttle in Class H. Appended are the scores: Sweepstake Matches—1, five clay pigeons, Smith and Swift first; 2, five clay pigeons, Snow and Stanton first; 3, five Macomber birds, Smith and Stanton first; 4, three pairs black birds, double, Snow first; 5, three pairs bats, double, Smith and Snow first; 6, Stanton and Swift first; 7, ten clay pigeons, Smith first; 8, ten Macomber birds, Warren first; 9, five pairs Macomber birds, Warren first; 10, ten clay pigeons, Smith first; 11, five pairs bats, double, Swift and Tuttle first; 12, seven straightaway clay pigeons, Swift first. Merchandise match score, ten singles, three pairs—Smith, 10, 8—18; Snow, 9, 8—17; Nichols, 9, 8—17; Swift, 8, 9—17; Stanton, 9, 7—16; Warren, 7, 8—15; Hall, 7, 7—14; Jewett, 7, 7—14; Tuttle, 3, 9—12. Macomber badge medal, ten singles, five pairs—Warren, 10, 7—17; Swift, 9, 6 15; Nichols, 8, 6—14; Snow, 8, 6—14; Stanton, 7, 6—13; Smith, 9, 2—11; Eames, 4, 5—9; L. E. Nichols, 3, 5—8; Tuttle, 2, 3—5.

WILMINGTON, July 16.—The Wellington Gun Club held its regular shoot to-day, a good attendance being present to participate in the sport. Following are the first prize winners in the several events: 5 bluerocks, Metcher; 5 bluerocks, De Rochemont; 5 bluerocks, Snow; 5 bats, De Rochemont; 6 bats, Stanton; 6 clay-pigeons, straightaway, Stanton; 6 bluerocks, Snow and Richards; 6 bats, Sanborn and De Rochemont; 6 macombers, Sanborn; 6 clay-pigeons, Nichols; 5 bluerocks, De Rochemont, Nichols and Richards; 6 clay-pigeons, Nichols and Stanton; 6 macombers, Nichols and Brown; 6 bats, Sanborn; 5 bluerocks, Snow.

SINCE ladies have been accustomed to use Glenn's Sulphur Soap in their toilet their personal attractions have been multiplied, and it is seldom they are seen disfigured with blotches and pimples, or rough or coarse skins. Sold by all druggists. HILL'S HAIR AND WHISKER DYE, black and brown, 50 cents.—ADV.

FOR membership apply to the Secretary, W. M. Carter, Trenton, N. J. Required age, 18 years or over. Application to be accompanied with $3 and recommendation of an active member. Sec'y A. C. A. Central Div., E. W. Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y Northern Div., J. B. Collins, Peterboro. Sec'y W. C. A., J. O. Shiras, Cincinnati, O.

NEW YORK C. C. REGATTA, JULY 16.

THE postponed regatta of the N. Y. C. C. was held on July 16, off the club house, the result being a decided success, in spite of the lack of wind for the sailing races. In view of this contingency the former programme had been changed, giving more paddling races. The first of these, for Classes III. and IV. together, brought out the following starters:

Hermit	15 ×30	W. P. Stephens.
Psyche	14.6×28	C. K. Munroe.
Siren	15 ×28	R. B. Burchard.
Rattler (Pecowsic)	16 ×29	H. O. Bailey.
	15 ×30	C. L. Roush.

The course was half a mile, with one turn, Hermit winning this, her first race, by a length, with Psyche second.

The next race, for Class II., had three starters:

Black Maria	Decked Rob Roy—W. P. Stephens.
Lark	Decked Rob Roy—L. L. Coudert.
Blackbird	Open Canadian—W. A. Rogers.

Black Maria won by a good distance after a hard race.

In the standing paddling were: Sea Urchin, B. H. Nadal: Hermit, W. P. Stephens; Psyche, C. K. Munroe. Sea Urchin won with Hermit second.

Thirteen canoes started in the sailing race, seniors and novices together, the course being triangular, three rounds. The wind was very light and tide strong flood, and most of the boats had much difficulty in rounding the second mark out in the channel. Evangeline, Mr. H. C. Ward, Brooklyn C. C., won easily, the canoe being very well sailed and making the most of the very light wind. Tramp, C. J. Stevens, N. Y. C. C., came second, while Natchez, E. H. Platt, N. Y. C. C., won the novice prize.

The tandem paddling brought out only two crews:

Minx	Brokaw and Blake—B. C. C.
Hermit	Stephens and Coudert—N. Y. C. C.

Minx led over the course, winning by two lengths.

The hand paddling race was won by C. H. Eagle, and the upset race by Com. Munroe.

The great feature of the day was the burlesque race, in which six clubs were represented. The Mohican C. C. entered Chief Nosebig, in blanket and feathers; the Sing Sing C. C. sent down on leave Mr. J. L. Bird in the Black Maria and a striped suit, while the N. Y. C. C. of Sailors Snug Harbor, Staten Island, was represented by W. Bowline, in oil skins, with a patch over his eye and a crutch. From the City of Churches came Rev. Gowanus Goggles, while the Royal Salvation Navy C. C. entered Lieut. Jubilee Jones, in red uniform and fatigue cap. The Ideal C. A. was out in full force in a large boat rowed by a waterman, a French cook at work over a stove in the stern, while the association reclined under an umbrella in the bows. The motley procession provoked much laughter from the spectators as it swung into view, and the race was very exciting. The Rev. Goggles won, though capsizing at the finish, and the prize was awarded to the B. C. C.

The race for sneakboxes and cruisers was not started for lack of wind. The prizes were handsome silk flags. In the evening the canoeists, with their guests from the Brooklyn C. C. dined at Tompkinsville, the meeting terminating at 11 P. M. with songs and speeches.

A sailing race for a cup to cost $25 to become the property of the winner, will be held on Sept. 24, and two paddling races, for Classes III. and IV. will probably take place at the same time. The races will be open to members of all recognized canoe clubs.

A NATIONAL A. C. A.

Editor Forest and Stream:

In FOREST AND STREAM of July 14, "W. C. A., No. 76" complains that the Western Canoe Association was "totally ignored" in a little item which I furnished for publication in a previous issue. I do not see how such an interpretation can be put upon the item in question. It simply treated, firstly, of a gentleman who was not wholly pleased with the location of the A. C. A. meet; and secondly, suggested incidentally that an impetus to the growth of canoeing might result from a meeting of the A. C. A. being held in the West. I do not understand what connection the W. C. A. could have had with "firstly"; and as to the "secondly," "No. 76" himself indorses the suggestion in his criticism, and trusts "that the A. C. A. 1888 meet will be held under such supervision as far West as Ohio, any way." Will "No. 76" please state where the "ignore" part comes in? There was no intention to ignore the W. C. A.—an organization which has done inestimable good in the cause for canoeing and canoes in the West, and one that, whether it remains an independent body or becomes a division of the A. C. A., is destined to be the principal factor in canoeing matters in this section of America for many years to come. I am personally acquainted with a number of its members, and know that better men never grasped a paddle. But, to state it mildly, no injury could result to the W. C. A. or to canoeing generally, for the Eastern men to materially increase their interest in the development of the sport in the West. It is not probable that there is any jealousy or ill feeling between the A. C. A. and the W. C. A. There certainly should be none. United or separate the two bodies ought to work together harmoniously for the good of the manliest sport in existence. Having no authority to advise as to what course should be taken in the matter, yet, as one interested in the healthy growth of canoeing, I earnestly hope that the two organizations may become united under one burgee.

"No. 76" intimates that, Rip Van Winkle-like, I have been asleep and dreaming. No, I have not been asleep. I have carefully watched the steady growth of the W. C. A., and have noted its achievements with as much pride as though I had participated therein. But as for dreaming, that is another thing. I look up to the wall of my room whereon there hangs a paddle, old and seamed and battered and broken. Few would consider it a beautiful paddle; but as I gaze upon it my memory runs back to certain dreams of the past few years. I see along the thousands of miles we two have traveled together hand in hand, this paddle and I; where it has guided my course among the rocks of fierce rapids, through the lily pads of brightly-flashing lakes, and into quiet, shadowed bays. The cleansed tablet of my memory brings out glorious dreams of Lake George, the St. Lawrence, the rivers and lakes of Canada and many water ways of our Western and Southern States.

Yes, "No. 76," my hand shaped itself to the paddle, and my canoeing dreams began long before the birth of any canoe organization in America; and although my glass tells me a story of gray hair and wrinkled face, yet at each returning summer time I go out to seek and find the lost fountain of youth on the dancing waves and under the forest trees. To-day by the side of the old paddle there hangs another, bright and new in its coat of varnish, which I propose to baptize in a dream this summer among the Adirondacks. May your paddling dreams be as pleasant as mine have been. ORANGE FRAZER.

WILMINGTON, O., July 16.

W. C. A. MEET.—Messrs. W. A. Leys and D. B. Jaques, Toronto C. C., will be at Ballast Island with their canoes Dawn and Dotterel.

LAKE ST. LOUIS C. C.

JULY 1 being the day in Canada on which the people celebrate what is called "Dominion Day," the Lake St. Louis C. C. decided to have a cruise that would occupy the entire day. So at half past eight the following members left on the steamer Prince of Wales, their destination being St Ann's, some 18 miles above Lachine on the Ottawa River:

S. P. Howard,	Ada.	E. B. Busteed	Mayflower.
S. White		W. J. White	
T. Stewart	Water Lily.	Dr. Rattan	Atlantic.
C. S. Shaw		Dr. Johnson	
F. Fairbank	Grace.	T. Doran	Rapid.
T. Moffat		T. B. Shearwood	
A. E. Nash	Ardie.	P. H. Levin	Netta.
T. K. Thomson		T. Hilditch	
H. E. Gunn	Baden-Powell.	Harry Shaw	Wanderer.
W. Shackell		B. McDould	
Robin Adair	Dr. Neidé.	W. Brock	Stephens.
Dr. Hutchison		A. S. Grasset	
Fred. Stewart	Vaux.	Harry Stewart	Coquette.
W. Woods		B. Thessecrault	
		W. Robertson	Maud.
		Geo. Auldjo	

We managed after getting away from the wharf to monopolize the hurricane deck, and to the enjoyment, I fancy, of the numerous passengers, the boys started some songs with good choruses. Getting a little weary and feeling the heat of the sun we all came down to the cabin, and taking possession of the piano proceeded to give the passengers an imitation of a canoe club afloat. One of the best singers in the club, Mr. Phil Levin, favored us with two songs.

On our arrival at St. Ann's and having portaged the lock we found a photographer ready to take us, and having accommodated this gentleman, we started our actual cruise, which was to Vaudreuil, then across Lake St. Louis to Beauharnois, and from there down the lake to Lachine, about thirty miles in all.

At Beauharnois we met a party from Lachine in a steam launch, which had come up for the day, and having spread our wet clothes out to dry we all, to the number of 43, repaired to Kelly's Hotel for dinner. Any other day would probably have been better to strike this hotel, as on this particular occasion a Sunday school was holding its annual picnic, and most of the people had patronized Kelly's for dinner, and we had to come in for a scanty repast.

From here down we got a fair wind, and taking advantage of this those who had sails dispensed with paddling and sailed home. We greatly missed our commodore, W. H. Binnell, especially when starting out from St. Ann's, one of our members taking it upon himself to lead the party, and not knowing the route, took the boys two or three miles out of their course, our commodore, who knows every inch of the river, is a very welcome leader. I would suggest to members of other clubs that when starting out on a cruise they look to see who are going with them, and not take out greenhorns on an all day cruise, as it is not only unpleasant for the older members to be kept waiting, but it is too much to ask them to "hold up" every few miles to wait for stragglers.

The Lake Saint Louis annual regatta takes place at Lachine on Aug. 13, the programme of which will appear next week.

MARION L.

NORTHERN DIVISION, A. C. A.—The races at the Stony Lake meet will be on Aug. 6 to 9. W. G. McKendrick will sail for England on July 20, so has resigned from the regatta committee, and Vice-Com. Rogers has appointed J. N. McKendrick, Ubique C. C., of Galt, in his place. A large meet is expected.

PASSAIC MEET.—Two canoeists from New York were present at the late Passaic meet, Messrs. O. F. Coe and C. J. Parkman, of the Hudson River Boat Club, who paddled and sailed from 135th street to Dundee Lake and back. Mr. Coe did not upset in the consolation race, as incorrectly reported last week.

NEW YORK C. C. FALL REGATTA.—The New York C. C. will offer a $25 cup for a sailing race, open to all members of canoe clubs, to be sailed on Sept. 24 off Staten Island. There will probably be a paddling race for 30in. and one for 28in. decked canoes, also open to all.

A. C. A. MEMBERSHIP.—Trenton, N. J., July 18.—*Editor Forest and Stream:* Chas. C. Kritzer, Newaygo, Mich.; J. A. MacMillian, Lindsay, Can.; G. Lyle Kingsley, Rome, N. Y.; Chas. Cooke, Paterson, N. J.; P. W. Stuckland and Giles Store, Lakefield, Conn., have applied for membership in the A. C. A.—WM. M. CARTER, Sec.

"COMPROMISE SLOOPS" (SO-CALLED).

Editor Forest and Stream:

Possibly the fact that you deem it necessary to comment so freely, not to say facetiously, on my brief remarks printed in your issue of last week should be by me considered a compliment. Be this as it may, will you permit me to add that what you are pleased to term "Mr. Clapham's theories," as to the non-"hanging on" qualities of cutters without keels—namely, Genesta and Galatea—are not theories at all.

Any intelligent man who used his eyes while watching the Puritan-Genesta and Mayflower-Galatea races must have plainly seen that on several occasions when the cutters were sailing in the wake of the sloops the former pointed nearer the wind than the latter, yet at the end of the tack the sloop would "fetch" to windward of the cutter. If this did not show that the cutter was making leeway perhaps you can inform us what was the matter, and no theories about it.

For seven years we have been persistently told that such narrow and deep boats as the Genesta and Galatea must beat beamy boats of comparatively light displacement and carrying a centerboard when turning to windward in a breeze and a sea. That apple cart has now been effectively upset by Shadow, Puritan, Mayflower and Titania, all of them being sloops of practically the same type. The FOREST AND STREAM has recently admitted this to be the fact, but at the same time "theorized" to the extent of saying that some almost impossible combination of depth, narrowness and dead weight would, if produced, beat the "Burgess boats."

During this seven-year sloop-cutter controversy I have pinned my faith to the Shadow type of boat.

The success of Puritan and Mayflower is due, primarily, to John B. Herreshoff, who, sixteen or seventeen years ago, designed and built little Shadow; for all that is best in the two large sloops comes through introducing and fining down the lines of the small one.

It is a pretty time now to tell us that the two white sloops represent a new and compromise model of great depth and displacement, when for sixteen years we have had a deep sloop, relatively to her size, winning races each successive season.

Call the Scotch Thistle a compromise keel sloop and you will hit the mark, but please in any event do simple justice to the Shadow type of sloop. It is quite true that Puritan and Mayflower carry lead under them; but in view of the fact that some of us, thinking ourselves the wisest, have made great mistakes, may it not be quite possible that a carefully enlarged Shadow, carrying all her weight inside, where it belongs, would beat both of her big sisters?

Now, Mr. Editor, here's a chance for another lecture on theories, but please cast no sarcastic reflections on that good invention, the weather grip. THOMAS CLAPHAM.

ROSLYN, L. I., July 1.

[We have not denied that in light weather neither Genesta nor Galatea has held to windward with the Burgess boats, the two former being decidedly lacking to windward at low speeds, though as the speed increased this disadvantage disappeared in proportion. The performance of two boats, however, in the face of much evidence on the other side, is no ground on which to base a general condemnation of all cutters. In all the others, from Madge to Bedouin, no such lack of weatherly power is seen; they can go to windward with the centerboards of their class, and it is only reasonable to suppose that the difference in the two large ones is due to some defect in them, rather than that it proves the entire type to be wrong. Clara, Oriva, Bedouin and Madge represent no "impossible combination," and it is certain that in the case of all but Clara, a boat of the same class and type built to-day would have many advantages in build and ballast over these, the newest of which is five years old, during which time many changes have been made. There are many others now besides the correspondent who are willing to sweep by Shadow, but before they can do this they must explain why, if they have believed so strongly in her, they have so persistently denied the value of depth. If the writings of Mr. Clapham are to be taken as evidence, it would seem that he has pinned his faith less on the "Shadow" than on the "shallow" type for many years. We have been over this same ground before with him, and have shown that Shadow is a deeper boat by far than her contemporaries, and also that she was far in advance of the boats of her day, so much so that she cannot be said to represent the ideas generally accepted and acted upon in 1871. In the FOREST AND STREAM of Oct. 14, 1886, appeared a letter from Mr. Clapham making the same claim, that Mayflower and Puritan were closely related to the old sloops, and giving some figures. We went into the question thoroughly at the time, and showed by many instances the incorrect nature of the claim; and it would profit little to repeat what we then said, to which Mr. Clapham made no reply at the time. No one disputes now the skill of the Herreshoffs, but for many years after Shadow was built no one cared to follow them in the matter of depth. No doubt but that Shadow of late years has exercised an influence on design in the East, but for one feature in which the new Burgess boats resemble her there are a dozen in which they differ radically. We have already compared her with the new Burgess cutter, Pappoose, and unfortunately there is nothing else in her class of modern build with which to compare her. Going to the Puritan class, the latest exponent of the new type, Voluuteer, an improved Mayflower as Mayflower was an improved Puritan, has a ratio of length to beam of 3.7, Shadow's ratio being 2.36. The ratio of draft to beam is 43 per cent. in Volunteer compared with 37 per cent. in Shadow, but this does not show the full difference, as Shadow's draft is largely at heel of keel, while Volunteer's represents actual depth of body amidships. One has all ballast high up, the other at the lowest possible point; Shadow has the sheer, counter and entire outline of the old sloops, while in these particulars the new boats are copies of the latters; Shadow is and has always been a sloop in rig, while the others are cutter in all but a laced mainsail. A Shadow properly enlarged to the length of Volunteer would make a fast boat beyond doubt, but no one to-day would put anything but a cutter rig over such a hull, and it is reasonably certain that with the same ballast plan she could win but occasional races from the leaden-keeled compromises. The subordinate place that New York holds to-day is mainly due to the position she has taken against low ballast; and some day, when they are even more hopelessly astern of Boston than at present, her yachtsmen will realize the truth of this "theory" that the FOREST AND STREAM has so long upheld. We do not wish to cast reflections on Mr. Clapham's latest opinion, as far as we can judge it is an admirable device for sailing boats and canoes, but if he will persistently tread on our pet keel, he had better rig out another guy or two, or we may be tempted to run it down.]

THE JUBILEE RACE—GENESTA'S LOG.

THE following are abstracts from the log of Genesta in her late race around the British Isles. The weather was light throughout the trip and there were no special incidents:

June 14—Weather fine and hot; light breezes east by south; started at noon and passed Sunk light vessel at 7:10 P. M. At 11 P. M. the wind died out and fog came up. Weather cleared next morning and at noon the log showed 80 miles from Sunk light vessel; distance covered in 24 hours, 118 knots.

June 15—Weather fine and clear; Genesta running with spinaker set; glass began to fall at 7 o'clock P. M. On following morning wind shifted to south by east; jibed and set spinaker on starboard side; distance, 24 hours, 100 knots.

June 16—Vessel still running with spinaker. Moderate breezes, which dropped away at night; distance, 24 hours, 130 miles.

June 17—Wind north, light and variable from east by south, south by west. Sighted Buchan Ness light on the port bow at 10:45 P. M., four miles away. Next morning at 9 o'clock passed Caithness. Wind light during most of day; 24 hours' run, 118 knots.

June 18—Weather fine and hot. At 12:30 took nice breeze from northeast and sighted Noss Head at 2 P. M. At 6 o'clock A. M. next day Cape Wrath bore seven miles away. Spinaker was set on port side and vessel run eight knots an hour; 24 hours' run, 140 knots.

June 19—Weather fine and clear; wind strong northeast. Run down to North and Little Minch. Wind freshened at 4 o'clock P. M., when spinaker and topsail were taken in, and set balloon foresail on the spinaker boom. At 6 o'clock P. M., off Mt. Hecla, wind and sea increasing so much that we hauled down one reef and stowed our balloon foresail. At 10:45 P. M., abreast of Barra lighthouse. The wind moderated early next morning, shook out reef and set jib-headed topsail. The wind backed to east by north at noon, when the spinaker was set; 24 hours' run, 204 knots.

June 20—Weather fine and clear. Wind moderating; swell setting in from north. Nearly ran over a dead whale. At 9 o'clock P. M., having logged 170 miles from Barra, we hauled up to southwest by south. At 11:30 P. M., abreast of Black Rock light, distance four miles. At 4 o'clock A. M. off Slyne Head, Galway. The wind was squally, but it veered to southeast and dropped away. Twenty-four hours' run, 125 knots.

June 21—Weather very fine and hot; wind dropped away to a calm, with a swell from the southwest. By 9 o'clock P. M. drifted down off Teraght lighthouse. Light air during most of the 24 hours. Distance run, 48 knots.

June 22—Weather fine and hot. Swell from southwest, light airs from northwest, which dropped away to a flat calm. At 5 o'clock P. M. were between Calf Rock and Dursey Head, Bantry Bay. We altered our course a little from Mizzen Head, where we took a light easterly breeze. Twenty-four hours' run, 140 knots.

June 23—Weather fine and clear, fresh breeze. At 9:30 P. M. took nice breeze from east-southeast, and saw Bishop's Rock Scilly, at midnight. Wind freshening; beat up Seven Stories lightship and Scilly. Wind still freshening, stood into Mount's Bay, Penzance, and under close-reefed main and foresail beat up around the Lizard in a moderate gale. Wind east, heavy sea. Twenty-four hours' run, 103 knots.

June 24—Rounded the Lizard at 12:30. Signaled our name to Lloyds and received back answer "First." Off the Marrack's buoy the wind fell light and we shook out a reef. At 9 o'clock P. M. we were under a whole mainsail and No. 2 jib. Beat all night under the shore, and next morning were off Dartmouth. At noon were off Exmouth, with wind dropping, Twenty-four hours' run, 100 knots.

June 25—Weather misty and wind dropping. At 9:45 P. M. saw Portland Bill lightship. Drifted around Bill lightship; took a breeze from the southeast and stood up to Anvil Point and crossed toward the Shingles; stood out on the port tack and then to St. Catherine's Point, and were abreast of it at 9 o'clock A. M. Signaled "all well" to Lloyd's. From here we worked up to Owers light vessel, which was reached at noon. Twenty-four hours' run, 110 knots.

June 26—Fresh breeze and hazy weather. Beat up under the shore and were off Beachy Head at 7:30 P. M., which we signaled. At 2:30 A. M., off Dungeness Point and crossed the line between Dover pier and the North Foreland high lightship at 5:15:30 A. M. Twenty-four hours' run, 86 knots. Following is the official score of the running:

Time.	Place.	Knots.
June 15, noon	Off Cromer	118
June 16, noon	Off Scarborough	100
June 17, noon	Off Frith of Forth	130
June 18, noon	Off Frith of Moray	118
June 19, noon	Off Stornoway	140
June 20, noon	Off Foreland	202
June 21, noon	Shannon	195
June 22, noon	Skelligs	48
June 23, noon	Between Scilly and Fastnet	140
June 24, noon	Kynance (by Lizard)	103
June 25, noon	Exmouth	100
June 26, noon	Owers	110
June 27, noon	Dover	86
Total		1580

A NEW YACHT FOR DETROIT.—The yacht built by the Detroit Drydock Co. for the City of the Straits Y. C., of Detroit, from designs by Mr. E. B. Wendell, was launched on July 2, and will be ready for the Interlake Y. R. A. regatta at Put-in-Bay. She is a compromise boat, 48ft. 9in. over all, 34ft. 11in. l.w.l., 15ft. 2in. beam, 5ft. draft, with 5 tons of lead in keel. She is cutter rigged, mast, deck to hounds, 40ft.; topmast, fid to sheave, 28ft.; bowsprit 24ft., boom 41ft., gaff 26ft. Area of mainsail 1,278sq.ft., jib 406ft., staysail 254ft.; total, 1,938sq.ft. She is unfortunately handicapped by the very awkward and inappropriate name of City of the Straits.

EASTERN Y. C. CRUISE.—On July 13 the fleet arrived at Bar Harbor. The accident to Gitana's mainsail was caused by a cigar thrown into it carelessly, burning a large hole.

HALIFAX JUBILEE REGATTA.

THE yachtsmen of Passamaquoddy Bay have agreed to give up their proposed regatta, the R. N. S. Y. S. promising to assist them next year in return, in organizing a regatta at Passamaquoddy Bay. The following correspondence has passed between Mr. Sumichrast and some New York and Boston gentlemen:

NEW YORK, July 4, 1887.

F. C. Sumichrast, Esq., Representing the Royal Nova Scotia Yacht Squadron, Sturtevant House, New York:

DEAR SIR—On behalf of citizens of Boston and New York who desire to mark their appreciation of the courtesy of the citizens of Halifax toward American yachtsmen, we offer a cup by Tiffany & Co., to be sailed for by yachts belonging to the Royal Nova Scotia Yacht Squadron during the regatta at Halifax in connection with the jubilee celebration. The names of the subscribers will be forwarded to you with the cup. We are yours sincerely, George Vm. Curtis, Wm. Astor, Oliver Wendell Holmes, Allen Thorndike Rice, Erastus Wiman, Chauncey M. Depew, Chas. F. Chickering, Norman L. Monro, James Russell Lowell, Wm. Butler Duncan, R. B. Forbes, Roderick W. Cameron, Wm. P. Douglas, Daniel Appleton, John P. Kennedy, H. M. Flagler, Committee.

STURTEVANT HOUSE, New York, July 7, 1887.

George Wm. Curtis, Esq., and others:

DEAR SIRS—I have the pleasure to acknowledge receipt of your letter of July 4 informing me, as the representative of the Royal Nova Scotia Yacht Squadron, that you offer a cup to be sailed for at Halifax by the yachts of our squadron on the occasion of the Jubilee Regatta there next month. It gives me sincere gratification to accept on behalf of the squadron this very handsome gift, which will, I need not assure, be highly prized by the citizens of Halifax in general as well as by the members of our squadron, as more especially interested. The competition for this cup will be not the least attractive feature of the forthcoming regatta. Your valued gift will, I hope, be sailed for in the presence of a large fleet of American yachts.

I beg you will convey to the subscribers to the cup the cordial thanks of the Royal Nova Scotia Yacht Squadron for the honor you have done them. I remain, yours sincerely,

F. C. SUMICHRAST,
Representing R. N. S. Y. S.

The course for this cup will be 21 miles, that for the leading races being 41 miles, from off Green Bank, Point Pleasant Park, to inner automatic buoy, thence around a triangle of 9-mile sides, and back to start. The R. N. S. Y. S. at its last meeting passed a vote of thanks to the yachtsmen of New York and Boston who had aided Mr. Sumichrast on his mission.

The following notice has been sent out on behalf of the Royal Nova Scotia Y. C.:

The Jubilee regatta at Halifax, N. S., will take place August 16 and 17 next. The dates have been settled after consultation with the leading yacht clubs in New York and Boston, and appear most suitable to the majority of yacht owners. The races are open to all American yachts, and entries, for which there will be no fee, may be made by mail or telegraph, with the Secretary R. N. S. Y. S., Halifax, Nova Scotia. Name of yacht, rig, length on load waterline, name of owner and of club, if any, should be given. The Eastern Y. C. having kindly agreed to sail their regatta at Marblehead immediately after the Goelet Cup races at Newport, yachts will be able to proceed from Halifax in ample time for the regatta and festivities there. On behalf of the R. N. S. Y. S. I express the hope that American yachts will visit our waters on this occasion, when they may depend on receiving a very warm welcome.—F. C. SUMICHRAST (Rep. R. N. S. Y. S.).

CAPSIZED CENTERBOARDS.

ON Saturday last a very severe squall broke over New York, a gale from northwest, with rain and hail, lasting about an hour. Again on Sunday, at noon, there was a second storm of almost equal violence, with a third and lighter one at 10 P. M. In these three many yachts and boats were capsized and a number of persons thrown overboard, but no correct estimate can be had. The proportions of drownings to capsizes are smaller than usual, as the weather was so warm that persons were lightly dressed and could well stand a few hours' exposure in warm water, while there were many boats out to the rescue as soon as the height of the storm was over. The conditions were very different from the early spring and the fall, when persons heavily dressed are thrown into ice-cold water that soon chills and numbs them. The squall of Saturday struck the fleet of the K. Y. C., nearly capsizing the Truant, but she sailed through it, though partly filled with water.

Among other capsizes on Sunday was that of a yacht with five men near Staten Island, the sloop Angler, with thirteen on board, all saved, one catboat near Robbins Reef, a yacht off Manhattan Beach, and a catboat near Barren Island. The crew of the latter, two men and a boy, were rescued by Mr. Hatch, of the Windward Club. Off Norton's Point the open boat Marion capsized, her crew of three being picked up by a rowboat. The catboat Ethel was capsized off Rockaway Inlet, her crew of four, with a dog, hanging to the bottom until rescued. Another party of six, three of them women, which started from Jersey City in a catboat, was rescued after the boat capsized by a young girl and a man who put from shore. A pilot who came up the Bay reported three capsized yachts outside the Narrows. In Jamaica Bay a boy was drowned from a capsized catboat, two men who were with him being rescued, while near Neptune station another capsize threw two men and two ladies into the water, but they were rescued. The steam yacht Reva blew ashore at Bay Ridge but came off safely. A seaman from the sloop Fanny was in the gig stowing an awning when the boat broke loose and was driven a long distance before help arrived and towed her back. On Saturday, at Rockland, Me., Frank Pollard was drowned by the capsizing of a centerboard boat, his companion saving himself by swimming.

A NEW HERRESHOFF STEAMER.

THE shoal draft steam yacht, Now Then, built by the Herreshoff Mfg. Co. for N. L. Munro, former owner of the Norma and the Henrietta, arrived in New York on July 12 from Bristol, making the remarkable run of 130 nautical miles in 7h. 4m. The yacht is entirely new and this run was a trial trip. The course of the American Y. C., between New London and Larchmont, was run in 4h. 9m. The full times of the run are:

Newport	11:22	A. M.	Stratford Shoal	4:02	P. M.
Point Judith	11:55	A. M.	Eaton's Neck	4:47	P. M.
Watch Hill	12:56	A. M.	Larchmont	5:36½	P. M.
New London	1:27½	P. M.	New York, 24th St.	6:26	P. M.
New Haven	3:24	P. M.			

On July 13 the new boat made her first trip to the Shrewsbury River, where her owner resides in summer, beating the steamer St. Johns by several miles.

The Now Then is built with steamed oak frames 1½in. square, spaced 14in. and double skin of wood, the inner being of ⅝in. white pine and the outer of ¼in. selected yellow pine, with galvanized steel fastenings. The planking in each layer runs fore and aft, the two skins breaking joints, while the deck, of mahogany, is laid in a similar manner. The hull is 85ft. over all, 81ft. l.w.l., 10ft. beam and draws 30in. at lowest point of keel, with an extreme draft of 38in. under shoe. The least freeboard is 3ft. 6in. She has a long, clean bow, but aft the hull widens above water into a flat oval overhang, the object being to prevent squatting. The buttock lines are very easy, giving a good delivery of water to the screw, which is placed beneath the overhang. The triple expansion engine has cylinders 7⅜, 12 and 19in. × 10½in., and the coil boiler has 25ft. of grate surface. The screw has four blades 36in. diameter and the shaft is of 3¼in. steel. Mr. Munro offers to race any steam yacht in America with a record, over the A.Y.C. course, giving the competing yacht a start of ten miles.

VOLUNTEER.

OWING to delay in the iron work for boom and gaff the Volunteer will not be ready for sea before to-day. The joiner work, all white pine, is about completed below, and skylight and hatches are finished. The mainsail will have an extra cloth added, as time is too short to stretch it fully before the N. Y. cruise. The balloon jibtopsail is of linen and the spinaker of cotton. The blocks are of special design, the peak halliard blocks on the gaff being pear-shaped, with a roller in place of the usual hook and shackle on the span. Each of the three gaff blocks weigh 15lbs. less than Puritan's and 12lbs. less than Mayflower's. The peak halliards reeve through one double and one single on masthead, while the throat halliards have a four-sheave block on masthead and three-sheave on gaff. All will be of white ash, kilndried. The bowsprit can be run in about 8ft. The report is current that the width across the stern is less than in the original plans and also that the rail height is different.

PLEON Y. C.—The second regatta of the Pleon Y. C., of Marblehead, was sailed on July 13 in a light south wind. Lady May won in first class and Monarch in second.

LAKE ONTARIO.

BELLEVILLE, July 18.—Never, during the past thirteen years have yachting matters been so dull on the Bay of Quinte; but despite the apparent dullness on the surface there is a good deal of agitation beneath, as future developments will show. The fact is that the advent of the Boston compromise Merle, at Oswego, and the English cutter Cyprus, at Toronto, and their prospective appearances in the association's round of regattas has set the owners of the second class flyers to thinking how to beat these new importations. Cyprus does not excite much anxiety, but the most profound respect is held for Merle, which, at the recent rendezvous at McDonald's Grove, was greatly admired in all respects by experts. The result will be a thorough overhauling of Iolanthe and Laura, of Kingston, and the adoption of such improvements in hull, rig and ballast as experience or ingenuity can suggest. The old Surprise, of Trenton, is also being rebuilt and improved and will take a prominent part, it is expected, in the later races of the series. The new sloop Wanderer is an unknown quantity. It is thus apparent that the second class will this year be made up of the most brilliant performers that have ever answered to the gun on fresh water.

In Class A, Atlanta, with hull properly prepared and a new suit of canvas, will make a great effort to regain the laurels of which Norah deprived of her here in a fine sailing breeze and smooth water last year; while the latter, with improvements too numerous to mention, including lead keel, lengthened overhang, improved bow and new mast and gaff, will be found a hard nut to crack in moderate winds. She is now on a cruise around Lake Ontario with her owner, Mr. John Bell, Q. C., wife and family, and his son Mr. Robert J. Bell and wife on board. The big compromise schooner Oriole and the cutter Aileen have also shown great speed this season.

In the first class the sloop Cygnet and cutter Verve, of Toronto, have shown a considerable improvement on last year's forms. The former has been lengthened 6ft., and the latter has donned a new suit from Lapthorn's famous loft. White Wings, of Trenton, has been put in racing condition, and what with Garfield of Kingston, Ethel of Rochester and others not as yet known to fame, this will be a magnificent class, among which it will be no easy matter to pick the winner.

The races are close at hand, but so far none of the clubs have issued their programmes. Our local club will meet at an early day, although Belleville is last on the list, and of their doings I will keep you advised. PORT TACK.

ATLANTIC Y. C. CRUISE.

THE fleet of the A. Y. C. was at the rendezvous off New Rochelle on Friday evening, at least as many as could get there, for a number of yachts lay becalmed at a distance, and their crews were out of reach of the dinner and reception prepared by the N. R. Y. C. in their honor. Some came in during the night, and at 9:30 Saturday the fleet attempted to get under way, but there was no wind. All day they drifted with light airs only, the squalls that visited New York passing over the fleet. It was nearly 9 P. M. before the fleet anchored off the George Hotel at Black Rock, where they were invited to a hop which filled the rest of the evening. On Sunday the yachts lay at anchor, service being held on board the Gevalia, schr., by the Rev. H. H. Thomas, chaplain of the club.

The programme for Monday was to race to New London, but the wind was so light at the start that Morris Cove, New Haven, was decided on instead. After a slow run in light airs the fleet arrived there in the afternoon and anchored for the night. On Tuesday, a start was made under similar conditions for New London, the fleet arriving late in the evening. On Wednesday, a race will be sailed from New London to Shelter Island, the fleet racing in classes. The runs thus far have been timed, but owing to the weather the results are valueless as tests.

KNICKERBOCKER Y. C., JULY 16.

FOLLOWING up the idea of class races through the season the Knickerbocker Y. C. held a race for open boats on July 16, the starters being: Class A—open sloops, 27ft. and over—A. Doelger's Adelaide and F. E. Barnes's Zena. Class B—sloops under 27ft.—Christie Sturz's Duster and T. R. Smith's Rosetta A.; Class C—cats 23ft. and over—Geo. Green's Adele, Com. Rosenquest's Mayotta and A. Kerker's Truant; Class D—cats under 23ft.—C. B. Thompson's Bubble and C. W. Nolze's Ida K. The course was from the clubhouse around Fort Schuyler buoy, 10 miles; allowance 1m. per foot. The wind was light southwest and tide flood at the start. There was a pretty race out to the mark which was timed thus:

Truant	4 13 24	Adelaide	4 23 04
Zena	4 14 23	Rosetta A	4 25 59
Adele	4 19 20	Ida K	4 26 30
Duster	4 19 40	Bubble	4 26 50
Mayotta	4 20 56	Idalia	4 29 45

On the way home Truant continued to lead until off Classon's Point, when a very violent storm struck the fleet. The wind blew a gale from northwest, while rain and hail fell heavily. The fleet reduced sail, only Zena carrying through the squall. Truant partly capsized and filled, but was finally sailed home partly waterlogged.

CLASS A—SLOOPS 27FT. AND OVER.

	Start.	Finish.	Elapsed.	Corrected.
Zena	3 15 43	5 35 00	2 19 17	2 15 04½
Adelaide	3 18 11	5 54 22	2 36 11	2 36 11

CLASS B—SLOOPS UNDER 27FT.

Duster	3 16 25	5 47 05	2 30 40	2 30 41
Rosetta A	3 16 25	5 57 07	2 40 42	2 40 02

CLASS C—CATS 23FT. AND OVER.

Adele	3 17 56	5 40 51	2 22 55	2 22 48¼
Truant	3 16 11	5 42 15	2 26 04	2 26 02¾
Mayotta	3 17 20	5 45 02	2 27 42	2 27 42

CLASS D—CATS UNDER 23FT.

Ida K	3 16 17	5 55 40	2 39 23	2 39 15½
Bubble	3 16 02	Not timed.		

SPECIAL CLASS.

Idalia	3 16 21	Not timed.		

In class A Zena beats Adelaide 21m. 6½s. In class B Duster beats Rosetta A. 9m. 22s. In class C Adele beats Truant 3m. 14s., and in class D Ida K. wins.

It was intended to settle the question that arose in the spring regatta between Surprise, Idalia and Thisbe, by a race on Saturday, but only Idalia started.

ROYAL CANADIAN Y. C., JULY 9.—The races for the Lorne and Landsdowne cups were sailed on July 9, over a course on Toronto Bay from the club house through western channel to bell buoy, thence to buoy five miles to the eastward, thence to buoy five miles out in the lake and about south of the club, thence to finish off Exhibition wharf. The wind was very light at the start, 2 P. M. Aileen and Oriole started for the Lorne Cup, and Verve, Cyprus and Yolande for the Lansdowne Cup. The wind was fluky and the yachts also failed to find the eastern buoy, so the race was resailed on July 16, the yachts starting in a 20-knot breeze as follows: Aileen 2:21:25, Cyprus 2:21:50, Verve 2:22:50, Oriole 2:23:50. Out to east buoy spinakers were carried, though they were almost unmanageable at times. The turn was timed: Oriole 3:00:30, Aileen 3:03:00, Verve 3:12:00, Cyprus 3:16:45. On the next leg, close-hauled, Aileen carried away the jaws of her gaff, losing a good deal of time in making repairs. The turn at south buoy was timed: Oriole 3:37:00, Verve 4:00:00, Aileen 4:03:30, Cyprus 4:10:00. Aileen finally gave up and Oriole won the Lorne cup. Cyprus carried away her topmast head and could set only lower sails, while Verve had No. 2 topsail and jibtopsail set. The times were:

	Finish.	Elapsed.	Corrected.
Cyprus	6 10 15	3 48 25	3 25 02
Verve	5 52 10	3 29 20	3 13 53
Oriole	4 57 00	2 33 10	2 33 10

Oriole holds the Lorne cup for this year and Cyprus scores one leg out of three for the Lansdowne cup.

CAPE COD Y. C.—The postponed race of July 4 was sailed on July 16 over a 11-mile triangular course. The times were:

FIRST CLASS.

	Elapsed.	Corrected.
Madge, Cummings & Howes	1 02 03	2 01 01
Percy Allen, F. Allen	2 09 36	2 05 56
Ariel, H. H. Sears & Co	2 01 15	2 07 08
Guinevere, Von Bacon	2 21 00	2 16 58

Fawn's time not taken.

SECOND CLASS.

Iris, E. D. Crowell	2 31 15	2 30 59
Magic, T. P. Lewis	2 38 20	2 38 12
Gracie, J. Crowell	2 44 28	2 44 17
Daisy, H. C. Radford	2 44 38	2 44 38

The judges were F. H. Sears, David W. Sears, E. B. Sears.

AREOLAS Y. C.—This club sailed a regatta on Sheepshead Bay on July 16. The catboat race was won by Lily B., and the jib and mainsail race by Ida T.

CORINTHIAN Y. C.—The first championship regatta of the Corinthian Y. C. was sailed off Marblehead on July 16, the courses being: For first and second classes—From judges' line, leaving buoys 5 and 3 on starboard, Halfway Rock on starboard, can buoy on outer breaker at Pig Rocks on starboard, buoy off Tom Moore's rocks on port, buoys 3 and 5 on port to judges' line, 10 miles. Third class—From judges' line, leaving Chappel's Ledge buoy on starboard, Gooseberry Ledge buoy on starboard, stakeboat one-half mile off Marblehead Rock on starboard, buoys 3 and 5 on port, to judges' line, 6 miles. The summary was:

FIRST CLASS—KEELS.

	Length.	Elapsed.	Corrected.
Gem, C. S. Dennison	26.03	2 42 15	2 11 34
Countess, R. S. Sewall	30.03	2 43 53	2 16 53
Agnes, W. E. Cummings	26.00	3 00 42	2 29 42
Echo, E. L. Burwell	24.10	3 05 58	2 33 54
Majel, W. H. Wilkinson	26.09	3 16 15	2 46 00

SECOND CLASS—CENTERBOARDS.

Expert, L. Whitcomb	23.04	2 43 04	2 09 05
Petrel, H. H. Paul	21.09	2 51 25	2 15 26
Sprite, H. M. Sears	22.08	3 12 19	2 37 31

SECOND CLASS—KEELS.

Witch, B. B. Crowninshield	23.01	3 17 57	2 43 40
Saracen, W. P. Fowle	23.10	3 17 43	2 44 20
Otter, Percy Chase	23.03	3 19 35	2 45 34
Carmita, C. S. Eaton	21.02	3 22 54	2 46 09

THIRD CLASS—CENTERBOARDS.

Viva, C. H. W. Foster	19.06	1 55 39	1 32 09
Dash, A. S. Browne	20.02	2 03 54	1 41 00
Josephine, D. H. Follett, Jr	18.08	2 07 01	1 42 45
Banshee, H. P. Benso	17.11	2 09 28	1 44 10
Pixy, F. W. Chandler	20.09	2 07 09	1 44 45

Greta, S. G. Allen	20.00	2 14 37	1 51 07
Carrie, Poor & Rice	19.02	Withdrawn.	
Polly, J. L. Putnam	20.10	Withdrawn.	

THIRD CLASS—KEELS.

Wraith, J. B. Paine	19.01	2 08 29	1 44 36
Nixie, A. L. Cochrane	20.09	2 07 03	1 44 42
Vera, Paine & Randall	19.09	2 10 26	1 47 10

Prizes, first class keels—Gem, first prize, $10; Countess, second prize, $5. Second class centerboards—First prize, $10; second prize, $5, Petrel. Second class keels—First prize, $10, Witch; second prize, $5, Saracen. Third class centerboards—First prize, $10, Viva; second prize, $5, Dash. Third class keels—First prize, $10, Wraith; second prize, $5, Nixie. Championship pennants are also awarded in each class of keels and centerboards, to be won twice to become the owner's property. The Witch has not yet been officially measured, and the prizes in her class are awarded subject to her measurement. The judges were Vice-Commodore I. S. Palmer, W. W. Whitcomb and Oscar E. Doolittle.

HULL Y. C.—The first championship regatta of the Hull Y. C. was sailed on July 16 in a light S.W. wind. The summary was:

SECOND CLASS—CENTERBOARDS—6 MILES.

	Length.	Elapsed.	Corrected.

Josephine, E. Sowers	15.00	9 00 00	10 46 00	1 45 25
Gracie, E. A. Leopold	12.00	9 00 00	10 57 50	1 48 47
Elsie, E. MacAllister	15.00	9 00 00	11 11 09	2 08 17

The four leading boats are Delaware River tuckups and are limited to 180ft. mainsail. With a crew of three men and a steady wholesail breeze with smooth water they do their best work and probably cannot be beaten under such conditions by any other style of boat carrying the same amount of sail. Winner, first prize, champion pennant, Flying Eagle. Judge, Wm. Rotchell, Jr.

R. Y. S. JUBILEE RACE.—On Aug. 8 the R. Y. S. will start a race for a prize of £800 from Cowes to Cherbourg, thence around Eddystone Light and back to start.

WHAT TO DO IN THE WATER.—Just at this season the number of deaths from drowning is greater than at any other time. Many of these might be prevented if the simple points were observed of keeping the mouth closed and the hands down when thrown into the water. The first involuntary act is to throw the arms and head up, immediately submerging the entire body, while the mouth is opened to cry for aid; at once filling the lungs with water. Many persons will float steadily if the body is kept as far under water as possible, only the nose and mouth being free. Remember that every ounce *out* of water is trying to sink you, and every ounce *under* water is trying to float you at the surface. On the back, with mouth closed except to breathe, and hands and arms extended, the hands paddling a little vertically, any one can keep afloat for a few minutes, often giving time for aid to arrive. The following, published some time since in the London *Times*, is worth a careful reading: "When I first went to sea at the age of 12½ years I fell overboard in the Bay of Biscay when the ship was going ten knots with studding sails set. A heavy sea was running, and the captain wrote that he had never known any one saved under such circumstances. I had been taught to swim at Eton, where I had gained some proficiency in diving for chalk eggs. This practice gives a boy the two qualifications to which, under Providence, I owe my life—first, that of not being afraid when under water, being in the habit of swimming about under water looking for the eggs which had been scattered; and, secondly, that of treading water, for we used to come up with eight or ten eggs, two or three being stowed under one's arm-pits, and we had to retain them all and put them into a punt or they did not count. My first sensation on feeling myself in and under the water was to force myself in the customary way to the surface and then, seeing the ship sailing away and the lifeboat apparently close to, to try the good straightforward breast stroke recommended by the secretary of the swimming association. Less than a minute convinced me of my error. My cloth uniform was very heavy, as it was midwinter, I was losing all my strength, and filling my nose and mouth with spoon drift. I at once gave it up, turned around and trod the water as long as I could; and when I could no longer do that, turned on my back and floated, in which position I was picked up by one of two cutters sent to search for me, as they had lost sight of me from the ship. I will not take up your space by praising the smartness of the ships or speaking of the officer, still living, or crew who manned that boat. My only object in writing is to add my testimony to that in your issue of to-day, that the 'art of sinking,' added to that of quietly waiting—treading water and floating—till assistance can reach you, will be found far more efficacious than wasting power by swimming."

PAPPOOSE AND SHONA.—Owing to the fact that these two boats, as well as Shadow, are in the same class in the E. Y. C., they are generally considered to be evenly matched; a supposition which is very unfair to the smallest of the three. Under the rule of the club the two larger pay practically nothing for their excess of sail area, but the racing is virtually on waterline length, while in other clubs about Boston the three race on mean length. The unfairness of the comparison is admitted in the following by the *Boston Herald*, which has always been opposed to the extreme type which Shona represents. The practical application of the differences of these small boats to the larger ones opens also an interesting field of speculation: "The races thus far this season seem to have resulted in contests between 'pairs,' and the Pappoose and the Shona form one of them. The victory of the Pappoose over the Shona, in certain quarters, seems to be taken as a great one, and thus in locating the Shona, the Pappoose outsailed Watson's best five-tonner. This is not so, for the five-tonner Doris can easily outsail the Shona. In fact, the latter never held first prize in her class in Scotland. The Shona could be stowed away in the Pappoose, so great is the difference in the relative bodies of both yachts. The Pappoose is to the Shona—as the Thistle is to the Irex—greater in displacement, beam, sail area and draft. The Pappoose measures over all 44ft.; waterline, 26ft., beam, 12ft. 5½in., and draft, 7.9ft. The Shona is 32.7ft. on the waterline, 5.75ft. beam, with about 7ft. draft. By the above it will be seen that the Pappoose is over 3ft. longer on the waterline, and nearly 6ft. wider. The Pappoose has a very high freeboard, for her size, and this makes her more powerful than the Shona at great angles of heel. The same advantages that the Thistle has over the Irex the Pappoose has over the Shona, and, with the results of the race between the Pappoose and the Shona and the Thistle and the Irex before one, the conclusion must be that a keel vessel with moderate beam in racing weather is apt to be faster than the 'plank on edge,' which is unable to carry the driving power of a yacht with greater beam. According to a gentleman who was on board the Shona in the Eastern Yacht Club race, in the head sea and windward work, the Shona got the best of the Shadow. The result of the race proved that the Shadow, in the race, handsomely defeated the Shona. In the Thistle, Watson has adapted the hull to the driving power he wished to put on it, and the result is that he has got a good, beamy, powerful and remarkably fast yacht."

Q. C. Y. C.—PROFESSIONAL vs. AMATEUR.—Cooper's Point, July 11.—*Editor Forest and Stream:* Notwithstanding the little unpleasantness arising from the distribution of prizes in the annual regatta of the Quaker City Y. C. it is hoped everything will be amicably arranged. The regatta committee worked faithfully for the interest of the club, and as judges decided by the letter of the law, and as I feel assured conscientiously, yet, in my opinion, erroneously. It is, however, an open question that may be settled hereafter, and in the meantime let us call a halt. I desire in this connection to thank the committee for their valuable assistance in my official duty as measurer. That the club is on the verge of disruption, as some alarmists predict, is without foundation in fact. Will you kindly once more give your views as to what constitutes a professional boat sailor.—R. G. WILKINS. It is impossible to give a hard and fast definition of a professional, but any man must be considered such who is paid for his services in sailing yachts, or earns his living wholly or in part by labor about the water, as in fishing craft, coasters or other working boats. Of course this would not apply to naval officers or officers of large vessels, and many cases must arise that will be difficult to adjust, but the best guides are the broad principles that an amateur is one who sails for pleasure and with no idea of money profit, and that he should not be forced to compete with those who have become proficient through regular work about the water.]

A JUBILEE RACE OF HIS OWN.—Mr. R. T. McMullen, the singlehand sailor so well known to yachtsmen through his books, "Orion," "Cruise of the Procyon," "Cruise of the Leo" and "Down Channel," is nothing if not original, and it will not surprise any one to hear that as he was dissatisfied with the arrangements for the R. T. Y. C. Jubilee race, he has started and sailed a little Jubilee race of his own in the famous old Orion, 20-tonner, of 42ft. l.w.l., 10ft. beam and 7ft. draft. Mr. McMullen believed that as a matter of sentiment the race should be entirely and not partly around the British Isles, and so chose the former course for his race. On July 10 he left Dover with a crew of two seamen and a friend, and sailed east and then north, around the Scotch coast and Ireland, arriving at Dover again on July 2. At the finish Orion crossed her original starting line, fired a gun, and made a tack or two for good measure, before taking in sail. The distance was 1,800 nautical miles, made in 22 days, and the entire undertaking speaks well for the spirit and pluck of the four men on board.

A STOLEN VESSEL.—On July 16 a large sloop was sighted by Capt. J. H. Mulligan of the Life Saving Station at Sandy Hook, with no one in command and sails flapping as she headed for the beach. With his crew he boarded her and found only two boys on board. The name on the stern was R. A. Marsh, while in the cabin was painted Mary A. Marshall, Prince's Bay. The prize crew sailed the vessel to Stapleton, S. I., where the boys were arrested. They proved to be Charles Holt and Charles King, of Boston; both runaways. How they came in possession of the vessel is a mystery.

CORINTHIAN Y. C.—The articles of incorporation of the Corinthian Y. C., of New York, were filed at Albany on July 13, the objects of the club being set forth as being to promote the interests of yachting in American waters; to increase the knowledge of naval architecture and of navigation; to encourage and promote sailing designing, management and the handling of yachts by their owners. The trustees for the first year are C. Smith Lee, M. Roosevelt Schuyler, A. Bryan Alley, Evan Clark and J. Murray Mitchell.

A CUTTER IN A GALE.—The Cypress afforded a very interesting sight to yachtsmen on the bay yesterday afternoon. The wind was blowing a gale from the northwest as the little Scotch cutter left the R. C. Y. C. moorings to beat across to the T. Y. C. house. The skipper carried a small jib and the mainsail triced up, and with a lee rail several inches under fairly ploughed through the water. The boat, as seen from the R. C. Y. C. launch, was a sight to gladden a yachtsman's heart.—*Toronto Mail July 11.*

THE WHITE SWAN'S CHALLENGE.—The challenge issued by Mr. Frank E. Brown in behalf of the White Swan was taken up by Black Cloud, Wona and Viola, and sailed on July 12, from Gloucester around the Isle of Shoals. Starting at 8 A. M., Black Cloud turned at 3:15 over a mile ahead, and arrived at 9:24 P. M., with White Cloud at 9:35.

BANSHEE.—A fine little cruiser of the compromise type has just been added to the fleet of the Seawanhaka C. Y. C., the Banshee, designed by Mr. A. Cary Smith, and built by Poillons under Mr. J. F. Tams's supervision. The Banshee is a centerboard boat with a deep lead keel of 7 tons, and cutter rigged. She is 48ft. 6in. over all, 39ft. 9in. l.w.l., 14ft. beam, 5ft. 11in. draft. Below she has a large stateroom on starboard side, a toilet room forward, an extra stateroom on port side, and a very good saloon aft. She was launched on July 12 in the presence of her owner, Mr. P. S. Pearsall, of Black Rock, Conn., Mr. and Mrs. T. W. Pearsall, Miss Pearsall, Mr. Thomas Pearsall, Mrs. J. J. Thorne, Miss Cochrane, Miss Endicott, Mr. J. Fred Tams, Mr. Daniel Lindley, Mr. J. F. Schiff, Mr. E. Robbins Walker, Mr. F. M. Cronise, Mr. Frank Polk and Mr. Wm. Bond. The yacht was launched with topmast on end and all ready for a trial trip, the christening being done by Miss Lottie Pearsall, who broke a bottle of Irish whisky over the bows.

DELVYN AND BEATRICE.—A private match was sailed on July 6 between these two yachts for a $50 cup, the course being from Larchmont around the Gangway Buoy, two rounds, making two legs to windward and two free. Delvyn is a 5-ton cutter, 33ft. l.w.l., 5ft. 5in. beam and 6ft. 8in. draft; while Beatrice is a centerboard sloop, 31ft. l.w.l., 12ft. 6in. beam and 3ft. 3in. draft. On the first round a squall came up which sent the cutter ahead so far that she had a lead of over a quarter of an hour at its termination. Beatrice gave up at the end of the first round, Delvyn finishing alone. The judges were Messrs. Monroe and Flint, Larchmont Y. C.

R. J. DOUGLAS & Co.—The firm of R. J. Douglas & Co., successors to Powell & Douglas, has lately been changed by the withdrawal of Robert Douglas, whose place is taken by Miles G. Nixon, of Chicago. Mr. Nixon is well known as a yachtsman and designer, and under his practical supervision a still higher standard of excellence may be looked for in the work turned out by the firm.

CHALLENGE TO OPEN BOATS.—Hugh Masterson, of Bridgeport, Conn., will match his 20ft. boat Americus against any 20ft. boat in the world for $250 or $300 a side. Race to be 10 miles to windward and return, boats to be rigged jib and mainsail. Challenge open for the next thirty days.

YACHTING NOTES.—Nokomis, schooner, has been chartered by J. D. Cheever, of New York....Thistle, sloop, has had her mast cut off 4ft. at Mumm's....Nirvana, keel sloop, has stepped a new mast 6ft. 4in. longer with larger rig....Carlotta, schooner, is fitting out at Mumm's Basin.

BURLINGTON BAY.—The second series of yacht races for the championship of Burlington Bay was sailed at Hamilton on July 16, resulting as follows: First Class—Surge, Coquette, Cacique. Second Class—Flirt, Mystery, Stella. Third Class—Flight, Rustler, Adeline.

DEATH OF EX-COM. HUSSEY.—Mr. Henry Hussey, ex-Com. South Boston Y. C., died on board the steamer Saale on her last voyage to New York. He had been to Germany for his health but was ordered home. For three years he was commodore of the South Boston Y. C.

ULIDIA-SCHEMER.—The three matches outside of Sandy Hook between these two yachts will be sailed the last of this month.

BEVERLY Y. C.—A regatta was sailed off Monument Beach on July 16, the winners being Surprise, Mist and Elinor.

RACING ON THE SHREWSBURY.—A race was sailed on July 13 in which Daisy and an unnamed boat won.

GENESTA.—Genesta is now racing in the A Class with the spars and ballast she first carried in 1884.

BRUNHILDE, schooner, J. J. Phelps, sailed from St. Croix on July 12 for Bermuda.

Answers to Correspondents.

A. G. W., Miramichi, N. B.—Write to Fred Allen, Monmouth, Ill.

TADOUSAC.—Writer of paper on Tadousac will please send address.

S. M. H., Boston.—For trout to stock with apply to F. M. Gilbert, Plymouth, Mass.

ROMME.—Go into a New Orleans gun store and they will give you the information.

BARCHLAND, Silver City, Utah.—Letter sent to you has been returned. Please send address.

D. J., Exeter, N. H.—Write to Schoverling, Daly & Gales, 84 & 86 Chambers street, New York city.

J. P. V.—We have written to address given about "Woodcraft" poem, but letter has been returned. Please send correct address.

NORTH WOODS, Yonkers.—Woodcock are not so abundant in the Adirondacks that any special point can be recommended to you. For deer go to Fenton's at Number Four.

J. A. M., Middleburgh, N. Y.—If three tied on score of 9, one broke 7, and two tied on 5, the one who broke 7 won second prize. Those who broke 9 divide first or shoot off for it.

A. C. S., Ithaca, N. Y.—Richard D. Sears, of Boston, is the champion lawn tennis player, and has been ever since the championship matches were established at Newport in 1881.

J. J. S., Chicago.—1. Bogardus uses a Scott gun, Carver a Greener, Paine a Smith & Wesson pistol. 2. There is no other .22 that we know of. For snap rifle shooting get Raub's trap and flying target; see advertisement of them elsewhere.

C. R. K.—1. Write to C. A. Coleman, Moscow, Maine. 2. A rifle is the proper weapon for deer. 3. Choose a caliber not smaller than .38. 4. If you use a chokebore shotgun chamber the buckshot on a wad at the bore to determine proper number to load in a layer in the shell.

A. E. M.—1. Most all of the winning Irish setters in this country have Elcho blood in their veins. 2. Write to W. H. Pierce, Peekskill, N. Y. 3. As to muzzle the standard says, "the color of the nose dark mahogany or dark chocolate." As to color the standard says, "white on chest, throat or toes, or a small star on the forehead, or a narrow streak or blaze on the nose or face not to disqualify." See full standard in "Standards and Points of Judging."

A. N. S., Brooklyn.—Will you kindly give me the address of parties of whom I can purchase helgramites, as I intend spending a couple of weeks in Sullivan county, at White Lake, where I hope to catch some black bass. If you know of any other good bait for bass, will you kindly mention it? Ans. We do not know of any one who keeps helgramites for sale, certainly not in the city. At Greenwood Lake some of the guides keep them. Take some saltwater shrimps with you, alive or salted, and you will find them a good bait.

E. N. F. Northampton, Mass.—If by a mishap a bitch is served by a mongrel, are the pups of future years liable to take back to the mongrel to their detriment in any way, if sired by a thoroughbred? Ans. This is a mooted point. We have seen many cases of such mishaps, but we have never observed anything in the subsequent produce to justify the conclusion that they were in any way influenced by the previous sire. In one instance a pointer bitch was by accident bred to a bulldog and had a litter of promising bull pups, but in all the subsequent litters no trace of the bulldog was to be seen.

A. J., Solomon City, Kans.—Please decide the following: Shooter No. 1 goes to score, calls pull; the bird is thrown from trap; he shoots; bird alights near trap; judge calls dead bird. Other shooter, No. 2, stands back watching bird; boy traps another bird and is coming in; boy attempts to catch bird; shooter No. 2 challenged the bird; it on being approached by boy flies away; shooter No. 2 had not been called to score, nor had he gone to score nor had five minutes elapsed. Ans. No. 2 had not lost his right to challenge, and his challenge being manifestly a correct one, should be sustained.

W. D. C., Katama, Martha's Vineyard, Mass.—The State of Massachusetts exercises jurisdiction over all ponds over twenty acres. Now, assuming such natural pond, first, would it be lawful to anchor a boat in such pond to shoot ducks therefrom? second, is it lawful to shoot ducks from a boat in this State? Of course the foregoing applies to the open season. Please answer with as much degree of certainty as possible, as sportsmen here are in doubt as to their rights under the law. Ans. So far as game laws go, the size of the pond is immaterial. The law (Chap. 276, Laws of 1887) imposes a penalty on any one who "shoots at or kills a wild fowl or any of the so-called shore, marsh or beach birds, with or by the use of a swivel, or pivot gun, or by the use of a torch, jack or artificial light, or pursues any wild fowl with or by aid of a sailboat or steam launch." This we do not construe as forbidding shooting from a rowboat at anchor. A special law (Chap. 246, Laws of 1886) prescribes that "whoever shoots at or kills any wild fowl or any of the so-called shore, marsh or beach birds from boats in the harbor and great ponds of Nantucket, and the waters in and around the islands of Tuckernuck, Muskeget and the Gravelly Islands, shall be punished for each offense by a fine of $20."

INFORMATION WANTED.

G. T. wants to know best points for quail in northern Virginia and West Virginia in the fall.

Dr. G. V. H. wants address of Savannah, Ga., publisher of a chart of the Okefinokee Swamp. He proposes to go there with a party in the fall.

Will some of your readers please give me a receipt for cleaning the corrode left by powder from a rifle barrel, which will not injure the rifling. This corrode was caused by the rifle not being cleaned after use.—S. R. N.

WRITE UPTHEGROVE & MCLELLAN, Valparaiso, Ind., for new catalogue of sportsmen's and civil engineers' wear.—*Adv.*

NEW YORK CITY, May 18, 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it*, not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. CUSHIER.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the large sale of this magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

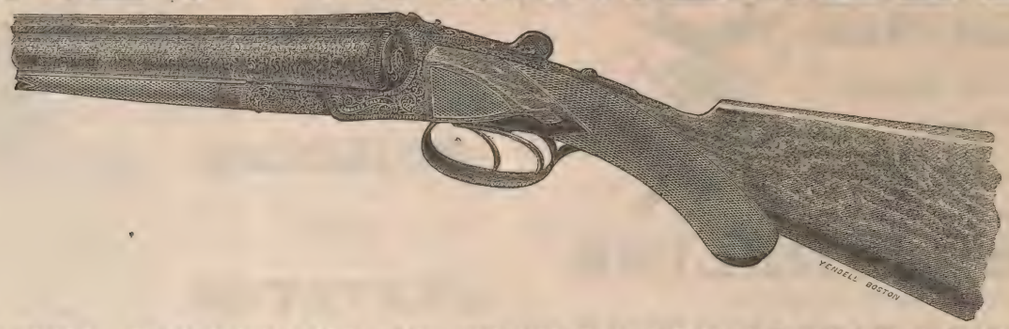
All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, steering apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.



A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

LIST OF PLATES.

I. The Sloop Yacht Schemer.

DALY HAMMERLESS

STANDS IN THE FOREFRONT OF HIGH GRADE BREECH-LOADING GUNS.

There are no guns on the market less than three times the value that can compare with the Daly Hammerless in point of actual value in the fineness of the material and workmanship. We have had expert mechanics test them against PURDEY (the finest maker in London), guns costing $500 to $800, and declare if there was any difference it was in favor of the DALY. The perfection of the shooting has been demonstrated by the capture of hundreds of prizes at the trap all over the country. No experts are paid to shoot a Daly gun, either by money, by gift of gun or special discount on same.

DALY THREE-BARREL

IS THE GREAT SUCCESS OF THE YEAR.

It is a great convenience to have always a rifle barrel with you. Perfection of workmanship, accuracy of adjustment, simplicity of construction, closeness of shooting and great penetration. The Daly 3-Barrel is not an awkward, heavy, clumsy affair, but beautiful in proportions and practically as light as a double barrel.

SEND TO

SCHOVERLING, DALY & GALES, 84 & 86 Chambers Street, New York,

For New Illustrated Catalogue of Gun Specialties.

We desire to call the attention of the public to our new Double-Action Revolver illustrated herewith. No expense or care has been spared to make this arm as near perfection as it is possible to get. The style is identical with the Smith & Wesson Revolver and in *no respect* whatever is it inferior. Our Rifles have enjoyed the reputation of being superior in workmanship, finish and accuracy of shooting to any others in the world; this position we mean to hold, and the Marlin Revolvers will be found to be in these points, so essential to a high class firearm, equal to anything we have heretofore made. Realizing the immense hold the S. & W. Revolvers have on the markets of the world, by having for a long series of years stood alone as perfectly made weapons, we have made our price sufficiently low to attract the notice of the trade and of the public, feeling confident that as soon as they are sufficiently known they will be duly appreciated and will command as high an estimation as any other goods the world over. For the present, the .38-caliber will be the only size made, to be followed soon by the .32-caliber. The cartridge used is that known as .38 S. & W., which can be found everywhere. As shown in the cut, the cartridges are extracted automatically by a simple device, and the Revolver can be opened without extracting if desired. The construction has several novel features which are covered by patents, which bring the Revolver up to highest standard attainable for strength, simplicity, durability, ease of manipulation.

Retail Price, Rubber Stock, Nickel Plated or Blued, $11.00.

"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

FOREST AND STREAM PUBLISHING COMPANY,
39 Park Row, New York.
LONDON: DAVIES & Co., 1 Finch Lane.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists. Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING Co., 39 Park Row.
LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

NESSMUK'S POEMS.

FOREST RUNES, By Geo W. Sears, (Nessmuk).

Large octavo, 208 pages, printed on heavy paper, bound in cloth, gold lettering, with a portrait of the author. Price, $1.50.

FOR SALE BY ALL BOOK DEALERS.

The Forest Waters the Farm;

OR,

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

For Sale.

GREEN RIVER.—THE SUBSCRIBER OFfers for sale a ten years' Government lease of the exclusive right to fish in about 30 miles of the main Green River in the Province of New Brunswick, Canada. It is thus named from the purity of its waters. One day by rail from Fredericton will place the sportsman at its mouth, where men and canoes can be had; it is navigable for these and light boats to its sources; it runs through picturesque forests, and is probably the best river for trout in Eastern America. Full information given on application to the subscriber. Reference is given by permission to J. H. PHAIR, Esq., Fishery Commissioner for New Brunswick. EDWARD JACK, Fredericton, New Brunswick, Canada.

TO RENT FOR SEPTEMBER AND OCTOber, to a party of gentlemen or club.—A handsome double cottage containing ten large rooms and two bathrooms, with water closets and plenty of water; handsomely furnished and delightfully situated on high ground on one of the most beautiful islands of the St. Lawrence River; owner will act as caterer if desired; arrangements can be made for next summer and fall if desired. Splendid fishing and duck shooting. Apply to OWNER, 52 West Twenty-first street, New York City. 1t

THE ATTENTION OF SPORTSMEN IS called to a most desirable tract in Essex County for hunting and fishing; eight hours from New York City; 12,000 acres in one parcel, or can be divided; Hudson and Indian Rivers unite on the tract, which has also three large trout ponds (½ mile to 1½ miles long); deer and winged game; land well wooded with hard timber. Offered at extraordinary bargain.
